2006 Mazda6 MAZDASPEED6 Workshop Manual

FOREWORD

This manual contains on-vehicle service and/or diagnosis procedures for the Mazda6, MAZDASPEED6.

For proper repair and maintenance, a thorough familiarization with this manual is important, and it should always be kept in a handy place for quick and easy reference.

All the contents of this manual, including drawings and specifications, are the latest available at the time of printing. As modifications affecting repair or maintenance occur, relevant information supplementary to this volume will be made available at Mazda dealers. This manual should be kept up-to-date.

Mazda Motor Corporation reserves the right to alter the specifications and contents of this manual without obligation or advance notice.

All rights reserved. No part of this book may be reproduced or used in any form or by any means, electronic or mechanical—including photocopying and recording and the use of any kind of information storage and retrieval system—without permission in writing.

WARNING

Servicing a vehicle can be dangerous. If you have not received service-related training, the risks of injury, property damage, and failure of servicing increase. The recommended servicing procedures for the vehicle in this workshop manual were developed with Mazda-trained technicians in mind. This manual may be useful to non-Mazda trained technicians, but a technician with our service-related training and experience will be at less risk when performing service operations. However, all users of this manual are expected to at least know general safety procedures.

This manual contains "Warnings" and "Cautions" applicable to risks not normally encountered in a general technician's experience. They should be followed to reduce the risk of injury and the risk that improper service or repair may damage the vehicle or render it unsafe. It is also important to understand that the "Warnings" and "Cautions" are not exhaustive. It is impossible to warn of all the hazardous consequences that might result from failure to follow the procedures.

The procedures recommended and described in this manual are effective methods of performing service and repair. Some require tools specifically designed for a specific purpose. Persons using procedures and tools which are not recommended by Mazda Motor Corporation must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

The contents of this manual, including drawings and specifications, are the latest available at the time of printing, and Mazda Motor Corporation reserves the right to change the vehicle designs and alter the contents of this manual without notice and without incurring obligation.

Parts should be replaced with genuine Mazda replacement parts or with parts which match the quality of genuine Mazda replacement parts. Persons using replacement parts of lesser quality than that of genuine Mazda replacement parts must satisfy themselves thoroughly that neither personal safety nor safety of the vehicle will be jeopardized.

Mazda Motor Corporation is not responsible for any problems which may arise from the use of this manual. The cause of such problems includes but is not limited to insufficient service-related training, use of improper tools, use of replacement parts of lesser quality than that of genuine Mazda replacement parts, or not being aware of any revision of this manual.

HOW TO USE THIS MANUAL

E6U000000000W03

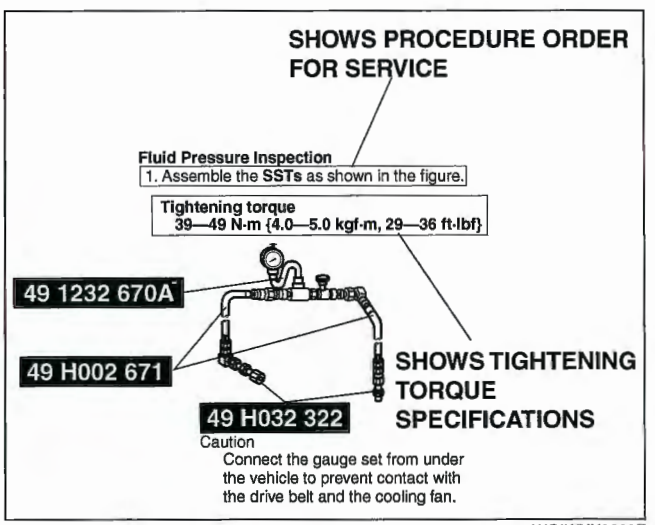
Range of Topics

- This manual contains procedures for performing all required service operations. The procedures are divided into the following five basic operations:
  - — Removal/Installation
  - — Disassembly/Assembly
  - — Replacement
  - — Inspection
  - — Adjustment
- Simple operations which can be performed easily just by looking at the vehicle (i.e., removal/installation of parts, jacking, vehicle lifting, cleaning of parts, and visual inspection) have been omitted.

Service Procedure

Inspection, adjustment

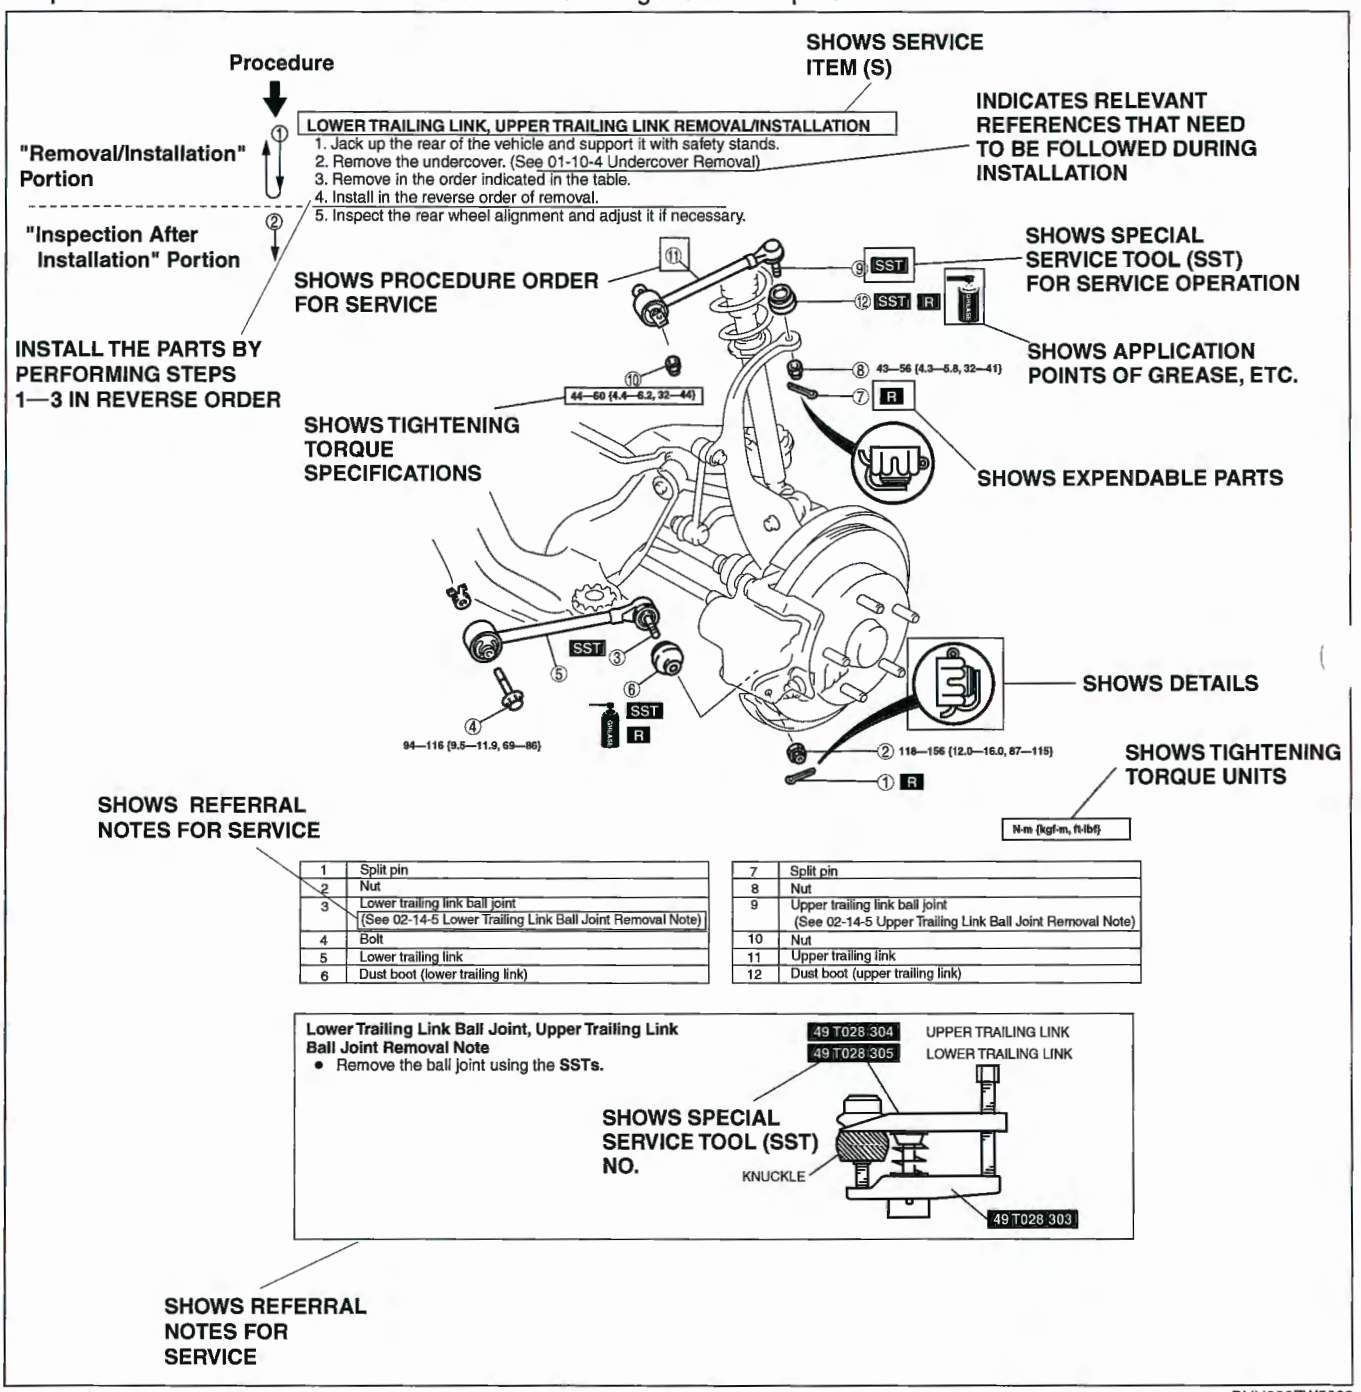
- Inspection and adjustment procedures are divided into steps. Important points regarding the location and contents of the procedures are explained in detail and shown in the illustrations.



WGIWXX0009E

Repair procedure

1. Most repair operations begin with an overview illustration. It identifies the components, shows how the parts fit together, and describes visual part inspection. However, only removal/installation procedures that need to be performed methodically have written instructions.
2. Expendable parts, tightening torques, and symbols for oil, grease, and sealant are shown in the overview illustration. In addition, symbols indicating parts requiring the use of special service tools or equivalent are also shown.
3. Procedure steps are numbered and the part that is the main point of that procedure is shown in the illustration with the corresponding number. Occasionally, there are important points or additional information concerning a procedure. Refer to this information when servicing the related part.



DHU000ZW5002

Symbols

- There are eight symbols indicating oil, grease, fluids, sealant, and the use of **SST** or equivalent. use. These symbols show application points or use of these materials during service.

Symbol	Meaning	Kind
	Apply oil	New appropriate engine oil or gear oil
	Apply brake fluid	New appropriate brake fluid
	Apply automatic transaxle/ transmission fluid	New appropriate automatic transaxle/ transmission fluid
	Apply grease	Appropriate grease
	Apply sealant	Appropriate sealant
	Apply petroleum jelly	Appropriate petroleum jelly
	Replace part	O-ring, gasket, etc.
	Use SST or equivalent	Appropriate tools

Advisory Messages

- You will find several **Warnings**, **Cautions**, **Notes**, **Specifications** and **Upper and Lower Limits** in this manual.

Warning

- A Warning indicates a situation in which serious injury or death could result if the warning is ignored.

Caution

- A Caution indicates a situation in which damage to the vehicle or parts could result if the caution is ignored.

Note

- A Note provides added information that will help you to complete a particular procedure.

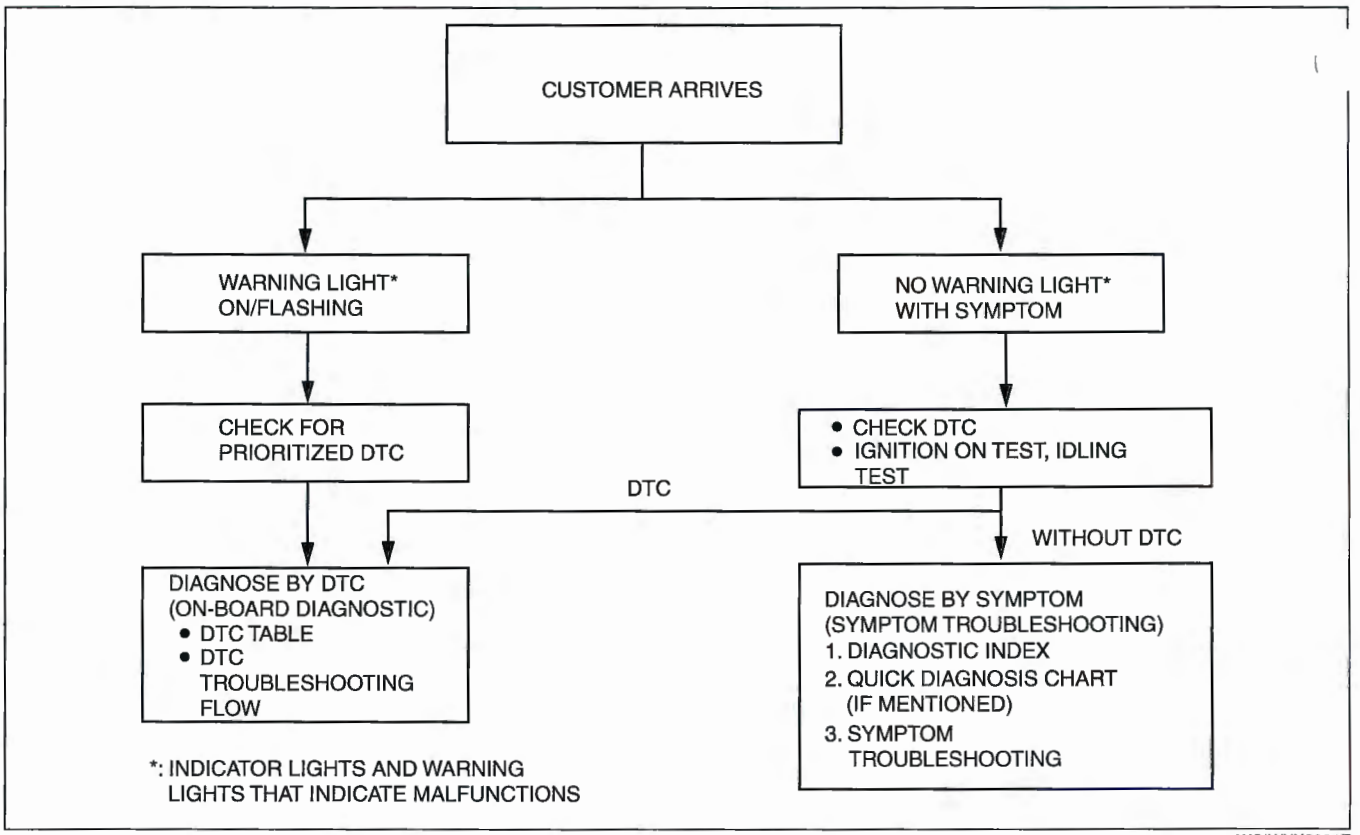
Specification

- The values indicate the allowable range when performing inspections or adjustments.

Upper and lower limits

- The values indicate the upper and lower limits that must not be exceeded when performing inspections or adjustments.

Troubleshooting Procedure
Basic flow of troubleshooting



WGIWXX0001E

DTC troubleshooting flow (on-board diagnostic)
- Diagnostic trouble codes (DTCs) are important hints for repairing malfunctions that are difficult to simulate. Perform the specific DTC diagnostic inspection to quickly and accurately diagnose the malfunction.
- The on-board diagnostic function is used during inspection. When a DTC is shown specifying the cause of a malfunction, continue the diagnostic inspection according to the items indicated by the on-board diagnostic function.

Diagnostic index
- The diagnostic index lists the symptoms of specific malfunctions. Select the symptoms related or most closely relating to the malfunction.

Quick diagnosis chart (If mentioned)
- The quick diagnosis chart lists diagnosis and inspection procedures to be performed specifically relating to the cause of the malfunction.

Symptom troubleshooting
- Symptom troubleshooting quickly determines the location of the malfunction according to symptom type.

Procedures for Use

Using the basic inspection (section 05)

- Perform the basic inspection procedure before symptom troubleshooting.
- Perform each step in the order shown.
  The reference column lists the location of the detailed procedure for each basic inspection.
- Although inspections and adjustments are performed according to the reference column procedures, if the cause of the malfunction is discovered during basic inspection, continue the procedures as indicated in the action column.

SHOWS INSPECTION ORDER

SHOWS ITEM NAMES FOR DETAILED PROCEDURES

SHOW POINTS REQUIRING ATTENTION BASED ON INSPECTION RESULTS

BASIC INSPECTION

STEP	INSPECTION		ACTION
1	Perform the mechanical system test. (See 05-13-3 MECHANICAL SYSTEM TEST.) Is mechanical system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
2	Turn the ignition switch to the ON position. When the selector lever is moved, does the selector illumination indicate synchronized position to the lever location? Also, when other ranges are selected from N or P during idling, does the vehicle move within 1—2 s?	Yes	Go to next step.
		No	Inspect the selector lever and TR switch. Repair or replace malfunctioning parts. (See 05-14-5 SELECTOR LEVER INSPECTION.) (See 05-13-10 TRANSMISSION RANGE (TR) SWITCH INSPECTION.) If the selector lever and TR switch are normal, go to the next step.
3	Inspect the ATF color condition. (See 05-13-8 AUTOMATIC TRANSMISSION FLUID (ATF) INSPECTION.) Are ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result. Flush ATX and cooler line as necessary.
4	Perform the line pressure test. (See 05-13-3 Line Pressure Test.) Is the line pressure normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
5	Perform the stall test. (See 05-13-4 Stall Speed Test.) Is the stall speed normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
	Inspect the voltage at the following TCM terminals. (See 05-13-29 TCM INSPECTION.) • Terminal 2J (TFT sensor) • Terminals 1D, 2B, 2C, 2E (TR switch) • Terminal 2G (turbine sensor) • Terminal 2D (down switch) • Terminal 2I (up switch) • Terminal 1E (M range switch) • Terminal 1W (steering shift switch) Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.

REFERENCE COLUMN

DDA000ZW4030

Using the DTC troubleshooting flow

- DTC troubleshooting flow shows diagnostic procedures, inspection methods, and proper action to take for each DTC.

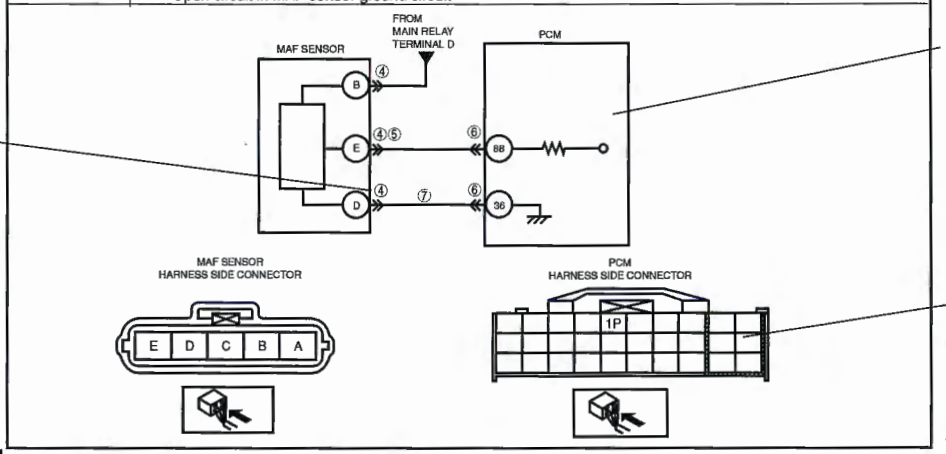
DETECTION CONDITION describes the condition under which the DTC is detected.

TROUBLE CONDITION

DTC P0103

DTC P0103	MAF circuit high input
DETECTION CONDITION	PCM monitors input voltage from TP sensor after ignition key is turned on. If input voltage at PCM terminal 68 is above 8.25 V, PCM determines that TP circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction during first drive cycle. Therefore, PENDING CODE is not available. • FREEZE FRAME DATE is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Open circuit in wiring between MAF sensor terminal D and PCM terminal 36 • Open circuit in MAF sensor ground circuit

POSSIBLE CAUSE describes possible point(s) of malfunction



Indicates the circuit to be inspected (01 and 05 section)

Indicates the inspection step No. to be performed (01 and 05 section)

Indicates the connector related to the inspection

STEP shows the order of troubleshooting

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to next step.
		No	Record FREEZE FRAME DATA on repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Are related Service Bulletins and/or on-line repair information available?	Yes	Perform repair or diagnosis according to available repair information. If vehicle is not repaired, then go to next step.
		No	Go to next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS to DLC-2. • Start engine. • Access MAF V PID using WDS. • Is MAF V PID within 0.2 - 8.3 V?	Yes	Intermittent concern is existing. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01-03-33 INTERMITTENT CONCERN TROUBLESHOOTING)
		No	Go to next step.
4	**INSPECT POOR CONNECTION OF MAF SENSOR CONNECTOR** • Turn ignition key to OFF. • Disconnect MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion etc.). • Are there any malfunctions?	Yes	Repair or replace terminals, then go to Step 8.

ACTION describes the appropriate action to a take as according to the result (Yes/No).

INSPECTION describes the method to quickly determine the failedpart(s).

Reference item(s) to perform ACTION.

B3E0000W014

Using the diagnostic index

- The symptoms of the malfunctions are listed in the diagnostic index for symptom troubleshooting.
- The exact malfunction symptoms can be selected by following the index.

No.	TROUBLESHOOTING ITEM		DESCRIPTION	Page
1	Melting of main or other fuses		—	(See 01-03-6 MELT NO.1 MAIN OR OTHER FUSE)
2	MIL comes on		MIL is illuminated incorrectly.	(See 01-03-7 NO.2 MIL COMES ON)
3	Will not crank		Starter does not work.	(See 01-03-8 NO. 3 WILL NOT CRANK)
4	Hard start/long crank/erratic start/erratic crank		Starter cranks engine at normal speed but engine requires excessive cranking time before starting.	(See 01-03-9 NO. 4 HARD START/ LONG CRANK/ERRATIC CRANK)
5	Engine stalls.	After start/at idle	Engine stops unexpectedly at idle and/or after start.	(See 01-03-11 NO. 5 ENGINE-STALLS AFTER START/AT IDLE)
6	Cranks normally but will not start		Starter cranks engine at normal speed but engine will not run.	(See 01-03-15 NO.6 CRANKS NORMALLY BUT WILL NOT START)
7	Slow return to idle		Engine takes more time than normal to return to idle speed.	(See 01-03-19 NO. 7 SLOW RERUN TO IDLE)
8	Engine runs rough/rotling		Engine speed fluctuates between specified idle speed and lower speed and engine shakes excessively.	(See 01-03-20 NO. 8 ENGINE RUNS ROUGH/ROLLING IDLE)
9	Fast idle/runs on		Engine speed continues at fast idle after warm-up. Engine runs after ignition key is turned to OFF.	(See 01-03-23 NO. 9 FAST IDLE/RUNS ON)
10	Low idle/stalls during deceleration		Engine stops unexpectedly at beginning of deceleration or recovery from deceleration.	(See 01-03-24 NO. 10 LOW IDLE/ STALLS DURING DECELERATION)

BHE0000W102

Using the quick diagnosis chart

- The chart lists the relation between the symptom and the cause of the malfunction.
- The chart is effective in quickly narrowing down the relation between symptom and cause of the malfunction. It also specifies the area of the common cause when multiple malfunction symptoms occur.
- The appropriate diagnostic inspection relating to malfunction cause as specified by the symptoms can be selected by looking down the diagnostic inspection column of the chart.

② **PARTS WHICH MAY BE THE CAUSE OF PROBLEMS**

SYMPTOM QUICK DIAGNOSTIC CHART

B3E0000W013

Using the symptom troubleshooting

- Symptom troubleshooting shows diagnostic procedures, inspection methods, and proper action to take for each trouble symptom.

DESCRIPTION describes what kind of TROUBLE SYMPTOM

TROUBLE SYMPTOM

14	Engine flares up or slips when upshifting or down shifting
DESCRIPTION	• When accelerator pedal is depressed for driveway, engine speed increase but vehicle speed increase slowly. • When accelerator is depressed while driving, engine speed increases but vehicle not.
POSSIBLE CAUSE	• There is clutch slip because clutch is stuck or line pressure is low. — Clutch stuck, slippage (forward clutch, 3-4 clutch, 2-4 brake band, one-way clutch 1, one-way clutch 2) • Line pressure low • Malfunction or mis-adjustment of TP sensor • Malfunction of VSS • Malfunction of input/turbine speed sensor • Malfunction of sensor ground • Malfunction of shift solenoid A, B or C • Malfunction of TCC solenoid valve • Malfunction of body ground • Malfunction of throttle cable • Malfunction of throttle valve body — Poor operating of mechanical pressure • Selector lever position disparity • TR switch position disparity **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-board Diagnostic and Automatic Transaxle Basic Inspection are conducted.

POSSIBLE CAUSE describes possible point of malfunction

STEP shows the order of troubleshooting.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is line pressure okay?	Yes	Go to next step.
		No	Repair or replace any defective parts according to inspection results.
2	• Is shift point okay? (See 05-17-5 ROAD TEST)	Yes	Go to next step
		No	Go to symptom troubleshooting No.9 "Abnormal shift".
3	• Stop engine and turn ignition switch on. • Connect WDS to DLC-2. • Simulate SHIFT A, SHIFT B and SHIFT C PIDs for ON. • Is operating sound of shift solenoids heard?	Yes	• Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual GF4A-EL (1666-1A-99F)) • If problem remains, replace or overhaul transaxle and repair or replace defective parts. (See 05-17-15 AUTOMATIC TRANSAXLE REMOVEVAL/INSTALLATION)
		No	• Inspect for bend, damage, corrosion or loose connection if shift solenoid A, B, or C terminal on ATX. • Inspect for shift solenoid mechanical stuck. (See 05-17-14 Inspection of Operation) • If shift solenoids are okay, inspect for open or short circuit between PCM connector terminal A, B or C.
4	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. — If vehicle is repaired, troubleshooting completed. — If vehicle is not repaired or additional diagnostic information is not available, replace or reprogram PCM.		

Reference item(s) for additional information to perform INSPECTION.

INSPECTION describes the method to quickly determine the failed part.

ACTION describes the appropriate action to take as a result (YES/NO) of INSPECTION.

How to perform ACTION is described in the relative material shown.

Reference item(s) to perform ACTION.

Electric current	A (ampere)
Electric power	W (watt)
Electric resistance	ohm
Electric voltage	V (volt)
Length	mm (millimeter)
	in (inch)
Negative pressure	kPa (kilo pascal)
	mmHg (millimeters of mercury)
	inHg (inches of mercury)
Positive pressure	kPa (kilo pascal)
	kgf/cm^2 (kilogram force per square centimeter)
	psi (pounds per square inch)
Number of revolutions	rpm (revolutions per minute)
Torque	N·m (Newton meter)
	kgf·m (kilogram force meter)
	kgf·cm (kilogram force centimeter)
	ft·lbf (foot pound force)
	in·lbf (inch pound force)
Volume	L (liter)
	US qt (U.S. quart)
	Imp qt (Imperial quart)
	ml (milliliter)
	cc (cubic centimeter)
	cu in (cubic inch)
	fl oz (fluid ounce)
Weight	g (gram)
	oz (ounce)

Conversion to SI Units (Système International d'Unités)

- All numerical values in this manual are based on SI units. Numbers shown in conventional units are converted from these values.

Rounding Off

- Converted values are rounded off to the same number of places as the SI unit value. For example, if the SI unit value is 17.2 and the value after conversion is 37.84, the converted value will be rounded off to 37.8.

Upper and Lower Limits

- When the data indicates upper and lower limits, the converted values are rounded down if the SI unit value is an upper limit and rounded up if the SI unit value is a lower limit. Therefore, converted values for the same SI unit value may differ after conversion. For example, consider 2.7 kgf/cm^2 in the following specifications:

  210—260 kPa {2.1—2.7 kgf/cm^2, 30—38 psi}
  270—310 kPa {2.7—3.2 kgf/cm^2, 39—45 psi}

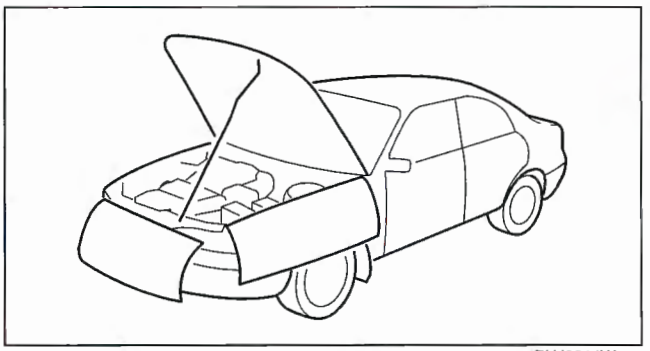
- The actual converted values for 2.7 kgf/cm^2 are 264 kPa and 38.4 psi. In the first specification, 2.7 is used as an upper limit, so the converted values are rounded down to 260 and 38. In the second specification, 2.7 is used as a lower limit, so the converted values are rounded up to 270 and 39.

SERVICE CAUTIONS

E6U000000000W06

Protection of the Vehicle

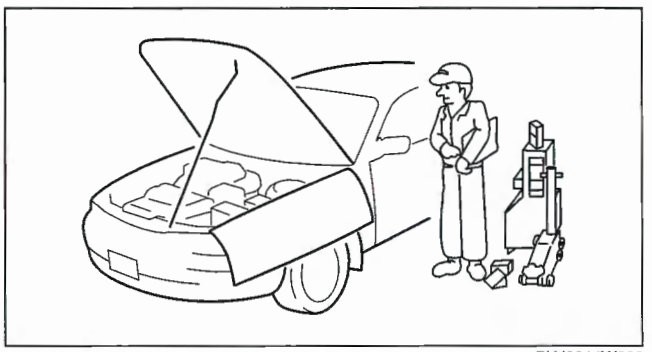
- Always be sure to cover fenders, seats and floor areas before starting work.



BHJ0014W001

Preparation of Tools and Measuring Equipment

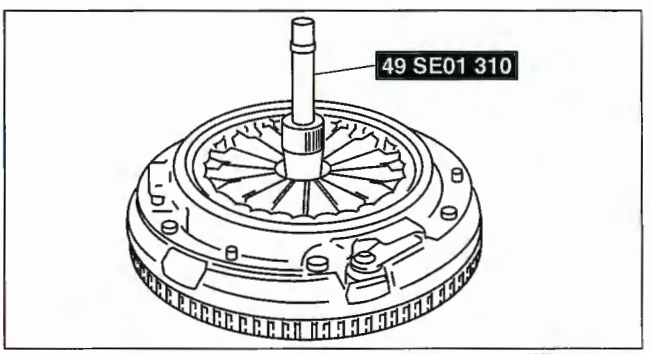
- Be sure that all necessary tools and measuring equipment are available before starting any work.



BHJ0014W002

ecial Service Tools

Use special service tools or equivalent when they are required.



WGIWXX0024E

Disconnection of the Negative Battery Cable

- Before beginning any work, turn the ignition switch to LOCK position, then disconnect the negative battery cable and wait for more than 1 min. to allow the backup power supply of the SAS control module to deplete its stored power. Disconnecting the battery cable will delete the memories of the clock, audio, and DTCs, etc. Therefore, it is necessary to verify those memories before disconnecting the cable.

Oil Leakage Inspection

- Use either of the following procedures to identify the type of oil that is leaking:

Using UV light (black light)

1. Remove any oil on the engine or transaxle/transmission.

Note

- Referring to the fluorescent dye instruction manual, mix the specified amount of dye into the engine oil (ATF (or transaxle/transmission oil).

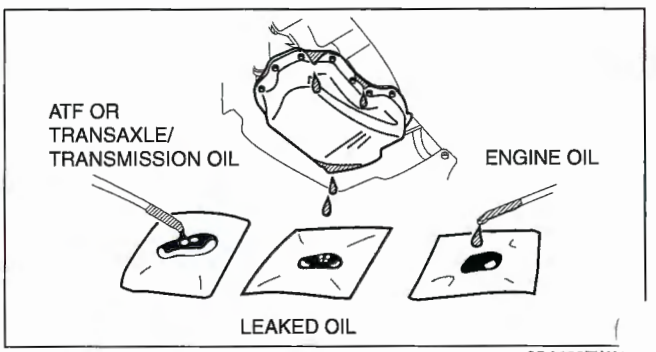
2. Pour the fluorescent dye into the engine oil or ATF (or transaxle/transmission oil).
3. Allow the engine to run for 30 min.
4. Inspect for dye leakage by irradiating with UV light (black light), and identify the type of oil that is leaking.
5. If no dye leakage is found, allow the engine to run for another 30 min. or drive the vehicle then reinspect.
6. Find where the oil is leaking from, then make necessary repairs.

Note

- To determine whether it is necessary to replace the oil after adding the fluorescent dye, refer to the fluorescent dye instruction manual.

Not using UV light (black light)

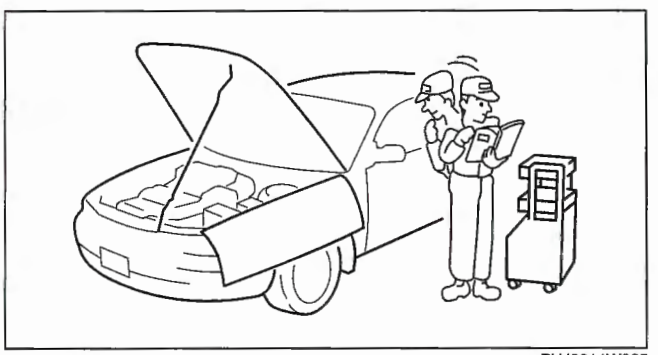
1. Gather some of the leaking oil using an absorbent white tissue.
2. Take samples of engine oil and ATF (or transaxle/transmission oil), both from the dipstick, and place them next to the leaked oil already gathered on the tissue.
3. Compare the appearance and smell, and identify the type of oil that is leaking.
4. Remove any oil on the engine or transaxle/ transmission.
5. Allow the engine to run for 30 min.
6. Check the area where the oil is leaking, then make necessary repairs.



CDA000ZWA0[illegible]

Removal of Parts

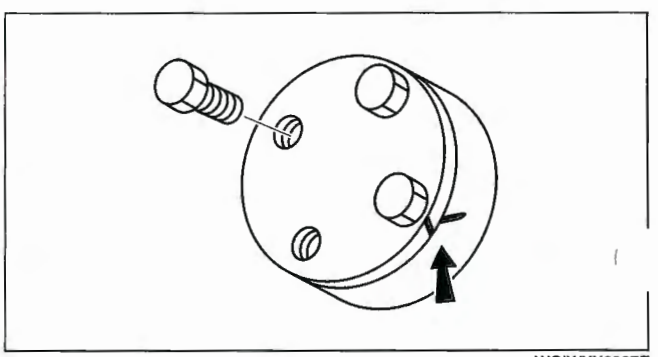
- While correcting a problem, also try to determine its cause. Begin work only after first learning which parts and subassemblies must be removed and disassembled for replacement or repair. After removing the part, plug all holes and ports to prevent foreign material from entering.



BHJ0014W005

Disassembly

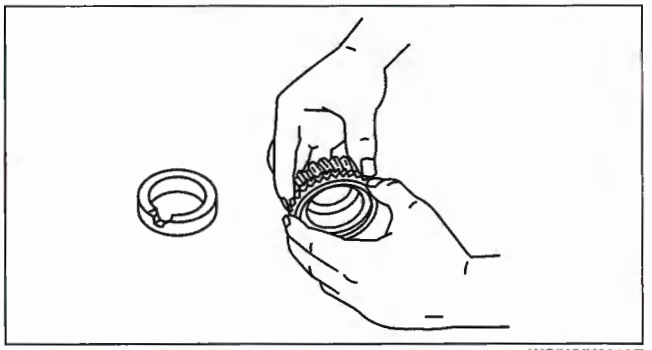
- If the disassembly procedure is complex, requiring many parts to be disassembled, all parts should be marked in a place that will not affect their performance or external appearance and identified so that reassembly can be performed easily and efficiently.



WGIWXX0027E

Inspection During Removal, Disassembly

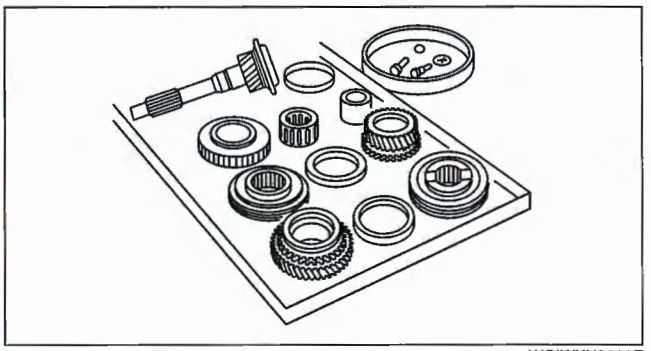
- When removed, each part should be carefully inspected for malfunction, deformation, damage and other problems.



WGIWXX0028E

Arrangement of Parts

- All disassembled parts should be carefully arranged for reassembly.
- Be sure to separate or otherwise identify the parts to be replaced from those that will be reused.



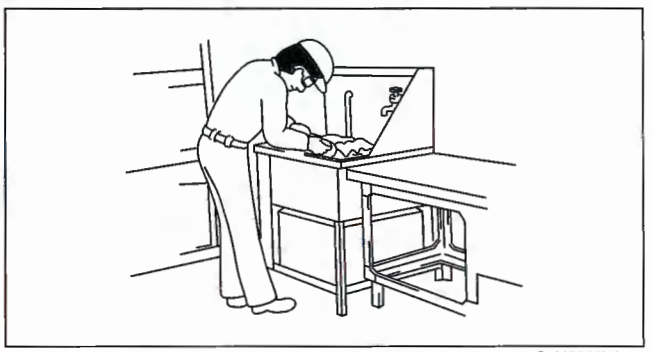
WGIWXX0029E

Cleaning of Parts

All parts to be reused should be carefully and thoroughly cleaned in the appropriate method.

Warning

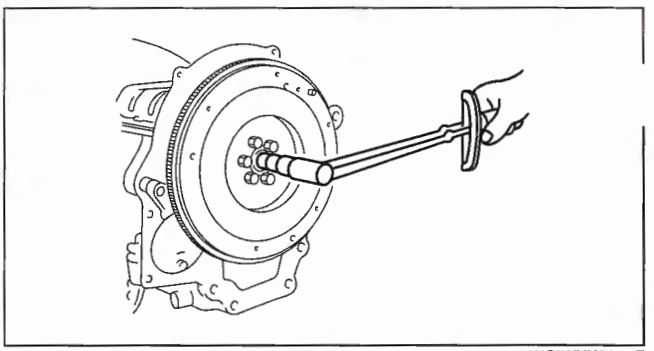
- **Using compressed air can cause dirt and other particles to fly out causing injury to the eyes. Wear protective eye wear whenever using compressed air.**



C5U0000W001

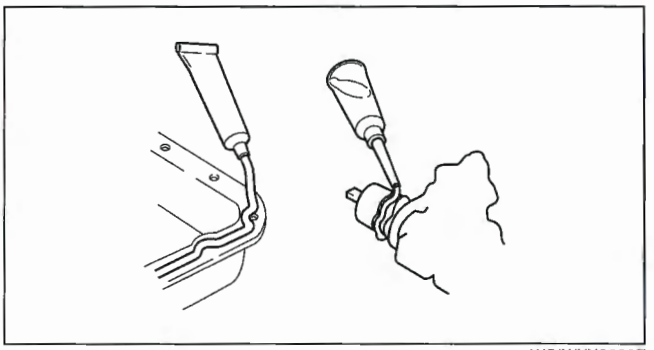
Reassembly

- Standard values, such as torques and certain adjustments, must be strictly observed in the reassembly of all parts.
- If removed, these parts should be replaced with new ones:
  - — Oil seals
  - — Gaskets
  - — O-rings
  - — Lockwashers
  - — Cotter pins
  - — Nylon nuts



WGIWXX0031E

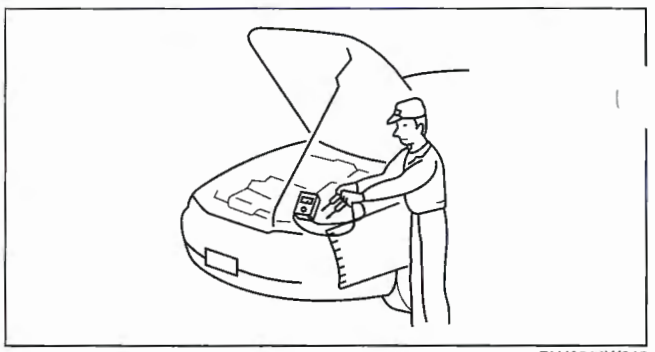
- Depending on location:
  - — Sealant and gaskets, or both, should be applied to specified locations. When sealant is applied, parts should be installed before sealant hardens to prevent leakage.
  - — Oil should be applied to the moving components of parts.
  - — Specified oil or grease should be applied at the prescribed locations (such as oil seals) before reassembly.



WGIWXX0032E

Adjustment

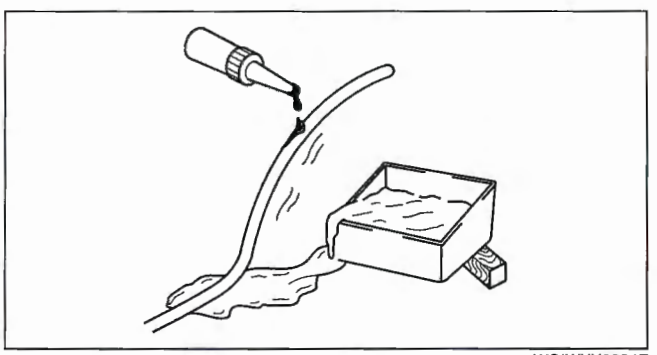
- Use suitable gauges and testers when making adjustments.



BHJ0014W012

Rubber Parts and Tubing

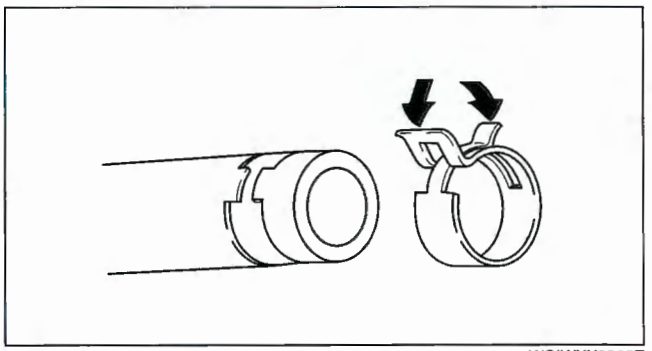
- Prevent gasoline or oil from getting on rubber parts or tubing.



WGIWXX0034E

Hose Clamps

- When reinstalling, position the hose clamp in the original location on the hose and squeeze the clamp lightly with large pliers to ensure a good fit.

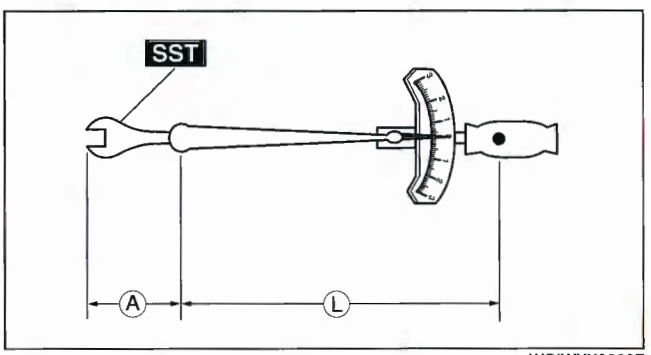


WGIWXX0035E

Torque Formulas

- When using a torque wrench-**SST** or equivalent combination, the written torque must be recalculated due to the extra length that the **SST** or equivalent adds to the torque wrench. Recalculate the torque by using the following formulas. Choose the formula that applies to you.

Torque Unit	Formula
N·m	N·m × [L/(L+A)]
kgf·m	kgf·m × [L/(L+A)]
kgf·cm	kgf·cm × [L/(L+A)]
ft·lbf	ft·lbf × [L/(L+A)]
in·lbf	in·lbf × [L/(L+A)]

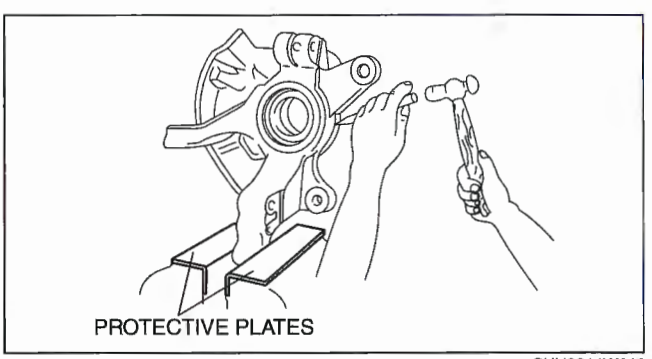


WGIWXX0036E

A : The length of the **SST** past the torque wrench drive.
: The length of the torque wrench.

Vise

- When using a vise, put protective plates in the jaws of the vise to prevent damage to parts.



CHU0014W010

Dynamometer

- When inspecting and servicing the power train on the dynamometer or speed meter tester, pay attention to the following:
  - — Place a fan, preferably a vehicle-speed proportional type, in front of the vehicle.
  - — Make sure the vehicle is in a facility with an exhaust gas ventilation system.
  - — Since the rear bumper might deform from the heat, cool the rear with a fan. (Surface of the bumper must be below **70°C {158°F} degrees**.)
  - — Keep the area around the vehicle uncluttered so that heat does not build up.
  - — Watch the water temperature gauge and don't overheat the engine.
  - — Avoid added load to the engine and maintain normal driving conditions as much as possible.

Note

- When only the front or rear wheels are rotated on a chassis dynamometer or equivalent, the ABS/TCS/DSC CM determines that there is a malfunction in the ABS/TCS/DSC and illuminates the following lights:
  - — Vehicles with ABS/TCS
    - ABS warning light
    - Brake system warning light
    - TCS indicator light
  - — Vehicles with DSC
    - ABS warning light
    - Brake system warning light
    - DSC indicator light
- If the above lights are illuminated, dismount the vehicle from the chassis dynamometer and turn the ignition switch to the LOCK position. Then, turn the ignition switch back to the ON position, run the vehicle at 10 km/h or more and verify that the warning lights go out. In this case, a DTC will be stored in the memory. Clear the DTC from the memory by following the memory clearing procedure [ABS]/[TCS]/[DSC] in the on-board diagnostic system. (See 04–02A–2 ABS/TCS ON-BOARD DIAGNOSIS.), (See 04–02B–3 DSC ON-BOARD DIAGNOSIS.)

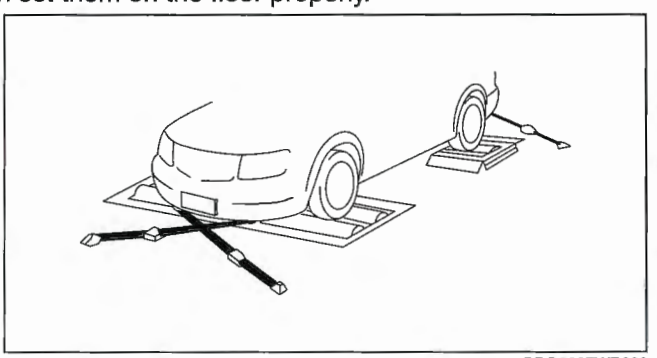
4WD inspection/service
Speedometer tester measurement

Caution

- **Install the tension bar (chain wire) to the tie down hook and secure the vehicle to prevent it from rolling and running off.**
- **Do not accelerate suddenly from a standstill or accelerate/decelerate rapidly.**

Free roller type

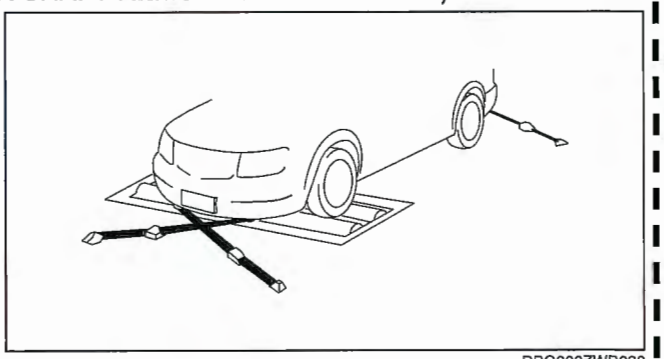
1. Align the free rollers with the wheel base and tread, then set them on the floor properly.
2. Drive the vehicle slowly onto the tester roller and free rollers.
3. Start the engine and accelerate gradually to inspect the speedometer.
4. After inspection, decelerate gradually with gentle braking.



DBG000ZWB022

Propeller shaft removal type

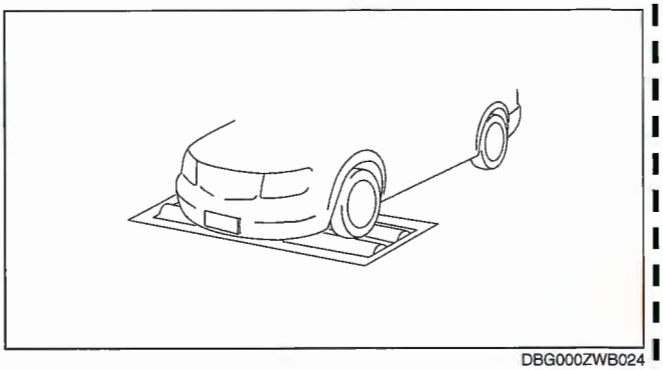
1. Remove the propeller shaft. (See 03–15–4 PROPELLER SHAFT REMOVAL/INSTALLATION.)
2. Place the front wheels on the tester roller.
3. Accelerate gradually and inspect the speedometer.
4. After inspection, decelerate gradually with gentle braking.
5. Install the propeller shaft. (See 03–15–4 PROPELLER SHAFT REMOVAL/INSTALLATION.)



DBG000ZWB023

Brake tester measurement

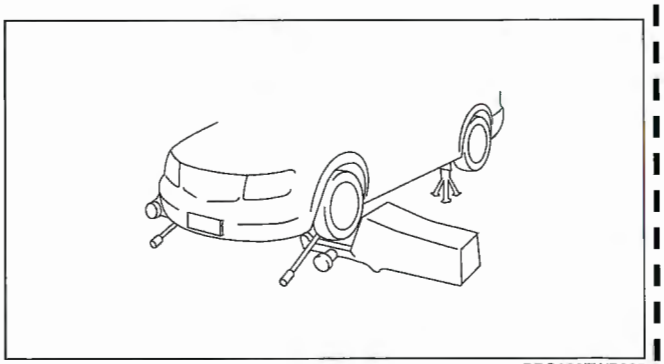
1. Place the wheels (front or rear) to be measured on the tester roller.
2. Shift to the N position/neutral.
3. Activate the tester roller and measure braking force.
   If there is a large amount of brake drag force, the electronic control system coupling may be affected. Jack up all four wheels to eliminate the effect of the coupling and rotate each wheel by hand to verify the rotation condition.



DBG000ZWB024

Wheel balancer (on the vehicle balancer)

1. Jack up all four wheels.
2. Support the wheels (front or rear) on the side to be measured (near the wheels) using a wheel balancer sensor stand.
3. Support the wheels on the side not to be measured (near the wheels) using safety stands.
4. Set up the wheel balancer and rotate the wheels using engine drive to measure the wheel balance.

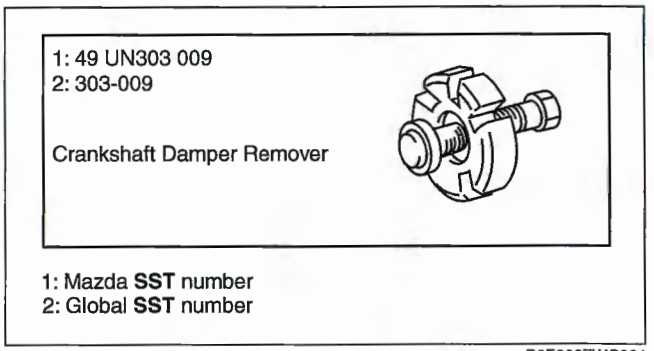


DBG000ZWB025

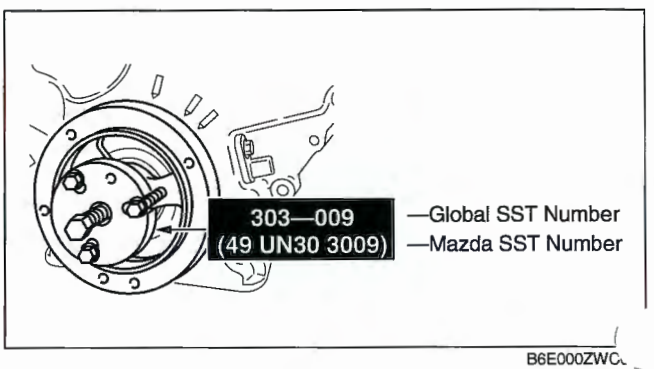
SST

- Some global **SST** or equivalent are used as **SSTs** necessary for engine repair. Note that these **SSTs** are marked with global **SST** numbers.
- Note that a global **SST** number is written together with a corresponding Mazda **SST** number as shown below.

Example (01–60 section)



Example (except 01–60 section)



INSTALLATION OF RADIO SYSTEM

E6U000000000W07

- If a radio system is installed improperly or if a high-powered type is used, the CIS and other systems may be affected. When the vehicle is to be equipped with a radio, observe the following precautions:
  - — Install the antenna at the farthest point from control modules.
  - — Install the antenna feeder as far as possible from the control module harnesses.
  - — Ensure that the antenna and feeder are properly adjusted.
  - — Do not install a high-powered radio system.

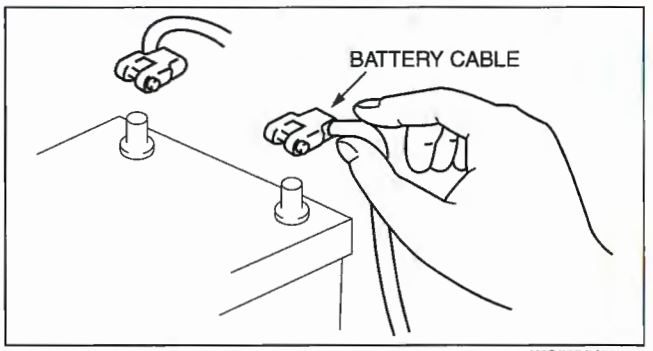
ELECTRICAL SYSTEM

E6U000000000W08

Electrical Parts

Battery cable

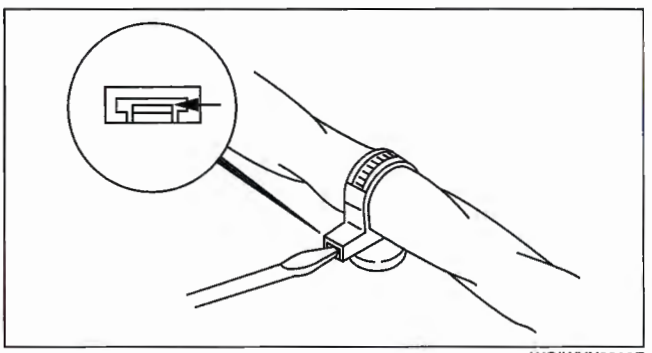
- Before disconnecting connectors or removing electrical parts, disconnect the negative battery cable.



WGIWXX0007E

Wiring Harness

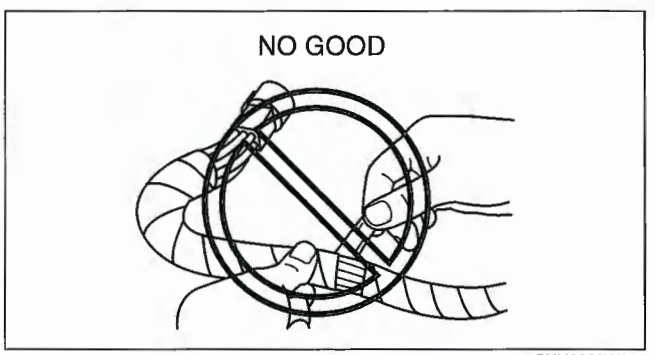
- To remove the wiring harness from the clip in the engine room, pry up the hook of the clip using a flathead screwdriver.



WGIWXX0039E

Caution

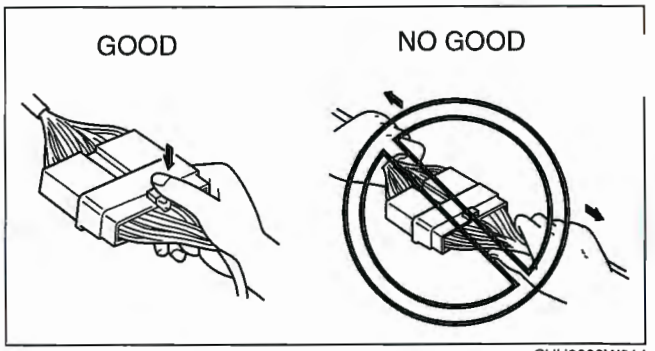
Do not remove the harness protective tape. Otherwise, the wires could rub against the body, which could result in water penetration and electrical shorting.



CHU0000W010

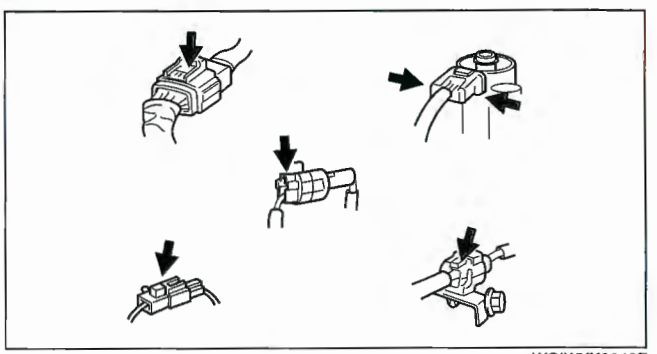
Connectors
Disconnecting connectors

- When disconnecting connector, grasp the connectors, not the wires.



CHU0000W014

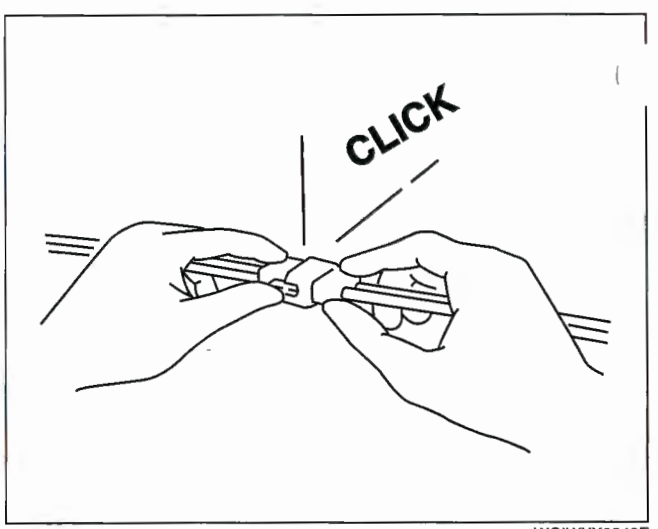
- Connectors can be disconnected by pressing or pulling the lock lever as shown.



WGIWXX0042E

Locking connector

- When locking connectors, listen for a click indicating they are securely locked.

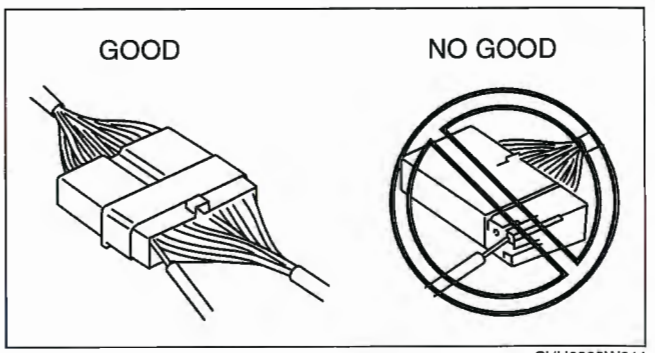


WGIWXX0043E

Inspection

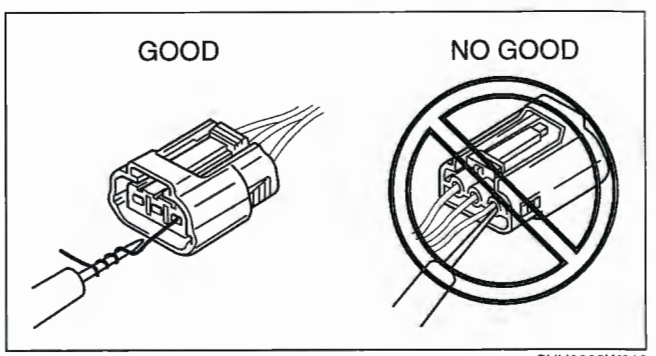
Caution
- **To prevent damage to the terminal, wrap a thin wire around the tester probe before inserting into terminal.**

- When a tester is used to inspect for continuity or measuring voltage, insert the tester probe from the wiring harness side.



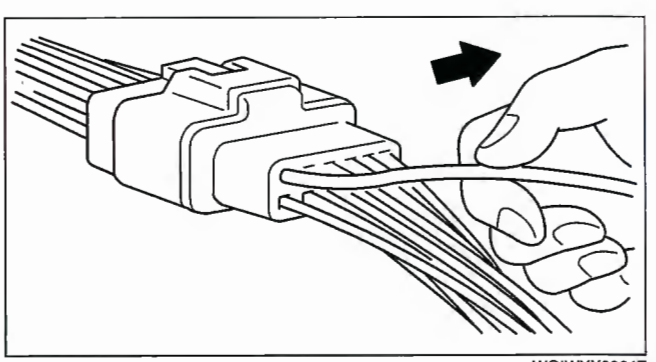
CHU0000W011

- Inspect the terminals of waterproof connectors from the connector side since they cannot be accessed from the wiring harness side.



CHU0000W012

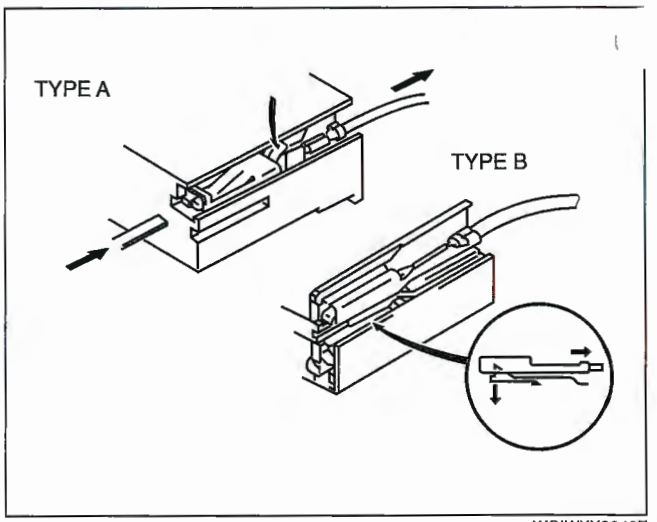
Terminals
Inspection
- Pull lightly on individual wires to verify that they are secured in the terminal.



WGIWXX0064E

Replacement

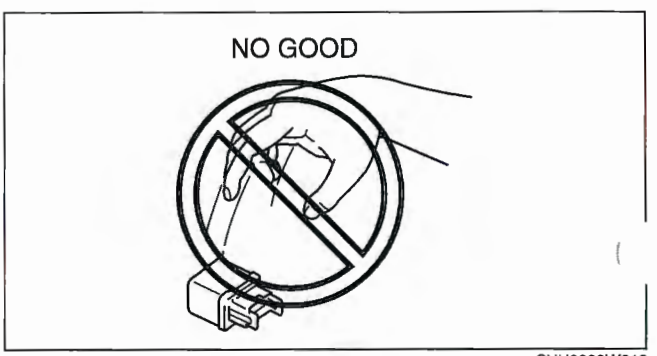
- Use the appropriate tools to remove a terminal as shown. When installing a terminal, be sure to insert it until it locks securely.
- Insert a thin piece of metal from the terminal side of the connector and with the terminal locking tab pressed down, pull the terminal out from the connector.



WGIWXX0046E

Sensors, Switches, and Relays

- Handle sensors, switches, and relays carefully. Do not drop them or strike them against other objects.



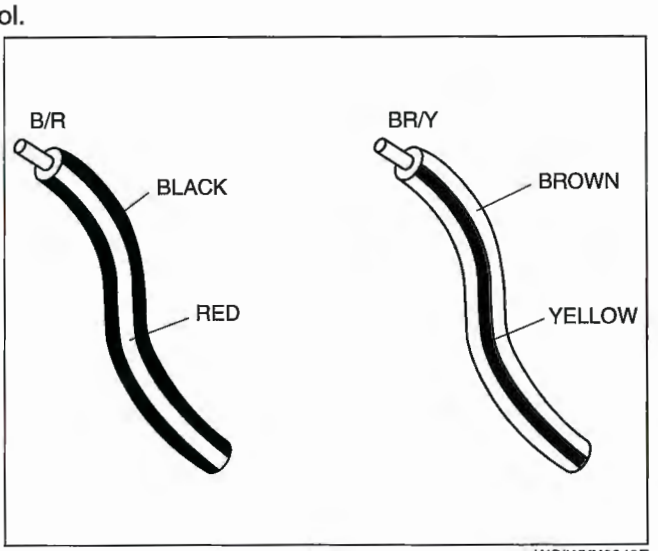
CHU0000W013

Wiring Harness

Wiring color codes

- Two-color wires are indicated by a two-color code symbol.
- The first letter indicates the base color of the wire and the second the color of the stripe.

CODE	COLOR	CODE	COLOR
B	Black	O	Orange
BR	Brown	P	Pink
G	Green	R	Red
GY	Gray	V	Violet
L	Blue	W	White
LB	Light Blue	Y	Yellow
LG	Light Green	–	–

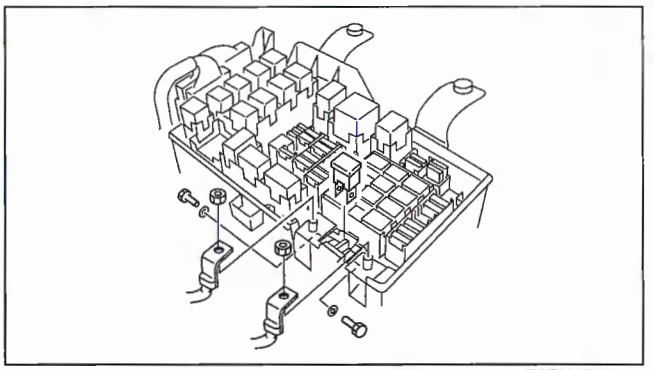


WGIWXX0048E

Fuse

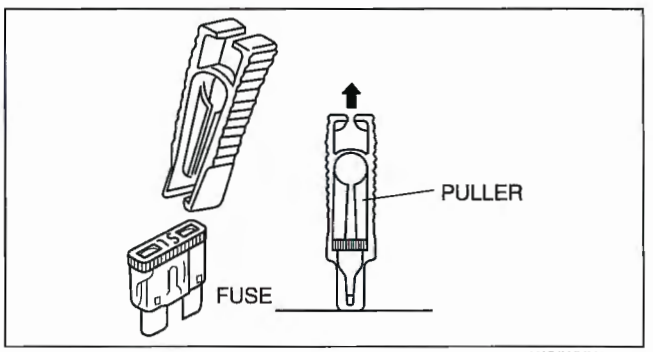
Replacement

- When replacing a fuse, be sure to replace it with one of the same capacity. If a fuse fails again, the circuit probably has a short and the wiring should be inspected.
  Be sure the negative battery terminal is disconnected before replacing a main fuse.



D6E000ZW4010

- When replacing a pullout fuse, use the fuse puller.



WGIWXX0050E

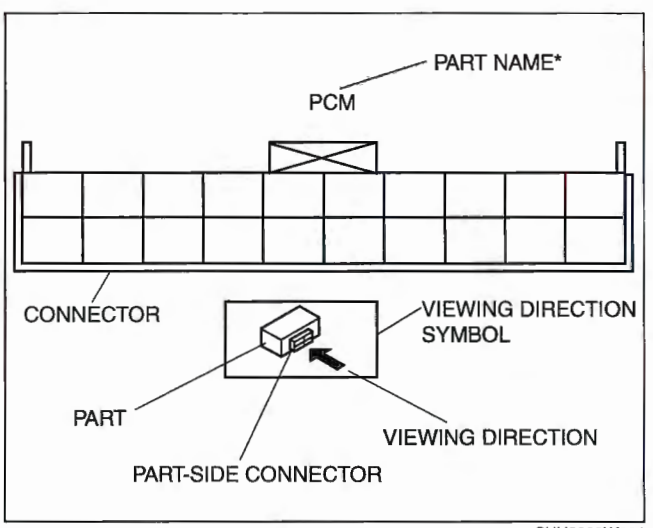
ection of View for Connector

- The viewing direction of connectors is indicated with a symbol.
- The figures showing the viewing direction are the same as those used in Wiring Diagrams.
- The viewing directions are shown in the following three ways:

Part-side connector

The viewing direction of part-side connectors is from the terminal side.

* : Part names are shown only when there are multiple connector drawings.

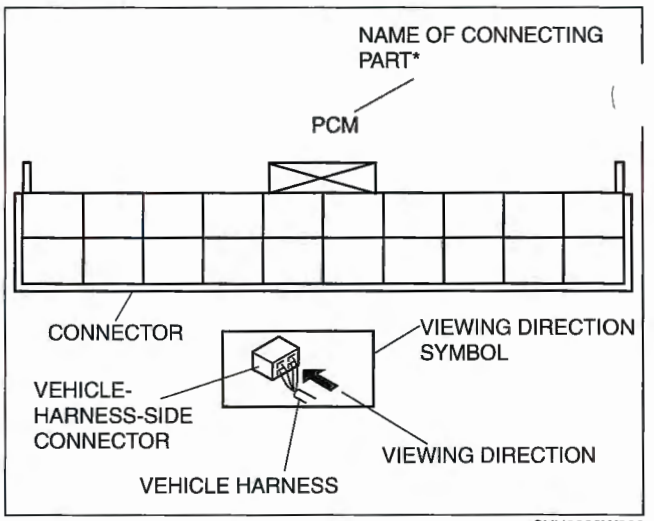


CHU0000W001

Vehicle harness-side connector

The viewing direction of vehicle harness-side connectors is from the harness side.

* : Part names are shown only when there are multiple connector drawings.

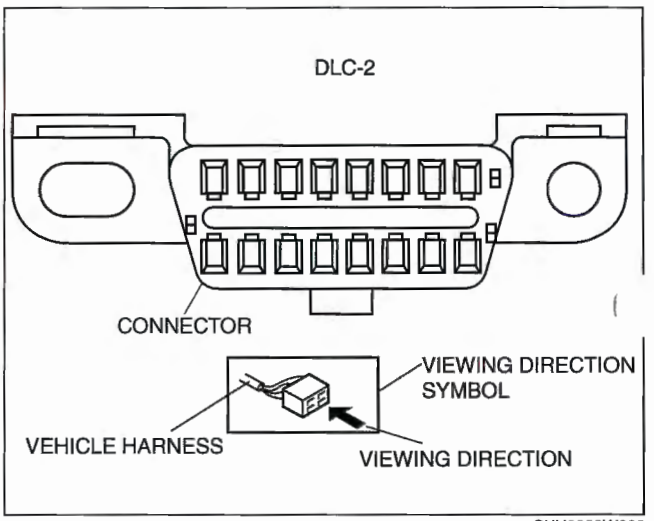


CHU0000W002

Other

When it is necessary to show the terminal side of vehicle harness-side connectors, such as the following connectors, the viewing direction is from the terminal side.

- Main fuse block and the main fuse block relays
- Data link connector
- Check connector
- Relay box



CHU0000W003

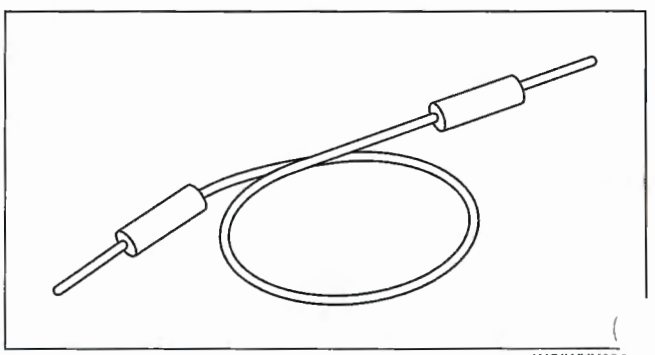
Electrical Troubleshooting Tools

Jumper wire

Caution

- **Do not connect a jumper wire from the power source line to a body ground. This may cause burning or other damage to wiring harnesses or electronic components.**

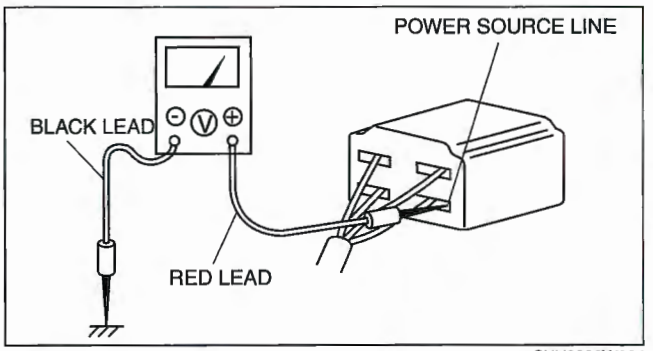
- A jumper wire is used to create a temporary circuit. Connect the jumper wire between the terminals of a circuit to bypass a switch.



WGIWXX006

Voltmeter

- The DC voltmeter is used to measure circuit voltage. A voltmeter with a range of **15 V or more** is used by connecting the positive (+) probe (red lead wire) to the point where voltage will be measured and the negative (-) probe (black lead wire) to a body ground.



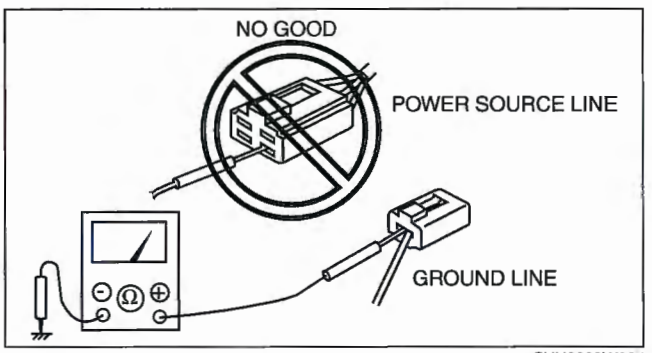
CHU0000W004

Ohmmeter

Caution

- **Do not connect the ohmmeter to any circuit where voltage is applied. This will damage the ohmmeter.**

- The ohmmeter is used to measure the resistance between two points in a circuit and to inspect for continuity and short circuits.

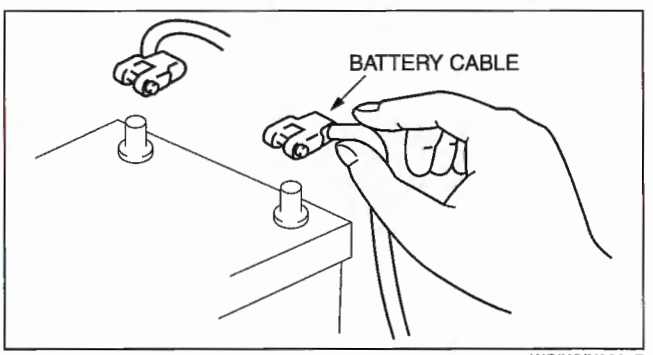


CHU0000W005

Precautions Before Welding

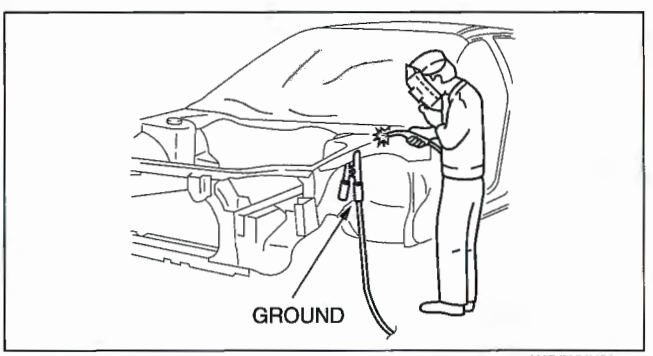
A vehicle has various electrical parts. To protect the parts from excessive current generated when welding, be sure to perform the following procedure.

1. Turn the ignition switch to the LOCK position.
2. Disconnect the battery cables.



WGIWXX0007E

3. Securely connect the welding machine ground near the welding area.
4. Cover the peripheral parts of the welding area to protect them from weld spatter.



WGIWXX0008E

JACKING POSITIONS, VEHICLE LIFT (2 SUPPORTS) AND SAFETY STAND (RIGID RACK) POSITIONS

E6U000000000W09

Jacking Positions [Mazda6]

Warning

- **Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.**

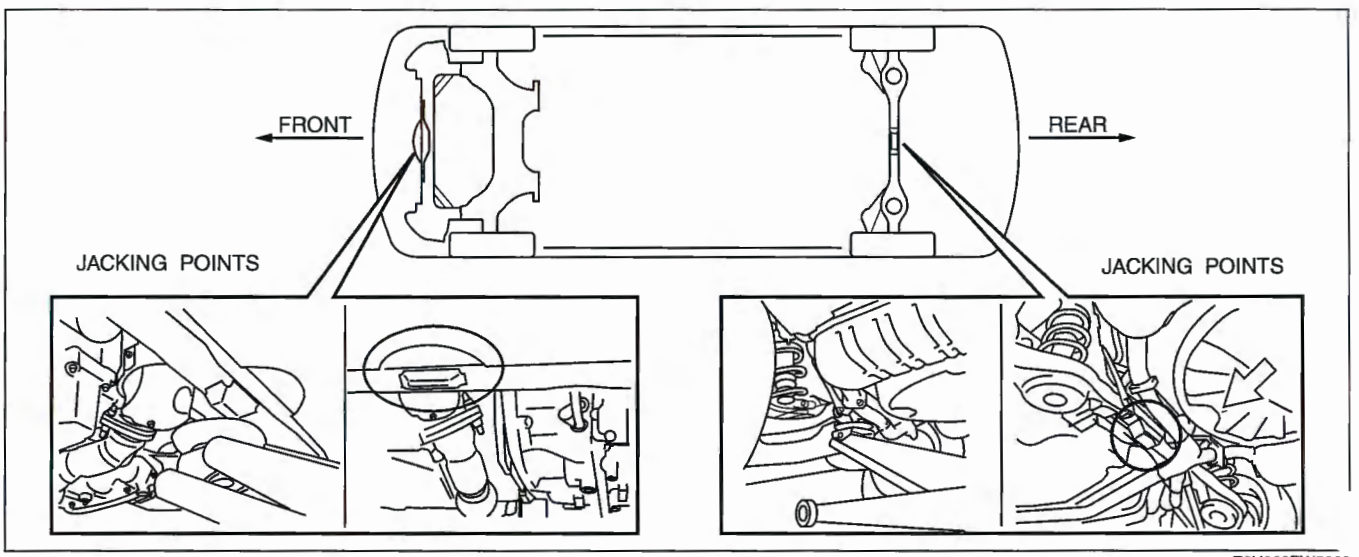
- Use safety stands to support the vehicle after it has been lifted.

Front

- At the jacking plate of the front crossmember.

Rear

- At the center of torsion beam axle.



E6U000ZW5009

Jacking Positions [MAZDASPEED6]

Warning

- **Improperly jacking a vehicle is dangerous. The vehicle can slip off the jack and cause serious injury. Use only the correct front and rear jacking points and block the wheels.**

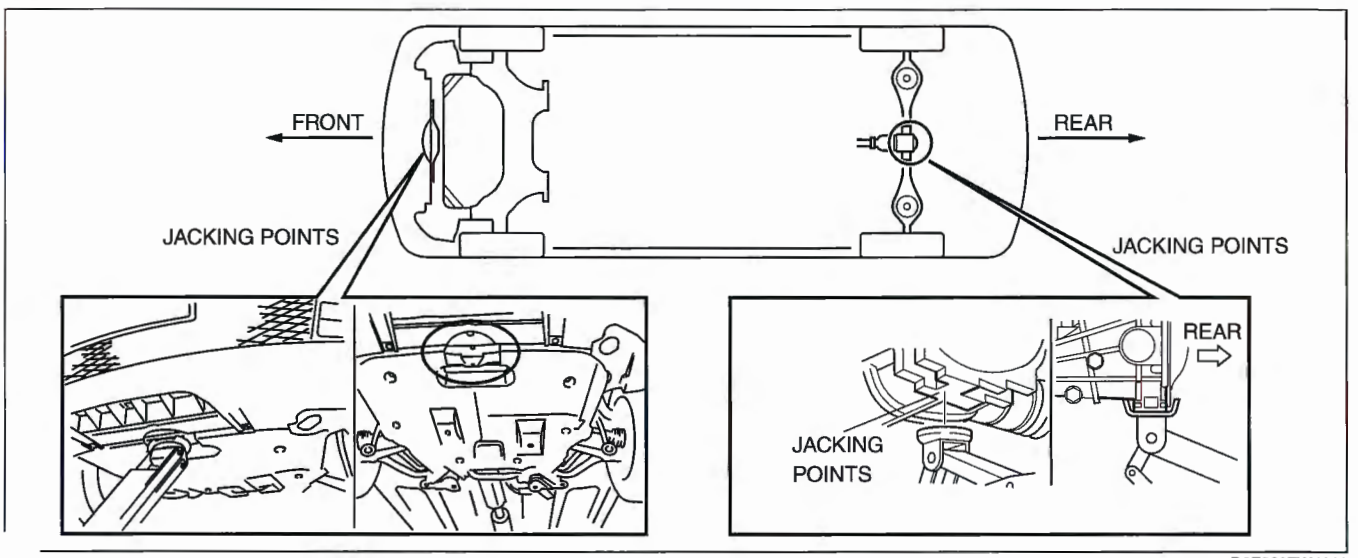
- Use safety stands to support the vehicle after it has been lifted.

Front

- At the jacking plate of the front crossmember.

Rear

- At the center of rear differential.



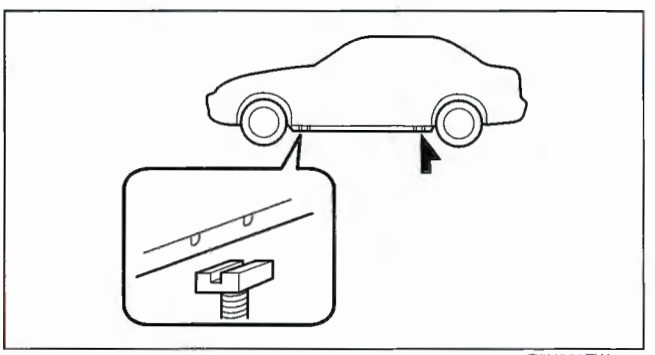
D6E000ZW4012

Vehicle Lift Positions
Front and rear

Warning

- **Unstably lifting a vehicle is dangerous. The vehicle can slip off the lift and cause serious injury and/or vehicle damage. Make sure that the vehicle is on the lift horizontally by adjusting the height of support at the end of the arm of the lift.**

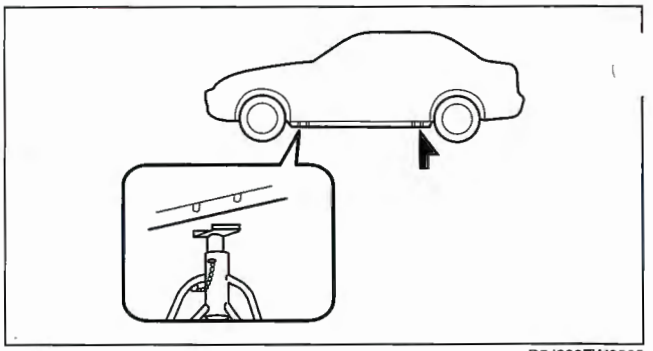
- Both sides of the vehicle, on side sills.



E5U000ZW5019

Safety Stand Positions
Front and rear

- Both sides of the vehicle, on side sills.

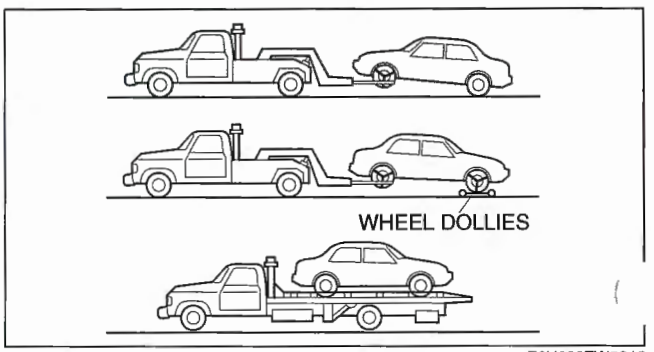


D5J000ZW6003

TOWING

E6U000000000W10

- Proper lifting and towing are necessary to prevent damage to the vehicle. State and local laws must be followed.
- A towed 2WD vehicle usually should have its front wheels off the ground. If excessive damage or other conditions prevent this, use wheel dollies.
- When towing a 2WD vehicle with the rear wheels on the ground, release the parking brake.
- A towed 4WD vehicle must have all its wheels off the ground.

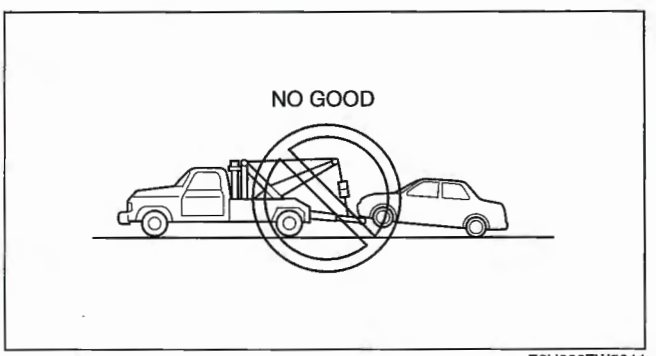


E6U000ZW5010

Towing a 2WD Vehicle

Caution

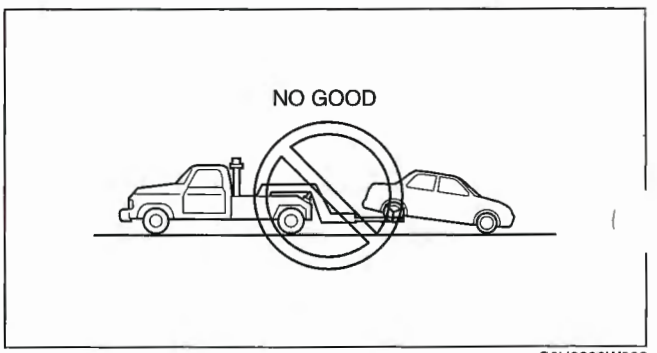
- **Do not tow with sling-type equipment. This could damage your vehicle. Use wheel-lift or flatbed equipment.**



E6U000ZW5011

Caution

- **Do not tow the vehicle pointed backward with driving wheels on the ground. This may cause internal damage to the transaxle.**

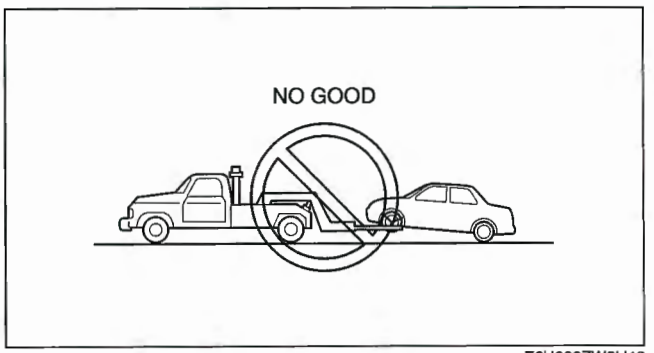


C6U0000W002

Towing a 4WD Vehicle

Warning

- **Towing a 4WD vehicle with either the front or rear wheels on the ground is dangerous as the drive train could be damaged, or the vehicle could trail away from the tow truck and cause an accident. Always tow a 4WD vehicle with all four wheels off the ground. If the drive train has been damaged, transport the vehicle on a flat bed truck.**



E6U000ZW6H12

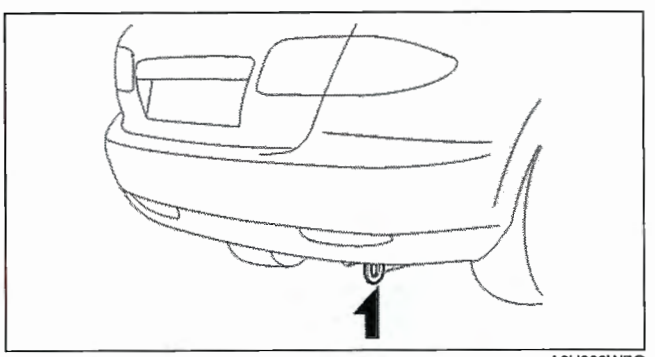
TIEDOWN HOOK

E6U000000000W11

Tiedown Hook [Mazda6]

Caution

- **Do not use the hook loops under the rear bumper for towing. It is designed ONLY for tying down the vehicle when it is being transported. Using them for towing will damage the bumper.**



A6U000WBQ

Tiedown Hook [MAZDASPEED6]

Caution

- **Don't use the tiedown hook under the front and rear for towing. It is designed ONLY for tying down the vehicle when it's being transported. Using them for towing will damage the bumper.**
- **Either of the rear tiedown hooks (left/right) can be used.**

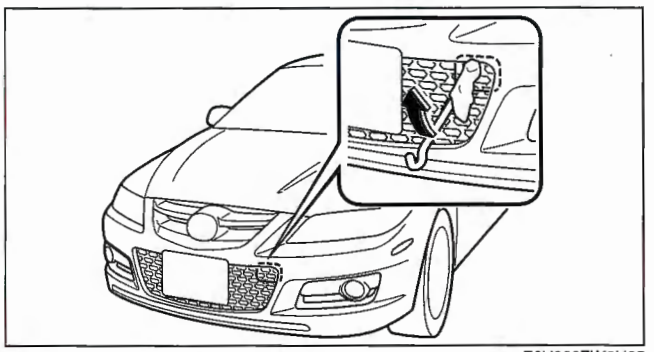
1. Remove the tiedown eyelet and lug wrench from the trunk.

2. Wrap a lug wrench with a soft cloth to prevent damage to the painted bumper and open the cap located on the front and rear bumper.

Caution

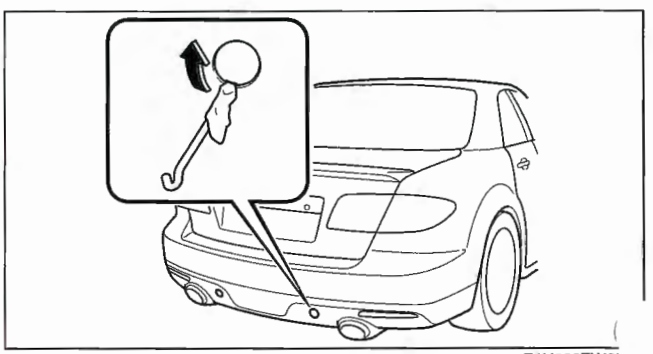
- **The cap cannot be completely removed. Do not use excessive force as it may damage the cap o. scratch the painted bumper surface.**

Front



E6U000ZW6H05

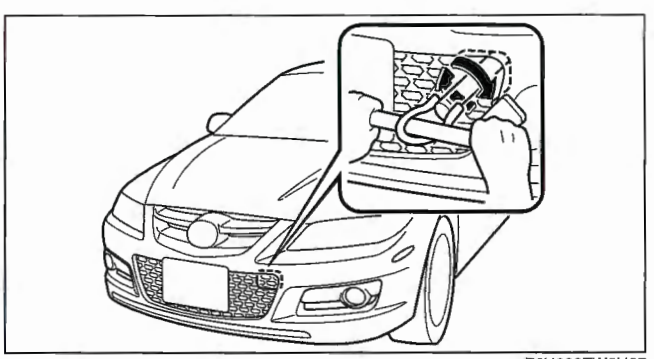
Rear



E6U000ZW6H

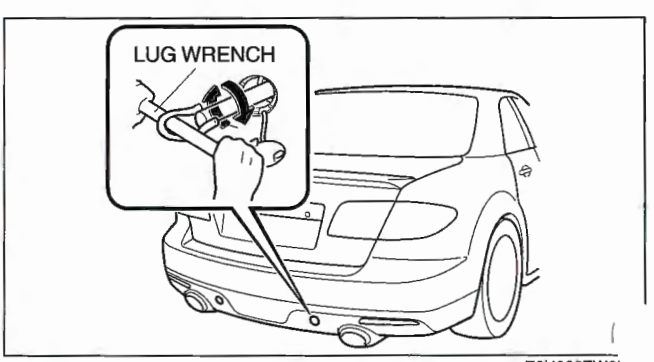
3. Securely install the tiedown eyelet using the lug wrench.

Front



E6U000ZW6H07

Rear



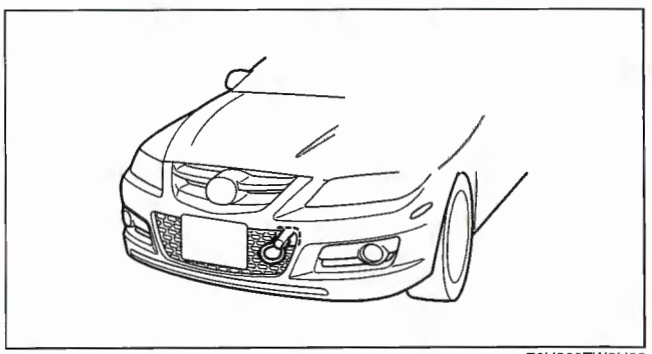
E6U000ZW6H

4. Hook the tying rope to the tiedown eyelet.

Caution

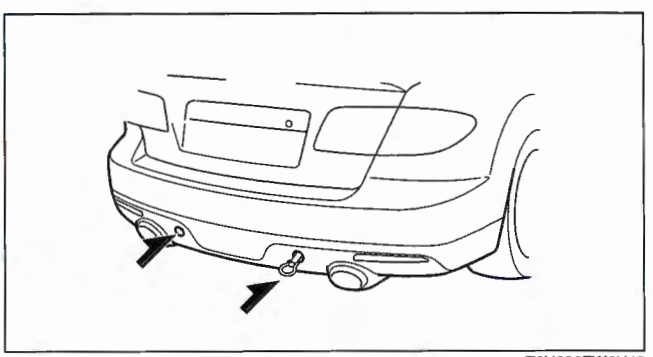
- **If the tiedown eyelet is not securely tightened, it may loosen or disengage from the bumper when tying down the vehicle. Make sure that the tiedown eyelet is securely tightened to the bumper.**

Front



E6U000ZW6H09

Rear



E6U000ZW6H10

SAE STANDARDS

E6U000000000W16

- In accordance with new regulations, SAE (Society of Automotive Engineers) standard names and abbreviations are now used in this manual. The table below lists the names and abbreviations that have been used in Mazda manuals up to now and their SAE equivalents.

SAE Standard		Remark		SAE Standard		Remark
Abbreviation	Name			Abbreviation	Name	
AP	Accelerator Pedal			MAP	Manifold Absolute Pressure	
APP	Accelerator Pedal Position			MAF sensor	Mass Air Flow Sensor	
ACL	Air Cleaner			MFL	Multiport Fuel Injection	
A/C	Air Conditioning			OBD	On-board Diagnostic System	
BARO	Barometric Pressure			OL	Open Loop	
B+	Battery Positive Voltage			OC	Oxidation Catalytic Converter	
CMP sensor	Camshaft Position Sensor			O2S	Oxygen sensor	
CAC	Charge Air Cooler			PNP	Park/Neutral Position	
CLS	Closed Loop System			PSP	Power Steering Pressure	
CTP	Closed Throttle Position			PCM	Powertrain Control Module	#3
CPP	Clutch Pedal Position			PAIR	Pulsed Secondary Air Injection	Pulsed injection
CIS	Continuous Fuel Injection System			AIR	Secondary Air Injection	Injection with air pump
CKP sensor	Crankshaft Position Sensor			SAPV	Secondary Air Pulse Valve	
DLC	Data Link Connector			SFI	Sequential Multiport Fuel Injection	
DTM	Diagnostic Test Mode	#1		3GR	Third Gear	
DTC	Diagnostic Test Code(s)			TWC	Three Way Catalytic Converter	
DI	Distributor Ignition			TB	Throttle Body	
DLI	Distributorless Ignition			TP sensor	Throttle Position Sensor	
EI	Electronic Ignition	#2		TCC	Torque Converter Clutch	
ECT	Engine Coolant Temperature			TCM	Transmission (Transaxle) Control Module	
EM	Engine Modification			TR	Transmission (Transaxle) Range	
EVAP	Evaporative Emission			TC	Turbocharger	
EGR	Exhaust Gas Recirculation			VSS	Vehicle Speed Sensor	
FC	Fan Control			VR	Voltage Regulator	
FF	Flexible Fuel			VAF sensor	Volume Air Flow Sensor	
4GR	Fourth Gear			WU-TWC	Warm Up Three Way Catalytic Converter	#4
GEN	Generator			WOP	Wide Open Throttle	
GND	Ground					
HO2S	Heated Oxygen Sensor	With heater				
IAC	Idle Air Control					
IAT	Intake Air Temperature					
KS	Knock Sensor					
MIL	Malfunction Indicator Lamp					

#1: Diagnostic trouble codes depend on the diagnostic test mode.
#2: Controlled by the PCM
#3: Device that controls engine and powertrain
#4: Directly connected to exhaust manifold

PRE-DELIVERY INSPECTION

E6U000000000W14

Pre-Delivery Inspection Table

Exterior

INSPECT and **ADJUST**, if necessary, the following items to specification:
❑ Glass, exterior bright metal and paint for damage
❑ Wheel lug nuts
❑ All weatherstrips for damage or detachment
❑ Tire pressures
❑ Headlight cleaner and fluid level (if equipped)
❑ Operation of hood release and lock
❑ Operation of trunk lid and fuel-filler lid opener
❑ Door operation and alignment including side door and back door
❑ Headlight aiming
INSTALL the following parts:
❑ Flap (front)
❑ Wheel caps or rings (if equipped)

Under hood—engine off

INSPECT and **ADJUST**, if necessary, the following items to specification:
❑ Fuel, engine coolant, and hydraulic lines, fittings, connections, and components for leaks
❑ Engine oil level
❑ Power steering fluid level
❑ Brake and clutch fluid level
❑ Windshield washer reservoir fluid level
❑ Radiator coolant level and specific gravity
❑ Tightness of water hose clamps
❑ Tightness of battery terminals, electrolyte level and specific gravity
❑ Differential oil level

Interior

INSTALL the following items:
❑ Fuse for accessories
INSPECT the operations of the following items:
❑ Seat controls (slide and recline) and headrests
❑ Folding rear seat
❑ Door locks, including childproof door locks
❑ Seat belts and warning system
❑ Ignition switch and steering lock
❑ Transaxle range switch
❑ Warning buzzers
❑ Ignition key reminder alarm
❑ Air bag system using warning light
❑ Cruise control system (if equipped)
❑ Power door lock
❑ Shift-lock system (if equipped)
❑ Starter interlock
❑ All lights including warning, and indicator lights
❑ Horn, wipers, and washers
❑ Wiper blades performance
Clean wiper blades and windshield, if necessary
❑ Antenna
❑ Audio system
❑ Cigarette lighter and clock
❑ Power windows (if equipped)
❑ Heater, defroster, and air conditioner at various mode selections (if equipped)
INSPECT the following items:
❑ Presence of spare fuse
❑ Upholstery and interior finish
INSPECT and **ADJUST**, if necessary, the following items:
❑ Operation and fit of windows
❑ Pedal height and free play of clutch pedal
❑ Parking brake

Under hood—engine running at operating temperature
INSPECT the following items:
❑ Automatic transaxle fluid level
❑ Operation of idle-up system for electrical load, air conditioner or power steering (if equipped)
❑ Ignition timing
❑ Idle speed
❑ Operation of throttle position sensor
❑ Operation of EGR valve

On hoist
INSPECT the following items:
❑ Manual transaxle oil level
❑ Underside fuel, coolant and hydraulic lines, fittings, connections, and components for leaks
❑ Tires for cuts or bruises
❑ Steering linkage, suspension, exhaust system, and all underside hardware for looseness or damage

Road test
INSPECT the following items:
❑ Brake operation
❑ Clutch operation
❑ Steering control
❑ Operation of gauges
❑ Squeaks, rattles, and unusual noises
❑ Engine general performance
❑ Emergency locking retractors and automatic locking retractors
❑ Cruise control system (if equipped)
❑ Operation of meters and gauges, squeaks, rattles, and abnormal noises

After road test
INSPECT for necessary owner information materials, tools, and spare tire in vehicle
The following items must be completed just before delivery to your customer.
❑ Load test battery and charge if necessary (Load test result: Volts)
❑ Adjust tire pressure to specification (Specified tire pressure is indicated on the door label.)
❑ Clean outside of vehicle
❑ Install fuses for accessories
❑ Remove seat and cabin carpet protective covers
❑ Vacuum inside of vehicle

SCHEDULED MAINTENANCE

E6U000000000W15

Scheduled Maintenance Table for U.S.A., CANADA, and Puerto Rico [Mazda6]

Schedule 1: Normal driving conditions (U.S.A. only)

- The vehicle is mainly operated where none of the "unique driving conditions" apply.
- For CANADA and Puerto Rico, follow schedule 2.

Maintenance Interval		Number of months or kilometers (miles), whichever comes first							
	Months	6	12	18	24	30	36	42	48
	× 1000 km	12	24	36	48	60	72	84	96
	× 1000 miles	7.5	15	22.5	30	37.5	45	52.5	60
ENGINE									
Drive belts (tension)	L3 engine model					I			
	AJ engine model				I				I

I: Inspect and repair, clean, adjust, or replace if necessary.
R: Replace
L: Lubricate

Remarks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage/kilometer period to ensure long-term reliability.

Schedule 2: Unique driving conditions (for U.S.A. unique conditions and CANADA/Puerto Rico all conditions)

- Repeated short-distance driving
  Driving in dusty conditions
  Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates

Maintenance Interval		Number of months or kilometers (miles), whichever comes first											
	Months	4	8	12	16	20	24	28	32	36	40	44	48

narks

- After the prescribed period, continue to follow the described maintenance at the recommended intervals.
- Refer below for a description of items marked* in the maintenance chart.

*1: Use FL22 type coolant in vehicles with the inscription "FL22" on the radiator cap itself or the surrounding area. Use FL22 when replacing the coolant.

*2: According to state/provincial and federal regulations, failure to perform maintenance on these items will not void your emissions warranties. However, Mazda recommends that all maintenance services be performed at the recommended time or mileage period to ensure long-term reliability.

*3: If the vehicle is operated under any of the following conditions, change the rear differential oil every 45,000 km (28,100 miles).
a) Towing a trailer or using a car-top carrier
b) Driving in dusty, sandy or wet condition
c) Extended periods of idling or low speed operation
d) Repeated short trips of less than 16 km (10 miles)

*4: If this component has been submerged in water, the oil should be changed.

Schedule 2: Unique driving conditions (for U.S.A. unique conditions and CANADA/Puerto Rico all conditions)

- Repeated short-distance driving
- Driving in dusty conditions
- Driving with extended use of brakes
- Driving in areas where salt or other corrosive materials are used
- Driving on rough or muddy roads
- Extended periods of idling or low-speed operation
- Driving for long periods in cold temperatures or extremely humid climates

Maintenance Interval		Number of months or kilometers (miles), whichever comes first

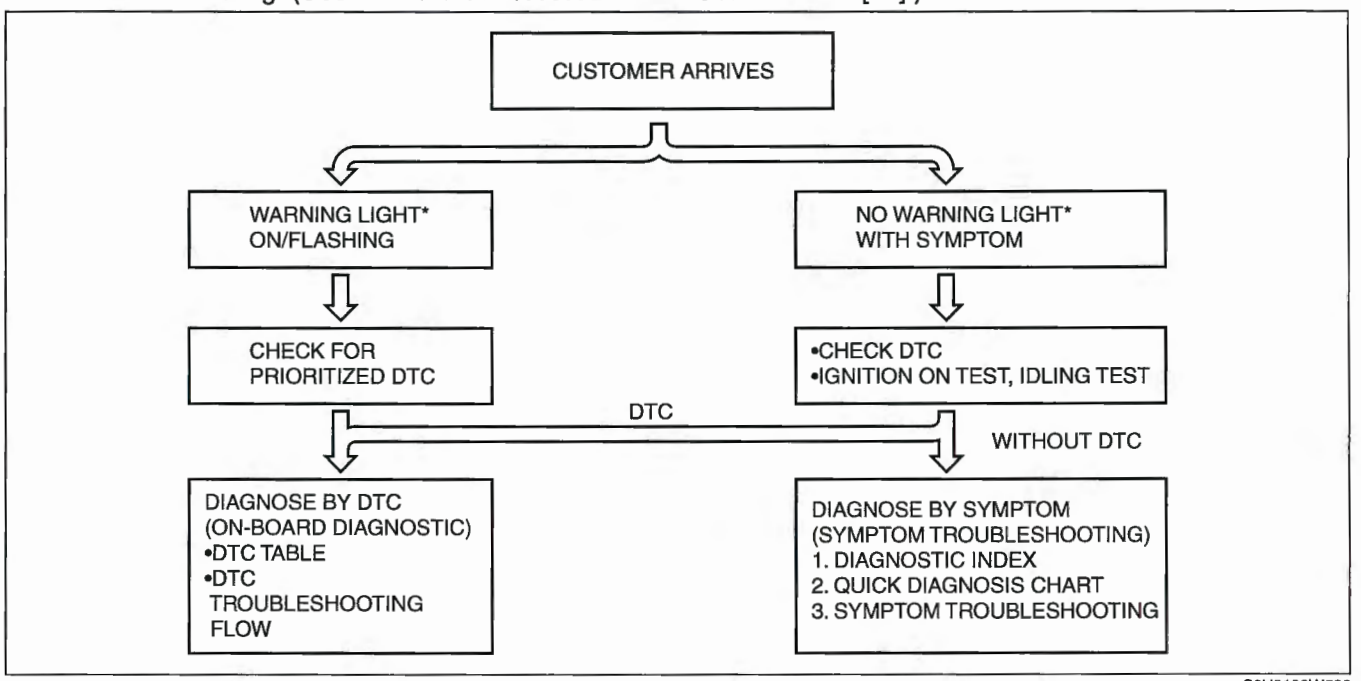
FOREWORD [L3]

E6U010200000W03

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
  - — If the DTC exists, diagnose the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
  - — If the DTC does not exist and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01–03A–11 QUICK DIAGNOSTIC CHART [L3].)



C6U0103W500

*: Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

OBD-II PENDING TROUBLE CODE [L3]

E6U010200000W04

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM judges that the system returned to normal or the problem was mistakenly detected, deletes the pending code. If the problem is found in the second drive cycle too, the PCM judges that the system has failed, and the DTC is stored.

OBD-II FREEZE FRAME DATA [L3]

E6U010200000W05

- This is the technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once freeze frame data for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD-II ON-BOARD SYSTEM READINESS TEST [L3]

E6U010200000W06

- This shows OBD-II systems operating status. If any monitor function is incomplete, WDS or equivalent will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II DIAGNOSTIC MONITORING TEST RESULTS [L3]

E6U010200000W07

- These results from the intermittent monitor system technical data, which are used to determine whether the system is normal or not. They also display the system's thresholds and diagnostic results. The intermittent monitor system monitors the oxygen sensor, EVAP purge system, catalyst and the EGR system.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [L3]

E6U010200000

- This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Te Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [L3]

E6U010200000W09

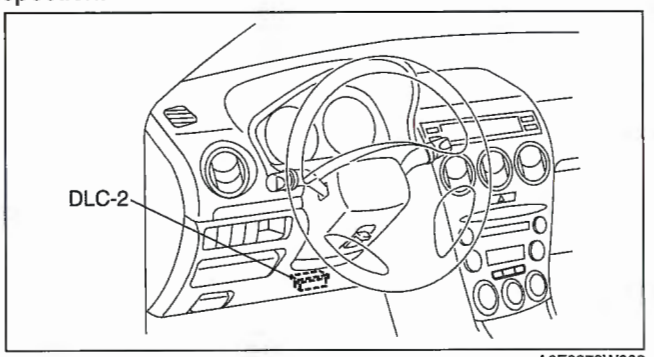
- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST [L3]

E6U010200000W10

DTCs Reading Procedure

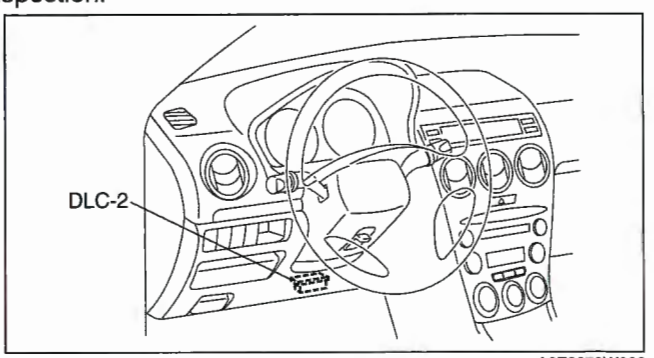
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Retrieve DTCs by WDS or equivalent.



A6E3970W002

Pending Trouble Code Access Procedure

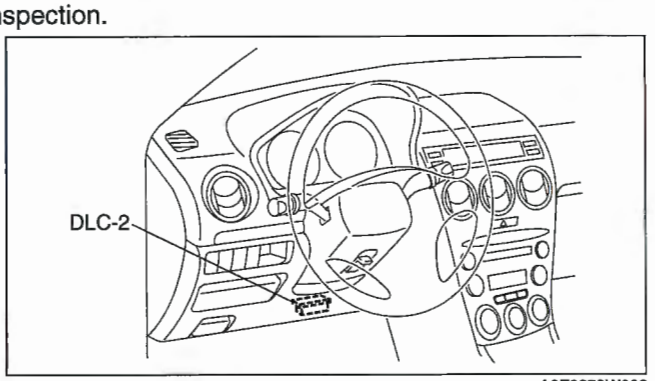
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Retrieve **PENDING trouble codes** by WDS or equivalent.



A6E3970W002

Freeze Frame PID Data Access Procedure

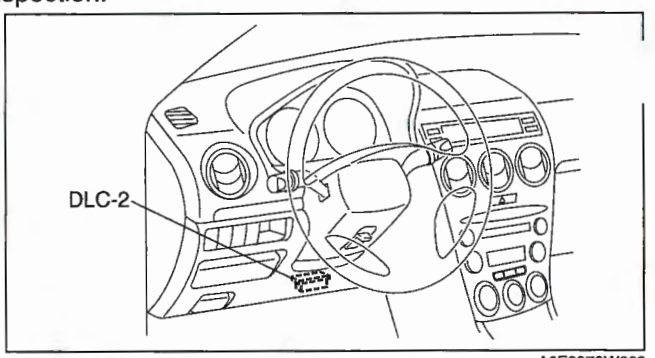
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Record the FREEZE FRAME PID DATA by WDS or equivalent.



A6E3970W002

On-Board System Readiness Tests Access Procedure

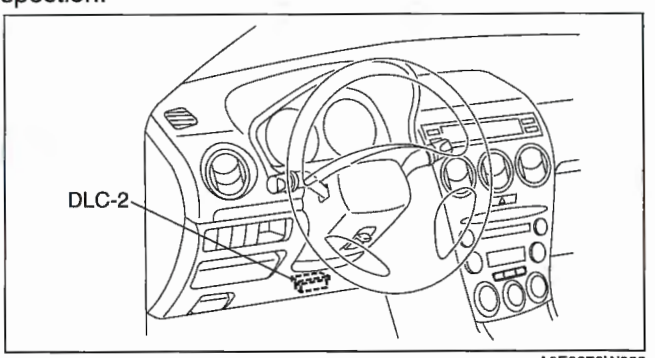
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Monitor the OBD-II systems operating status by WDS or equivalent.



A6E3970W002

PID/DATA Monitor and Record Procedure

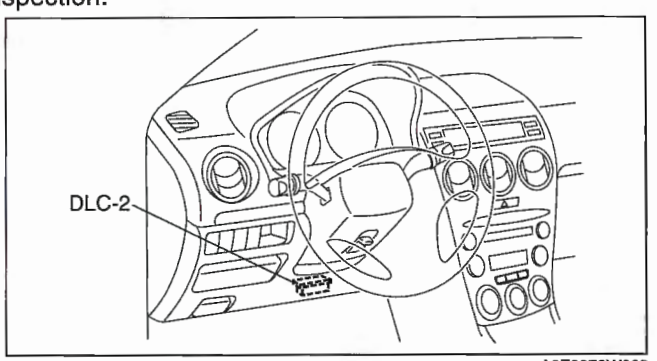
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Access and monitor PIDs by WDS or equivalent.



A6E3970W002

Diagnostic Monitoring Test Results Access Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Access to the DIAGNOSTIC MONITORING TEST RESULTS and read the test results by WDS or equivalent.

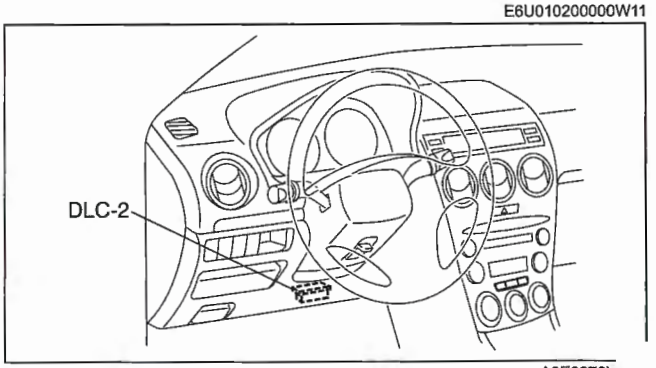


A6E3970W002

AFTER REPAIR PROCEDURE [L3]

E6U010200000W11

1. Connect WDS or equivalent.
2. Cycle the ignition switch from OFF to ON.
3. Record DTC if retrieved.
4. Clear all diagnostic data by WDS or equivalent.



A6E3970v

KOEO/KOER SELF TEST [L3]

E6U010200000W12

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located in the driver compartment.
3. Retrieve the KOEO/KOER DTCs using the WDS or equivalent.

OBD-II DRIVE MODE [L3]

E6U010200000W13

- Using the OBD-II drive mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
  The OBD-II drive mode is divided into the specific drive mode and single drive mode.
- For the specific drive mode, specified drive modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single drive mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific drive mode. The applicable system is diagnosed by driving in the following drive modes.
  — PCM Adaptive Memory Produce Drive Mode
  — EGR System Repair Verification Drive Mode
  — HO2S heater, HO2S, and TWC Repair Verification Drive Mode
  — EVAP System Repair Verification Drive Mode
- The following systems are diagnosed with the single drive mode.
  — EGR system
  — Oxygen sensor (HO2S)
  — Oxygen sensor heater
  — Catalytic converter (TWC)
  — Fuel, misfire and evaporative (EVAP) system

Caution

- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the WDS or equivalent is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the WDS or equivalent using the PID/DATA MONITOR AND RECORD function and inspect later.**

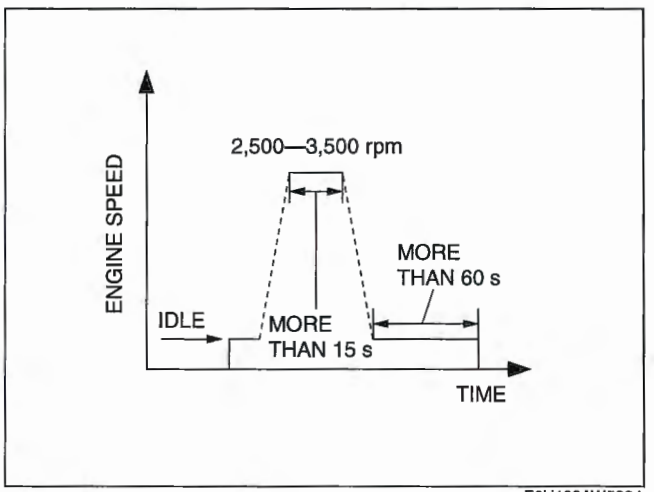
Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the WDS or equivalent to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
  — The OBD-II system detects the malfunction.
  — The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The WDS or equivalent can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
  — If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
  — If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

PCM Adaptive Memory Production Drive Mode

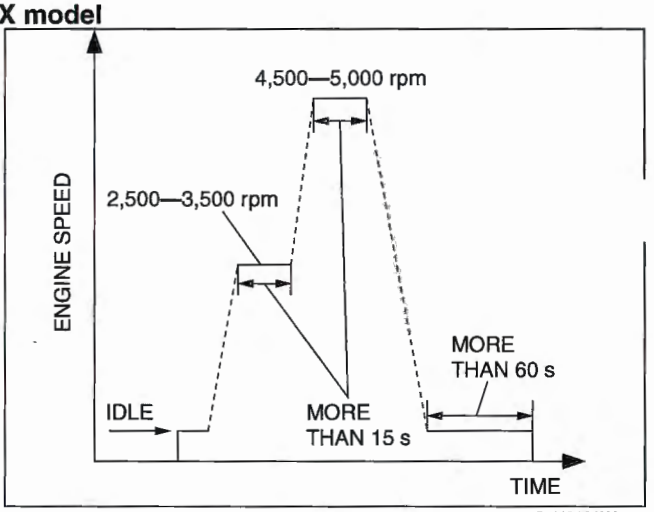
1. Start the engine and warm it up completely.
2. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
   - Initial ignition timing and idle speed are within the specification.
3. Perform no load racing at the engine speed shown in the graph, then idle the engine for more than **60 s** after the cooling fan has stopped. If possible, monitor RPM PID for engine speed during this procedure.

California emission regulation applicable ATX model



E6U102AW5224

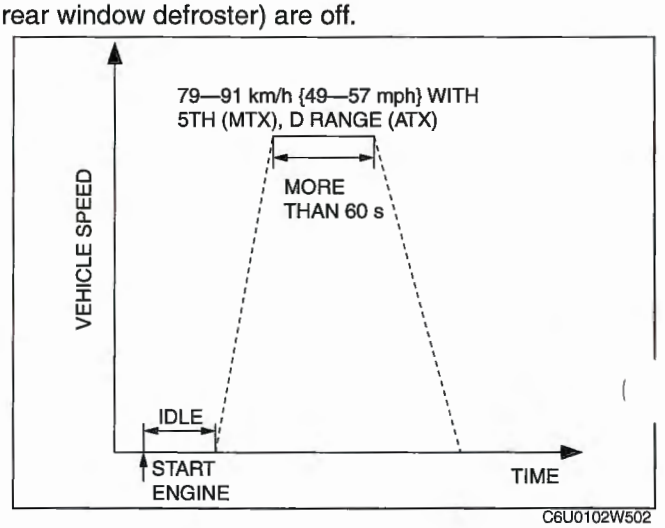
Except for California emission regulation applicable ATX model



C6U0102W501

EGR System Repair Verification Drive Mode

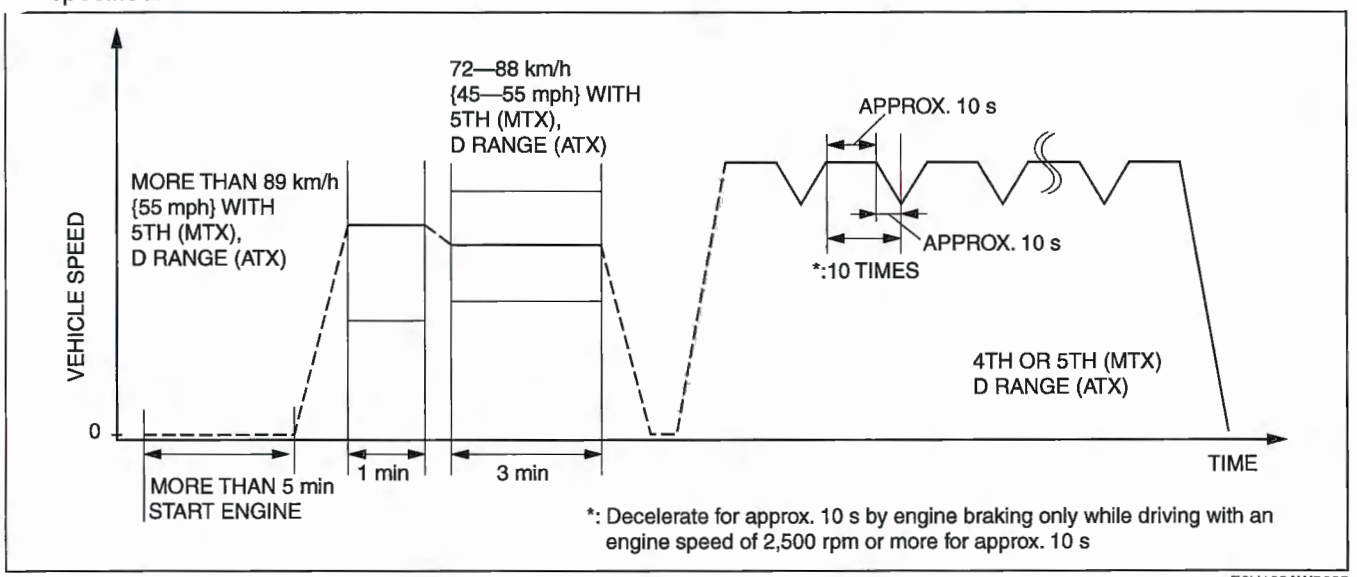
1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph.
4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.
6. Verify no DTCs are available.



C6U0102W502

HO2S heater, HO2S, and TWC Repair Verification Drive Mode

1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



E6U102AW5225

4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within the specification, repair has not been completed.
6. Verify no DTCs are available.

EVAP System Repair Verification Drive Mode

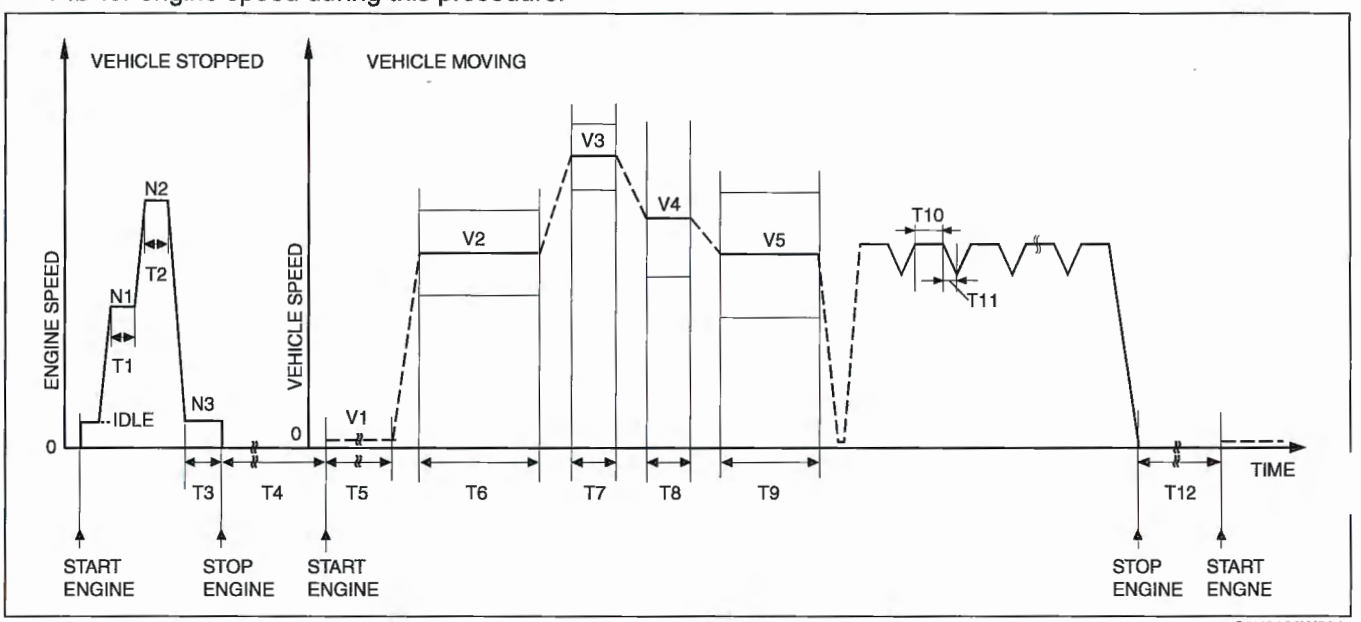
Note

- If "EVAP System Repair Verification Drive Mode" cannot be performed (it is impossible to drive the vehicle under this drive mode condition), perform EVAP system test procedure as an alternative. (See 01–03A–62 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3].)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before engine is started to initiate the EVAP system test.
   - BARO: **more than 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—40 °C {41—104 °F}**
   - FTL: **15—85%**
   - B+: **more than 10.9 V**
2. Clear the DTC from the PCM memory using the WDS or equivalent.
3. Start the engine and idle it for **more than 10 s**, then turn ignition switch off.
4. Leave vehicle for **5 hours or more**.
5. Start the engine and idle for **more than 15 min**.
6. Drive the vehicle at an engine speed of **65—80 km/h {40—50 mph}** for **more than 5 min**.
7. Stop the vehicle and turn ignition switch off.
8. Leave vehicle as it is for **10 min or more**.
9. Start the engine.
10. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, turn the ignition switch off then go back to Step 1.
11. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, repair has not completed.
12. Verify no DTCs are available.

PCM Adaptive Memory Production, EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the WDS or equivalent.
3. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
   - Initial ignition timing and idle speed are within the specification.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to Step 6.
   - BARO: **more than 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—40 °C {41—104 °F}**
   - FTL: **15—85%**
   - B+: **more than 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.



C6U0102W504

Step	Time	Engine speed (rpm)	Vehicle speed (km/h {mph})	Vehicle condition
1	T1: More than 15 s	N1: 2,500—3,500	0 {0}	—
2*	T2: More than 15 s	N2: 4,500—5,000	0 {0}	—
3	T3: More than 60 s	N3: Idle	0 {0}	Idle the engine after the cooling fan has stopped
4	T4: More than 5 h	0	0 {0}	Keep the ignition switch off
5	T5: More than 15 min	Idle	V1: 0 {0}	—
6	T6: 5 min	—	V2: 65—80 {40—50}	MTX: 5TH ATX: D range
7	T7: 1 min	—	V3: 79—91 {49—57}	MTX: 5TH ATX: D range
8	T8: 1 min	—	V4: More than 89 {55}	MTX: 5TH ATX: D range
9	T9: 3 min	—	V5: 72—88 {45—55}	MTX: 5TH ATX: D range
10	T10: Approx. 10 s	More than 2,500	—	—
11	T11: Approx. 10 s	—	—	Decelerate by engine braking only (10 times) MTX: 4 or 5TH ATX: D range
12	T12: More than 10 min	0	0 {0}	Keep the ignition switch off

* : Except for California emission regulation applicable ATX model

6. Turn the ignition switch off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
   - If completed, all of the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then perform the applicable specific drive mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.

DIAGNOSTIC MONITORING TEST RESULTS [L3]

E6U010200000W14

- The purpose of this test mode is to confirm the result of OBD-II monitor diagnostic test results. The result values stored when particular monitor is completed are displayed. If the monitor is not completed, initial value is displayed.

TEST ID	Description	Related system
10: 01: 80*1	HO2S (Front) lean-to-rich response time (calculated)	HO2S
10: 01: 81*1	HO2S (Front) rich-to-lean response time (calculated)	
10: 01: 84*2	HO2S (Front) period (calculated)	
10: 02: 03*2	Low HO2S (Rear) voltage for switch time calculation (constant)	
10: 02: 04*2	High HO2S (Rear) voltage for switch time calculation (constant)	
10: 02: 05*2	HO2S (Rear) rich-to-lean response time (calculated)	
10: 02: 85*1	HO2S (Middle) rich-to-lean response time (calculated)	
10: 21: 80	Front and HO2S (Rear) switching time ratio	Catalyst
10: 31: 83	EGR pressure variation	EGR
10: 3A: 80	EVAP system leak detection pump gross leak check	EVAP
10: 3B: 80	EVAP system leak detection pump small leak check	
10: 3C: 80*3	EVAP system leak detection pump very small leak check	
10: 3D: 80	Purge flow monitor	
10: A2: 0B	EWMA misfire counts for last 10 driving cycles	Misfire
10: A2: 0C	Misfire counts for last/current driving cycles	
10: A3: 0B	EWMA misfire counts for last 10 driving cycles	
10: A3: 0C	Misfire counts for last/current driving cycles	
10: A4: 0B	EWMA misfire counts for last 10 driving cycles	
10: A4: 0C	Misfire counts for last/current driving cycles	
10: A5: 0B	EWMA misfire counts for last 10 driving cycles	
10: A5: 0C	Misfire counts for last/current driving cycles	
10: E1: 80	Heat radiation ratio	Engine cooling system
10: E1: 81	Engine coolant temperature

DTC TABLE [L3]

E6U010200000W15

×: Applicable
—: Not applicable

DTC No.	Condition	MIL	DC	Monitor item	Self-test type*1	Memory function	Page
B1213	Number of valid keys is below minimum.	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
B1342	PCM is defective.	OFF	—	—	C, O	×	(See 01–02A–25 DTC B1342 [L3].)
B1600	ID number signal is not received.	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
B1601	PCM received incorrect ID number from key (transponder).	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
B1681	Coil signal is not received.	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
B2103	Coil failure.	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
B2431	Transponder programming failure.	(See 09–02F–3 DTC TABLE [IMMOBILIZER SYSTEM].)					
P0011	CMP Timing over-advanced	ON	1	CCM	C, R	×	(See 01–02A–26 DTC P0011 [L3].)
P0012	CMP Timing over-retarded	ON	2	CCM	C, R	×	(See 01–02A–28 DTC P0012 [L3].)
P0016	CKP-CMP correlation	ON	2	CCM	C	×	(See 01–02A–30 DTC P0016 [L3].)
P0030	Front HO2S heater control circuit problem	ON	2	HO2S heater	C, O, R	×	(See 01–02A–32 DTC P0030 [L3].)
P0031	Front HO2S heater circuit low input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–36 DTC P003 [L3].)
P0032	Front HO2S heater circuit high input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–40 DTC P0032 [L3].)
P0037	Middle*2/Rear*3 HO2S heater circuit low input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–44 DTC P0037 [L3].)
P0038	Middle*2/Rear*3 HO2S heater circuit high input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–48 DTC P0038 [L3].)
P0043*2	Rear HO2S heater circuit low input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–52 DTC P0043 [L3].)
P0044*2	Rear HO2S heater circuit high input	ON	2	HO2S heater	C, O, R	×	(See 01–02A–54 DTC P0044 [L3].)
P0069	MAF circuit range/performance problem	ON	2	CCM	C	×	(See 01–02A–56 DTC P0069 [L3].)
P0101	Manifold absolute pressure/ atmospheric pressure correlation	ON	2	CCM	C	×	(See 01–02A–57 DTC P0101 [L3].)
P0102	MAF circuit low input	ON	1	CCM	C, O, R	×	(See 01–02A–59 DTC P0102 [L3].)
P0103	MAF circuit high input	ON	1	CCM	C, O, R	×	(See 01–02A–61 DTC P0103 [L3].)
P0107	MAP sensor circuit low input	ON	1	CCM	C, O, R	×	(See 01–02A–63 DTC P0107 [L3].)

DTC No.	Condition	MIL	DC	Monitor item	Self-test type*1	Memory function	Page
P0108	MAP sensor circuit high input	ON	1	CCM	C, O, R	×	(See 01–02A–65 DTC P0108 [L3].)
P0111	IAT circuit performance problem	ON	2	CCM	C	×	(See 01–02A–67 DTC P0111 [L3].)
P0112	IAT circuit low input	ON	1	CCM	C, O, R	×	(See 01–02A–68 DTC P0112 [L3].)
P0113	IAT circuit high input	ON	1	CCM	C, O, R	×	(See 01–02A–70 DTC P0113 [L3].)
P0116	Engine coolant temperature circuit range/performance	ON	2	Engine cooling system	C	×	(See 01–02A–72 DTC P0116 [L3].)
P0117	ECT circuit low input	ON	1	Engine cooling system	C, O, R	×	(See 01–02A–74 DTC P0117 [L3].)
P0118	ECT circuit high input	ON	1	Engine cooling system	C, O, R	×	(See 01–02A–76 DTC P0118 [L3].)
P0122	TP sensor No.1 circuit low input	ON	1	CCM	C, O, R	×	(See 01–02A–78 DTC P0122 [L3].)
P0123	TP sensor No.1 circuit high input	ON	1	CCM	C, O, R	×	(See 01–02A–80 DTC P0123 [L3].)
P0125	Excessive time to enter closed loop fuel control	ON	2	Engine cooling system	C	×	(See 01–02A–82 DTC P0125 [L3].)
P0126	Coolant thermostat stuck open	ON	2	Engine cooling system	C	×	(See 01–02A–84 DTC P0126, P0128 [L3].)
P0128	Coolant thermostat stuck open	ON	2	Engine cooling system	C	×	(See 01–02A–84 DTC P0126, P0128 [L3].)
P0130*2	Front HO2S circuit problem	ON	2	HO2S	C, O, R	×	(See 01–02A–86 DTC P0130 [L3].)
P0131	Front HO2S circuit low input	ON	2	HO2S	C, O, R	×	(See 01–02A–88 DTC P0131 [L3].)
P0132	Front HO2S circuit high input	ON	2	HO2S	C, O, R	×	(See 01–02A–92 DTC P0132 [L3].)
P0133	Front HO2S circuit problem	ON	2	HO2S	C	×	(See 01–02A–96 DTC P0133 [L3].)
P0134	Front HO2S circuit no activity detected	ON	2	HO2S	C, R	×	(See 01–02A–100 DTC P0134 [L3].)
P0137*3	Rear HO2S circuit low input	ON	2	HO2S	C, O, R	×	(See 01–02A–104 DTC P0137 [L3].)
P0138	Middle*2/Rear*3 HO2S circuit high input	ON	2	HO2S	C, O, R	×	(See 01–02A–107 DTC P0138 [L3].)
P0139	Middle*1/Rear*2 HO2S circuit malfunction	ON	2	HO2S	C	×	(See 01–02A–109 DTC P0139 [L3].)

DTC No.	Condition	MIL	DC	Monitor item	Self-test type*1	Memory function	Page
P0140*3	Rear HO2S circuit no activity detected	ON	2	HO2S	C, R	×	(See 01–02A–113 DTC P0140 [L3].)
P0144*2	Rear HO2S circuit high input	ON	2	HO2S	C, O, R	×	(See 01–02A–116 DTC P0144 [L3].)

DTC B1342 [L3]

E6U010208888W01

DTC B1342	PCM malfunction
DETECTION CONDITION	• Malfunction in the PCM internal circuit.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear the DTC from the PCM memory using the WDS or equivalent. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
2	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0011 [L3]

E6U010200001W01

DTC P0011	CMP Timing over-advanced
DETECTION CONDITION	**California emission regulation applicable ATX model** • Actual valve timing is over-advanced by **10 ° (when the following conditions are met)** from target valve timing when the OCV is controlled in the maximum valve timing retard condition. **MONITORING CONDITION** — Engine coolant temperature is **above 20 °C {68 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • Actual valve timing is over-advanced by **15 °** (when the following conditions are met) from target valve timing when the OCV is controlled in the maximum valve timing retard condition. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm**. — Engine coolant temperature is **above 70—110 °C {158—230 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• OCV malfunction • Spool valve in OCV is stuck in advance position. • Variable valve timing actuator is stuck in advance position. • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV FOR MALFUNCTION** • Start engine. • Increase engine speed. • Stop engine. • Remove the OCV. • Inspect the position of spool valve in OCV. • Is spool valve located at valve retard position?	Yes	Go to the next step.
		No	Replace OCV, then go to Step 6.
4	**INSPECT STOPPER PIN MECHANISM** • Remove timing chain. • Inspect stopper pin. (See 01–10A–30 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3].) • Is stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator, then go to Step 6.
5	**INSPECT ROTOR POSITION** • Remove variable valve timing actuator. • Is rotor position at maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace variable valve timing actuator, go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0011 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0012 [L3]

E6U010200001W02

DTC P0012	CMP Timing over-retarded
DETECTION CONDITION	**California emission regulation applicable ATX model** • Actual valve timing is over-retarded by **10** ° (when the following conditions are met) from target valve timing for **5 s** when the OCV system control is within feed-back range. **MONITORING CONDITION** — Engine coolant temperature is **above 20 °C {68 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • Actual valve timing is over-retarded by **10** ° (when the following conditions are met) from target valve timing for **5 s** when the OCV system control is within feed-back range. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm**. — Engine coolant temperature is **above 70—110 °C {158—230 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• OCV (oil control valve) malfunction • Low engine oil pressure • Spool valve in OCV (oil control valve) is stuck in retard position. • Variable valve timing actuator is stuck in retard position. • Following oil runners are clogged or have leakage. **Oil runners** • Between oil pressure switch and OCV (oil control valve) • Between OCV (oil control valve) and variable valve timing actuator • In variable valve timing actuator • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Is DTC P2088 or P2089 present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02A–212 DTC P2088 [L3] or 01–02A–214 DTC P2089 [L3].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start engine. • Does oil pressure warning light illuminate?	Yes	Inspect engine oil pressure. (See 01–11A–5 OIL PRESSURE INSPECTION [L3, AJ].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop engine. • Remove timing chain cover. • Is camshaft timing mark at correct point? (See 01–10A–9 TIMING CHAIN REMOVAL/INSTALLATION [L3].)	Yes	Go to the next step.
		No	Reinstall timing chain, then go to Step 8.
6	**INSPECT OCV FOR MALFUNCTION** • Stop engine. • Remove OCV. • Inspect position of spool valve in OCV. • Is spool valve located at valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace OCV, then go to Step 8.
7	**INSPECT ENGINE OIL RUNNER** • Inspect following engine oil runners for clogging or leakage. — Between oil pressure switch and OCV — Between OCV and variable valve timing actuator — In variable valve timing actuator • Is there any clogging or leakage?	Yes	Repair or replace suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0012 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0016 [L3]

E6U010200001W13

DTC P0016	CKP-CMP correlation
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connector • CMP sensor malfunction • CKP sensor malfunction • Damaged or scratched CMP sensor pulse wheel • Damaged or scratched CKP sensor pulse wheel • Foreign material on CMP sensor • Foreign material on CKP sensor • Improper valve timing

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CMP SENSOR FOR FOREIGN MATERIAL** • Remove the CMP sensor. • Inspect the CMP sensor for foreign materials. • Is there any foreign material on the CMP sensor?	Yes	Remove foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
5	**INSPECT CMP SENSOR PULSE WHEEL** • Visually inspect the CMP sensor pulse wheel. • Are there any damage or scratches at the CMP sensor pulse wheel?	Yes	Replace the camshaft, then go to Step 13. (See 01–10A–18 CYLINDER HEAD GASKET REPLACEMENT [L3].)
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See 01–40A–48 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP, then go to Step 13.
7	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	**INSPECT CKP SENSOR FOR FOREIGN MATERIAL** • Remove the CKP sensor. • Inspect the CKP sensor for foreign material. • Is there any foreign material on the CKP sensor?	Yes	Remove foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Are there any damage or scratches on the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01–10A–9 TIMING CHAIN REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See 01–40A–46 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 13. (See 01–40A–45 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3].)
11	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
12	**INSPECT VALVE TIMING** • Inspect valve timing. (See 01–10A–9 TIMING CHAIN REMOVAL/INSTALLATION [L3].) • Is valve timing normal?	Yes	Go to the next step.
		No	Adjust the valve timing properly, then go to the next step. (See 01–10A–9 TIMING CHAIN REMOVAL/ INSTALLATION [L3].)
13	**VERIFY TROUBLESHOOTING OF DTC P0016 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and run it at the idle. • Retrieve the DTC using the WDS or equivalent. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0030 [L3]

E6U010200001W10

California Emission Regulation Applicable ATX Model

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• The PCM monitors the front HO2S impedance when under the front HO2S heater control for **200 s**. If the impedance is **more than 44 ohms**, the PCM determines that there is a front HO2S heater control circuit problem. **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01–15A–5 HO2S Removal Note.)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO self-test (using WDS or equivalent) or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode (not using WDS or equivalent). (See 01–02A–12 KOEO/KOER SELF TEST [L3].) (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• OBD system monitors the output signal voltage from oxygen sensor which is proportion to the element impedance of oxygen sensor. • If the output signal voltage isn't between **0.75 V** and **1.5 V** after specified time from engine start, heater performance considered failed. **MONITORING CONDITIONS** — Battery voltage: **10—18 V** — Time from engine start is **74 s or more** **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to ground in wiring harness between front HO2S terminal C*1, 2D*2 and PCM terminal 2BG • Short to power supply in wiring harness between front HO2S terminal C*1, 2D*2 and PCM terminal 2BG • Open circuit in wiring harness between front HO2S terminal 1B*2 and PCM terminal 2AC*2 • Open circuit in wiring harness between front HO2S terminal C*1, 2D*2 and PCM terminal 2BG • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is the DTC P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0030 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Front HO2S connector disconnected. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there continuity?	Yes	Repair or replace for short to ground, then go to Step 11.
		No	Go to the next step.
7	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 11. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step11.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN** • Front HO2S and PCM connectors disconnected. • Measure the continuity following circuit at wiring harness-side terminal. — Between front HO2S terminal C*1, 2D*2 and PCM terminal 2BG — Between front HO2S terminal 1B*2 and PCM terminal 2AC*2 • Are there continuity?	Yes	Go to the next step.
		No	Repair or replace for open, then go to Step 11.
10	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER** • Front HO2S and PCM connectors disconnected. • Measure the voltage between front HO2S sensor terminal C*1, 2D*2 (wiring harness-side) and ground? • Is the voltage greater than **1.5V**	Yes	Repair or replace for short to power, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

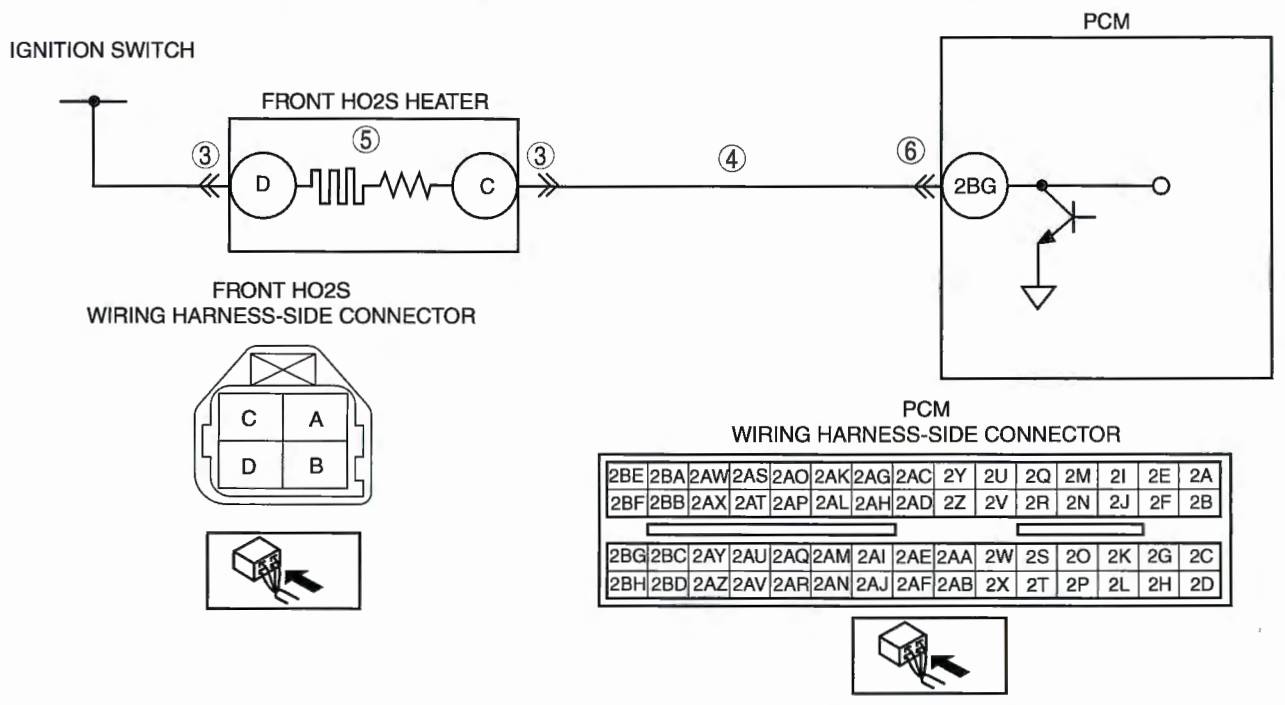
*1 : California Emission Regulation Applicable ATX Model
*2 : Except for California Emission Regulation Applicable ATX Model

DTC P0031 [L3]

E6U010200001W11

California Emission Regulation Applicable ATX Model

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater control voltage when the PCM turns the front HO2S heater off. If the control voltage **exceeds 50%** of the battery voltage, the PCM determines that the front HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between Front HO2S terminal C and PCM terminal 2BG • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal C (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. if the PCM turns the front HO2S heater off or on but the front HO2S heater circuit remains low voltage, the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by duty signal. **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and front HO2S terminal 2B • Short to ground in wiring harness between ignition switch and front HO2S terminal 2B • Open circuit in wiring harness between front HO2S terminal 2D and PCM terminal 2BG • Short to ground in wiring harness between front HO2S terminal 2D and PCM terminal 2BG • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

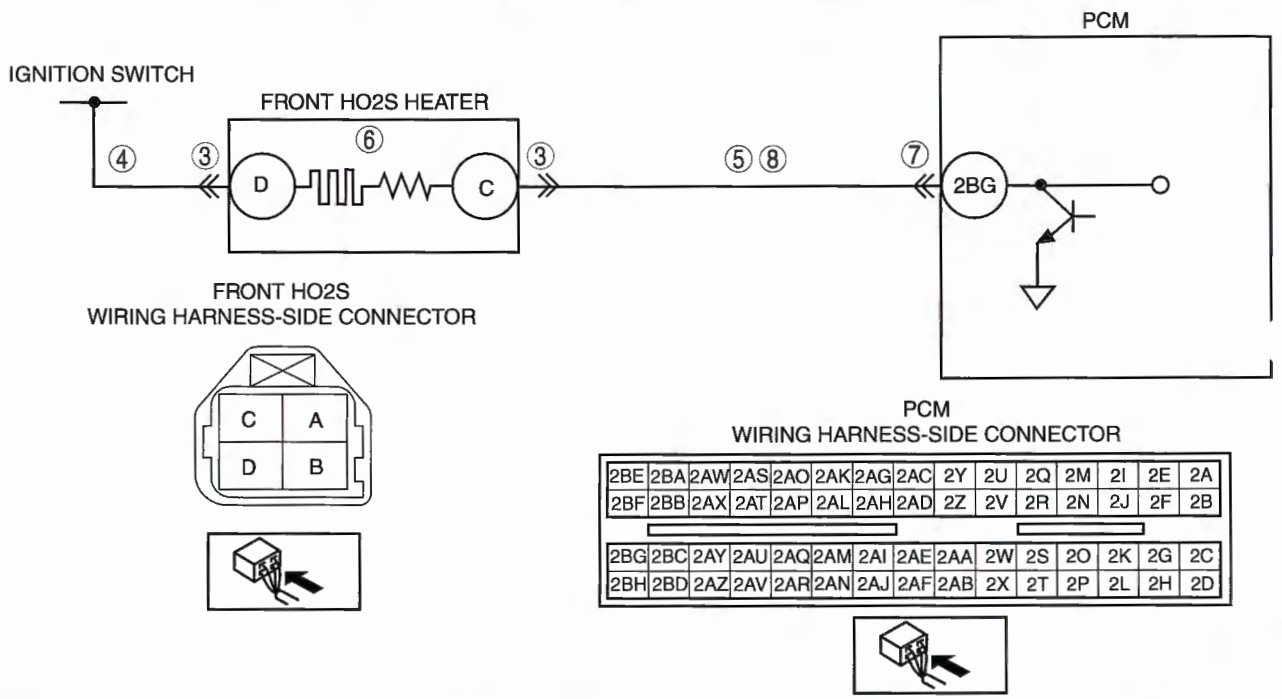
STEP	INSPECTION		ACTION
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and PCM terminal 2BG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0032 [L3]

E6U010200001W12

California Emission Regulation Applicable ATX Model

DTC P0032	Front HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S heater control voltage when the PCM turns the front HO2S heater on. the control voltage is **less than 50%** of the battery voltage, the PCM determines that the front HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and front HO2S terminal D • Short to GND in wiring harness between ignition switch and front HO2S terminal D • Open circuit in wiring harness between front HO2S terminal C and PCM terminal 2BG • Short to GND in wiring harness between front HO2S terminal C and PCM terminal 2BG • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal D (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to GND, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal C (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal C (wiring harness-side) and PCM terminal 2BG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

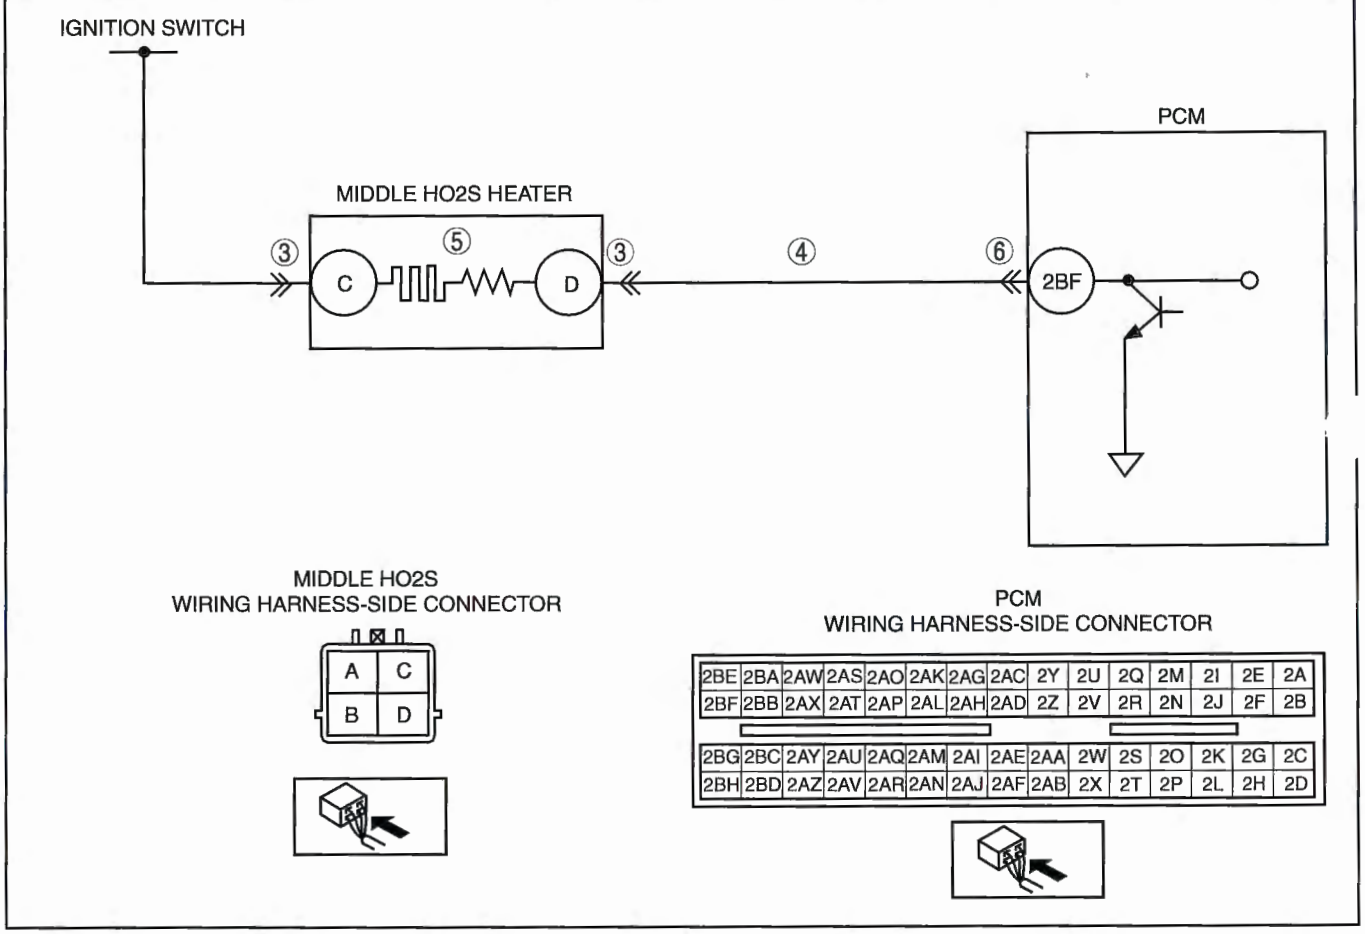
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0037 [L3]

E6U010200001W06

California Emission Regulation Applicable ATX Model

DTC P0037	Middle HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the middle HO2S heater control voltage when the PCM turns the middle HO2S heate off. If the control voltage **exceeds 25%** of the battery voltage, the PCM determines that the middle HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between middle HO2S terminal D and PCM terminal 2BF • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT MIDDLE HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the middle HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between middle HO2S terminal D (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT MIDDLE HO2S HEATER** • Inspect the middle HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the middle HO2S, then go to Step 7. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0037	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater off or on but the rear HO2S heater circuit remains low voltage, the PCM determines that the rear HO2S heater circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Open circuit in wiring harness between the ignition switch and rear HO2S terminal C • Open circuit in wiring harness between rear HO2S terminal D and PCM terminal 2BE • Short to ground in wiring harness between rear HO2S terminal D and PCM terminal 2BE • Poor connection at the rear HO2S or the PCM connector • PCM malfunction

Diagnostic procedure

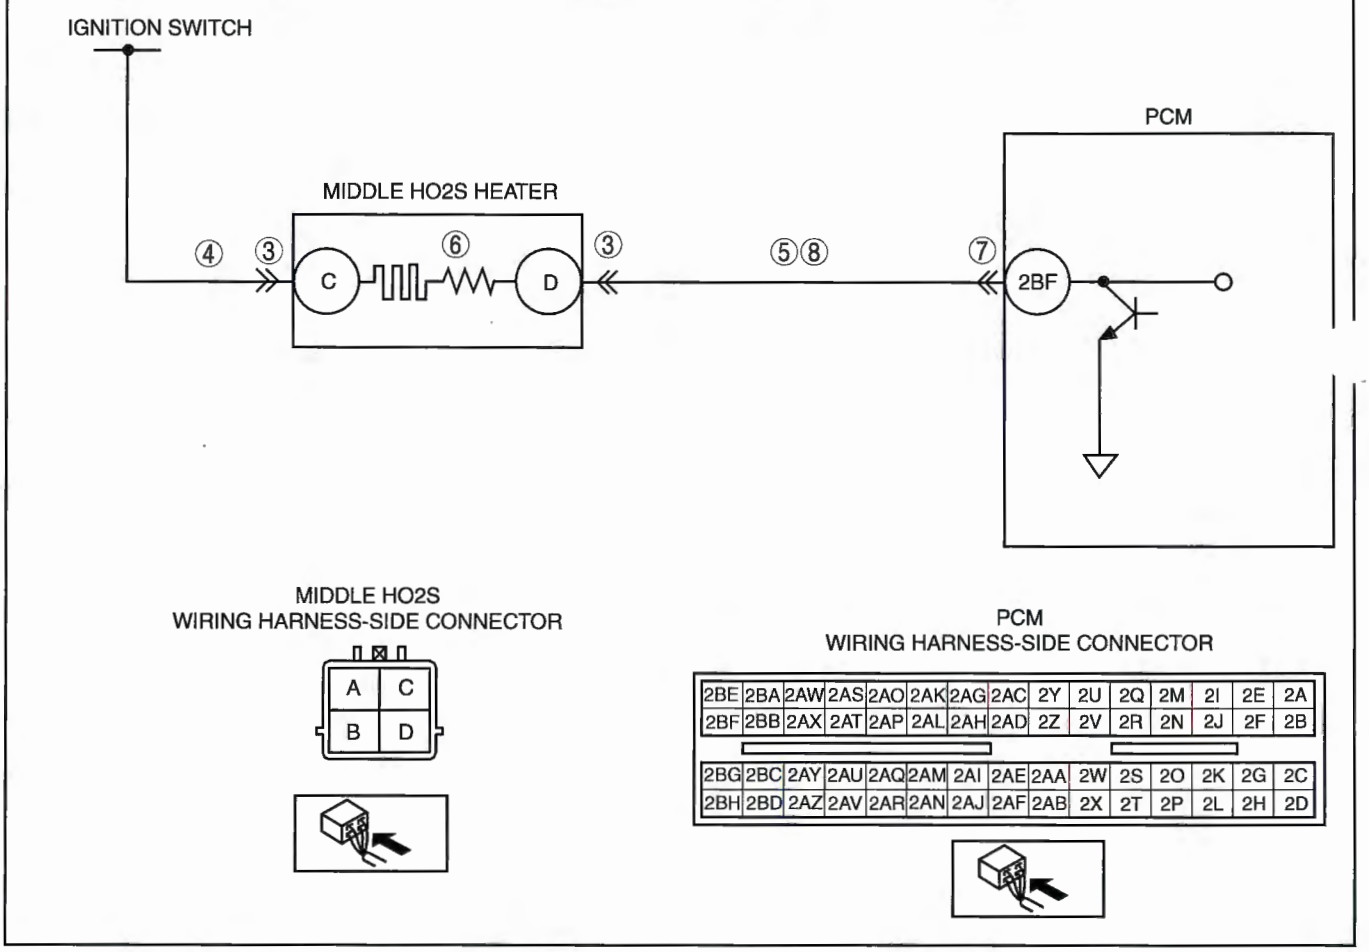
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S TERMINAL** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER** • Inspect rear HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is rear HO2S heater normal?	Yes	Go to the next step.
		No	Replace the rear HO2S, then go to Step 7.
5	**INSPECT PCM TERMINAL** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for shot to power circuit, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0038 [L3]

E6U010200001W07

California Emission Regulation Applicable ATX Model

DTC P0038	Middle HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the middle HO2S heater control voltage when the PCM turns the middle HO2S heate on. If the control voltage is **less than 57%** of the battery voltage, the PCM determines that the middle HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and middle HO2S terminal C • Short to GND in wiring harness between ignition switch and middle HO2S terminal C • Open circuit in wiring harness between middle HO2S terminal D and PCM terminal 2BF • Short to GND in wiring harness between middle HO2S terminal D and PCM terminal 2BF • PCM malfunction



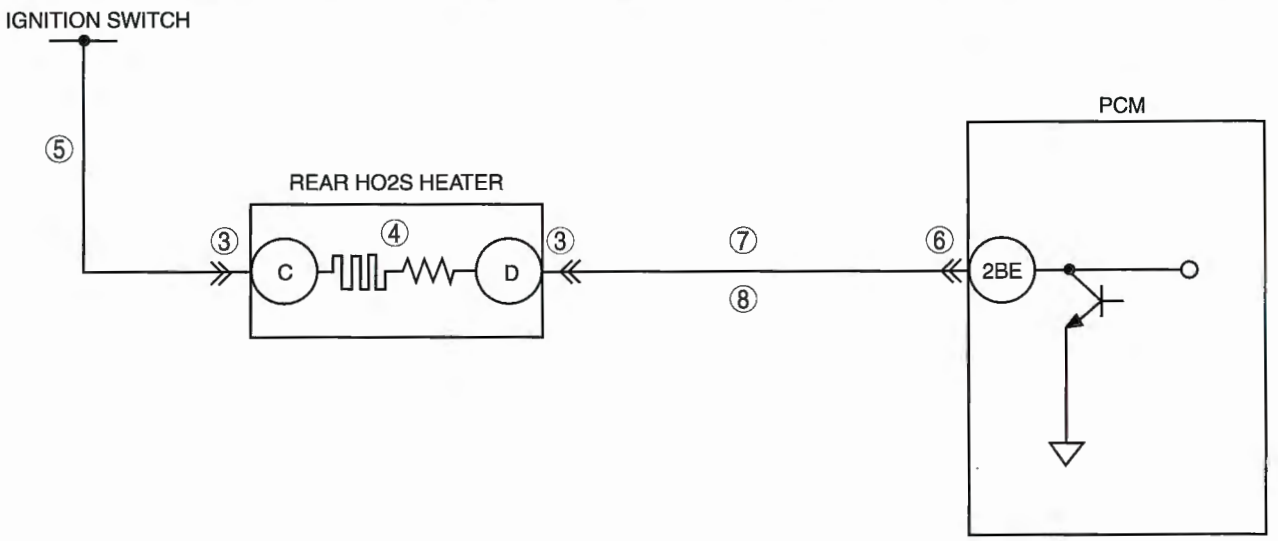
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

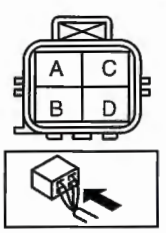
STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MIDDLE HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the middle HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT MIDDLE HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between middle HO2S terminal C (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to GND, then go to Step 9.
5	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GND** • Turn the ignition switch off. • Inspect for continuity between middle HO2S terminal D (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MIDDLE HO2S HEATER** • Inspect the middle HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the middle HO2S, then go to Step 9. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT MIDDLE HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between middle HO2S terminal D (wiring harness-side) and PCM terminal 2BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

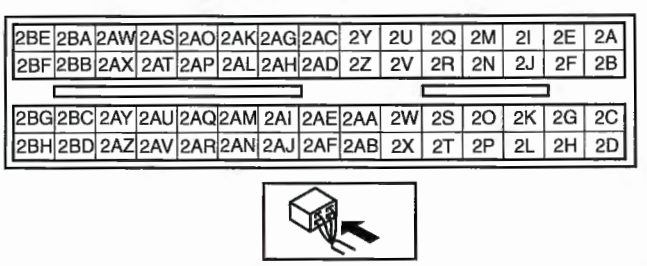
DTC P0038	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater off or on but the rear HO2S heater circuit remains high voltage, the PCM determines that the rear HO2S heater circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Short to power supply in wiring harness between rear HO2S terminal D and PCM terminal 2BE • Short circuit in rear HO2S or PCM • Rear HO2S heater malfunction • PCM malfunction



REAR HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF REAR HO2S CONNECTOR** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is rear HO2S heater normal?	Yes	Go to the next step.
		No	Replace the rear HO2S, then go to Step 9.
5	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to Step 9.
6	**INSPECT POOR CONNECTION OF PCM CONNECTOR** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 2BE. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0043 [L3]

E6U010200001W08

DTC P0043	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater control voltage when the PCM turns the rear HO2S heater off. If the control voltage **exceeds 25%** of the battery voltage, the PCM determines that the rear HO2S heater control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between rear HO2S terminal D and PCM terminal 2BE • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 7. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0043 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0044 [L3]

E6U010200001W09

DTC P0044	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater control voltage when the PCM turns the rear HO2S heater on. If the control voltage is **less than 57%** of the battery voltage, the PCM determines that the rear HO2S heater control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and rear HO2S terminal C • Short to GND in wiring harness between ignition switch and rear HO2S terminal C • Open circuit in wiring harness between front HO2S terminal D and PCM terminal 2BE • Short to GND in wiring harness between front HO2S terminal D and PCM terminal 2BE • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body GND. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to GND, then go to Step 9.
5	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GND** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 9.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 9. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 2BE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0044 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
0	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0069 [L3]

E6U010200001W15

DTC P0069	Manifold absolute pressure/atmospheric pressure correlation
DETECTION CONDITION	• PCM monitors differences between intake manifold vacuum and atmospheric pressure. If the difference is **below –12 kPa {–90 mmHg, –3.5 inHg}** or **above 12 kPa {90 mmHg, 3.5 inHg}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITION** — **12—15 s** from when ignition switch is turned off. — Intake air temperature is **above -10°C {14°F}**. — Engine coolant temperature is **above 70°C {158°F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • BARO sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC** • Turn the ignition switch to off then start the engine. • Have DTC P0107, P0108, P2228 or P2229 been stored?	Yes	Inspect and repair DTC P0107, P0108, P2228 or P2229.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0069 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA.
5	**INSPECT MAP SENSOR STUCK OPEN OR CLOSED** • Inspect MAP sensor. (See 01–40A–36 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3].) • Is the MAP sensor normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to step 7.
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01–40A–50 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 (Vehicles equipped with BARO sensor built into PCM)].) • Is the BARO sensor normal?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
7	**VERIFY TROUBLESHOOTING OF DTC P0069 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0101 [L3]

E6U010200100W01

DTC P0101	MAF circuit range/performance problem
DETECTION CONDITION	• PCM monitors the mass intake air flow amount when the engine is running. — If mass intake air amount is **above 50 l/s** for **5 s** and engine speed is **below 2,000 rpm** with engine running PCM determines that detected mass intake air flow amount is too high. — If mass intake air flow amount is **below 8—59 l/s*1, 6—58 l/s*2** (The value depends on engine speed.) for **5 s** and engine speed is **above 1,000 rpm** with engine running and throttle opening angle is **above 50%**, PCM determines that detected mass intake air flow amount is too low. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Electrical corrosion in MAF RETURN circuit • Voltage drops in GND circuit

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS or equivalent to DLC-2. • Start the engine. • Access ECT, MAF, TP and RPM PIDs using the WDS or equivalent. • Warm-up engine until ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more**. **Caution** • **While driving, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear (MTX), D range (ATX) **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3])
4	**CHECK MAF SENSOR TERMINALS FOR ELECTRICAL CORROSION** • Turn the ignition switch off. • Disconnect MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is any problem corrosion found?	Yes	Repair or replace suspected terminal or MAF sensor, then go to Step 6.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Check for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0101 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Warm-up engine until ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more**. **Caution** • **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear (MTX), D range (ATX) **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3]) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3])
		No	Troubleshooting completed.

DTC P0102 [L3]

E6U010200100W02

DTC P0102	MAF circuit low input
DETECTION CONDITION	• PCM monitors input voltage from MAF sensor when engine is running. If input voltage is **below 0.21 V**, PCM determines that MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to ground in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit in wiring harness between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit in wiring harness between main relay and MAF/IAT sensor terminal A • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to ON (Engine off). • Inspect voltage at MAF/IAT sensor terminal A (wiring harness-side). • Is voltage **B+**?	Yes	Go to the next step.
		No	Inspect for open circuit in wiring harness between MAF/IAT sensor terminal A (wiring harness-side) and main relay. Repair or replace harness, then go to Step 8.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Remove PCM with PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal C (wiring harness-side) and PCM terminal 1AK (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace suspected harness, then go to Step 8.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT** • Inspect continuity between following circuits: — MAF/IAT sensor terminal C (wiring harness-side) and body ground — MAF/IAT sensor connector terminal C and B (wiring harness-side) • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Replace MAF/IAT sensor, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0103 [L3]

E6U010200100W03

DTC P0103	MAF circuit high input
DETECTION CONDITION	• PCM monitors input voltage from MAF sensor when engine is running. If input voltage at PCM terminal 1AK is **above 4.9 V**, PCM determines that MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between MAF/IAT sensor terminal C and PCM terminal1AK • Open circuit in MAF/IAT sensor ground circuit • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between MAF/IAT sensor terminal C (wiring harness-side) and body ground. • Is voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace suspected harness, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Remove PCM with PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal B (wiring harness-side) and GND. • Is there continuity?	Yes	Replace MAF/IAT sensor, then go to the next step.
		No	Repair or replace suspected harness, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0107 [L3]

E6U010200100W05

DTC P0107	MAP sensor circuit low input
DETECTION CONDITION	• PCM monitors input voltage from MAP sensor when intake air temperature is **above –10 °C {14 °F}**. If input voltage is **below 0.10 V**, PCM determines that MAP sensor circuit has a malfunction. **MONITORING CONDITIONS** — Calculated load: **13—32 %** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Short to ground in wiring harness between MAP sensor terminal D and PCM terminal 2AG • Open circuit in wiring harness between MAP sensor terminal C and PCM terminal 2AU • MAP sensor signal circuit and MAP sensor ground circuit are shorted each other. • PCM malfunction

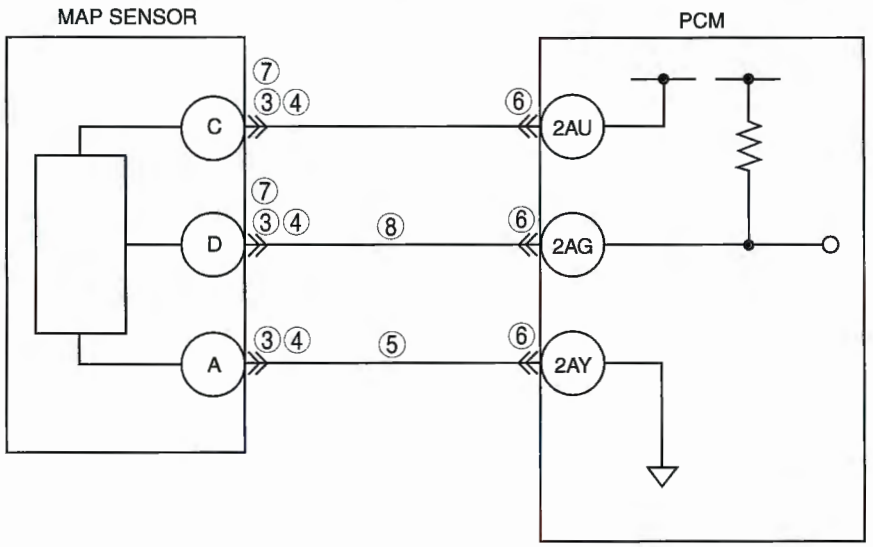
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Recorded FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY MAP PID WHEN MAP SENSOR CONNECTOR IS DISCONNECTED** • Disconnect MAP sensor connector. • Is voltage **above 4.9 V?**	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT MAP SENSOR CONNECTOR** **Note** • If DTC P0122 and P2228 are also retrieved with P0107, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to ON (Engine off). • Measure voltage between MAP sensor terminal C (wiring harness-side) and body ground. • Is voltage **within 4.5—5.5 V?**	Yes	Check for poor connection of MAP sensor terminal C (wiring harness-side). • Repair or replace terminal if necessary. • If normal, replace MAP sensor. Then go to Step 7.
		No	Check for open circuit between PCM terminal 2AU (wiring harness-side) and MAP sensor terminal C (wiring harness-side). Repair or replace suspected harness, then go to Step 7.
5	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect continuity between MAP sensor terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAP SENSOR SIGNAL AND GROUND CIRCUIT FOR SHORT EACH OTHER** • Check continuity between MAP sensor terminals D and A (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0108 [L3]

E6U010200100W06

DTC P0108	MAP sensor circuit high input
DETECTION CONDITION	• PCM monitors input voltage from MAP sensor when intake air temperature is **above –10 °C {14 °F}**. If input voltage is **above 4.92 V**, PCM determines that MAP sensor circuit has a malfunction. **MONITORING CONDITIONS** — Calculated load: **13—32 %** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Open circuit in wiring harness between MAP sensor terminal A and PCM terminal 2AY • Open circuit in wiring harness between MAP sensor terminal D and PCM terminal 2AG • MAP sensor signal circuit short to constant voltage supply circuit • PCM malfunction



MAP SENSOR
HARNESS SIDE CONNECTOR

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONNECTION OF MAP SENSOR CONNECTOR** • Turn the ignition switch off. • Verify that the MAP sensor connector is connected securely. • Is connection normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 9.
4	**INSPECT MAP SENSOR CONNECTOR FOR POOR CONNECTION** • Disconnect the MAP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace suspected terminal, then go to Step 9.
		No	Go to the next step.
5	**VERIFY MAP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between MAP sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for open circuit between PCM terminal 2AY (wiring harness-side) and MAP sensor terminal A (wiring harness-side). Repair or replace suspected harness, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection at terminal 2AY (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between MAP sensor terminal D and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 9.
		No	Go to the next step.
8	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between MAP sensor terminal D (wiring harness-side) and PCM terminal 2AG (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace suspected harness, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to applicable inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0111 [L3]

E6U010200100W07

DTC P0111	IAT circuit performance problem
DETECTION CONDITION	• If intake air temperature is higher than engine coolant temperature by **18 °C {32.4 °F} for 1.2 s** with ignition switch on*, the PCM determines that there is a intake air temperature sensor circuit range/performance problem. *: Ignition switch on when **6 h** or more has passed since the previous ignition switch off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See 01–40A–33 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3].) • Is IAT sensor normal?	Yes	Replace MAF/IAT sensor, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0111 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and run engine under FREEZE FRAME DATA condition. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0112 [L3]

E6U010200100W08

DTC P0112	IAT circuit low input
DETECTION CONDITION	• The PCM monitors IAT sensor signal. If the PCM detected IAT sensor voltage **below 0.16 V**, the PCM determines that the IAT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • Short to ground between MAF/IAT sensor terminal D and PCM terminal 1AT • Short each harness IAT signal circuit and IAT ground circuit. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR TERMINAL** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Inspect for bent terminal of MAF/IAT sensor terminals D and E (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect WDS or equivalent to DLC-2. • Access IAT PID. • Verify IAT value when disconnecting MAF/IAT sensor connector. • Does IAT value change?	Yes	Replace MAF/IAT sensor, then go to Step 7.
		No	Go to the next step.
5	**INSPECT IAT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect continuity between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT IAT CIRCUITS FOR SHORT** • Inspect continuity between MAF/IAT sensor terminals D and E (wiring harness-side). • Is there continuity?	Yes	Repair or replace harness for short, then go to Step 7.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0113 [L3]

E6U010200100W09

DTC P0113	IAT circuit high input
DETECTION CONDITION	• The PCM monitors IAT sensor signal. If the PCM detected IAT sensor voltage **above 4.84 V**, the PCM determines that the IAT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Open circuit between MAF/IAT sensor terminal D and PCM terminal 1AT • Short to power supply between MAF/IAT sensor terminal D and PCM terminal 1AT • Open circuit between MAF/IAT sensor terminal E and PCM terminal 1AR • Poor connection at MAF/IAT sensor or PCM connector. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect WDS or equivalent to DLC-2. • Access IAT PID. • Connect a jumper wire between MAF/IAT sensor terminals D and E (wiring harness-side). • Verify IAT value. • Is voltage **below 4.9 V**?	Yes	Replace MAF/IAT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between MAF/IAT sensor terminal D (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect PCM terminals 1AT and 1AR (wiring harness-side) for tightness using feeler tool. • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between MAF/IAT sensor terminal D (wiring harness-side) and PCM terminal 1AT (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
8	**INSPECT IAT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between MAF/IAT sensor terminal E (wiring harness-side) and PCM terminal 1AR (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0113 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0116 [L3]

E6U010200100W31

DTC P0116	Engine coolant temperature circuit range/performance
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engir is started and **5 min** have been passed after leaving the vehicle **6 h or more**. If difference between maximum and minimum values of engine coolant temperature is **below 6 °C {10.8 °F}** the PCM determines that there is an ECT circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor. (Engine cooling system) • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0116 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01–40A–35 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**COMPARE ECT PID VALUE** • Prepare a new ECT sensor. • Clear the DTC from the PCM memory using the WDS or equivalent. • Connect the ECT sensor connector to the new ECT sensor without installing to the engine. • Turn the ignition switch to the ON position and record the ECT PID value. • Replace the malfunction ECT sensor with new one. • Start the engine and wait for 5 min. • Record the ECT PID value. • Is the difference between ECT PID values more than 6 °C {42 °F}?	Yes	Go to the next step.
		No	Inspect the thermostat. • If the thermostat is normal, go to the next step. • If the thermostat is not normal, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0116 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Start the engine and warm it up to completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0117 [L3]

E6U010200100W10

DTC P0117	ECT circuit low input
DETECTION CONDITION	• The PCM monitors ECT sensor signal. If the PCM detected ECT sensor voltage **below 0.18 V*1, 0.20 V*2** the PCM determines that the ECT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Short to ground circuit between ECT sensor terminal A and PCM connector terminal 2AH. • Short each harness ECT signal circuit and ECT ground circuit. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL BENT** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for bent of ECT sensor terminals A and B (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect WDS or equivalent to DLC-2. • Access ECT PID. • Verify ECT value when disconnecting ECT sensor connector. • Does ECT value change?	Yes	Replace ECT sensor, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ECT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect continuity between ECT sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT IAT CIRCUIT FOR SHORT HARNESSES** • Inspect continuity between ECT sensor terminal A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace harness for short, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0117 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0118 [L3]

E6U010200100W11

DTC P0118	ECT circuit high input
DETECTION CONDITION	• The PCM monitors ECT sensor signal. If the PCM detected ECT sensor voltage **above 4.58 V**, the PCM determines that the ECT sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Open circuit between ECT sensor terminal A and PCM terminal 2AH • Short to power supply between ECT sensor terminal A and PCM terminal 2AH • Open circuit between ECT sensor terminal B and PCM terminal 2AY • Poor connection of ECT sensor or PCM connectors • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect WDS or equivalent to DLC-2. • Access ECT PID. • Connect a jumper wire between ECT sensor terminals A and B (wiring harness-side). • Verify ECT value • Is voltage **below 4.58 V**?	Yes	Replace ECT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between ECT sensor terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between ECT sensor terminal A (wiring harness-side) and PCM terminal 2AH (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
8	**INSPECT ECT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between ECT sensor terminal B (wiring harness-side) and PCM terminal 2AY (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
0	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0122 [L3]

E6U010200100W12

DTC P0122	TP sensor No.1 circuit low input
DETECTION CONDITION	• If PCM detects TP sensor No.1 voltage **below 0.2 V** after ignition switch to ON, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal A and PCM terminal 2AK • Short to ground between throttle body terminal A and PCM terminal 2AK • Open circuit between throttle body terminal B and PCM terminal 2AO • Short to ground between throttle body terminal B and PCM terminal 2AO • PCM malfunction

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect WDS or equivalent. • Access TP1 PID. • Disconnect throttle body connector. • Connect a jumper wire between throttle body terminals A and B (wiring harness-side). • Is voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform TP sensor inspection. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Is TP sensor normal?	Yes	Inspect for poor throttle body connector terminal B connection. Repair or replace if necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to ON (Engine off). • Measure voltage at throttle body terminal B (wiring harness-side). • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace open circuit between throttle body connector terminal B (wiring harness-side) and PCM connector terminal 2AO (wiring harness-side). Then, then go to Step 8.
6	**VERIFY TP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect continuity between throttle body terminal A (wiring harness-side) and PCM terminal 2AK (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace suspected harness, then go to Step 8.
7	**VERIFY TP1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between throttle body terminal A (wiring harness-side) and body ground. • Inspect continuity between throttle body terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0123 [L3]

E6U010200100W13

DTC P0123	TP sensor No.1 circuit high input
DETECTION CONDITION	• If PCM detects TP sensor No.1 voltage is **above 4.9 V*1, 4.85 V*2** after ignition switch to ON, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to constant voltage supply circuit between throttle body terminal A and PCM terminal 2AK • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT THROTTLE BODY CONNECTION FOR POOR CONNECTION** • Disconnect throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace suspected terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Perform TP sensor inspection. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3]) • Is TP sensor normal?	Yes	Go to the next step.
		No	Replace throttle body, then go to Step 10.
6	**INSPECT TP1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between throttle body terminal A (wiring harness-side) and body ground. • Is voltage **above 4.9 V**?	Yes	Repair or replace short to power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between throttle body connector terminal B (wiring harness-side) and PCM connector terminal 2AO • Inspect continuity between throttle body connector terminal D (wiring harness-side) and PCM connector terminal 2AP • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace open circuit between TP sensor connector terminal B (wiring harness-side) and PCM connector terminal 2AO (wiring harness-side). Then, go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to Step 10.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect continuity between throttle body terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
1	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0125 [L3]

E6U010200100W14

DTC P0125	Excessive time to enter closed loop fuel control
DETECTION CONDITION	• The PCM monitor ECT sensor signal at PCM terminal 2AH after engine is started at the engine is cold. If engine coolant temperature does not reach the expected temperature for specified period, PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start closed-loop fuel control. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Poor connection of connectors • Engine cooling system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Start engine. • Warm up engine completely. • Access ECT PID using the WDS or equivalent. • Is ECT PID **above 60 °C {140 °F}**?	Yes	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect ECT sensor. (See 01–40A–35 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Replace ECT sensor, then go to Step 8.
6	**INSPECT ENGINE COOLANT SYSTEM** • Inspect the following items. — Cooling system cap — Radiator — Thermostat — Water pump — Cooling fan • Are they normal?	Yes	Go to the next step.
		No	Repair or replace necessary part, then go to Step 8.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0125 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to ON (Engine off). • Access ECT PID using the WDS or equivalent. • Wait until ECT PID **below 8 °C {46 °F}**[*1]**, 19.4 °C {66.9 °F}**[*2]. • Start engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable model
*2 : Except for California emission regulation applicable model

DTC P0126, P0128 [L3]

E6U010200100W15

DTC P0126 DTC P0128	**Coolant thermostat stuck open**
DETECTION CONDITION	**DTC P0126** • If the ECT signal never exceeds **71 °C {160 °F}** after engine start for specified period, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10 °C {14 °F}** — Vehicle speed: **over 9.4 km/h {5.8 mph} [ATX], over 6.3 km/h {3.9mph} [MTX]** **DTC P0128** • PCM monitors MAF, IAT, VSS and EAT signals and calculate radiator heat radiation ratio while following monitoring conditions are met. If calculated value exceeds threshold, PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — ECT at engine start: **Below 36 °C {97 °F}** — IAT: **above –10 °C {14 °F}** — Difference between ECT at engine start and minimum IAT: **Below 6 °C {10.8 °F}** — Vehicle speed: **over 32 km/h {20 mph}** **Diagnostic support note** • This is an intermittent monitor (Engine cooling system). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• ECT sensor malfunction • Coolant thermostat malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT COOLANT THERMOSTAT FOR WHETHER STUCK OPEN** • Perform coolant thermostat inspection. (See 01–12A–10 THERMOSTAT INSPECTION [L3, AJ].) • Is coolant thermostat normal?	Yes	Inspect ECT sensor. Replace ECT sensor if necessary, then go to the next step.
		No	Replace coolant thermostat, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION** • Make sure to reconnect all disconnected connectors. • Cool down engine. **Note** • If workshop inside and outside temperature difference is significant, PCM might not operate thermostat monitor. Therefore, it is recommended to cool down engine out of workshop. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Access ECT, IAT PIDs and make sure that each value is within following specifications. — ECT: **below 36 °C {97 °F}** (for P0128 only) — IAT: **Above –10°C {14°F}** — Difference between ECT and IAT: **Below 6°C {43°F}** • Is there any PID that is out of specification?	Yes	Take corrective action (e.g. cool down engine), then repeat this step.
		No	Go to the next step for DTC P0126 or go to step 7 for DTC P0128.
6	**VERIFY TROUBLESHOOTING OF DTC P0126 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST #10: E1: 81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops during every **5 minutes** of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is **–10°C {14°F}**, monitoring period is **38 minutes** and ECT is **30 °C {86 °F}**, monitoring period is **8 minutes**) • Verify TEST #10: E1: 81 (ECT) value. • Is value above minimum value?	Yes	Go to Step 8.
		No	Replace PCM, then go to Step 8.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0128 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST #10: E1: 80 (Heat radiation ratio) or #10: E1: 81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Verify TEST #10: E1: 80 (Heat radiation ratio) and #10: El: 81 (ECT) value. • Are value of TEST #10: E1: 80 (Heat radiation ratio) below maximum value and value of TEST #10: E1: 81 (ECT) above minimum value?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0130 [L3]

E6U010200100W16

DTC P0130	Front HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the front HO2S impedance when under the front HO2S heater control. If the impedance is **more than 500 ohms**, the PCM determines that there is a front HO2S circuit problem. **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 6. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0130 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0131 [L3]

E6U010200100W27

California Emission Regulation Applicable ATX Model

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S and the front HO2S output current when the engine is running. If the input voltage is **less than 1.8 V** or the output current is **less than –5 mA**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S terminal A and PCM terminal 2AD • Short to ground in wiring harness between front HO2S terminal A and PCM terminal 2AD • Open circuit in wiring harness between front HO2S terminal B and PCM terminal 2Z • Short to ground in wiring harness between front HO2S terminal B and PCM terminal 2Z • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — Front HO2S terminal A (wiring harness-side) and body ground — Front HO2S terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See 01–15A–5 HO2S Removal Note.)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal A (wiring harness-side) and PCM terminal 2AD (wiring harness-side) — Front HO2S terminal B (wiring harness-side) and PCM terminal 2Z (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO self-test (using WDS or equivalent) or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode (not using WDS or equivalent). (See 01–02A–12 KOEO/KOER SELF TEST [L3].) (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S while the engine is running. If the input voltage is **above 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Short to ground in wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Open circuit in wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Short to ground in wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Open circuit in wiring harness between front HO2S terminal 1A and PCM terminal 2AD • Short to ground in wiring harness between front HO2S terminal 1A and PCM terminal 2AD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal 1A (wiring harness-side) and PCM terminal 2AD (wiring harness-side) — Front HO2S terminal 1B (wiring harness-side) and PCM terminal 2AC (wiring harness-side) — Front HO2S terminal 1C (wiring harness-side) and PCM terminal 2Z (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
1	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0132 [L3]

E6U010200100W28

California Emission Regulation Applicable ATX Model

DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S and the front HO2S output current when the engine is running. If the input voltage is **more than 3.8 V** or the output current is **more than 5 mA**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between front HO2S terminal A and PCM terminal 2AD • Short to power supply in wiring harness between front HO2S terminal B and PCM terminal 2Z • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal A (wiring harness-side) and body ground — Front HO2S terminal B (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15A–5 HO2S Removal Note.)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO self-test (using WDS or equivalent) or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode (not using WDS or equivalent). (See 01–02A–12 KOEO/KOER SELF TEST [L3].) (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage is **less than 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Short to power supply in wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Short to power supply in wiring harness between front HO2S terminal 1A and PCM terminal 2AD • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P0133 [L3]

E6U010200100W29

California Emission Regulation Applicable ATX Model

DTC P0133	Front HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the front HO2S output current and short term fuel trim (SHRTFT) when the following conditions are met. If the output current response is lower than that expected from the fuel trim, the PCM determines that the front HO2S circuit is slow. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • Front HO2S heater monitor is completed. • Fuel system loop status is closed loop fuel control. **Diagnostic support note** • This is an intermittent monitor. (HO2S) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S malfunction • Front HO2S looseness • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Clogged or restricted fuel filter (built-in fuel pump unit) • Fuel leakage in fuel line between fuel distribution pipe and fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection purge solenoid hose • Insufficient compression • Engine malfunction (Engine coolant leakage)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0133 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S11 PID using the WDS or equivalent. • Inspect PID under following accelerator pedal conditions in PARK. • Is PID normal? — **Loss than 1 mA** when suddenly depressing accelerator pedal (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition).	Yes	Go to step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the front HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the front HO2S, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PID. • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	The engine is driven under rich condition. Go to the next step.
		No	The engine is driven under lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (EXCESSIVE FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect the fuel pump maximum pressure, and fuel return pipe for clogging. (See 01–14A–21 FUEL PUMP UNIT INSPECTION [L3, AJ].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (LOW FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to step 12.
		No	Go to the next step.
1	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign material or stain inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside the fuel filter (low-pressure side), clean the fuel tank and fuel filter. • If normal, replace the fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0133 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0133	Front HO2S circuit problem

DETECTION CONDITION	• Oxygen sensor malfunction is detected by measuring of the average frequency of oxygen sensor signal, time required to pass from rich to lean, time required to pass from lean to rich.
	• The average frequency of oxygen sensor signal is more than the threshold value.
	MONITORING CONDITIONS
	— HO2S heater, HO2S, and TWC Repair Verification Drive Mode
	— Following conditions are met:
	  • Front HO2S heater monitor is completed.
	  • Fuel system loop status is closed loop fuel control.
	— ECT sensor and front HO2S heater and normal.
	— Engine speed: **1,500—3,500 rpm**
	— Charging efficiency: **15—63 % (at engine speed is 2,500 rpm)**
	— Engine coolant temperature **above 70 °C {158 °F}**
	Diagnostic support note
	• This is an intermittent monitor. (HO2S)
	• The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM.
	• DIAGNOSTIC MONITORING TEST RESULTS is available.
	• PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle.
	• FREEZE FRAME DATA is available.
	• DTC is stored in the PCM memory.

POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S malfunction • Front HO2S looseness • Fuel pump malfunction • Fuel pressure regulation malfunction • Clogged or restricted fuel filter (built-in fuel pump unit) • Fuel leakage in fuel line between fuel distribution pipe and fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection purge solenoid hose • Insufficient compression • Engine malfunction (Engine coolant leakage)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the WDS or equivalent. • Is the DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P0133 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S11 PID using the WDS or equivalent. • Inspect PID under following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **–1.0 —1.0 A** when idle — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.

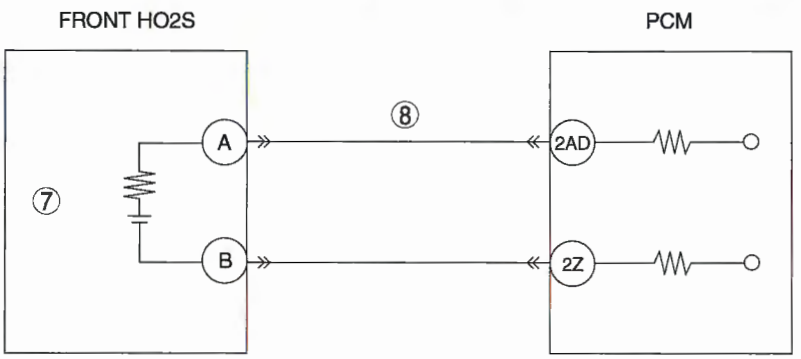
STEP	INSPECTION		ACTION
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the front HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the front HO2S, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 13.
		No	Replace the sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PID. • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	The engine is driven under rich condition. Go to the next step.
		No	The engine is driven under lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (EXCESSIVE FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect the fuel pump maximum pressure, and fuel return pipe for clogging. (See 01–14A–21 FUEL PUMP UNIT INSPECTION [L3, AJ].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (LOW FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign material or stain inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside the fuel filter (low-pressure side), clean the fuel tank and fuel filter. • If normal, replace the fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0133 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0134 [L3]

E6U010200100W30

California Emission Regulation Applicable ATX Model

DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the front HO2S element impedance when the following conditions are met. If the front HO2S element impedance is **150 ohms or more**, the PCM determines that front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — Following conditions are met • Time from engine start is **above 30 s** (ECT when engine start is **20 °C {68 °F}**). **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Open circuit or short to ground in wiring harness between front HO2S terminal A and PCM terminal 2AD



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR

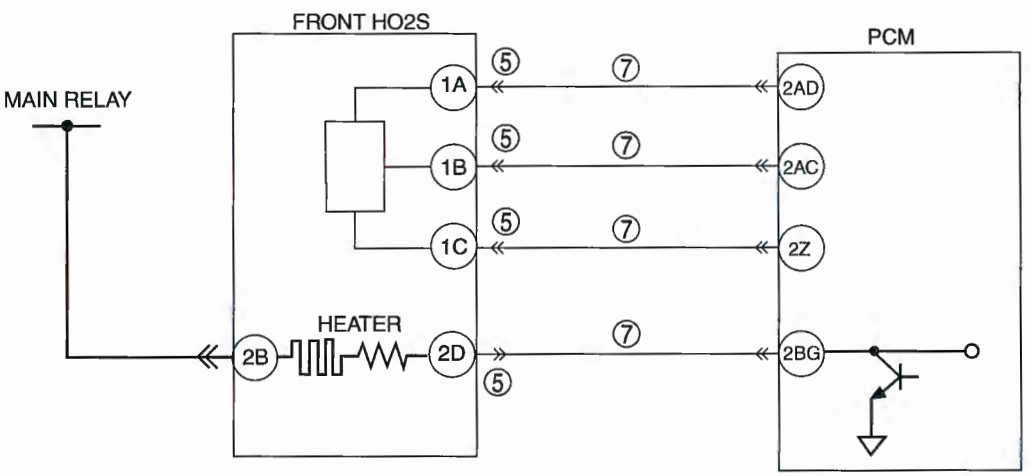
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

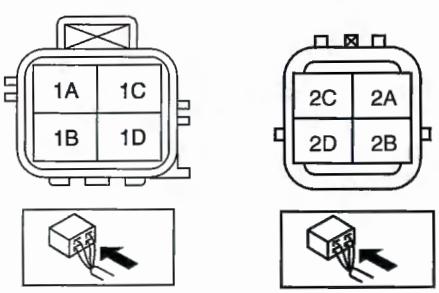
STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor DTC, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step 10.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is the front HO2S heater normal?	Yes	Go to the next step.
		No	Replace the front HO2S, then go to Step 10. (See 01–15A–5 HO2S Removal Note.)
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Replace the front HO2S, then go to Step 10. (See 01–15A–5 HO2S Removal Note.)
8	**INSPECT FRONT HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY CIRCUIT** • Turn the ignition switch to OFF. • Disconnect the front HO2S connector. • Measure the voltage between front HO2S terminal A (wiring harness-side) and GND. • Is the voltage **above 3.22 V**?	Yes	Repair or replace for short to power supply circuit, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S SIGNAL CIRCUIT FOR OPEN** • Disconnect the PCM connector. • Inspect for continuity between PCM terminal 2AD (wiring harness-side) and front HO2S terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace for open circuit, then go to the net step.
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from memory using the WDS or equivalent. • Perform the KOER self-test (using WDS or equivalent) or the HO2S heater, HO2S, and TWC Repair Verification Drive Mode (not using WDS or equivalent). (See 01–02A–12 KOEO/KOER SELF TEST [L3].) (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

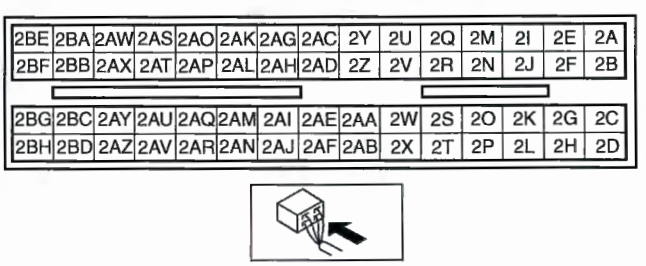
DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from front HO2S when the following conditions are met. Under the following monitoring conditions, the input voltage **more than 3.22 V**, the PCM determines that the front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — Following conditions are met • Front HO2S heater is turned on **for more than 30 s**. • Battery voltage: **10 —18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Leakage exhaust system • Open or short circuit in wiring harness between front HO2S terminal 1A and PCM terminal 2AD • Open or short circuit in wiring harness between front HO2S terminal 1B and PCM terminal 2AC • Open or short circuit in wiring harness between front HO2S terminal 1C and PCM terminal 2Z • Open or short circuit in wiring harness between front HO2S terminal 2D and PCM terminal 2BG • Insufficient compression • Engine malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor DTC, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the WDS or equivalent. • Is the DTC P2237 or P2251 also present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S11 PID using the WDS or equivalent. • Verify PID while racing engine in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **–1.0 —1.0 A** when idle — **More than 0.25 mA** just after releasing the of accelerator pedal (lean condition)	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following harnesses at wiring harness-side connector terminals for open or short circuit, repair or replace wiring harness if necessary. — Front HO2S terminal 1A and PCM terminal 2AD — Front HO2S terminal 1B and PCM terminal 2AC — Front HO2S terminal 1C and PCM terminal 2Z — Front HO2S terminal 2D and PCM terminal 2BG • If all items above are normal, replace malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to inspection results, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from memory using the WDS or equivalent. • Perform the KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0137 [L3]

E6U010200100W32

DTC P0137	Rear HO2S circuit low input
DETECTION CONDITION	• The PCM monitors input voltage from rear HO2S. If the input voltage from the rear HO2S is below **0.1 V** for **35.2 s** the PCM determines that circuit input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met. • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Fuel injector control in rear HO2S closed loop control. • The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.1 V** though the short term fuel trim is controlled up to **20.5 %** for **9.6 s**, the PCM determines that sensor circu input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met for **above 20.8 s**. • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. **Diagnostic support note** • This is a continuous monitor (HO2S). • MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to ground in wiring between rear HO2S terminal A and PCM terminal 2Q • Open circuit in wiring between rear HO2S terminal A and PCM terminal 2Q • Open circuit in wiring between rear HO2S terminal B and PCM terminal 1BC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0137 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)

STEP	INSPECTION		ACTION
5	**INSPECT HO2S (REAR) CONNECTOR FOR POOR CONNECTION** • Turn ignition key OFF. • Disconnect HO2S (rear) connector. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 11.
		No	Go to next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 11.
		No	Go to next step.
7	**INSPECT HO2S (REAR) SIGNAL CIRCUIT FOR OPEN** • Inspect continuity between HO2S (rear) terminal A (harness-side) and PCM terminal 2Q (harness-side). • Is there any continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit, then go to Step 11.
8	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND CIRCUIT** • Inspect continuity between rear HO2S (rear) terminal A (harness-side) and body ground. • Is there any voltage reading?	Yes	Replace short to power supply circuit, then go to Step 11.
		No	Go to next step.
9	**INSPECT HO2S (REAR) GROUND CIRCUIT FOR OPEN** • Inspect continuity between HO2S (rear) terminal B (harness-side) and PCM terminal 1BC (harness-side). • Is there any continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit, then go to Step 11.
10	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start engine. • Access O2S12 PID using WDS or equivalent. • Verify PID while racing engine at least **10 times** (in NEUTRAL (MTX) or PARK (ATX)). • Does PID reading stay **above 0.45 V**?	Yes	Repair or replace HO2S (rear), then go to next step.
		No	Go to next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0137 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER self-test using the WDS or equivalent. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0138 [L3]

E6U010200100W21

DTC P0138	Middle*1/Rear*2 HO2S circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from middle*1/rear*2 HO2S. If the input voltage from the middle*1/rear*2 HO2S sensor is **above 1.2 V** for **0.5 s*1/0.8 s*2**, the PCM determines that circuit input is high. **Diagnostic support note** • This is a continues monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle*1/Rear*2 HO2S malfunction • Short to power supply in wiring harness between middle*1/rear*2 HO2S terminal A and PCM terminal 2R*1, 2Q*2 • Middle*1/Rear*2 HO2S or PCM terminal shorted • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related service bulletins and/or repair Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0138 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT MIDDLE*1 /REAR*2 HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect middle*1/rear*2 HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between middle*1/rear*2 HO2S terminal A (wiring harness-side) and body ground. • Is there any voltage?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start engine. • Access O2S12 PID using the WDS or equivalent. • Verify PID while racing engine at least **10 times** in PARK (ATX) or NEUTRAL (MTX). • Does PID stay **above 0.55 V?**	Yes	Replace sensor, then go to the next step. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Run the PCM adaptive memory procedure drive mode and HO2S heater, HO2S, and TWC repair verification drive mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

DTC P0139 [L3]

E6U010200100W22

California Emission Regulation Applicable ATX Model

DTC P0139	Middle HO2S circuit problem
DETECTION CONDITION	• The PCM monitors inversion cycle period, middle HO2S output voltage inclination. The PCM detects that the voltage inclinations are below threshold consecutive **5 times** when following conditions are met, or **0.3 V or more** is detected **three times** even though fuel cut is performed for **3 s or more**, the PCM determines that circuit has malfunction. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode — Following conditions are met: • Engine speed is **500 rpm or above**. • Engine coolant temperature is **above 70 °C {158 °F}**. **Diagnostic support note** • This is an intermittent monitor. (HO2S) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Middle HO2S deterioration • Middle HO2S malfunction • Looseness middle HO2S • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel distribution pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Engine malfunction (Leakage engine coolant)

01–02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and /or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 PID using the WDS or equivalent. • Inspect PID under following accelerator pedal conditions in PARK. • Is PID normal? — **More than 0.55 V** when suddenly depress accelerator pedal (rich condition). — **Less than 0.55 V** just after release of accelerator pedal (lean condition).	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF MIDDLE HO2S** • Inspect if the middle HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and middle HO2S. • Is there gas leakage?	Yes	Repair or replace malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access LONGFT1 PIDs • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	Engine is driven under rich condition. Go to the next step.
		No	Engine is driven under lean condition. Go to step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See 01–14A–21 FUEL PUMP UNIT INSPECTION [L3, AJ].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is fuel line pressure normal?	Yes	Go to step 12.
		No	Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign materials or stain inside fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.

STEP	INSPECTION		ACTION
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P0139	Rear HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the rich (**0.4 V**) to lean (**0.3 V**) response time of the rear HO2S. The PCM measure the response time when the following conditions are met. The PCM determines the rear HO2S response deterioration malfunction when the measured response time is more than the threshold value (**80 ms**) five consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — Following conditions are met: • Fuel cut during deceleration • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • HO2S (rear) output voltage is **above 0.4 V**. • The PCM monitors for a time-out malfunction (when rear HO2S remains above 0.3 V for longer than a specified period of time during fuel cut control). The PCM measure the amount of time from when the following conditions are met until the rear HO2S output voltage drops **below 0.3 V**. The PCM determines a HO2S time-out malfunction when the detected time is more than the threshold value (**6 s**) three consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — Following conditions are met: • Fuel cut during deceleration • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • HO2S (rear) is activated (**more than 0.55 V**). **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S malfunction • Looseness rear HO2S • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel distribution pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Engine malfunction (Leakage engine coolant)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on repair order, then g to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and /or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 PID using the WDS or equivalent. • Inspect PID under following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is PID normal? — **More than 0.55 V** when suddenly depress accelerator pedal (rich condition). — **Less than 0.55 V** just after release of accelerator pedal (lean condition).	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Inspect if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage is found between the exhaust manifold and rear HO2S. • Is there gas leakage?	Yes	Repair or replace malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access LONGFT1 PIDs • Compare it with FREEZE FRAME DATA recorded at Step 1. • Is it below FFD value?	Yes	Engine is driven under rich condition. Go to the next step.
		No	Engine is driven under lean condition. Go to step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See 01–14A–21 FUEL PUMP UNIT INSPECTION [L3, AJ].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is fuel line pressure normal?	Yes	Go to step 12.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign materials or stain inside fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0140 [L3]

E6U010200100W23

DTC P0140	Rear HO2S circuit no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.55 V** though the short term fuel trim is controlled up to **25%** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met for **above 20.8 s** • Engine speed is **above 1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. — Rear HO2S voltage is **above 0.1 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S heater malfunction • Exhaust system leakage • Open or short to ground circuit between rear HO2S terminal A and PCM terminal 2Q • Insufficient compression • Engine malfunction

DTC P0140	Rear HO2S circuit no activity detected

Diagnostic procedure

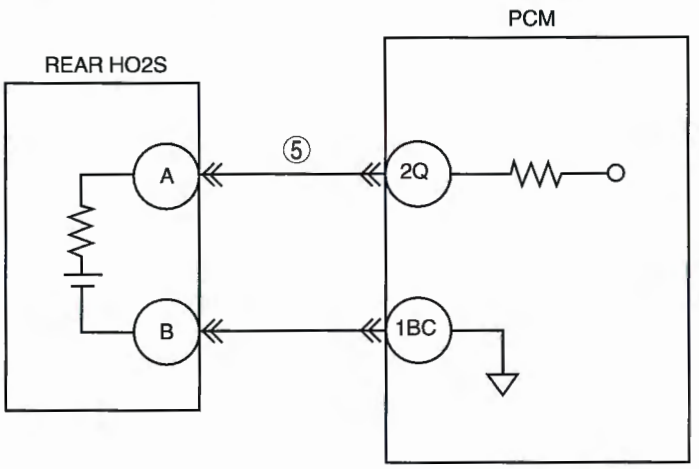
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** **Note** • If fuel monitor DTC, DTC P0131or P0132 is retrieved, ignore it until P0140 is fixed. • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0140 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S12 for P0140 or O2S22 for P0160 PID using the WDS or equivalent. • Verify PID while racing engine at least **10 times** (in NEUTRAL (MTX) or PARK (ATX)). • Is PID reading normal? — **More than 0.55 V** at least once during engine racing.	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Check if rear HO2S is loosely installed. • Is sensor installed securely?	Yes	Go to the next step.
		No	Install sensor securely, then go to Step10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between exhaust pipe and rear HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust parts, then go to Step 10.
		No	• Inspect the following harnesses for open or short to ground circuit, repair or replace harness if necessary. — Rear HO2S terminal A (wiring harness-side) to PCM terminal 2Q (wiring harness-side) • Repair or replace harness if necessary. • If all items above are normal, replace faulty sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the Step 10.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0140 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0144 [L3]

E6U010200100W24

DTC P0144	Rear HO2S circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from rear HO2S. If the input voltage from the rear HO2S sensor is **above 1.2 V** for **0.5 s**, the PCM determines that circuit input is high. **Diagnostic support note** • This is an continuous monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to power supply in wiring harness between rear HO2S terminal A and PCM terminal 2Q • Rear HO2S or PCM terminal shorted • PCM malfunction



REAR HO2S

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or repair Information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0144 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect rear HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between rear HO2S terminal A (wiring harness-side) and body ground. • Is any voltage reading?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start engine. • Access O2S13 PID using the WDS or equivalent. • Verify PID while racing engine at least **10 times** in PARK. • Does PID stay **above 0.55 V**?	Yes	Repair or replace sensor, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0144 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Run the PCM adaptive memory procedure drive mode and HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0171 [L3]

E6U010200100W25

DTC P0171	Fuel trim system too lean
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, PCM determines that the fuel system is too lean. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Fuel return hose clogged • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Insufficient compression • Variable valve timing control system improper operation • Air suction in intake-air system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Is other DTCs present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to appropriate DTC troubleshooting procedures. (See 01–02A–18 DTC TABLE [L3].)
		No	If drive ability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0171 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (ignition switch TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or replace if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any input signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses, and repair or replace it. Then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P0171 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depress (rich condition) — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Inspect for air suction at followings due to cracks, damages and loosening parts: • From air cleaner to throttle body • From throttle body to dynamic chamber • From dynamic chamber to intake manifold • Vacuum hoses **Note** • Engine speed may change when rust penetrating agent is sprayed on the air suction area. Repair or replace any faulty part, then go to Step 17.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace FRONT HO2S. Then go to Step 17.
8	**INSPECT MAF PID** • Start engine. • Access MAF PID using the WDS or equivalent. • Verify that MAF PID changes quickly according to race engine RPM. • Is MAF PID response normal?	Yes	Go to the next step.
		No	Replace Mass air flow sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. **Note** • If engine won't start, inspect fuel line pressure with ignition switch ON. • Inspect fuel line pressure while engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is fuel line pressure normal?	Yes	Go to Step 12.
		No	• If fuel line pressure is too high: Replace fuel pump unit, then go to Step 17. • If fuel line pressure is too low: Go to the next step.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect low-pressure side fuel filter for follows: • Foreign materials or stain inside fuel filter Perform following actions as result. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean of fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 17.
12	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related harness condition (intermittent open or short) for all cylinders. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 17.
13	**INSPECT IGNITION SYSTEM OPERATION** • Carry out spark test. (See 01–03A–69 Spark Test) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result. Then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 19.

STEP	INSPECTION		ACTION
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to variable valve timing control system inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove fuel injector. • Inspect injector operation. • Is fuel injector normal?	Yes	Go to the next step.
		No	Replace injector, then go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P0171 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode" again. • Access PENDING CODE. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0172 [L3]

E6U010200100W26

DTC P0172	Fuel trim system too rich
DETECTION CONDITION	• PCM monitors short fuel trim (SHRTFT) and long fuel trim (LONGFT) values when closed loop fuel control. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria, PCM determines that the fuel system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • EGR valve improper operation • Variable tumble solenoid valve improper operation • Purge solenoid valve improper operation • Pressure regulator malfunction • Fuel pump malfunction • Fuel return hose clogged • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • PCV valve malfunction • PCM malfunction

Diagnostic procedure

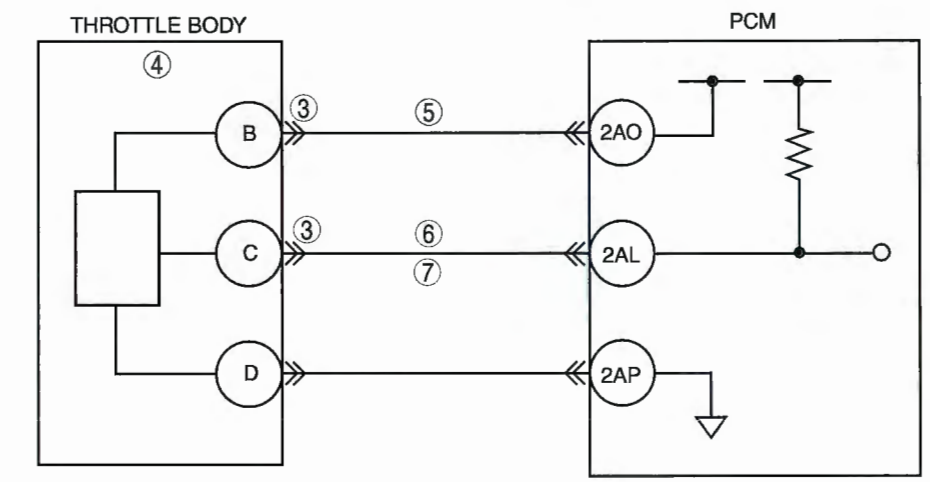
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTCs present?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	If drive ability concern is present, go to Step 9. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0172 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (ignition switch TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or replace if necessary. Then go to Step 11.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect PID data while simulating FREEZE FRAME DATA condition. • Is there any input signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, and repair or replace it. Then go to Step 11.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 PID using the WDS or equivalent. • Verify PID while racing engine (in PARK). • Is PID reading normal? — **Less than 1 mA** when accelerator pedal is suddenly depress (rich condition) — **More than 1 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Replace the front HO2S. Then go to Step 11.
8	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect fuel line pressure while engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is fuel line pressure normal?	Yes	Go to the next step.
		No	Replace the fuel pump unit, then go to Step 11.
9	**INSPECT LONG TERM FUEL TRIM** • Turn the ignition switch off. • Disconnect purge hose from intake manifold and plug opening end of hose and intake manifold. • Access LONGFT1 PID. • Does it shift to positive value?	Yes	Inspect the purge solenoid valve. Repair or replace it if necessary, then go to Step 11.
		No	Go to the next step.
10	**INSPECT PCV VALVE OPERATION** • Inspect PCV valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3].)	Yes	Go to the next step.
		No	Replace the PCV valve, then go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0172 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the "HO2S heater, HO2S, and TWC Repair Verification Drive Mode" again. • Access PENDING CODE. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

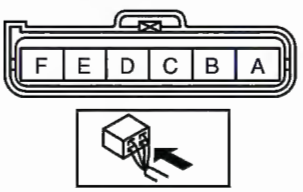
DTC P0222 [L3]

E6U010200200W01

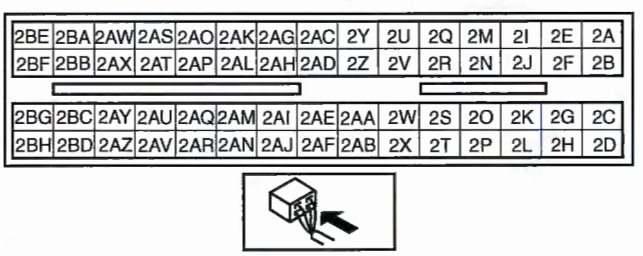
DTC P0222	TP sensor No.2 circuit low input
DETECTION CONDITION	• If PCM detects TP sensor No.2 voltage **below 0.05 V*1, 0.2 V*2** after ignition switch to ON, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction conditions in first drive cycles. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal C and PCM terminal 2AL • Short to ground between throttle body terminal C and PCM terminal 2AL • Open circuit between throttle body terminal B and PCM terminal 2AO • Short to ground between throttle body terminal B and PCM terminal 2AO • PCM malfunction



THROTTLE BODY
HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

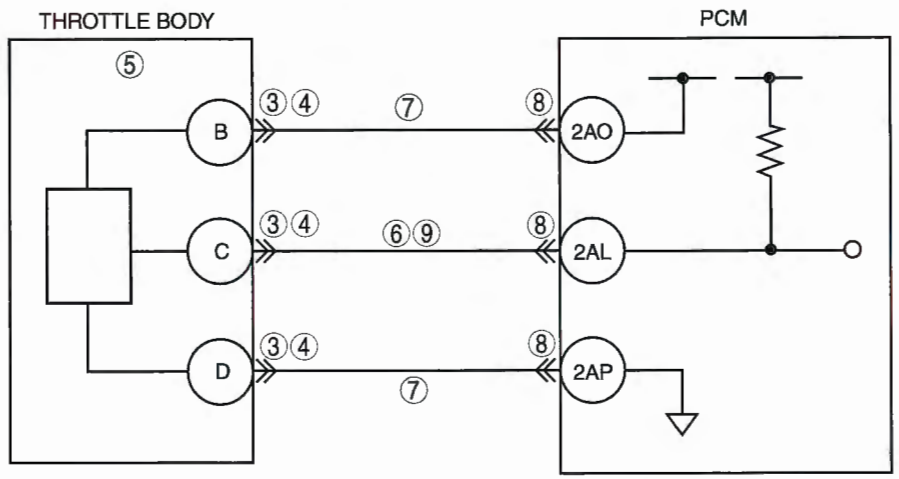
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect WDS or equivalent. • Access TP2 PID. • Disconnect throttle body connector. • Connect a jumper wire between throttle body terminals B and C (wiring harness-side). • Is voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform TP sensor inspection. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Is TP sensor normal?	Yes	Inspect for poor throttle body connector terminal B connection. Repair or replace as necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to ON (Engine off). • Measure voltage at throttle body terminal B (wiring harness-side). • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace open circuit between throttle body connector terminal B and PCM connector terminal 2AO (wiring harness-side). Then, then go to Step 8.
6	**VERIFY TP2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect continuity between throttle body terminal C (wiring harness-side) and PCM terminal 2AL • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace suspected harness, then go to Step 8.
7	**VERIFY TP2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between throttle body terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0222 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

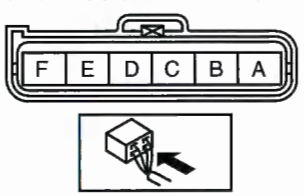
DTC P0223 [L3]

E6U010200200W02

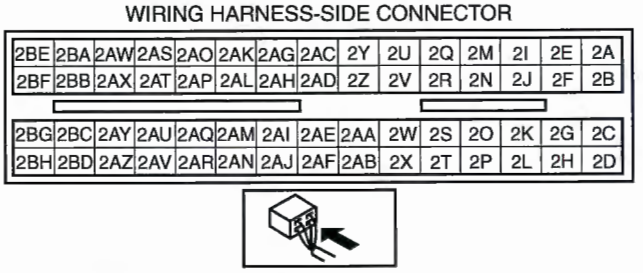
DTC P0223	TP sensor No.2 circuit high input
DETECTION CONDITION	• If PCM detects TP sensor No.2 voltage is **above 4.85 V** after ignition switch to ON, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction conditions in first drive cycles. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to constant voltage supply between throttle body terminal C and PCM terminal 2AL • PCM malfunction



THROTTLE BODY
HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.

STEP	INSPECTION		ACTION
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Disconnect throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace suspected terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Perform TP sensor inspection. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3]) • Is TP sensor normal?	Yes	Go to the next step.
		No	Replace throttle body, then go to Step 10.
6	**INSPECT TP2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between throttle body terminal C (wiring harness-side) and body ground. • Is voltage **above 4.9 V**?	Yes	Repair or replace short to power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between throttle body connector terminal D (wiring harness-side) and PCM terminal 2AP (wiring harness-side). • Inspect continuity between throttle body connector terminal B (wiring harness-side) and PCM terminal 2AO (wiring harness-side). • Is there continuity?	Yes	Repair or replace open circuit between throttle body terminal D (wiring harness-side) and PCM connector terminal 2AP (wiring harness-side). Then, go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to Step 10.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect continuity between throttle body terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0300 [L3]

E6U010200300W01

DTC P0300	Random misfire detection
DETECTION CONDITION	• PCM monitors CKP sensor input signal interval time. PCM calculates the change of the interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, PCM detects a misfire in the corresponding cylinder. While the engine is running, PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • MIL illuminates if PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the misfire which affects emission performance during first drive cycle. • MIL flashes if PCM detects the misfire which can damage the catalytic converter during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • CMP sensor malfunction • Ignition coil malfunction • Ignition system malfunction • MAF sensor contamination • Excess air suction in intake air system (between MAF sensor and intake manifold) • Fuel pump malfunction • Fuel pressure regulator malfunction • Clogged fuel line • Clogged fuel filter • Fuel leakage in fuel line • Fuel run-out • Poor quality fuel • Purge control solenoid valve malfunction • PCV valve malfunction • EGR valve malfunction • Vacuum hose damage or improper connection • Related connector and terminal malfunction • Related wiring harness malfunction • Insufficient compression • Variable valve timing control system improper

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS (ignition switch TO ON/IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP_REL, and VSS PIDs using the WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs at idle?	Yes	Inspect suspected circuit and/or part according to inspection results. (See 01–40A–9 PCM INSPECTION [L3].) Then go to Step 24.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit and/or part according to inspection results. (See 01–40A–9 PCM INSPECTION [L3].) Then go to Step 24.
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect CMP sensor. (See 01–40A–48 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3].) • Is CMP sensor normal?	Yes	Go to the next step.
		No	Inspect installation condition and damage on timing chain and gears, repair faulty parts. • If it is normal, replace CMP sensor. Then go to Step 24.
7	**VERIFY CKP SENSOR INSTALLATION CONDITION** • Inspect for CKP sensor looseness. • Is CKP sensor loose?	Yes	Retighten CKP sensor, then go to Step 20.
		No	Go to the next step.
8	**INSPECT IGNITION COIL HARNESS** • Inspect the ignition coil related harness condition (intermittent open or short) for all cylinders. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 20.
9	**INSPECT IGNITION SYSTEM OPERATION** • Carry out Spark Test. (See 01–03A–69 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to Spark Test result. Then go to Step 20.
10	**INSPECT MAF PID** • Start engine. • Access MAF PID using the WDS or equivalent. • Verify that MAF PID changes quickly according to race engine RPM. • Is MAF PID response normal?	Yes	Go to the next step.
		No	Replace MAF sensor, then go to Step 20.
11	**INSPECT EXCESSIVE AIR SUCTION IN INTAKE AIR SYSTEM** • Inspect for air leakage at following: — Between MAF sensor and throttle body — Between throttle body and intake manifold • Is there any malfunction?	Yes	Repair or replace suspected part, then go to Step 20.
		No	Go to the next step.
12	**INSPECT FUEL LINE PRESSURE** • Inspect fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is fuel line pressure normal?	Yes	Go to Step 14.
		No	If fuel line pressure is too low, go to the next step. If fuel line pressure is excess high, replace fuel pump unit, then go to Step 20.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect for fuel leakage in fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 20.
		No	Inspect low-pressure side fuel filter for following: • Foreign materials or stain inside fuel filter Perform following actions depend on the result above. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean of fuel tank and filter (low-pressure side). • If normal, replace fuel pump unit. Then, go to Step 20.
14	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 20.

STEP	INSPECTION		ACTION
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to variable valve timing control system inspection results, then go to Step 20.
16	**INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE** • Inspect purge control system operation. (See 01–03A–70 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to purge control system inspection results, then go to Step 20.
17	**INSPECT PCV VALVE OPERATION** • Turn the ignition switch off. • Remove PCV valve and inspect valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3].) • Is PCV valve operation normal?	Yes	Replace PCV valve, then go to Step 20.
		No	Go to the next step.
18	**INSPECT OPERATION OF EGR VALVE** • Remove EGR valve. • Visually inspect for stuck to open. • Is EGR valve stuck to open?	Yes	Repair or replace EGR valve, then go to Step 20.
		No	Go to the next step.
19	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
20	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Perform the KOER self-test using the WDS or equivalent. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304 [L3]

E6U010200300W02

DTC P0301 **DTC P0302** **DTC P0303** **DTC P0304**	**Cylinder No.1 misfire detection** **Cylinder No.2 misfire detection** **Cylinder No.3 misfire detection** **Cylinder No.4 misfire detection**
DETECTION CONDITION	• PCM monitors crankshaft position sensor input signal interval time. PCM calculates the change of the interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, PCM detects a misfire in the corresponding cylinder. While the engine is running, PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • MIL illuminates if PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the misfire which affects emission performance during first drive cycle. • MIL flashes if PCM detects the misfire which can damage the catalytic converter during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Spark plug malfunction • Ignition system malfunction • Fuel injector malfunction • Air suction in intake air system (between dynamic chamber and cylinder head) • Inadequate engine compression due to engine internal malfunction • Related connector or terminal malfunction • Related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (ignition switch TO ON /IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP_REL and VSS PIDs using the WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs at idle?	Yes	Inspect suspected circuit and/or part according to inspection results. Then go to Step 15. (See 01–40A–9 PCM INSPECTION [L3].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit and/or part according to inspection results. Then go to Step 15. (See 01–40A–9 PCM INSPECTION [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT SPARK PLUG CONDITION** • Turn the ignition switch off. • Remove spark plug from suspected cylinder. • Inspect spark plug condition: — Cracks — Excess wear — Gap — Wet • Is any problem found on spark plug?	Yes	• If spark plug is wet, fuel flooding is suspected. Go to step 12. • If spark plug has a cracks, excessive wear or improper gap, replace faulty spark plug. Then go to Step 14.
		No	Go to the next step.
7	**INSPECT IGNITION COIL HARNESS** • Inspect the ignition coil related harness condition (intermittent open or short) for all cylinders. • Are harness conditions normal?	Yes	Go to the next step.
		No	Repair suspected wiring harnesses, then go to Step 14.
8	**INSPECT IGNITION SYSTEM OPERATION** • Carry out Spark Test. (See 01–03A–69 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to Spark Test result. Then go to the Step 14.
9	**INSPECT FOR AIR SUCTION AT INTAKE AIR SYSTEM** • Inspect for air leakage at following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head • Is air leakage found?	Yes	Repair or replace suspected part, then go to Step 14.
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR HARNESS** • Remove intake air system parts. • Disconnect fuel injector connector on suspected cylinder. • Connect NOID LIGHT to fuel injector connector terminals. • Inspect light dimness during cranking. • Does noid light illuminate?	Yes	Go to the next step.
		No	Inspect fuel injector harnesses. Repair or replace it if necessary, then go to Step 14.
11	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the Step 14.
12	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 14.
13	**INSPECT FUEL INJECTOR OPERATION** • Remove fuel injector from suspected cylinder. • Swap injector with injector on other cylinder. • Start engine and run it at idle. • Is misfire DTC for cylinder which has a suspected fuel injector?	Yes	Replace injector, then go to the next step.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER self-test using the WDS or equivalent. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0327 [L3]

E6U010200300W03

DTC P0327	Knock sensor circuit low input
DETECTION CONDITION	• PCM monitors input signal from knock sensor when engine is running. If input voltage is **below 0.01 V*1, 0.06 V*2**, PCM determines that knock sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Open or short to ground circuit between knock sensor connector terminal A and PCM terminal 2U • Open or short to ground circuit between knock sensor connector terminal B and PCM terminal 2V • Shorted knock sensor two wires • PCM malfunction

*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect knock sensor connector. • Check for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform knock sensor inspection. (See 01–40A–49 KNOCK SENSOR (KS) INSPECTION [L3]) • Is knock sensor normal?	Yes	Go to the next step.
		No	Replace knock sensor, then go to the next step.
5	**INSPECT KNOCK SENSOR CIRCUITS FOR OPEN CIRCUIT** • Disconnect knock sensor connector. • Inspect continuity between the following circuits: — Knock sensor female terminal A (wiring harness-side) and PCM terminal 2U (wiring harness-side) — Knock sensor female terminal B (wiring harness-side) and PCM terminal 2V (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace suspected wiring harness, then go to Step 9.
6	**INSPECT KNOCK SENSOR CIRCUITS FOR SHORT TO GROUND** • Inspect continuity between following circuits: — Knock sensor female terminal A (wiring harness-side) and body ground — Knock sensor female terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace suspected wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FOR SHORT CIRCUITS** • Inspect continuity between knock sensor female terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 9.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection at terminals 2U and 2V (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0327 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0328 [L3]

E6U010200300W04

DTC P0328	Knock sensor circuit high input
DETECTION CONDITION	• PCM monitors input signal from knock sensor when engine is running. If input voltage is **below 4.77 V*1, 4.9 V*2**, PCM determines that knock sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Short to power supply in wiring between knock sensor terminal A and PCM terminal 2U • Short to power supply in wiring between knock sensor terminal B and PCM terminal 2V • PCM malfunction

*2 : Except for California emission regulation applicable ATX model

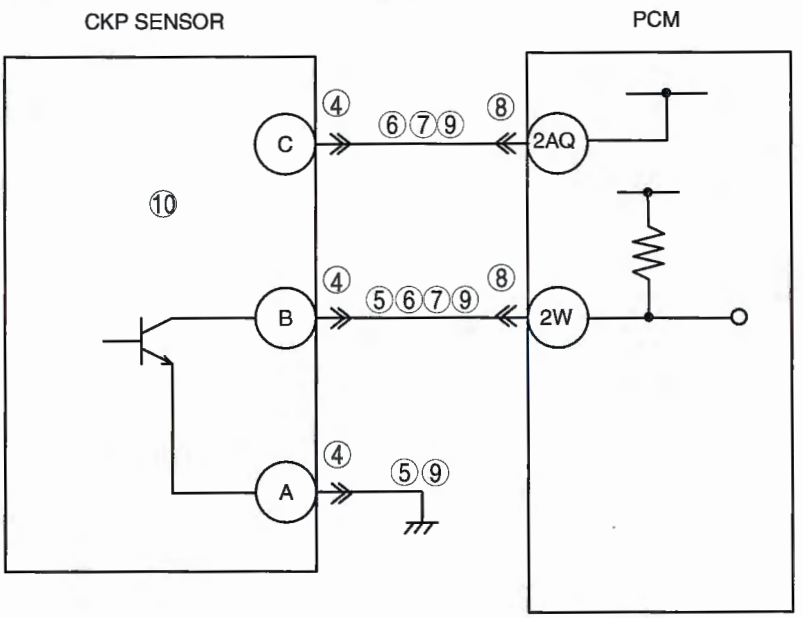
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect knock sensor connector. • Inspect for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to step 7.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform knock sensor inspection. (See 01–40A–49 KNOCK SENSOR (KS) INSPECTION [L3]) • Is knock sensor normal?	Yes	Go to the next step.
		No	Replace knock sensor, then go to step 7.
5	**INSPECT KNOCK SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch ON (Engine off). • Measure voltage between knock sensor terminal A (wiring harness-side) and body GND and knock sensor terminal B (wiring harness-side) and body GND. • Is there any voltage?	Yes	Repair or replace harness for short to power supply, then go to step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0328 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0335 [L3]

E6U010200300W08

DTC P0335	CKP sensor circuit problem
DETECTION CONDITION	• If the PCM does not receive the input voltage from the CKP sensor for **4.2 s** while the MAF is **1.95 g/s {0.2[illegible] lb/min.} or above**, the PCM determines that the CKP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • Connector or terminal malfunction • CKP sensor is dirty. • Short to the power supply between CKP sensor terminal B and PCM terminal 2W • Short to ground between CKP sensor terminal C and PCM terminal 2AQ • Short to ground between CKP sensor terminal B and PCM terminal 2W • Open circuit between CKP sensor terminal A and body ground • Open circuit between CKP sensor terminal B and PCM terminal 2W • Open circuit between CKP sensor terminal C and PCM terminal 2AQ • CKP sensor pulse wheel malfunction • Both CKP sensor wires are shorted to each other • PCM malfunction



CKP SENSOR

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CKP SENSOR VOLTAGE** • Disconnect the CKP sensor connector. • Connect the voltmeter between the CKP sensor connector terminals B and C (sensor-side). • Inspect the voltage in the AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CKP sensor connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.
5	**INSPECT CKP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off • Disconnect the CKP sensor connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between following terminals (wiring harness-side): — CKP sensor terminal B • Is the voltage **B+**?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
6	**INSPECT CKP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between following terminal and body ground: — CKP sensor connector terminal C (wiring harness-side) — CKP sensor connector terminal B (wiring harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT CKP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CKP sensor connector terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
9	**INSPECT CKP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CKP sensor terminal A (wiring harness-side) and body ground — CKP sensor terminal B (wiring harness-side) and PCM terminal 2W (wiring harness-side) — CKP sensor terminal C (wiring harness-side) and PCM terminal 2AQ • Are there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 11.

STEP	INSPECTION		ACTION
10	**INSPECT CKP SENSOR** • Turn the ignition switch off. • Perform the CKP sensor inspection. (See 01–40A–46 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3]) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Inspect the CKP sensor pulse wheel for damage. Replace the CKP sensor pulse wheel and go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0335 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Access the MAF PID using the WDS or equivalent. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0340 [L3]

E6U010200300W09

DTC P0340	CMP sensor circuit problem
DETECTION CONDITION	• The PCM monitors the input voltage from the CMP sensor when the engine is running. If the PCM does not receive the input voltage from the CMP sensor while the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor malfunction • Connector or terminal malfunction • CMP sensor is dirty • Short to the power circuit between CMP sensor terminal B and PCM terminal 2S • Short to ground circuit between CMP sensor terminal C and PCM terminal 2AM • Short to ground circuit between CMP sensor terminal B and PCM terminal 2S • Open circuit between CMP sensor terminal A and body ground • Open circuit between CMP sensor terminal B and PCM terminal 2S • Open circuit between CMP sensor terminal C and PCM terminal 2AM • Both CMP sensor wires are shorted to each other • CKP sensor pulse wheel malfunction • CKP sensor misinstallation • Timing chain misinstallation • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction

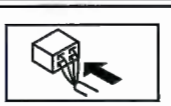
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CMP SENSOR VOLTAGE** • Disconnect the CMP sensor connector. • Connect a voltmeter between CMP sensor connector terminals B and C (sensor-side). • Inspect the voltage in AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CMP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 15.
5	**INSPECT CMP CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Turn ignition switch to the ON position (Engine off) • Measure voltage between the CMP sensor connector terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
6	**INSPECT CMP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal and body ground: — CMP sensor connector terminal B (wiring harness-side) — CMP sensor connector terminal C (wiring harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
7	**INSPECT CMP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CMP sensor connector terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 15.
		No	Go to the next step.
9	**INSPECT CMP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CMP sensor terminal A (wiring harness-side) and body ground — CMP sensor terminal B (wiring harness-side) and PCM terminal 2S (wiring harness-side) — CMP sensor terminal C (wiring harness-side) and PCM terminal 2AM (wiring harness-side) • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 15.

STEP	INSPECTION		ACTION
10	**INSPECT CMP SENSOR** • Turn the ignition switch off. • Perform the CMP sensor inspection. (See 01–40A–48 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3].) • Is the CMP sensor normal?	Yes	Go to the Step 15.
		No	Replace the CMP sensor and go to Step 15.
11	**VERIFY CKP SENSOR INSTALLATION** • Verify the CKP sensor installation. (See 01–40A–45 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3].) • Is the CKP sensor installed correctly?	Yes	Go to the next step.
		No	Reinstall the CKP sensor and go to Step 15.
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain misinstallation — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts and go to Step 15. • Timing chain • Camshaft sprocket • Crankshaft pulley
13	**INSPECT STOPPER PIN MECHANISM (LF, L3)** • Remove the timing chain. • Inspect the stopper pin. (See 01–10A–30 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 15.
14	**INSPECT ROTOR POSITION (LF, L3)** • Remove the variable valve timing actuator. (See 01–10A–31 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [L3]) • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P0340 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Access the MAF PID using the WDS or equivalent. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0401 [L3]

E6U010200400W01

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	• PCM monitors difference in intake manifold pressures when EGR is operated and when it is stopped. If the difference is too small, PCM determines that EGR flow insufficient. **Diagnostic support note** • This is an intermittent monitor (EGR). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • MAP sensor malfunction • EGR gasket malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EGR related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Turn ignition switch to OFF then ON (Engine off). • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONDITION** • Inspect vacuum hoses for clogs, any damages, frozen, or vacuum leakage. • Is there any malfunction?	Yes	Replace vacuum hoses, then go to Step 8.
		No	Go to the next step.
5	**INSPECT EGR VALVE MALFUNCTION** • Perform EGR valve inspection. (See 01–16A–17 EGR VALVE INSPECTION [L3].) • Is EGR valve normal?	Yes	Go to the next step.
		No	Replace EGR valve, then go to Step 8.
6	**INSPECT MAP SENSOR MALFUNCTION** • Perform MAP sensor inspection. (See 01–40A–36 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3].) • Is EGR valve normal?	Yes	Go to the next step.
		No	Replace MAP sensor, then go to Step 8.
7	**INSPECT EGR VALVE PASSAGE** • Turn the ignition switch off. • Remove EGR valve. • Is gasket installation normal?	Yes	Go to the next step.
		No	Install gasket correctly, then go to the next step.
8	**MONITOR EGR SYSTEM BY DRIVE MODE** • Clear the DTC from the PCM memory using the WDS or equivalent. • Run DRIVE MODE 1. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID status. • Does FUEL_EVAL PID change to Yes?	Yes	Retry this step.
		No	Go to the next step.
9	**MONITOR EGR SYSTEM BY DRIVE MODE** • Run DRIVE MODE 2. (See 01–02A–14 EGR System Repair Verification Drive Mode.) • Stop vehicle and access ON BOARD SYSTEM READINESS TEST to inspect DRIVE MODE completion status. • Verify EGR_EVAL PID status. • Does EGR_EVAL PID change to Yes?	Yes	Go to the next step.
		No	Retry this step.
10	**VERIFY TROUBLESHOOTING OF DTC P0401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Access DIAGNOSTIC MONITORING TEST RESULTS. (See 01–02A–12 Diagnostic Monitoring Test Results Access Procedure.) • Verify TEST #10: 31: 83 (EGR flow test) value. • Is value within specification?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0403 [L3]

E6U010200400W17

DTC P0403	EGR valve (stepper motor) circuit problem
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the EGR valve control signal voltage and current. If the following conditions are met, th PCM determines that there is the EGR control circuit problem. — The PCM turns the EGR valve off, but the voltage of the EGR valve control signal remains low. — The PCM turns the EGR valve on, but the current of the EGR valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • The PCM monitors the input voltage from EGR valve. If the voltage remain low or high, the PCM determines that the EGR valve circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction conditions in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between EGR valve terminal E and PCM terminal 2K • Short to power supply in wiring harness between EGR valve terminal A and PCM terminal 2G • Short to power supply in wiring harness between EGR valve terminal B and PCM terminal 2L • Short to power supply in wiring harness between EGR valve terminal F and PCM terminal 2H • Short to ground circuit in wiring harness between EGR valve terminal E and PCM terminal 2K • Short to ground circuit in wiring harness between EGR valve terminal A and PCM terminal 2G • Short to ground circuit in wiring harness between EGR valve terminal B and PCM terminal 2L • Short to ground circuit in wiring harness between EGR valve terminal F and PCM terminal 2H • Open circuit in wiring harness between EGR valve terminal E and PCM terminal 2K • Open circuit in wiring harness between EGR valve terminal A and PCM terminal 2G • Open circuit in wiring harness between EGR valve terminal B and PCM terminal 2L • Open circuit in wiring harness between EGR valve terminal F and PCM terminal 2H • Open circuit in wiring harness between main relay terminal D and EGR valve terminal C • Open circuit in wiring harness between main relay terminal D and EGR valve terminal D • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EGR VALVE FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EGR valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage following terminal and body ground. — EGR valve terminal C — EGR valve terminal D • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit then go to Step 10.

STEP	INSPECTION		ACTION
5	**INSPECT EGR VALVE** • Inspect the EGR valve. (See 01–16A–17 EGR VALVE INSPECTION [L3].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 10.
6	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminal and body ground: — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage following terminal and body ground: — EGR valve terminal E — EGR valve terminal A — EGR valve terminal B — EGR valve terminal F • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
9	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity following terminals: — Between EGR valve terminal E and PCM terminal 2K — Between EGR valve terminal A and PCM terminal 2G — Between EGR valve terminal B and PCM terminal 2L — Between EGR valve terminal F and PCM terminal 2H • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0403 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0420 [L3]

E6U010200400W03

DTC P0420	Catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM compares the number of front HO2S and rear HO2S inversions for a predetermined time. The PCM monitors the rear HO2S inversion counts when the following conditions are met: The PCM detects inversion ratio. If the inversion ratio is below threshold, the PCM determine that catalyst system has deteriorated. — The front HO2S inversion counts is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: **MONITORING CONDITION** — Engine speed **1,300—3,000 rpm** — Calculated TWC temperature is **above400 °C {752 °F}** — Calculated load **15—48%** (at engine speed **2,000 rpm**) **Diagnostic support note** • This is an intermittent monitor. (Catalyst) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• TWC deterioration or malfunction • Exhaust gas leakage • Looseness of front HO2S • Looseness of rear HO2S • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC inspection.
		No	Go to the next step.
4	**INSPECT GAS LEAKAGE OF EXHAUST SYSTEM** • Visually inspect exhaust gas leakage in exhaust system. • Is there gas leakage?	Yes	Repair or replace faulty exhaust parts, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF FRONT AND REAR OXYGEN SENSORS** • Inspect for looseness of front and rear oxygen sensors. • Is it normal?	Yes	Go to the next step.
		No	Retighten sensor, then go to Step 7.
6	**INSPECT TWC** • Clear DTC using the WDS or equivalent. • Cycle ignition switch to OFF then back to ON. • Inspect TWC. • Is it normal?	Yes	Replace suspected oxygen sensor, then go to the next step.
		No	Replace TWC, then go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0420 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start engine and perform "PCM Adaptive Memory Procedure Drive Mode" and "EGR System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0421 [L3]

E6U010200400W04

DTC P0421	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM monitors the input voltage from the middle HO2S and the rear HO2S output current when the following conditions are met. If the input voltage change is extremely large compared to the output current change, the PCM determines that the catalyst system has deteriorated. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Catalyst converter temperature: **more than 350 °C {662 °F}** — Engine speed: **1,000—4,000 rpm** — LOAD: **19—56%** (at engine speed **2,000 rpm**) — Time with purge control system does not operate: **more than 5 s** **Diagnostic support note** • This is an intermittent monitor (Catalyst). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Exhaust gas leakage • Loose front HO2S • Loose middle HO2S • Loose rear HO2S • TWC deterioration or malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR EXHAUST GAS LEAKAGE** • Visually inspect exhaust gas leakage in the exhaust system. • Is there exhaust gas leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF MIDDLE AND REAR HO2S** • Inspect the middle and rear HO2S for looseness. • Is it normal?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 7. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
6	**INSPECT TWC** • Clear the DTC using the WDS or equivalent generic OBD function. • Turn the ignition switch off then back to the ON position. • Inspect the TWC. (See 01–16A–23 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [L3, AJ].) • Is it normal?	Yes	Replace the heated oxygen sensor, then go to the next step.
		No	Replace the TWC, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0441 [L3]

E6U010200400W05

DTC P0441	EVAP control system incorrect purge flow
DETECTION CONDITION	• PCM measures the purge line pressure, which is the vacuum when a following condition. If vacuum between charcoal canister and intake manifold does not reach the specified, PCM determines that the EVAP system has clogging. **MONITORING CONDITION** — Engine speed: **1,500—3.450 rpm** [MTX], **1,220—3.550 rpm** [ATX] — Throttle opening angle: **25 %** (At engine speed is **2500 rpm**) — Vehicle speed: **69.5—136 km/h {43.2—84.5 mph}** [MTX], **34.5—136 km/h {21.4—84.5 mph}** [ATX] **Diagnostic support note** • This is an intermittent monitor (EVAP system monitor). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Damaged or loose EVAP hose • EVAP pipe damaged • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system monitor) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 present?	Yes	Go to appropriate DTC inspection.
		No	Go to the next step.
4	**DETERMINE IF LEAK CONCERN OR BLOCKAGE CONCERN** • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test result failed?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE STUCK CLOSED** • Inspect purge solenoid valve for stuck closed. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is purge solenoid valve normal?	Yes	Inspect following parts for clogging. • Vacuum hoses between intake manifold to charcoal canister • Charcoal canister Repair or replace part, then go to Step 11.
		No	Replace purge solenoid valve, then go to Step 11.
6	**LOCATE LEAK POINT** • Check the following for leakage using Ultrasonic leak detector. — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed (red light turns on)?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed (red light turns on)?	Yes	Replace EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed (red light turns on)?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0441 COMPLETED** • Start the engine and let it idle. • Clear DTC using the WDS or equivalent. • Turn ignition switch OFF. • Perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3]) • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0442 [L3]

E6U010200400W06

DTC P0442	EVAP control system leak detected (small leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when the specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, PCM determines that the EVAP system has small leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {41—95 °F}** — Battery voltage: **11V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.33 inHg}** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system monitor). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel filler cap malfunction • Fuel tank malfunction • Poor seal fuel pump unit • Damaged or loose EVAP hose • Damaged EVAP pipe

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system monitor) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related PENDING CODE or stored DTCs. • Is other DTC present?	Yes	Go to appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test result failed?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
5	**LOCATE LEAK POINT** • Check leakage for the following using EVAP system tester. — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect the purge solenoid valve is stuck closed. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Replace EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0443 [L3]

E6U010200400W18

DTC P0443	Purge solenoid valve circuit problem
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the purge solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the purge solenoid valve control circuit problem. — The PCM turns the purge solenoid valve off, but the voltage of the purge solenoid valve control signal remains low. — The PCM turns the purge solenoid valve on, but the current of the purge solenoid valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • The PCM monitors the input voltages from the purge solenoid valve. If the voltage remains low or high, the PCM determines that the purge solenoid valve circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Connector or terminal malfunction • Short to ground in wiring harness between purge solenoid valve terminal A and PCM terminal 2C • Open circuit in wiring harness between main relay and purge solenoid valve terminal B • Open circuit in wiring harness between purge solenoid valve terminal A and PCM terminal 2C • Short to power supply in wiring harness between purge solenoid valve terminal A and PCM terminal 2C • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION** • Disconnect purge solenoid valve tube that is connected to intake manifold. • Connect vacuum pump to purge solenoid valve. • Pump vacuum pump several times and stop. • Wait **a few seconds**. • Is vacuum maintained?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE** • Turn the ignition switch off. • Disconnect purge solenoid valve connector. • Pump vacuum pump several times and wait **a few seconds**. • Is vacuum maintained?	Yes	Repair or replace wiring harness for short to ground, then go to Step 10.
		No	Replace the purge solenoid valve, then go to Step 10.
5	**INSPECT PURGE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Perform the purge solenoid valve inspection. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ]) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve terminal B and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Inspect the harness at between purge solenoid valve terminal A (wiring harness-side) and PCM terminal 2C (wiring harness-side) for open or short circuit. • If there is continuity, go to the next step. • If there is no continuity, repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0443 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0446 [L3]

E6U010200400W08

DTC P0446	Change over valve (COV) (EVAP system leak detection pump) stuck close
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. When the decrease in pump load current is less than the specification after the reference current value has bee. obtained, the PCM determines change over valve (COV) in EVAP system leak detection pump has a malfunction. **Diagnostic support note** • This is an intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Damaged COV (in EVAP system leak detection pump.) • Short to power circuit between the EVAP system leak detection pump terminal C and PCM terminal • Damaged PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**CHECK COV CONTROL (EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER)** • Turn ignition switch to ON (engine OFF). • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump connector terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.
4	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. (See 01–16A–11 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3, AJ].) • Is the COV (EVAP system leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.

STEP	INSPECTION		ACTION
5	**VERIFY TROUBLESHOOTING OF DTC P0446 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3]) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0455 [L3]

E6U010200400W09

DTC P0455	EVAP control system leak detected (gross leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when the specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, PCM determines that the EVAP system has gross leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {41—95 °F}** — Battery voltage: **11V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.33 inHg}** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system monitor). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Loose, missing or defective fuel filler cap • Charcoal canister malfunction • Fuel tank malfunction • Damaged or loose EVAP hose • Poor connection or damaged vacuum hose

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system monitor related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is DTCs P0443 and/or P0446 present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP System Leak Inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
5	**INSPECT FUEL FILLER CAP** • Verify fuel-filler cap is not either disconnected, loose or damaged. • Is it normal? **Note** • When fuel-filler caps other than OEM caps are attached, it is considered malfunction.	Yes	Go to the next step.
		No	Retighten fuel-filler cap or replace it, if it is damaged. Go to Step 17.
6	**INSPECT PURGE SOLENOID VALVE FOR BEING STUCK** • Inspect purge solenoid valve. • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 17.
7	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Perform EVAP system leak detection pump inspection. • Is COV (EVAP leak detection pump) normal?	Yes	Go to the next step.
		No	Replace EVAP system leak detection pump, then go to Step 17.
8	**DETERMINE IF EVAP CONTROL SYSTEM FOR LEAKAGE OR BLOCKAGE** **Note** • If EVAP tester is not available, then go to the next step. • Perform EVAP System Leak Inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test normal?	Yes	Repair or replace faulty area, then go to Step 17.
		No	Go to the next step.
9	**INSPECT LEAKAGE OF CHARCOAL CANISTER TO FUEL PUMP** • Disconnect fuel tank side vacuum hose at charcoal canister. • Apply vacuum **1.7 kPa {13 mmHg, 0.5 inHg}** to disconnected vacuum hose using vacuum pump. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify vacuum hose installation condition between fuel tank and charcoal canister. • Is poor connection detected?	Yes	Connect vacuum hose correctly, then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL TANK INSTALLATION** • Remove fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed fuel pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to Step 17.
12	**INSPECT FUEL TANK** • Inspect fuel tank. • Is it normal?	Yes	Replace vacuum hose from charcoal canister and fuel tank, then go to the next step.
		No	Replace fuel tank, then go to the next step.
13	**INSPECT LEAKAGE FROM CHARCOAL CANISTER TO PURGE SOLENOID VALVE** • Disconnect purge solenoid valve side vacuum hose at charcoal canister. • Apply vacuum **3.3 kPa {25 mmHg, 1.0 inHg}** to disconnected vacuum hose using vacuum pump. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 17
		No	Go to the next step.
14	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify vacuum hose installation condition between purge solenoid valve and charcoal canister. • Is poor connection detected?	Yes	Connect vacuum hose correctly, then go to Step 17.
		No	Go to the next step.
15	**INSPECT PURGE SOLENOID VALVE FOR DAMAGE OR AIR LEAK** • Remove purge solenoid valve and inspect for damage and air leak. • Is it normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 17.
16	**INSPECT CHARCOAL CANISTER** • Remove charcoal canister and inspect for plugging, damage and pinhole. • Is it normal?	Yes	Replace vacuum hose from charcoal canister to purge solenoid valve, then go to the next step.
		No	Replace charcoal canister, then go to the next step.
17	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors. • Perform EVAP System Leak Inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0456 [L3]

E6U010200400W10

DTC P0456	EVAP control system leak detected (very small leak)
DETECTION CONDITION	• PCM measure the pump load current (EVAP line pressure) when a specified period has passed after EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference load value c rate of the load increase lower than the specified within a specified period, PCM determines that the EVAP system has very small leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {41—95 °F}** — Battery voltage: **11V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.33 inHg}** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP system monitor). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULTS is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Change over valve (COV) in EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel cap malfunction • Fuel tank malfunction • Poor seal fuel pump unit • Damaged or loose EVAP hose • Damaged EVAP pipe

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system monitor related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related PENDING CODE or stored DTCs. • Is other DTC present?	Yes	Go to appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test result failed?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
5	**LOCATE LEAK POINT** • Check leakage for the following using EVAP system tester. — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect if purge solenoid valve is stuck closed. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Replace EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0461 [L3]

E6U010200400W11

DTC P0461	Fuel gauge sender unit circuit range/performance
DETECTION CONDITION	• PCM monitors fuel level voltage difference before and after PCM-calculated fuel consumption has reached **more than 24.5 L {25.9 US qt., 21.6 Imp qt.}**. If the difference is **less than 5%**, the PCM determines that fuel gauge sender unit range/performance is in error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect fuel gauge sender unit. (See 09–22–23 FUEL GAUGE SENDER UNIT INSPECTION [EXCEPT AWD].) • Is fuel gauge sender unit normal?	Yes	Replace PCM, then go to the next step.
		No	Repair or replace fuel gauge sender unit, then go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0462 [L3]

E6U010200400W12

DTC P0462	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the signal of the fuel level and fuel gauge sender unit output voltage from instrument cluster. If the PCM detects fuel level or fuel gauge sender unit output voltage is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace suspected malfunction, then go to Step 4.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0462 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0463 [L3]

E6U010200400W13

DTC P0463	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the signal of the fuel level and fuel gauge sender unit output voltage from instrument cluster. If the PCM detects fuel level or fuel gauge sender unit output voltage is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace suspected malfunction, then go to Step 4.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0463 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0480 [L3]

E6U010200400W19

DTC P0480	Cooling fan relay No.1 control circuit malfunction
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the cooling fan relay No.1 control signal voltage and current. If the following conditions are met, the PCM determines that there is the cooling fan relay No.1 control circuit problem. — The PCM turns the cooling fan relay No.1 off, but the voltage of the cooling fan relay No.1 control signal remains low. — The PCM turns the cooling fan relay No.1 on, but the current of the cooling fan relay No.1 control signal remains high. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • PCM monitors cooling fan relay No.1 control signal. If voltage remains low or high, PCM determines that fan relay No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Cooling fan relay No.1 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and cooling fan relay No.1 terminal E • Open circuit in wiring harness between cooling fan relay No.1 terminal A and PCM terminal 1M • Short to ground in wiring harness between cooling fan relay No.1 terminal A and PCM terminal 1M • Short to power supply in wiring harness between cooling fan relay No.1 terminal A and PCM terminal 1M • PCM malfunction

Diagnostic procedure

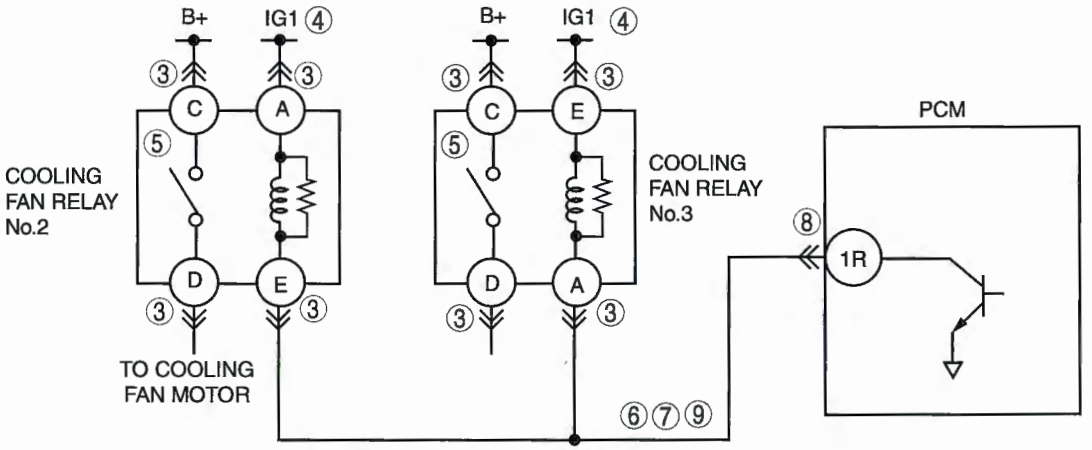
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT COOLING FAN RELAY NO.1 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect cooling fan relay No.1 connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT COOLING FAN RELAY NO.1 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to ON (Engine off). • Measure voltage between cooling fan relay No.1 terminal E (harness side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Replace or replace the wiring harness for an open circuit, then go to Step 10.
5	**INSPECT COOLING FAN RELAY NO.1** • Inspect cooling fan relay No.1. (See 09–21–7 RELAY INSPECTION.) • Is cooling fan relay No.1 normal?	Yes	Go to the next step.
		No	Replace the cooling fan relay No.1, then go to Step 10.
6	**INSPECT COOLING FAN RELAY NO.1 CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure voltage between cooling fan relay No.1 terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 10.
		No	Go to the next step.
7	**INSPECT COOLING FAN RELAY NO.1 CONTROL CIRCUIT FOR SHORT TO GROUND** • inspect for continuity between cooling fan relay No.1 terminal A (harness side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
9	**INSPECT COOLING FAN RELAY NO.1 CONTROL CIRCUIT FOR OPEN CIRCUIT** • inspect for continuity between cooling fan relay No.1 terminal A (wiring harness-side) and PCM terminal 1M (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0480 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the DTC P0480 present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0481 [L3]

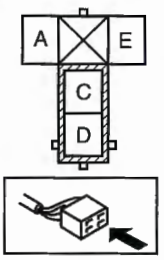
E6U010200400W20

DTC P0481	Cooling fan relay No.2 and No.3 control circuit malfunction
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the cooling fan relay No.2 and No.3 control signal voltage and current. If the following conditions are met, the PCM determines that there is the cooling fan relay No.2 and No.3 control circuit problem. — The PCM turns the cooling fan relay No.2 and No.3 off, but the voltage of the cooling fan relay No.2 and No.3 control signal remains low. — The PCM turns the cooling fan relay No.2 and No.3 on, but the current of the cooling fan relay No.2 and No.3 control signal remains high. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • PCM monitors cooling fan relay No.2 and No.3 control signal. If voltage remains low or high, PCM determines that fan relay No.2 and No.3 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Cooling fan relay No.2 malfunction • Cooling fan relay No.3 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and cooling fan relay No.2 terminal A • Open circuit in wiring harness between cooling fan relay No.2 terminal E and PCM terminal 1R • Open circuit in wiring harness between ignition switch and cooling fan relay No.3 terminal E • Open circuit in wiring harness between cooling fan relay No.3 terminal A and PCM terminal 1R • Short to ground in wiring harness between cooling fan relay No.2 terminal E and PCM terminal 1R • Short to power supply in wiring between cooling fan relay No.2 terminal E and PCM terminal 1R • Short to ground in wiring harness between cooling fan relay No.3 terminal A and PCM terminal 1R • Short to power supply in wiring harness between cooling fan relay No.3 terminal A and PCM terminal 1R • PCM malfunction

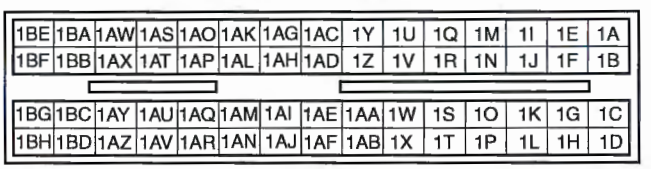
DTC P0481	Cooling fan relay No.2 and No.3 control circuit malfunction



COOLING FAN RELAY HARNESS SIDE CONNECTOR



PCM HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect cooling fan relay No.2 and 3 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure voltage between following terminals and body ground. — Cooling fan relay No.2 terminal A (harness side) — Cooling fan relay No.3 terminal E (harness side) • Is voltage **B+**?	Yes	Go to the next step.
		No	Replace or replace the wiring harness for an open circuit, then go to Step 10.

STEP	INSPECTION		ACTION
5	**INSPECT COOLING FAN RELAY NO.2 AND NO.3** • Inspect cooling fan relay No.2 and No.3. (See 09–21–7 RELAY INSPECTION.) • Are cooling fan relay No.2 and No.3 normal?	Yes	Go to the next step.
		No	Replace the cooling fan relay No.2 or No.3, then go to Step 10.
6	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure voltage between following terminals and body ground. — Cooling fan relay No.2 terminal E (harness side) — Cooling fan relay No.3 terminal A (harness side) • Is voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 10.
		No	Go to the next step.
7	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 CONTROL CIRCUIT FOR SHORT TO GROUND** • inspect for continuity between following terminals and body ground. — Cooling fan relay No.2 terminal E (harness side) — Cooling fan relay No.3 terminal A (harness side) • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
9	**INSPECT COOLING FAN RELAY NO.2 AND NO.3 CONTROL CIRCUIT FOR OPEN CIRCUIT** • inspect for continuity between following terminals and PCM terminal 1R (harness side). — Cooling fan relay No.2 terminal E (harness side) — Cooling fan relay No.3 terminal A (harness side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0481 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the DTC P0481 present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0482 [L3]

E6U010200400W21

DTC P0482	Cooling fan relay No.4 control circuit malfunction
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the cooling fan relay No.4 control signal voltage and current. If the following conditions are met, the PCM determines that there is the cooling fan relay No.4 control circuit problem. — The PCM turns the cooling fan relay No.4 off, but the voltage of the cooling fan relay No.4 control signal remains low. — The PCM turns the cooling fan relay No.4 on, but the current of the cooling fan relay No.4 control signal remains high. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • PCM monitors cooling fan relay No.4 control signal. If voltage remains low or high, PCM determines that fan relay circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Cooling fan relay No.4 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between ignition switch and cooling fan relay No.4 terminal E • Open circuit in wiring harness between cooling fan relay No.4 terminal A and PCM terminal 1N • Short to ground in wiring harness between cooling fan relay No.4 terminal A and PCM terminal 1N • Short to power supply in wiring between cooling fan relay No.4 terminal A and PCM terminal 1N • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT COOLING FUN RELAY NO.4 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect cooling fan relay No.4 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT COOLING FUN RELAY NO.4 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to ON (Engine off). • Measure voltage between cooling fan relay No.4 terminal E (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Replace or replace the wiring harness for an open circuit, then go to Step 10.
5	**INSPECT COOLING FUN RELAY NO.4** • Inspect cooling fan relay No.4. (See 09–21–7 RELAY INSPECTION.) • Is cooling fan relay No.4 normal?	Yes	Go to the next step.
		No	Replace the cooling fan relay No.4, then go to Step 10.
6	**INSPECT COOLING FUN RELAY NO.4 CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure voltage between cooling fan relay No.4 terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 10.
		No	Go to the next step.
7	**INSPECT COOLING FUN RELAY NO.4 CONTROL CIRCUIT FOR SHORT TO GROUND** • inspect for continuity between cooling fan relay No.4 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal and/or connector, then go to Step 10.
		No	Go to the next step.
9	**INSPECT COOLING FUN RELAY NO.4 CONTROL CIRCUIT FOR OPEN CIRCUIT** • inspect for continuity between cooling fan relay No.4 terminal A (wiring harness-side) and PCM terminal 1N (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0482 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the DTC P0481 present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0500 [L3]

E6U010200500W01

DTC P0500	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	**With ABS/TCS** • If an error in the wheel speed signal from the ABS/DSC HU/CM is detected by CAN when the following conditions are met: — Shift range in except P, N or R position (ATX) — Neutral switch and clutch pedal position switch are OFF (MTX) — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **MTX without ABS/TCS** • Vehicle speed signal from vehicle speed sensor is **below 3.7 km/h {2.3 mph}** when following conditions are met: — Neutral switch and clutch pedal position switch are OFF — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	**Without ABS/TCS** • VSS malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2M and VSS terminal A (MTX) • Open circuit between PCM terminal 2N and VSS terminal B (MTX) • Short to ground between PCM terminal 2M and VSS terminal A (MTX) • Short to ground between PCM terminal 2N and VSS terminal B (MTX) • Short to power supply between PCM terminal 2M and VSS terminal A (MTX) • Short to power supply between PCM terminal 2N and VSS terminal B (MTX) • PCM malfunction **With ABS/TCS** • Front ABS wheel-speed sensor malfunction • ABS/TCS/DSC malfunction • Connector or terminal malfunction • PCM malfunction

DTC P0500	Vehicle speed sensor (VSS) circuit malfunction

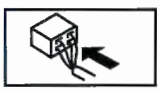
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME PID DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS or equivalent to DLC-2. • Start engine. • Access VSS PID using the WDS or equivalent. — Vehicle speed **20 km/h {12.4 mph}: 20km/h {12.4 mph}** — Vehicle speed **40 km/h {24.8 mph}: 40km/h {24.8 mph}** • Are PID readings within specification?	Yes	Go to intermittent concern troubleshooting procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
		No	Go to the next step.
4	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Verify that the VSS connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.

STEP	INSPECTION		ACTION
5	**INSPECT VSS** • Perform VSS inspection. (See 05–15A–4 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [G35M-R].) (See 05–15B–5 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [A65M-R].) • Is VSS normal?	Yes	Go to the next step.
		No	Replace VSS, then go to Step 11.
6	**INSPECT VSS CIRCUIT FOR SHORT TO POWER** • Turn ignition switch OFF • Disconnect VSS connector. • Turn ignition switch ON (Engine off) • Measure voltage following terminals: — VSS terminal A (wiring harness-side) — VSS terminal B (wiring harness-side) • Is there any voltage?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT VSS CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between following terminal and body ground: — VSS terminal A (wiring harness-side) — VSS terminal B (wiring harness-side) • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT VSS CIRCUITS FOR SHORT CIRCUIT** • Inspect continuity between VSS connector terminals A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace suspected harness, then go to Step 11.
		No	Go to the next step.
9	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT VSS CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between following terminals (wiring harness-side): — VSS terminal A and PCM terminal 2M — VSS terminal B and PCM terminal 2N • Is there continuity?	Yes	Inspect VSS pulse wheel for damage. Replace VSS pulse wheel and go to the next step.
		No	Repair or replace suspected harness, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0500 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Warm up engine. • Access RPM and LOAD PID using the WDS or equivalent. • Drive vehicle under following conditions for **18s**. — Engine speed: **2,000 rpm or above** — Gear: Gear is in other than NEUTRAL — Load: **40% or above** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0505 [L3]

E6U010200500W02

DTC P0505	Idle control system malfunction
DETECTION CONDITION	• PCM cannot control idle speed toward target idle speed while KOER self test.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Clogged air cleaner element • Clogged air intake passage • A/C relay control circuit malfunction • Generator control circuit malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to OFF, then ON. (Engine off) • Verify PENDING CODE or stored DTCs using the WDS or equivalent. • Is DTC P0506, P0507, P2100, P2101, P2102, P2103, P2107, P2108 or P2119 present?	Yes	Perform applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
3	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform electronic throttle control system operation inspection. (See 01–03A–66 Electronic Throttle Control System Inspection.) • Does electronic throttle control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning parts according to electronic throttle control system operation inspection results, then go to Step 9.
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** **Note** • The following test should be performed for A/C. Go to the next step for vehicles without A/C. • Turn blower motor switch to off. • Is magnetic clutch still on?	Yes	Go to "A/C ALWAYS ON / A/C COMPRESSOR RUNS CONTINUOUSLY." of ENGINE SYMPTOM TROUBLESHOOTING then go to Step 9. (See 01–03A–10 ENGINE SYMPTOM TROUBLESHOOTING [L3].)
		No	Go to the next step.
5	**INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION** • Apply electrical load at idle. • Is engine speed increased?	Yes	Go to the next step.
		No	Repair short to power supply in generator control circuit, then go to Step 9.
6	**INSPECT AIR CLEANER ELEMENT** • Remove air cleaner element with engine running. • Does engine speed increase?	Yes	Clean or replace air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT THROTTLE BODY PASSAGE** • Is throttle body clogged?	Yes	Clean or replace throttle body passage, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul engine, then go to the next step.

STEP	INSPECTION		ACTION
9	**VERIFY TROUBLESHOOTING OF DTC P0505 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC using the WDS or equivalent. • Perform vehicle self-test. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0506 [L3]

E6U010200500W03

DTC P0506	Idle control system RPM lower than expected
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **14 s**, when brake pedal is depressed (brake switch is ON) and steering wheel is held straight ahead (power steering pressure switch is OFF). **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below –10 °C {14 °F}**, PCM cancels diagnosis of P0506. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator malfunction • Purge solenoid valve malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Repair applicable DTCs. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**INSPECT A/C MAGNET CLUTCH OPERATION** • Turn blower motor switch off. • Is magnet clutch still on?	Yes	Refer to "A/C is always on or A/C compressor runs continuously." of ENGINE SYMPTOM TROUBLESHOOTING, then go to Step 10. (See 01–03A–55 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3].)
		No	Go to the next step.
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) — TP sensor (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to Step 10.
6	**INSPECT PURGE SOLENOID VALVE MALFUNCTION** • Perform purge solenoid valve inspection. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 10.
7	**INSPECT AIR CLEANER ELEMENT** • Remove air cleaner element with engine running. • Does engine speed increase?	Yes	Replace air cleaner element, then go to Step 10.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul engine, then go to Step 10.
9	**INSPECT GENERATOR** • Perform generator inspection. (See 01–17A–5 GENERATOR INSPECTION [L3, AJ].) • Is generator normal?	Yes	Go to the next step.
		No	Repair or replace related part, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0506 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress brake pedal for **14 s or more.** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0507 [L3]

E6U010200500W04

DTC P0507	Idle control system RPM higher than expected
DETECTION CONDITION	• Actual idle speed is higher than expected by **200 rpm** for **14 s**, when brake pedal is depressed (brake switch is ON) and steering wheel is held straight ahead (power steering pressure switch is OFF). **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below –10 °C {14 °F}**, PCM cancels diagnosis of P0507. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Vacuum hose misconnection • PCM malfunction

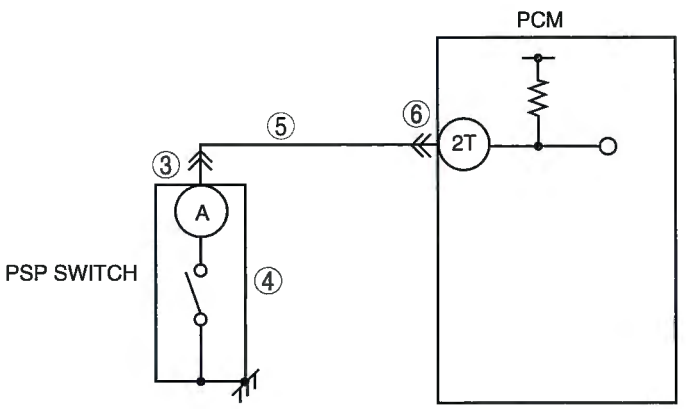
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Repair applicable DTCs. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Are vacuum hoses connecting accurately? (See 01–13A–3 VACUUM HOSE ROUTING DIAGRAM [L3].)	Yes	Go to the next step.
		No	Reconnect vacuum hose accurately, then go to step 6.
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) — TP sensor (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress brake pedal for **14 s or more.** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0550 [L3]

E6U010200500W08

DTC P0550	PSP switch circuit malfunction
DETECTION CONDITION	• The PCM monitors PSP switch signal. If input voltage is low voltage (switch stays on) for **1 min.** when the VSS is **above 60 km/h {37 mph}** and ECT is **above 60 °C {140 °F}**, the PCM determines that PSP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PSP switch malfunction • Connector or terminal malfunction • Short to ground in wiring harness between PSP switch terminal A and PCM terminal 2T • PCM malfunction



PSP SWITCH
HARNESS SIDE CONNECTOR

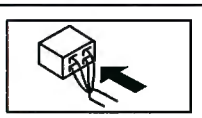
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



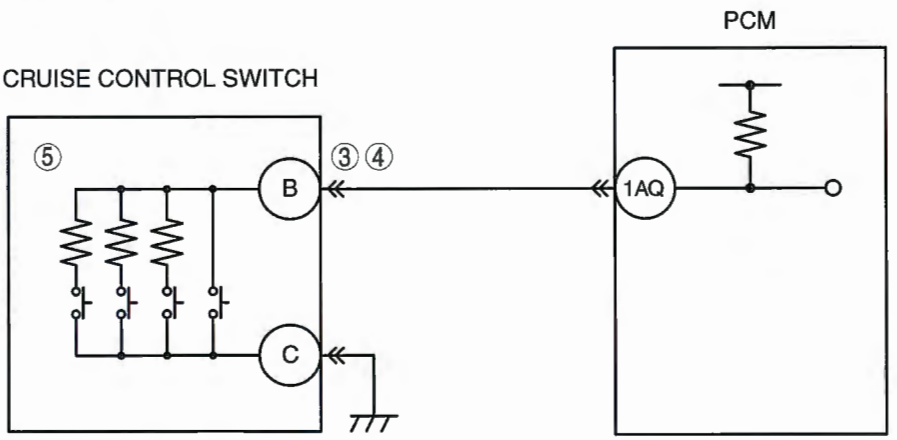
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PSP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PSP connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PSP SWITCH** • Perform PSP switch inspection. (See 01–40A–27 POWER STEERING PRESSURE (PSP) SWITCH INSPECTION [L3].) • Is PSP switch normal?	Yes	Go to the next step.
		No	Replace PSP switch, then go to Step 7.
5	**INSPECT PSP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect PCM connector. • inspect for continuity between PSP switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0550 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle **above 60 km/h {37 mph}** for **1 min.** • Verify that ECT PID **above 60 °C {140 °F}** using the WDS or equivalent. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0564 [L3]

E6U010200500W06

DTC P0564	Cruise control switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the cruise control switch signal. If the PCM detects that any one of following switches (Main, CANCEL, SET/COAST, RESUME/ACCEL) remains on for **2 min**, the PCM determines that the cruise control switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Cruise control switch malfunction • Connector or terminal malfunction • Short to power supply in wiring harness from cruise control switch terminal B and PCM terminal 1AQ. • Short to GND in wiring harness from cruise control switch terminal B and PCM terminal 1AQ. • PCM malfunction



CRUISE CONTROL SWITCH
HARNESS SIDE CONNECTOR

1BF	1BB	1AX	1AT	1AP	1AL	1AH	1AD	1Z	1V	1R	1N	1J	1F	1B
1BG	1BC	1AY	1AU	1AQ	1AM	1AI	1AE	1AA	1W	1S	1O	1K	1G	1C
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

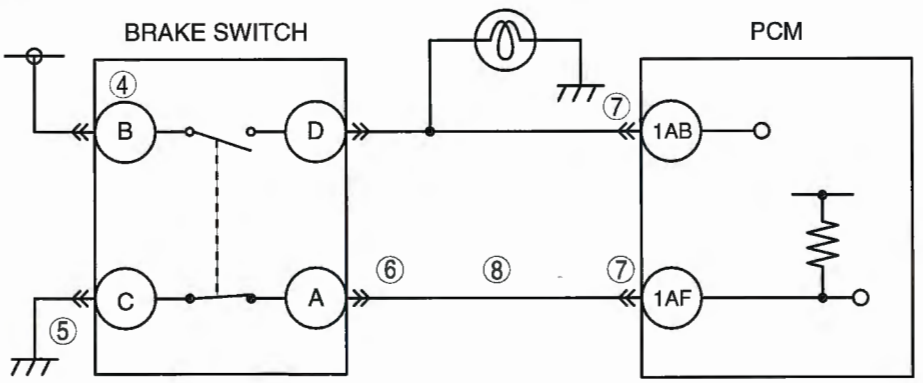
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT CRUISE CONTROL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged, pulled-put terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace suspected terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Disconnect cruise control switch and PCM connectors. • Inspect continuity between cruise control switch terminal B (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace short to GND, then go to Step 6.
		No	Go to the next step.
4	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn ignition switch to ON (Engine off). • Inspect voltage between cruise control switch terminal (wiring harness-side) and body GND. • Is voltage **below 1.0 V**?	Yes	Go to the next step.
		No	Repair or replace short to power supply, then go to Step 6.
5	**INSPECT CRUISE CONTROL SWITCH OPERATION** • Inspect cruise control switch. (See 01–20A–1 CRUISE CONTROL SWITCH INSPECTION [L3, AJ].) • Is cruise control switch normal?	Yes	Go to the next step.
		No	Replace cruise control switch, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF P0564 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle with cruise control **2 min. or more.** • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0571 [L3]

E6U010200500W07

DTC P0571	Brake switch circuit malfunction
DETECTION CONDITION	• The PCM monitors changes in input voltage for brake switch No.1 and No.2. If the PCM detects that both brake switches No.1 and No.2 remain on or off for **15 s**, it determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Open circuit between brake switch terminal A and PCM terminal 1AF • Open circuit between brake switch terminal C and body ground • Short to power supply between brake switch terminal A and PCM terminal 1AF • Short to GND between brake switch terminal A and PCM terminal 1AF • PCM malfunction



BRAKE SWITCH

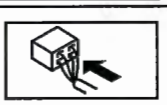
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect brake switch connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminal then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT BRAKE SWITCH** • Inspect brake switch. • Is brake switch normal?	Yes	Go to the next step.
		No	Replace brake switch, then go to Step 10.
5	**INSPECT GND CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
6	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO GROUND** • Inspect continuity between brake switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit, then go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect continuity between brake switch terminal A (wiring harness-side) and PCM terminal 3T (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
9	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO POWER** • Turn ignition switch to ON (Engine off). • Measure voltage between brake switch terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF P0571 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to ON (Engine off). • Depress and release brake pedal **more than 5 times**. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

DTC P0601 [L3]

E6U010200600W01

DTC P0601	Internal control module memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PCM internal memory malfunction • PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0601 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0602 [L3]

E6U010200600W02

DTC P0602	PCM programming error
DETECTION CONDITION	• No configuration data in PCM **Note** • When the configration is completed, DTC P0602 is cleared. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Complete configuration has not been completed. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Perform PCM configuration procedure, then go to the next step. (See 01–40A–24 PCM REPLACEMENT [L3].)
3	**VERIFY TROUBLESHOOTING OF DTC P0602 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0604 [L3]

E6U010200600W03

DTC P0604	PCM RAM error
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0604 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0606 [L3]

E6U010200600W04

DTC P0606	PCM processor
DETECTION CONDITION	• PCM internal CPU malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0606 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0607 [L3]

E6U010200600W05

DTC P0607	Control module performance
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0607 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0610 [L3]

E6U010200600W06

DTC P0610	Control module vehicle options error
DETECTION CONDITION	• PCM data configuration error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Configuration procedure has not been completed. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Perform PCM configuration procedure, then go to the next step. (See 01–40A–24 PCM REPLACEMENT [L3].)
3	**VERIFY TROUBLESHOOTING OF DTC P0610 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0638 [L3]

E6U010200600W07

DTC P0638	Throttle actuator control range/performance
DETECTION CONDITION	• The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle actuator control circuit range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

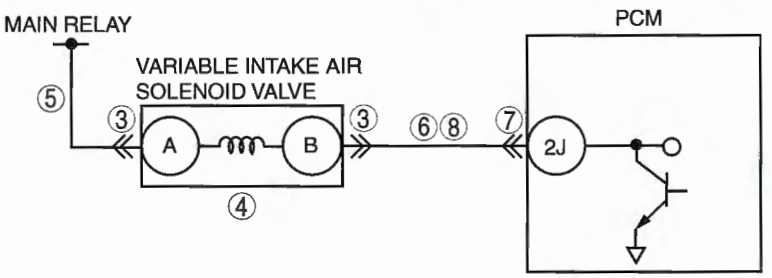
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Perform diagnostic procedure for applicable DTCs.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF P0638 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and let it idle. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

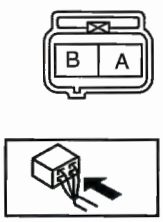
DTC P0661 [L3]

E6U010200600W08

DTC P0661	Variable intake air system solenoid valve circuit low input
DETECTION CONDITION	• PCM monitors variable intake air solenoid valve control signal. If PCM turns variable intake air solenoid valve off but voltage still remains low, PCM determines that variable intake air solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Variable intake air solenoid valve malfunction • Open circuit in wiring harness between main relay and variable intake air solenoid valve terminal A • Open circuit in wiring harness between variable intake air solenoid valve terminal B and PCM terminal 2J • Short to ground in wiring harness between variable intake air solenoid valve terminal B and PCM terminal 2J • Connector or terminal malfunction • PCM malfunction



VARIABLE INTAKE AIR SOLENOID VALVE HARNESS SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR

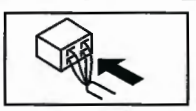
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

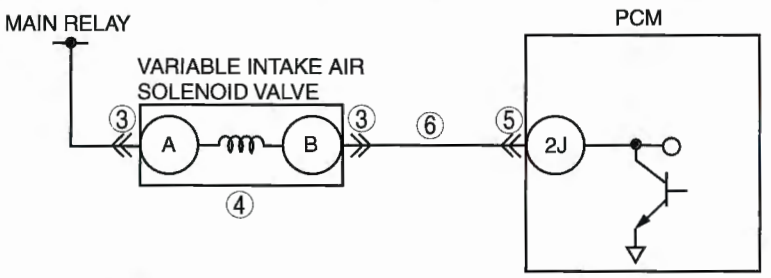
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect variable intake air solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE MALFUNCTION** • Perform variable intake air solenoid valve inspection. (See 01–13A–8 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION [L3].) • Is variable intake air solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable intake air solenoid valve, then go to step 9.
5	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to ON (Engine off). • Measure voltage between variable intake air solenoid valve terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
6	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between variable intake air solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection at terminal 4R. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between variable intake air solenoid valve terminal A (wiring harness-side) and PCM terminal 2J (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0661 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and run engine speed **above 4,400 rpm** few times. • Retrieve any DTC. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

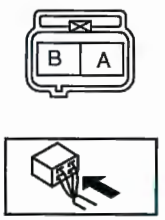
DTC P0662 [L3]

E6U010200600W09

DTC P0662	Variable intake air system solenoid valve circuit high input
DETECTION CONDITION	• PCM monitors variable intake air solenoid valve control signal. If PCM turns variable intake air solenoid valve on but voltage still remains high, PCM determines that variable intake air solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Variable intake air solenoid valve malfunction • Short to power supply between variable intake air solenoid valve terminal A and PCM terminal 2J • Shorted variable intake air solenoid valve or PCM connector • PCM malfunction



VARIABLE INTAKE AIR SOLENOID VALVE HARNESS SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR

2BE	2BA	2AW	2AS	2AO	2AK	2AG	2AC	2Y	2U	2Q	2M	2I	2E	2A

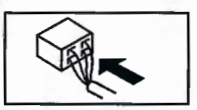
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect variable intake air solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE MALFUNCTION** • Perform variable intake air solenoid valve inspection. (See 01–13A–8 VARIABLE INTAKE AIR SOLENOID VALVE INSPECTION [L3].) • Is VIS solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable intake air solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection at terminal 2J. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE INTAKE AIR SOLENOID VALVE CONTROL CIRCUIT SHORT TO POWER SUPPLY** • Turn ignition switch to ON (Engine off). • Measure voltage between variable intake air solenoid valve terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0662 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to OFF. • Start engine and run engine speed **above 4,400 rpm** few times. • Retrieve any DTC. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0703 [L3]

E6U010200700W03

DTC P0703	Brake switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the brake switch No.1. If the PCM does not the voltage changes while alternately accelerating and decelerating **8 times**, the PCM determines that the brake switch No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Poor connection of brake switch connector or PCM connector • Short to power supply in wiring harness between brake switch No.1 terminal D and PCM connector terminal 1AB • Open circuit in wiring harness between brake switch No.1 terminal D and PCM connector terminal 1AB • Open circuit in wiring harness between battery positive terminal and brake switch No.1 terminal A • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the WDS or equivalent to DLC-2. • Access BOO PID. • Verify BOO PID during brake pedal operation. • Is BOO PID always OFF?	Yes	Go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
5	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the WDS or equivalent to DLC-2. • Access BOO PID. • Connect a jumper wire between brake switch No.1 terminal A and D. • Is BOO PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 13.
		No	Replace the brake switch, then go to Step 13.
7	**INSPECT BRAKE SWITCH POWER CIRCUIT FOR OPEN CIRCUIT** • Measure the voltage between brake switch terminal A and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the brake switch power circuit for open, then go to Step 13.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
9	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal D and PCM terminal 1AB. • Is there continuity?	Yes	Go to Step 13.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 13.
10	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the WDS or equivalent to DLC-2. • Access BOO PID. • Verify that BOO PID changes from ON to OFF when the brake switch connector disconnected. • Does BOO PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 12.
11	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 13.
		No	Replace the brake switch, then go to Step 13.
12	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure the voltage between brake switch terminal D and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0703 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive the vehicle **30 km/h {18.6 mph} or more**. • Depress and release the brake pedal **more than 8 times** while driving vehicle. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0704 [L3]

E6U010200700W04

DTC P0704	Clutch pedal position (CPP) switch input circuit problem
DETECTION CONDITION	• The PCM monitors changes in input voltage from the CPP switch. If the PCM does not detect the voltage changes while the vehicle runs with vehicle speed **above 30 km/h {19 mph}** and stops **8 times** alternately, the PCM determines that the CPP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• CPP switch malfunction • Poor connection of CPP switch connector or PCM connector • Short to ground in wiring harness between CPP switch terminal B and PCM terminal 1D • Open circuit in wiring harness between CPP switch terminal B and PCM terminal 1D • Open circuit in wiring harness between ground and CPP switch terminal D • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the WDS or equivalent to DLC-2. • Access CPP PID. • Verify CPP PID during clutch pedal operation. • Is CPP PID always OFF?.	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the WDS or equivalent to DLC-2. • Access CPP PID. • Connect a jumper wire between CPP switch terminal B and D. • Is CPP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01–40A–25 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
7	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal D and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the CPP switch power supply for an open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal B and PCM terminal 1D. • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the WDS or equivalent to DLC-2. • Access CPP PID. • Verify that CPP PID changes from ON to OFF when CPP switch connector disconnected. • Does CPP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT CPP SWITCH** • Inspect the CPP switch. (See 01–40A–25 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
13	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between CPP switch terminal B and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0704 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Operate the clutch pedal while the vehicle runs and stops **8 times** alternately. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P0850 [L3]

E6U010200800W01

DTC P0850	Neutral switch circuit malfunction
DETECTION CONDITION	• PCM monitors changes in input voltage from neutral switch. If PCM does not detect PCM terminal 1X voltage changes while running vehicle with vehicle speed **above 30 km/h {19 mph}** and clutch pedal turns press and depress **10 times** repeatedly, PCM determines that neutral switch circuit has malfunction **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Neutral switch malfunction • Poor connection of neutral switch connector or PCM connector • Short to ground between neutral switch terminal B and PCM connector terminal 1X • Open circuit in wiring harness between neutral switch terminal B and PCM connector terminal 1X • Open circuit in wiring harness between ground and brake switch terminal A. • PCM malfunction

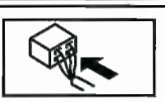
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Verify CPP/PNP PID when gear is neutral position. • Is CPP/PNP PID always OFF?.	Yes	Go to Next step.
		No	Go to Step 10.
4	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Connect a jumper wire between neutral switch terminal A and B (wiring harness-side). • Is CPP/PNP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT NEUTRAL SWITCH** • Perform neutral switch inspection. (See 01–40A–26 NEUTRAL SWITCH INSPECTION [L3].) • Is neutral switch normal?	Yes	Go to Step 14.
		No	Replace neutral switch, then go to Step 14.
7	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between neutral switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace neutral switch power circuit for open circuit, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between neutral switch terminal B (wiring harness-side) and PCM terminal 1X (wiring harness-side). • Is there continuity?	Yes	Repair or replace harness for open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Verify that CPP/PNP PID changes from ON to OFF when neutral switch connector disconnected. • Does CPP/PNP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT NEUTRAL SWITCH** • Perform neutral switch inspection. (See 01–40A–26 NEUTRAL SWITCH INSPECTION [L3].) • Is neutral switch normal?	Yes	Go to Step 14.
		No	Replace neutral switch, then go to Step 14.
13	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between neutral switch terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0850 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle **above 30 km/h {19 mph}** and stop vehicle. • Depress and release clutch pedal **more than 10 times** during drive cycle. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2004 [L3]

E6U010202000W01

DTC P2004	Variable tumble shutter valve stuck open
DETECTION CONDITION	• PCM monitors mass variable tumble shutter valve position using variable tumble shutter valve switch. If PCM turns the variable tumble solenoid valve on but variable tumble shutter valve position still remain open (variable tumble shutter valve switch off), PCM determines that variable tumble shutter valve has been stuck open. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Variable tumble shutter valve actuator malfunction (stuck open) • Misconnected or pulled out vacuum hose • Variable tumble solenoid valve malfunction • Open circuit in wiring between variable tumble solenoid valve terminal B and PCM terminal 2I • Short to power in wiring between variable tumble solenoid valve terminal B and PCM terminal 2I • Open circuit in wiring between variable tumble shutter valve switch terminal C and PCM terminal 2AE • Short to power in wiring between variable tumble shutter valve switch terminal C and PCM terminal 2AE • PCM malfunction

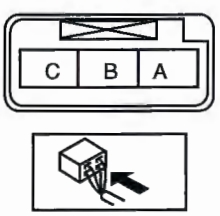
VARIABLE TUMBLE SHUTTER VALVE SWITCH HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
4	**VERIFY STORED OTHER DTCS** • Verify stored DTCs using the WDS or equivalent. • Is DTC P2088 or P2089 present?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform "VARIABLE TUMBLE SOLENOID VALVE INSPECTION". (See 01–13A–9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [L3].) • Is variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable tumble control solenoid valve, then go to Step 13.
6	**INSPECT VARIABLE TUMBLE SHUTTER VALVE ACTUATOR** • Perform "VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION". (See 01–13A–9 VARIABLE TUMBLE SHUTTER VALVE ACTUATOR INSPECTION [L3].) • Is variable tumble shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace Intake manifold, then go to Step 13.
7	**INSPECT VARIABLE TUMBLE SHUTTER VALVE SWITCH** • Perform "VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION". (See 01–40A–28 VARIABLE TUMBLE SHUTTER VALVE SWITCH INSPECTION [L3].) • Is variable tumble shutter valve switch normal?	Yes	Go to the next step.
		No	Replace intake manifold, then go to Step 13.
8	**VERIFY CONNECTION OF VACUUM HOSE ROUTING** • Verify that the vacuum hoses are connected properly. (See 01–13A–3 VACUUM HOSE ROUTING DIAGRAM [L3].) • Are vacuum hoses connected properly?	Yes	Go to the next step.
		No	Connect the vacuum hoses properly, then go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE TUMBLE SOLENOID VALVE OR VARIABLE TUMBLE SHUTTER VALVE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect the variable tumble solenoid valve connector and variable tumble shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
11	**INSPECT VARIABLE TUMBLE SOLENOID VALVE OR VARIABLE TUMBLE SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between the following terminal: — Variable tumble solenoid valve terminal B (wiring harness-side) and PCM terminal 2I (wiring harness-side). — Variable tumble shutter valve switch terminal C (wiring harness-side) and PCM terminal 2AE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 13.
12	**INSPECT VARIABLE TUMBLE SOLENOID VALVE OR VARIABLE TUMBLE SHUTTER VALVE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Disconnect the variable tumble solenoid valve connector and variable tumble shutter valve switch connector. • Turn ignition switch to ON (Engine off). • Measure voltage between the following terminal and body ground. — PCM terminal 2I (wiring harness-side). — PCM terminal 2AE (wiring harness-side). • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to the next step.
		No	Go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P2004 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Drive vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25–35 %** • Engine speed **above 2,500: below 25 %** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2006 [L3]

E6U010202000W02

DTC P2006	Variable tumble shutter valve stuck closed
DETECTION CONDITION	• PCM monitors mass variable tumble shutter valve position using variable tumble shutter valve switch. If variable tumble turns variable tumble solenoid valve off but variable tumble shutter valve position still remain close (variable tumble shutter valve position sensor on), PCM determines that variable tumble shutter valve has been stuck closed. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • TP sensor malfunction • CKP sensor malfunction • Variable tumble solenoid valve malfunction • Variable tumble shutter valve malfunction (stuck closed) • Variable tumble shutter valve actuator malfunction (stuck closed). • Short to ground circuit between variable tumble control solenoid valve terminal B and PCM terminal 2I • Short to ground in wiring between variable tumble shutter valve switch terminal C and PCM terminal 2AE • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500—2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
4	**VERIFY STORED OTHER DTCS** • Verify stored DTCs using WDS or equipment. • Is other DTC present except P0117, P0118, P0122, P0123 and/or P0335?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE TUMBLE SHUTTER VALVE ACTUATOR** • Perform "Variable Tumble System Operation Inspection". (See 01–03A–67 Variable Tumble System Operation Inspection.) • Is variable tumble shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace variable tumble shutter valve actuator, then go to Step 10.

STEP	INSPECTION		ACTION
6	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform "variable tumble solenoid valve airflow inspection". (See 01–13A–9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [L3].) • Is variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable tumble solenoid valve, then go to Step 10.
7	**INSPECT VARIABLE TUMBLE SOLENOID VALVE OR VARIABLE TUMBLE SHUTTER VALVE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF. • Disconnect the variable tumble solenoid valve connector and variable tumble shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection at PCM terminals (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT VARIABLE TUMBLE SOLENOID VALVE OR VARIABLE TUMBLE SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between the following terminal and body ground. — PCM terminal 2I (wiring harness-side). — PCM terminal 2AE (wiring harness-side). • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2006 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Drive vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is below as followings • Engine speed **below 1,500 rpm**: **above 35%** • Engine speed **between 1,500—2,500 rpm**: **between 25–35%** • Engine speed **above 2,500**: **below 25%** • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2009 [L3]

E6U010202000W09

DTC P2009	Variable tumble solenoid valve circuit low input
DETECTION CONDITION	• The PCM monitors variable tumble solenoid valve control signal. If the PCM turns variable tumble solenoid valve off but voltage still remains low, the PCM determines that variable tumble solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable tumble solenoid valve • Short to ground in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I • Open circuit in wiring harness between main relay and variable tumble solenoid valve terminal A • Open circuit in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I • Variable tumble solenoid valve malfunction • PCM malfunction

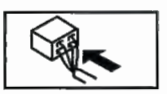
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



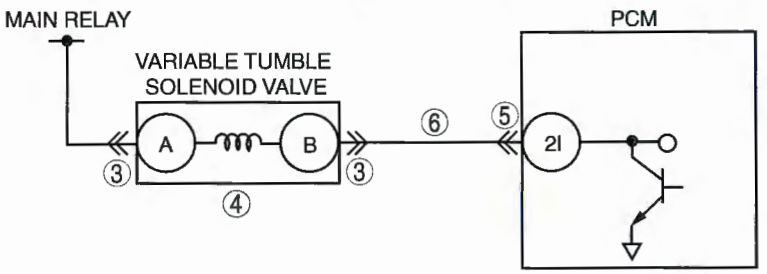
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Perform the variable tumble solenoid valve inspection. (See 01–13A–9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [L3].) • Is variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable tumble solenoid valve, then go to Step 9.
5	**INSPECT VARIABLE TUMBLE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the variable tumble solenoid valve connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable tumble solenoid valve terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2I. (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between variable tumble solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between variable tumble solenoid valve terminal B (wiring harness-side) and PCM terminal 2I (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2009 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2010 [L3]

E6U010202000W10

DTC P2010	Variable tumble solenoid valve circuit high input
DETECTION CONDITION	• The PCM monitors the variable tumble solenoid valve control signal. If the PCM turns variable tumble solenoid valve on but the voltage still remains high, the PCM determines that the variable tumble solenoi valve circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable tumble solenoid valve • Short to power supply in wiring harness between variable tumble solenoid valve terminal B and PCM terminal 2I • Variable tumble solenoid valve malfunction • PCM malfunction



VARIABLE TUMBLE SOLENOID VALVE WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT VARIABLE TUMBLE SOLENOID VALVE** • Inspect the variable tumble solenoid valve. (See 01–13A–9 VARIABLE TUMBLE SOLENOID VALVE INSPECTION [L3].) • Is the variable tumble solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable tumble solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2I. (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE TUMBLE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the variable tumble solenoid valve. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2I and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness with short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2010 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2088 [L3]

E6U010202000W11

DTC P2088	Oil control valve (OCV) circuit low
DETECTION CONDITION	• The PCM monitors the OCV voltage. If the PCM detects the OCV control voltage (calculated from the OCV' is below the threshold voltage (calculated from the battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM or OCV connector • Short to ground in wiring between OCV terminal A and PCM terminal 2E • Open circuit in wiring between the main relay and OCV terminal B • Open circuit in wiring between OCV terminal A and PCM terminal 2E • OCV malfunction • PCM malfunction

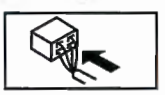
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV** • Inspect the OCV. (See 01–10A–32 OIL CONTROL VALVE (OCV) INSPECTION [L3].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 9.
5	**INSPECT OCV POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the OCV connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between variable tumble control solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2E (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between OCV terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect the OCV connector. • Turn the ignition switch to the ON position (Engine off). • Inspect for continuity between OCV terminal A (wiring harness-side) and PCM terminal 2E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open or short circuit to ground, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2088 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2089 [L3]

E6U010202000W12

DTC P2089	Oil control valve (OCV) circuit high
DETECTION CONDITION	• The PCM monitors the OCV voltage. If the PCM detects that the OCV control voltage (calculated from the OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM or OCV connector • Short to power circuit in wiring between OCV terminal A and PCM terminal 2E • OCV malfunction • PCM malfunction

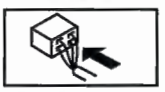
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV** • Inspect the OCV. (See 01–10A–32 OIL CONTROL VALVE (OCV) INSPECTION [L3].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 2E (such as damaged, pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER** • Remove the OCV. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2E and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2089 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2096 [L3]

E6U010202000W16

DTC P2096	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is less*1/more*2 than the specification, the PCM determines that the target A/F feedback system is too lean. **MONITORING CONDITION*2** — Rear HO2S voltage is **above 0.1 V** **Diagnostic support note** • This is a continuous monitor (Fuel system). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle*1/Rear*2 HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • Front HO2S malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pump unit malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2096 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF MIDDLE*1/REAR*2 HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under the following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the TWC and middle*1/rear*2 HO2S. • If there is no leakage, replace the rear HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 17.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40A–9 PCM INSPECTION [L3].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See 01–40A–9 PCM INSPECTION [L3].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). **Except for California emission regulation applicable ATX model:** — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). **California emission regulation applicable ATX model:** — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 17.
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 17.
10	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect the hose in intake-air system for looseness, cracks or damages. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 17.
		No	Replace the fuel pump unit, then go to Step 17. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
13	**INSPECT IGNITION COIL WIRING HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 17.
14	**INSPECT IGNITION SYSTEM OPERATION** • Perform spark test. (See 01–03A–69 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result. Then go to Step 17.
15	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 17.
16	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to the next step. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2096 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

DTC P2097 [L3]

E6U010202000W17

DTC P2097	Target A/F feedback system too rich
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more*1/less*2 than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle*1/Rear*2 HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Front HO2S malfunction • Excessive fuel line pressure • Fuel pump unit malfunction • Purge valve malfunction • Insufficient engine compression • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2097 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF MIDDLE*1/REAR*2 HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and middle*1/rear*2 HO2S. • If there is no leakage, replace rear HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 11.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs: (See 01–40A–9 PCM INSPECTION [L3].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01–40A–9 PCM INSPECTION [L3].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access O2S11 PID. • Read O2S11 PID under following accelerator pedal condition (in NEUTRAL). **Except for California emission regulation applicable ATX model:** — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). **California emission regulation applicable ATX model:** — **Less than 1 mA** when accelerator pedal is suddenly depressed (rich condition). — **More than 1 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 11.
9	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 11. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
10	**INSPECT LONG TERM FUEL TRIM** • Connect the WDS or equivalent to the DLC-2. • Access LONGFT1 PID. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step 1. • Is the LONGFT1 PID above FREEZE FRAME DATA?	Yes	Inspect the purge valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • If there is any malfunction, replace the purge valve. Then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2097 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

DTC P2100 [L3]

E6U010202100W22

DTC P2100	Throttle actuator circuit open
DETECTION CONDITION	• The PCM monitors the electronic throttle valve motor current. If the PCM detects that the electronic throttle valve motor current is below the threshold current, the PCM determines that the electronic throttle valve motor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle valve motor malfunction • Open circuit between throttle body terminal F and PCM terminal 2A • Open circuit between throttle body terminal E and PCM terminal 2B • Poor connection of the throttle body connector or the PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC using the WDS or equivalent. • Start the engine and idle it. • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Go to the INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)

STEP	INSPECTION		ACTION
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ELECTRICAL MALFUNCTION** • Measure the resistance between throttle body terminal E and F (part-side). • Is the resistance **approx. 1.3 ohms**?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 11.
6	**CLASSIFY MALFUNCTION ET POWER SUPPLY CIRCUIT OR CONTROL CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure voltage between throttle body terminal F (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	There is a malfunction at the control circuit. Go to Step 9.
		No	There is a malfunction at the power supply. Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
8	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal F (wiring harness-side) and PCM terminal 2A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 11.
9	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT CONTROL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Inspect for continuity between throttle body terminal E (wiring harness-side) and PCM terminal 2B (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2100 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2101 [L3]

E6U010202100W02

DTC P2101	Throttle actuator circuit range/performance
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay on. If the input voltage is **less than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is low. • The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay off. If the input voltage is **more than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor. (CCM) • The MIL illuminates if the PCM detects the above malfunction conditions during first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • If any of the following conditions continue for a specified period of time or more the PCM detects a malfunction in the throttle actuator. — The voltage of the motor power supply is **4 V or less** while the motor relay is on — There is a system error in the electrical throttle control system of the PCM — The temperature of the electrical throttle control system in the PCM is **180 °C {356 °F}** **Diagnostic support note** • This is a continuous monitor. (CCM) • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Drive-by-wire relay and related circuit malfunction • Main relay and related circuit malfunction • Throttle position sensor No.1 and related circuit malfunction • Throttle position sensor No.2 and related circuit malfunction • PCM malfunction

01–02A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and stored DTCs using the WDS or equivalent. • Is any DTC present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2101 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.

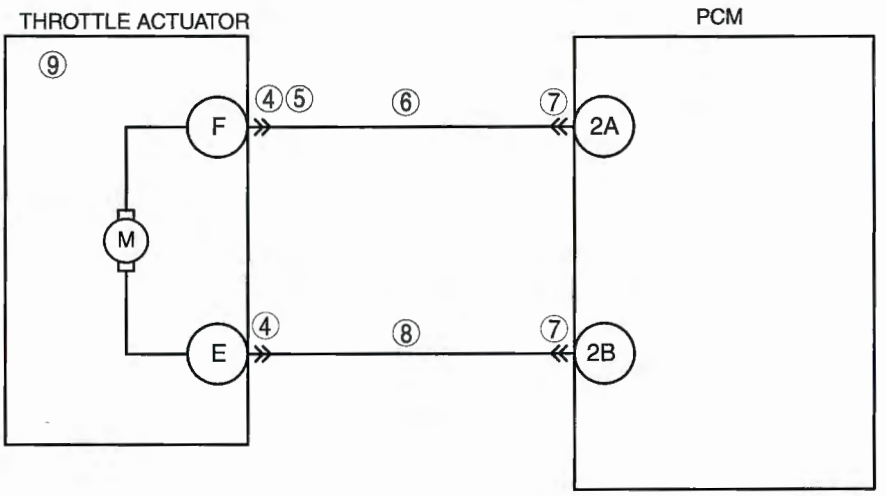
STEP	INSPECTION		ACTION
6	**INSPECT MAIN RELAY OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect PCM connector. • Turn ignition switch to ON (Engine off). • Measure voltage between PCM terminal 1BE and body ground. • Is voltage **B+**?	Yes	Go to Step 13.
		No	Go to the next step.
7	**INSPECT MAIN RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect main relay. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
8	**INSPECT POWER SUPPLY OF MAIN RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between main relay terminal D (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
9	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF MAIN RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between main relay terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
10	**INSPECT MAIN RELAY** • Inspect main relay. (See 09–21–7 RELAY INSPECTION.) • Is main relay normal?	Yes	Go to the next step.
		No	Replace main relay, then go to Step 22.
11	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect main relay and PCM connector. • Check continuity between main relay terminal C (wiring harness-side) and PCM terminal 1BE (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
12	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check continuity between main relay terminal E (wiring harness-side) and PCM terminal 1Q (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
13	**INSPECT DRIVE-BY-WIRE CONTROL RELAY OUTPUT VOLTAGE** • Turn ignition switch to ON (Engine off). • Measure voltage between PCM terminal 1AX (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for short to power supply, then go to Step 22.
14	**INSPECT POOR CONNECTION OF DRIVE-BY-WIRE RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect drive-by-wire relay. • Check drive-by-wire relay connector (wiring harness-side) for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
15	**INSPECT POWER SUPPLY OF DRIVE-BY-WIRE RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between drive-by-wire relay terminal D (wiring harness-side) and body ground.	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.

STEP	INSPECTION		ACTION
16	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF DRIVE-BY-WIRE RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between drive-by-wire relay terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit between drive-by-wire relay terminal A and main relay terminal C, then go to Step 22.
17	**INSPECT DRIVE-BY-WIRE RELAY** • Inspect drive-by-wire relay. (See 09–21–7 RELAY INSPECTION.) • Is drive-by-wire relay normal?	Yes	Go to the next step.
		No	Replace drive-by-wire relay, then go to Step 22.
18	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between drive-by-wire relay terminal C (wiring harness-side) and PCM terminal 1BF (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
19	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check continuity between drive-by-wire relay E (wiring harness-side) and PCM terminal 1AX (wiring harness-side).	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
20	**INSPECT THROTTLE POSITION SENSOR NO.1 OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect PCM connector. • Turn ignition switch to ON (Engine off). • Check voltage between PCM terminal 2AK and body ground. • Is voltage **0.40—0.60 V**?	Yes	Go to the next step.
		No	Check throttle position sensor No.1 and related circuits and terminal. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) Repair or replace if necessary, then go to Step 22.
21	**INSPECT THROTTLE POSITION SENSOR NO.2 OUTPUT VOLTAGE** • Turn ignition switch to ON (Engine off). • Check voltage between PCM terminal 2AL and body ground. • Is voltage **4.40—4.60 V**?	Yes	Go to the next step.
		No	Check throttle position sensor No.2 and related circuits and terminal. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) Repair or replace as necessary, then go to the next step.
22	**VERIFY TROUBLESHOOTING OF DTC P2101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and run it at idle. • Turn ignition switch to OFF then ON (Engine off). • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
23	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2102 [L3]

E6U010202100W23

DTC P2102	Throttle actuator circuit low input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. If the PCM detects that the throttle actuator circuit current is excessively low, the PCM determines that the throttle actuator circuit was a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• Short to ground circuit between the throttle body terminal F and the PCM terminal 2A • Short to ground circuit between the throttle body terminal E and the PCM terminal 2B • Poor connection of the throttle body or the PCM connector • Throttle valve motor malfunction • PCM malfunction



THROTTLE BODY WIRING HARNESS-SIDE CONNECTOR

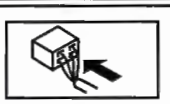
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



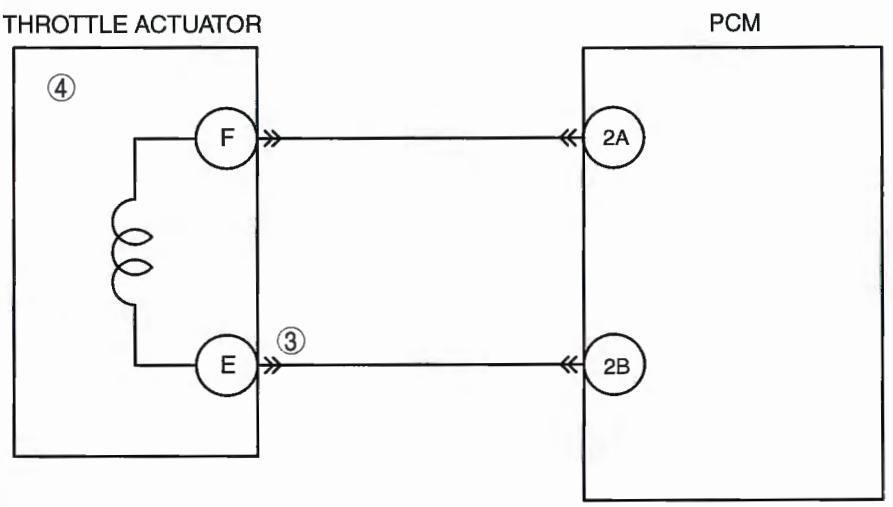
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the WDS or equivalent. • Is DTC P2100 also present?	Yes	Go to the appropriate DTC inspection, then go to Step 9. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged, pulled-put pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal F (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

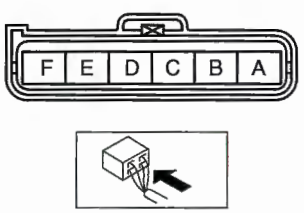
DTC P2103 [L3]

E6U010202100W04

DTC P2103	Throttle actuator circuit high input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. PCM detects throttle actuator circuit current excessive high, PCM determines that the electronic throttle actuator circuit malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Short to power supply between throttle body terminal E and PCM terminal 2B • Throttle valve motor malfunction • PCM malfunction



THROTTLE BODY WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR

2BE	2BA	2AW	2AS	2AO	2AK	2AG	2AC	2Y	2U	2Q	2M	2I	2E	2A

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect throttle body and PCM connectors. • Turn ignition switch to ON (Engine off). • Measure voltage between throttle body terminal E (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT THROTTLE ACTUATOR** • Inspect throttle actuator. (See 01–13A–7 THROTTLE ACTUATOR INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Replace throttle body, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2107 [L3]

E6U010202100W05

DTC P2107	Throttle actuator control module processor problem
DETECTION CONDITION	• Throttle actuator control module internal processor error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module internal processor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2108 [L3]

E6U010202100W06

California Emission Regulation Applicable ATX Model

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• PCM detects either following conditions, PCM determines that throttle actuator control system has malfunction. — TP sensor power supply voltage **below 4.4 V** — TP sensor No.1 output voltage **below 0.20 V or above 4.85 V** (DTC P0122 or P0123) — TP sensor No.2 output voltage **below 0.20 V or above 4.85 V** (DTC P0222 or P0223) — PCM internal circuit for TP sensor No.1 input circuit malfunction. **Diagnostic support note** • This is a continues monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal A and PCM terminal 2AK • Short to ground between throttle body terminal A and PCM terminal 2AK • Open circuit between throttle body terminal B and PCM terminal 2AO • Open circuit between throttle body terminal D and PCM terminal 2AP • Short to constant voltage supply between throttle body terminal A and PCM terminal 2AK • Short to constant voltage supply between throttle body terminal C and PCM terminal 2AL • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the WDS or equivalent. • Is the DTC P0122, P0123, P0222 or P0223 also present?	Yes	Go to appropriate DTC troubleshooting procedure, then go to Step 7.
		No	Go to the next step.
4	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.1 CIRCUIT** • Perform INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.1 related harnesses and connectors. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
5	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.2 CIRCUIT** • Perform INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.2 related harnesses and connectors. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].) • Is there any malfunction	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
6	**INSPECT TP SENSOR** • Inspect TP sensor. • Is TP sensor normal?	Yes	Go to the next step.
		No	Replace throttle body, then go to nest step.
7	**VERIFY TROUBLESHOOTING OF DTC P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to ON (Engine off). • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2109 [L3]

E6U010202100W07

DTC P2109	TP sensor minimum stop range/performance problem
DETECTION CONDITION	• The PCM monitors the minimum TP when the closed TP learning is completed. If the TP is **less than 6.03%** or **more than 18.7%**, the PCM determines that there is a TP sensor minimum stop range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13A–7 Resistance Inspection.) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3], 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the TP sensor, then go to the next step. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3], 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2109 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2112 [L3]

E6U010202100W08

DTC P2112	Throttle actuator control system range/performance problem
DETECTION CONDITION	• The PCM monitors the throttle actuator control duty ratio when the engine is running. If the duty ratio is **more than 95%**, the PCM determines that there is a throttle actuator control system range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2119 [L3]

E6U010202100W09

DTC P2119	Throttle actuator control throttle body range/performance problem
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM compares the TP with the default TP when the ignition switch is off. If the different between TP is default TP is lower than threshold, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • The PCM compares the TP with the default TP when the ignition switch is off. If the TP is higher than the default TP, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13A–7 Resistance Inspection.) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3], 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the TP sensor, then go to the next step. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3], 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2119 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to the ON position (Engine off), then off. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2122 [L3]

E6U010202100W24

DTC P2122	APP sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **less than 0.35*1, 0.2 V*2**, the PCM determines that the APP sensor No.1 circuit input voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal D and PCM terminal 1AL • Short to ground in wiring harness between APP sensor terminal D and PCM terminal 1AL • Open circuit in wiring harness between APP sensor terminal F and PCM terminal 1AO • Short to ground in wiring harness between APP sensor terminal F and PCM terminal 1AO • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — APP sensor terminal D (wiring harness-side) and body ground — APP sensor terminal F (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01–13A–10 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — APP sensor terminal D (wiring harness-side) and PCM terminal 1AL (wiring harness-side) — APP sensor terminal F (wiring harness-side) and PCM terminal 1AO (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2123 [L3]

E6U010202100W25

DTC P2123	APP sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.1 when the engine is running. If the input voltage is **above 4.8*1, 4.5 V*2**, the PCM determines that the APP sensor No.1 circuit input voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between APP sensor terminal F and PCM terminal 1AO • Open circuit in wiring harness between APP sensor terminal E and PCM terminal 1AS • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal F (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01–13A–10 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between APP sensor terminal E (wiring harness-side) and PCM terminal 1AS (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2127 [L3]

E6U010202100W26

DTC P2127	APP sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **less than 0.35*1, 0.2 V*2**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit in wiring harness between APP sensor terminal A and PCM terminal 1AJ • Short to ground in wiring harness between APP sensor terminal A and PCM terminal 1AJ • Open circuit in wiring harness between APP sensor terminal C and PCM terminal 1AP • Short to ground in wiring harness between APP sensor terminal C and PCM terminal 1AP • PCM malfunction

*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal C (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect the APP sensor No.2. (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01–13A–10 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — APP sensor terminal A (wiring harness-side) and PCM terminal 1AJ (wiring harness-side) — APP sensor terminal C (wiring harness-side) and PCM terminal 1AP (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2127 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2128 [L3]

E6U010202100W28

DTC P2128	APP sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from APP sensor No.2 when the engine is running. If the input voltage is **more than 4.8**[*1]**, 4.5 V**[*2], the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • Are any DTCs is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between APP sensor terminal C and PCM terminal 1AP • Open circuit in wiring harness between APP sensor terminal B and PCM terminal 1AV • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect APP sensor No.2. (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 8. (See 01–13A–10 ACCELERATOR PEDAL REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — APP sensor terminal B (wiring harness-side) and PCM terminal 1AV (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2128 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2135 [L3]

E6U010202100W14

DTC P2135	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that ther is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 6. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3], 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2135 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2138 [L3]

E6U010202100W15

DTC P2138	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • APP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Inspect the APP sensor. (See 01–40A–29 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 6. (See 01–13A–10 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2177 [L3]

E6U010202100W16

DTC P2177	Fuel system too lean at off idle
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel contro' at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses repair or replace it. Then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01–03A–70 Purge Control System Inspection.) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 17.
11	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	If the fuel pressure is too high, replace fuel pump nit, then go to Step 17. If the fuel line pressure is low, go to the next step.
12	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Perform spark test. (See 01–03A–69 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.

STEP	INSPECTION		ACTION
17	**VERIFY TROUBLESHOOTING OF DTC P2177 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2178 [L3]

E6U010202100W17

DTC P2178	Fuel system too rich at off idle
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • EGR valve improper operation • VTCS improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 16.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 16.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2177 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 16.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2 • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01–03A–70 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 16.
11	**INSPECT EGR VALVE OPERATION** • Perform EGR Control System Inspection. (See 01–03A–70 EGR Control System Inspection.) • Does the EGR control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
12	**INSPECT VTCS OPERATION** • Perform Variable Tumble Control Operation Inspection. (See 01–03A–67 Variable Tumble System Operation Inspection.) • Does the VTCS work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
13	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to the next step.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 16. If the fuel line pressure is low, go to the next step.

STEP	INSPECTION		ACTION
14	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to the next step.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off the fuel tank and filter. Then go to the next step.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P2178 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2187 [L3]

E6U010202100

DTC P2187	Fuel system too lean at idle
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF and TP PIDs using the WDS or equivalent.) • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 17.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2187 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT PURGE SOLENOID VALVE STUCK OPEN** • Turn the ignition switch off. • Disconnect both hoses from purge solenoid valve. • Blow air through purge solenoid valve. • Does air blow through?	Yes	Replace the purge solenoid valve. Then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 13.
		No	If the fuel pressure is too high, replace fuel pump unit, then go to Step 17. If the fuel line pressure is low, go to the next step.
12	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off the fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Perform spark test. (See 01–03A–69 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test results, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10A–4 COMPRESSION INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2187 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2188 [L3]

E6U010202100W19

DTC P2188	Fuel system too rich at idle
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • EGR valve stuck open • VTCS improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 16.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 16.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access O2S11 for P2188 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **–1.0—1.0 A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 16.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform Purge Control System Inspection. (See 01–03A–70 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 16.
11	**INSPECT VTCS OPERATION** • Perform Variable Tumble Control Operation Inspection. (See 01–03A–67 Variable Tumble System Operation Inspection.) • Does the VTCS work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 16.
12	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect the fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to Step 14.
		No	If the fuel pressure is too high, replace fuel pump nit, then go to Step 16. If the fuel line pressure is low, go to the next step.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is fuel leakage found?	Yes	Replace the fuel line, then go to Step 16.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean off fuel tank and filter. Then go to Step 16.
14	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03A–72 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 16.
15	**INSPECT IF EGR VALVE IS STUCK OPEN** • Remove the EGR valve. • Does the EGR valve stuck open?	Yes	Clean or replace the EGR valve, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
16	**VERIFY TROUBLESHOOTING OF DTC P2188 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2195 [L3]

E6U010202100W20

California Emission Regulation Applicable ATX Model

DTC P2195	Front HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **more than 1.2 A** for **25 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — MAF amount: **6—80 g/s {0.80—10.58 lb/min}** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **more than 0.2 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Leakage exhaust gas • Air suction at intake-air system malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0171 also present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
7	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 14.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 14.
9	**INSPECT FRONT HO2S** • Inspect front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 14. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 14. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.

STEP	INSPECTION		ACTION
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to the next step.
		No	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
13	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P2195	Front HO2S signal stuck lean
ETECTION ONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **more than 1.2 A** for **25 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5 %** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **more than 0.2 V** **Diagnostic support note** • This is an intermittent monitor. (HO2S) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Leakage exhaust gas • Air suction at intake-air system malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 14.
7	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 14.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 14.
9	**INSPECT FRONT HO2S** • Inspect front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 14. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 14. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.

STEP	INSPECTION		ACTION
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to the next step.
		No	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3, AJ].)
13	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2196 [L3]

E6U010202100W21

California Emission Regulation Applicable ATX Model

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **less than 0.8 A** for **25 s**, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — MAF amount: **6—80 g/s {0.80—10.58 lb/min}** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **less than 0.8 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0172 also present?	Yes	Go to the appropriate DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 11.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 11. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 11. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

Except for California Emission Regulation Applicable ATX Model

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **less than 0.8 A** for **25 s**, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5 %** — Target A/F feedback system status: feedback control — Output voltage from the middle HO2S: **less than 0.8 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the appropriate DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40A–9 PCM INSPECTION [L3].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 11.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40A–37 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3].) • Is there any malfunction?	Yes	Replace front HO2S, then go to Step 11. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to Step 11. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02A–13 OBD-II DRIVE MODE [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2228 [L3]

E6U010202200W01

DTC P2228	BARO sensor circuit low input
DETECTION CONDITION	• PCM monitors input voltage from BARO sensor. If input voltage is **below 2.1 V**[*1], **1.95**[*2], PCM determines that BARO sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Perform BARO sensor inspection. (See 01–40A–50 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 (Vehicles equipped with BARO sensor built into PCM)].) • Is BARO sensor normal?	Yes	Go to the next step.
		No	Replace BARO sensor, then go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2228 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2229 [L3]

E6U010202200W02

DTC P2229	BARO sensor circuit high input
DETECTION CONDITION	• PCM monitors input voltage from BARO sensor. If input voltage is **above 4.0 V**[*1], **4.45**[*2] PCM determines that BARO sensor circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

*1 : California emission regulation applicable ATX model
*2 : Except for California emission regulation applicable ATX model

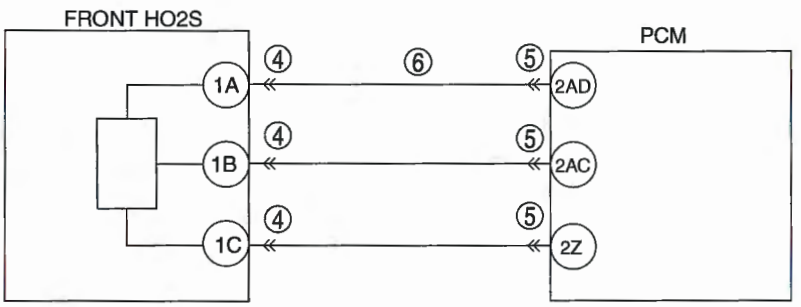
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Perform BARO sensor inspection. (See 01–40A–50 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 (Vehicles equipped with BARO sensor built into PCM)].) • Is BARO sensor normal?	Yes	Go to the next step.
		No	Replace BARO sensor, then go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2229 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to ON (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

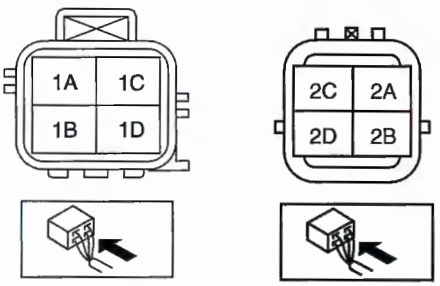
DTC P2237 [L3]

E6U010202200W07

DTC P2237	Front HO2S positive current control circuit open
DETECTION CONDITION	• The PCM monitors front HO2S positive current control circuit voltage. If the voltage is not changed against the PCM control value while the engine running, the PCM determines that the front HO2S positive current control circuit is open. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AD and front HO2S terminal 1A • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM

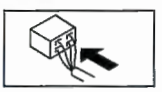
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



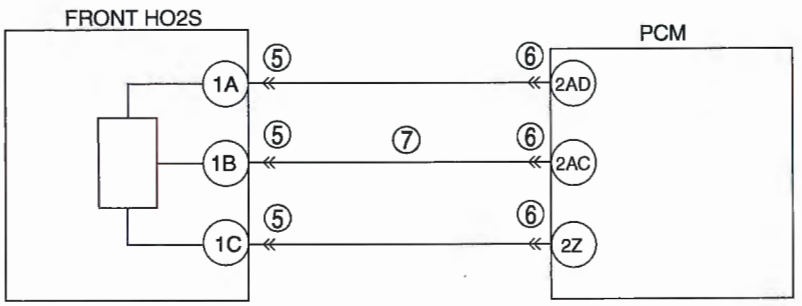
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2237 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02A–18 DTC TABLE [L3].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT FRONT HO2S POSITIVE CURRENT CIRCUIT FOR OPEN CIRCUIT** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2AD (wiring harness-side) and front HO2S terminal 1A (wiring harness-side). • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace wiring harness for open, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2237 COMPLETED** • Make sure to reconnect all disconnected • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

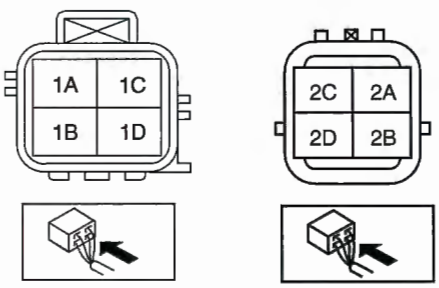
DTC P2251 [L3]

E6U010202200W08

DTC P2251	Front HO2S negative current control circuit open
DETECTION CONDITION	• The PCM monitors front HO2S negative current control circuit voltage. If the voltage is not changed against the PCM control value while the engine running, the PCM determines that the front HO2S negative current control circuit is open. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2AC and front HO2S terminal 1B • Front HO2S heater can not be controlled • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR

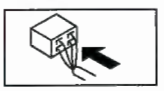
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to the available Service information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is the DTC P0030, P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is the DTC P2251 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02A–18 DTC TABLE [L3].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2AC and 1B at wiring harness-side connectors. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2251 COMPLETED** • Make sure to reconnect all disconnected connectors • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOEO or KOER self-test. (See 01–02A–12 KOEO/KOER SELF TEST [L3].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2270 [L3]

E6U010202200W03

DTC P2270	Middle HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the middle HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **0.4 V or less** for **30 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **more than 1,500 rpm** — MAF amount: **more than 10 g/s {1.32 lb/min}** — Short term fuel trim: **–20—20%** — Long term fuel trim: **–15—15%** — Fuel injection system status: feedback control **Diagnostic support note** • This is a intermittent monitor. (HO2S) • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • Leakage fuel • Fuel injector malfunction • Air suction at intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2195 present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2270 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF THE MIDDLE HO2S** • Start the engine and warm it up completely. • Access O2S12 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the middle HO2S. • If there is no leakage, replace the middle HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [L3].) Then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2270 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2271 [L3]

E6U010202200W04

DTC P2271	Middle HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the middle HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **0.85 V or more** for **25 s**, or is **above 0.3 V**, the PCM determines that the front HO2S signal remains rich. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **more than 1,500 rpm** — MAF amount: **more than 10 g/s {1.32 lb/min}** — Short term fuel trim: **-20 — 20%** — Long term fuel trim: **-15 — 15%** — Fuel injection system status: feedback control **Diagnostic support note** • This is a intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Middle HO2S malfunction • Front HO2S malfunction • Front HO2S heater malfunction • Middle HO2S heater malfunction • Fuel pump control malfunction • Fuel pressure malfunction • Fuel injector malfunction • Leakage exhaust gas • Leakage engine coolant • Purge solenoid valve malfunction • Purge solenoid valve hoses improper connection • Restriction in intake-air system • Insufficient compression — Engine oil malfunction — Increased oil pressure — Metering oil pump malfunction — Metering oil pump control malfunction — Engine malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is DTC P2196 present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2271 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF MIDDLE HO2S** • Start the engine and warm it up completely. • Access O2S12 PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the middle HO2S. • If there is no leakage, replace the middle HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2271 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2274 [L3]

E6U010202200W05

DTC P2274	Rear HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the rear HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **below 0.17 V** even after recovery from fuel cut, the PCM determines that the front HO2S signal remains lean. **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • Rear HO2S malfunction • Fuel injector malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • Air suction at intake-air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2274 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Start the engine and warm it up completely. • Access O2S13 PID using the WDS or equivalent. • Check PID under following the accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of the accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the TWC and the rear HO2S. • If there is no leakage, replace the rear HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 10.
6	**INSPECT THE FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Inspect the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT THE PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 10.
		No	Go to the next step.
8	**INSPECT THE FUEL INJECTOR** • Inspect the fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step 10. (See 01–14A–24 FUEL INJECTOR REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**INSPECT THE ENGINE COOLANT PASSAGE FOR THE ENGINE COOLANT LEAKAGE** • Perform the engine coolant leakage inspection. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF THE DTC P2274 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Stop the vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2275 [L3]

E6U010202200W06

DTC P2275	Rear HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the rear HO2S input voltage when the following conditions are met. If the subtracted input voltage from the target voltage (calculated by PCM) is **above 0.17 V** when the fuel cut, the PCM determines that the front HO2S signal remains rich. **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Rear HO2S heater malfunction • Pressure regulator malfunction (built-in fuel pump unit) • Fuel injector malfunction • Leakage exhaust gas • Purge solenoid valve malfunction • Purge solenoid valve hoses improper connection • Insufficient engine compression • Engine malfunction (leakage engine coolant) • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are there any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2275 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF THE REAR HO2S** • Start engine and warm it up completely. • Access O2S13 PID using the WDS or equivalent. • Check PID under following the accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the TWC and the rear HO2S. • If there is no leakage, replace rear HO2S. (See 01–15A–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [L3].) Then go to Step 11.
6	**INSPECT THE PURGE SOLENOID VALVE** • Inspect the purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the purge solenoid valve, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT THE FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 9.
8	**INSPECT THE FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace malfunctioning part, then go to Step 11.
		No	Replace fuel pump, then go to Step 11.
9	**INSPECT THE FUEL INJECTOR** • Inspect fuel injector. (See 01–14A–29 FUEL INJECTOR INSPECTION [L3].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to Step11. (See 01–14A–24 FUEL INJECTOR REMOVAL/ INSTALLATION [L3].)
		No	Go to the next step.
10	**INSPECT THE ENGINE COOLANT PASSAGE FOR ENGINE COOLANT LEAKAGE** • Perform the engine coolant leakage inspection. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2275 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Stop vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify O2S_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2401 [L3]

E6U010202400W01

DTC P2401	EVAP system leak detection pump motor circuit low
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. If the pump load current is lower than specified, the PCM determines EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Open circuit between main relay terminal E and EVAP system leak detection pump terminal A • Open circuit between EVAP system leak detection pump terminal D and PCM terminal 1U • Short to ground circuit between EVAP system leak detection pump terminal D and PCM terminal 1U • Poor connection at EVAP system leak detection pump or PCM connector • PCM malfunction

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn ignition switch to OFF then ON (Engine off). • Verify related PENDING CODE or stored DTC. • Is DTC P2405 present?	Yes	Go to appropriate DTC inspection. (See 01–02A–283 DTC P2405 [L3].)
		No	Go to the next step.
4	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EVAP system leak detection pump connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect main relay. • Inspect continuity between EVAP system leak detection pump terminal A (wiring harness-side) and main relay terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between EVAP system leak detection pump terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between EVAP system leak detection pump terminal D (wiring harness-side) and PCM terminal 1U (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
9	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Perform EVAP system leak detection pump inspection. (See 01–16A–11 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3, AJ].) • Is EVAP system leak detection pump normal?	Yes	Go to the next step.
		No	Replace EVAP system leak detection pump, then go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P2401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start engine and perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) — Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2402 [L3]

E6U010202400W02

DTC P2402	EVAP system leak detection pump motor circuit high
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. If the pump load current is higher than specified, the PCM determines EVAP system leak detection pump motc circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Short to power supply between the EVAP system leak detection pump terminal D and PCM terminal 1U • PCM malfunction

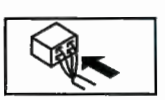
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Go to the next step.
4	**CHECK EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON. • Disconnect EVAP system leak detection pump connector. • Measure voltage between EVAP system leak detection pump terminal D (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace wiring harness, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2402 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start engine and perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) — Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2404 [L3]

E6U010202400W03

DTC P2404	EVAP system leak detection pump sensor circuit malfunction
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. After obtaining the reference current value, if the time in which the pump load current reaches the reference current value is less than the specification, the PCM determines air filter has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Air filter clogging • EVAP hose bending • Damaged PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**CHECK EVAP HOSE BENDING** • Inspect EVAP hose for bending. • Is EVAP hose normal?	Yes	Go to the next step.
		No	Repair or replace suspected hose, then go to Step 5.
4	**CHECK AIR FILTER FOR CLOGGING** • Inspect air filter for clogging. • Is air filter normal?	Yes	Go to the next step.
		No	Replace air filter, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2404 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) — Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2405 [L3]

E6U010202400W04

DTC P2405	EVAP system leak detection pump sensor circuit low input
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. If the current is lower than the specification while the PCM obtains the reference current value, the PCM determines EVAP system leak detection pump orifice has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump orifice fallen off • EVAP system leak detection pump motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace EVAP system leak detection pump, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2405 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start engine and perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) — Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2407 [L3]

E6U010202400W05

DTC P2407	EVAP system leak detection pump sensor circuit intermittent
DETECTION CONDITION	• The PCM monitors pump load current (EVAP line pressure), while EVAP leak monitor is operating. When either of the following is detected **6 times or more** successively, the PCM determines EVAP system leak detection pump heater has a malfunction: — While obtaining the reference current value, the change in pump load current exceeds the specification. — After obtaining the reference current value, the pump load current is kept lower than the maximum pump load current for more than the specified time. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump heater malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP HEATER** • Perform EVAP system leak detection pump inspection. (See 01–16A–11 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3, AJ]) • Is the EVAP system leak detection pump normal?	Yes	Replace the EVAP system leak detection pump, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2407 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform EVAP system test using the WDS or equivalent. (See 01–03A–72 Evaporative Emission (EVAP) System Leak Inspection.) • Is same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform "EVAP System Repair Verification Drive Mode". (See 01–02A–13 OBD-II DRIVE MODE [L3].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2502 [L3]

E6U010202500W01

DTC P2502	Generator terminal B circuit open
DETECTION CONDITION	• PCM judges generator output voltage is **above 17 V** or battery voltage is **below 11 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Open circuit between generator terminal B and battery positive terminal • Battery malfunction • Generator malfunction • PCM is poorly connected. • PCM, generator and/or battery are poorly connected.

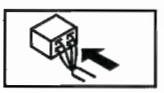
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Turn the ignition switch off. • Inspect battery. • Is battery normal?	Yes	Replace battery, then go to Step 7.
		No	Go to the next step.
4	**INSPECT POOR INSTALLATION OF GENERATOR TERMINAL** • Turn the ignition switch off. • Inspect generator terminal B installation nut for looseness. • Is nut loose?	Yes	Tighten generator terminal B installation nut, then go to Step 7.
		No	Go to the next step.
5	**INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL** • Inspect battery positive terminal for looseness. • Is terminal loose?	Yes	Connect battery positive terminal correctly, then go to Step 7.
		No	Go to the next step.
6	**INSPECT BATTERY CHARGING CIRCUIT** • Start engine. • Disconnect battery positive terminal. • Does engine stall?	Yes	Repair or replace harness between generator terminal B and battery positive terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2502 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the memory using the WDS or equivalent. • Turn ignition switch to OFF, then start engine. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2503 [L3]

E6U010202500W02

DTC P2503	Generator output voltage signal no electricity
DETECTION CONDITION	• PCM needs **more than 20 A** from generator, and judges generator output voltage to be **below 8.5 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM and/or generator are poorly connected. • Open and/or short to GND in wiring harness from between generator terminal P and PCM terminal 2AJ • Open and/or short to GND in wiring harness from between generator terminal D and PCM terminal 2AI • Drive belt misadjustment

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT DRIVE BELT CONDITION** • Verify that drive belt auto tensioner indicator mark does not exceed limit. • Is front drive belt normal?	Yes	Go to the next step.
		No	Replace and/or adjust drive belt, then go to Step 10.
4	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Disconnect generator connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal P (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT GENERATOR CONTROL CIRCUIT FOR OPEN CIRCUIT** • Measure resistance between generator terminal D (wiring harness-side) and PCM terminal 2AI (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
9	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR OPEN CIRCUIT** • Measure resistance between generator terminal P (wiring harness-side) and PCM terminal 2AJ (wiring harness-side). • Is there continuity?	Yes	Repair or replace generator, then go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2503 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to OFF, then start engine. • Is the same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2504 [L3]

E6U010202500W03

DTC P2504	Battery overcharge
DETECTION CONDITION	• PCM judges generator output voltage is **above 18.5 V** or battery voltage is **above 16.0 V** during engine running. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Short to power supply between generator connector terminal D and PCM connector terminal 2AI • Generator malfunction • PCM and/or generator are poorly connected.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect generator connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 8.
		No	Go to the next step.
4	**CLASSIFY GENERATOR MALFUNCTION OR OTHER MALFUNCTION** • Turn ignition switch to ON (Engine off). • Measure voltage between generator terminal D (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Malfunction at generator. Go to Step 7.
5	**INSPECT PCM GENERATOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace pins, then go to Step 8.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to ON (engine OFF). • Measure voltage between generator terminal D (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power supply, then go to Step 8.
		No	Go to Step 8.
7	**INSPECT GENERATOR CONTROL TERMINAL FOR SHORT TO POWER SUPPLY** • Measure resistance between generator terminal D (part-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace generator, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2504 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to OFF, then start engine. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2507 [L3]

E6U010202500W05

DTC P2507	PCM B+ voltage low
DETECTION CONDITION	• The PCM monitors the voltage of back-up battery positive terminal. If the PCM detects battery positive terminal voltage **below 2.5 V** for **2 s**, the PCM determines that the backup voltage circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Melt down EEC fuse • Open circuit in wiring between EEC fuse and PCM terminal 1BA • Short to ground between EEC fuse and PCM terminal 1BA • Poor connection of PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME on the repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT EEC FUSE** • Turn the ignition switch off. • Inspect EEC fuse for failure and proper. • Is it normal?	Yes	Go to Step 6.
		No	• If EEC fuse has been burnt, then go to the next step. • If EEC fuse is not installed correctly, install it correctly then go to Step 7.
4	**INSPECT MONITOR CIRCUIT FOR SHORT TO GROUND** • Disconnect battery cables. • Inspect for continuity between EEC fuse terminal and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground and install new fuse, then go to Step 7.
		No	Go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MONITOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect battery cables. • Inspect for continuity between EEC fuse terminal and PCM terminal 1BA (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2610 [L3]

E6U010202600W03

DTC P2610	PCM internal engine off timer performance
DETECTION CONDITION	• PCM internal engine off timer is damaged. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal engine off timer is damaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2610 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02A–18 DTC TABLE [L3].)
		No	DTC troubleshooting completed.

DTC P2676 [L3]

E6U010202600W01

DTC P2676	Variable air duct (VAD) solenoid valve circuit low input
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the VAD solenoid valve control signal voltage and current. If the following conditions ai met, the PCM determines that there is the VAD solenoid valve circuit problem. — The PCM turns the VAD solenoid valve off, but the voltage of the VAD solenoid valve control signal remains low. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • The PCM monitors VAD solenoid valve control signal. If the PCM turns VAD solenoid valve off but voltage still remains low, the PCM determines that VAD solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• VAD solenoid valve malfunction • Open circuit in wiring between main relay and VAD solenoid valve terminal A • Open circuit in wiring between VAD solenoid valve terminal B and PCM terminal 1K • Short to ground in wiring between VAD solenoid valve terminal B and PCM terminal 1K • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VAD SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect VAD solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT VAD SOLENOID VALVE MALFUNCTION** • Perform VAD solenoid valve inspection. (See 01–13A–6 VARIABLE AIR DUCT (VAD) CONTROL SOLENOID VALVE INSPECTION [L3].) • Is VAD solenoid valve normal?	Yes	Go to the next step.
		No	Replace VAD solenoid valve, then go to step 9.
5	**INSPECT VAD SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position (Engine off). • Measure voltage between VAD solenoid valve terminal A (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to Step 9.
6	**INSPECT VAD SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between VAD solenoid valve terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace wiring harness for short to ground, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection at terminal 1K. (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VAD SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between VAD solenoid valve terminal B (wiring harness-side) and PCM terminal 1K (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2676 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and run engine speed **above 4,400 rpm** few times. • Retrieve any DTC. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

DTC P2677 [L3]

E6U010202600W02

DTC P2677	Variable air duct (VAD) solenoid valve circuit high input
DETECTION CONDITION	**California emission regulation applicable ATX model** • The PCM monitors the VAD solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the VAD solenoid valve circuit problem. — The PCM turns the VAD solenoid valve on, but the current of the VAD solenoid valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
	Except for California emission regulation applicable ATX model • The PCM monitors VAD solenoid valve control signal. If the PCM turns VAD solenoid valve on but voltage still remains high, the PCM determines that VAD solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • PENDING CODE is available if PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• VAD solenoid valve malfunction • Short to power supply between VAD solenoid valve terminal B and PCM terminal 1K • Shorted VAD solenoid valve or PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VAD SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect VAD solenoid valve connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT VAD SOLENOID VALVE MALFUNCTION** • Perform VAD solenoid valve inspection. (See 01–13A–6 VARIABLE AIR DUCT (VAD) CONTROL SOLENOID VALVE INSPECTION [L3].) • Is VIS solenoid valve normal?	Yes	Go to the next step.
		No	Replace VAD solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminal 1K. (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VAD SOLENOID VALVE CONTROL CIRCUIT SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure voltage between VAD solenoid valve terminal B (wiring harness-side) and body ground. • Is voltage **B+**?	Yes	Repair or replace wiring harness for open circuit, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2677 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start engine and run engine speed a**bove 4,400 rpm** few times. • Retrieve any DTC. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02A–12 AFTER REPAIR PROCEDURE [L3].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02A–18 DTC TABLE [L3].)
		No	Troubleshooting completed.

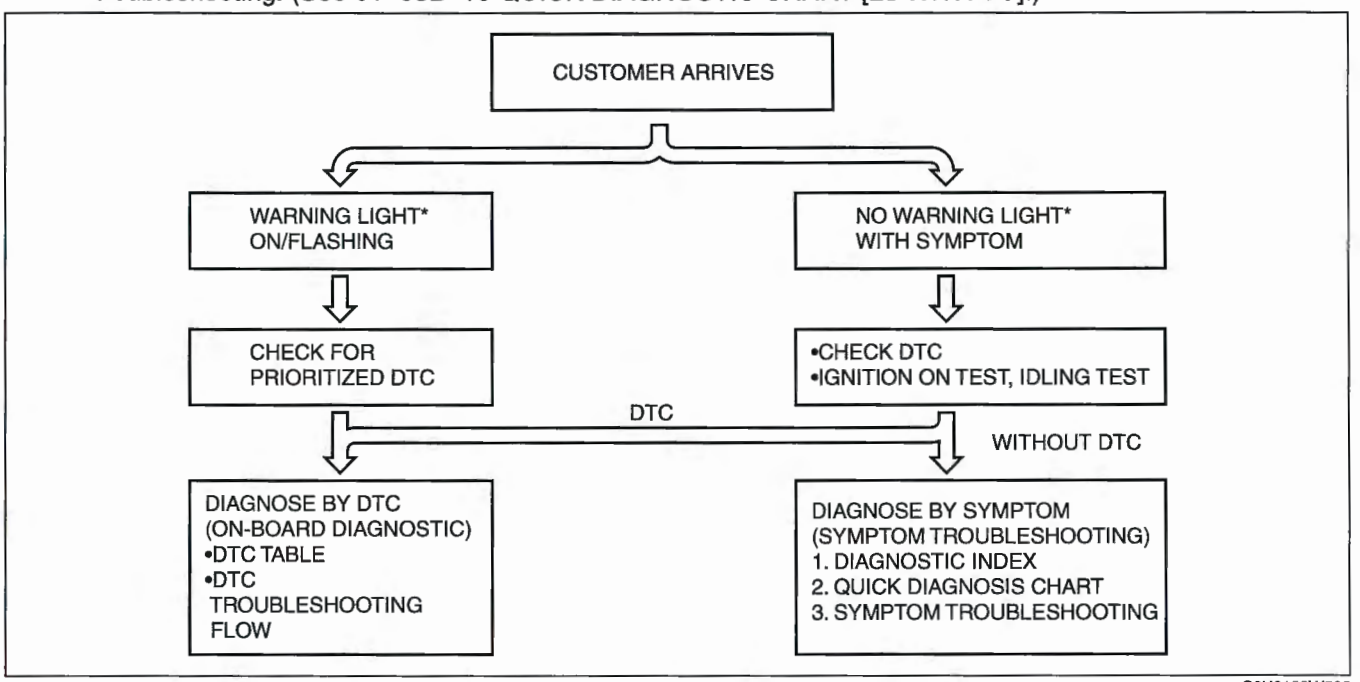
FOREWORD [L3 WITH TC]

E6U010200000WD3

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication and diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  — If a DTC exists, diagnose the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
  — If a DTC does not exist and the MIL does not illuminate or flash, diagnose the applicable symptom troubleshooting. (See 01–03B–10 QUICK DIAGNOSTIC CHART [L3 WITH TC].)



C6U0103W500

*: Malfunction Indicator Lamp (MIL), Generator Warning Light, Security Light

OBD-II PENDING TROUBLE CODE [L3 WITH TC]

E6U010200000WD4

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM determines that the system has returned to normal or the problem was mistakenly detected, it deletes the pending code. If the problem is found in the second drive cycle, too the PCM determines that the system is malfunctioning, and the DTC is stored.

OBD-II FREEZE FRAME DATA [L3 WITH TC]

E6U010200000WD5

- This is technical data which indicates the engine condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of the Misfire or Fuel System DTCs. Once freeze frame data for the Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD-II ON-BOARD SYSTEM READINESS TEST [L3 WITH TC]

E6U010200000WD6

- This shows the OBD-II systems operating status. If any monitor function is incomplete, the WDS or equivalent will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II DIAGNOSTIC MONITORING TEST RESULTS [L3 WITH TC]

E6U010200000WD7

- These result from the intermittent monitor system technical data, which are used to determine whether the system is normal or not. They also display the system's thresholds and diagnostic results. The intermittent monitor system monitors the oxygen sensor, EVAP purge system, catalyst and the EGR system.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [L3 WITH TC]

E6U010200000

- This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [L3 WITH TC]

E6U010200000WD9

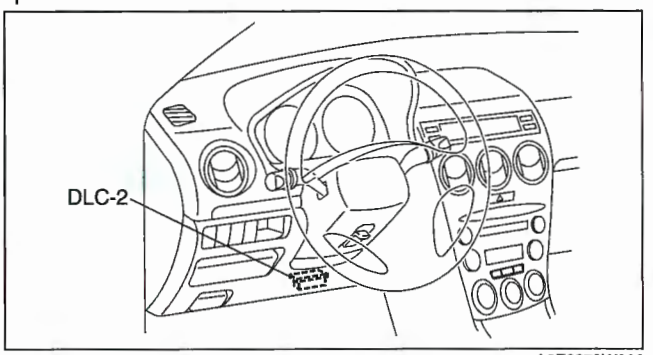
- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST [L3 WITH TC]

E6U010200000WE0

DTCs Reading Procedure

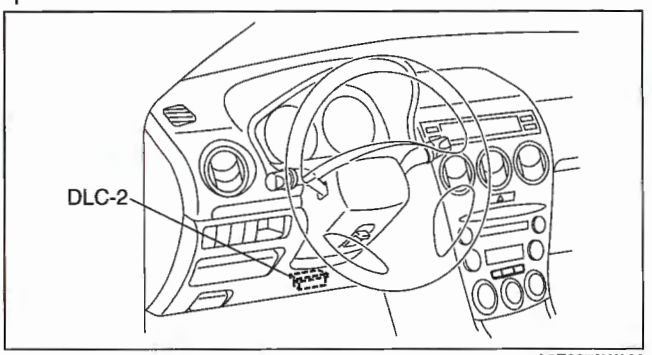
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the center console.
3. Retrieve DTCs using the WDS or equivalent.



A6E3970W002

Pending Trouble Code Access Procedure

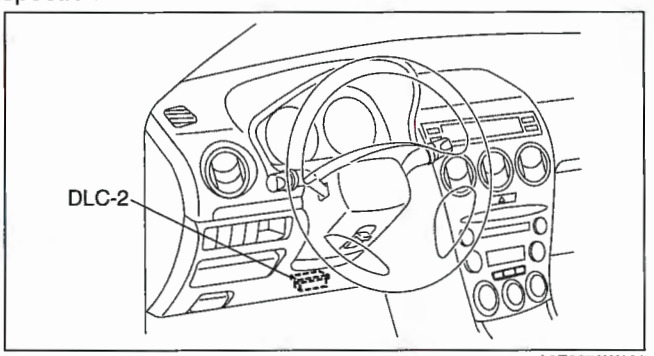
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Retrieve **PENDING trouble codes** using the WDS or equivalent.



A6E3970W002

Freeze Frame PID Data Access Procedure

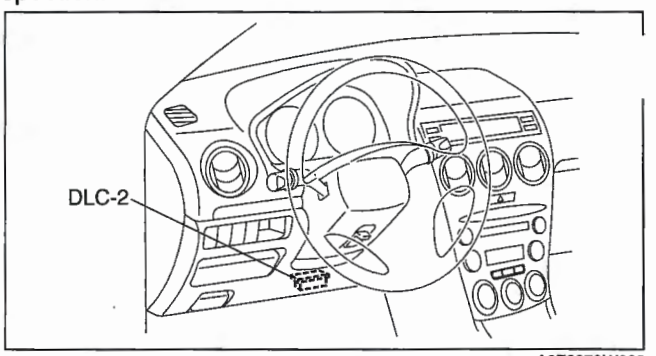
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Record the FREEZE FRAME PID DATA using the WDS or equivalent.



A6E3970W002

On-Board System Readiness Tests Access Procedure

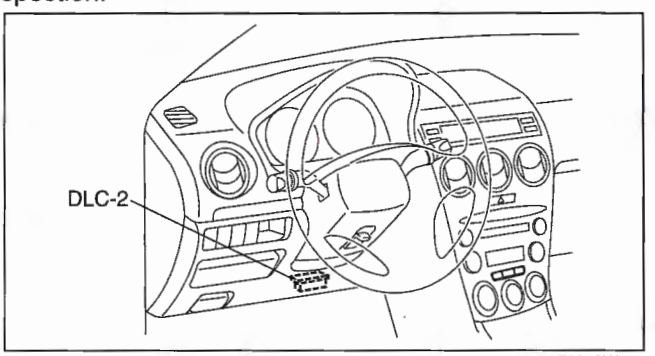
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Monitor the OBD-II systems operating status using the WDS or equivalent.



A6E3970W002

PID/DATA Monitor and Record Procedure

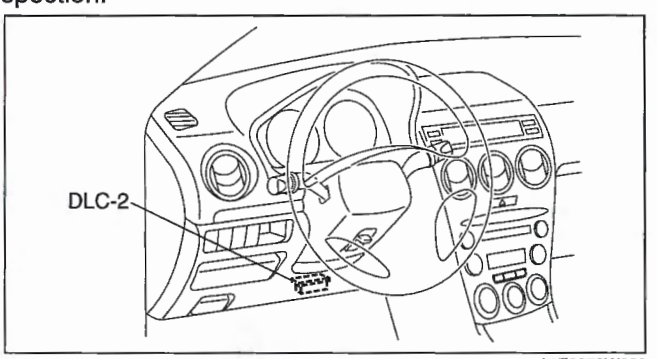
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Access and monitor PIDs using the WDS or equivalent.



A6E3970W002

Diagnostic Monitoring Test Results Access Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Access to the DIAGNOSTIC MONITORING TEST RESULTS and read the test results using the WDS or equivalent.

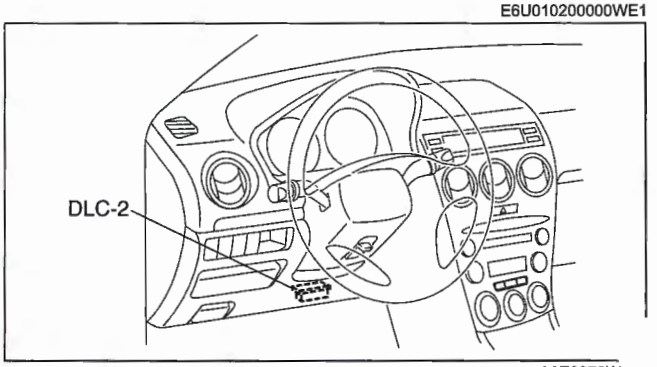


A6E3970W002

AFTER REPAIR PROCEDURE [L3 WITH TC]

1. Connect the WDS or equivalent.
2. Cycle the ignition switch from the off to the ON position.
3. Any retrieved DTCs.
4. Clear all diagnostic data using the WDS or equivalent.

E6U010200000WE1



A6E3970W

KOEO/KOER SELF TEST [L3 WITH TC]

E6U010200000WE2

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located in the driver compartment. Retrieve the KOEO/KOER DTCs using the WDS or equivalent.

OBD-II DRIVE MODE [L3 WITH TC]

E6U010200000WE3

- Using the OBD-II drive mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II drive mode is divided into the specific drive mode and single drive mode.
- For the specific drive mode, specified drive modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single drive mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific drive mode. The applicable system is diagnosed by driving in the following drive modes.
  - — PCM Adaptive Memory Produce Drive Mode
  - — EGR System Repair Verification Drive Mode
  - — HO2S heater, HO2S, and TWC Repair Verification Drive Mode
  - — EVAP System Repair Verification Drive Mode
- The following systems are diagnosed with the single drive mode.
  - — EGR system
  - — Oxygen sensor (HO2S)
  - — Oxygen sensor heater
  - — Catalytic converter (TWC)
  - — Fuel, misfire and evaporative (EVAP) system

Caution

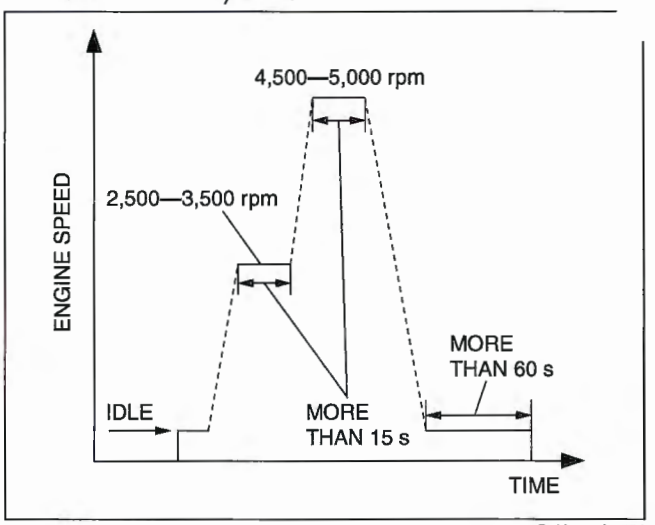
- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the WDS or equivalent is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the WDS or equivalent using the PID/DATA MONITOR AND RECORD function and inspect later.**

Note

- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the WDS or equivalent to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
  - — The OBD-II system detects the malfunction.
  - — The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The WDS or equivalent can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
  - — If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
  - — If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

PCM Adaptive Memory Production Drive Mode

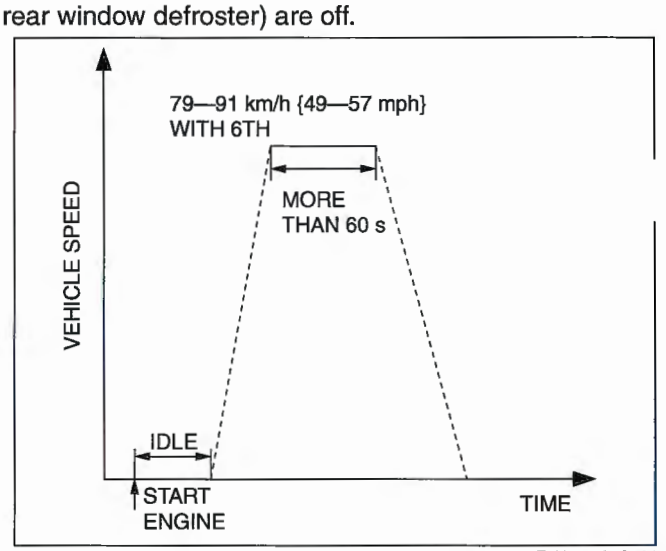
1. Start the engine and warm it up completely.
2. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Perform no load racing at the engine speed shown in the graph, then idle the engine for more than **60 s** after the cooling fan has stopped. If possible, monitor RPM PID for engine speed during this procedure.



C6U0102W501

EGR System Repair Verification Drive Mode

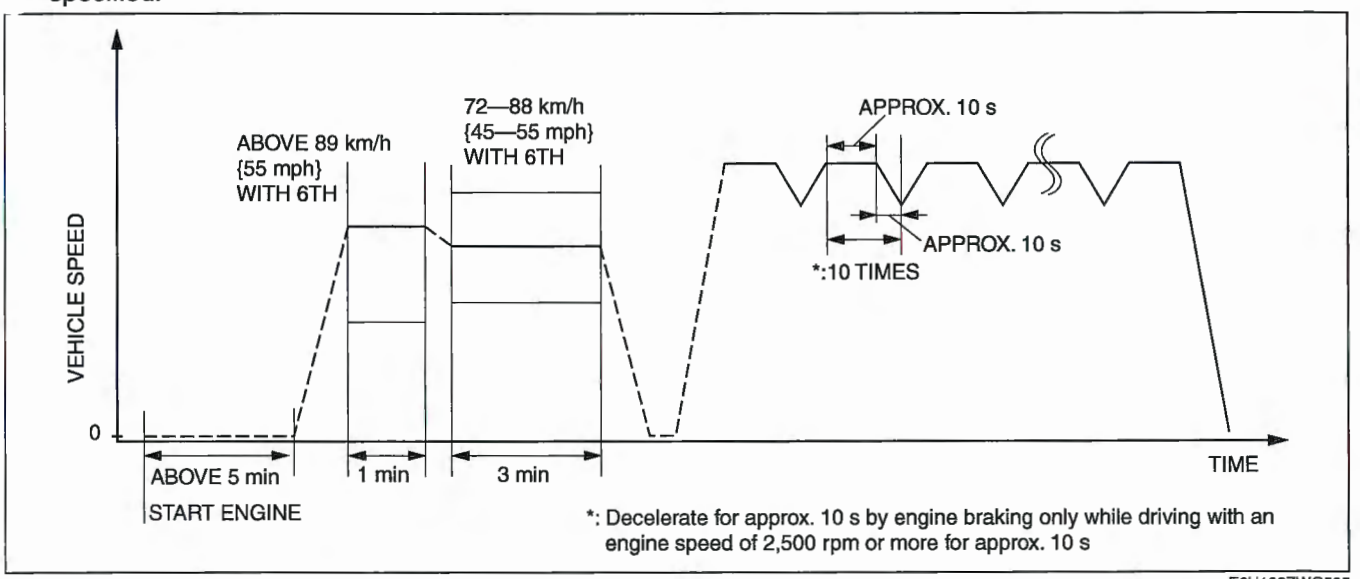
1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph.
4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within specification, repair has not been completed.
6. Verify no DTCs are available.



E6U102ZWC504

HO2S heater, HO2S, and TWC Repair Verification Drive Mode

1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



E6U102ZWC505

4. Stop the vehicle and access ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off then repeat from Step 3.
5. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within the specification, repair has not been completed.
6. Verify no DTCs are available.

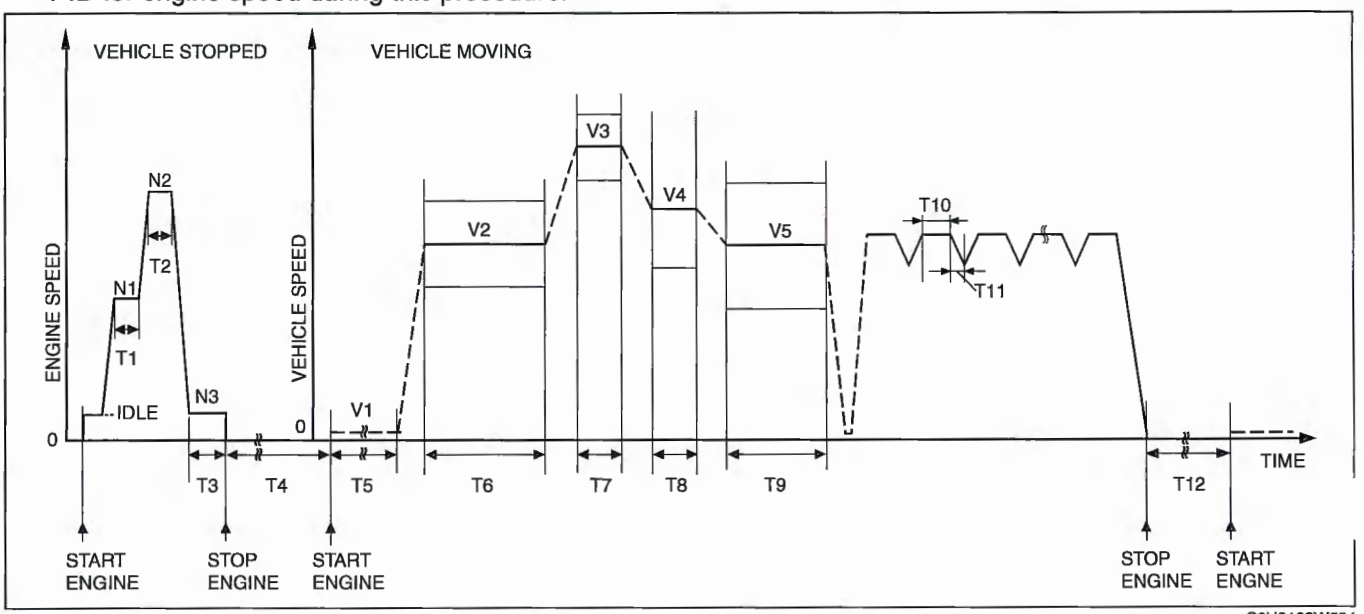
EVAP System Repair Verification Drive Mode

Note
- If "EVAP System Repair Verification Drive Mode" cannot be performed (it is impossible to drive the vehicle under this drive mode condition), perform the EVAP system test procedure as an alternative. (See 01–03B–80 ENGINE CONTROL SYSTEM OPERATION INSPECTION [L3 WITH TC].)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before the engine is started to initiate the EVAP system test.
   - BARO: **above 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—35 °C {41—95 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
2. Clear the DTC from the PCM memory using the WDS or equivalent.
3. Turn the ignition switch off.
4. Leave the vehicle for **5 hours or more**.
5. Start the engine and idle it for **more than 5 min**.
6. Drive the vehicle at an engine speed of **65—80 km/h {40—50 mph}** for **more than 5 min**.
7. Stop the vehicle and the turn ignition switch off.
8. Leave vehicle as it is for **5.5 hours or more**.
9. Start the engine.
10. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, turn the ignition switch off then go back to Step 1.
11. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
    - If detected values are not within specification, the repair has not been completed.
12. Verify that no DTCs are present.

PCM Adaptive Memory Production, EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the WDS or equivalent.
3. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to 6.
   - BARO: **above 72.2 kPa {542 mmHg, 21.3 inHg}**
   - IAT: **5—35 °C {41—95 °F}**
   - FTL: **15—85%**
   - B+: **above 10.9 V**
5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor RPM PID for engine speed during this procedure.



C6U0102W504

Step	Time	Engine speed (rpm)	Vehicle speed (km/h {mph})	Vehicle condition
1	T1: More than 15 s	N1: 2,500—3,500	0 {0}	—
2	T2: More than 15 s	N2: 4,500—5,000	0 {0}	—
3	T3: More than 60 s	N3: Idle	0 {0}	Idle the engine after the cooling fan has stopped
4	T4: More than 5 h	0	0 {0}	Keep the ignition switch off
5	T5: More than 5 min	Idle	V1: 0 {0}	—
6	T6: 5 min	—	V2: 65—80 {40—50}	6TH
7	T7: 1 min	—	V3: 79—91 {49—57}	6TH
8	T8: 1 min	—	V4: Above 89 {55}	6TH
9	T9: 3 min	—	V5: 72—88 {45—55}	6TH
10	T10: Approx. 10 s	Above 2,500	—	—
11	T11: Approx. 10 s	—	—	Decelerate by engine braking only (10 times)
12	T12: More than 5.5 h	0	0 {0}	Keep the ignition switch off

6. Turn the ignition switch off.
7. Access the ON BOARD SYSTEM READINESS to verify the OBD monitoring status.
   - If completed, all of the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then perform the applicable specific drive mode for any monitoring item that was not in the detection condition.
8. Access the DIAGNOSTIC MONITORING TEST RESULTS to verify the monitor results.
   - If detected values are not within specification, the repair has not been completed.

DIAGNOSTIC MONITORING TEST RESULTS [L3 WITH TC]

E6U010200000WE4

- The purpose of this test mode is to confirm the result of the OBD-II monitor diagnostic test results. The result values stored when a particular monitor is completed are displayed. If the monitor is not completed, the initial value is displayed.

TEST ID	Description	Related system
10: 01: 80	HO2S (Front) lean-to-rich response time (calculated)	HO2S
10: 02: 03	Low HO2S (Rear) voltage for switch time calculation (constant)	
10: 02: 04	High HO2S (Rear) voltage for switch time calculation (constant)	
10: 02: 05	HO2S (Rear) rich-to-lean response time (calculated)

DTC P0011 [L3 WITH TC]

E6U010200001W16

DTC P0011	CMP Timing over-advanced
DETECTION CONDITION	• Actual valve timing is over-advanced by **17 °** (when the following conditions are met) from the target valve timing when the OCV is controlled at the maximum valve timing retard condition. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm**. — Engine coolant temperature is **above 70—110 °C {158—230 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• OCV malfunction • Spool valve in the OCV is stuck in the advance position. • Variable valve timing actuator is stuck in the advance position. • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV FOR MALFUNCTION** • Start the engine. • Increase the engine speed. • Stop the engine. • Remove the OCV. • Inspect the position of the spool valve in the OCV. • Is the spool valve located at the valve retard position?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 6.
4	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. • Inspect the stopper pin. (See 01–10B–37 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 6.
5	**INSPECT ROTOR POSITION** • Remove the variable valve timing actuator. • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the variable valve timing actuator, go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0011 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0012 [L3 WITH TC]

E6U010200001W17

DTC P0012	CMP Timing over-retarded
DETECTION CONDITION	• Actual valve timing is over-retarded by **5 °** (when the following conditions are met) from the target valve timing for **5 s** when the OCV system control is within the feed-back range. **MONITORING CONDITION** — Engine speed is **below 4,000 rpm**. — Engine coolant temperature is **above 70—110 °C {158—230 °F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• OCV (oil control valve) malfunction • Low engine oil pressure • Spool valve in OCV (oil control valve) is stuck in the retard position. • Variable valve timing actuator is stuck in the retard position. • Following oil runners are clogged or have leakage. **Oil runners** • Between oil pressure switch and OCV (oil control valve) • Between OCV (oil control valve) and variable valve timing actuator • In variable valve timing actuator • Loose timing chain or improper valve timing due to timing chain slippage • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Is DTC P2088 or P2089 present?	Yes	Go to the appropriate DTC troubleshooting procedure. (See 01–02B–198 DTC P2088 [L3 WITH TC] or 01–02B–200 DTC P2089 [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start the engine. • Does the oil pressure warning light illuminate?	Yes	Inspect engine oil pressure. (See 01–11B–3 OIL PRESSURE INSPECTION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop the engine. • Remove the timing chain cover. • Is the camshaft timing mark at the correct point? (See 01–10B–10 TIMING CHAIN REMOVAL/INSTALLATION [L3 WITH TC].)	Yes	Go to the next step.
		No	Reinstall the timing chain, then go to Step 8.
6	**INSPECT OCV FOR MALFUNCTION** • Stop the engine. • Remove the OCV. • Inspect the position of the spool valve in the OCV. • Is the spool valve located at the valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
		No	Replace the OCV, then go to Step 8.
7	**INSPECT ENGINE OIL RUNNER** • Inspect the following engine oil runners for clogging or leakage. — Between the oil pressure switch and the OCV — Between the OCV and the variable valve timing actuator — In the variable valve timing actuator • Is there any clogging or leakage?	Yes	Repair or replace the suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed using the cleaning mode of the variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0012 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0016 [L3 WITH TC]

E6U010200001W18

DTC P0016	CKP-CMP correlation
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and CMP sensor. If the input pulse pick-up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connector • CMP sensor malfunction • CKP sensor malfunction • Damaged or scratched CMP sensor pulse wheel • Damaged or scratched CKP sensor pulse wheel • Foreign material on CMP sensor • Foreign material on CKP sensor • Improper valve timing

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CMP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CMP SENSOR FOR FOREIGN MATERIAL** • Remove the CMP sensor. • Inspect the CMP sensor for foreign material. • Is there any foreign material on the CMP sensor?	Yes	Remove foreign material from the CMP sensor, then go to Step 13.
		No	Go to the next step.
5	**INSPECT CMP SENSOR PULSE WHEEL** • Visually inspect the CMP sensor pulse wheel. • Is there any damage or scratching to the CMP sensor pulse wheel?	Yes	Replace the camshaft, then go to Step 13. (See 01–10B–20 CYLINDER HEAD GASKET REPLACEMENT [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See 01–40B–36 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Replace the CMP, then go to Step 13.
7	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
8	**INSPECT CKP SENSOR FOR FOREIGN MATERIAL** • Remove the CKP sensor. • Inspect the CKP sensor for foreign material. • Is there any foreign material on the CKP sensor?	Yes	Remove foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PULSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Is there any damage or scratching to the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01–10B–10 TIMING CHAIN REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See 01–40B–38 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 13. (See 01–40B–41 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
11	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
12	**INSPECT VALVE TIMING** • Inspect valve timing. (See 01–10B–10 TIMING CHAIN REMOVAL/ INSTALLATION [L3 WITH TC].) • Is valve timing normal?	Yes	Go to the next step.
		No	Adjust the valve timing properly, then go to the next step. (See 01–10B–10 TIMING CHAIN REMOVAL/ INSTALLATION [L3 WITH TC].)
13	**VERIFY TROUBLESHOOTING OF DTC P0016 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0030 [L3 WITH TC]

E6U010200001W19

DTC P0030	Front HO2S heater control circuit problem
DETECTION CONDITION	• OBD system monitors the output signal voltage from oxygen sensor which is in proportion to the element impedance of oxygen sensor. If the output signal voltage is not between **0.75 V** and **1.5 V** after specified time from engine start, heater performance is considered failed. **Monitoring condition** • **74 s** elapsed from engine start • Battery voltage: **10—18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in wiring harness between front HO2S heater terminal 2D and PCM terminal 4AD • Short to ground in the wiring harness between front HO2S heater terminal 2D and PCM terminal 4AD • Short to power supply in the wiring harness between front HO2S heater terminal 2D and PCM terminal 4AD • Open circuit in the wiring harness between front HO2S heater terminal 1B and PCM terminal 2G • PCM malfunction

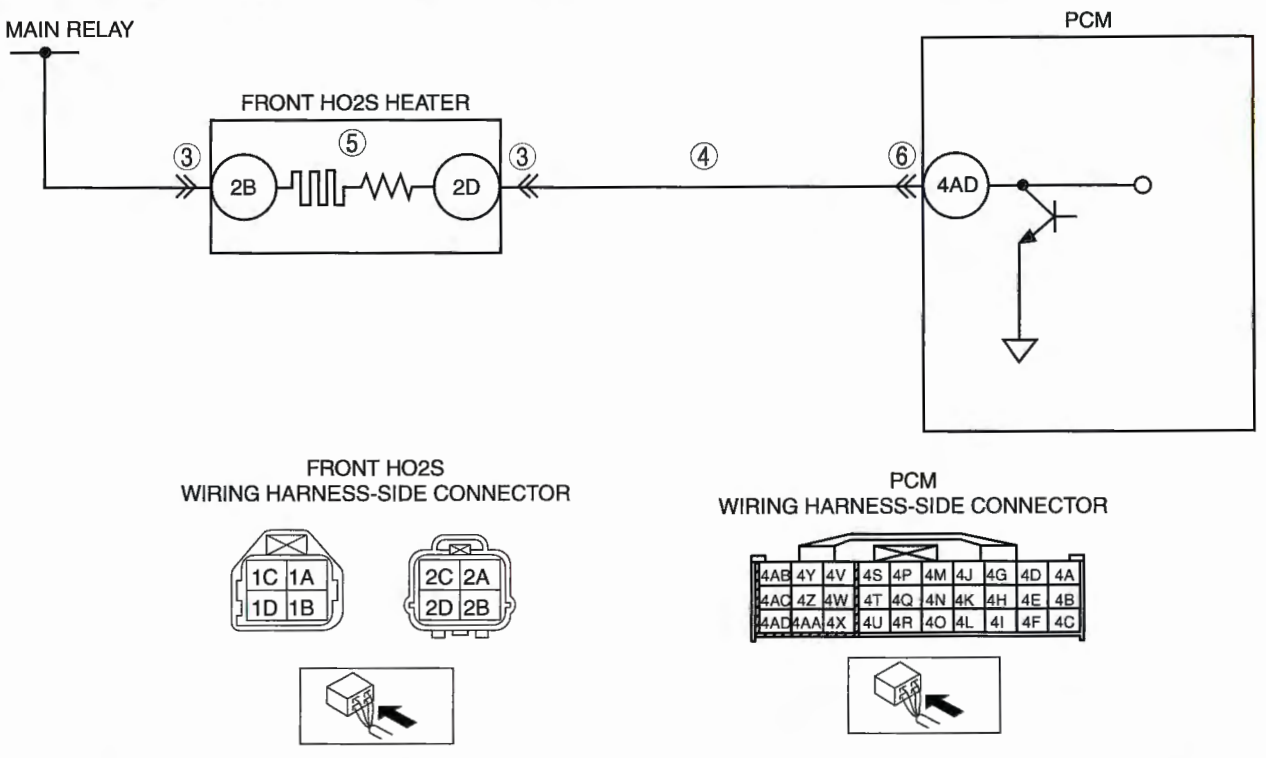
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is DTC P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0030 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 8. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0030 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0031 [L3 WITH TC]

E6U010200001W20

DTC P0031	Front HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. If the PCM turns the front HO2S heater off or or but the front HO2S heater circuit voltage remains low the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between main relay and front HO2S terminal 2B • Short to ground in the wiring harness between main relay and front HO2S terminal 2B • Open circuit in the wiring harness between front HO2S terminal 2D and PCM terminal 4AD • Short to ground in the wiring harness between front HO2S terminal 2D and PCM terminal 4AD • PCM malfunction



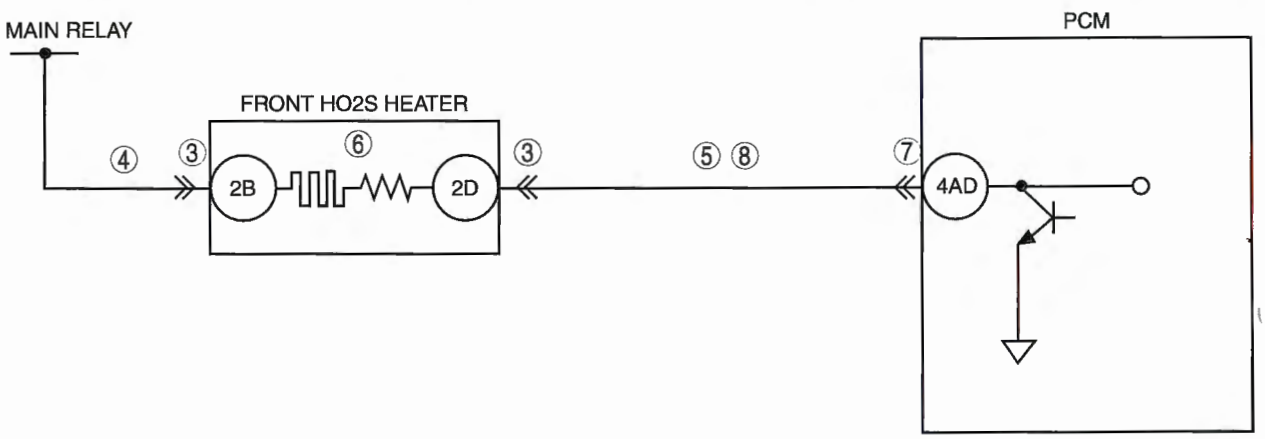
Diagnostic procedure

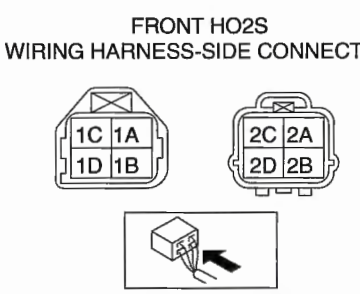
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 7. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

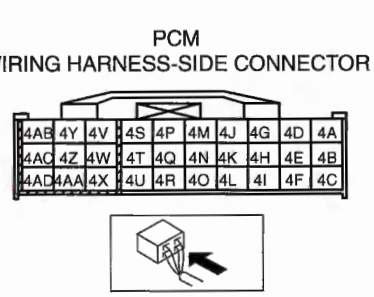
DTC P0032 [L3 WITH TC]

E6U010200001W21

DTC P0032	Front HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S heater output voltage. If the PCM turns the front HO2S heater on or off but the front HO2S heater circuit voltage remains high the PCM determines that the front HO2S heater circuit has a malfunction. **Note** • The front HO2S heater is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between front HO2S terminal 2D and PCM terminal 4AD • PCM malfunction







Diagnostic procedure

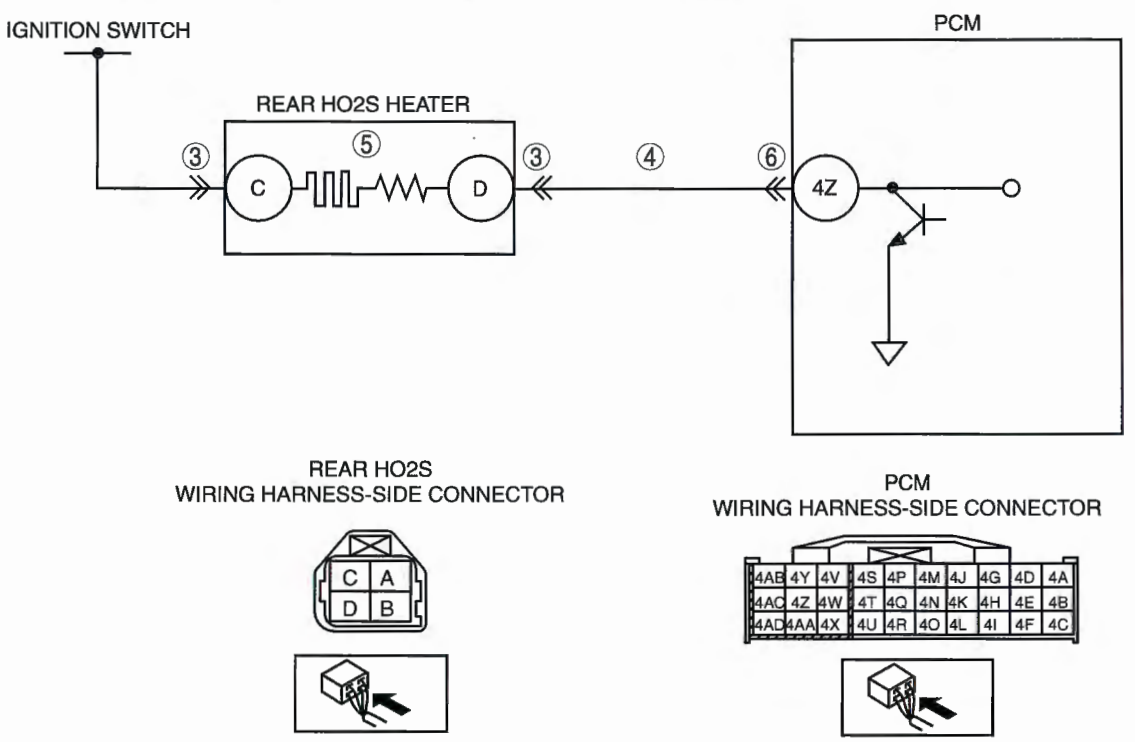
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FRONT HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between front HO2S terminal 2B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S HEATER** • Inspect the front HO2S heater. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between front HO2S terminal 2D (wiring harness-side) and PCM terminal 4AD (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0037 [L3 WITH TC]

E6U010200001W22

DTC P0037	Rear HO2S heater circuit low input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater on or off but the rear HO2S heater circuit voltage remains low the PCM determines that the rear HO2S heater circ has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between ignition switch and rear HO2S terminal C • Short to ground in the wiring harness between ignition switch and rear HO2S terminal C • Open circuit in the wiring harness between rear HO2S terminal D and PCM terminal 4Z • Short to ground in the wiring harness between rear HO2S terminal D and PCM terminal 4Z • PCM malfunction



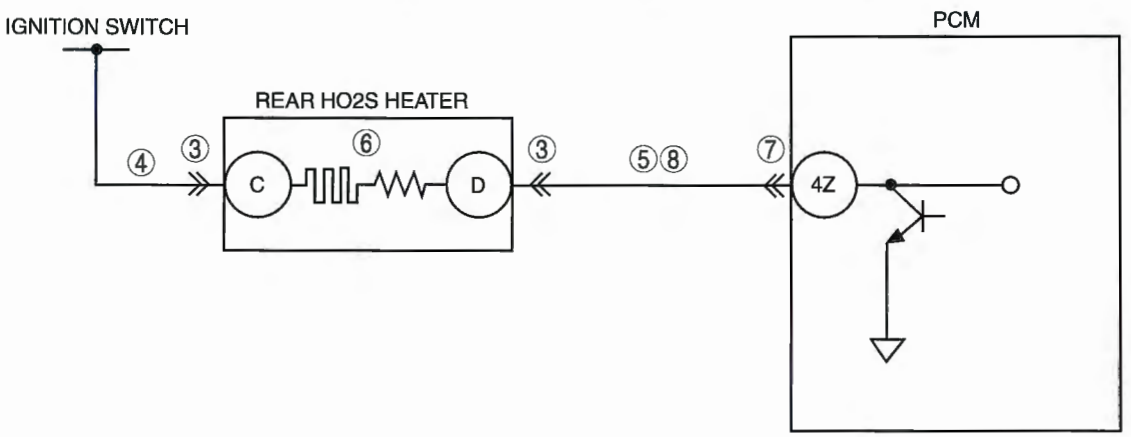
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 7.
		No	Go to the next step.
5	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 7. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0037 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

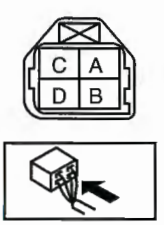
DTC P0038 [L3 WITH TC]

E6U010200001W23

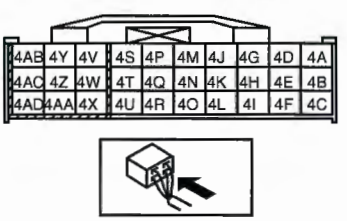
DTC P0038	Rear HO2S heater circuit high input
DETECTION CONDITION	• The PCM monitors the rear HO2S heater output voltage. If the PCM turns the rear HO2S heater off but the rear HO2S heater circuit voltage remains high the PCM determines that the rear HO2S heater circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S heater malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between rear HO2S terminal D and PCM terminal 4Z • PCM malfunction



REAR HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT REAR HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the rear HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT REAR HO2S HEATER POWER CIRCUIT FOR OPEN CIRCUIT OR SHORT TO GROUND** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between rear HO2S terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit or short to ground, then go to Step 9.
5	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT REAR HO2S HEATER** • Inspect the rear HO2S heater. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the rear HO2S, then go to Step 9. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT REAR HO2S HEATER CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between rear HO2S terminal D (wiring harness-side) and PCM terminal 4Z (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0038 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0069 [L3 WITH TC]

E6U010200001W24

DTC P0069	Manifold absolute pressure/atmospheric pressure correlation
DETECTION CONDITION	• PCM monitors differences between intake manifold vacuum and atmospheric pressure. If the difference is **below –12 kPa {–90 mmHg, –3.5 inHg}** or **above 12 kPa {90 mmHg, 3.5 inHg}** when the following conditions are met, the PCM determines that there is a MAP sensor performance problem. **MONITORING CONDITION** — **12—15 s** from when ignition switch is turned off. — Intake air temperature is **above -10°C {14°F}**. — Engine coolant temperature is **above 70°C {158°F}**. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction or substandard performance • BARO sensor malfunction or substandard performance

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC** • Turn the ignition switch to off then start the engine. • Have DTC P0107, P0108, P2228 or P2229 been stored?	Yes	Inspect and repair DTC P0107, P0108, P2228 or P2229.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0069 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA.
5	**INSPECT MAP SENSOR STUCK OPEN OR CLOSED** • Inspect MAP sensor. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC].) • Is the MAP sensor normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to step 7. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
6	**INSPECT BARO SENSOR** • Inspect the BARO sensor. (See 01–40B–34 BAROMETRIC PRESSURE (BARO) SENSOR INSPECTION [L3 WITH TC].) • Is the BARO sensor normal?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
7	**VERIFY TROUBLESHOOTING OF DTC P0069 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0089 [L3 WITH TC]

E6U010200001W25

DTC P0089	Fuel pressure regulator performance
DETECTION CONDITION	• If the fuel pressure average value measured by the PCM exceeds the specification when the camshaft is rotating at a specified rate, the PCM determines that there is a fuel pressure regulator performance problem. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Connector or terminal malfunction • PCM malfunction

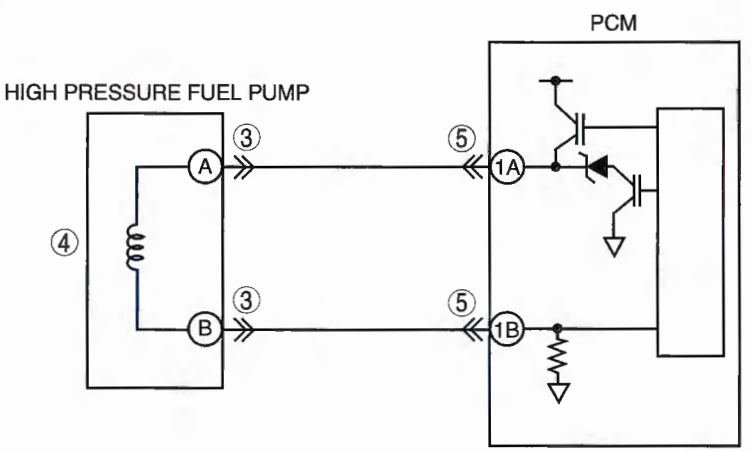
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 6.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See 01–14B–20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the high pressure fuel pump, then go to Step 6. (See 01–14B–18 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0089 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

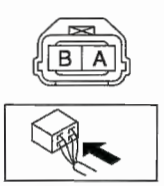
DTC P0091 [L3 WITH TC]

E6U010200001W26

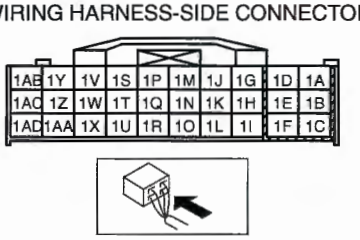
DTC P0091	Fuel pressure regulator control circuit low
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve off but the spill valve control solenoid valve control circuit voltage is low, the PCM determines that the spill valve control solenoid valve control circuit has malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed is **3,000 rpm or less**. • Battery voltage is **10 V or more**. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Open circuit in the wiring harness between high pressure fuel pump terminal A and PCM terminal 1A • Open circuit in the wiring harness between high pressure fuel pump terminal B and PCM terminal 1B • Short to ground in the wiring harness between high pressure fuel pump terminal A and PCM terminal 1A • Short to ground in the wiring harness between high pressure fuel pump terminal B and PCM terminal 1B • Connector or terminal malfunction • PCM malfunction



HIGH PRESSURE FUEL PUMP WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



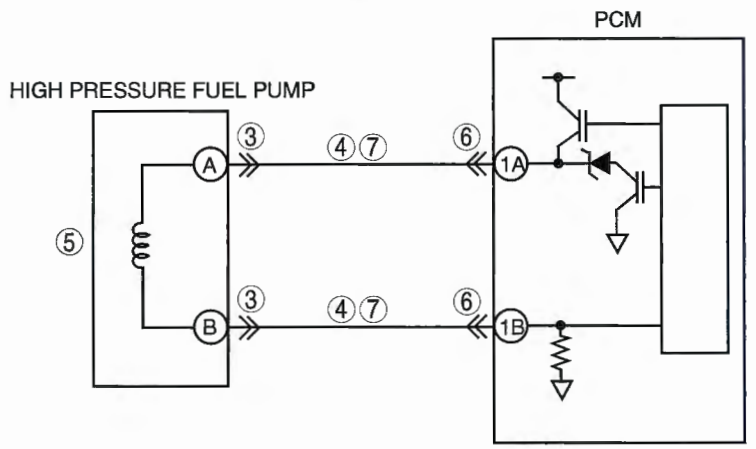
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See 01–14B–20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction.	Yes	Replace the high pressure fuel pump, then go to Step 7. (See 01–14B–18 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and body ground — High pressure fuel pump terminal B (wiring harness-side) and body ground • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a possible short to the power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0091 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

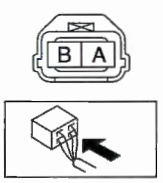
DTC P0092 [L3 WITH TC]

E6U010200001W27

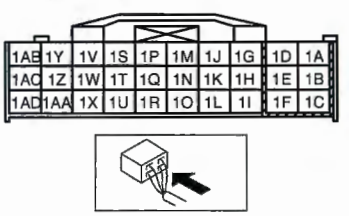
DTC P0092	Fuel pressure regulator control circuit high
DETECTION CONDITION	• When the PCM turns the spill valve control solenoid valve on but the spill valve control solenoid valve circui* voltage is high, the PCM determines that the spill valve control solenoid valve control circuit has malfunction. **MONITORING CONDITIONS** — The following conditions are met: • Engine speed is **3,000 rpm or less.** • Battery voltage is **10 V or more.** **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spill valve control solenoid valve malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between high pressure fuel pump terminal B and PCM terminal 1B • PCM malfunction



HIGH PRESSURE FUEL PUMP WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

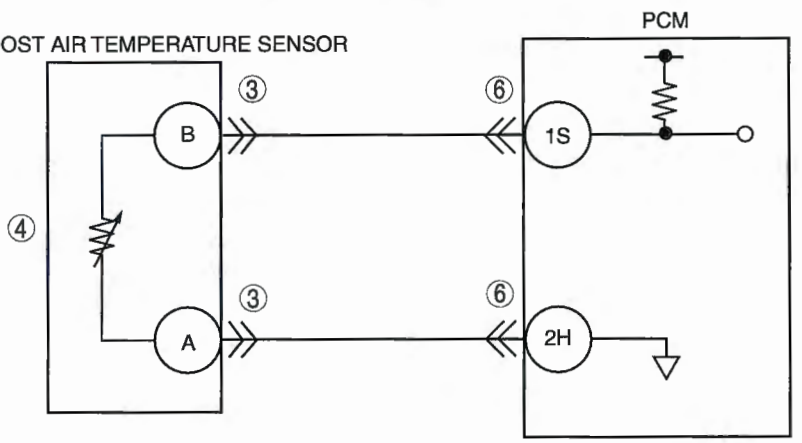
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT HIGH PRESSURE FUEL PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the high pressure fuel pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and body ground — High pressure fuel pump terminal B (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE** • Inspect the spill valve control solenoid valve. (See 01–14B–20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Is there any malfunction.	Yes	Replace the high pressure fuel pump, then go to Step 8. (See 01–14B–18 HIGH PRESSURE FUEL PUMP REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT SPILL VALVE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — High pressure fuel pump terminal A (wiring harness-side) and PCM terminal 1A (wiring harness-side) — High pressure fuel pump terminal B (wiring harness-side) and PCM terminal 1B (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0092 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0096 [L3 WITH TC]

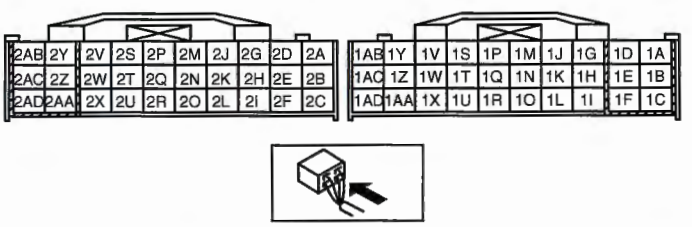
E6U010200001W28

DTC P0096	Boost air temperature sensor circuit range/performance problem
DETECTION CONDITION	• If the intake air temperature is higher than the engine coolant temperature by **23 °C {41.4 °F}** for **1.2 s** with the ignition switch turn to the ON position*, the PCM determines that there is a boost air temperature sensor circuit range/performance problem. *: Ignition switch on when **6 h or more** has passed since the ignition switch was turned off **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction



MAP/BOOST AIR TEMPERATURE SENSOR WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR



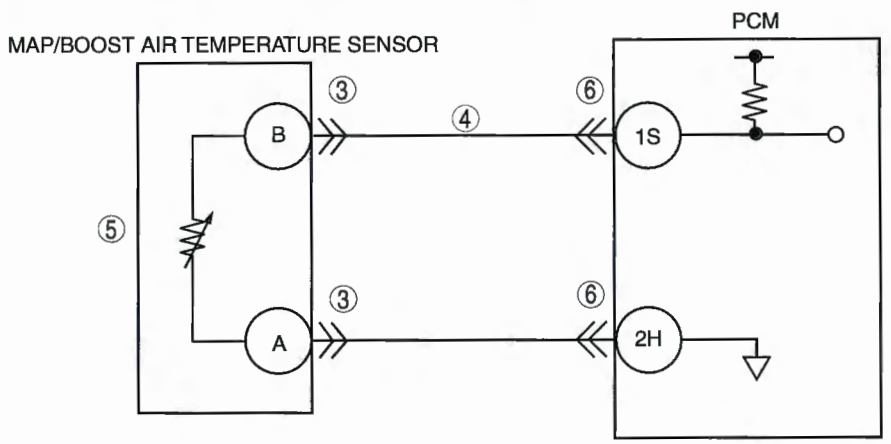
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor. (See 01–40B–32 BOOST AIR TEMPERATURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 7. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 7. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0096 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and run it under the FREEZE FRAME DATA condition. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0097 [L3 WITH TC]

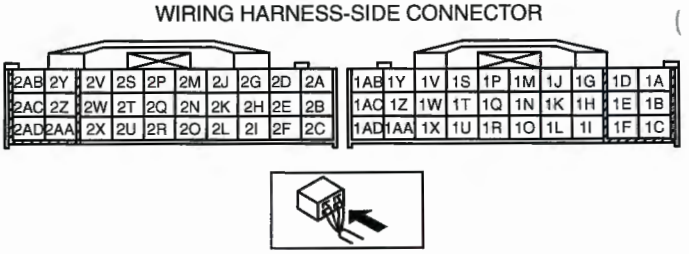
E6U010200001W29

DTC P0097	Boost air temperature sensor circuit low
DETECTION CONDITION	• If the PCM detects that the boost air temperature sensor voltage is **0.1 V or less**, the PCM determines that the boost air temperature sensor circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • Short to ground circuit between MAP/boost air temperature sensor terminal B and PCM terminal 1S • Connector or terminal malfunction • PCM malfunction



MAP/BOOST AIR TEMPERATURE SENSOR WIRING HARNESS-SIDE CONNECTOR

PCM WIRING HARNESS-SIDE CONNECTOR



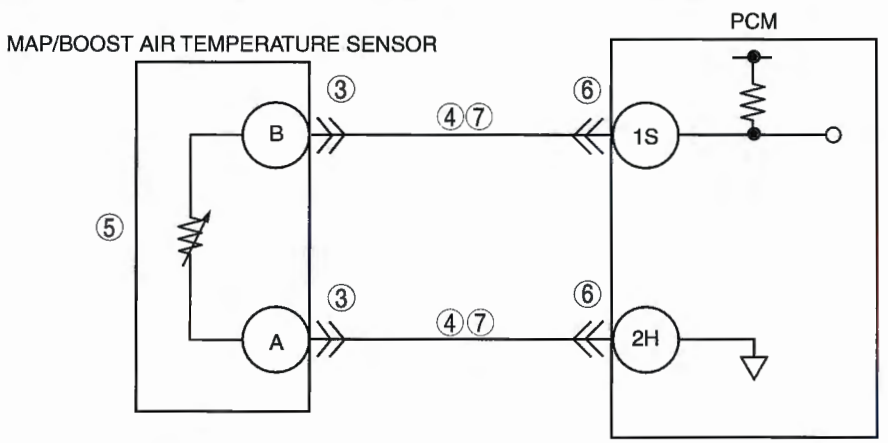
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT BOOST AIR TEMPERATURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the MAP/boost air temperature sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor. (See 01–40B–32 BOOST AIR TEMPERATURE SENSOR INSPECTION [L3 WITH TC].) • Is there malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 7. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0097 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

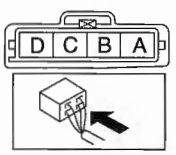
DTC P0098 [L3 WITH TC]

E6U010200001W30

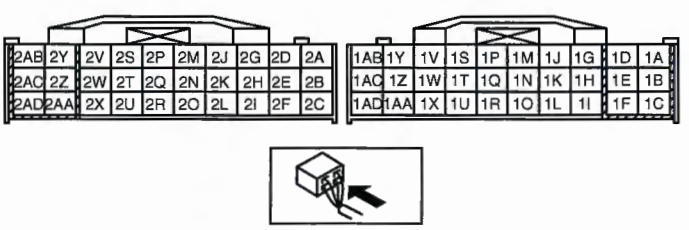
DTC P0098	Boost air temperature sensor circuit high
DETECTION CONDITION	• If the PCM detects that the boost air temperature sensor voltage is **4.96 V or more**, the PCM determines that the boost air temperature sensor circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Boost air temperature sensor malfunction • Open circuit between MAP/boost air temperature sensor terminal A and PCM terminal 2H • Open circuit between MAP/boost air temperature sensor terminal B and PCM terminal 1S • Short to the power circuit between MAP/boost air temperature sensor terminal A and PCM terminal 2H • Short to the power circuit between MAP/boost air temperature sensor terminal B and PCM terminal 1S • Connector or terminal malfunction • PCM malfunction



MAP/BOOST AIR TEMPERATURE SENSOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAP/boost air temperature sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals: — MAP/boost air temperature sensor terminal B (wiring harness-side) and body ground — MAP/boost air temperature sensor terminal A (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 8.
		No	Go to the next step.
5	**INSPECT BOOST AIR TEMPERATURE SENSOR** • Inspect the boost air temperature sensor connector. (See 01–40B–32 BOOST AIR TEMPERATURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the MAP/boost air temperature sensor, then go to Step 8. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR/BOOST AIR TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT MAP/BOOST AIR TEMPERATURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Measure the voltage between the following terminals: — MAP/boost air temperature sensor terminal B (wiring harness-side) and PCM terminal 1S (wiring harness-side) — MAP/boost air temperature sensor terminal A (wiring harness-side) and PCM terminal 2H (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0098 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0101 [L3 WITH TC]

E6U010200100W33

DTC P0101	MAF circuit range/performance problem
DETECTION CONDITION	• PCM monitors the mass intake air flow amount when the engine is running. — If the mass intake air amount is **above 71.8 l/s** for **6 s** and engine speed is **below 2,000 rpm** with the engine running, the PCM determines that detected mass intake air flow amount is too high. — If the mass intake air flow amount is **below 9.7—87.3 l/s** (The value depends on engine speed.) for **6 s** and the engine speed is **above 1,000 rpm** with engine running and the throttle opening angle is **above 50%**, the PCM determines that the detected mass intake air flow amount is too low. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Electrical corrosion in MAF RETURN circuit • Voltage drops in the ground circuit

Diagnostic procedure

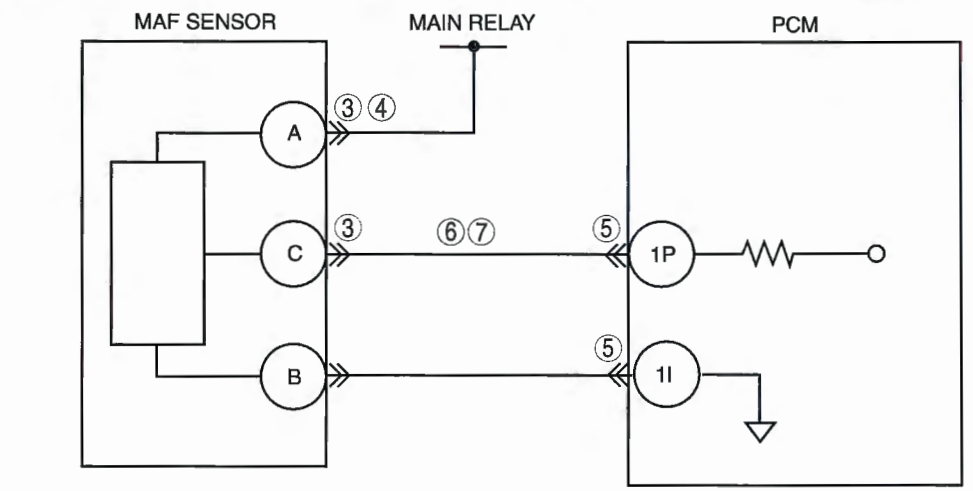
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS IS CONCERN INTERMITTENT OR CONSTANT** • Connect the WDS or equivalent to DLC-2. • Start the engine. • Access the ECT, MAF, TP and RPM PIDs using the WDS or equivalent. • Warm-up the engine until the ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more**. **Caution** • **While driving, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC])
4	**CHECK MAF SENSOR TERMINALS FOR ELECTRICAL CORROSION** • Turn the ignition switch off. • Disconnect the MAF sensor connector. • Check for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is any problem corrosion found?	Yes	Repair or the replace suspected terminal or MAF sensor, then go to Step 6.
		No	Go to the next step.

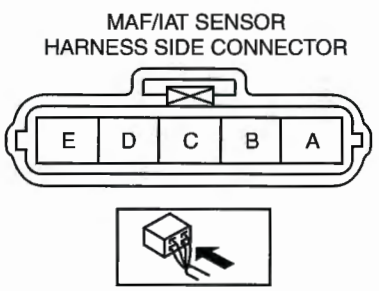
STEP	INSPECTION		ACTION
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Check for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0101 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Warm-up engine until ECT PID is **above 70°C {158°F}**. • Idle engine for **5 s or more.** **Caution** • **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.** • Drive the vehicle under the following two conditions: **Condition 1** — TP PID: **50—87.5%** — RPM PID: **above 1,000 rpm** — 4th gear **Condition 2** — TP PID: **above 80%** — RPM PID: **below 2,000 rpm** — gear in • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC]) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC])
		No	Troubleshooting completed.

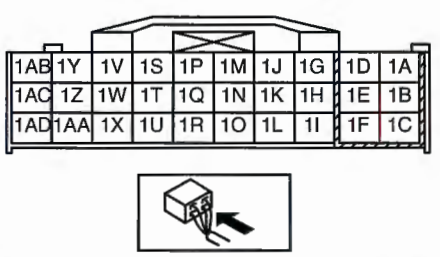
DTC P0102 [L3 WITH TC]

E6U010200100W34

DTC P0102	MAF circuit low input
DETECTION CONDITION	• PCM monitors input voltage from the MAF sensor when engine is running. If the input voltage is **below 0.2 V**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1P • Open circuit in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1P • Open circuit in the wiring harness between main relay and MAF/IAT sensor terminal A







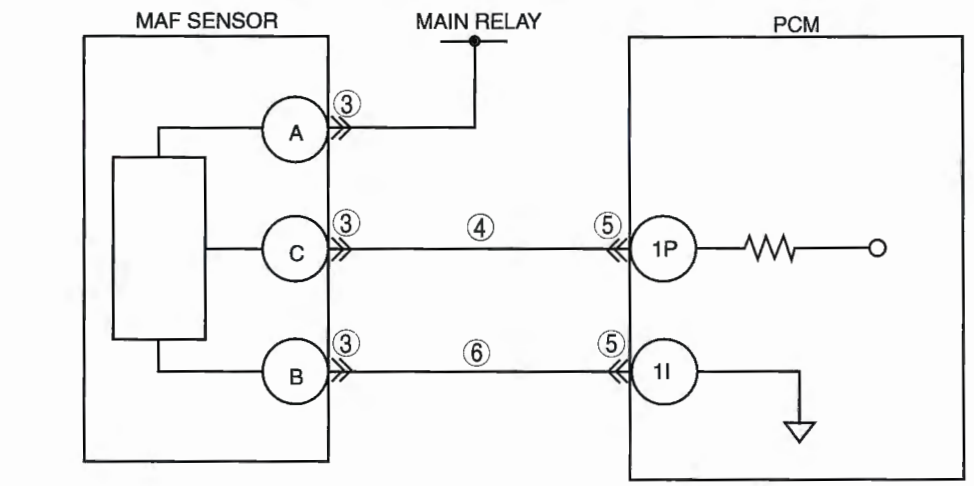
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 8.
		No	Go to the next step.
4	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Inspect voltage at MAF/IAT sensor terminal A (harness-side). • Is voltage **B+**?	Yes	Go to the next step.
		No	Inspect for an open circuit in the wiring harness between MAF/IAT sensor terminal A (harness-side) and the main relay. Repair or replace the wiring harness, then go to Step 8.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal C (harness-side) and PCM terminal 1P (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or the replace suspected wiring harness, then go to Step 8.
7	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between the MAF/IAT sensor terminal C (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected harness, then go to the next step.
		No	Replace the MAF/IAT sensor, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

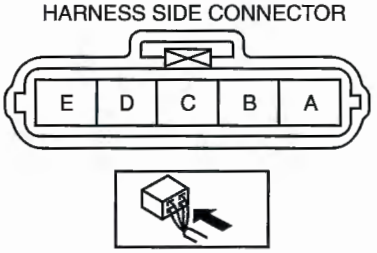
DTC P0103 [L3 WITH TC]

E6U010200100W59

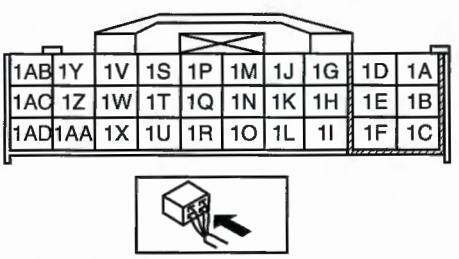
DTC P0103	MAF circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from the MAF sensor when the engine is running. If the input voltage is **above 4.9 V**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between MAF/IAT sensor terminal C and PCM terminal 1P • Open circuit in the wiring harness between MAF/IAT sensor terminal B and PCM terminal 1I



MAF/IAT SENSOR
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR



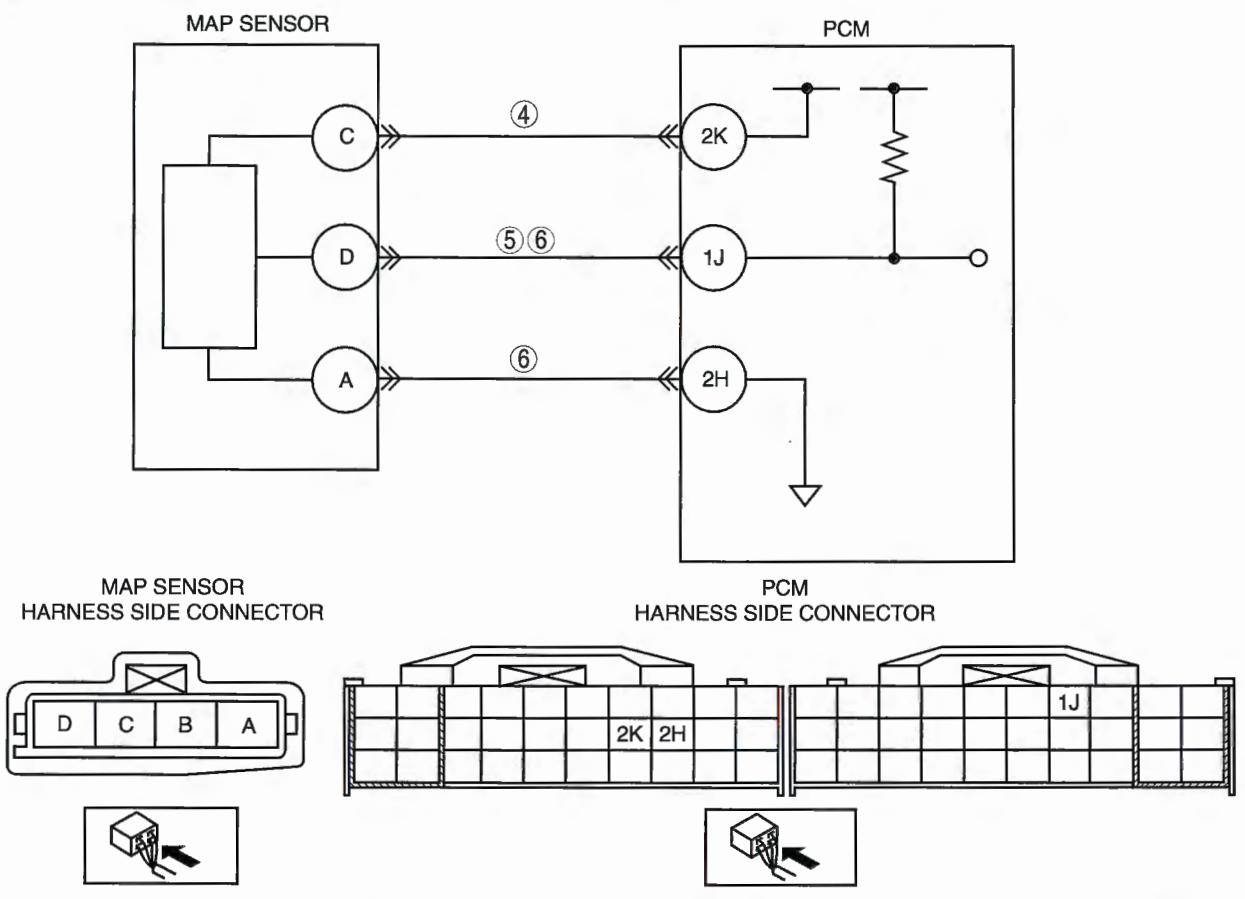
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace terminals, then go to Step 7.
		No	Go to the next step.
4	**INSPECT MAF SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure voltage between MAF/IAT sensor terminal C (harness-side) and body ground. • Is voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with the PCM connector connected. • Inspect for continuity between MAF/IAT sensor terminal B (harness-side) and PCM terminal 1I. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0107 [L3 WITH TC]

E6U010200100W36

DTC P0107	MAP sensor circuit low input
DETECTION CONDITION	• PCM monitors input voltage from the MAP sensor when the intake air temperature is **above –10 °C {14 °F}**. If the input voltage is **below 0.10 V**, the PCM determines that the MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between MAP sensor terminal D and PCM terminal 1J • Open circuit in the wiring harness between MAP sensor terminal C and PCM terminal 2K • MAP sensor signal circuit and MAP sensor ground circuit are shorted to each other. • PCM malfunction



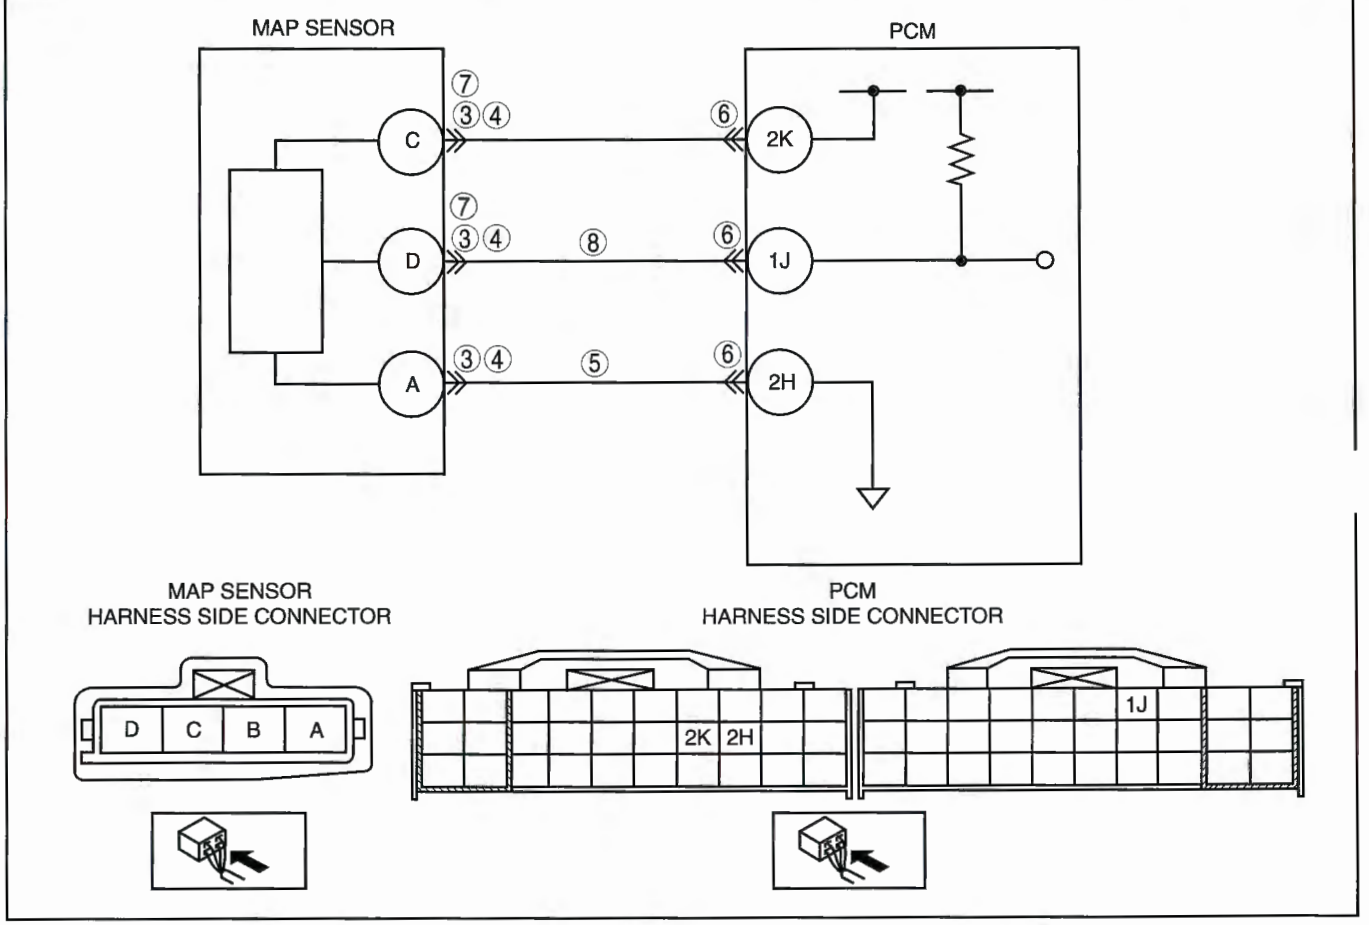
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Recorded FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY MAP PID WHEN MAP SENSOR CONNECTOR IS DISCONNECTED** • Disconnect the MAP sensor connector. • Is the voltage **above 4.9 V?**	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT MAP SENSOR CONNECTOR** **Note** • If DTC P0122 and P2228 are also retrieved with P0107, go to the CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure voltage between MAP sensor terminal C (harness-side) and body ground. • Is the voltage **within 4.5—5.5 V?**	Yes	Check for a poor connection of MAP sensor terminal C (harness-side). • Repair or replace the terminal if necessary. • If normal, replace the MAP sensor. Then go to Step 7.
		No	Check for an open circuit between PCM terminal 2K (harness-side) and MAP sensor terminal C (harness-side). Repair or replace the suspected wiring harness, then go to Step 7.
5	**INSPECT MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAP sensor terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MAP SENSOR SIGNAL AND GROUND CIRCUIT FOR SHORT EACH OTHER** • Check for continuity between MAP sensor terminals D and A (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0108 [L3 WITH TC]

E6U010200100W37

DTC P0108	MAP sensor circuit high input
DETECTION CONDITION	• PCM monitors input voltage from the MAP sensor when the intake air temperature is **above –10 °C {14 °F}** If the input voltage is **above 4.9 V**, the PCM determines that MAP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• MAP sensor malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between MAP sensor terminal A and PCM terminal 2H • Open circuit in the wiring harness between MAP sensor terminal D and PCM terminal 1J • MAP sensor signal circuit short to the constant voltage supply circuit • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONNECTION OF MAP SENSOR CONNECTOR** • Turn the ignition switch off. • Verify that the MAP sensor connector is connected securely. • Is the connection normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 9.
4	**INSPECT MAP SENSOR CONNECTOR FOR POOR CONNECTION** • Disconnect the MAP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 9.
		No	Go to the next step.
5	**VERIFY MAP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAP sensor terminal A (harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Inspect for an open circuit between PCM terminal 2H (harness-side) and MAP sensor terminal A (harness-side). Repair or replace the suspected wiring harness, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between MAP sensor terminal D and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
8	**VERIFY MAP SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAP sensor terminal D (harness-side) and PCM terminal 1J (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to applicable inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0111 [L3 WITH TC]

E6U010200100W38

DTC P0111	IAT circuit performance problem
DETECTION CONDITION	• If the intake air temperature is higher than the engine coolant temperature by **18 °C {32.4 °F}** for **1.2 s** with the ignition switch turn in the ON position*, the PCM determines that there is an IAT sensor circuit range/performance problem. *: Ignition switch is in the ON position when **6 h or more** have passed since the ignition switch was turned off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at MAF/IAT sensor or PCM connector • PCM malfunction

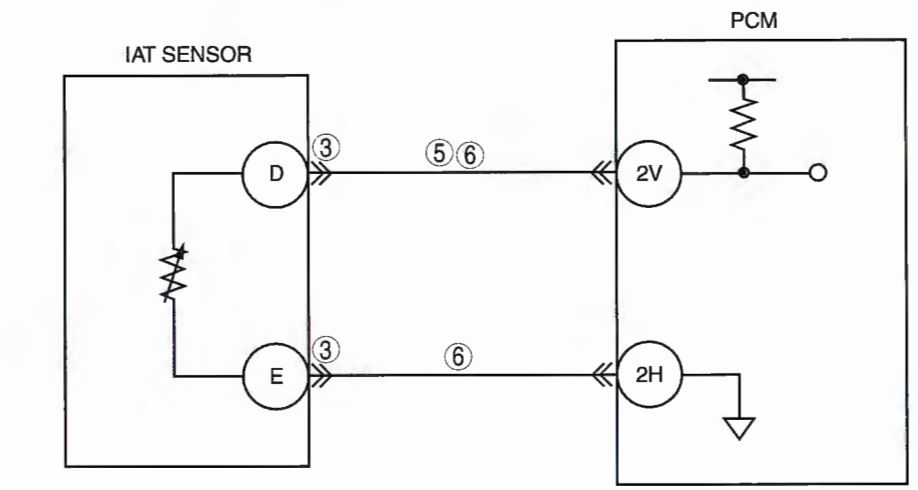
Diagnostic procedure

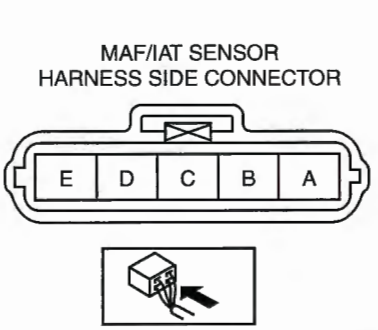
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See 01–40B–33 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [L3 WITH TC].) • Is IAT sensor normal?	Yes	Replace MAF/IAT sensor, then go to Step 6.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0111 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and run the engine under the FREEZE FRAME DATA condition. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

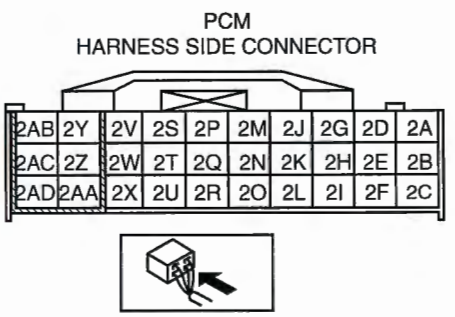
DTC P0112 [L3 WITH TC]

E6U010200100W39

DTC P0112	IAT circuit low input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detects on IAT sensor voltage **below 0.06 V**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Poor connection at the MAF/IAT sensor or PCM connector • Short to ground between MAF/IAT sensor terminal D and PCM terminal 2V • Short to each harness IAT signal circuit and IAT ground circuit. • PCM malfunction







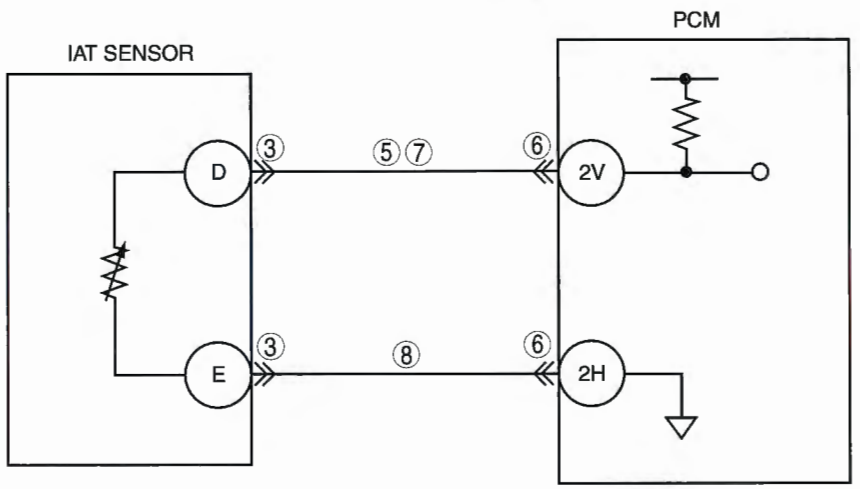
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR TERMINAL** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for bent terminal of MAF/IAT sensor terminals D and E (part-side). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect the WDS or equivalent to DLC-2. • Access the IAT PID. • Verify the IAT value when disconnecting the MAF/IAT sensor connector. • Does the IAT value change?	Yes	Replace the MAF/IAT sensor, then go to Step 7.
		No	Go to the next step.
5	**INSPECT IAT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for continuity between MAF/IAT sensor terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT IAT CIRCUITS FOR SHORT** • Inspect for continuity between MAF/IAT sensor terminals D and E (harness-side). • Is there continuity?	Yes	Repair or the replace harness for a short, then go to Step 7
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

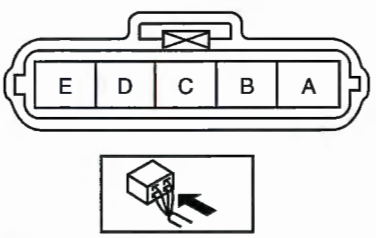
DTC P0113 [L3 WITH TC]

E6U010200100W40

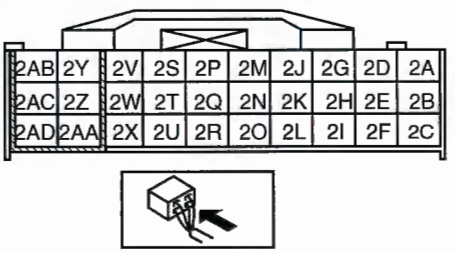
DTC P0113	IAT circuit high input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal. If the PCM detected IAT sensor voltage **above 4.9 V**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Open circuit between MAF/IAT sensor terminal D and PCM terminal 2V • Short to the power supply between MAF/IAT sensor terminal D and PCM terminal 2V • Open circuit between MAF/IAT sensor terminal E and PCM terminal 2H • Poor connection at the MAF/IAT sensor or the PCM connector.



MAF/IAT SENSOR
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR



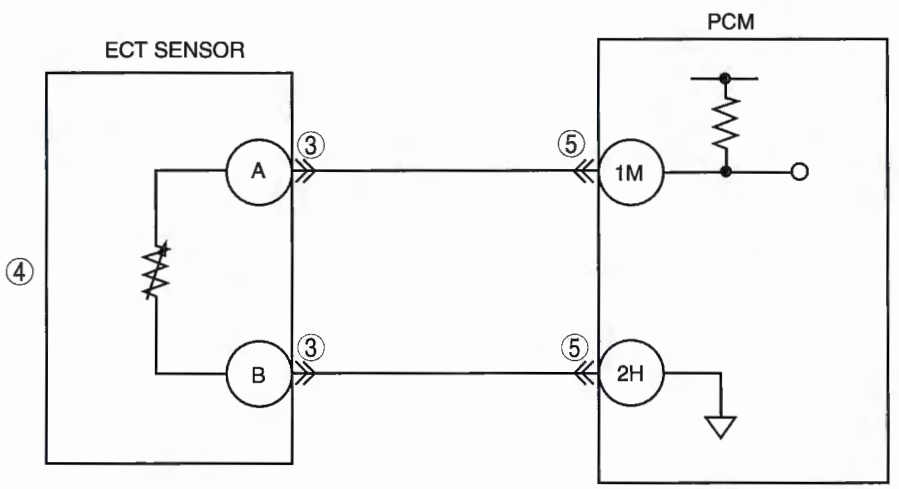
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY IAT SENSOR MALFUNCTION OR HARNESS MALFUNCTION** • Connect the WDS or equivalent to the DLC-2. • Access the IAT PID. • Connect a jumper wire between MAF/IAT sensor terminals D and E (harness-side). • Verify the IAT value. • Is the voltage **below 4.9 V**?	Yes	Replace the MAF/IAT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between MAF/IAT sensor terminal D (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or the wiring replace harness for a short to the power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect PCM terminals 2V and 2H (harness-side) for tightness using a feeler tool. • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal D (harness-side) and PCM terminal 2V (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT IAT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between MAF/IAT sensor terminal E (harness-side) and PCM terminal 2H (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wi ring harness for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0113 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

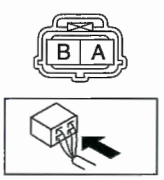
DTC P0116 [L3 WITH TC]

E6U010200100W41

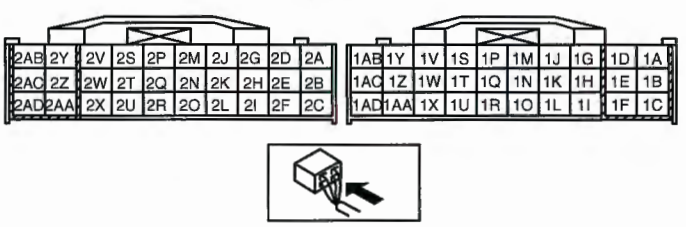
DTC P0116	ECT circuit range/performance problem
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and **5 min** have been passed after leaving the vehicle **6 h or more**. If the difference between the maximum and the minimum values of the engine coolant temperature is **below 6°C {10.8°F}**, the PCM determines that there is an ECT circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction



ECT SENSOR
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



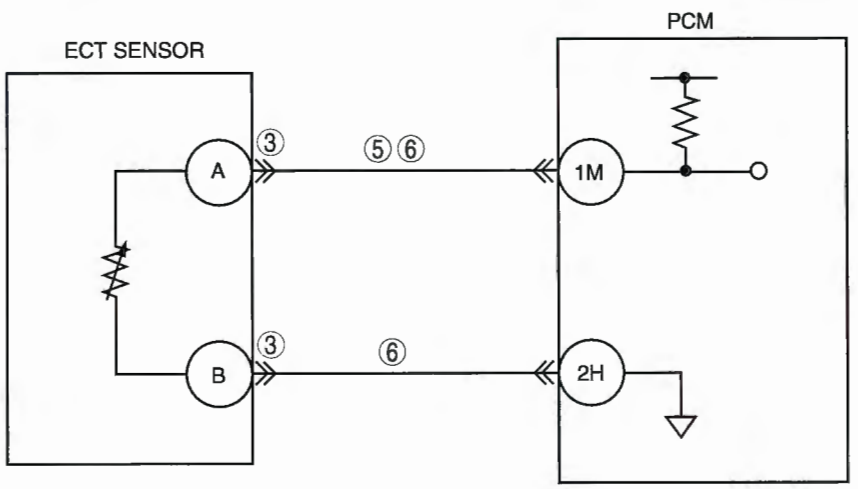
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to ne, then go next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 6. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0116 COMPLETED** • Leave vehicle for **8 h.** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and wait for **5 min.** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WIT TC].)
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC]) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC])
		No	DTC troubleshooting completed.

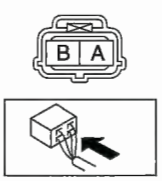
DTC P0117 [L3 WITH TC]

E6U010200100W42

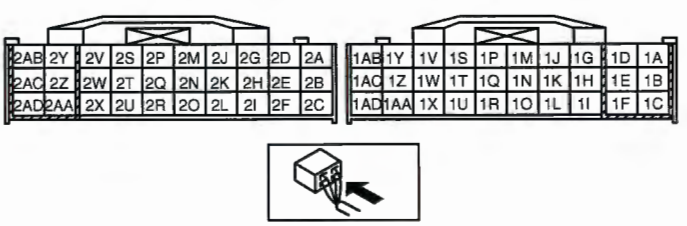
DTC P0117	ECT sensor circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage **below 0.2 V**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Short to ground in the wiring harness between ECT sensor terminal A and PCM connector terminal 1M • Short to each wiring harness in ECT signal circuit and ECT ground circuit • PCM malfunction



ECT SENSOR
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



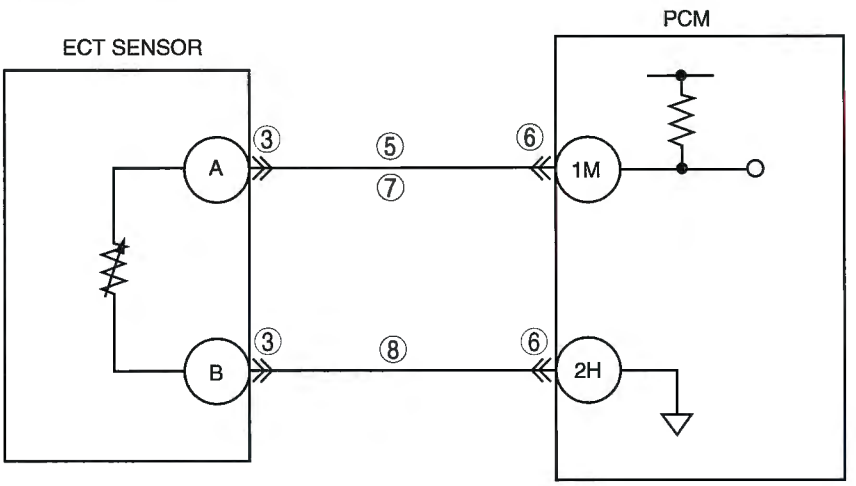
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR BENT TERMINALS** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect ECT sensor terminals A and B (part-side) for bending. • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the WDS or equivalent to DLC-2. • Access the ECT PID. • Verify the ECT value when disconnecting the ECT sensor connector. • Does the ECT value change?	Yes	Replace the ECT sensor, then go to Step 7. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT ECT SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between ECT sensor terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
6	**INSPECT ECT CIRCUIT FOR SHORT TO WIRING HARNESSES** • Inspect for continuity between ECT sensor terminal A and B (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a short, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0117 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

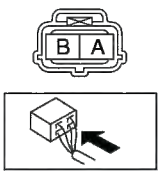
DTC P0118 [L3 WITH TC]

E6U010200100W43

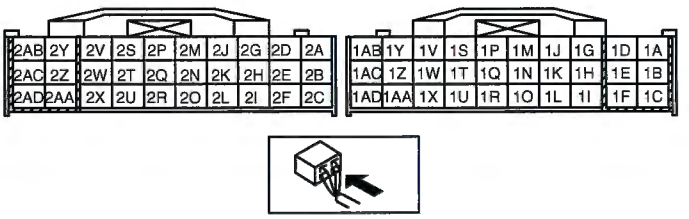
DTC P0118	ECT sensor circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal. If the PCM detects the ECT sensor voltage is **above 4.6 V**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connect or terminal malfunction • Open circuit in the wiring harness between ECT sensor terminal A and PCM terminal 1M • Short to power supply in the wiring harness between ECT sensor terminal A and PCM terminal 1M • Open circuit in the wiring harness between ECT sensor terminal B and PCM terminal 2H • PCM malfunction



ECT SENSOR
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



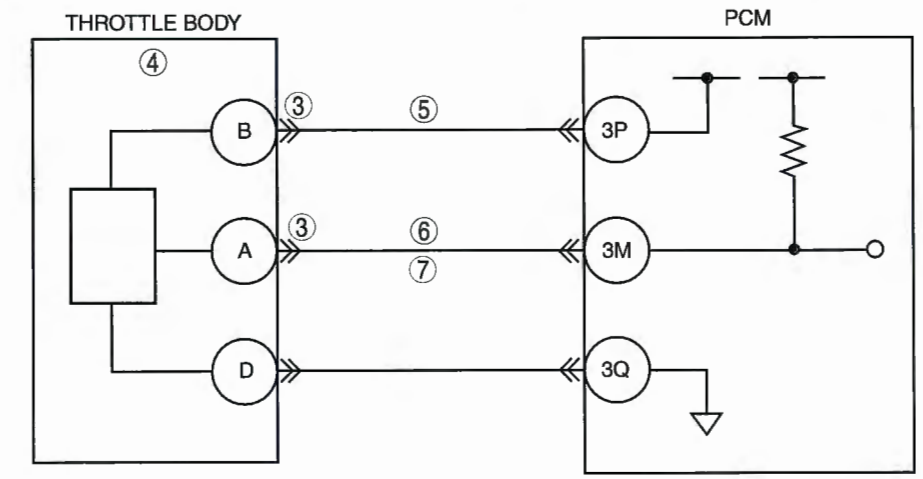
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT POOR CONNECTION OF ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**CLASSIFY ECT SENSOR MALFUNCTION OR WIRING HARNESS MALFUNCTION** • Connect the WDS or equivalent to the DLC-2. • Access the ECT PID. • Connect a jumper wire between ECT sensor terminals A and B. • Verify the ECT value. • Is the voltage **4.6 V or below**?	Yes	Replace the ECT sensor, then go to Step 9.
		No	Go to the next step.
5	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between ECT sensor terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect the continuity between ECT sensor terminal A (wiring harness-side) and PCM terminal 1M. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT ECT SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between ECT sensor terminal B (wiring harness-side) and PCM terminal 2H. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

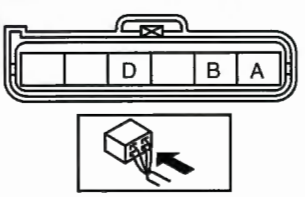
DTC P0122 [L3 WITH TC]

E6U010200100W44

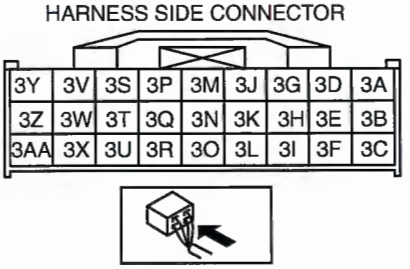
DTC P0122	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage is **below 0.2 V** after the ignition switch is turned to the ON position, the PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Short to ground between throttle body terminal A and PCM terminal 3M • Open circuit between throttle body terminal B and PCM terminal 3P



THROTTLE BODY
HARNESS SIDE CONNECTOR



PCM
HARNESS SIDE CONNECTOR



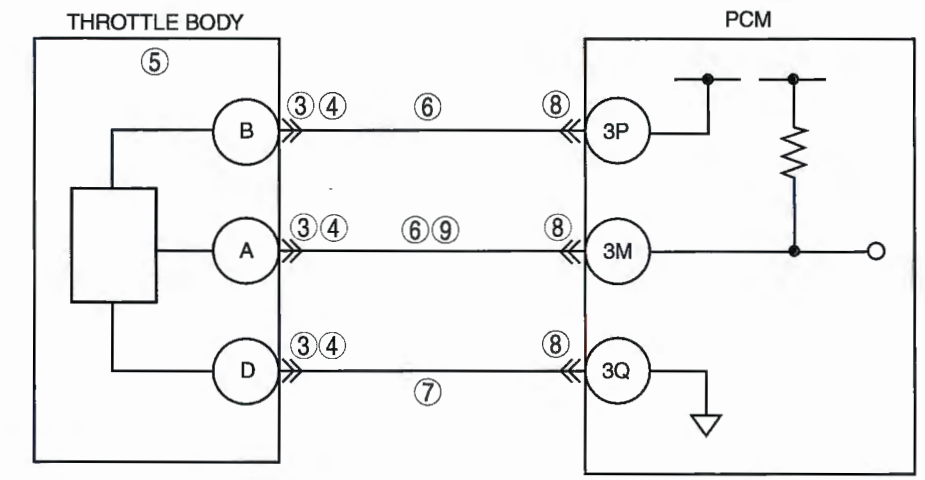
Diagnostic procedure

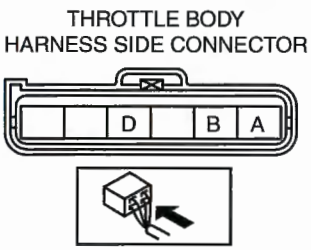
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect the WDS or equivalent. • Access the TP1 PID. • Disconnect the throttle body connector. • Connect a jumper wire between throttle body terminals A and B (harness-side). • Is the voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is the TP sensor normal?	Yes	Inspect for poor throttle body connector terminal B connection. Repair or replace if necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure the voltage at throttle body terminal B (harness-side). • Is the voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace for an open circuit between throttle body connector terminal B (harness-side) and PCM connector terminal 3N (harness-side). Then, then go to Step 8.
6	**VERIFY TP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal A (harness-side) and PCM terminal 3M (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected harness, then go to Step 8.
7	**VERIFY TP1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between throttle body terminal A (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

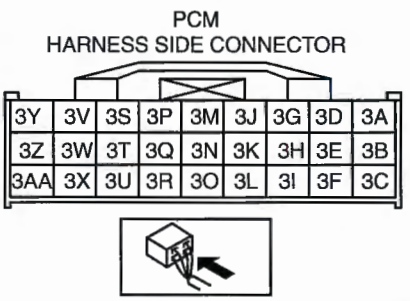
DTC P0123 [L3 WITH TC]

E6U010200100W45

DTC P0123	TP sensor No.1 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.1 voltage is **above 4.9 V** after ignition switch to the ON position, PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal B and PCM terminal 3P • Open circuit between throttle body terminal D and PCM terminal 3Q • Short to the constant voltage supply circuit between throttle body terminal A and PCM terminal 3M







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT THROTTLE BODY CONNECTION FOR POOR CONNECTION** • Disconnect throttle body connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected wiring terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC]) • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 10.
6	**INSPECT TP1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal A (harness-side) and body ground. • Is the voltage **above 4.9 V**?	Yes	Repair or replace for short to a power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between throttle body connector terminal B (harness-side) and PCM connector terminal 3P. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace for an open circuit between TP sensor connector terminal B (harness-side) and PCM connector terminal 3P (harness-side). Then, go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to Step 10.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between throttle body terminals A and B (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0125 [L3 WITH TC]

E6U010200100W46

DTC P0125	Excessive time to enter closed loop fuel control
DETECTION CONDITION	• The PCM monitors the ECT sensor signal after the engine is started while the engine is cold. If the engine coolant temperature does not reach the expected temperature for a specified period, the PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start closed-loop fuel control. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Cooling system malfunction • Poor connection of connectors • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform the repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS: IS CONCERN INTERMITTENT OR CONSTANT** • Start the engine. • Warm up the engine completely. • Access the ECT PID using the WDS or equivalent. • Is the ECT PID **above 60 °C {140 °F}**?	Yes	Intermittent concern exists. Go to the INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01–40B–30 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the ECT sensor, then go to Step 7.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion.) • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0125 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to the ON position (Engine off). • Access the ECT PID using the WDS or equivalent. • Wait until ECT PID **below 8 °C {46 °F}**. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0126, P0128 [L3 WITH TC]

E6U010200100W47

DTC P0126 DTC P0128	**Coolant thermostat stuck open**
DETECTION CONDITION	**DTC P0126** • If the ECT signal never exceeds **71 °C {160 °F}** after engine is started for a specified period, the PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10 °C {14 °F}** — Vehicle speed: **over 6.0 km/h {3.7 mph}** **DTC P0128** • PCM monitors MAF, IAT, VSS and ECT signals and calculate radiator's heat the radiation ratio when the following monitoring conditions are met. If the calculated value exceeds the threshold, the PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **above –10°C {14 °F}** — ECT at engine start: **Below 36 °C {97 °F}** — Difference between ECT at engine start and minimum IAT: **Below 6 °C {10.8 °F}** — Vehicle speed: **over 30 km/h {18.6 mph}** **Diagnostic support note** • This is an intermittent monitor (Engine cooling system). • MIL illuminates if PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• ECT sensor malfunction • Coolant thermostat malfunction • PCM malfunction

Diagnostic procedure

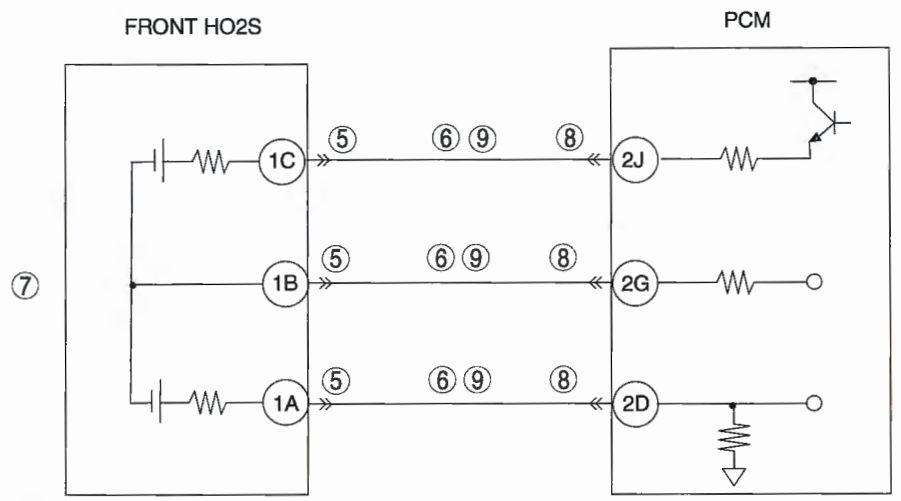
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Repair the circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT IF COOLANT THERMOSTAT IS STUCK OPEN** • Perform the coolant thermostat inspection. (See 01–12B–7 THERMOSTAT INSPECTION [L3 WITH TC].) • Is the coolant thermostat normal?	Yes	Inspect the ECT sensor. Replace the ECT sensor if necessary, then go to the next step.
		No	Replace the coolant thermostat, then go to the next step.
5	**VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION** • Make sure to reconnect all disconnected connectors. • Cool down the engine. **Note** • If the temperature difference between the inside and outside of the workshop, the PCM might not operate the thermostat monitor. Therefore, it is recommended to cool down the engine outside of the workshop. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Access the ECT, IAT PIDs and make sure that each value is within the following specifications. — ECT: **below 36 °C {97 °F}** (for P0128 only) — Difference between the ECT and IAT: **Below 6 °C {43°F}** • Is there any PID that is out of specification?	Yes	Take corrective action (e.g. cool down engine), then repeat this step.
		No	Go to the next step for DTC P0126 or go to Step 7 for DTC P0128.

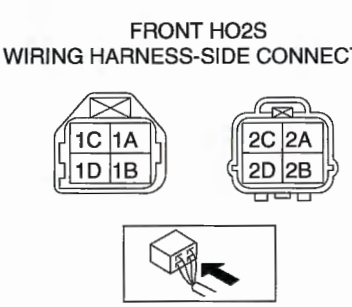
STEP	INSPECTION		ACTION
6	**VERIFY TROUBLESHOOTING OF DTC P0126 COMPLETED** • Start the engine and turn off the E/L and A/C. • Access the DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST #10: E1: 81 (ECT). **Note** • This test requires actual driving. A chassis roller cannot be used for this test. • During the test drive, constant speed should be maintained, although 2 or 3 stops during every **5 minutes** of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is **–10 °C {14 °F}**, monitoring period is **20 minutes** and if ECT is **30 °C {86 °F}**, monitoring period is **8 minutes**) • Verify TEST #10: E1: 81 (ECT) value. • Is the value above the minimum value?	Yes	Go to Step 8.
		No	Replace PCM, then go to Step 8. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
7	**VERIFY TROUBLESHOOTING OF DTC P0128 COMPLETED** • Start the engine and turn off the E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST #10: E1: 80 (Heat radiation ratio) or #10: E1: 81 (ECT). **Note** • This test requires actual driving. A chassis roller cannot be used for this test. • During the test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Verify TEST #10: E1: 80 (Heat radiation ratio) and #10: E1: 81 (ECT) value. • Is value of TEST #10: E1: 80 (Heat radiation ratio) below the maximum the value and value of TEST #10: E1: 81 (ECT) above the minimum value?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

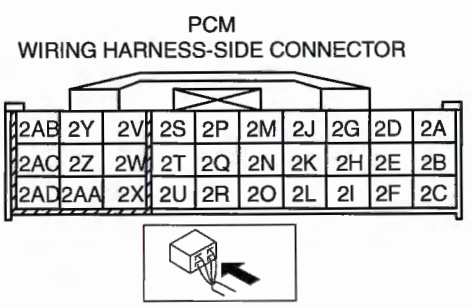
DTC P0131 [L3 WITH TC]

E6U010200100W48

DTC P0131	Front HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage is **above 1.0 V** for **25 s**, the PCM determines that the front HO2S circuit voltage is low. **Diagnostic support note** • This is a continuance monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between front HO2S terminal 1C and PCM terminal 2J • Short to ground in the wiring harness between front HO2S terminal 1C and PCM terminal 2J • Open circuit in the wiring harness between front HO2S terminal 1B and PCM terminal 2G • Short to ground in the wiring harness between front HO2S terminal 1B and PCM terminal 2G • Short to ground in the wiring harness between front HO2S terminal 1A and PCM terminal 2D • PCM malfunction







Diagnostic procedure

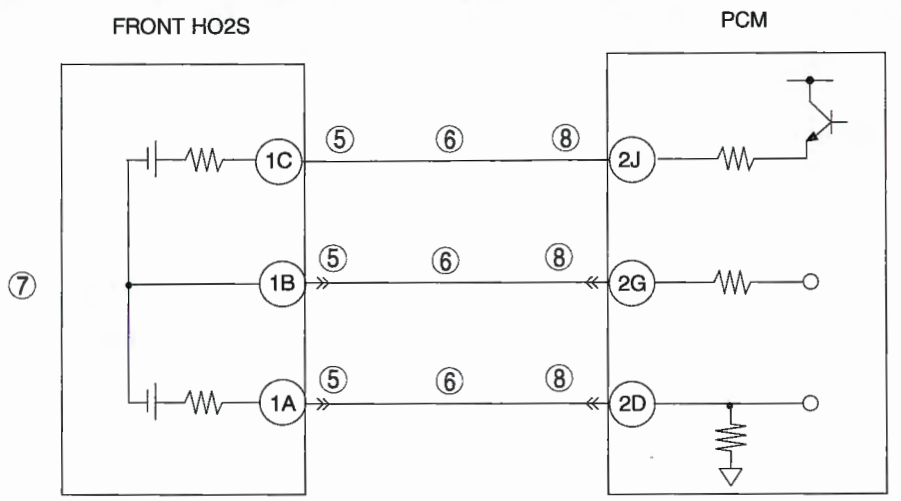
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0131 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 10. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following circuits: — Front HO2S terminal 1B (wiring harness-side) and PCM terminal 2G (wiring harness-side) — Front HO2S terminal 1C (wiring harness-side) and PCM terminal 2J (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0131 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

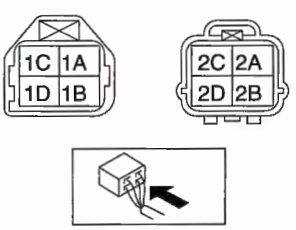
DTC P0132 [L3 WITH TC]

E6U010200100W49

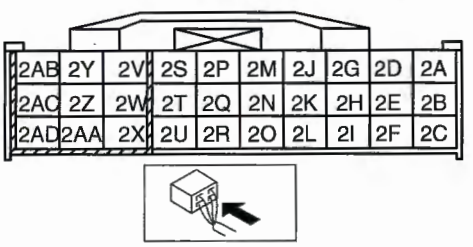
DTC P0132	Front HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the front HO2S when the engine is running. If the input voltage i **less than 1.0 V** for **2 s**, the PCM determines that the front HO2S circuit voltage is high. **Diagnostic support note** • This is a continuance monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between front HO2S terminal 1C and PCM terminal 2J • Short to the power supply in the wiring harness between front HO2S terminal 1B and PCM terminal 2G • Short to the power supply in the wiring harness between front HO2S terminal 1A and PCM terminal 2D • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0132 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — Front HO2S terminal 1A (wiring harness-side) and body ground — Front HO2S terminal 1B (wiring harness-side) and body ground — Front HO2S terminal 1C (wiring harness-side) and body ground • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to the power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 9. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0132 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0133 [L3 WITH TC]

E6U010200100W50

DTC P0133	Front HO2S circuit slow response
DETECTION CONDITION	• An oxygen sensor malfunction can be detected by measuring the average frequency of the oxygen sensor signal, time required to pass from rich to lean, and the time required to pass from lean to rich. • The average frequency of the oxygen sensor signal is more than the threshold value. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode — The following conditions are met: • Front HO2S heater monitor is completed. • ECT sensor and front HO2S heater are normal • Engine speed: **1,750—3,500 rpm**. • Charging efficiency: **35—63%** (at engine speed of **2500 rpm**) • Fuel system loop status is closed loop fuel control. • Engine coolant temperature **above 70 °C {158 °F}** **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S malfunction • Front HO2S looseness • Fuel pressure sensor malfunction • Clogged or restricted fuel line • Fuel leakage in the fuel line between the fuel delivery pipe and the fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection purge solenoid hose • Insufficient compression • Engine malfunction (Engine coolant leakage)

Diagnostic procedure

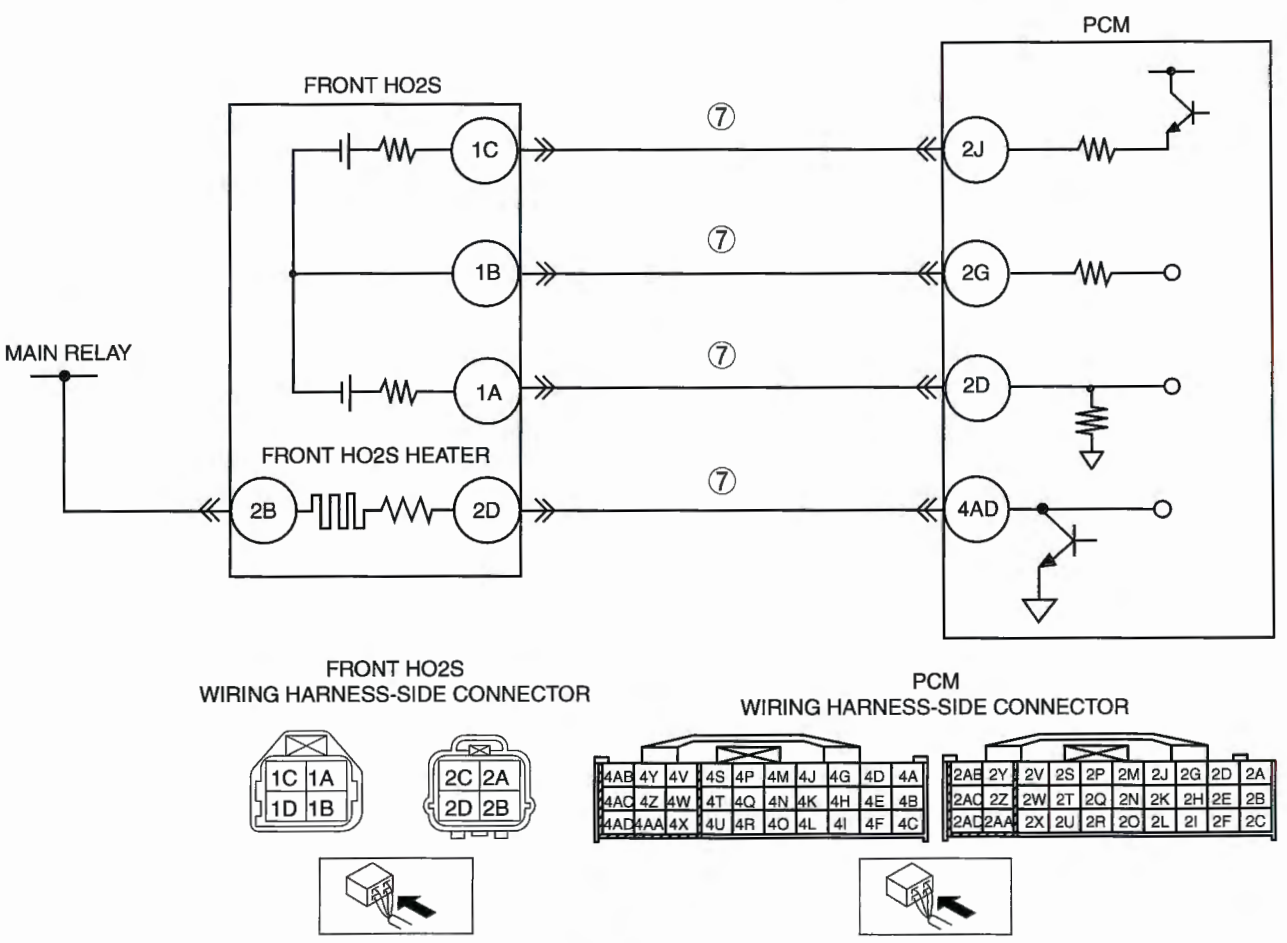
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the pending or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 14.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0133 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S11 PID using the WDS or equivalent. • Inspect the PID under the following accelerator pedal conditions in NEUTRAL. • Is the PID normal? — Less than 1mA when the accelerator pedal is suddenly depressed (rich condition). — More than 1mA just after accelerator pedal is released (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the front HO2S installed securely?	Yes	Go to the next step.
		No	Retighten the front HO2S, then go to Step 14.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if any gas leakage is found between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning exhaust part, then go to Step 14.
		No	Replace sensor, then go to Step 14.
8	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor the FUEL PRES PID. • Is the FUEL PRES PID value within the specification? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 13.
		No	Go to the next step.
9	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 11.
10	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 14.
11	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Retest Step 14.
		No	Go to the next step.
12	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump. Then go to Step 14.
13	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION". (See 01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0133 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0134 [L3 WITH TC]

E6U010200100W51

DTC P0134	Front HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the HO2S when the following conditions are met. If under the following monitoring conditions, the input voltage **more than 3.22 V**, the PCM determines that the front HO2S is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — The following conditions are met • Front HO2S heater is tuned on for **above 30 s** • Battery voltage: **10—18 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S deterioration • Front HO2S heater malfunction • Leakage exhaust system • Open or short circuit in the wiring harness between front HO2S terminal 2D and PCM terminal 4AD • Open or short circuit in the wiring harness between front HO2S terminal 1C and PCM terminal 2J • Open or short circuit in the wiring harness between front HO2S terminal 1B and PCM terminal 2G • Open or short circuit in the wiring harness between front HO2S terminal 1A and PCM terminal 2D • Insufficient compression • Engine malfunction



Diagnostic procedure

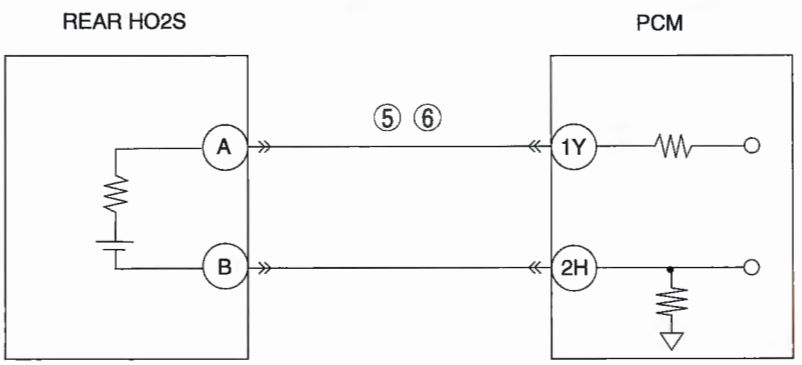
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If fuel monitor, DTC P0132 is retrieved, ignore it until P0134 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the WDS or equivalent. • Is the DTC P2237 or P2251 also present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S11 PID using the WDS or equivalent. • Verify the PID while racing engine in NEUTRAL. • Is the PID normal? — **–1.0—1.0 A** when idle — **More than 0.25 mA** just after releasing the of accelerator pedal is released (lean condition)	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF FRONT HO2S** • Inspect if the front HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install the sensor securely, then go to Step 10.
7	**INSPECT EXHAUST SYSTEM FOR GAS LEAKAGE** • Visually inspect if there is any gas leakage between the exhaust manifold and front HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following wiring harnesses at the wiring harness-side connector terminals for an open circuit, repair or the replace wiring harness if necessary. — Front HO2S terminal 1A and PCM terminal 2D — Front HO2S terminal 1B and PCM terminal 2G — Front HO2S terminal 1C and PCM terminal 2J — Front HO2S terminal 2D and PCM terminal 4AD • If all the items above are normal, replace the malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See 01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform the engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0134 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode and the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

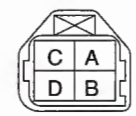
DTC P0137 [L3 WITH TC]

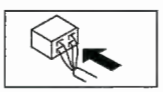
E6U010200100W52

DTC P0137	Rear HO2S circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S. If the input voltage from the rear HO2S sensor is below **0.1 V** for **41.6 s**, the PCM determines that the circuit input is low. **MONITORING CONDITIONS** — HO2S,HO2S heater and TWC repair verification drive mode. — The following conditions are met. • Engine speed is above **1,500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • Fuel injector control in rear HO2S is in closed loop control. • The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not exceed **0.1 V** through the short term fuel trim is controlled up to **20.5%** for **9.6 s**, the PCM determines that the sensor circuit input is low. **MONITORING CONDITIONS** — HO2S,HO2S heater and TWC repair verification drive mode. — The following conditions are met for **more than 20.8 s**. • Engine speed is **more than 1,500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. **Diagnostic support note** • This is an intermittent monitor. (HO2S) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Open circuit or short to ground in wiring between rear HO2S terminal A and PCM terminal 1Y • PCM malfunction

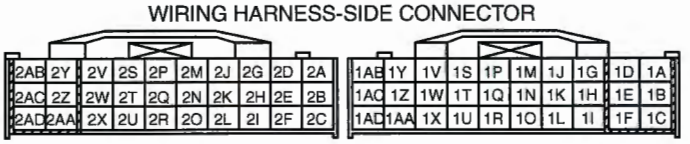


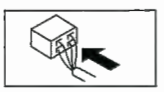
REAR HO2S
WIRING HARNESS-SIDE CONNECTOR





PCM
WIRING HARNESS-SIDE CONNECTOR





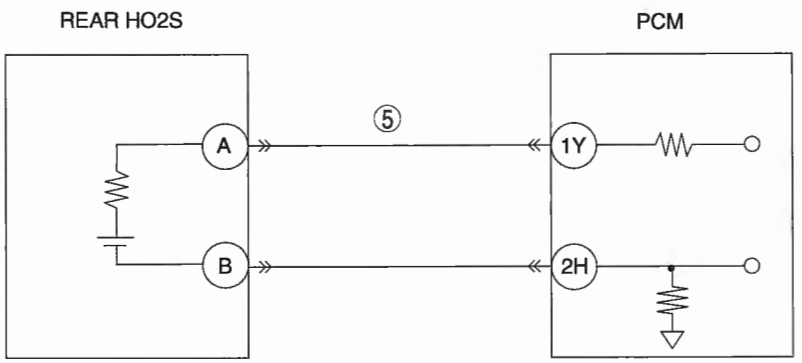
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting procedure. (See01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0137 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting for the DTC on the FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT HARNESS** • Turn the ignition switch off. • Disconnect rear HO2S and PCM connectors. • Verify the continuity between rear HO2S sensor terminal A (wiring harness side) and body ground. • Is there continuity?	Yes	Repair for a short to ground circuit, then go to Step 7.
		No	Go to the next step.
6	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT REAR HO2S** • Rear HO2S connector disconnected. • Verify the continuity between rear HO2S sensor terminal A (part side) and body ground. • Is there continuity?	Yes	Replace the rear HO2S then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0137 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

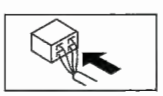
DTC P0138 [L3 WITH TC]

E6U010200100W53

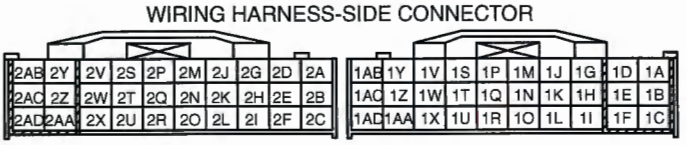
DTC P0138	Rear HO2S circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S. If the input voltage from the rear HO2S sensor is **above 1.2 V** for **0.8 s**, the PCM determines that the circuit input is high. **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S malfunction • Short to power supply in the wiring harness between rear HO2S terminal A and PCM terminal 1Y • Rear HO2S or PCM terminal shorted • PCM malfunction

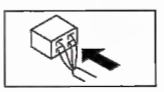


REAR HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related service bulletins and/or repair Information availability. • Is any related Service Information available?	Yes	Perform the repair or diagnosis according to available Service Information. • If vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTC** • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending code or stored DTCs using WDS or equivalent. • Is other DTC present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0138 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect rear HO2S connector. • Turn the ignition switch to the ON position. (Engine off) • Measure the voltage between rear HO2S terminal A (wiring harness-side) and body ground. • Is there any voltage?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Start the engine. • Access the O2S12 PID using the WDS or equivalent. • Verify the PID while racing the engine at least **10 times** in NEUTRAL. • Does the PID stay **above 0.55 V**?	Yes	Replace the sensor, then go to the next step. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Run the PCM adaptive memory procedure drive mode and HO2S heater, HO2S, and TWC repair verification drive mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0139 [L3 WITH TC]

E6U010200100W54

DTC P0139	Rear HO2S circuit problem
DETECTION CONDITION	• The PCM monitors the rich (**0.4 V**) to lean (**0.3 V**) response time of the rear HO2S. The PCM measures the response time when the following conditions are met. The PCM determines that the rear HO2S response deteriorated when the measured response time is more than the threshold value (**130 ms**) five consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — The following conditions are met: • Fuel cut during deceleration • Engine speed is **more than 500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. • HO2S (rear) output voltage is **more than 0.4 V**. • The PCM monitors for a time-out malfunction (when rear HO2S remains above **0.3 V** for longer than a specified period of time during fuel cut control). The PCM measure the amount of time from when the following conditions are met until the rear HO2S output voltage drops **below 0.3 V**. The PCM determines that a HO2S time-out malfunction has occurred when the detected time is more than the threshold value (**6.4 s**) three consecutive times. **MONITORING CONDITIONS** — HO2S heater, HO2S, and TWC Repair Verification Drive Mode or EGR, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode — The following conditions are met: • Fuel cut during deceleration • Engine speed is **more than 500 rpm**. • Engine coolant temperature is **more than 70 °C {158 °F}**. • HO2S (rear) is activated (**more than 0.55 V**). **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • DIAGNOSTIC MONITORING TEST RESULTS is available. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S malfunction • Rear HO2S looseness • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe to fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Improper connection of purge solenoid hoses • Insufficient compression • Engine malfunction (Leakage engine coolant)

Diagnostic procedure

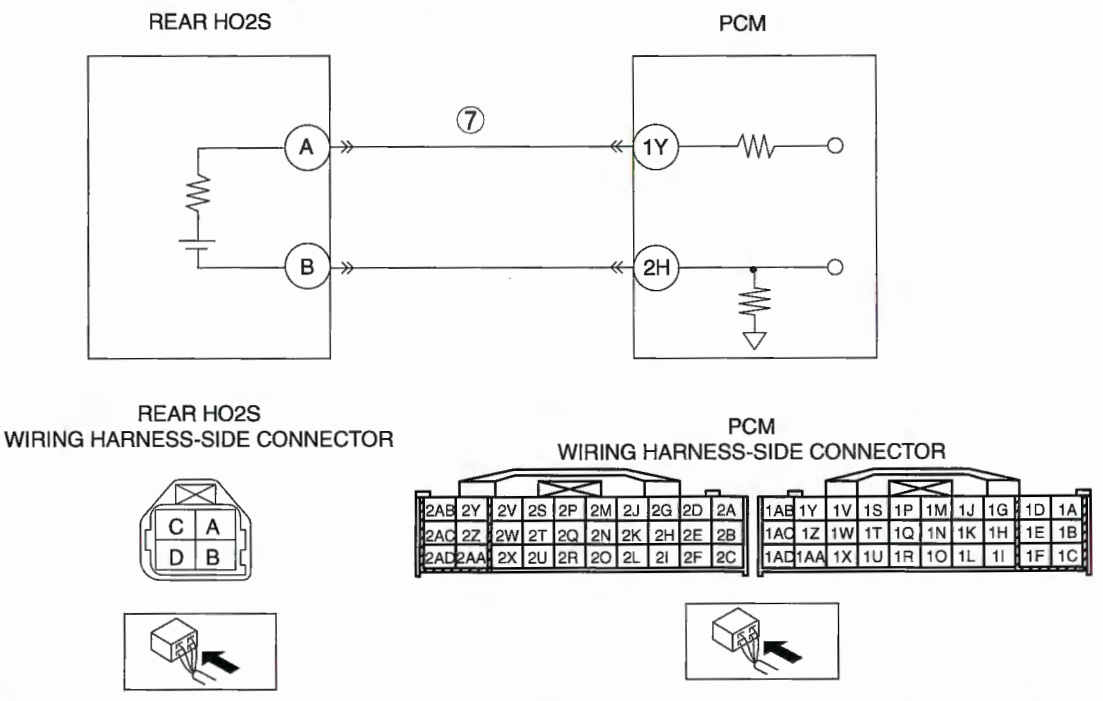
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify pending and /or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to DTC P0443 troubleshooting procedures, then go to Step 13.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S12 PID using the WDS or equivalent. • Inspect the PID under the following accelerator pedal conditions or NEUTRAL. • Is the PID normal? — **More than 0.55 V** the accelerator pedal is suddenly depressed (rich condition). — **Less than 0.55 V** just after accelerator pedal is released (lean condition).	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Inspect if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 13.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually inspect if there is any gas leakage between the exhaust manifold and the rear HO2S. • Is there gas leakage?	Yes	Repair or replace the malfunctioning faulty exhaust part, then go to Step 13.
		No	Replace sensor, then go to Step 13.
8	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 PIDs • Compare it with the FREEZE FRAME DATA recorded at Step 1. • Is it below the FFD value?	Yes	The engine is driven under a rich condition. Go to the next step.
		No	The engine is driven under a lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine is running. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Inspect fuel pump maximum pressure and fuel return pipe for clogging. (See 01–14B–16 FUEL PUMP UNIT INSPECTION [L3 WITH TC].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 13.
10	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine is running. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 12.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect the fuel line for any leakage. • Is there fuel leakage?	Yes	Replace the fuel line, then go to Step 13.
		No	Inspect the fuel filters for the following: • Foreign material or staining inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or staining is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 13.
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0139 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the "PCM Adaptive Memory Produce Drive Mode" and "HO2S heater, HO2S, and TWC Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0140 [L3 WITH TC]

E6U010200100W55

DTC P0140	Rear HO2S no activity detected
DETECTION CONDITION	• The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.55 V** though the short term fuel trim is controlled up to **20.5%** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — The following conditions are met for **above 20.8 s** • Engine speed is **above 1,500 rpm** • Engine coolant temperature is **above 70 °C {158 °F}** • Rear HO2S voltage is **above 0.1V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Rear HO2S deterioration • Rear HO2S heater malfunction • Exhaust system leakage • Open circuit or short to ground in the wiring harness between rear HO2S terminal A and PCM terminal 1Y • Insufficient compression • Engine malfunction



Diagnostic procedure

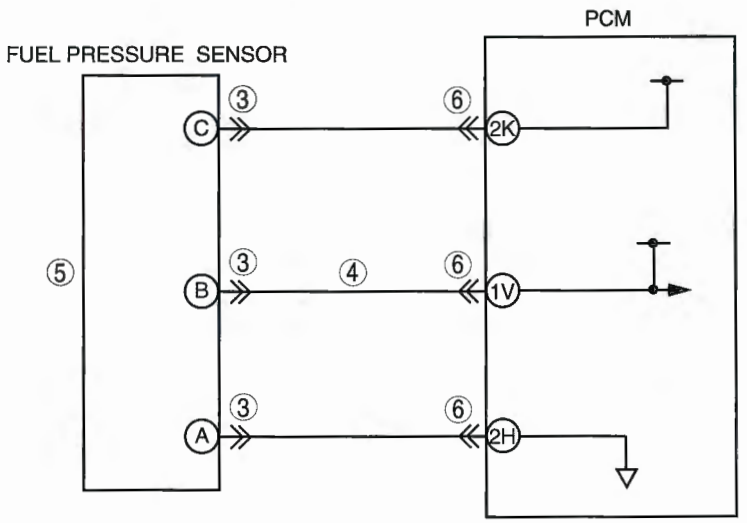
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING AND STORED DTC** **Note** • If the fuel monitor, DTC P0132 is retrieved, ignore it until P0140 is fixed. • Turn the ignition switch off, then to the ON position. (Engine off) • Verify pending and stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0140 on the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for the DTC on the FREEZE FRAME DATA. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S12 or the P0140 PID using the WDS or equivalent. • Verify the PID while racing the engine at least **10 times** in NEUTRAL. • Is the PID reading normal? — **More than 0.55 V** at least once during engine racing	Yes	Go to Step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Check if the rear HO2S is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Install the sensor securely, then go to Step 10.
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between the exhaust pipe and the rear HO2S. • Is there gas leakage?	Yes	Repair or replace any malfunctioning exhaust part, then go to Step 10.
		No	• Inspect the following wiring harnesses for an open or short to the ground circuit, repair or replace the wiring harness if necessary. — Rear HO2S terminal A (wiring harness-side) to PCM terminal 1Y (wiring harness-side) • Repair or replace the wiring harness if necessary. • If all items above are normal, replace the malfunctioning sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform the ENGINE COOLANT LEAKAGE INSPECTION. (See01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is the cooling system hold pressure normal?	Yes	Repair or the replace the malfunctioning part according to the inspection result. Then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0140 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

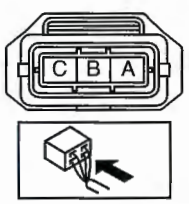
DTC P0192 [L3 WITH TC]

E6U010200100W56

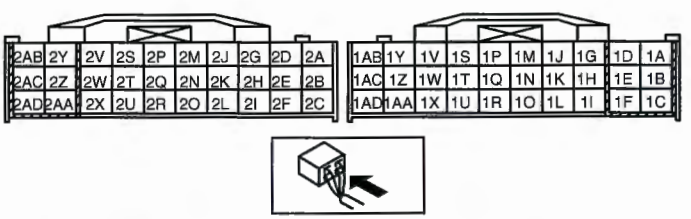
DTC P0192	Fuel rail pressure sensor circuit low input
DETECTION CONDITION	• If the input voltage from the fuel pressure sensor is less than **0.19 V** for **1.3 s**, the PCM determines that th fuel pressure sensor circuit is low. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel pressure sensor malfunction • Short to ground in wiring harness between fuel pressure sensor terminal B and PCM terminal 1V • Connector or terminal malfunction • PCM malfunction



FUEL PRESSURE SENSOR
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



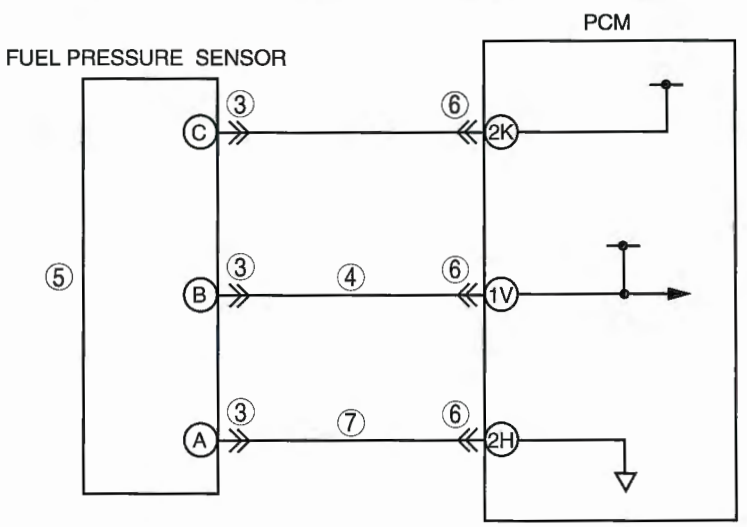
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the fuel pressure sensor terminal B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel pressure sensor, then go to Step 7. (See 01–40B–34 FUEL PRESSURE SENSOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0192 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

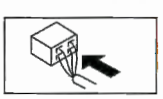
DTC P0193 [L3 WITH TC]

E6U010200100W57

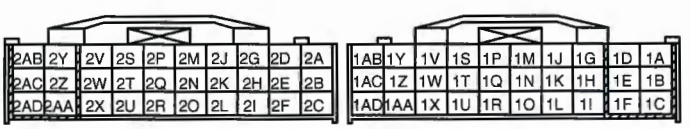
DTC P0193	Fuel rail pressure sensor circuit high input
DETECTION CONDITION	• If the input voltage from the fuel pressure sensor is more than **4.8 V** for **1.3 s**, the PCM determines that the fuel pressure sensor circuit is high. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel pressure sensor malfunction • Open circuit in the wiring harness between fuel pressure sensor terminal A and PCM terminal 2H • Short to power in the wiring harness between fuel pressure sensor terminal B and PCM terminal 1V • Connector or terminal malfunction • PCM malfunction

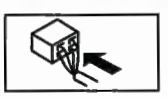


FUEL PRESSURE SENSOR
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR





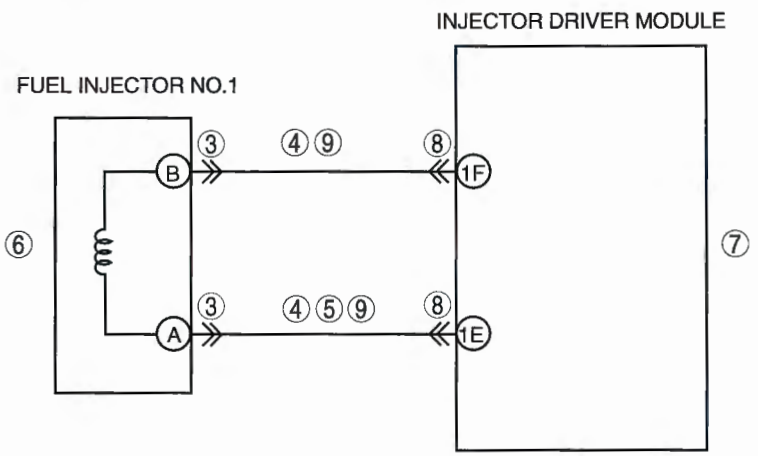
Diagnostic procedure

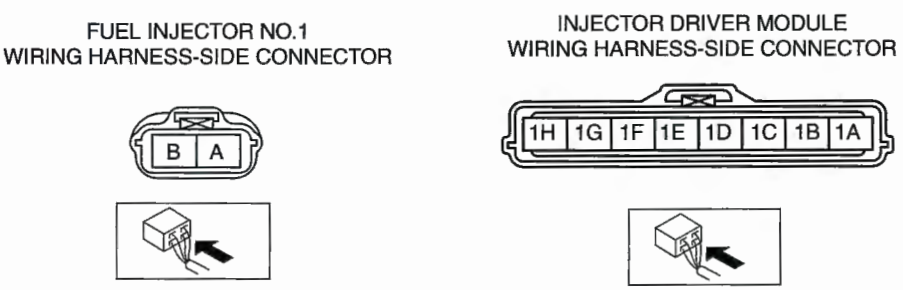
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL PRESSURE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel pressure sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT FUEL PRESSURE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel pressure sensor terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the Step 8.
		No	Go to the next step.
5	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel pressure sensor, then go to Step 8. (See 01–40B–34 FUEL PRESSURE SENSOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FUEL PRESSURE SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the fuel pressure sensor terminal A (wiring harness-side) and PCM terminal 2H (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0193 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0201 [L3 WITH TC]

E6U010200200W03

DTC P0201	Injector circuit/open cylinder No.1
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives the fuel injector No.1, the PCM determines that there is an open circuit in the fuel injector No.1 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.1 malfunction • Injector driver module malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.1 terminal B and injector driver module terminal 1F • Open circuit between fuel injector No.1 terminal A and injector driver module terminal 1E • Short to power supply between fuel injector No.1 terminal A and injector driver module terminal 1E • Short to ground between fuel injector No.1 terminal B and injector driver module terminal 1F • Short to ground between fuel injector No.1 terminal A and injector driver module terminal 1E • PCM malfunction





Diagnostic procedure

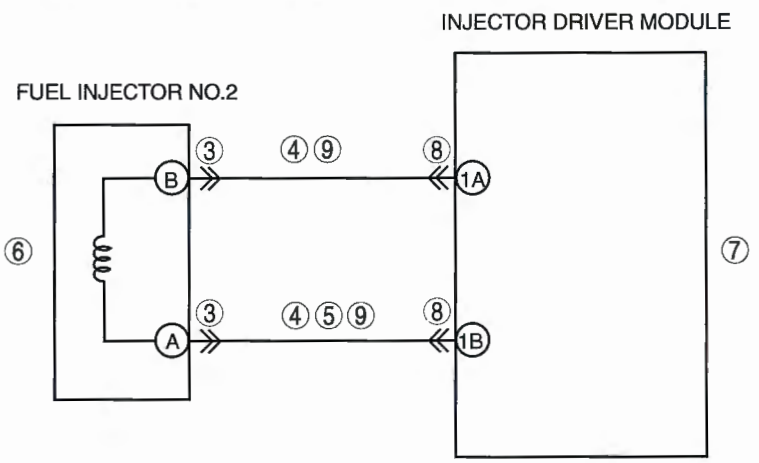
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

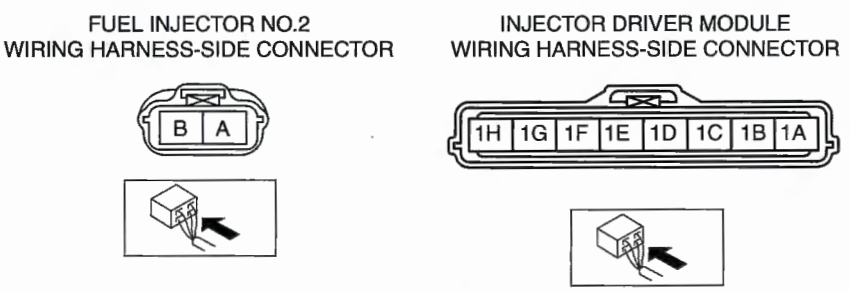
STEP	INSPECTION		ACTION
3	**INSPECT FUEL INJECTOR NO.1 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.1 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.1 terminal B (wiring harness-side) and body ground — Fuel injector No.1 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.1 terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.1** • Inspect the fuel injector No.1. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace fuel injector No.1, then go to Step 10. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there malfunction?	Yes	Replace the injector driver module, then go to Step 10. (See 01–40B–21 INJECTOR DRIVER MODULE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.1 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.1 terminal B (wiring harness-side) and PCM terminal 1F (wiring harness-side) — Fuel injector No.1 terminal A (wiring harness-side) and PCM terminal 1E (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0201 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0202 [L3 WITH TC]

E6U010200200W04

DTC P0202	Injector circuit/open cylinder No.2
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives th fuel injector No.2, the PCM determines that there is an open circuit in the fuel injector No.2 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.2 malfunction • Injector driver module malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.2 terminal B and injector driver module terminal 1A • Open circuit between fuel injector No.2 terminal A and injector driver module terminal 1B • Short to power supply between fuel injector No.2 terminal A and injector driver module terminal 1B • Short to ground between fuel injector No.2 terminal B and injector driver module terminal 1A • Short to ground between fuel injector No.2 terminal A and injector driver module terminal 1B • PCM malfunction





Diagnostic procedure

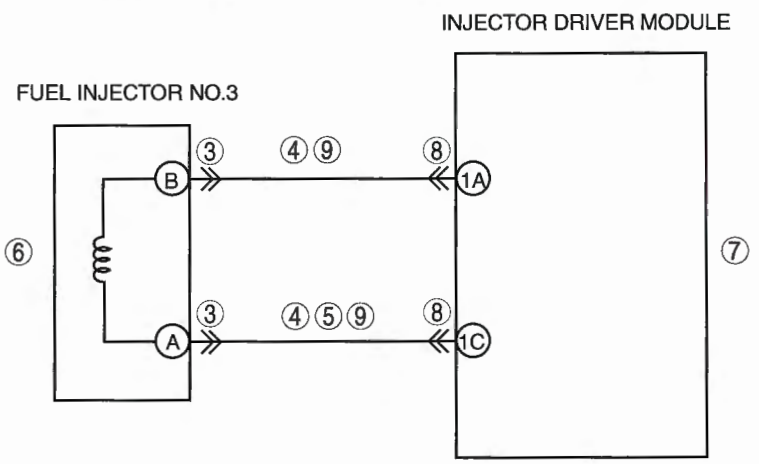
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

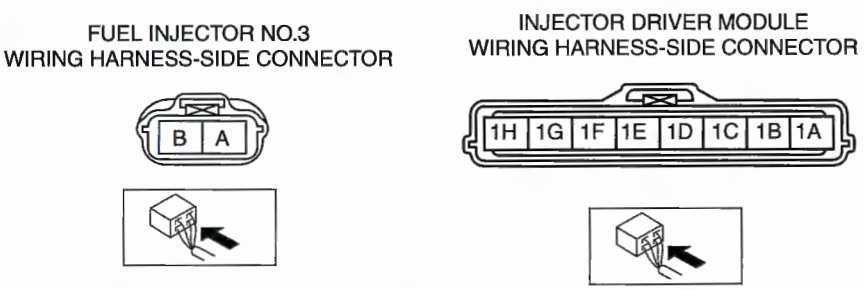
STEP	INSPECTION		ACTION
3	**INSPECT FUEL INJECTOR NO.2 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.2 terminal B (wiring harness-side) and body ground — Fuel injector No.2 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.2 terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.2** • Inspect the fuel injector No.2. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel injector No.2, then go to Step 10. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there malfunction?	Yes	Replace the injector driver module, then go to Step 10. (See 01–40B–21 INJECTOR DRIVER MODULE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.2 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.2 terminal B (wiring harness-side) and PCM terminal 1A (wiring harness-side) — Fuel injector No.2 terminal A (wiring harness-side) and PCM terminal 1B (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0202 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0203 [L3 WITH TC]

E6U010200200W05

DTC P0203	Injector circuit/open cylinder No.3
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives fuel injector No.3, the PCM determines that there is an open circuit in the fuel injector No.3 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.3 malfunction • Injector driver module malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.3 terminal B and injector driver module terminal 1A • Open circuit between fuel injector No.3 terminal A and injector driver module terminal 1C • Short to power supply between fuel injector No.3 terminal A and injector driver module terminal 1C • Short to ground between fuel injector No.3 terminal B and injector driver module terminal 1A • Short to ground between fuel injector No.3 terminal A and injector driver module terminal 1C • PCM malfunction





Diagnostic procedure

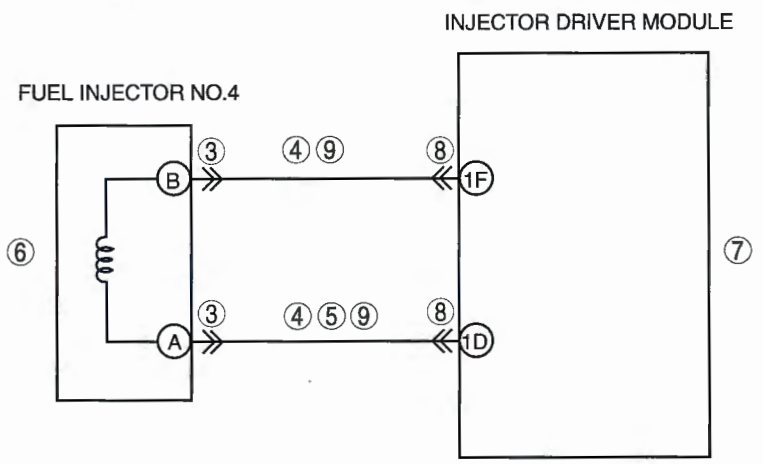
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

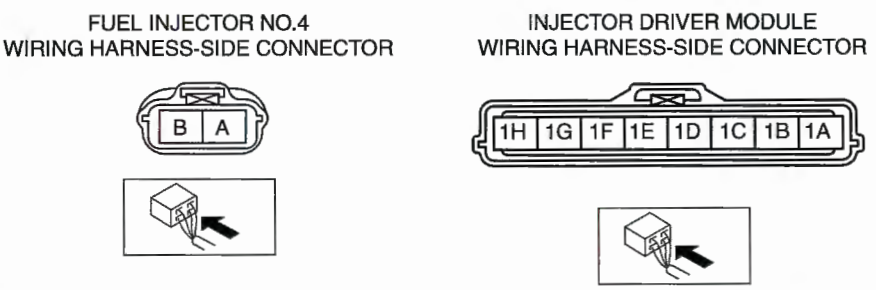
STEP	INSPECTION		ACTION
3	**INSPECT FUEL INJECTOR NO.3 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.3 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.3 terminal B (wiring harness-side) and body ground — Fuel injector No.3 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.3 terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.3** • Inspect fuel injector No.3. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace fuel injector No.3, then go to Step 10. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there malfunction?	Yes	Replace the injector driver module, then go to Step 10. (See 01–40B–21 INJECTOR DRIVER MODULE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.3 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.3 terminal B (wiring harness-side) and PCM terminal 1A (wiring harness-side) — Fuel injector No.3 terminal A (wiring harness-side) and PCM terminal 1C (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0203 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0204 [L3 WITH TC]

E6U010200200W06

DTC P0204	Injector circuit/open cylinder No.4
DETECTION CONDITION	• If the fuel injection verification signal is not input at **255 times** continuously even though the PCM drives fuel injector No.4, the PCM determines that there is an open circuit in the fuel injector No.4 control circuit. **MONITORING CONDITION** — The following conditions are met: • Engine speed: **4,000 rpm or less** • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel injector No.4 malfunction • Injector driver module malfunction • Connector or terminal malfunction • Open circuit between fuel injector No.4 terminal B and injector driver module terminal 1F • Open circuit between fuel injector No.4 terminal A and injector driver module terminal 1D • Short to power supply between fuel injector No.4 terminal A and injector driver module terminal 1D • Short to ground between fuel injector No.4 terminal B and injector driver module terminal 1F • Short to ground between fuel injector No.4 terminal A and injector driver module terminal 1D • PCM malfunction





Diagnostic procedure

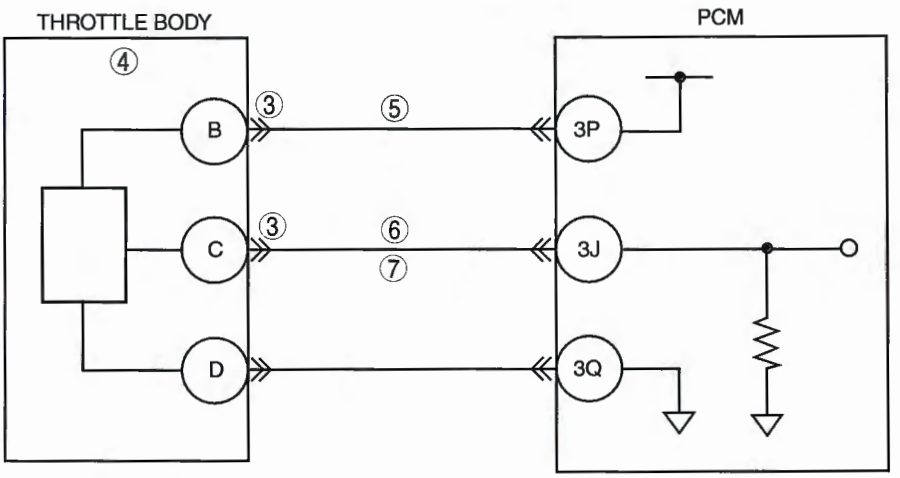
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

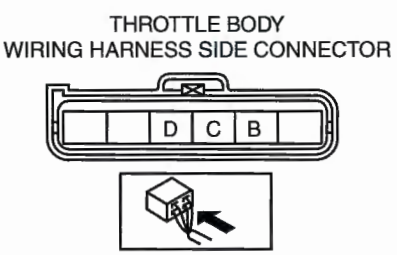
STEP	INSPECTION		ACTION
3	**INSPECT FUEL INJECTOR NO.4 CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fuel injector No.4 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.4 terminal B (wiring harness-side) and body ground — Fuel injector No.4 terminal A (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 10.
		No	Go to the next step.
5	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the fuel injector No.4 terminal A (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to Step 10.
		No	Go to the next step.
6	**INSPECT FUEL INJECTOR NO.4** • Inspect fuel injector No.4. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace fuel injector No.4, then go to Step 10. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the injector driver module, then go to Step 10. (See 01–40B–21 INJECTOR DRIVER MODULE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR NO.4 CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Fuel injector No.4 terminal B (wiring harness-side) and PCM terminal 1F (wiring harness-side) — Fuel injector No.4 terminal A (wiring harness-side) and PCM terminal 1D (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0204 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

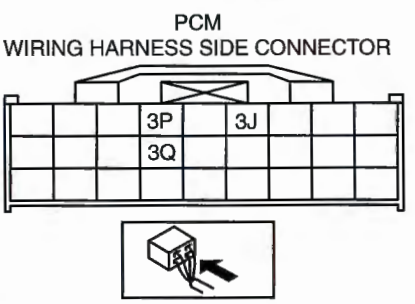
DTC P0222 [L3 WITH TC]

E6U010200200W07

DTC P0222	TP sensor No.2 circuit low input
DETECTION CONDITION	• If PCM detects that the TP sensor No.2 voltage is **below 0.2 V** after the ignition switch to the ON position the PCM determines that TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction conditions in first drive cycles. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal C and PCM terminal 3J • Short to ground between throttle body terminal C and PCM terminal 3J • Open circuit between throttle body terminal B and PCM terminal 3P • Short to ground between throttle body terminal B and PCM terminal 3P • PCM malfunction







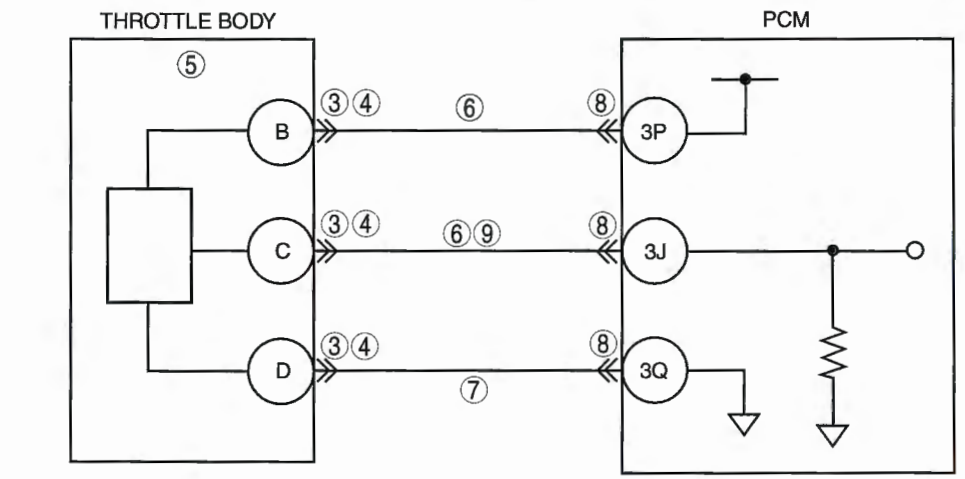
Diagnostic procedure

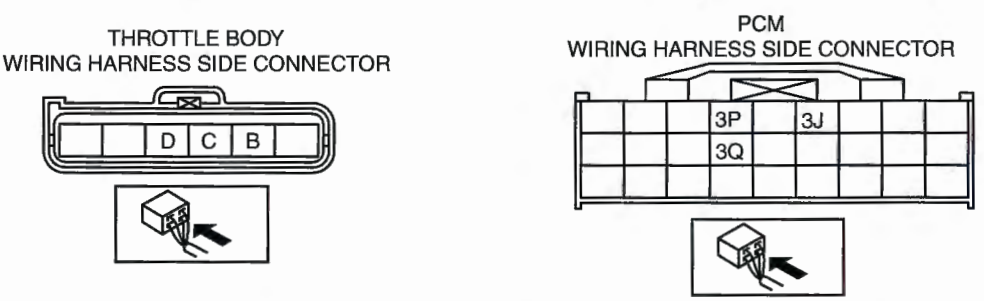
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY TP SENSOR OR HARNESS MALFUNCTION** • Connect the WDS or equivalent. • Access the TP2 PID. • Disconnect the throttle body connector. • Connect a jumper wire between throttle body terminals B and C (harness-side). • Is the voltage **above 4.9 V**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is the TP sensor normal?	Yes	Inspect throttle body connector terminal B connection for poor connection. Repair or replace if necessary, then go to Step 8.
		No	Replace throttle body, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT THROTTLE BODY CONNECTOR** **Note** • If DTC P0107 and P2228 are also retrieved with P0122, go to the CONSTANT VOLTAGE troubleshooting procedure. • Turn ignition switch to the ON position (Engine off). • Measure the voltage at throttle body terminal B (harness-side). • Is the voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace for an open circuit between throttle body connector terminal B and PCM connector terminal 3P (harness-side). Then, then go to Step 8.
6	**VERIFY TP2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between throttle body terminal C (harness-side) and PCM terminal 3J. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 8.
7	**VERIFY TP2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between throttle body terminal C (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0222 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0223 [L3 WITH TC]

E6U010200200W08

DTC P0223	TP sensor No.2 circuit high input
DETECTION CONDITION	• If the PCM detects that the TP sensor No.2 voltage is **above 4.85 V** after the ignition switch to the ON position, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction conditions in first drive cycles. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal D and PCM terminal 3Q • Short to constant voltage supply between throttle body terminal C and PCM terminal 3J • PCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR** • Turn the ignition switch off. • Verify that the throttle body connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT TP SENSOR** • Perform the TP sensor inspection. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC]) • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 10.
6	**INSPECT TP2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal C (harness-side) and body ground. • Is the voltage **above 4.9 V**?	Yes	Repair or replace for a short to a power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY TP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between throttle body connector terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace for an open circuit between throttle body terminal D (harness-side) and PCM connector terminal 3Q (harness-side). Then, go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to Step 10.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between throttle body terminals B and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
1	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0234 [L3 WITH TC]

E6U010200200W09

DTC P0234	Turbo/supercharger overboost condition
DETECTION CONDITION	• If the manifold absolute pressure or charging efficiency are more than the specification for the specified period of time, the PCM determines that the turbocharger is in an overboost condition. **MONITORING CONDITIONS** — Engine speed is **2,000 rpm or more.** **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Vacuum hose looseness or damage • Improper installation of the vacuum hose

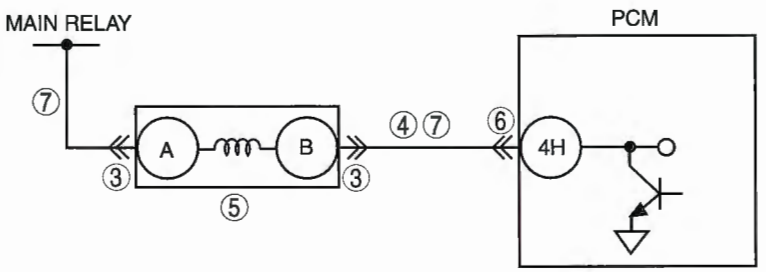
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See 01–13B–14 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 5. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE** • Inspect the vacuum hose condition for the following: — Looseness — Damage — Improper installation • Is there any malfunction?	Yes	Repair or replace the suspected part, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0234 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

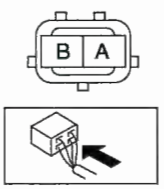
DTC P0245 [L3 WITH TC]

E6U010200200W10

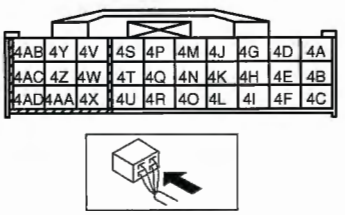
DTC P0245	Turbocharger wastegate solenoid low
DETECTION CONDITION	• When the PCM turns the wastegate control solenoid valve off but the wastegate control solenoid valve circuit voltage is low, the PCM determines that the wastegate control solenoid valve control circuit voltage is low. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Connector or terminal malfunction • Open circuit in the wiring harness between wastegate control solenoid valve terminal A and main relay • Open circuit in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 4H • Short to ground in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 4H • PCM malfunction



WASTEGATE CONTROL SOLENOID VALVE WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the wastegate control solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

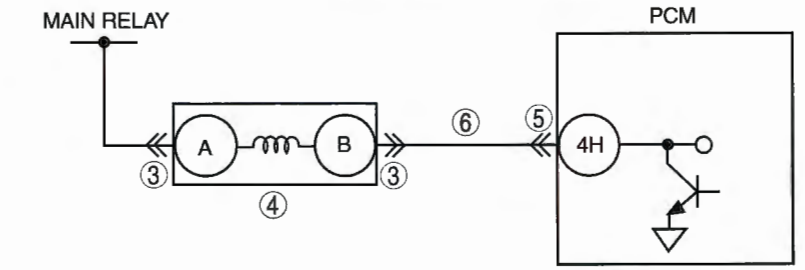
STEP	INSPECTION		ACTION
4	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the wastegate control solenoid valve terminal B and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See 01–13B–14 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 8. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT WASTEGATE CONTROL SOLENOID VALVE GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Inspect for continuity between the following terminals: — Wastegate control solenoid valve terminal A (wiring harness-side) and main relay — Wastegate control solenoid valve terminal B (wiring harness-side) and PCM terminal 4H (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0245 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0246 [L3 WITH TC]

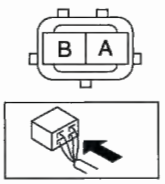
E6U010200200W11

DTC P0246	Turbocharger wastegate solenoid high
DETECTION CONDITION	• When the PCM turns the wastegate control solenoid valve on but the wastegate control solenoid valve circuit voltage is high, the PCM determines that the wastegate control solenoid valve control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Wastegate control solenoid valve malfunction • Connector or terminal malfunction • Short to power supply in the wiring harness between wastegate control solenoid valve terminal B and PCM terminal 4H • PCM malfunction

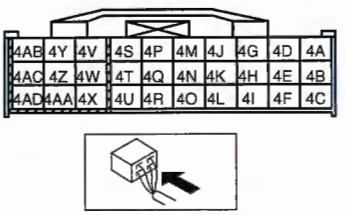
DTC P0246	Turbocharger wastegate solenoid high



WASTEGATE CONTROL SOLENOID VALVE WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the wastegate control solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT WASTEGATE CONTROL SOLENOID VALVE** • Inspect the wastegate control solenoid valve. (See 01–13B–14 WASTEGATE CONTROL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the wastegate control solenoid valve, then go to Step 7. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT WASTEGATE CONTROL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. • Inspect for continuity between the wastegate control solenoid valve terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a possible short to power supply, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY TROUBLESHOOTING OF DTC P0246 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0300 [L3 WITH TC]

E6U010200300W10

DTC P0300	Random misfire detected
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects a misfire which affects emission performance during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • CMP sensor malfunction • Ignition coil malfunction • Ignition system malfunction • MAF sensor contamination • Excess air suction in intake air system (between MAF sensor and intake manifold) • Fuel pump malfunction • High pressure fuel pump malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • Improper fuel pump speed control operation • Fuel pressure regulator (built-in fuel pump unit) malfunction • Fuel line clogged • Fuel filter clogged • Fuel leakage in fuel line • Fuel runout • Poor quality fuel • Purge control solenoid valve malfunction • PCV valve malfunction • EGR valve malfunction • Vacuum hoses damage or improper connection • Related connector and terminal malfunction • Related wiring harness malfunction • Insufficient compression • Variable valve timing control system improper • Injector driver module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP, and VSS PIDs using the WDS or equivalent. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) • Is there any signal that is far out of specification when the ignition switch is turned to the ON position and the engine idles?	Yes	Inspect the suspected circuit and/or part according to the inspection results. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) Then go to Step 26.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as in Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the suspected circuit and/or part according to the inspection results. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) Then go to Step 26.
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect the CMP sensor. (See 01–40B–36 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the next step.
		No	Inspect the installation condition for damage to the timing chain and gears, repair the malfunctioning part. • If it is normal, replace the CMP sensor. Then go to Step 26.
7	**VERIFY CKP SENSOR INSTALLATION CONDITION** • Inspect the CKP sensor for looseness. • Is the CKP sensor loose?	Yes	Retighten the CKP sensor, then go to Step.
		No	Go to the next step.
8	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the suspected wiring harnesses, then go to Step 26.
9	**INSPECT IGNITION SYSTEM OPERATION** • Carry the out spark test. (See 01–03B–90 Spark Test) • Is a strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result. Then go to Step 26.
10	**INSPECT MAF PID** • Start the engine. • Access the MAF PID using the WDS or equivalent. • Race the engine and verify that the MAF PID changes quickly according to the change in the engine speed. • Is the MAF PID response normal?	Yes	Go to the next step.
		No	Replace the MAF sensor, then go to Step 26.

STEP	INSPECTION		ACTION
11	**INSPECT IN INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Inspect for air leakage at the following: — Between the MAF sensor and throttle body — Between throttle body and intake manifold • Is there any malfunction?	Yes	Repair or replace suspected part, then go to Step 26.
		No	Go to the next step.
12	**INSPECT FUEL LINE PRESSURE** • Inspect fuel line pressure. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the fuel line pressure normal?	Yes	Go to Step 14.
		No	If the fuel line pressure is too low, go to the next step. If the fuel line pressure is too high, replace the fuel pump unit, then go to Step 26.
13	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for fuel leakage. • Is there any fuel leakage?	Yes	Replace suspected fuel line, then go to Step 20.
		No	Inspect the fuel filters for following: • Foreign material or stain inside fuel filter (low-pressure side) Perform following actions depend on the result above. • If foreign materials or stain is found inside fuel filter (low-pressure side), clean the fuel tank and filter (low-pressure side). • If normal, replace the fuel pump unit. Then, go to Step 26.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Perform engine overhaul for repairs, then go to Step 26.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03B–93 Variable Valve Timing Control System Operation Inspection) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the variable valve timing control system inspection results, then go to Step 26.
16	**INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE** • Turn the ignition switch off. • Connect the vacuum pump to the purge control solenoid valve and apply vacuum to the solenoid. • Verify that the solenoid holds vacuum. • Turn the ignition switch to the ON position (Engine off). • Access EVAPCP PID in the SIMULATION TEST using the WDS or equivalent. • Set duty value to **100%** for the EVAPCP PID. • Apply vacuum while turning the solenoid from OFF to ON and simulating the EVAPCP PID with a **100%** duty value. • Verify that the solenoid releases vacuum while the solenoid is turned on. • Is the purge control solenoid valve operation normal?	Yes	Go to the next step.
		No	Replace the purge control solenoid valve, then go to Step 26.
17	**INSPECT PCV VALVE OPERATION** • Turn the ignition switch off. • Remove the PCV valve and inspect the valve operation. (See 01–16B–13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) • Is the PCV valve operation normal?	Yes	Replace the PCV valve, then go to Step 26.
		No	Go to the next step.
18	**INSPECT OPERATION OF EGR VALVE** • Remove the EGR valve. • Visually inspect the if EGR valve is stuck open. • Is the EGR valve stuck open?	Yes	Repair or replace the EGR valve, then go to Step 26.
		No	Go to the next step.

STEP	INSPECTION		ACTION
19	**VERIFY FUEL PUMP SPEED CONTROL OPERATION** • Perform Fuel Pump Speed Control Inspection. (See 01–03B–89 Fuel Pump Speed Control Inspection.) • Does the fuel pump speed control work properly?	Yes	Go to the next step.
		No	Inspect or replace the malfunctioning parts, according to inspection results. Then go to Step 26.
20	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor the FUEL_PRES PID. • Is the FUEL_PRES PID value within the specification? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 24.
		No	Go to the next step.
21	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 23.
22	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 26.
23	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 26.
		No	Go to the next step.
24	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between the fuel pump and the high pressure fuel pump. • Measure the low side fuel pressure. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specification?	Yes	Go to the next step.
		No	Inspect for the following. • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump.Then go to Step 26.
25	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to the next step.
		No	Go to the next step.
26	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
27	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304 [L3 WITH TC]

E6U010200300W11

DTC P0301 **DTC P0302** **DTC P0303** **DTC P0304**	**Cylinder No.1 misfire detected** **Cylinder No.2 misfire detected** **Cylinder No.3 misfire detected** **Cylinder No.4 misfire detected**
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of interval time for each cylinder. If the change of interval time exceeds the preprogrammed criteria, the PCM detects a misfire in the corresponding cylinder. While the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates a misfire ratio for each crankshaft revolution. If the ratio exceeds the preprogrammed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • The MIL illuminates if the PCM detects a misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • The MIL flashes if the PCM detects a misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects a misfire which affects emission performance during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Spark plug malfunction • Ignition coil malfunction • Ignition system malfunction • Fuel injector malfunction • Air suction in intake air system (between dynamic chamber and cylinder head) • Inadequate engine compression due to engine internal malfunction • Related connector or terminal malfunction • Related wiring harness • Injector driver module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON /IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP and VSS PIDs using the WDS or equivalent. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) • Is there any signal that is far out of specification when the ignition switch is turned to the ON position and the engine idles?	Yes	Inspect the suspected circuit and/or part according to inspection results. Then go to Step 15. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as in Step 4 while simulating the FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the suspected circuit and/or part according to inspection results. Then go to Step 15. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)
		No	Go to the next step.

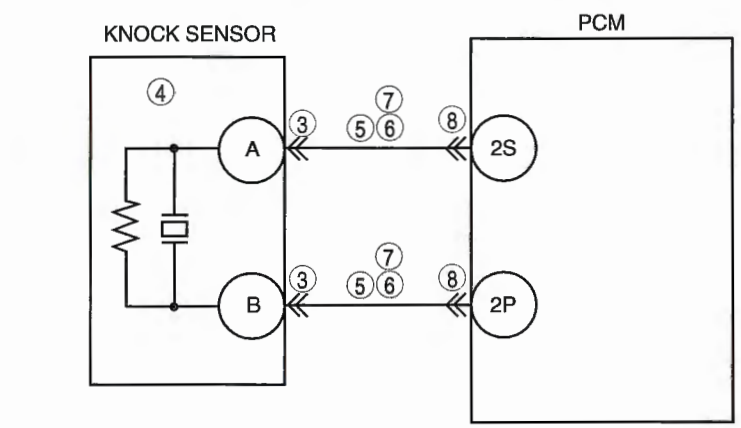
STEP	INSPECTION		ACTION
6	**INSPECT SPARK PLUG CONDITION** • Turn the ignition switch off. • Remove the spark plug from the suspected cylinder. • Inspect the spark plug condition: — Cracks — Excess wear — Gap — Wetness • Is there any problem found on the spark plug?	Yes	• If a spark plug is wet, fuel flooding is suspected. Then go to Step 15. • If a spark plug has cracks, excessive wear or an improper gap, replace the malfunctioning spark plug. Then go to Step 15.
		No	Go to the next step.
7	**INSPECT INTAKE-AIR SYSTEM FOR AIR SUCTION** • Inspect for air leakage at the following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head • Is air leakage found?	Yes	Repair or replace suspected part, then go to Step 15.
		No	Go to the next step.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12B–5 ENGINE COOLANT LEAKAGE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace the malfunctioning part according to the inspection results. Then go to Step 15.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR WIRING HARNESS** • Remove the intake air system parts. • Disconnect the fuel injector connector on suspected cylinder. • Connect the NOID LIGHT to the fuel injector terminals. • Inspect the light dim during cranking. • Does the light not illuminate?	Yes	Go to the next step.
		No	Inspect the fuel injector wiring harnesses. Repair or replace if necessary, then go to Step 15.
10	**INSPECT IGNITION COIL HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) of the suspected cylinder. • Are the wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the suspected wiring harnesses, then go to Step 15.
11	**INSPECT IGNITION SYSTEM OPERATION** • Carry out the spark test. (See 01–03B–90 Spark Test) • Is a strong blue spark visible at the suspected cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the spark test result. Then go to Step 15.
12	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
13	**INSPECT FUEL INJECTOR OPERATION** • Connect the WDS or equivalent to DLC-2. • Access INJ#1, INJ#2, INJ#3, INJ#4 PIDs. • Start the engine and warm it up to the normal operating temperature. • Turn the fuel injector off from on using the PID simulation function. • Does the engine speed decrease while the fuel injectors are turned off?	Yes	Go to the Step 15.
		No	Go to the next step.
14	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module and the related wiring harness. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Inspect and replace the fuel injector for the cylinder in which the engine speed does not decrease. Then go to the next step. (See 01–03B–87 Fuel Injector Operation Inspection.)

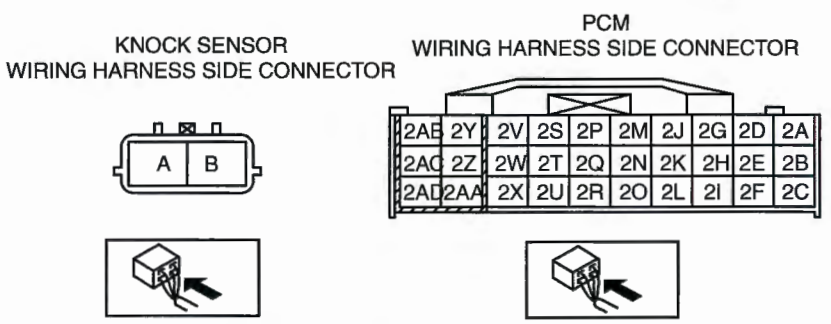
STEP	INSPECTION		ACTION
15	**VERIFY IF TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0327 [L3 WITH TC]

E6U010200300W12

DTC P0327	Knock sensor circuit low input
DETECTION CONDITION	• PCM monitors the input signal from the knock sensor when the engine is running. If the input voltage at the PCM terminals between 2P and 2S is **below 0.12 V**, the PCM determines that the knock sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Open or short to ground circuit between knock sensor connector terminal A and PCM terminal 2S • Open or short to ground circuit between knock sensor connector terminal B and PCM terminal 2P • Knock sensor wires (2) shorted • PCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the knock sensor connector. • Check for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform the knock sensor inspection. (See 01–40B–35 KNOCK SENSOR (KS) INSPECTION [L3 WITH TC]) • Is the knock sensor normal?	Yes	Go to the next step.
		No	Replace the knock sensor, then go to the next step.
5	**INSPECT KNOCK SENSOR CIRCUITS FOR OPEN CIRCUIT** • Disconnect the knock sensor connector. • Inspect the continuity between the following circuits: — Knock sensor female terminal A (harness-side) and PCM terminal 2S (harness-side) — Knock sensor female terminal B (harness-side) and PCM terminal 2P (harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 9.
6	**INSPECT KNOCK SENSOR CIRCUITS FOR SHORT TO GROUND** • Inspect the continuity between the following circuits: — Knock sensor female terminal A (harness-side) and body ground — Knock sensor female terminal B (harness-side) and body ground • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FOR SHORT CIRCUITS** • Inspect for continuity between knock sensor female terminals A and B (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 9.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminals 2P and 2S (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0327 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0328 [L3 WITH TC]

E6U010200300W13

DTC P0328	Knock sensor circuit high input
DETECTION CONDITION	• PCM monitors the input signal from the knock sensor when the engine is running. If the input voltage at the PCM terminals between 2P and 2S is **below 4.9 V**, the PCM determines that the knock sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Knock sensor malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between knock sensor terminal A and PCM terminal 2S • Short to the power supply in the wiring harness between knock sensor terminal B and PCM terminal 2P • PCM malfunction

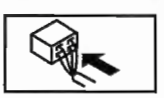
2AD	2AA	2X	2U	2R	2O	2L	2I	2F	2C



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KNOCK SENSOR CONNECTOR TERMINAL FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the knock sensor connector. • Inspect for poor connection at terminals A and B (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to step 7.
		No	Go to the next step.
4	**INSPECT KNOCK SENSOR** • Perform the knock sensor inspection. (See 01–40B–35 KNOCK SENSOR (KS) INSPECTION [L3 WITH TC]) • Is the knock sensor normal?	Yes	Go to the next step.
		No	Replace the knock sensor, then go to step 7.
5	**INSPECT KNOCK SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between knock sensor terminal A (harness-side) and body ground and knock sensor terminal B (harness-side) and body ground. • Is there any voltage?	Yes	Repair or replace the wiring harness for a short to the power supply, then go to step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0328 COMPLETED** • Make sure to connect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0335 [L3 WITH TC]

E6U010200300W14

DTC P0335	CKP sensor circuit malfunction
DETECTION CONDITION	• If the PCM does not receive the input voltage from the CKP sensor for **4.2 s** while the MAF is **2.0 g/s {0.26 lb/min.} or above**, the PCM determines that the CKP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • Connector or terminal malfunction • CKP sensor is dirty. • Short to the power supply between CKP sensor terminal A and PCM terminal 2H • Short to the power supply between CKP sensor terminal B and PCM terminal 2C • Short to ground between CKP sensor terminal C and main relay • Short to ground between CKP sensor terminal B and PCM terminal 2C • Open circuit between CKP sensor terminal A and PCM terminal 2H • Open circuit between CKP sensor terminal B and PCM terminal 2C • Open circuit between CKP sensor terminal C and main relay • CKP sensor pulse wheel malfunction • Both CKP sensor wires are shorted to each other • PCM malfunction

Diagnostic procedure

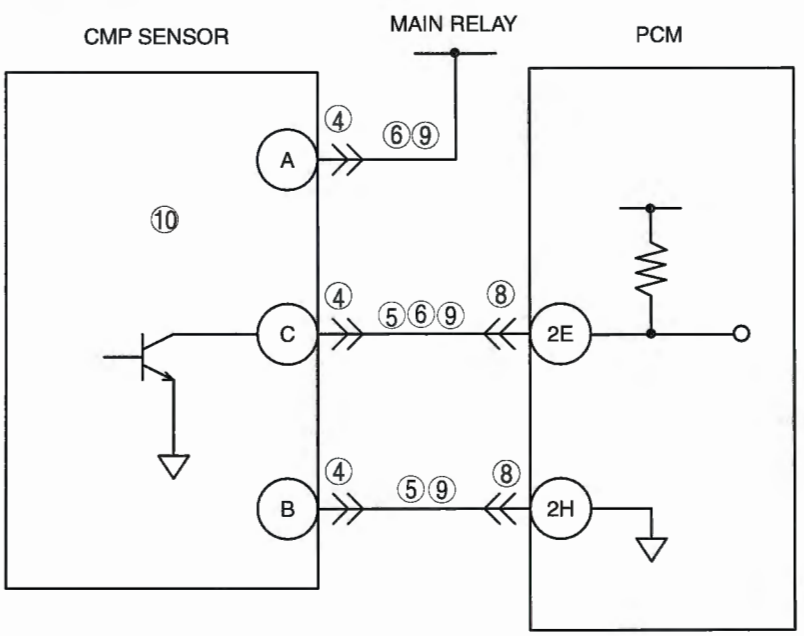
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available the repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CKP SENSOR VOLTAGE** • Disconnect the CKP sensor connector. • Connect the voltmeter between the CKP sensor connector terminals B and C (sensor-side). • Inspect the voltage in the AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CKP sensor connector is connected securely. • Is connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 11.
5	**INSPECT CKP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch OFF • Disconnect the CKP sensor connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between following terminals (harness-side): — CKP sensor terminal A — CKP sensor terminal B • Is there any voltage?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
6	**INSPECT CKP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between following terminal and body ground: — CKP sensor connector terminal C (harness-side) — CKP sensor connector terminal B (harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
7	**INSPECT CKP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CKP sensor connector terminals B and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 11.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 11.
		No	Go to the next step.
9	**INSPECT CKP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CKP sensor terminal A (harness-side) and PCM terminal 2H (harness-side) — CKP sensor terminal B (harness-side) and PCM terminal 2C (harness-side) — CKP sensor terminal C (harness-side) and main relay • Are there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 11.

STEP	INSPECTION		ACTION
10	**INSPECT CKP SENSOR** • Turn the ignition switch off. • Perform the CKP sensor inspection. (See 01–40B–38 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [L3 WITH TC]) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Inspect the CKP sensor pulse wheel for damage. Replace the CKP sensor pulse wheel and go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0335 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Access the MAF PID using the WDS or equivalent. **Note** • The MAF PID should indicate **2.0 g/s {0.26 lb/min.} or above** during this test • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

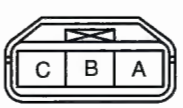
DTC P0340 [L3 WITH TC]

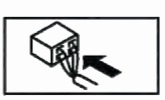
E6U010200300W15

DTC P0340	Camshaft position (CMP) sensor circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltage from the CMP sensor when engine is running. If the PCM does not receive the input voltage from the CMP sensor while the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor malfunction • Connector or terminal malfunction • CMP sensor is dirty • Short to the power circuit between CMP sensor terminal C and PCM terminal 2E • Short to the power circuit between CMP sensor terminal B and PCM terminal 2H • Short to ground circuit between CMP sensor terminal A and main relay • Short to ground circuit between CMP sensor terminal C and PCM terminal 2E • Open circuit between CMP sensor terminal A and main relay • Open circuit between CMP sensor terminal B and PCM terminal 2H • Open circuit between CMP sensor terminal C and PCM terminal 2E • Both CMP sensor wires are shorted to each other • CKP sensor pulse wheel malfunction • CKP sensor misinstallation • Timing chain misinstallation • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction

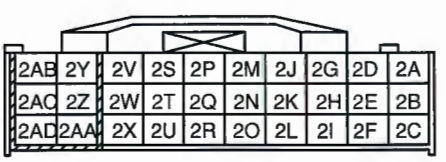


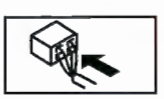
CMP SENSOR
WIRING HARNESS-SIDE CONNECTOR





PCM
WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CMP SENSOR VOLTAGE** • Disconnect the CMP sensor connector. • Connect a voltmeter between CMP sensor connector terminals A and C (sensor-side). • Inspect the voltage in AC range while cranking the engine. • Is there any voltage?	Yes	Go to the next step.
		No	Go to step 10.
4	**INSPECT CMP SENSOR CONNECTOR FOR POOR CONNECTION** • Verify that the CMP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Reconnect the connector, then go to Step 15.
5	**INSPECT CMP CIRCUIT FOR SHORT TO POWER** • Turn ignition switch OFF. • Disconnect the CMP sensor connector. • Turn ignition switch to the ON position (Engine off) • Measure voltage between the following terminals: — CMP sensor connector terminal C (harness-side) and body ground — CMP sensor connector terminal B (harness-side) and body ground • Is the voltage B+ ?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
6	**INSPECT CMP CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminal and body ground: — CMP sensor connector terminal A (harness-side) — CMP sensor connector terminal C (harness-side) • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
7	**INSPECT CMP CIRCUITS FOR SHORT CIRCUIT** • Inspect for continuity between CMP sensor connector terminals A and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to Step 15.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 15.
		No	Go to the next step.
9	**INSPECT CMP CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following circuits: — CMP sensor terminal A (harness-side) and main relay — CMP sensor terminal B (harness-side) and PCM terminal 2H (harness-side) — CMP sensor terminal C (harness-side) and PCM terminal 2E (harness-side) • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the suspected wiring harness, then go to Step 15.

STEP	INSPECTION		ACTION
10	**INSPECT CMP SENSOR** • Turn the ignition switch off. • Perform the CMP sensor inspection. (See 01–40B–36 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [L3 WITH TC].) • Is the CMP sensor normal?	Yes	Go to the Step 15.
		No	Replace the CMP sensor and go to Step 15.
11	**VERIFY CKP SENSOR INSTALLATION** • Verify the CKP sensor installation. (See 01–40B–41 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [L3 WITH TC].) • Is the CKP sensor installed correctly?	Yes	Go to the next step.
		No	Reinstall the CKP sensor and go to Step 15.
12	**VERIFY VALVE TIMING MECHANISM INSTALLATION** • Verify the valve timing mechanism installation for the following parts: — Timing chain misinstallation — Loose camshaft sprocket lock bolt — Loose crankshaft pulley lock bolt • Is the valve timing mechanism installed correctly?	Yes	Go to the next step.
		No	Reinstall the following parts and go to Step 15. • Timing chain • Camshaft sprocket • Crankshaft pulley
13	**INSPECT STOPPER PIN MECHANISM** • Remove the timing chain. • Inspect the stopper pin. (See 01–10B–37 VARIABLE VALVE TIMING ACTUATOR INSPECTION [L3 WITH TC].) • Is the stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace the variable valve timing actuator, then go to Step 15.
14	**INSPECT ROTOR POSITION** • Remove the variable valve timing actuator. (See 01–10B–36 VARIABLE VALVE TIMING ACTUATORE REMOVAL/INSTALLATION [L3 WITH TC]) • Is the rotor position at the maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM NORMAL** **Note** • This DTC is detected as an intermittent concern. • The intermittent concern might be removed by cleaning the variable valve timing mode control function. Go to the next step.
		No	Replace the variable valve timing actuator, then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P0340 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Access the MAF PID using the WDS or equivalent. **Note** • The MAF PID should indicate **1.95 g/s {0.25 lb/min.} or above** during this test • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0401 [L3 WITH TC]

E6U010200400W22

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	• PCM monitors the difference in intake manifold pressures when the EGR is operated and when it is stopped. If the difference is too small, the PCM determines that the EGR flow is insufficient. **Diagnostic support note** • This is an intermittent monitor (EGR system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • MAP sensor malfunction • EGR gasket malfunction • PCM malfunction

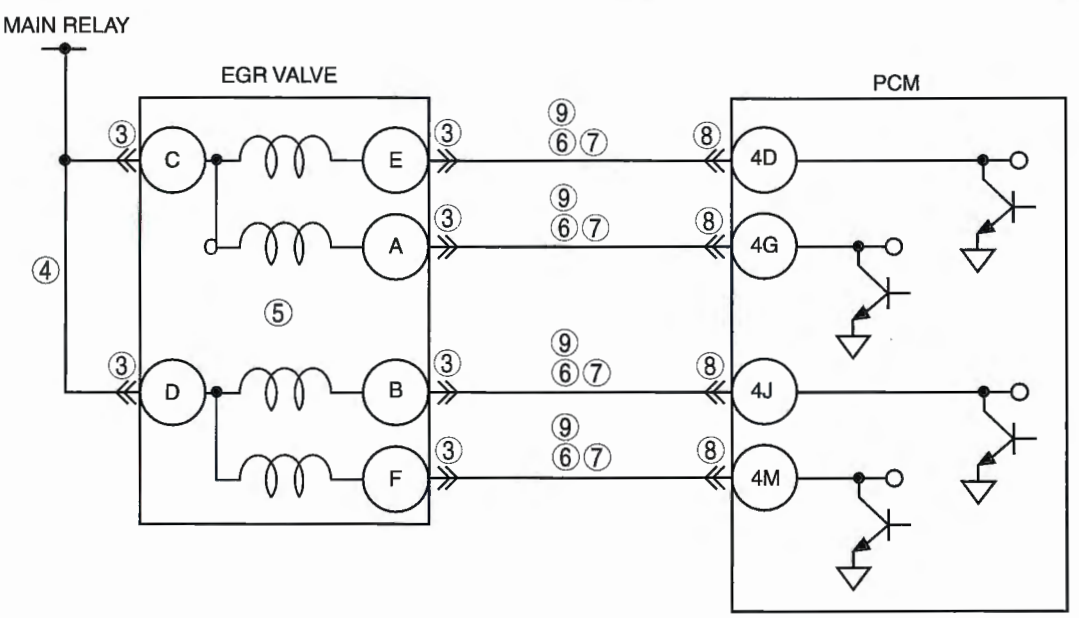
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EGR system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Have other DTCs been stored?	Yes	Repair the circuit malfunction for applicable DTCs.
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONDITION** • Inspect freezing vacuum hoses for clogs, damage, frozen, or vacuum leakage. • Is there any malfunction?	Yes	Replace the vacuum hoses, then go to Step 8.
		No	Go to the next step.
5	**INSPECT EGR VALVE MALFUNCTION** • Inspect the EGR valve. (See 01–16B–11 EGR VALVE INSPECTION [L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 8.
6	**INSPECT MAP SENSOR MALFUNCTION** • Perform the MAP sensor inspection. (See 01–40B–31 MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR INSPECTION [L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the MAP sensor, then go to Step 8.
7	**INSPECT EGR VALVE PASSAGE** • Turn the ignition switch off. • Remove the EGR valve. • Is the gasket installation normal?	Yes	Go to the next step.
		No	Install the gasket correctly, then go to the next step.
8	**MONITOR EGR SYSTEM BY DRIVE MODE** • Clear the DTC from the PCM memory using the WDS or equivalent. • Run the PCM Adaptive Memory Procedure Drive Mode. (See 01–02B–10 PCM Adaptive Memory Production Drive Mode.) • Stop the vehicle and access the ON BOARD READINESS TEST to inspect the DRIVE MODE completion status. • Verify the FUEL_EVAL and EGR_EVAL PIDs status. • Do the FUEL_EVAL and EGR_EVAL PIDs change to Yes?	Yes	Go to the next step.
		No	Retry this step.
9	**VERIFY TROUBLESHOOTING OF DTC P0401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Access the DIAGNOSTIC MONITORING TEST RESULTS. (See 01–02B–8 Diagnostic Monitoring Test Results Access Procedure.) • Verify the TEST #10: 31: 83 (EGR pressure variation) value. • Is the value within the specification?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
0	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

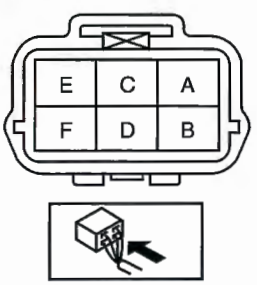
DTC P0403 [L3 WITH TC]

E6U010200400W23

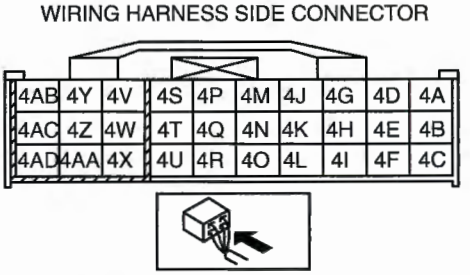
DTC P0403	EGR valve (stepper motor) circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltage from the EGR valve. If the voltage remain low or high, the PCM determine that the EGR valve circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor. (CCM) • MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is not available. • DTCs are not stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between EGR valve terminal E and PCM terminal 4D • Short to the power supply in the wiring harness between EGR valve terminal A and PCM terminal 4G • Short to the power supply in the wiring harness between EGR valve terminal B and PCM terminal 4J • Short to the power supply in the wiring harness between EGR valve terminal F and PCM terminal 4M • Short to ground circuit in wiring harness between EGR valve terminal E and PCM terminal 4D • Short to ground circuit in wiring harness between EGR valve terminal A and PCM terminal 4G • Short to ground circuit in wiring harness between EGR valve terminal B and PCM terminal 4J • Short to ground circuit in wiring harness between EGR valve terminal F and PCM terminal 4M • Open circuit in the wiring harness between EGR valve terminal E and PCM terminal 4D • Open circuit in the wiring harness between EGR valve terminal A and PCM terminal 4G • Open circuit in the wiring harness between EGR valve terminal B and PCM terminal 4J • Open circuit in the wiring harness between EGR valve terminal F and PCM terminal 4M • Open circuit in the wiring harness between main relay terminal C and EGR valve terminal C • Open circuit in the wiring harness between main relay terminal C and EGR valve terminal D • PCM malfunction



EGR VALVE
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EGR VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the EGR valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.
4	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage following the terminal and body ground. — EGR valve terminal C (harness-side) — EGR valve terminal D (harness-side) • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit then go to Step 10.
5	**INSPECT EGR VALVE** • Perform the EGR valve inspection. (See 01–16B–11 EGR VALVE INSPECTION [L3 WITH TC].) • Is the EGR valve normal?	Yes	Go to the next step.
		No	Replace the EGR valve, then go to Step 10.
6	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals and body ground: — EGR valve terminal E (harness-side) — EGR valve terminal A (harness-side) — EGR valve terminal B (harness-side) — EGR valve terminal F (harness-side) • is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT FOR CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground: — EGR valve terminal E (harness-side) — EGR valve terminal A (harness-side) — EGR valve terminal B (harness-side) — EGR valve terminal F (harness-side) • Is voltage **B+**?	Yes	Repair or replace wiring harness for a short to power supply, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminals and/or connector, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Remove the PCM with PCM connector connected. • Inspect for continuity between the following terminals (harness-side): — Between EGR valve terminal E and PCM terminal 4D — Between EGR valve terminal A and PCM terminal 4G — Between EGR valve terminal B and PCM terminal 4J — Between EGR valve terminal F and PCM terminal 4M • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0403 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0421 [L3 WITH TC]

E6U010200400V

DTC P0421	Warm up catalyst system efficiency below threshold
DETECTION CONDITION	• The PCM compares the number of front HO2S and rear HO2S inversions for a predetermined time. The PCM monitors the number of inversions the rear side performs while the front side inverts for a specified number of times when the following monitoring conditions are met. The PCM detects the inversion ratio. If the inversion ratio is below the threshold, The PCM determines that the catalyst system has deteriorated. **MONITORING CONDITIONS** — Engine speed: **1,500—3,000 rpm** — Calculated TWC temperature: **above 400 °C {752 °F}** — LOAD: **15—48%** (at engine speed of **2,000 rpm**) **Diagnostic support note** • This is an intermittent monitor (Catalyst). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TWC deterioration or malfunction • Exhaust gas leakage • Loose front HO2S • Loose rear HO2S • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR EXHAUST GAS LEAKAGE** • Visually inspect for exhaust gas leakage in the exhaust system. • Is there exhaust gas leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INSTALLATION OF FRONT AND REAR HO2S** • Inspect the front and rear HO2S for looseness. • Is it normal?	Yes	Go to the next step.
		No	Retighten the sensor, then go to Step 7. (See 01–15B–3 HO2S Removal Note.)
6	**INSPECT TWC** • Clear the DTC using the WDS or equivalent generic OBD function. • Turn the ignition switch off then back to the ON position. • Inspect the TWC. (See 01–16B–13 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Replace the heated oxygen sensor, then go to the next step.
		No	Replace the TWC, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Perform the HO2S heater, HO2S, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0441 [L3 WITH TC]

E6U010200400W25

DTC P0441	Evaporative emission control system incorrect purge flow
DETECTION CONDITION	• PCM measures the purge line pressure under the following conditions. If the vacuum between the charcoal canister and the intake manifold does not reach the specification, PCM determines that the EVAP system is clogged. **MONITORING CONDITION** — Engine speed: **1,500—3,000 rpm** — Vehicle speed: **53—136 km/h {32.9—84.5 mph}** **Diagnostic support note** • This is an intermittent monitor (Evaporative emission system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Evaporative emission system leak detection pump malfunction • Charcoal canister malfunction • EVAP hose damaged or loose • EVAP pipe damaged • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**DETERMINE IF LEAK CONCERN OR BLOCKAGE CONCERN** • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the system inspection fail?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT IF PURGE SOLENOID VALVE STUCK CLOSED** • Inspect if the purge solenoid valve is stuck closed. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Inspect the following parts for clogging. • Vacuum hoses between the intake manifold to the charcoal canister • Catch tank • Charcoal canister Repair or replace the part, then go to Step 11.
		No	Replace the purge solenoid valve, then go to Step 11.

STEP	INSPECTION		ACTION
6	**LOCATE LEAK POINT** • Inspect the following for leakage using the ultrasonic leak detector. — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace the part, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place a clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and air filter. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail (red light turns on)?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail (red light turns on)?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail (red light turns on)?	Yes	Leakage still exists. Locate leak the point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0441 COMPLETED** • Start the engine and let it idle. • Clear the DTC using the WDS or equivalent. • Turn the ignition switch off. • Perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC]) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0442 [L3 WITH TC]

E6U010200400W26

DTC P0442	Evaporative emission control system leak detected (small leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when the specified period has passed after the EVAP system is sealed when the monitoring conditions are met. If the load does not reach the reference current value within the specified period, the PCM determines that the EVAP system has a small leak. **MONITORING CONDITION** — The ignition switch is turned off. — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — Time from engine off: **5 h 10 min** **Diagnostic support note** • This is an intermittent monitor (Evaporative emission system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel filler cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

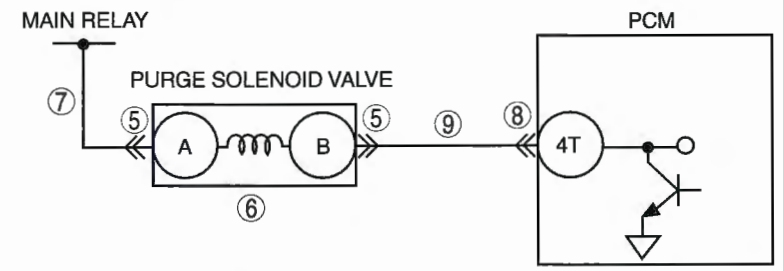
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
5	**LOCATE LEAK POINT** • Inspect for leakage for the following using the Evaporative Emissions Tester. — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair the leakage or replace the part, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve is stuck closed. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place the clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and the air filter. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result failed?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result failed?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

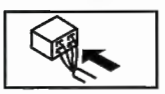
DTC P0443 [L3 WITH TC]

E6U010200400W27

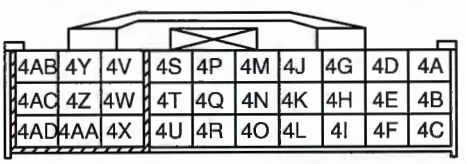
DTC P0443	EVAP control system purge control valve circuit malfunction
DETECTION CONDITION	• PCM monitors the input voltages from the purge solenoid valve. If the voltage remains low or high, the PCM determines that the purge solenoid valve circuit has a malfunction. **Diagnostic support note** • This is an continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between purge solenoid valve terminal B and PCM terminal 4T • Open circuit in the wiring harness between the main relay and purge solenoid valve terminal A • Open circuit in the wiring harness between purge solenoid valve terminal B and PCM terminal 4T • Short to the power supply between purge solenoid valve terminal B and PCM terminal 4T • PCM malfunction

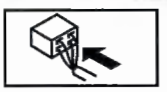


PURGE SOLENOID VALVE
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION** • Disconnect the purge solenoid valve tube that is connected to the intake manifold. • Connect the vacuum pump to the purge solenoid valve. • Pump the vacuum pump several times and stop. • Wait **a few seconds**. • Is the vacuum maintained?	Yes	Go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE** • Turn the ignition switch off. • Disconnect the purge solenoid valve connector. • Pump the vacuum pump several times and wait **a few seconds.** • Is the vacuum maintained?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Replace the purge solenoid valve, then go to Step 10.
5	**INSPECT PURGE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Perform the purge solenoid valve inspection. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT PURGE SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between purge solenoid valve connector terminal A and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged/pulled-out pins, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure voltage between purge solenoid valve terminal B (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Inspect for continuity between purge solenoid valve terminal B (harness-side) and PCM terminal 4T (harness-side). • If there is continuity, go to the next step. • If there is no continuity, repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0443 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0446 [L3 WITH TC]

E6U010200400W28

DTC P0446	Change over valve (COV) (EVAP system leak detection pump) stuck close
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating When the decrease in the pump load current is less than the specification after the reference current valu has been obtained, the PCM determines that the change over-valve (COV) in the EVAP system leak detection pump has a malfunction. **Diagnostic support note** • This is an intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Damaged COV (in EVAP system leak detection pump.) • Short to the power circuit between the EVAP system leak detection pump terminal C and PCM terminal 3V • Damaged PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**CHECK COV CONTROL (EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER)** • Turn ignition switch to the ON position (engine OFF). • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump connector terminal C (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness, then go to Step 5.
		No	Go to the next step.
4	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. (See 01–16B–8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3 WITH TC].) • Is the COV (EVAP system leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0446 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If the EVAP system test function is not available, preform the following procedure: — Perform "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC]) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0455 [L3 WITH TC]

E6U010200400W29

DTC P0455	Evaporative emission control system leak detected (gross leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when the specified period has passed after the EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference current value within the specified period, the PCM determines that the EVAP system has a gross leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — Time from engine off: **5 h 10 min** **Diagnostic support note** • This is an intermittent monitor (Evaporative emission system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Loose, missing or defective fuel filler cap • Charcoal canister malfunction • Fuel tank malfunction • EVAP hose damaged or loose • Poor connection or damaged vacuum hose

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off then to the ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are DTCs P0443 and/or P0446 present?	Yes	Go to the appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform the Evaporative System Leak Inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
5	**INSPECT FUEL FILLER CAP** • Verify that the fuel-filler cap is neither disconnected nor loose or damaged. • Is it normal? **Note** • When a fuel-filler cap other than an OEM cap is attached, it is considered a malfunction.	Yes	Go to the next step.
		No	Retighten the fuel-filler cap or replace it if it is damaged. Go to Step 18.

STEP	INSPECTION		ACTION
6	**INSPECT IF PURGE SOLENOID VALVE IS STUCK** • Inspect the purge solenoid valve. • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 18.
7	**INSPECT COV (EVAP SYSTEM LEAK DETECTION PUMP)** • Inspect the EVAP system leak detection pump. • Is the COV (EVAP leak detection pump) normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to Step 18.
8	**DETERMINE IF EVAP CONTROL SYSTEM FOR LEAKAGE OR BLOCKAGE** **Note** • If the evaporative emission tester is not available, then go to the next step. • Perform the Evaporative System Leak Inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the system test fail?	Yes	Repair or replace malfunctioning area, then go to Step 18.
		No	Go to the next step.
9	**INSPECT LEAKAGE OF CHARCOAL CANISTER TO FUEL PUMP** • Disconnect the fuel tank side vacuum hose at the charcoal canister. • Apply vacuum **1.7 kPa {13 mmHg, 0.5 inHg}** to the disconnected vacuum hose using a vacuum pump. • Does the vacuum hold for a minimum of **2 min**?	Yes	Go to Step 13.
		No	Go to the next step.
10	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify the vacuum hose installation condition between the fuel tank and the charcoal canister. • Is a poor connection detected?	Yes	Connect the vacuum hose correctly, then go to Step 18.
		No	Go to the next step
11	**INSPECT FUEL TANK INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or poorly installed fuel pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to Step 18.
12	**INSPECT FUEL TANK** • Inspect the fuel tank. • Is it normal?	Yes	Replace the vacuum hose from the charcoal canister to the fuel tank, then go to the next step.
		No	Replace the fuel tank, then go to the next step.
13	**INSPECT LEAKAGE FROM CHARCOAL CANISTER TO PURGE SOLENOID VALVE** • Disconnect the purge solenoid valve side vacuum hose at the charcoal canister. • Apply vacuum **3.3 kPa {25 mmHg, 1.0 inHg}** to the disconnected vacuum hose using a vacuum pump. • Does the vacuum hold for a minimum of **2 min**?	Yes	Go to Step 18.
		No	Go to the next step.
14	**VERIFY POOR CONNECTION OF VACUUM HOSE** • Verify the vacuum hose installation condition between the purge solenoid valve and the charcoal canister. • Is a poor connection detected?	Yes	Connect the vacuum hose correctly, then go to Step 18.
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE FOR DAMAGE OR AIR LEAKAGE** • Remove the purge solenoid valve and inspect for damage and air leakage. • Is it normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step18.

STEP	INSPECTION		ACTION
16	**INSPECT CATCH TANK** • Remove the catch tank and inspect for clogging, damage and pinholes using a vacuum pump. • Is it normal?	Yes	Go to the next step.
		No	Replace the catch tank, then go to Step 18.
17	**INSPECT CHARCOAL CANISTER** • Remove the charcoal canister and inspect for clogging, damage and pinholes. • Is it normal?	Yes	Replace the vacuum hose from the charcoal canister to the purge solenoid valve, then go to the next step.
		No	Replace the charcoal canister, then go to the next step.
18	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors. • Perform the Evaporative System Leak Inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to the next step.
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0456 [L3 WITH TC]

E6U010200400W30

DTC P0456	Evaporative emission control system leak detected (very small leak)
DETECTION CONDITION	• PCM measures the pump load current (EVAP line pressure) when a specified period has passed after the EVAP system is sealed when monitoring conditions are met. If the load does not reach the reference load value or the rate of the load increase is lower than the specification within a specified period, the PCM determines that the EVAP system has a very small leak. **MONITORING CONDITION** — IG switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** — **5 h 10 min** elapsed from engine off: **Diagnostic support note** • This is an intermittent monitor (Evaporative system monitor). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Evaporative emission system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch off then ON position (Engine off). • Verify related PENDING CODE or stored DTCs. • Are other DTC present?	Yes	Go to the appropriate DTC inspection.
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the system test result fail?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect the purge solenoid valve and the EVAP system leak detection pump circuit for an intermittent concern. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
5	**LOCATE LEAK POINT** • Check for leakage for the following using the Evaporative Emission Tester — Charcoal canister — Catch tank — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair the leakage or replace the part, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect if the purge solenoid valve is stuck closed. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place a clamp on the EVAP system leak detection pump hose between the EVAP system leak detection pump and the air filter. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove the clamp. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Replace the EVAP system leak detection pump, then go to Step 10.
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove the fuel tank. • Visually inspect for damage, insufficient sealing or a poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform the evaporative system leak inspection. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Does the test result fail?	Yes	Leakage still exists. Locate the leak point and repair. Then go to the next step.
		No	Go to next step
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0461 [L3 WITH TC]

E6U010200400W31

DTC P0461	Fuel gauge sender unit circuit range/performance
DETECTION CONDITION	• PCM monitors the fuel level voltage difference before and after the PCM-calculated fuel consumption has reached **25 L {26.4 US qt., 22 Imp qt.}**. If the difference is **5% less than** the PCM-calculated fuel consumption, the PCM determines that the fuel gauge sender unit range/performance is in error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction or substandard performance • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect the fuel gauge sender unit. (See 09–22–23 FUEL GAUGE SENDER UNIT INSPECTION [AWD].) • Is the fuel gauge sender unit normal?	Yes	Replace the PCM, then go to the next step.
		No	Repair or replace the fuel gauge sender unit, then go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0462 [L3 WITH TC]

E6U010200400W32

DTC P0462	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the signals of the fuel level and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects that the fuel level or fuel gauge sender unit output voltage is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform the "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the suspected malfunction, then go to Step 4.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0462 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0463 [L3 WITH TC]

E6U010200400W33

DTC P0463	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the signals of the fuel level and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects that the fuel level or fuel gauge sender unit output voltage is too high the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Instrument cluster malfunction • Fuel gauge sender unit malfunction • PCM malfunction

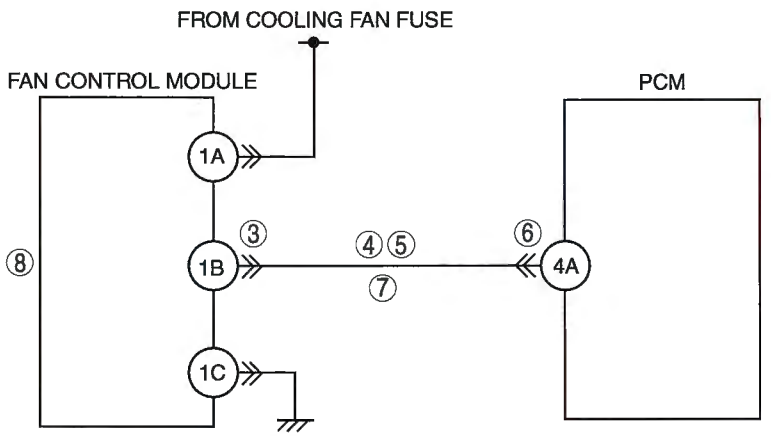
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace the suspected malfunction, then go to Step 4.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0463 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

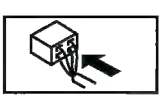
DTC P0480 [L3 WITH TC]

E6U010200400W34

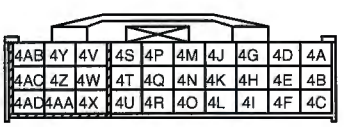
DTC P0480	Fan control circuit problem
DETECTION CONDITION	• The PCM monitors the input voltage from the fan control module. If the voltage remains low or high, the PCM determines that the fan control circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fan control module malfunction • Connector or terminal malfunction • Short to the power supply in the wiring harness between fan control module terminal 1B and PCM terminal 4A • Short to ground in the wiring harness between fan control module terminal 1B and PCM terminal 4A • Open circuit in the wiring harness between fan control module terminal 1B and PCM terminal 4A • PCM malfunction

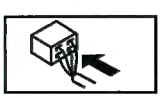


FAN CONTROL MODULE
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FAN CONTROL MODULE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the fan control module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between fan control module terminal 1B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between fan control module terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between fan control module terminal 1B (wiring harness-side) and PCM terminal 4A. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
8	**INSPECT FAN CONTROL MODULE** • Perform the fan control module inspection. (See 01–03B–92 Cooling Fan Control System Inspection.) • Is the fan control module normal?	Yes	Go to the next step.
		No	Replace the fan control module, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0480 COMPLETED** • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Turn A/C switch to ON. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0500 [L3 WITH TC]

E6U010200500W09

DTC P0500	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Wheel speed signal from the DSC HU/CM is **below 3.7 km/h {2.3 mph}** when the following conditions are met: — Neutral switch and CPP switch are off — Load is above **40%** — Engine speed is **2,000 rpm or above** — Brake switch is OFF **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Front ABS wheel-speed sensor malfunction • DSC malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME PID DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Information availability. • Is any related Service Information available?	Yes	Perform the repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY STORED DTC IN DSC HU/CM** • Turn the ignition switch to the ON position (Engine off). • Verify stored DTCs in the DSC HU/CM. (See04–02B–3 DSC ON-BOARD DIAGNOSIS.) • Are DTCs stored?	Yes	Go to the appropriate DTC inspection. (See04–02B–4 DTC Table.)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0500 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Warm up the engine. • Access the RPM and LOAD PID using the WDS or equivalent. • Drive the vehicle under the following conditions for **18s**. — Engine speed: **2,000 rpm or above** — Gear: Gear is in other than NEUTRAL — Load: **40% or above** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0505 [L3 WITH TC]

E6U01020C500V10

DTC P0505	IAC system problem
DETECTION CONDITION	• The PCM cannot control idle speed toward the target idle speed during the KOER self test.
POSSIBLE CAUSE	• Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator control circuit malfunction • Low engine compression (Over capacity of blow-by gas) • Electronic throttle control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING OR STORED DTCs** • Turn the ignition switch off then to the ON position. (Engine off) • Verify pending code or stored DTCs using the WDS or equivalent. • Are DTCs P0506, P0507, P0638, P2100, P2101, P2102, P2103, P2108, or P2119 present?	Yes	Perform the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
3	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the TP sweep inspection. (See01–03B–85 Throttle position (TP) sweep inspection.) • Does the electronic throttle control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to the inspection result. Then go to Step 9.
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** **Note** • The following test should be performed for vehicles with A/C. Go to the next step for vehicles without A/C • Turn the fan switch off. • Is the magnetic clutch still on?	Yes	Go to "A/C ALWAYS ON / A/C COMPRESSOR RUNS CONTINUOUSLY." of ENGINE SYMPTOM TROUBLESHOOTING then go to Step 9. (See 01–03B–9 ENGINE SYMPTOM TROUBLESHOOTING [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION** • Apply electrical load. • Does the engine speed increase?	Yes	Go to the next step.
		No	Repair for a short to the power supply in the generator control circuit, then go to Step 9.
6	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine running. • Does the engine speed increase?	Yes	Clean or replace the air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT THROTTLE BODY PASSAGE** • Is the throttle body clogged?	Yes	Clean or replace the throttle body passage, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0505 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the WDS or equivalent. • Perform the KOER Self-Test. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0506 [L3 WITH TC]

E6U010200500W11

DTC P0506	Idle control system RPM lower than expected
DETECTION CONDITION	• Actual idle speed is lower than expected by **100 rpm** for **14 s** when the brake pedal is depressed (brake switch is on) and the steering wheel is held straight ahead (power steering pressure switch is off). **Note** • If the atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or the intake air temperature is **below –10 °C {14 °F}**, the PCM cancels the diagnosis of P0506. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator malfunction • Purge solenoid valve malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Repair the applicable DTCs. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT A/C MAGNET CLUTCH OPERATION** • Turn the blower motor switch off. • Is the magnet clutch still on?	Yes	Refer to "A/C is always on or A/C compressor runs continuously." of ENGINE SYMPTOM TROUBLESHOOTING, then go to Step 10. (See 01–03B–71 NO.24 A/C IS ALWAYS ON OR A/C COMPRESSOR RUNS CONTINUOUSLY [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) — TP sensor (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to Step 10.
6	**INSPECT PURGE SOLENOID VALVE MALFUNCTION** • Perform the purge solenoid valve inspection. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the purge solenoid valve normal?	Yes	Go to the next step.
		No	Replace the purge solenoid valve, then go to Step 10.
7	**INSPECT AIR CLEANER ELEMENT** • Remove the air cleaner element with the engine running. • Does the engine speed increase?	Yes	Replace the air cleaner element, then go to Step 10.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is the engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 10.
9	**INSPECT GENERATOR** • Perform the generator inspection. (See 01–17B–6 GENERATOR INSPECTION [L3 WITH TC].) • Is the generator normal?	Yes	Go to the next step.
		No	Repair or replace the related part, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0506 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress the brake pedal for **14 s or more.** • Is PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0507 [L3 WITH TC]

E6U010200500W12

DTC P0507	Idle control system RPM higher than expected
DETECTION CONDITION	• Actual idle speed is higher than expected by **200 rpm** for **14 s** when the brake pedal is depressed (brake switch is on) and steering wheel is held straight ahead (power steering pressure switch is off). **Note** • If the atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or the intake air temperature is **below –10 °C {14 °F}**, the PCM cancels diagnosis of P0507. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Vacuum hose misconnection • PCM malfunction

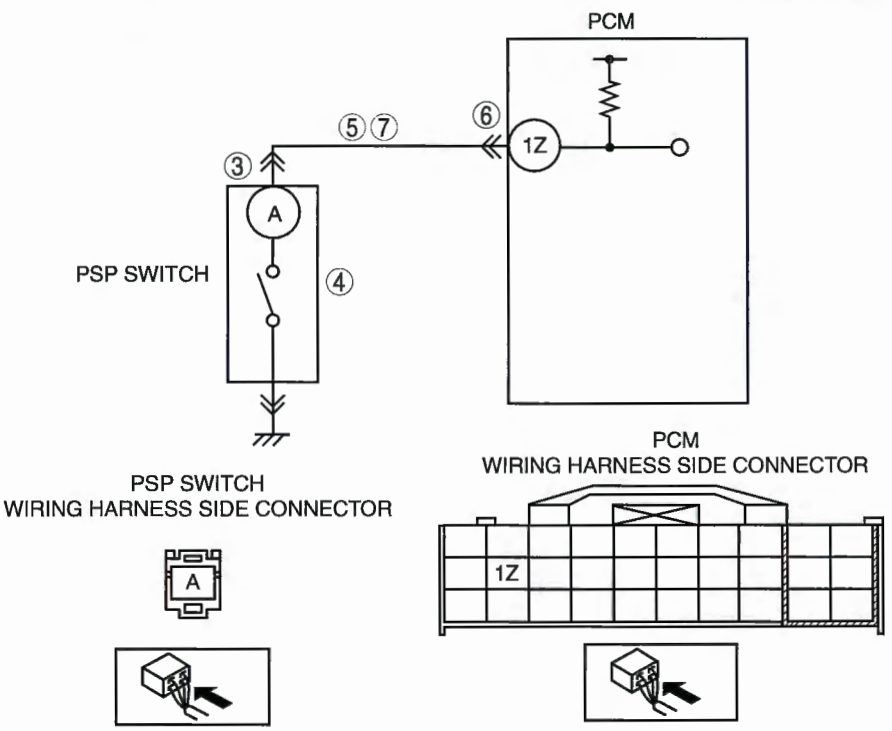
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn ignition switch to off, then ON position (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Repair applicable DTCs. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Are the vacuum hoses connecting accurately? (See 01–13B–4 VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].)	Yes	Go to the next step.
		No	Reconnect the vacuum hoses correctly, then go to step 6.
5	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM MALFUNCTION** • Inspect the following parts: — APP sensor (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) — TP sensor (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Are they normal?	Yes	Go to the next step.
		No	Replace the necessary parts, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress the brake pedal for **14 s or more.** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0550 [L3 WITH TC]

E6U010200500W13

DTC P0550	PSP switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the PSP switch signal, If the input voltage is low voltage (switch stays on) for **1 min.** when the VSS is **above 60.0 km/h {37.4 mph}** and the ECT is **above 60 °C {140 °F}**, the PCM determine that the PSP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PSP switch malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between the PSP switch terminal and PCM terminal 1Z • Open circuit in the wiring harness between the PSP switch terminal and PCM terminal 1Z • PCM malfunction



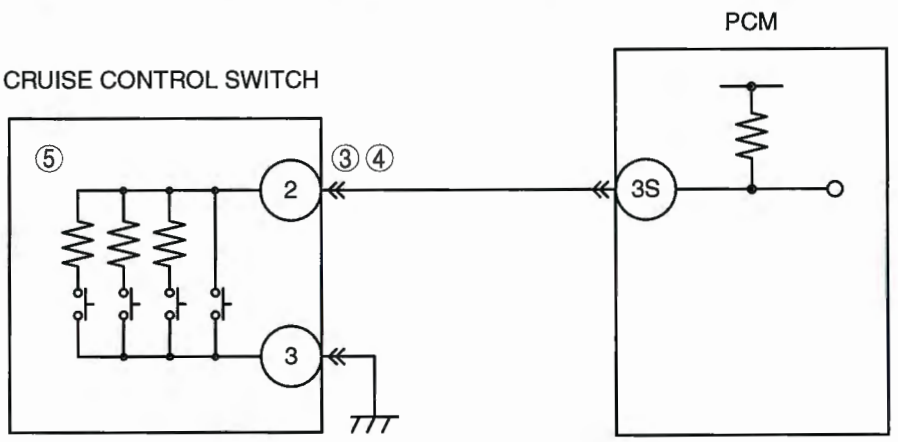
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair formation availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PSP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PSP connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT PSP SWITCH** • Perform the PSP switch inspection. (See 01–40B–24 POWER STEERING PRESSURE (PSP) SWITCH INSPECTION [L3 WITH TC].) • Is the PSP switch normal?	Yes	Go to the next step.
		No	Replace the PSP switch, then go to Step 8.
5	**INSPECT PSP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the PCM connector. • Inspect for continuity between the PSP switch terminal (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn ignition switch to OFF • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT SIGNAL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Inspect for continuity between PSP terminal A (harness-side) and PCM terminal 1Z (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0550 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive the vehicle **above 60 km/h {37.3 mph}** for **1 min.** • Verify that the ECT PID is **above 60 °C {140 °F}** using the WDS or equivalent. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

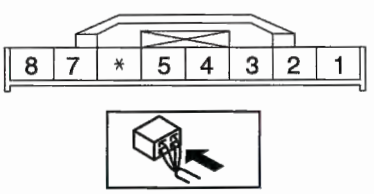
DTC P0564 [L3 WITH TC]

E6U010200500W14

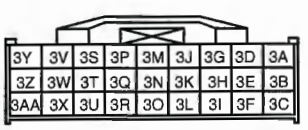
DTC P0564	Cruise control switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the cruise control switch signal. If the PCM detects that any one of following switches (Main, CANCEL, SET/COAST, RESUME/ACCEL) remains on for **2 min**, the PCM determines that the cruise control switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Cruise control switch malfunction • Connector or terminal malfunction • Short to power circuit in wiring harness from cruise control switch terminal 2and PCM terminal 3S • Short to ground circuit in wiring harness from cruise control switch terminal 2and PCM terminal 3S • PCM malfunction

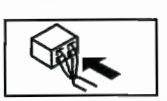


CRUISE CONTROL SWITCH
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR





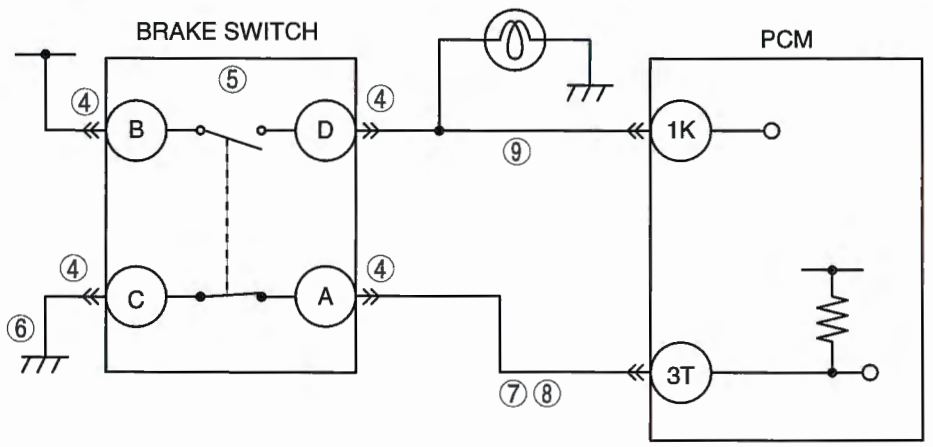
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT CRUISE CONTROL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or the replace the terminal, then go to Step 6.
		No	Go to the next step.
3	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Disconnect the cruise control switch and PCM connectors. • Inspect for continuity between cruise control switch terminal 2 (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace for a short to ground, then go to Step 6.
		No	Go to the next step.
4	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Inspect the voltage between cruise control switch terminal 2 (wiring harness-side) and body ground. • Is the voltage **below 1.0 V**?	Yes	Go to the next step.
		No	Repair or replace for a short to the power supply, then go to Step 6.
5	**INSPECT CRUISE CONTROL SWITCH OPERATION** • Inspect the cruise control switch. (See 01–20B–1 CRUISE CONTROL SWITCH INSPECTION [L3 WITH TC].) • Is the cruise control switch normal?	Yes	Go to the next step.
		No	Replace the cruise control switch, then go to the next step.
6	**VERIFY TROUBLESHOOTING OF P0564 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive the vehicle using cruise control for **2 min. or more.** • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

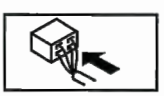
DTC P0571 [L3 WITH TC]

E6U010200500W15

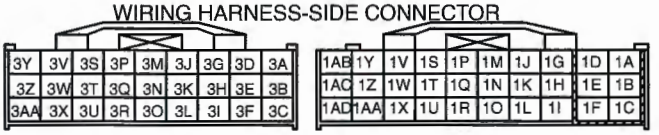
DTC P0571	Brake switch circuit problem
DETECTION CONDITION	• The PCM monitors the change in the input voltage for brake switch No.1 and No.2. If the PCM detects tha* both brake switches No.1 and No.2 remain on or off for **15 s**, it determines that the brake switch circuit ha a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Open circuit between brake switch terminal A and PCM terminal 3T • Open circuit between brake switch terminal C and body ground • Short to the power between brake switch terminal A and PCM terminal 3T • Short to the ground circuit between brake switch terminal A and PCM terminal 3T • PCM malfunction

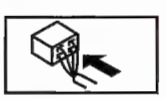


BRAKE SWITCH
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0703 also present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged, pull-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT BRAKE SWITCH** • Inspect the brake switch. • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to Step 10.
6	**INSPECT GROUND CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
7	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO GROUND** • Inspect for continuity between brake switch terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground circuit, then go to Step 10.
		No	Go to the next step.
8	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal A (wiring harness-side) and instrument cluster terminal 3T (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT SIGNAL CIRCUIT OF BRAKE SWITCH NO.2 FOR SHORT TO POWER** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between brake switch terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF P0571 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to the ON position (Engine off). • Depress and release the brake pedal **more than 5 times**. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0601 [L3 WITH TC]

E6U010200600W10

DTC P0601	Internal control module memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal memory malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0601 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is same DTC present?	Yes	Replace the PCM, go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0602 [L3 WITH TC]

E6U010200600W11

DTC P0602	PCM programming error
DETECTION CONDITION	• No configuration data in PCM **Note** • If the "PCM CONFIGURATION" is successful, the PCM stores DTC P0602 and illuminates the MIL (System is normal). Clear DTC P0602 using the WDS or equivalent after the "PCM CONFIGURATION". • MIL turns off after three drive cycles with no failure (DTCs remain in PCM). **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Configuration has not been completed. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Perform PCM configuration procedure, then go to the next step. (See 01–40B–20 PCM CONFIGURATION [L3 WITH TC].)
3	**VERIFY TROUBLESHOOTING OF DTC P0602 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0604 [L3 WITH TC]

E6U010200600W12

DTC P0604	PCM RAM error
DETECTION CONDITION	• PCM internal RAM malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0604 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0606 [L3 WITH TC]

E6U010200600W13

DTC P0606	ECM/PCM processor
DETECTION CONDITION	• PCM internal CPU malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0606 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0607 [L3 WITH TC]

E6U010200600W14

DTC P0607	PCM performance problem
DETECTION CONDITION	• PCM internal malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P0607 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0610 [L3 WITH TC]

E6U010200600W15

DTC P0610	PCM vehicle options error
DETECTION CONDITION	• PCM data configuration error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM malfunction

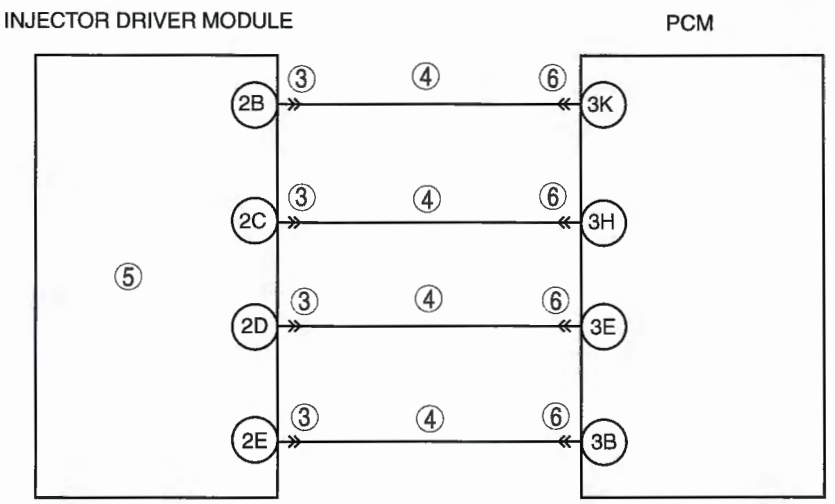
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0610 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

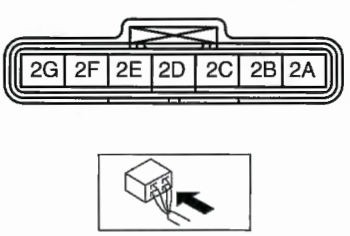
DTC P0611 [L3 WITH TC]

E6U010200600W16

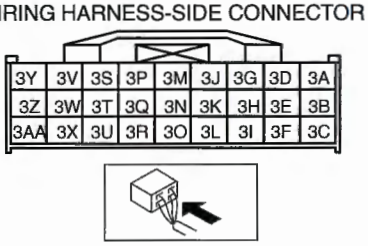
DTC P0611	Fuel injector control module performance
DETECTION CONDITION	• When the PCM drives fuel injectors No.1—No.4 but the injector driver module No.1—No.4 circuit voltage is low, the PCM determines that there is a fuel injector control module performance problem. **MONITORING CONDITION** — The following conditions are met: • Battery voltage: **10.03 V or more** • Fuel injection control: except during fuel cut **Diagnostic support note** • This is a continuous monitor (Other). • MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Injector driver module malfunction • Connector or terminal malfunction • Short to ground in the wiring harness between injector driver module terminal 2B and PCM terminal 3K • Short to ground in the wiring harness between injector driver module terminal 2C and PCM terminal 3H • Short to ground in the wiring harness between injector driver module terminal 2D and PCM terminal 3E • Short to ground in the wiring harness between injector driver module terminal 2E and PCM terminal 3B • PCM malfunction



INJECTOR DRIVER MODULE
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INJECTOR DRIVER MODULE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the injector driver module connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT INJECTOR DRIVER MODULE CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Inspect for continuity between the following terminals. — Injector driver module terminal 2B (wiring harness-side) and body ground — Injector driver module terminal 2C (wiring harness-side) and body ground — Injector driver module terminal 2D (wiring harness-side) and body ground — Injector driver module terminal 2E (wiring harness-side) and body ground • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT INJECTOR DRIVER MODULE** • Inspect the injector driver module. (See 01–40B–21 INJECTOR DRIVER MODULE INSPECTION [L3 WITH TC].) • Is there malfunction?	Yes	Replace the injector driver module, then go to Step 7. (See 01–40B–21 INJECTOR DRIVER MODULE REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0611 COMPLETED** • Make sure to connect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P0638 [L3 WITH TC]

E6U010200600W17

DTC P0638	Throttle actuator control range/performance
DETECTION CONDITION	• The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle actuator control circuit range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

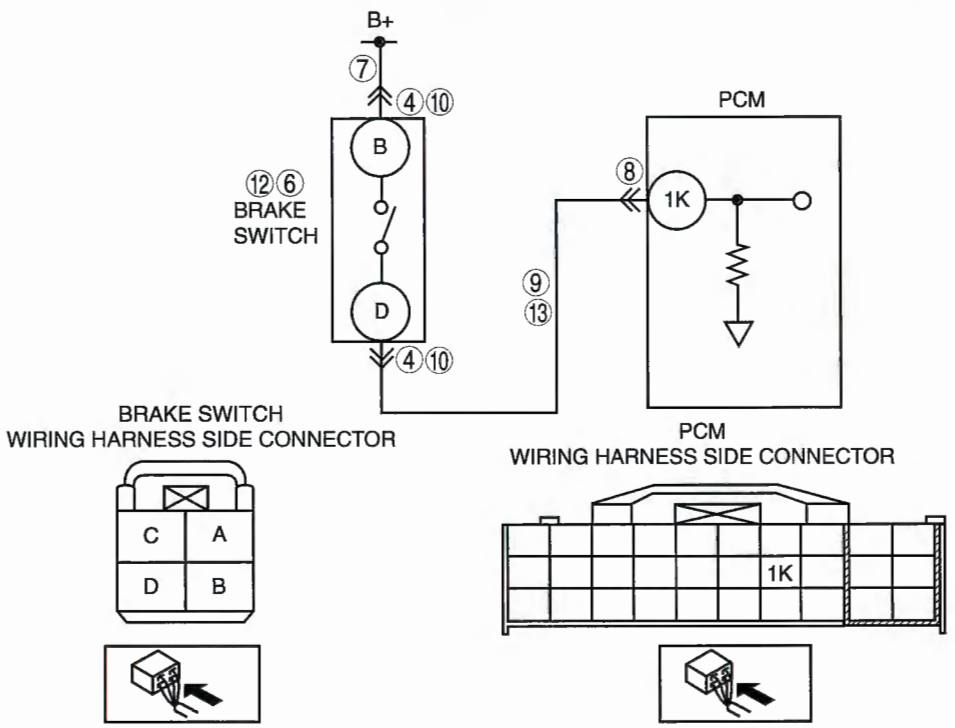
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Perform the diagnostic procedure for the applicable DTCs.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF P0638 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and let it idle. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P0703 [L3 WITH TC]

E6U010200700W05

DTC P0703	Brake switch No.1 circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the brake switch. If the PCM does not detect the voltage change while alternately accelerating and decelerating **8 times**, the PCM determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Poor connection of the brake switch connector or the PCM connector • Short to the power supply between brake switch terminal D and PCM connector terminal 1K • Open circuit between brake switch terminal D and PCM connector terminal 1K • Open circuit between the battery positive terminal and brake switch terminal B • PCM malfunction



Diagnostic procedure

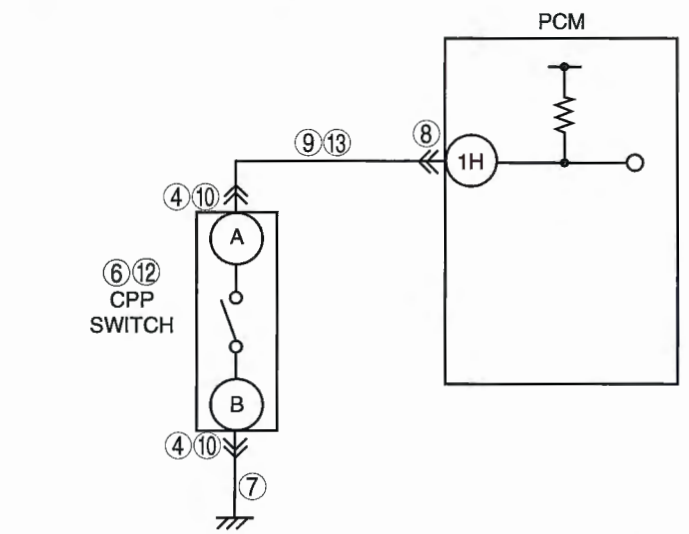
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the WDS or equivalent to the DLC-2. • Access the BOO PID. • Verify the BOO PID during brake pedal operation. • Is the BOO PID always off?	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the brake switch connector. • Inspect for poor connection (such as damaged pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the BOO PID. • Connect a jumper wire between brake switch terminal B and D (harness-side). • Is the BOO PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT BRAKE SWITCH** • Perform the brake switch inspection. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
7	**INSPECT BRAKE SWITCH POWER CIRCUIT FOR OPEN CIRCUIT** • Measure the voltage between brake switch connector terminal B (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the brake switch power circuit for an open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between brake switch terminal D (harness-side) and PCM terminal 1K (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect brake switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**CLASSIFY BRAKE SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the BOO PID. • Verify that the BOO PID changes from on to off when the brake switch connector is disconnected. • Does BOO PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT BRAKE SWITCH** • Perform the brake switch inspection. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to Step 14.
		No	Replace the brake switch, then go to Step 14.
13	**INSPECT BRAKE SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Measure the voltage between brake switch connector terminal D (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0703 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive vehicle at **30 km/h {18.6 mph} or more**. • Depress and release brake pedal **more than 8 times** while driving the vehicle. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

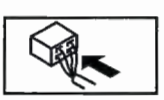
DTC P0704 [L3 WITH TC]

E6U010200700W06

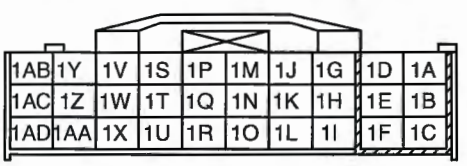
DTC P0704	Clutch switch circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the CPP switch. If the PCM does not detect the voltage change while the vehicle is driven at a vehicle speed of **above 30 km/h {19 mph}** and stopped **8 times** alternately, the PCM determines that the CPP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Clutch switch malfunction • Poor connection of the CPP switch connector or the PCM connector • Short to ground between CPP switch terminal A and PCM connector terminal 1H • Open circuit between CPP switch terminal A and PCM connector terminal 1H • Open circuit between ground and CPP switch terminal B • PCM malfunction

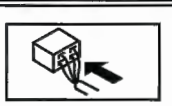


CPP SWITCH
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

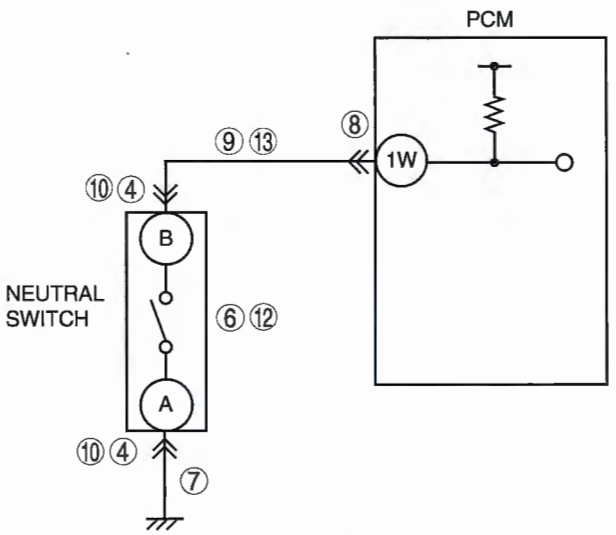
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP PID. • Verify the CPP PID during clutch pedal operation. • Is the CPP PID always off?.	Yes	Go to Next step.
		No	Go to Step 10.
4	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP PID. • Connect a jumper wire between CPP switch terminal A and B (harness-side). • Is the CPP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT CPP SWITCH** • Perform the CPP switch inspection. (See 01–40B–22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3 WITH TC].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
7	**INSPECT CPP SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal B (harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the CPP switch power circuit for an open circuit, then Go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between CPP switch terminal A (harness-side) and PCM terminal 1H (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT CPP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the CPP switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
1	**CLASSIFY CPP SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP PID. • Verify that the CPP PID changes from on to off when the CPP switch connector disconnected. • Does the CPP PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.

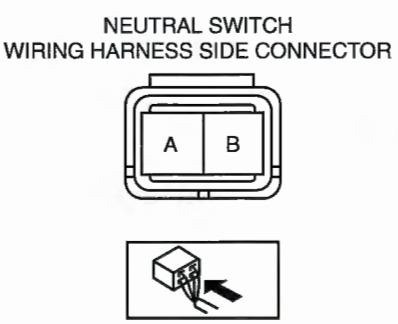
STEP	INSPECTION		ACTION
12	**INSPECT CPP switch** • Perform the CPP switch inspection. (See 01–40B–22 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [L3 WITH TC].) • Is the CPP switch normal?	Yes	Go to Step 14.
		No	Replace the CPP switch, then go to Step 14.
13	**INSPECT CPP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between CPP switch terminal A and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 14.
		No	Go to Next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0704 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Operate the clutch pedal while driving the vehicle **below 30 km/h {19 mph} and stopping 8 times** alternately. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

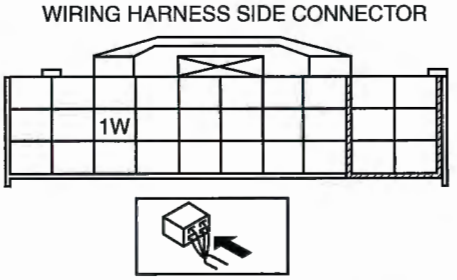
DTC P0850 [L3 WITH TC]

E6U010200800W02

DTC P0850	Neutral switch circuit malfunction
DETECTION CONDITION	• PCM monitors changes in the input voltage from the neutral switch. If the PCM does not detect the voltage change while driving the vehicle at a speed **above 30 km/h {19 mph}** and the clutch pedal is depressed and released **10 times** repeatedly, the PCM determines that the neutral switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Neutral switch malfunction • Poor connection of the neutral switch connector or PCM connector • Short to ground between neutral switch terminal B and PCM connector terminal 1W • Open circuit in the wiring harness between neutral switch terminal B and PCM connector terminal 1W • Open circuit in the wiring harness between ground and brake switch terminal A. • PCM malfunction







Diagnostic procedure

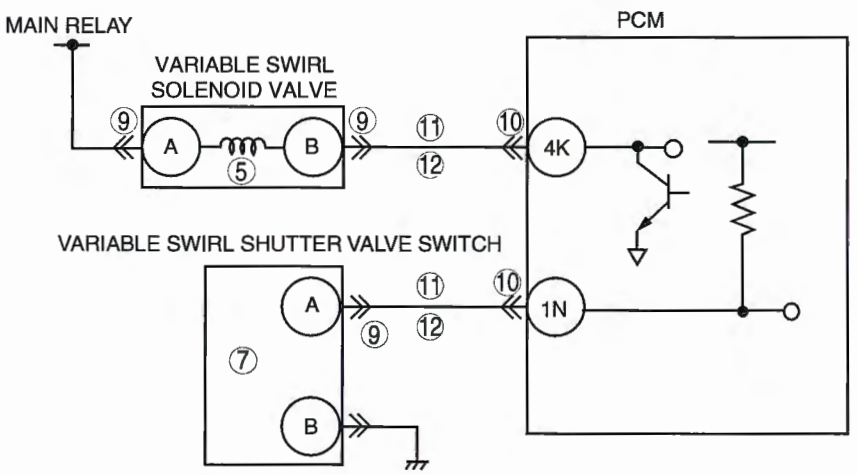
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP/PNP PID. • Verify the CPP/PNP PID when gear is in the neutral position. • Is the CPP/PNP PID always off?.	Yes	Go to Next step.
		No	Go to Step 10.
4	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP/PNP PID. • Connect a jumper wire between neutral switch terminal A and B (harness-side). • Is the CPP/PNP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT NEUTRAL SWITCH** • Perform the neutral switch inspection. (See 01–40B–23 NEUTRAL SWITCH INSPECTION [L3 WITH TC].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
7	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal A (harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the neutral switch power circuit for an open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between neutral switch terminal B (harness-side) and PCM terminal 1W (harness-side). • Is there continuity?	Yes	Repair or replace wiring harness for an open circuit, then go to Step 14.
		No	Go to Step 14.
10	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect neutral switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect the WDS or equivalent to the DLC-2. • Access the CPP/PNP PID. • Verify that the CPP/PNP PID changes from on to off when the neutral switch connector is disconnected. • Does the CPP/PNP PID change from on to off?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT NEUTRAL SWITCH** • Perform the neutral switch inspection. (See 01–40B–23 NEUTRAL SWITCH INSPECTION [L3 WITH TC].) • Is the neutral switch normal?	Yes	Go to Step 14.
		No	Replace the neutral switch, then go to Step 14.
13	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between neutral switch terminal B (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 14.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0850 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle **above 30 km/h {19 mph}** and stop vehicle. • Depress and release clutch pedal **more than 10 times** during the drive cycle. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

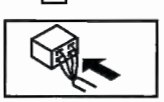
DTC P2004 [L3 WITH TC]

E6U010202000W18

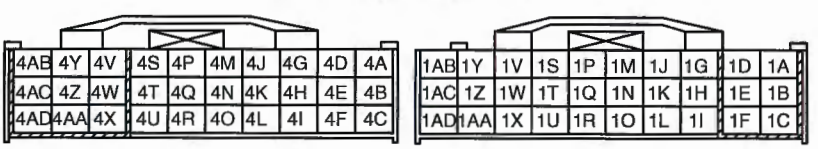
DTC P2004	Variable swirl control system shutter valve stuck open
DETECTION CONDITION	• PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If the PCM turns variable swirl solenoid valve on but variable swirl shutter valve position still remains open (variable swirl shutter valve switch is on), the PCM determines that the variable swirl shutter valve is stuck open. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Variable swirl shutter valve actuator malfunction (stuck open) • Misconnected or pulled out vacuum hose • Variable swirl solenoid valve malfunction • Open circuit in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 4K • Short to power in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 4K • Open circuit in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 1N • Short to power in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 1N • PCM malfunction

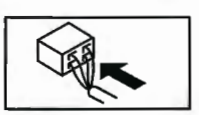


VARIABLE SWIRL SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR

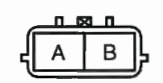


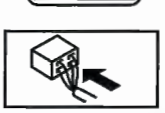
PCM WIRING HARNESS SIDE CONNECTOR





VARIABLE SWIRL SHUTTER VALVE SWITCH WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

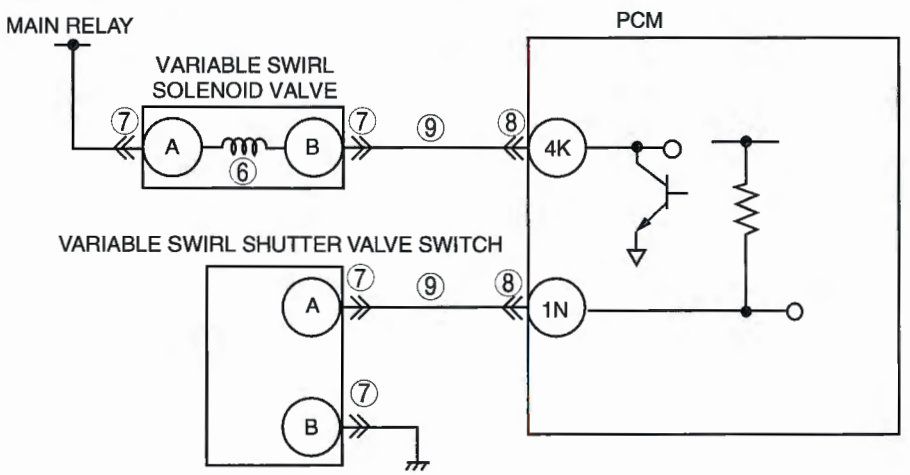
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	**VERIFY IF STORED OTHER DTCs STORED** • Verify stored DTCs using the WDS or equivalent. • Is DTC P2088 or P2089 present?	Yes	Go to the appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform "VARIABLE SWIRL SOLENOID VALVE INSPECTION". (See 01–13B–13 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace variable swirl solenoid valve, then go to Step 13.
6	**INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR** • Perform "VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION". (See 01–13B–13 VARIABLE SWIRL SHUTTER VALVE ACTUATOR INSPECTION [L3 WITH TC].) • Is the variable swirl shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace the intake manifold, then go to Step 13.
7	**INSPECT VARIABLE SWIRL SHUTTER VALVE SWITCH** • Perform the "VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION". (See 01–40B–25 VARIABLE SWIRL SHUTTER VALVE SWITCH INSPECTION [L3 WITH TC].) • Is the variable swirl shutter valve switch normal?	Yes	Go to the next step.
		No	Replace the intake manifold, then go to Step 13.
8	**VERIFY CONNECTION OF VACUUM HOSE ROUTING** • Verify that the vacuum hoses are connected properly. (See 01–13B–4 VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) • Are the vacuum hoses connected properly?	Yes	Go to the next step.
		No	Connect the vacuum hoses properly, then go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SW CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the variable swirl solenoid valve connector and variable swirl shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
11	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SW SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the following terminals: — Variable swirl solenoid valve terminal B (harness-side) and PCM terminal 4K (harness-side). — Variable swirl shutter valve sw terminal A (harness-side) and PCM terminal 1N (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 13.
12	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWITCH CIRCUIT FOR SHORT TO POWER SUPPLY** • Disconnect the variable swirl solenoid valve connector and variable swirl shutter valve switch connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals and body ground. — PCM terminal 4K (harness-side). — PCM terminal 1N (harness-side). • Is the voltage **B+?**	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P2004 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

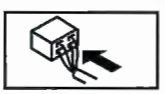
DTC P2006 [L3 WITH TC]

E6U010202000W19

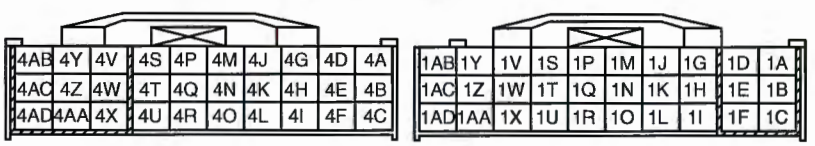
DTC P2006	Variable swirl control system shutter valve stuck closed
DETECTION CONDITION	• PCM monitors the mass variable swirl shutter valve position using the variable swirl shutter valve switch. If PCM turns the variable swirl solenoid valve off but the variable swirl position still remains closed (variable swirl shutter valve switch is off), the PCM determines that the variable swirl shutter valve is stuck closed. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • TP sensor malfunction • CKP sensor malfunction • Variable swirl solenoid valve malfunction • Variable swirl shutter valve malfunction (stuck closed) • Variable swirl shutter valve actuator malfunction (stuck closed). • Short to ground circuit between variable swirl solenoid valve terminal B and PCM terminal 4K • Short to ground in the wiring harness between variable swirl shutter valve switch terminal A and PCM terminal 1N • PCM malfunction

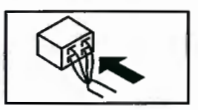


VARIABLE SWIRL SOLENOID VALVE WIRING HARNESS SIDE CONNECTOR

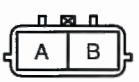


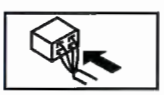
PCM WIRING HARNESS SIDE CONNECTOR





VARIABLE SWIRL SHUTTER VALVE SWITCH WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

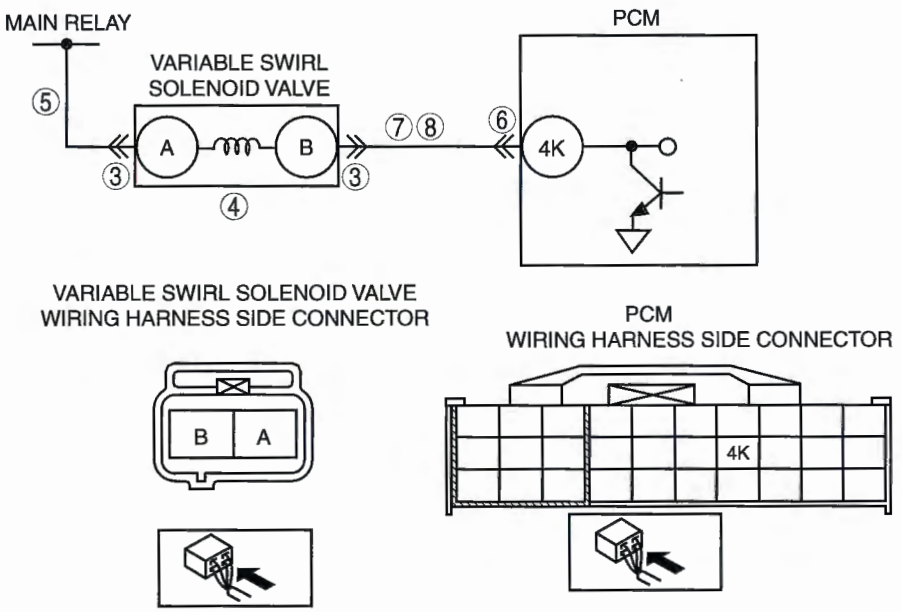
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive the vehicle under following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to INTERMITTENT CONCERN TROUBLESHOOTING procedure. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)
4	**VERIFY STORED OTHER DTCS** • Verify stored DTCs using WDS or equipment. • Is other DTC present except P0117, P0118, P0121, P0122, P0123 and/or P0335?	Yes	Go to appropriate DTC troubleshooting procedures.
		No	Go to the next step.
5	**INSPECT VARIABLE SWIRL SHUTTER VALVE ACTUATOR** • Perform the "Variable Swirl System Operation Inspection". (See 01–03B–86 Variable Swirl System Operation Inspection.) • Is the variable swirl shutter valve actuator normal?	Yes	Go to the next step.
		No	Replace the variable swirl shutter valve actuator, then go to Step 10.
6	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform the "variable swirl solenoid valve airflow inspection". (See 01–13B–13 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 10.
7	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SW CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the variable swirl solenoid valve connector and the variable swirl shutter valve switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection at the PCM terminals (such as damaged, pulled-out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 10.
		No	Go to the next step.

STEP	INSPECTION		ACTION
9	**INSPECT VARIABLE SWIRL SOLENOID VALVE OR VARIABLE SWIRL SHUTTER VALVE SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between the following terminals and body ground. — PCM terminal 4K (harness-side). — PCM terminal 1N (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2006 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start the engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Drive the vehicle under the following conditions: — Engine coolant temperature is **above 63 °C {145 °F}**. — Engine speed: **below 3,750 rpm** — Throttle opening angle is as follows: • Engine speed **below 1,500 rpm: above 35%** • Engine speed **between 1,500–2,500 rpm: between 25–35%** • Engine speed **above 2,500: below 25%** • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2009 [L3 WITH TC]

E6U010202000W20

DTC P2009	Variable swirl solenoid valve control circuit low
DETECTION CONDITION	• PCM monitors the variable swirl solenoid valve control signal. If the PCM turns variable swirl solenoid valve off but the voltage still remains low, the PCM determines that the variable swirl solenoid valve control circu has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at PCM and/or variable swirl solenoid valve • Short to ground in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 4K • Open circuit in the wiring harness between main relay and variable swirl solenoid valve terminal A • Open circuit in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 4K • Variable swirl solenoid valve malfunction • PCM malfunction



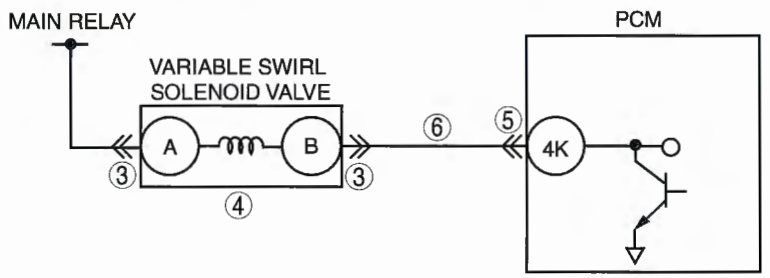
Diagnostic procedure

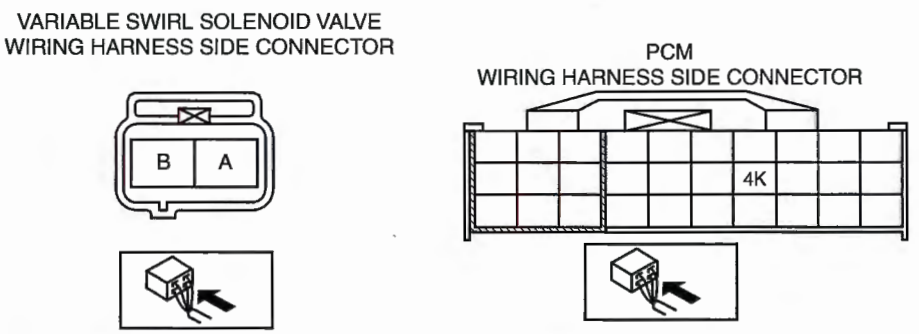
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform the variable swirl solenoid valve inspection. (See 01–13B–13 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 9.
5	**INSPECT VARIABLE SWIRL SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the variable swirl solenoid valve connector. • Turn ignition switch to the ON position (Engine off). • Measure voltage between variable swirl solenoid valve terminal A (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 4K. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between variable swirl solenoid valve terminal B (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect variable swirl solenoid valve connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 4K (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open or short to ground circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2009 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2010 [L3 WITH TC]

E6U010202000W21

DTC P2010	Variable swirl solenoid valve control circuit high
DETECTION CONDITION	• PCM monitors the variable swirl solenoid valve control signal. If the PCM turns variable swirl solenoid valve on but the voltage still remains high, the PCM determines that the variable swirl solenoid valve control circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at the PCM and/or the variable swirl solenoid valve • Short to the power supply in the wiring harness between variable swirl solenoid valve terminal B and PCM terminal 4K • Variable swirl solenoid valve malfunction • PCM malfunction





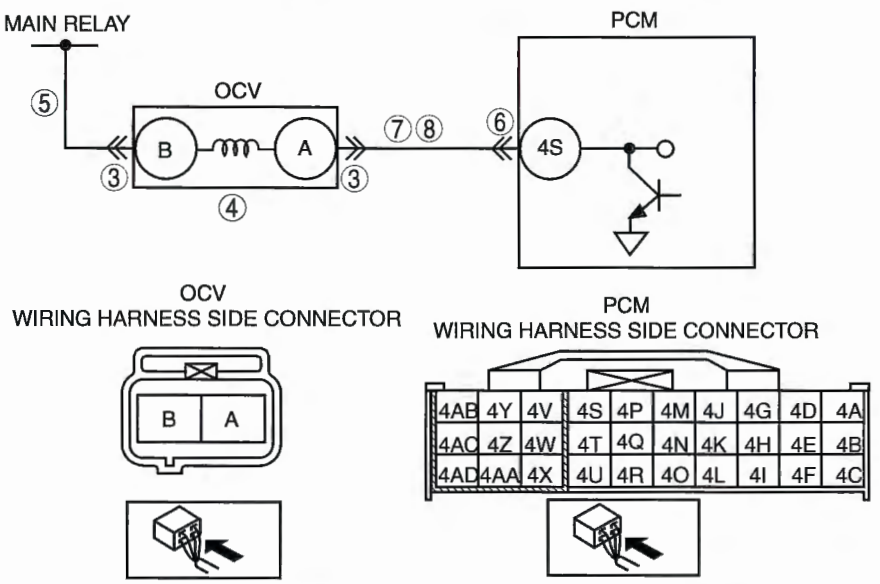
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT VARIABLE SWIRL SOLENOID VALVE** • Perform variable swirl solenoid valve inspection. (See 01–13B–13 VARIABLE SWIRL SOLENOID VALVE INSPECTION [L3 WITH TC].) • Is the variable swirl solenoid valve normal?	Yes	Go to the next step.
		No	Replace the variable swirl solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 4K. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT VARIABLE SWIRL SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the variable swirl solenoid valve. • Turn ignition switch to the ON position (Engine off). • Measure voltage between PCM terminal 4K (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2010 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2088 [L3 WITH TC]

E6U010202000W22

DTC P2088	OCV actuator circuit low
DETECTION CONDITION	• PCM monitors the OCV voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is below the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connectors at the PCM and/or OCV • Short to ground in the wiring harness between OCV terminal A and PCM terminal 4S • Open circuit in the wiring harness between main relay and OCV terminal B • Open circuit in the wiring harness between OCV terminal A and PCM terminal 4S • OCV malfunction • PCM malfunction



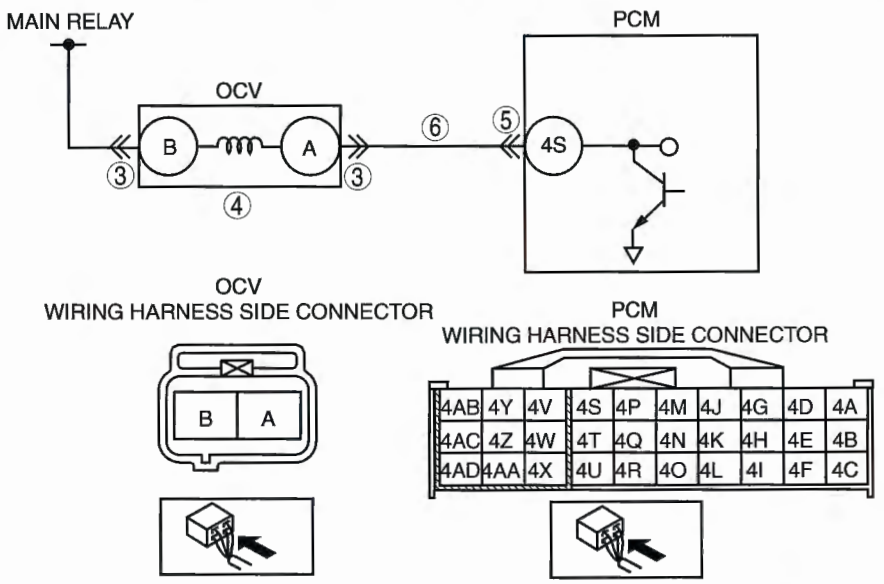
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV** • Perform the OCV inspection. (See 01–10B–38 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace OCV, then go to Step 9.
5	**INSPECT OCV POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the OCV connector. • Turn ignition switch to the ON position (Engine off). • Measure voltage between OCV terminal B (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 9.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 4S. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between OCV terminal A (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV CONTROL CIRCUIT FOR OPEN CIRCUIT** • Connect the OCV connector. • Turn ignition switch to the ON position (Engine off). • Check for continuity between OCV terminal A (harness-side) and PCM terminal 4S (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open or short to ground circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2088 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2089 [L3 WITH TC]

E6U010202000W23

DTC P2089	OCV actuator circuit high
DETECTION CONDITION	• PCM monitors the OCV voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection at the PCM and/or OCV connectors • Short to the power supply in the wiring harness between OCV terminal A and PCM terminal 4S • OCV malfunction • PCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV** • Perform the OCV inspection. (See 01–10B–38 OIL CONTROL VALVE (OCV) INSPECTION [L3 WITH TC].) • Is the OCV normal?	Yes	Go to the next step.
		No	Replace the OCV, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection at PCM terminal 4S. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT OCV CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Remove the OCV. • Turn the ignition switch to the ON position (Engine off). • Measure voltage between PCM terminal 4S and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2089 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to off. • Start the engine and warm it up completely. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2096 [L3 WITH TC]

E6U010202000W24

DTC P2096	Target A/F feedback system too lean
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim while under target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system is too lean. • Rear HO2S sensor voltage is **more than 0.1 V** **Diagnostic support note** • This is a continuous monitor (Fuel system). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Exhaust gas leakage • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • Front HO2S malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2096 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access O2S12 PID. • Read O2S12 PID under the following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the TWC and rear HO2S. • If there is no leakage, replace the rear HO2S. (See 01–15B–3 HO2S Removal Note.) Then go to Step 20.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 20.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access the O2S11 PID. • Read the O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **–0.1—0.1A** when idle. — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15B–3 HO2S Removal Note.) Then go to Step 20.
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.
10	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect the hose in intake-air system for looseness, cracks or damages. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 20.
		No	Go to the next step.
11	**INSPECT IGNITION COIL WIRING HARNESSES** • Inspect the ignition coil related wiring harness condition (intermittent open or short circuit) for all cylinders. • Are wiring harness conditions normal?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 20.
12	**INSPECT IGNITION SYSTEM OPERATION** • Perform the spark test. (See 01–03B–90 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result. Then go to Step 20.
13	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul the engine, then go to Step 20.

STEP	INSPECTION		ACTION
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 18.
		No	Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 18.
		No	Replace the fuel delivery pipe, then go to Step 20.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 20.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.
19	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the fuel injector, then go to the next step. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2096 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2097 [L3 WITH TC]

E6U010202000W25

DTC P2097	Target A/F feedback system too rich
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim while under target A/F feedback control. If the fuel trim is less than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Exhaust gas leakage • Rear HO2S malfunction • IAT sensor malfunction • ECT sensor malfunction • Front HO2S malfunction • Excessive fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Purge valve malfunction • Insufficient engine compression • PCM malfunction

Diagnostic procedure

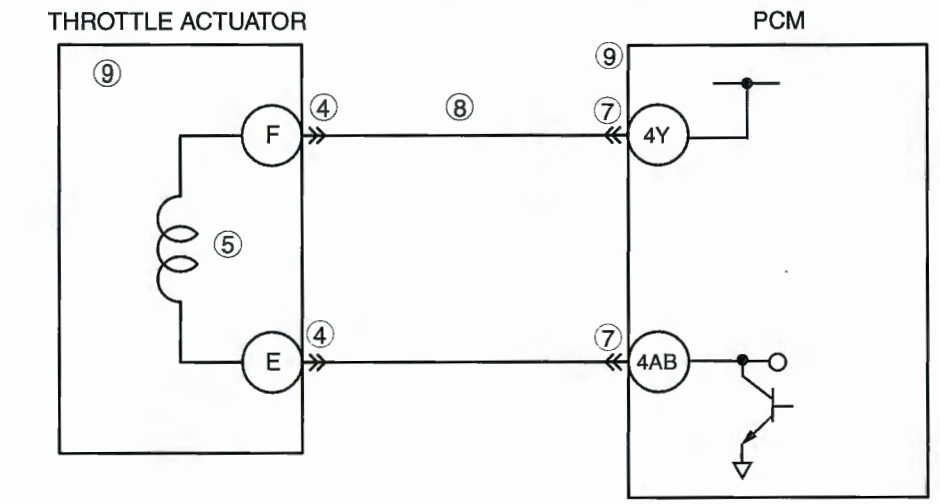
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY REPAIR INFORMATION AVAILABILITY** • Verify related service repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2178 or P2188 also present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2097 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access the O2S12 PID. • Read the O2S12 PID under following accelerator pedal condition (in NEUTRAL). — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition) • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and rear HO2S. • If there is no leakage, replace rear HO2S. (See 01–15B–3 HO2S Removal Note.) Then go to Step 15.
6	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs: (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.

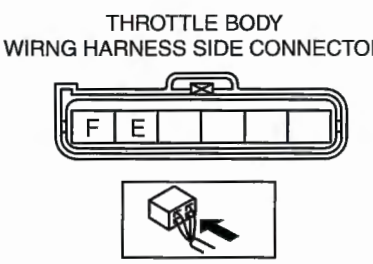
STEP	INSPECTION		ACTION
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Connect the WDS or equivalent to the DLC-2. • Start the engine and warm it up completely. • Access the O2S11 PID. • Read the O2S11 PID under following accelerator pedal condition (in NEUTRAL). — **–0.1—0.1A** when idle — **More than 0.25 mA** just after release of accelerator pedal (lean condition). • Is the PID normal?	Yes	Go to the next step.
		No	Visually inspect for exhaust gas leakage between the exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15B–3 HO2S Removal Note.) Then go to Step 15.
9	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 14.
		No	Go to the next step.
10	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 12.
11	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the fuel delivery pipe, then go to Step 15.
12	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump. • Monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 15.
		No	Go to the next step.
13	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If normal replace the fuel pump. Then go to Step 15.
14	**INSPECT LONG TERM FUEL TRIM** • Connect the WDS or equivalent to the DLC_2. • Access LONGFT1 PID. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step 1. • Is the LONGFT1 PID above FREEZE FRAME DATA?	Yes	Inspect the purge valve. (See 01–16B–10 PURGE SOLENOID VALVE INSPECTION [L3 WITH TC].) • If there is any malfunction, replace the purge valve. (See 01–13B–4 VACUUM HOSE ROUTING DIAGRAM [L3 WITH TC].) Then go to the next step.
		No	Go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P2097 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

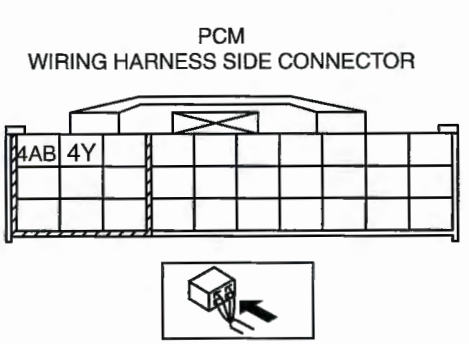
DTC P2100 [L3 WITH TC]

E6U010202100W29

DTC P2100	Throttle actuator circuit open
DETECTION CONDITION	• PCM monitors the electronic throttle valve motor current. If the PCM detects that the electronic throttle valve motor current is below the threshold current, the PCM determines that the electronic throttle valve motor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Throttle valve motor malfunction • Open circuit between throttle body terminal F and PCM terminal 4Y • Open circuit between throttle body terminal E and PCM terminal 4AB • Poor connection of throttle body connector or PCM connector • PCM malfunction







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Clear the DTC using the WDS or equivalent. • Start the engine and let it idle. • Is the same PENDING CODE present?	Yes	Go to the next step.
		No	Go to INTERMITTENT CONCERNS TROUBLESHOOTING procedure. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].)

STEP	INSPECTION		ACTION
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Check for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
5	**INSPECT THROTTLE VALVE ELECTRICAL MALFUNCTION** • Measure resistance between throttle body terminal E and F (part-side). • Is resistance approx. **1.3 ohms**?	Yes	Go to the next step.
		No	Replace the throttle body, then go to Step 13.
6	**CLASSIFY MALFUNCTION ET POWER SUPPLY CIRCUIT OR CONTROL CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal F (harness-side) and body ground. • Is the voltage **B+**?	Yes	Malfunction at control circuit. Go to the next step.
		No	Malfunction at power supply circuit. Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Check for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 13.
		No	Go to the next step.
8	**INSPECT POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to off. • Check for continuity between throttle body terminal F (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness to a short to ground, then go to Step 13.
		No	Go to the next step.
9	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Check for continuity between throttle body terminal F (harness-side) and PCM terminal 4Y (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 13.
10	**INSPECT CONTROL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal E (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 13.
		No	Go to the next step.
11	**INSPECT CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to off. • Check for continuity between throttle body terminal E (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 13.
		No	Go to the next step.
12	**INSPECT CONTROL CIRCUIT MALFUNCTION FOR OPEN CIRCUIT** • Check for continuity between throttle body terminal E (harness-side) and PCM terminal 4AB (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.

STEP	INSPECTION		ACTION
13	**VERIFY TROUBLESHOOTING OF DTC P2100 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2101 [L3 WITH TC]

E6U010202100W30

DTC P2101	Throttle actuator circuit range/performance
DETECTION CONDITION	• If the PCM detects any of the following conditions, the PCM determines that the throttle circuit has a malfunction. — Default throttle angle that the PCM stored and the throttle angle with drive-by-wire-relay off is not significant. — Voltage from drive-by-wire-relay is too high or too low — PCM detects large voltage difference between the drive-by-wire-relay and the main relay — PCM internal malfunction **Diagnostic support note** • This is a continuous monitor. • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Drive-by-wire-relay and related circuit malfunction • Main relay and related circuit malfunction • Throttle position sensor No.1 and related circuit malfunction • Throttle position sensor No.2 and related circuit malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and stored DTCs using the WDS or equivalent. • Are any DTCs present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2101 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
6	**INSPECT MAIN RELAY OUTPUT VOLTAGE** • Turn the ignition switch to off. • Connect the PCM connector. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 2Y and body ground. • Is the voltage **B+**?	Yes	Go to Step 13.
		No	Go to the next step.
7	**INSPECT MAIN RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the main relay. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
8	**INSPECT POWER SUPPLY OF MAIN RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal D (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
9	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF MAIN RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between main relay terminal A (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
10	**INSPECT MAIN RELAY** • Inspect the main relay. (See 09–21–7 RELAY INSPECTION.) • Is the main relay normal?	Yes	Go to the next step.
		No	Replace the main relay, then go to Step 22.

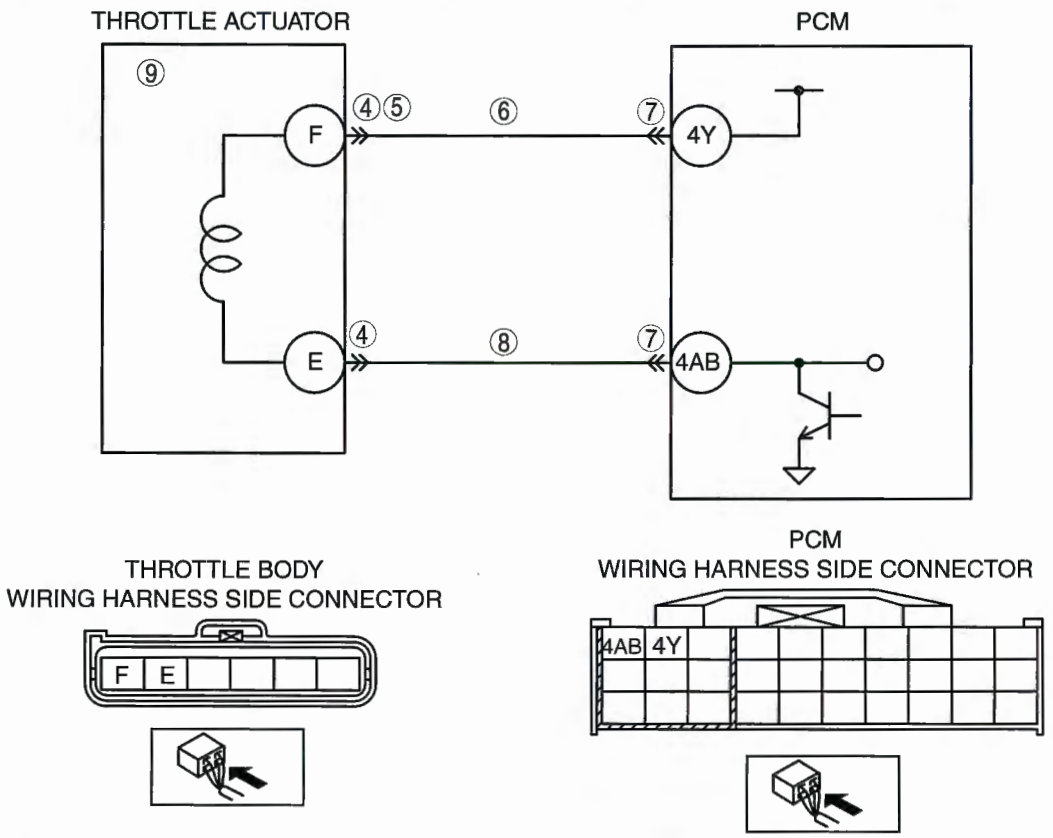
STEP	INSPECTION		ACTION
11	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Disconnect the main relay and the PCM connector. • Check for continuity between main relay terminal C (harness-side) and PCM terminal 2Y (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
12	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check for continuity between main relay terminal E (harness-side) and PCM terminal 2X (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
13	**INSPECT DRIVE-BY-WIRE-RELAY OUTPUT VOLTAGE** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between PCM terminal 4V (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a short to power supply, then go to Step 22.
14	**INSPECT DRIVE-BY-WIRE-RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the drive-by-wire-relay. • Check drive-by-wire-relay connector (harness-side) for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
15	**INSPECT POWER SUPPLY OF DRIVE-BY-WIRE-RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire-relay terminal D (harness-side) and body ground.	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
16	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF DRIVE-BY-WIRE-RELAY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between drive-by-wire-relay terminal E (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit between drive-by-wire-relay terminal E and main relay terminal C, then go to Step 22.
17	**INSPECT DRIVE-BY-WIRE-RELAY** • Inspect the drive-by-wire-relay. (See 09–21–7 RELAY INSPECTION.) • Is the drive-by-wire-relay normal?	Yes	Go to the next step.
		No	Replace the drive-by-wire-relay, then go to Step 22.
18	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Check for continuity between drive-by-wire-relay terminal C (harness-side) and PCM terminal 4V (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.
19	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check for continuity between drive-by-wire-relay A (harness-side) and PCM terminal 3C (harness-side).	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 22.

STEP	INSPECTION		ACTION
20	**INSPECT THROTTLE POSITION SENSOR NO.1 OUTPUT VOLTAGE** • Turn the ignition switch to off. • Connect the PCM connector. • Turn ignition switch to the ON position (Engine off). • Check voltage between PCM terminal 3M and body ground. • Is the voltage **0.40—0.60 V**?	Yes	Go to the next step.
		No	Check the throttle position sensor No.1 and related circuits and terminal. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) Repair or replace if necessary, then go to Step 22.
21	**INSPECT THROTTLE POSITION SENSOR NO.2 OUTPUT VOLTAGE** • Turn ignition switch to the ON position (Engine off). • Check the voltage between PCM terminal 3J and body ground. • Is the voltage **4.40—4.60 V**?	Yes	Go to the next step.
		No	Check the throttle position sensor No.2 and related circuits and terminal. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) Repair or replace as necessary, then go to the next step.
22	**VERIFY TROUBLESHOOTING OF DTC P2101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and run it at idle. • Turn ignition switch to OFF then ON (Engine off). • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
23	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2102 [L3 WITH TC]

E6U010202100W31

DTC P2102	Throttle actuator circuit low input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. If the PCM detects that the throttle actuator circuit current is excessively low, the PCM determines that the throttle actuator circuit was a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Open circuit between throttle body terminal F and PCM terminal 4Y • Open circuit between throttle body terminal E and PCM terminal 4AB • Short to ground circuit between throttle body terminal F and PCM terminal 4Y • Short to ground circuit between throttle body terminal E and PCM terminal 4AB • Poor connection of throttle body or PCM connector • Throttle valve motor malfunction • PCM malfunction



Diagnostic procedure

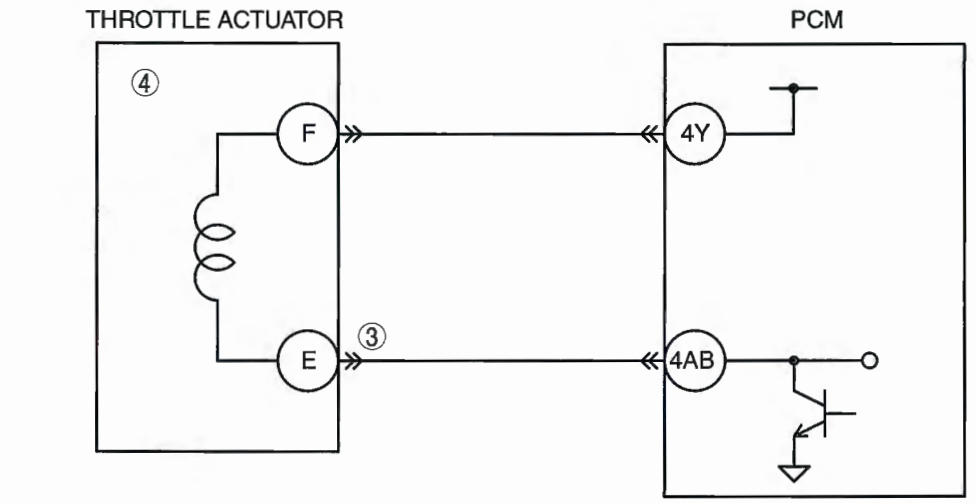
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

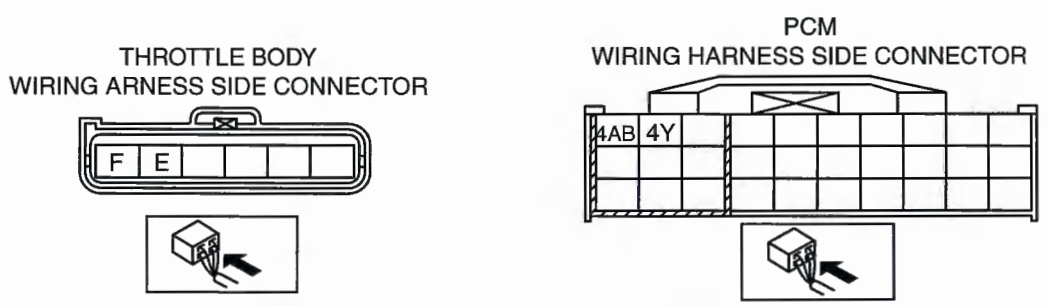
STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the WDS or equivalent. • Is the DTC P2100 also present?	Yes	Go to appropriate the DTC troubleshooting procedure, then go to Step 10.
		No	Go to the next step.
4	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged, pulled-put pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT POWER SUPPLY CIRCUIT OF THROTTLE ACTUATOR FOR OPEN CIRCUIT** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal F (harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
6	**INSPECT POWER SUPPLY CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO GROUND** • Turn the ignition switch to off. • Check continuity between throttle body terminal F (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground circuit, then go to Step 10.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
8	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Check for continuity between throttle body terminal E (harness-side) and PCM terminal 4AB (harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for an open circuit, then go to Step 10.
		No	Go to the next step.
9	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13B–12 THROTTLE ACTUATOR INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2103 [L3 WITH TC]

E6U010202100W32

DTC P2103	Throttle actuator circuit high input
DETECTION CONDITION	• PCM monitors the throttle actuator circuit current. If the PCM detects that the throttle actuator circuit current is excessively high, the PCM determines that the electronic throttle actuator circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Short to the power supply between throttle body terminal E and PCM terminal 4AB • Throttle valve motor malfunction • PCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CONTROL CIRCUIT OF THROTTLE ACTUATOR FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to off. • Disconnect the throttle body and PCM connectors. • Turn ignition switch to the ON position (Engine off). • Measure the voltage between throttle body terminal E (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 5.
		No	Go to the next step.
4	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13B–12 THROTTLE ACTUATOR INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2107 [L3 WITH TC]

E6U010202100W33

DTC P2107	Throttle actuator control module processor problem
DETECTION CONDITION	• Throttle actuator control module internal processor error **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module internal processor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF P2107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2108 [L3 WITH TC]

E6U010202100W34

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• If the PCM detects either of the following conditions, the PCM determines that throttle actuator control system has a malfunction. — TP sensor power supply voltage **below 4.4 V** — TP sensor No.1 output voltage **below 0.20 V or above 4.85 V** (DTC P0122 or P0123) — TP sensor No.2 output voltage **below 0.20 V or above 4.85 V** (DTC P0222 or P0223) — PCM internal circuit for TP sensor No.1 input circuit malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal A and PCM terminal 3M • Short to ground between throttle body terminal A and PCM terminal 3M • Open circuit between throttle body terminal B and PCM terminal 3P • Open circuit between throttle body terminal D and PCM terminal 3Q • Short to the constant voltage supply between throttle body terminal A and PCM terminal 3M • Short to the constant voltage supply between throttle body terminal C and PCM terminal 3J • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and/or stored DTCs using the WDS or equivalent. • Is the DTC P0122, P0123, P0222 or P0223 also present?	Yes	Go to appropriate DTC troubleshooting procedure, then go to Step 7.
		No	Go to the next step.
4	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.1 CIRCUIT** • Perform the INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.1 related harnesses and connectors. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • Is there any malfunction?	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
5	**VERIFY INTERMITTENT MALFUNCTION AT TP SENSOR NO.2 CIRCUIT** • Perform the INTERMITTENT TROUBLESHOOTING procedure to TP sensor No.2 related harnesses and connectors. (See 01–03B–6 INTERMITTENT CONCERN TROUBLESHOOTING [L3 WITH TC].) • Is there any malfunction	Yes	Repair or replace malfunctioning part, according to inspection result, the go to Step 7.
		No	Go to the next step.
6	**INSPECT TP SENSOR** • Inspect the TP sensor. • Is the TP sensor normal?	Yes	Go to the next step.
		No	Replace the throttle body, then go to nest step.
7	**VERIFY TROUBLESHOOTING OF DTC P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn ignition switch to the ON position (Engine off). • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2119 [L3 WITH TC]

E6U010202100W35

DTC P2119	Throttle actuator control throttle body range/performance problem
DETECTION CONDITION	• The PCM compares the TP with the default TP when the ignition switch is off. If the TP is higher than the default TP, the PCM determines that there is a throttle actuator control throttle body range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunctioning condition in the first drive cycles. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

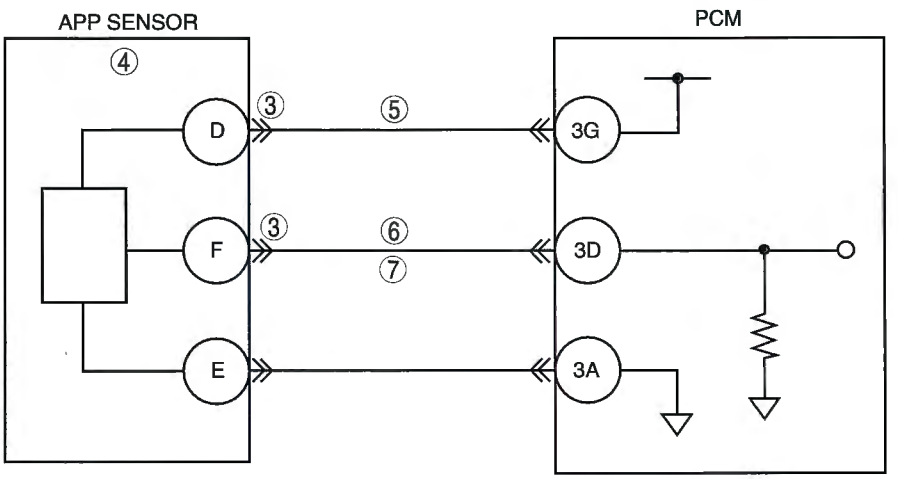
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13B–12 Resistance Inspection.) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC], 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the TP sensor, then go to the next step. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC], 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2119 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to the ON position (Engine off), then off. • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

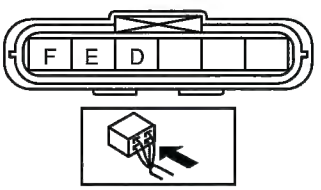
DTC P2122 [L3 WITH TC]

E6U010202100W36

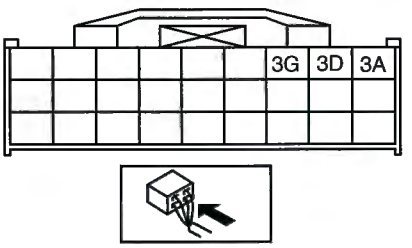
DTC P2122	Accelerator pedal position (APP) sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the APS No.1 signal. If the PCM detects that the APP sensor No.1 voltage is **below 0.2 V**, the PCM determines that the APP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal F and PCM terminal 3D • Short to ground circuit between APP sensor terminal F and PCM terminal 3D • Open circuit between APP sensor terminal D and PCM terminal 3G



APP SENSOR
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR



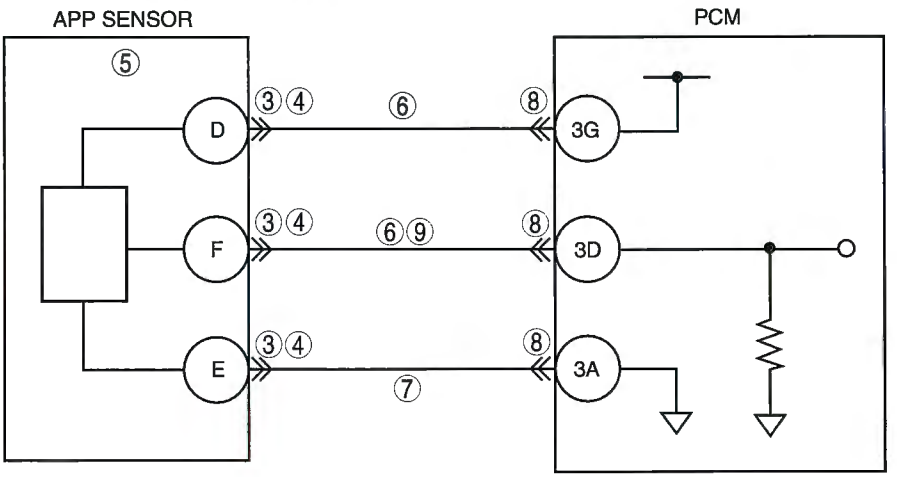
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY APP SENSOR OR HARNESS MALFUNCTION** • Connect the WDS or equivalent. • Access the APP1 PID. • Disconnect the throttle body connector. • Connect a jumper wire between APP sensor terminals D and F (harness-side). • Is the PID **approx. 100%**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT APP SENSOR** • Perform the APP sensor inspection. (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is the APP sensor normal?	Yes	Inspect for poor APP sensor connector terminal D connection. Repair or replace if necessary, then go to Step 8.
		No	Replace the APP sensor, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT APP SENSOR CONNECTOR** • Turn ignition switch to the ON position (Engine off). • Measure the voltage at APP sensor terminal D (harness-side). • Is the voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace open circuit between APP sensor connector terminal D and PCM connector terminal 3G (harness-side). Then, then go to Step 8.
6	**VERIFY APP1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Inspect continuity between APP sensor terminal F (harness-side) and PCM terminal 3D (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go to Step 8.
7	**VERIFY APP1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between APP sensor terminal F (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

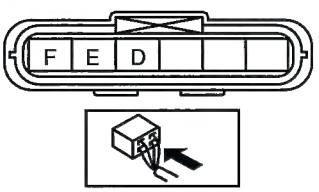
DTC P2123 [L3 WITH TC]

E6U010202100W37

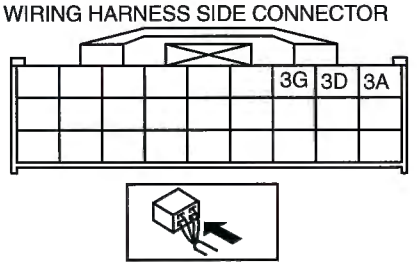
DTC P2123	Accelerator pedal position (APP) sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the APP sensor No.1 signal. If the PCM detects that the APP sensor No.1 voltage is **above 4.5 V**, the PCM determines that the APP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal E and PCM terminal 3A • Open circuit between APP sensor terminal F and PCM terminal 3D • Short to constant voltage in the supply circuit between APP sensor terminal F and PCM terminal 3D



APP SENSOR
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR



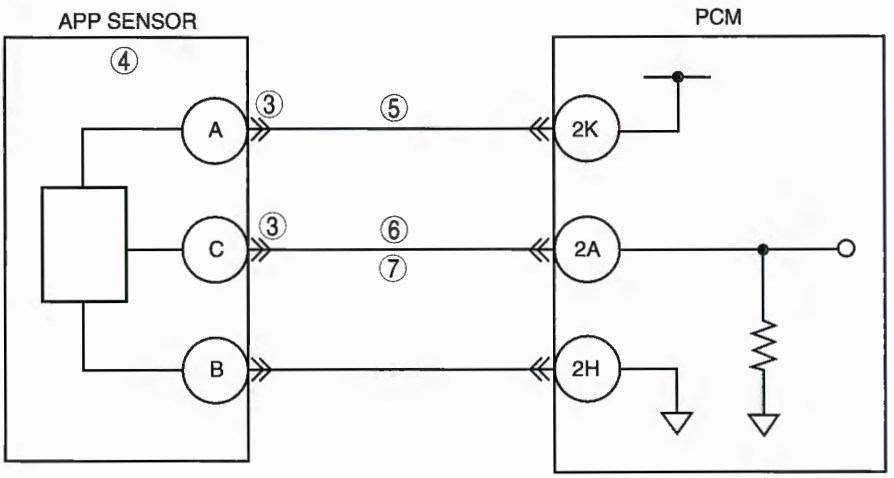
Diagnostic procedure

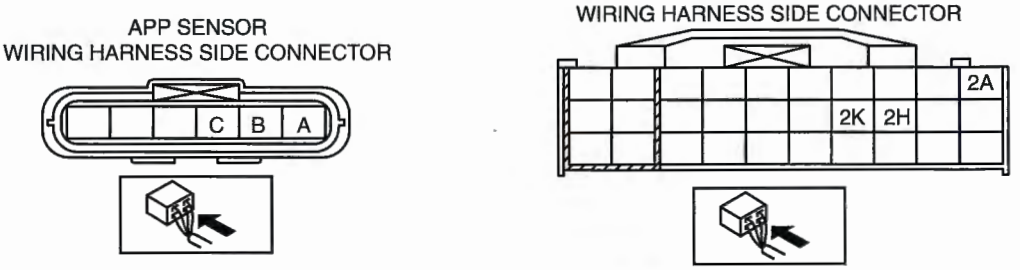
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR** • Turn the ignition switch to off. • Verify that the APP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT APP SENSOR** • Perform the APP sensor inspection. (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is the APP sensor normal?	Yes	Go to the next step.
		No	Replace the APP sensor, then go to Step 10.
6	**INSPECT APP1 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal F (harness-side) and body ground. • Is the voltage **above 4.8 V**?	Yes	Repair or replace a short to power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY APP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Disconnect the PCM connector. • Inspect for continuity between APP sensor terminal E (harness side) and PCM terminal 3A (harness side). • Is there continuity?	Yes	Repair or replace for an open circuit between APP sensor terminal F (harness-side) and PCM connector terminal 3D (harness-side). Then, go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
9	**VERIFY TP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect for continuity between throttle body terminals D and F (harness side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2127 [L3 WITH TC]

E6U010202100W38

DTC P2127	Accelerator pedal position (APP) sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the APP sensor No.2 signal. If the PCM detects that the APP sensor No.2 voltage is **below 0.2 V**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal C and PCM terminal 2A • Short to ground circuit between APP sensor terminal C and PCM terminal 2A • Open circuit between APP sensor terminal A and PCM terminal 2K





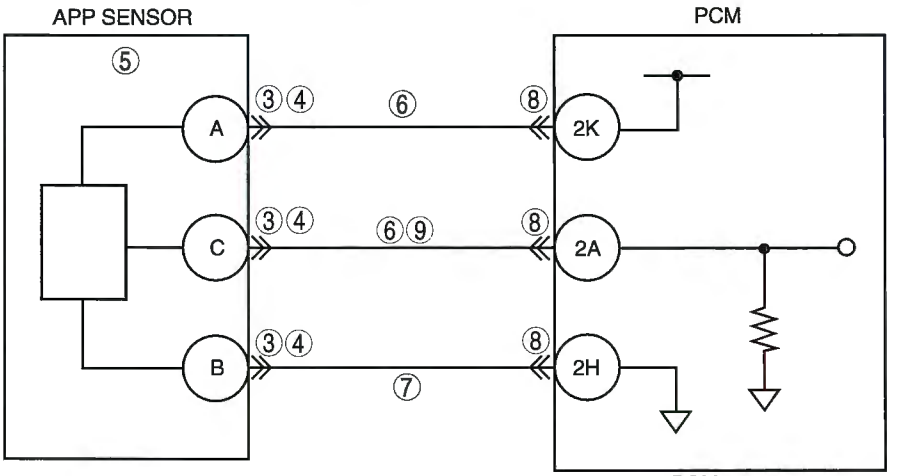
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY APP SENSOR OR HARNESS MALFUNCTION** • Connect the WDS or equivalent. • Access the APP2 PID. • Disconnect the throttle body connector. • Connect a jumper wire between APP sensor terminals A and C (harness-side). • Is the PID **approx. 100%**?	Yes	Go to the next step.
		No	Go to step 5.
4	**INSPECT APP SENSOR** • Perform the APP sensor inspection. (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is the APP sensor normal?	Yes	Inspect for poor APP sensor connector terminal A connection. Repair or replace if necessary, then go to Step 8.
		No	Replace the APP sensor, then go to Step 8.
5	**INSPECT POWER SUPPLY CIRCUIT VOLTAGE AT APP SENSOR CONNECTOR** • Turn ignition switch to the ON position (Engine off). • Measure the voltage at APP sensor terminal A (harness-side). • Is the voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace for an open circuit between APP sensor connector terminal A and PCM connector terminal 2K (harness-side). Then, then go to Step 8.
6	**VERIFY APP2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to off. • Inspect for continuity between APP sensor terminal C (harness-side) and PCM terminal 2A (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the suspected wiring harness, then go t Step 8.
7	**VERIFY APP2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between APP sensor terminal C (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2127 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

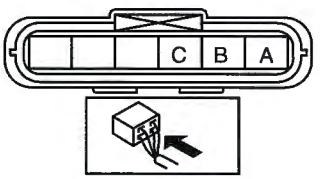
DTC P2128 [L3 WITH TC]

E6U010202100W39

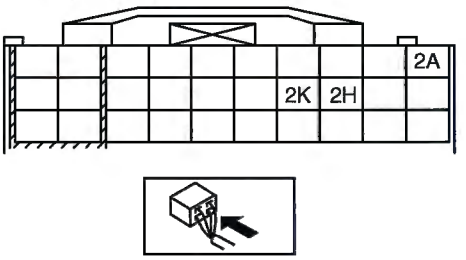
DTC P2128	Accelerator pedal position (APP) sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the APP sensor No.2 signal. If the PCM detects that the APP sensor No.2 voltage is **above 4.5 V**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal B and PCM terminal 2H • Open circuit between APP sensor terminal C and PCM terminal 2A • Short to constant voltage in the supply circuit between APP sensor terminal C and PCM terminal 2A



APP SENSOR
WIRING HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR** • Turn the ignition switch to off. • Verify that the APP sensor connector is connected securely. • Is the connector normal?	Yes	Go to the next step.
		No	Connect the connector securely, then go to Step 10.
4	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the suspected terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT APP SENSOR** • Perform the APP sensor inspection. (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is the APP sensor normal?	Yes	Go to the next step.
		No	Replace the APP sensor, then go to Step 10.
6	**INSPECT APP2 SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn ignition switch to the ON position (Engine off). • Measure the voltage between APP sensor terminal C (harness-side) and body ground. • Is the voltage **above 4.5 V**?	Yes	Repair or replace for a short to power supply. Then, go to Step 10.
		No	Go to the next step.
7	**VERIFY APP SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Disconnect the PCM connector. • Inspect the continuity between APP sensor terminal B (harness-side) and PCM terminal 2H (harness-side). • Is there continuity?	Yes	Repair or replace for an open circuit between APP sensor terminal C (harness-side) and PCM connector terminal 2A (harness-side). Then, go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
9	**VERIFY APP SIGNAL CIRCUIT FOR SHORT TO CONSTANT VOLTAGE CIRCUIT** • Inspect the continuity between throttle body terminals A and C (harness-side). • Is there continuity?	Yes	Repair or replace the suspected wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2128 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2135 [L3 WITH TC]

E6U010202100W40

DTC P2135	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 6. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [L3 WITH TC], 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2135 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2138 [L3 WITH TC]

E6U010202100W41

DTC P2138	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that ther is an APP sensor No.1/No.2 angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • APP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Inspect the APP sensor. (See 01–40B–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 6. (See 01–13B–15 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

DTC P2177 [L3 WITH TC]

E6U010202100W42

DTC P2177	Fuel system too lean at off idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that the fuel system is too lean at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line • Exhaust system leakage • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

01–02B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 20.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses repair or replace it. Then go to Step 20.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the WDS or equivalent. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — **More than 0.25 mA** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace the source of air suction, then go to Step 20.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See 01–03B–91 Purge Control System Inspection.) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 20.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. • Is fuel leakage found? (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 20.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 20.
		No	Go to the next step.
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.

STEP	INSPECTION		ACTION
16	**INSPECT IGNITION SYSTEM** • Perform the spark test. (See 01–03B–90 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test result, then go to Step 20.
17	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 20.
18	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See 01–03B–93 Variable Valve Timing Control System Operation Inspection.) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 20.
19	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2177 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2178 [L3 WITH TC]

E6U010202100W43

DTC P2178	Fuel system too rich at off idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fue control at off-idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria the PCM determines that fuel system is too rich at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • EGR valve improper operation • Variable swirl control improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 19.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the WDS or equivalent. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — **More than 0.25 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 19.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2 • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 19.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See 01–03B–91 Purge Control System Inspection.) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01–16B–13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 19
11	**INSPECT EGR VALVE OPERATION** • Perform the EGR Control System Inspection. (See 01–03B–90 EGR Control System Inspection.) • Does the EGR control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
12	**INSPECT VARIABLE SWIRL CONTROL OPERATION** • Perform the Variable Swirl Control Operation Inspection. (See 01–03B–86 Variable Swirl System Operation Inspection.) • Does the variable swirl control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
13	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See 01–03B–93 Variable Valve Timing Control System Operation Inspection.) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 19.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 18.
		No	Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.

STEP	INSPECTION		ACTION
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See 01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to the next step.
		No	Replace the fuel delivery pipe, then go to Step 19.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 19.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P2178 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2187 [L3 WITH TC]

E6U010202100W44

DTC P2187	Fuel system too lean at idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, the PCM determines that fuel system is too lean at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Exhaust system leakage • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

01–02B

ıgnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF and TP PIDs using the WDS or equivalent.) • Is there any signal that is far out of specification when the ignition switch is at the ON position and the engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 20.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 20.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the WDS or equivalent. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — **Below 0.25 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. Then go to Step 20.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 20.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace the source of air suction, then go to Step 20.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID VALVE STUCK OPEN** • Turn the ignition switch to off. • Disconnect the both hoses from purge solenoid valve. • Blow the air through purge solenoid valve. • Does the air blow through?	Yes	Replace the purge solenoid valve. Then go to Step 20.
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 20.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 20.
		No	Go to the next step.
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to Step 20.

STEP	INSPECTION		ACTION
16	**INSPECT IGNITION SYSTEM** • Perform the spark test. (See 01–03B–90 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to spark test results, then go to Step 20.
17	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression. (See 01–10B–9 COMPRESSION INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Implement the engine overhaul for repairs, then go to Step 20.
18	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See 01–03B–93 Variable Valve Timing Control System Operation Inspection.) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 20.
19	**INSPECT FUEL INJECTOR OPERATION** • Remove the fuel injector. • Inspect the fuel injector (resistance, injection amount). (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is the fuel injector normal?	Yes	Go to the next step.
		No	Replace the fuel injector, then go to the next step.
20	**VERIFY TROUBLESHOOTING OF DTC P2187 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
21	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2188 [L3 WITH TC]

E6U010202100W45

DTC P2188	Fuel system too rich at idle
DETECTION CONDITION	• PCM monitors the short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fue control at idle. If the LONGFT and the sum total of these fuel trims exceed the preprogrammed criteria, th PCM determines that fuel system is too rich at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • Front HO2S deterioration • Front HO2S heater malfunction • MAF sensor malfunction • Pressure regulator malfunction • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Fuel pump malfunction • EGR valve stuck open • Variable swirl control improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • PCV valve malfunction • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to off, then to the ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	If misfire the DTC is present, go to Step 8. If other DTCs is present, go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (IGNITION SWITCH TO THE ON POSITION/ IDLE)** • Access the APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when the ignition switch is at the ON position and engine runs?	Yes	Inspect the sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect the same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect the sensor and related wiring harnesses, repair or replace it. Then go to Step 19.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Access the O2S11 for P2177 PID using the WDS or equivalent. • Check the PID under following accelerator pedal condition in NEUTRAL. • Is the PID reading normal? — **–0.1—0.1 A** when idle — **Below 0.25 mA** just after release of accelerator pedal (lean condition)	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between the exhaust manifold and the front HO2S. Then go to Step 19.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 19.
9	**INSPECT PURGE SOLENOID OPERATION** • Perform the Purge Control System Inspection. (See 01–03B–91 Purge Control System Inspection.) • Does the purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
10	**INSPECT PCV VALVE OPERATION** • Inspect the PCV valve operation. (See 01–16B–13 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [L3 WITH TC].) • Is the PCV valve normal?	Yes	Go to the next step.
		No	Replace the PCV valve, then go to Step 19.
11	**INSPECT VARIABLE SWIRL CONTROL OPERATION** • Perform the Variable Swirl Control Operation Inspection. (See 01–03B–86 Variable Swirl System Operation Inspection.) • Does the variable swirl control work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection result, then go to Step 19.
12	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect the variable valve timing control system operation. (See 01–03B–93 Variable Valve Timing Control System Operation Inspection.) • Does the variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results, then go to Step 18.
13	**INSPECT IF EGR VALVE IS STUCK OPEN** • Remove the EGR valve. • Does the EGR valve stuck open?	Yes	Clean or replace the EGR valve, then go to Step 19.
		No	Go to the next step.
14	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 18.
		No	Go to the next step.
15	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 17.

STEP	INSPECTION		ACTION
16	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 19.
		No	Replace the fuel delivery pipe, then go to Step 19.
17	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 19.
		No	Go to the next step.
18	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P2188 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adaptive Memory Produce Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2195 [L3 WITH TC]

E6U010202100W46

DTC P2195	Front HO2S signal stuck lean
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **more than 1.2 A** for **25 s**, the PCM determines that the front HO2S has a malfunction. **MONITORING CONDITION** — ECT: more than **70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5%** — Output voltage from the rear HO2S: **0.2 V or above** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Exhaust gas leakage • Air suction at intake-air system malfunction • Fuel leakage • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

TEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then to ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 16.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under FREEZE FRAME DATA condition. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 16.
7	**INSPECT INTAKE-AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 16.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 16.
9	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 16. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 16. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FUEL_PRES PID. • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 15.
		No	Go to the next step.
12	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 15.
		No	Replace the fuel delivery pipe, then go to Step 16.
14	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 16.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. (See01–14B–20 HIGH PRESSURE FUEL PUMP INSPECTION [L3 WITH TC].) • Measure the low side fuel pressure. 01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC] • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P2195 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2196 [L3 WITH TC]

E6U010202100W47

DTC P2196	Front HO2S signal stuck rich
DETECTION CONDITION	• The PCM monitors the front HO2S output current when the following conditions are met. If the average output current is **less than 0.85 A** for **25 s**, the PCM determines that the front HO2S has a malfunction. **MONITORING CONDITION** — ECT: **more than 70 °C {158 °F}** — Engine speed: **1,000—3,200 rpm** — Charging efficiency: **20—62.5%** — Output voltage from the rear HO2S: **0.8 V or less** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Fuel injector malfunction • Excessive fuel pressure • Fuel pressure sensor malfunction • Relief valve (built-in fuel delivery pipe) malfunction • Spill valve control solenoid valve (built-in high pressure fuel pump) malfunction • High pressure fuel pump malfunction • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177 or P2187 also present?	Yes	Go to the appropriate DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to FREEZE FRAME DATA DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 15.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 15.
8	**INSPECT FRONT HO2S** • Inspect the front HO2S. (See 01–40B–42 HEATED OXYGEN SENSOR (HO2S) INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the front HO2S, then go to Step 15. (See 01–15B–3 HO2S Removal Note.)
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect the fuel injector. (See 01–14B–29 FUEL INJECTOR INSPECTION [L3 WITH TC].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 15. (See 01–14B–25 FUEL INJECTOR REMOVAL/ INSTALLATION [L3 WITH TC].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT FUEL PRESSURE (HIGH-SIDE)** • Access and monitor FRP PID. • Is the FRP PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 14.
		No	Go to the next step.
11	**IDENTIFY CAUSE BY FUEL PRESSURE SENSOR OR HIGH PRESSURE FUEL PUMP** • Is the vehicle accelerate performance normally?	Yes	Go to the next step.
		No	Go to Step 16.
12	**INSPECT FUEL PRESSURE SENSOR** • Inspect the fuel pressure sensor. (See01–40B–34 FUEL PRESSURE SENSOR INSPECTION [L3 WITH TC].) • Is the fuel pressure sensor normal?	Yes	Go to Step 14.
		No	Replace the fuel delivery pipe, then go to Step 15.
13	**INSPECT HIGH PRESSURE FUEL PUMP** • Replace the high pressure fuel pump • Monitor FUEL_PRES PID • Is the FUEL_PRES PID value within the specified? (See 01–40B–6 Using the WDS or Equivalent.)	Yes	Go to Step 15.
		No	Go to the next step.
14	**INSPECT FUEL PRESSURE (LOW-SIDE)** • Connect the fuel pressure gauge between fuel pump and high pressure fuel pump. • Measure the low side fuel pressure. (See01–14B–5 FUEL LINE PRESSURE INSPECTION [L3 WITH TC].) • Is the low side fuel pressure within the specified?	Yes	Go to the next step.
		No	Inspect for following: • Fuel line restriction • Fuel filter clogging If okay replace the fuel pump. Then go to the next step.
15	**VERIFY TROUBLESHOOTING OF DTC P2196 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the PCM Adopted Memory Produce Drive Mode and HO2S heater, and TWC Repair Verification Drive Mode. (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2228 [L3 WITH TC]

E6U010202200W09

DTC P2228	BARO sensor circuit low input
DETECTION CONDITION	• PCM monitors the input voltage from the BARO sensor. If the input voltage at the PCM is **below 1.95 V**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Start the engine. • Access the BARO PID using the WDS or equivalent. • Inspect that the BARO PID is within the specification. • Is there any malfunction?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2228 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2229 [L3 WITH TC]

E6U010202200W10

DTC P2229	BARO sensor circuit high input
DETECTION CONDITION	• PCM monitors the input voltage from the BARO sensor. If the input voltage at the PCM is **above 4.45 V**, the PCM determines that the BARO sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• BARO sensor malfunction • PCM malfunction

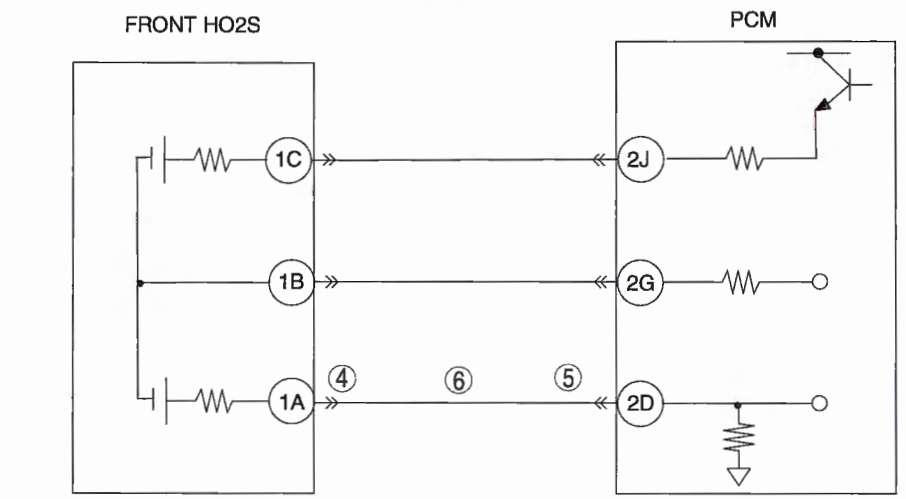
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BARO SENSOR MALFUNCTION** • Start the engine. • Access the BARO PID using the WDS or equivalent. • Inspect that the BARO PID is within the specification. • Is there any malfunction?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2229 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the memory using the WDS or equivalent. • Start engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

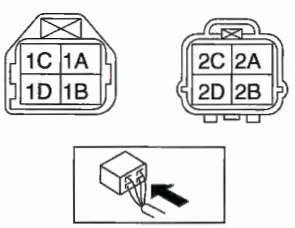
DTC P2237 [L3 WITH TC]

E6U010202200W11

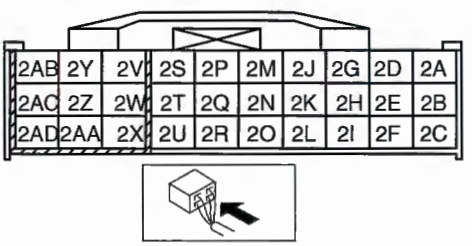
DTC P2237	Front HO2S positive current control circuit open
DETECTION CONDITION	• The PCM monitors the front HO2S positive current control circuit voltage. If the voltage does not change with the PCM control value while the engine is running, the PCM determines that the front HO2S positive current control circuit is open. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2D and front HO2S terminal 1A • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



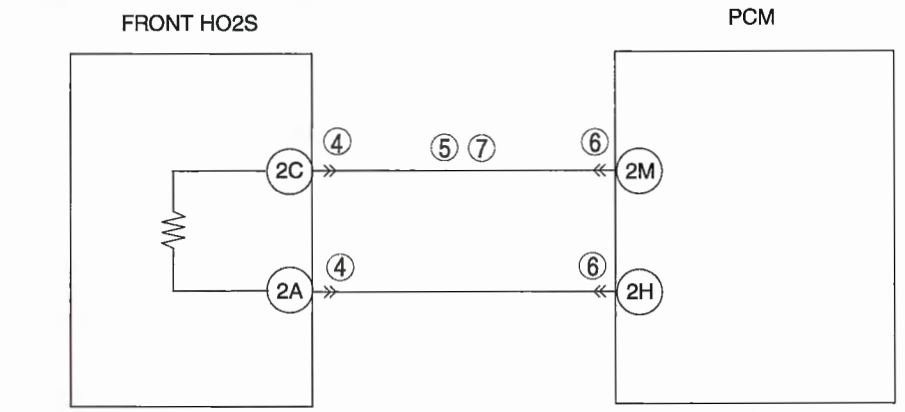
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2237 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step.
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step.
		No	Go to the next step.
6	**INSPECT FRONT HO2S POSITIVE CURRENT CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • Front HO2S and PCM connectors disconnected. • Verify the continuity between PCM terminal 2D and front HO2S terminal 1A. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace the wiring harness for an open, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2237 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

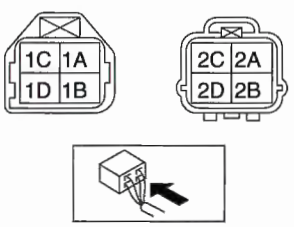
DTC P2245 [L3 WITH TC]

E6U010202200W12

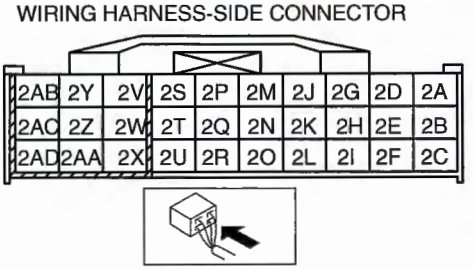
DTC P2245	Front HO2S sensor reference voltage circuit low input
DETECTION CONDITION	• The PCM monitors is front HO2S sensor reference voltage circuit voltage. If the voltage below the threshold value while the engine is running, the PCM determines that the front HO2S sensor reference voltage circuit is low. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to ground circuit between PCM terminal 2M and front HO2S sensor terminal 2C • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



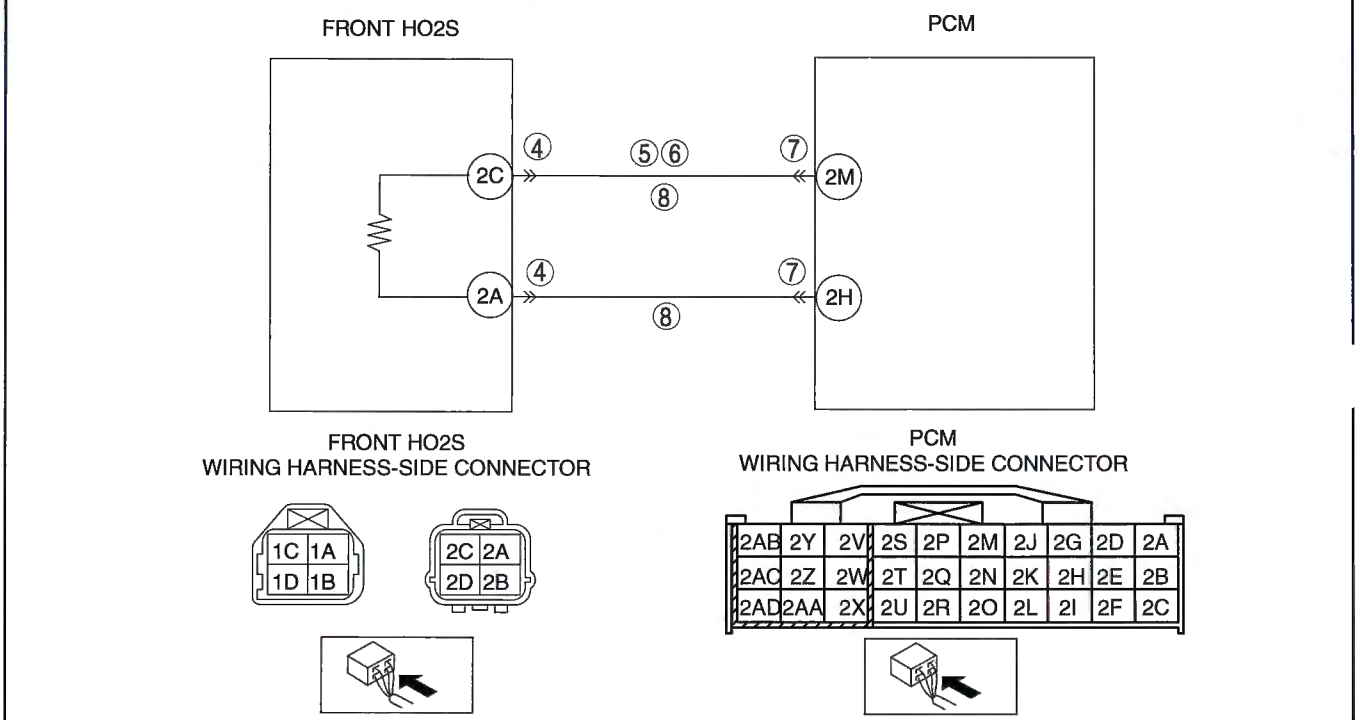
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2245 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO GROUND AT FRONT HO2S** • Turn the ignition switch to the off. • Front HO2S connector disconnected. • Inspect the continuity between front HO2S terminal 2C (part-side) and ground. • Is there continuity?	Yes	Replace the front HO2S, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO GROUND AT PCM - FRONT HO2S** • Turn the ignition switch to the off. • Front HO2S and PCM connectors disconnected. • Inspect the continuity between front HO2S terminal 2C (harness-side) and ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to ground between PCM terminal 2M and front HO2S sensor terminal 2C, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2245 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2246 [L3 WITH TC]

E6U010202200W13

DTC P2246	Front HO2S sensor reference voltage circuit high input
DETECTION CONDITION	• The PCM monitors the front HO2S sensor reference voltage circuit voltage. If the voltage is above the threshold value while the engine is running, the PCM determines that the front HO2S sensor reference voltage circuit is high. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Short to the power circuit between PCM terminal 2M and front HO2S terminal 2C • Open circuit between PCM terminal 2M and front HO2S terminal 2C • Open circuit between PCM terminal 2H and front HO2S terminal 2A • PCM malfunction



Diagnostic procedure

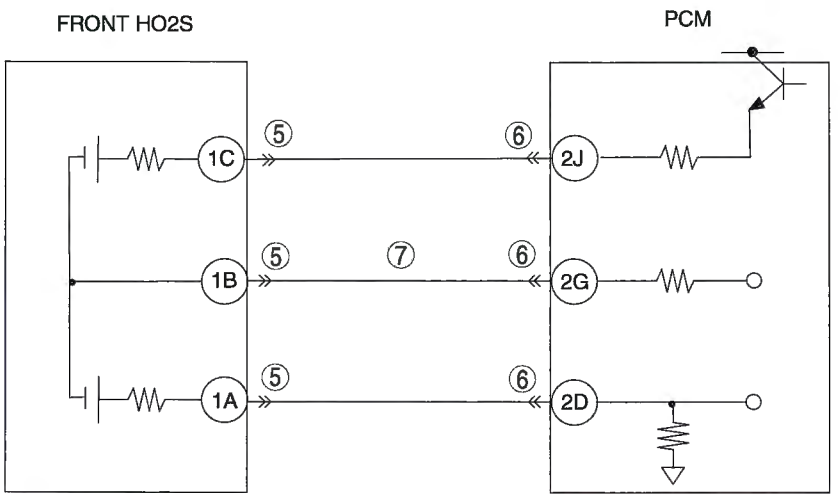
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2246 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)

STEP	INSPECTION		ACTION
4	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO POWER AT FRONT HO2S** • Front HO2S connector disconnected. • Turn the ignition switch to the ON position (engine off). • Measure the voltage between front HO2S terminal 2C (part-side) and ground. • Is the voltage above 5.0 V?	Yes	Replace the front HO2S, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR SHORT TO POWER AT PCM - FRONT HO2S** • Front HO2S connector disconnected. • Turn the ignition switch to the ON position (engine off). • Measure the voltage between front HO2S terminal 2C (harness-side) and ground. • Is the voltage above 5.0 V?	Yes	Repair or replace for a short to power, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT FRONT HO2S REFERENCE VOLTAGE CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • Front HO2S and PCM connectors disconnected. • Verify the continuity between following terminals at harness-side connectors. — PCM terminal 2M - front HO2S terminal 2C — PCM terminal 2H - front HO2S terminal 2A • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for an open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2246 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

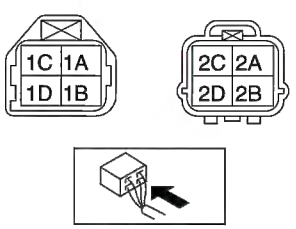
DTC P2251 [L3 WITH TC]

E6U010202200W14

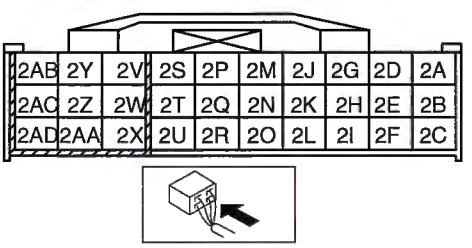
DTC P2251	Front HO2S negative current control circuit open
DETECTION CONDITION	• The PCM monitors the front HO2S negative current control circuit voltage. If the voltage does not change with the PCM control value while the engine is running, the PCM determines that the front HO2S negativ current control circuit is open. **Diagnostic support note** • This is a continuous monitor. (HO2S) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Front HO2S malfunction • Connector or terminal malfunction • Open circuit between PCM terminal 2G and front HO2S terminal 1B • Front HO2S heater cannot be controlled • PCM malfunction



FRONT HO2S
WIRING HARNESS-SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



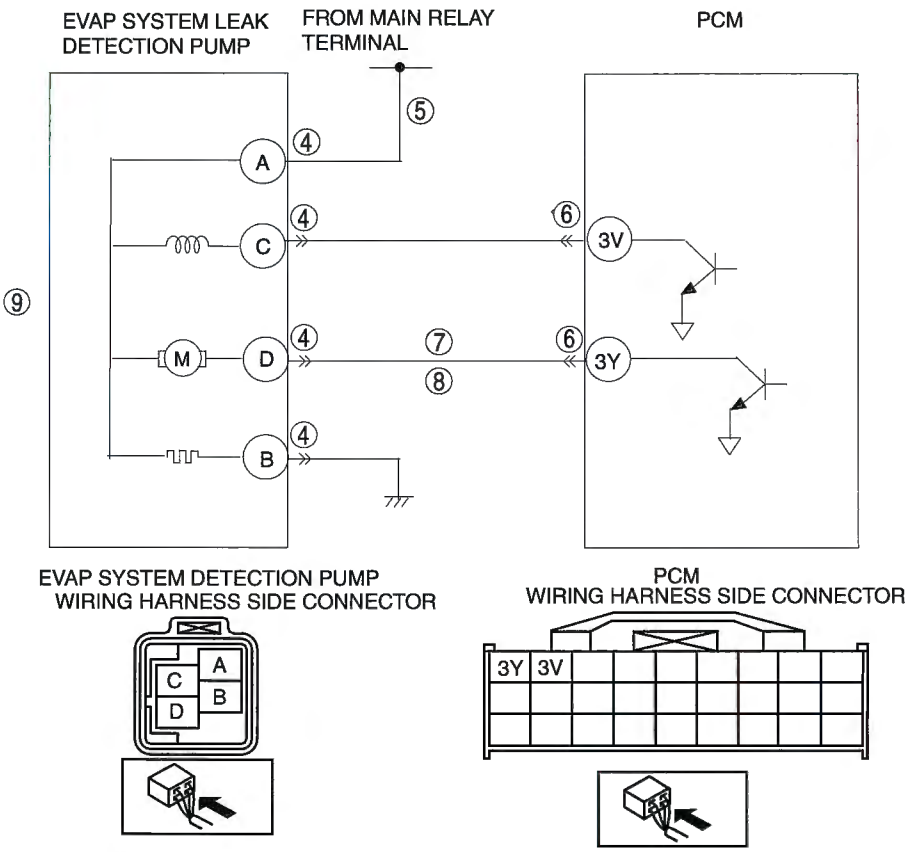
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is the DTC P0030, P0031 or P0032 also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2251 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See01–02B–14 DTC TABLE [L3 WITH TC].)
5	**INSPECT FRONT HO2S CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the front HO2S connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT FRONT HO2S NEGATIVE CURRENT CONTROL CIRCUIT FOR OPEN AT PCM - FRONT HO2S** • The front HO2S and the PCM connectors disconnected. • Verify the continuity between the PCM terminal 2G and the front HO2S terminal 1B at harness-side connectors. • Is there continuity?	Yes	Replace the front HO2S, then go to the next step.
		No	Repair or replace for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2251 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the HO2S heater, HO2S and TWC Repair Verification Drive Mode. (See01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2401 [L3 WITH TC]

E6U010202400W06

DTC P2401	EVAP system leak detection pump motor circuit low
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the pump load current is lower than specified, the PCM determines that the EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Open circuit between main relay and EVAP system leak detection pump terminal A • Open circuit between EVAP system leak detection pump terminal D and PCM terminal 3Y • Short to ground circuit between EVAP system leak detection pump terminal D and PCM terminal 3Y • Poor connection at the EVAP system leak detection pump or the PCM connector • PCM malfunction



Diagnostic procedure

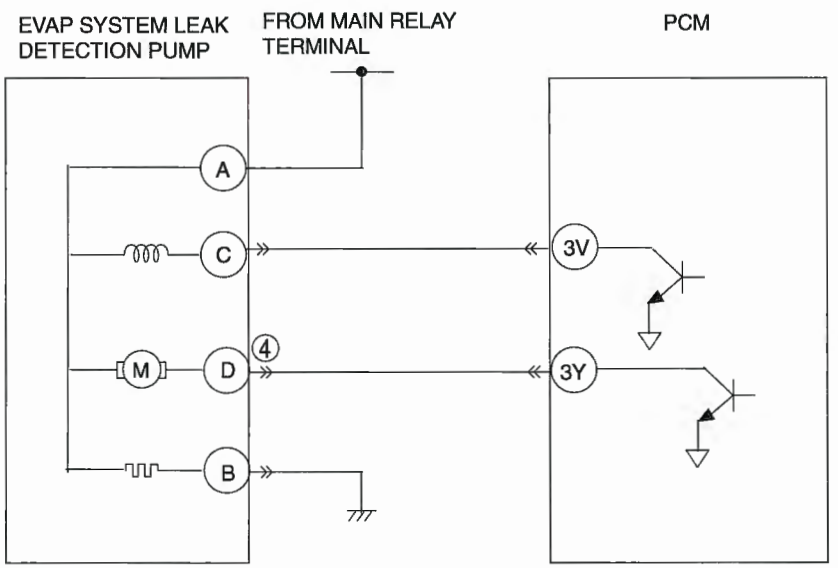
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch to the OFF then ON position (Engine off). • Verify related PENDING CODE or stored DTC. • Is DTC P2405 present?	Yes	Go to appropriate DTC inspection. (See 01–02B–264 DTC P2405 [L3 WITH TC].)
		No	Go to the next step.
4	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EVAP system leak detection pump connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
5	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the main relay. • Inspect continuity between EVAP system leak detection pump terminal A (harness-side) and main relay. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between EVAP system leak detection pump terminal D (harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP MOTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between EVAP system leak detection pump terminal D (harness-side) and PCM terminal 3Y (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Perform the EVAP system leak detection pump inspection. (See 01–16B–8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3 WITH TC].) • Is the EVAP system leak detection pump normal?	Yes	Go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.

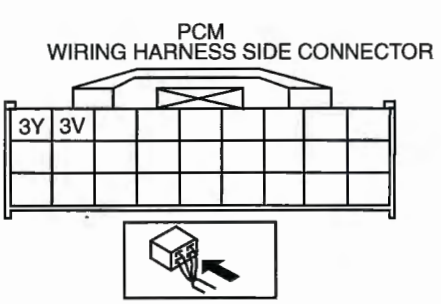
STEP	INSPECTION		ACTION
10	**VERIFY TROUBLESHOOTING OF DTC P2401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2402 [L3 WITH TC]

E6U010202400W07

DTC P2402	EVAP system leak detection pump motor circuit high
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the pump load current is higher than specified, the PCM determines that the EVAP system leak detection pump motor circuit has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump malfunction • Short to the power supply between the EVAP system leak detection pump terminal D and PCM terminal 3Y • PCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then g to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn the ignition switch to the OFF then ON position (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to the appropriate DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Go to the next step.
4	**CHECK EVAP SYSTEM LEAK DETECTION PUMP CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. • Disconnect the EVAP system leak detection pump connector. • Measure the voltage between EVAP system leak detection pump terminal D (harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2402 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2404 [L3 WITH TC]

E6U010202400W08

DTC P2404	EVAP system leak detection pump sensor circuit malfunction
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. After obtaining the reference current value, If the pump load current is greater than or equal to the reference current value plus **2 mA** within the specified time, the PCM determines that the air filter has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• Air filter clogging • EVAP hose bending • Damaged PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**CHECK EVAP HOSE BENDING** • Inspect the EVAP hose for bending. • Is the EVAP hose normal?	Yes	Go to the next step.
		No	Repair or replace the suspected hose, then go to Step 5.
4	**CHECK AIR FILTER FOR CLOGGING** • Inspect the air filter for clogging. • Is the air filter normal?	Yes	Go to the next step.
		No	Replace the air filter, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2404 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2405 [L3 WITH TC]

E6U010202400W09

DTC P2405	EVAP system leak detection pump sensor circuit low input
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. If the current is lower than the specification while the PCM obtains the reference current value, the PCM determines that the EVAP system leak detection pump orifice has a malfunction. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump orifice has fallen off • EVAP system leak detection pump motor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the EVAP system leak detection pump, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2405 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2407 [L3 WITH TC]

E6U010202400W10

DTC P2407	EVAP system leak detection pump sensor circuit intermittent
DETECTION CONDITION	• The PCM monitors pump the load current (EVAP line pressure), while the EVAP leak monitor is operating. When either of the following is detected **6 times or more** successively, the PCM determines that the EVAP system leak detection pump heater has a malfunction: — While obtaining the reference current value, the change in pump load current exceeds the specification. — After obtaining the reference current value, the pump load current is kept lower than the maximum pump load current for more than the specified time. **Diagnostic support note** • This is a intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in PCM memory.
POSSIBLE CAUSE	• EVAP system leak detection pump heater malfunction • PCM malfunction

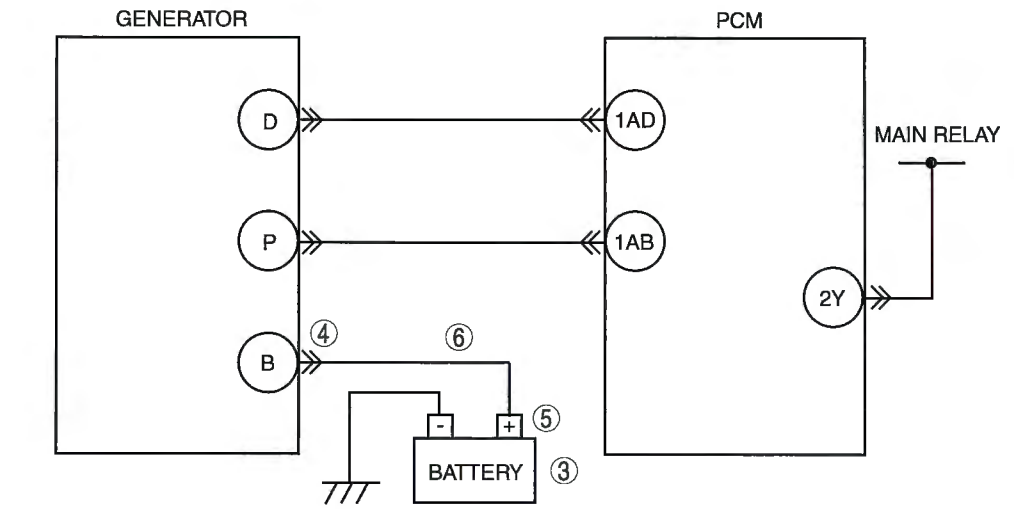
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP HEATER** • Perform the EVAP system leak detection pump inspection. (See 01–16B–8 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3 WITH TC]) • Is the EVAP system leak detection pump normal?	Yes	Replace the EVAP system leak detection pump, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P2407 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the EVAP system test using the WDS or equivalent. (See 01–03B–94 Evaporative Emission (EVAP) System Leak Inspection.) • Is the same DTC present? **Note** • If EVAP system test function is not available, take following procedure. — Start the engine and perform the "EVAP System Repair Verification Drive Mode". (See 01–02B–9 OBD-II DRIVE MODE [L3 WITH TC].) — Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step.
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

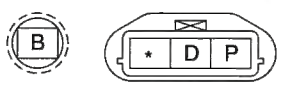
DTC P2502 [L3 WITH TC]

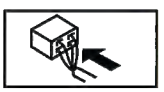
E6U010202500W06

DTC P2502	Charging system voltage problem
DETECTION CONDITION	• PCM determines that the generator output voltage is **above 17 V** or the battery voltage is **below 11 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Open circuit between generator terminal B and battery positive terminal • Battery malfunction • Generator malfunction • PCM is poorly connected • PCM, generator and/or battery are poorly connected

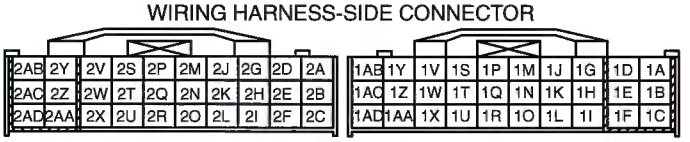


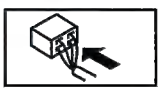
GENERATOR
WIRING HARNESS-SIDE CONNECTOR





PCM
WIRING HARNESS-SIDE CONNECTOR





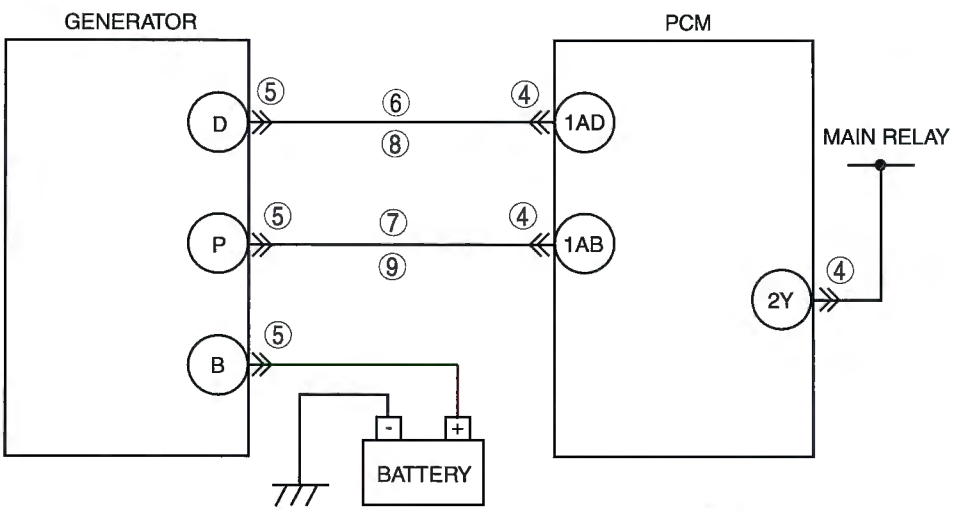
Diagnostic procedure

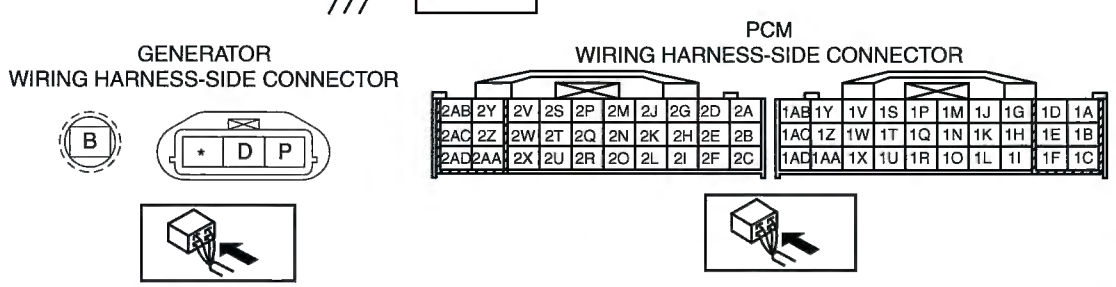
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BATTERY** • Turn the ignition switch off. • Inspect the battery. • Is the battery normal?	Yes	Go to the next step.
		No	Replace the battery, then go to Step 7.
4	**INSPECT POOR INSTALLATION OF GENERATOR TERMINAL** • Turn the ignition switch to off. • Inspect for looseness of generator terminal B installation nut. • Is the nut loose?	Yes	Tighten the generator terminal B installation nut, then go to Step 7.
		No	Go to the next step.
5	**INSPECT POOR INSTALLATION OF BATTERY POSITIVE TERMINAL** • Inspect for looseness of battery positive terminal. • Is the terminal loose?	Yes	Connect the battery positive terminal correctly, then go to Step 7.
		No	Go to the next step.
6	**INSPECT BATTERY CHARGING CIRCUIT** • Disconnect the generator terminal B. • Measure the voltage between generator terminal B (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between generator terminal B and battery positive terminal, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2502 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2503 [L3 WITH TC]

E6U010202500W07

DTC P2503	Charging system voltage low
DETECTION CONDITION	• PCM needs **more than 20 A** from the generator, and determines that generator output voltage is **below 8.5 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Generator malfunction • PCM and/or generator are poorly connected • Open and/or short to ground in the wiring harness from between generator terminal P and PCM terminal 1AB • Open and/or short to ground in the wiring harness from between generator terminal D and PCM terminal 1AD • Drive chain misadjustment





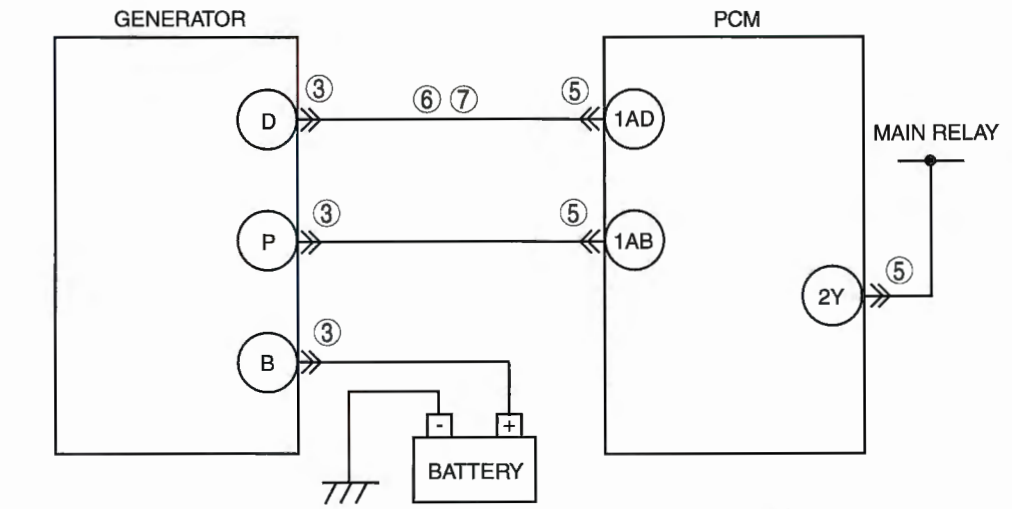
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT DRIVE CHAIN CONDITION** • Verify that the drive chain auto tensioner indicator mark does not exceed limit. • Is the front drive chain normal?	Yes	Go to the next step.
		No	Replace the and/or adjust drive chain, then go to Step 10.
4	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 10.
		No	Go to the next step.
5	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Disconnect the generator connector. • Inspect for poor connection (damaged, pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 10.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
7	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between generator terminal P (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground, then go to Step 10.
		No	Go to the next step.
8	**INSPECT GENERATOR CONTROL CIRCUIT FOR OPEN** • Inspect for continuity between generator terminal D (wiring harness-side) and PCM terminal 1AD (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to Step 10.
9	**INSPECT GENERATOR OUTPUT VOLTAGE MONITOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between generator terminal P (wiring harness-side) and PCM terminal 1AB (wiring harness-side). • Is there continuity?	Yes	Repair or replace the generator, then go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P2503 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

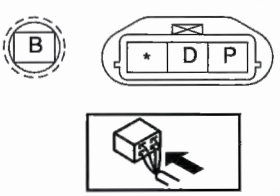
DTC P2504 [L3 WITH TC]

E6U010202500W08

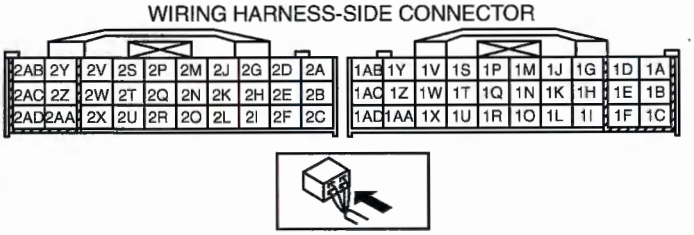
DTC P2504	Charging system voltage high
DETECTION CONDITION	• PCM determines that the generator output voltage is **above 18.5 V** or the battery voltage is **above 16.0 V** while the engine is running. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Short to the power circuit between generator connector terminal D and PCM connector terminal 1AD • Generator malfunction • PCM and/or generator are poorly connected



GENERATOR WIRING HARNESS-SIDE CONNECTOR



PCM WIRING HARNESS-SIDE CONNECTOR



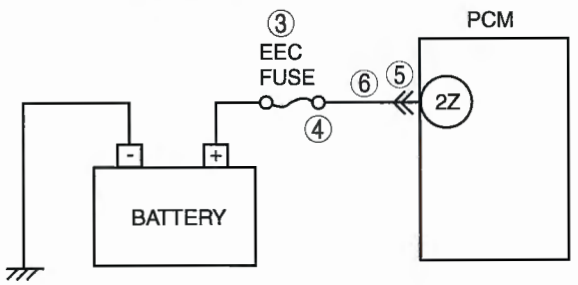
Diagnostic procedure

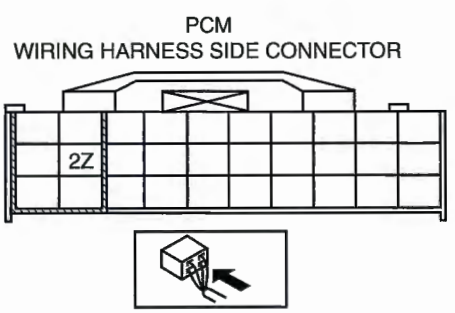
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT GENERATOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the generator connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminals, then go to Step 8.
		No	Go to the next step.
4	**CLASSIFY GENERATOR MALFUNCTION OR OTHER MALFUNCTION** • Turn the ignition switch to the ON (Engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Go to the next step.
		No	There is a malfunction at the generator. Go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (damaged/pulled-out terminals, corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the pins, then go to Step 8.
		No	Go to the next step.
6	**INSPECT GENERATOR CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (engine off). • Measure the voltage between generator terminal D (wiring harness-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for a short to power supply, then go to Step 8.
		No	Go to Step 8.
7	**INSPECT GENERATOR CONTROL TERMINAL FOR SHORT TO POWER** • Measure the voltage between generator terminal D (part-side) and body ground. • Is the voltage **B+**?	Yes	Repair or replace the generator, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2504 COMPLETED** • Make sure to reconnect all connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER self-test. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Ares any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2507 [L3 WITH TC]

E6U010202500W09

DTC P2507	PCM +BB (back-up battery) voltage low
DETECTION CONDITION	• The PCM monitors the voltage of the back-up battery positive terminal. If the PCM detects that the battery positive terminal voltage is **below 2.5 V** for **2 s**, the PCM determines that the backup voltage circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• Melt down EEC fuse • Open circuit in the wiring harness between the EEC fuse and PCM terminal 2Z • Short to ground between the EEC fuse and PCM terminal 2Z • Poor connection of the PCM connector. • PCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EEC FUSE** • Turn the ignition switch to off. • Inspect the EEC fuse for failure and proper. • Is it normal?	Yes	Go to step 6.
		No	• If the EEC fuse has been melt down, then go to the next step. • If the EEC fuse is not installed correctly, install it correctly then go to Step 7.
4	**INSPECT MONITOR CIRCUIT FOR SHORT TO GROUND** • Disconnect the battery cables. • Inspect for continuity between EEC fuse terminal and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for a short to ground and install new fuse, then go to Step 7.
		No	Go to step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminals, then go to Step 7.
		No	Go to the next step.
6	**INSPECT MONITOR CIRCUIT FOR OPEN CIRCUIT** • Disconnect the battery cables. • Inspect for continuity between EEC fuse terminal and PCM terminal 2Z (harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for an open circuit, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	Troubleshooting completed.

DTC P2610 [L3 WITH TC]

E6U010202600W04

DTC P2610	PCM internal engine off timer performance
DETECTION CONDITION	• PCM internal engine off timer is damaged. **Diagnostic support note** • This is a continuous monitor (CCM). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTCs are stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal engine off timer is damaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2610 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40B–6 PCM REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02B–8 AFTER REPAIR PROCEDURE [L3 WITH TC].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02B–14 DTC TABLE [L3 WITH TC].)
		No	DTC troubleshooting completed.

OBD-II PENDING TROUBLE CODES [AJ]

E6U010218881W03

- These appear when a problem is detected in a monitored system. The code for a failed system is stored in the PCM memory in the first drive cycle. This code is called the pending code. If the PCM judges that the system returned to normal or the problem was mistakenly detected, deletes the pending code. If the problem is found in the second drive cycle too, the PCM judges that the system has failed, and the DTC is stored.

OBD-II FREEZE FRAME DATA [AJ]

E6U010218881W04

- This is the technical data which indicates the engine's condition at the time of the first malfunction. This data will remain in the memory even if another emission-related DTC is stored, with the exception of Misfire or Fuel System DTCs. Once freeze frame data for Misfire or Fuel System DTC is stored, it will overwrite any previous data and the freeze frame will not be overwritten again.

OBD-II ON-BOARD SYSTEM READINESS TEST [AJ]

E6U010218881W05

- This shows the OBD-II systems operating status. If any monitor function is incomplete, WDS or equivalent will identify which monitor function has not been completed. Misfires, Fuel System and Comprehensive Components (CCM) are continuous monitoring-type functions. The catalyst, EGR system, evaporation system and oxygen sensor will be monitored under drive cycles. The OBD-II diagnostic system is initialized by performing the DTC cancellation procedure or disconnecting the negative battery cable.

OBD-II DIAGNOSTIC MONITORING TEST RESULTS [AJ]

E6U010218881W06

- The results from the intermittent monitor system's technical data are used to determine whether the system is normal or not. They also display the system's thresholds and diagnostic results. The intermittent monitor system monitors the oxygen sensor, EVAP purge system, catalyst and the EGR system.

OBD-II READ/CLEAR DIAGNOSTIC TEST RESULTS [AJ]

E6U010218881W07

- This retrieves all stored DTCs in the PCM and clears the DTC, Freeze Frame Data, On-Board Readiness Test Results, Diagnostic Monitoring Test Results and Pending Trouble Codes.

OBD-II PARAMETER IDENTIFICATION (PID) ACCESS [AJ]

E6U010218881W08

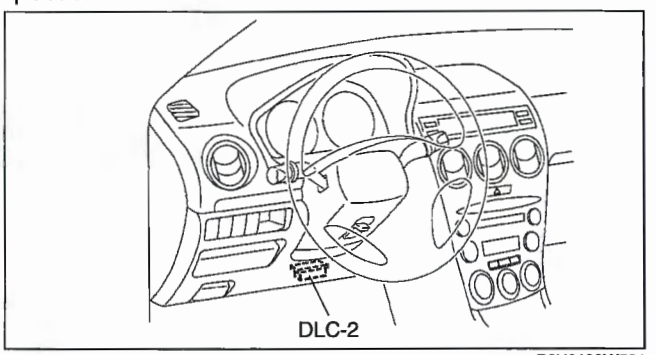
- The PID mode allows access to certain data values, analog and digital inputs and outputs, calculated values and system status information. Since PID values for output devices are PCM internal data values, inspect each device to identify which output devices are malfunctioning.

ON-BOARD DIAGNOSTIC TEST [AJ]

E6U010218881W09

DTC Reading Procedure

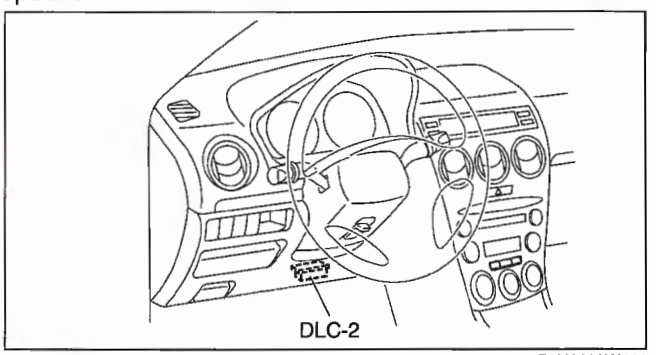
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Retrieve DTCs using the WDS or equivalent.



B6U0102W501

Pending Trouble Code Access Procedure

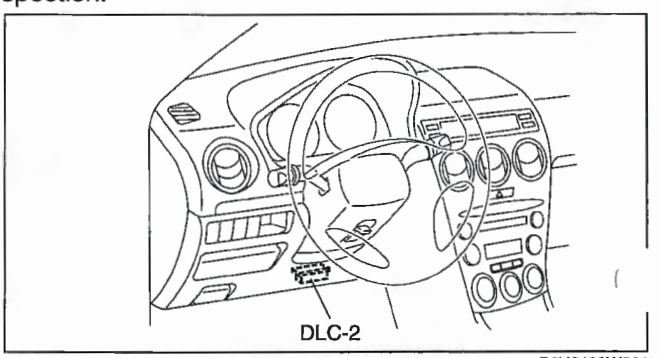
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Retrieve **Pending trouble codes** using the WDS or equivalent.



B6U0102W501

Freeze Frame PID Data Access Procedure

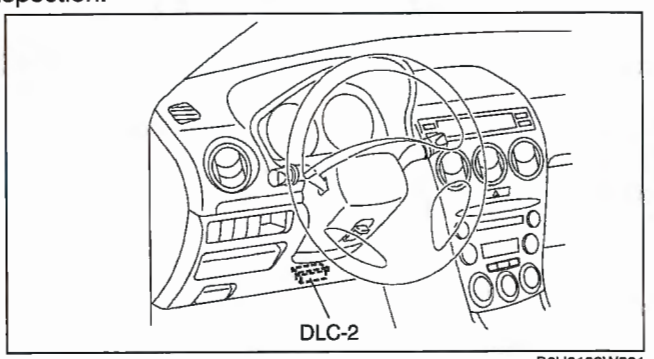
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Record the FREEZE FRAME PID DATA using the WDS or equivalent.



B6U0102W501

On-Board System Readiness Tests Access Procedure

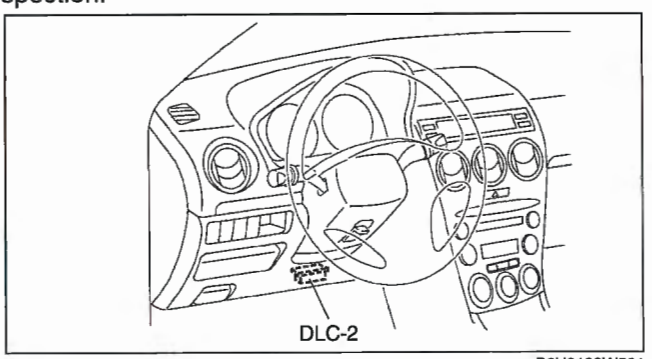
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Monitor the OBD-II systems operating status using the WDS or equivalent.



B6U0102W501

PID/DATA Monitor and Record Procedure

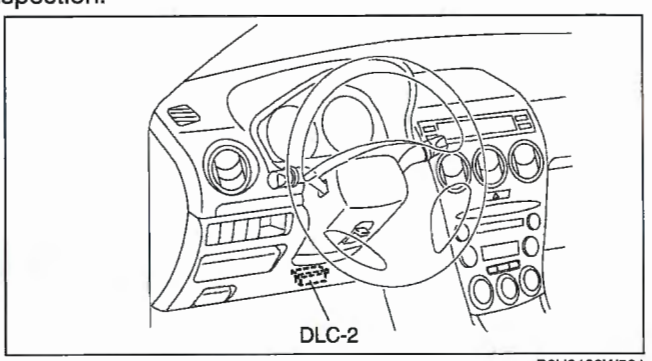
1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Access and monitor PIDs using the WDS or equivalent.



B6U0102W501

ıgnostic Monitoring Test Results Access Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Access to the DIAGNOSTIC MONITORING TEST RESULTS and read the test results using the WDS or equivalent.

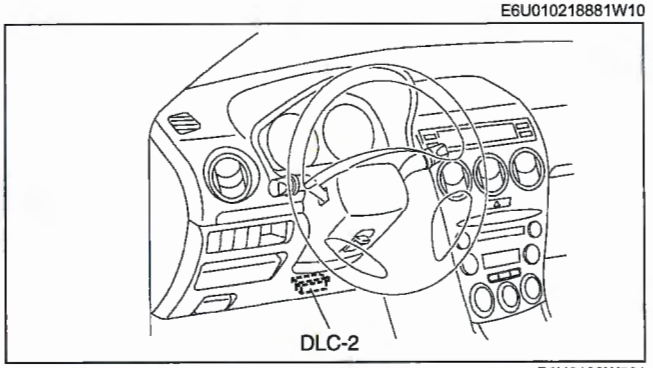


B6U0102W501

AFTER REPAIR PROCEDURE [AJ]

1. Connect the WDS or equivalent to the DLC-2.
2. Cycle the ignition switch from OFF to ON.
3. Record DTC if retrieved.
4. Erase all diagnostic data using the WDS or equivalent.

E6U010218881W10



B6U0102W501

KOEO/KOER SELF TEST [AJ]

E6U010218881W11

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located in the driver compartment.
3. Retrieve the KOEO/KOER DTCs using the WDS or equivalent.

OBD-II DRIVE MODE [AJ]

E6U010218881W12

- Using the OBD-II drive mode, the monitoring item requested by OBD-II regulations can be easily diagnosed.
- Performing the Drive Mode inspects the OBD-II system for proper operation and must be performed to ensure that no additional DTCs are present.
- The OBD-II drive mode is divided into the specific drive mode and single drive mode.
- For the specific drive mode, specified drive modes have been set for each individual monitoring item requested by OBD-II regulations, and they can be diagnosed individually. For the single drive mode, the entire monitoring item requested by OBD-II regulations can be diagnosed.
- The following modes are in the specific drive mode. The applicable system is diagnosed by driving in the following drive modes.
  - — PCM Adaptive Memory Produce Drive Mode
  - — EGR System Repair Verification Drive Mode
  - — HO2S heater, HO2S, and TWC Repair Verification Drive Mode
  - — EVAP System Repair Verification Drive Mode
- The following systems are diagnosed with the single drive mode.
  - — EGR system
  - — HO2S
  - — HO2S heater
  - — Catalytic converter (TWC)
  - — Fuel, misfire and evaporative (EVAP) system

Caution

- **While performing the Drive Mode, always operate the vehicle in a safe and lawful manner.**
- **When the WDS or equivalent is used to observe monitor system status while driving, be sure to have another technician with you, or record the data in the WDS or equivalent using the PID/DATA MONITOR AND RECORD function and inspect later.**

Note

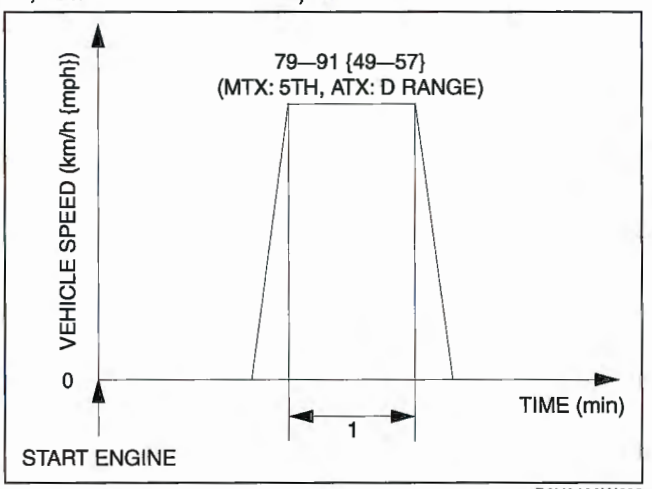
- Vehicle speed and engine speed detected by the PCM may differ from that indicated by the speedometer and tachometer. Use the WDS or equivalent to monitor vehicle speed.
- If the OBD-II system inspection is not completed during the Drive Mode, the following causes are considered:
  - — The OBD-II system detects the malfunction.
  - — The Drive Mode procedure is not completed correctly.
- Disconnecting the battery will reset the memory. Do not disconnect the battery during and after Drive Mode.
- The WDS or equivalent can be used at anytime through the course of the Drive Mode to monitor the completion status. Monitoring can be done by viewing the ON BOARD SYSTEM READINESS menu.
- The OBD monitoring status can be confirmed with the ignition switch operation. During KOEO, the MIL illuminates for a fail-light inspection for **approx. 17 s**. The OBD monitoring status is confirmed after the fail-light inspection.
  - — If all of the diagnosis is completed even one time, the MIL will continue to illuminate.
  - — If all of the diagnosis is not completed, the MIL flashes for **approx. 7 s**, and then it illuminates until the engine is started.

Mode 1 (PCM Adaptive Memory Produce Drive Mode)

1. Start the engine and warm up completely.
2. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
   - Initial ignition timing and idle speed are within the specification.
3. Perform no load racing at the engine speed of **2,500—3,500 rpm** for **15 s or more**, then idle the engine for **60 s or more** after the cooling fan stopped. If possible, monitor RPM PID for engine speed during this procedure.

Mode 2 (EGR System Repair Verification Drive Mode)

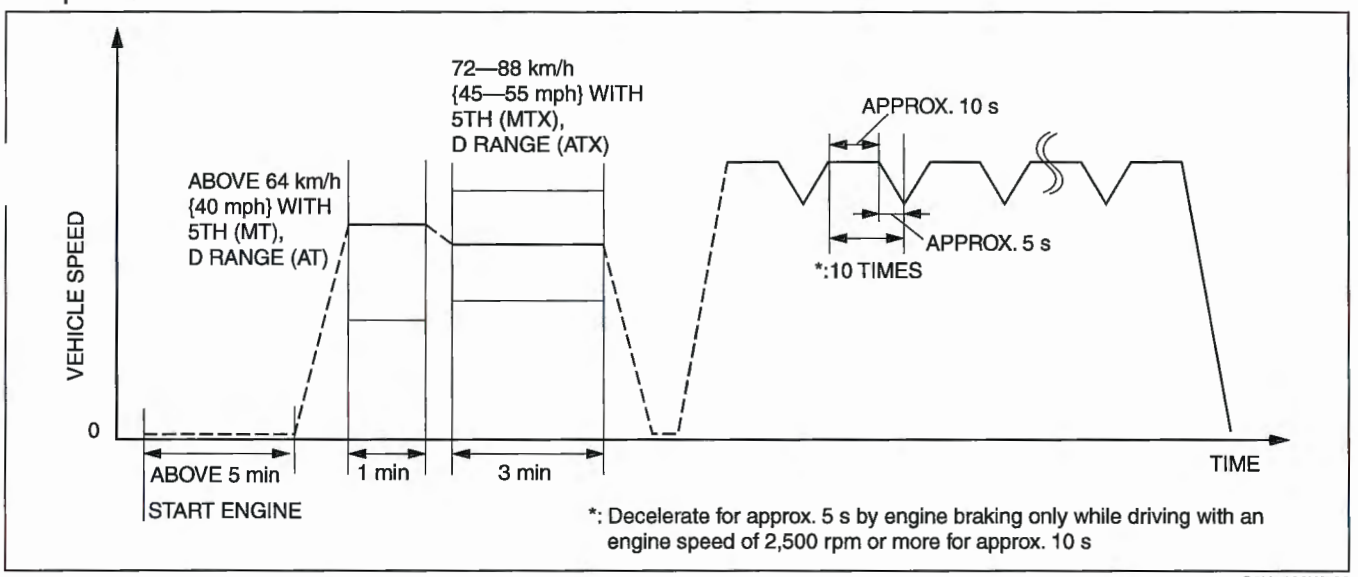
1. Perform "PCM Adaptive Memory Produce Drive Mode "first.
2. Verify that all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph.
   Stop the vehicle and access the ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then repeat from Step 3.
5. Access the DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If detected values are not within the specification, the repair has not been completed.
6. Verify the no DTCs are available.



B6U0102W503

Mode 3 (HO2S heater, HO2S, and TWC Repair Verification Drive Mode)

1. Perform "PCM Adaptive Memory Production Drive Mode" first.
2. Verify all accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
3. Drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified.



C6U0102W503

4. Stop the vehicle and access the ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then repeat from Step 3.
5. Access the DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If the detected values are not within the specification, the repair has not been completed.
6. Verify no DTCs are available.

Mode 6 (EVAP System Repair Verification Drive Mode)

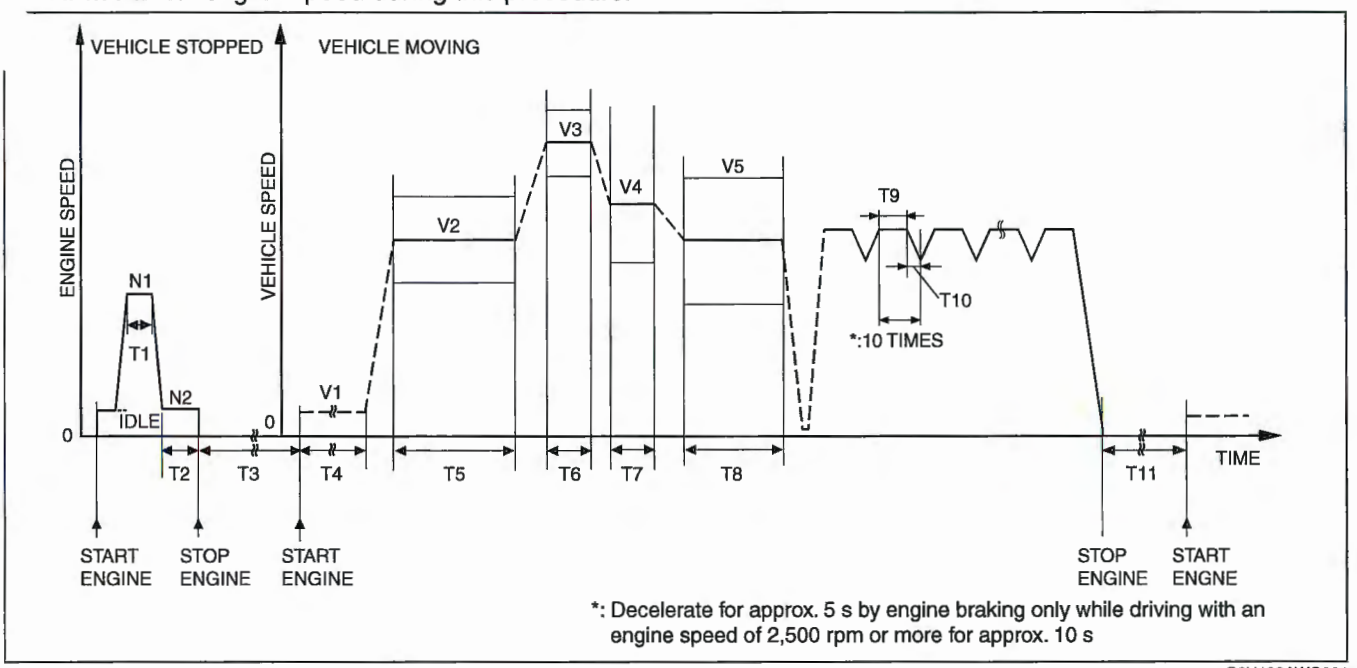
Note
- If "EVAP System Repair Verification Drive Mode "cannot be performed (the vehicle under the specified condition), perform the EVAP system test procedure as an alternative. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.)

1. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications before the engine is started to initiate the EVAP system test.
   - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
   - IAT: **5—35 °C {41—95 °F}**
   - Fuel tank level: **15—85%**
   - Battery positive voltage: **above 10.9 V**
2. Clear DTCs from the PCM memory using the WDS or equivalent.
3. Start the engine and idle it for **10 s or more**, then turn ignition switch off.
4. Leave the vehicle is this condition for **5 hours or more**.
5. Start the engine and idle it for **15 min or more**.
6. Drive the vehicle at the engine speed of **65—80 km/h {40—50 mph}** for **5 min or more**.
7. Stop the vehicle and turn ignition switch off.
8. Leave vehicle in this condition for **10 min or more**.
9. Start the engine.
10. Access the ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
    - If completed, the OBD monitoring status items change from non-completed to completed.
    - If not completed, turn the ignition switch off, then repeat from Step 3.
11. Access DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
    - If the detected values are not within the specification, the repair has not been completed.
12. Verify that no DTCs are available.

Single Drive Mode (PCM Adaptive Memory Produce, EGR System, HO2S heater, HO2S, TWC, and EVAP System Repair Verification Drive Mode)

1. Start the engine and warm it up completely.
2. Clear the DTC from the PCM memory using the WDS or equivalent.
3. Verify the following conditions and correct if necessary:
   - All accessory loads (A/C, headlights, blower fan, rear window defroster) are off.
   - Initial ignition timing and idle speed are within the specification.
4. Verify that all of the following PIDs are within the following specifications. All PIDs must be within specifications from Step 5 to Step 6.
   - BARO: **72.2 kPa {542 mmHg, 21.3 inHg} or higher**
   - IAT: **5—35 °C {41—95 °F}**
   - Fuel tank level: **15—85%**
   - Battery positive voltage: **above 10.9 V**

5. With the vehicle stopped, race the engine at the engine speed indicated, and then drive the vehicle as shown in the graph. The driving conditions before driving at constant speed are not specified. If possible, monitor the RPM PID for engine speed during this procedure.



*: Decelerate for approx. 5 s by engine braking only while driving with an engine speed of 2,500 rpm or more for approx. 10 s

C6U102AWC001

Step	Time	Engine speed (rpm)	Vehicle speed (km/h {mph})	Vehicle condition
1	T1: More than 15 s	N1: 2,500—3,500	0 {0}	—
2	T2: More than 60 s	N2: Idle	0 {0}	Idle the engine after the cooling fan has stopped
3	T3: More than 5 h	0	0 {0}	Keep the ignition switch off
4	T4: More than 15 min	Idle	V1: 0 {0}	—
5	T5: 5 min	—	V2: 65—80 {40—50}	MTX: 5TH ATX: D range
6	T6: 1 min	—	V3: 79—91 {49—57}	MTX: 5TH ATX: D range
7	T7: 1 min	—	V4: Above 65 {40}	MTX: 5TH ATX: D range
8	T8: 3 min	—	V5: 73—88 {45—55}	MTX: 5TH ATX: D range
9	T9: Approx. 10 s	Above 2,500	—	Repeat acceleration and deceleration 10 times. (Decelerate without braking.)
10	T10: Approx. 5 s	—		
11	T11: More than 10 min	0	0 {0}	Keep the ignition switch off

6. Turn the ignition switch off and leave the vehicle for **10 min or more** with the ignition switch off.
7. Start and stop the engine.
8. Access the ON BOARD SYSTEM READINESS menu of GENERIC OBD-II FUNCTION to verify the OBD monitoring status.
   - If completed, all of the OBD monitoring status items change from non-completed to completed.
   - If not completed, turn the ignition switch off, then perform the applicable specific drive mode for any monitoring item that was not in the detection condition.
9. Access the DIAGNOSTIC MONITORING TEST RESULTS menu of GENERIC OBD-II FUNCTIONS to verify the monitor results.
   - If the detected values are not within the specification, the repair has not been completed.

DIAGNOSTIC MONITORING TEST RESULTS [AJ]

E6U010218881W13

- The purpose of this test mode is to confirm the result of the OBD-II monitor diagnostic test results. The result values stored when a particular monitor is completed are displayed. If the monitor is not completed, the initial value is displayed.

DTC B1342 [AJ]

E6U010208888W02

DTC B1342	PCM malfunction
DETECTION CONDITION	• Malfunction in the PCM internal circuit.
POSSIBLE CAUSE	• PCM internal malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear the DTC from the PCM memory using the WDS or equivalent. • Is same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
2	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0011 [AJ]

E6U010200000W16

DTC P0011	CMP timing over-advanced (RH)
DETECTION CONDITION	• The actual valve timing is over-advanced by **20°** from the target valve timing when the OCV is controlled in the maximum valve timing retard condition. **MONITORING CONDITIONS** — Engine coolant temperature is **above 63 °C {145 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Oil control valve system malfunction • Spool valve in OCV (RH) is stuck in advance position. • Variable valve timing actuator (RH) is stuck in advance position. • Loose timing chain or improper valve timing • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (RH) FOR MALFUNCTION** • Start engine. • Increase engine speed. • Stop engine. • Remove OCV (RH). (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].) • Inspect position of spool valve in OCV (RH). • Is spool valve located at valve retard position?	Yes	Go to the next step.
		No	Replace OCV (RH), then go to Step 6. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
4	**INSPECT STOPPER PIN MECHANISM** • Remove timing chain. • Inspect stopper pin. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR INSPECTION [AJ].) • Is stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator (RH), then go to Step 6. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)

STEP	INSPECTION		ACTION
5	**INSPECT ROTOR POSITION** • Remove variable valve timing actuator (RH). (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].) • Is rotor position at maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace variable valve timing actuator (RH), go to the next step. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
6	**VERIFY TROUBLESHOOTING OF DTC P0011 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0012 [AJ]

E6U010200000W17

DTC P0012	CMP timing over-retarded (RH)
DETECTION CONDITION	• The actual valve timing is over-retarded by **10°** from the target valve timing for **4 s** when the OCV system control is within the feed-back range. **MONITORING CONDITIONS** — Engine coolant temperature is **above 63 °C {145 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Low engine oil pressure • Oil control valve malfunction • Loose timing chain or improper valve timing • Spool valve in OCV (RH) is stuck in retard position • The following oil runners are clogged or have leakage: — Between oil pressure switch and OCV (RH) — Between OCV (RH) and variable valve timing actuator (RH) — In variable valve timing actuator (RH) • Variable valve timing actuator (RH) is stuck in retard position • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Is DTC P2088 or P2089 present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start engine. • Does oil pressure warning light illuminate?	Yes	Inspect engine oil pressure. (See 01–11A–5 OIL PRESSURE INSPECTION [L3, AJ].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop engine. • Remove timing chain cover. • Is camshaft timing mark at correct point? (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)	Yes	Go to the next step.
		No	Reinstall timing chain, then go to Step 8. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
6	**INSPECT OCV (RH) FOR MALFUNCTION** • Stop engine. • Remove OCV (RH). (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].) • Inspect position of spool valve in OCV (RH). • Is spool valve located at valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace OCV, then go to Step 8. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
7	**INSPECT ENGINE OIL RUNNER** • Inspect the following engine oil runners for clogging or leakage: — Between oil pressure switch and OCV (RH) — Between OCV (RH) and variable valve timing actuator (RH) — In variable valve timing actuator (RH) • Is there any clogging or leakage?	Yes	Repair or replace suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0012 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0016, P0018 [AJ]

E6U010200000WC9

DTC P0016 DTC P0018	CKP-CMP correlation (RH) CKP-CMP correlation (LH)
DETECTION CONDITION	• The PCM monitors the input pulses from the CKP sensor and CMP sensor (RH, LH). If the input pulse pic up timing do not match each other, the PCM determines that the camshaft position does not coincide with the crankshaft position. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Poor connection of connector • CMP sensor (RH, LH) malfunction • CKP sensor malfunction • Damaged or scratched CMP sensor (RH, LH) pulse wheel • Damaged or scratched CKP sensor pulse wheel • Foreign material on CMP sensor (RH, LH) • Foreign material on CKP sensor • Improper valve timing

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT CMP SENSOR (RH, LH) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CMP sensor (RH, LH) connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
4	**INSPECT CMP SENSOR (RH, LH) FOR FOREIGN MATERIAL** • Remove the CMP sensor (RH, LH). • Inspect the CMP sensor (RH, LH) for foreign materials. • Is there any foreign material on the CMP sensor (RH, LH)?	Yes	Remove foreign material from the CMP sensor (RH, LH), then go to Step 13.
		No	Go to the next step.
5	**INSPECT CMP SENSOR (RH, LH) PLUSE WHEEL** • Visually inspect the CMP sensor (RH, LH) pulse wheel. • Are there any damage or scratches at the CMP sensor (RH, LH) pulse wheel?	Yes	Replace the camshaft, then go to Step 13. (See 01–10C–24 CYLINDER HEAD GASKET REPLACEMENT [AJ].)
		No	Go to the next step.
6	**INSPECT CMP SENSOR (RH, LH)** • Inspect the CMP sensor (RH, LH). (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is the CMP sensor (RH, LH) normal?	Yes	Go to the next step.
		No	Replace the CMP sensor (RH, LH), then go to Step 13.

STEP	INSPECTION		ACTION
7	**INSPECT CKP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the CKP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
8	**INSPECT CKP SENSOR FOR FOREIGN MATERIAL** • Remove the CKP sensor. • Inspect the CKP sensor for foreign material. • Is there any foreign material on the CKP sensor?	Yes	Remove foreign material from the CKP sensor, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CKP SENSOR PLUSE WHEEL** • Visually inspect the CKP sensor pulse wheel. • Are there any damage or scratches on the CKP sensor pulse wheel?	Yes	Replace the CKP sensor pulse wheel, then go to Step 13. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
10	**INSPECT CKP SENSOR** • Inspect the CKP sensor. (See 01–40C–41 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [AJ].) • Is the CKP sensor normal?	Yes	Go to the next step.
		No	Replace the CKP sensor, then go to Step 13. (See 01–40C–40 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [AJ].)
11	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
12	**INSPECT VALVE TIMING** • Inspect valve timing. (See 01–10C–6 TIMING CHAIN REMOVAL/INSTALLATION [AJ].) • Is valve timing normal?	Yes	Go to the next step.
		No	Adjust the valve timing properly, then go to the next step. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
13	**VERIFY TROUBLESHOOTING OF DTC P0016, P0018 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Run Drive Mode 1 and 3. (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0021 [AJ]

E6U010200000W18

DTC P0021	CMP timing over-advanced (LH)
DETECTION CONDITION	• The actual valve timing is over-advanced by **20°** from the target valve timing when the OCV is controlled in the maximum valve timing retard condition. **MONITORING CONDITIONS** — Engine coolant temperature is **above 63 °C {145 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Oil control valve malfunction • Spool valve in OCV (LH) is stuck in advance position. • Variable valve timing actuator (LH) is stuck in advance position. • Loose timing chain or improper valve timing • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (LH) FOR MALFUNCTION** • Start engine. • Increase engine speed. • Stop engine. • Remove OCV (LH). (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].) • Inspect position of spool valve in OCV (LH). • Is spool valve located at valve retard position?	Yes	Go to the next step.
		No	Replace OCV (LH), then go to Step 6. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
4	**INSPECT STOPPER PIN MECHANISM** • Remove timing chain. • Inspect stopper pin. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR INSPECTION [AJ].) • Is stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator (LH), then go to Step 6. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
5	**INSPECT ROTOR POSITION** • Remove variable valve timing actuator (LH). (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].) • Is rotor position at maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace variable valve timing actuator, go to the next step. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
6	**VERIFY TROUBLESHOOTING OF DTC P0021 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0022 [AJ]

E6U010200000W19

DTC P0022	CMP timing over-retarded (LH)
DETECTION CONDITION	• The actual valve timing is over-retarded by **10°** from the target valve timing for **4 s** when the OCV system control is within the feed-back range. **MONITORING CONDITIONS** — Engine coolant temperature is **above 63 °C {145 °F}** **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Low engine oil pressure • Oil control valve malfunction • Loose timing chain or improper valve timing • Spool valve in OCV (LH) is stuck in retard position. • The following oil runners are clogged or have leakage: — Between oil pressure switch and OCV (LH) — Between OCV (LH) and variable valve timing actuator (LH) — In variable valve timing actuator (LH) • Variable valve timing actuator (LH) is stuck in retard position. • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Is DTC P2092 or P2093 present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**VERIFY ENGINE OIL PRESSURE** • Start engine. • Does oil pressure warning light illuminate?	Yes	Inspect engine oil pressure. (See 01–11A–5 OIL PRESSURE INSPECTION [L3, AJ].)
		No	Go to the next step.
5	**VERIFY TIMING CHAIN INSTALLATION** • Stop engine. • Remove timing chain cover. • Is camshaft timing mark at correct point? (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)	Yes	Go to the next step.
		No	Reinstall timing chain, then go to Step 8. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
6	**INSPECT OCV (LH) FOR MALFUNCTION** • Stop engine. • Remove OCV (LH). (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].) • Inspect position of spool valve in OCV (LH). • Is spool valve located at valve retard position?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace OCV (LH), then go to Step 8. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
7	**INSPECT ENGINE OIL RUNNER** • Inspect the following engine oil runners for clogging or leakage: — Between oil pressure switch and OCV (LH) — Between OCV (LH) and variable valve timing actuator (LH) — In variable valve timing actuator (LH) • Is there any clogging or leakage?	Yes	Repair or replace suspected runner, then go to the next step.
		No	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0022 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0031 [AJ]

E6U010200000W20

DTC P0031	HO2S heater (RF) circuit low
DETECTION CONDITION	• The PCM monitors the HO2S heater (RF) control signal at PCM terminal 2AW. If the PCM turns the HO2S heater (RF) off but the HO2S heater (RF) circuit remains low voltage, the PCM determines that the HO2S heater (RF) circuit has a malfunction. **Note** • HO2S heater (RF) is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• HO2S heater (RF) malfunction • Connector or terminal malfunction • Open circuit between ignition switch and HO2S (RF) terminal C • Short to ground circuit between HO2S (RF) terminal D and PCM terminal 2AW • Open circuit between HO2S (RF) terminal D and PCM terminal 2AW • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S (RF) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect HO2S (RF) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT HO2S HEATER (RF) POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between HO2S (RF) terminal C and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT HO2S HEATER (RF) CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between HO2S (RF) terminal D and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT HO2S HEATER (RF)** • Inspect HO2S heater (RF). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S (RF), then go to Step 9. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT HO2S HEATER (RF) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between HO2S (RF) terminal D and PCM terminal 2AW. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
9	**VERIFY TROUBLESHOOTING OF DTC P0031 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0032 [AJ]

E6U010200000W21

DTC P0032	HO2S heater (RF) circuit high
DETECTION CONDITION	• The PCM monitors the HO2S heater (RF) control signal at PCM terminal 2AW. If the PCM turns the HO2S heater (RF) on but the HO2S heater (RF) circuit remains high voltage, the PCM determines that the HO2S heater (RF) circuit has a malfunction. **Note** • HO2S heater (RF) is controlled by a duty signal. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• HO2S heater (RF) malfunction • Connector or terminal malfunction • Short to power circuit between HO2S (RF) terminal D and PCM terminal 2AW • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S (RF) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect HO2S (RF) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT HO2S HEATER (RF) CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between HO2S (RF) terminal D and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for shot to power, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HO2S HEATER (RF)** • Inspect HO2S heater (RF). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S (RF), then go to Step 7. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0032 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0037 [AJ]

E6U010200000W22

DTC P0037	HO2S heater (RR) circuit low
DETECTION CONDITION	• The PCM monitors the HO2S heater (RR) control signal at PCM terminal 2AT. If the PCM turns the HO2S heater (RR) off but the HO2S heater (RR) circuit remains low voltage, the PCM determines that the HO2S heater (RR) circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• HO2S heater (RR) malfunction • Connector or terminal malfunction • Open circuit between ignition switch and HO2S (RR) terminal C • Short to ground circuit between HO2S (RR) terminal D and PCM terminal 2AT • Open circuit between HO2S (RR) terminal D and PCM terminal 2AT • PCM malfunction

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S (LF) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect HO2S (LF) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT HO2S HEATER (LF) CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between HO2S (LF) terminal D and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HO2S HEATER (LF)** • Inspect HO2S heater (LF). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S (LF), then go to Step 7. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0052 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0057 [AJ]

E6U010200000W26

DTC P0057	HO2S heater (LR) circuit low
DETECTION CONDITION	• The PCM monitors the HO2S heater (LR) control signal at PCM terminal 2AO. If the PCM turns the HO2S heater (LR) off but the HO2S heater (LR) circuit remains low voltage, the PCM determines that the HO2S heater (LR) circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• HO2S heater (LR) malfunction • Connector or terminal malfunction • Open circuit between ignition switch and HO2S (LR) terminal C • Short to ground circuit between HO2S (LR) terminal D and PCM terminal 2AO • Open circuit between HO2S (LR) terminal D and PCM terminal 2AO • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S (LR) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect HO2S (LR) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT HO2S HEATER (LR) POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between HO2S (LR) terminal C and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT HO2S HEATER (LR) CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between HO2S (LR) terminal D and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT HO2S HEATER (LR)** • Inspect HO2S heater (LR). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S (LR), then go to Step 9. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT HO2S HEATER (LR) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between HO2S (LR) terminal D and PCM terminal 2AO. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0057 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0058 [AJ]

E6U010200000W27

DTC P0058	HO2S heater (LR) circuit high
DETECTION CONDITION	• The PCM monitors the HO2S heater (LR) control signal at PCM terminal 2AO. If the PCM turns the HO2S heater (LR) on but the rear heater circuit remains high voltage, the PCM determines that the HO2S heater (LR) circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (HO2S heater). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• HO2S heater (LR) malfunction • Connector or terminal malfunction • Short to power circuit between HO2S (LR) terminal D and PCM terminal 2AO • PCM malfunction

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S heater related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT HO2S (LR) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect HO2S (LR) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT HO2S HEATER (LR) CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between HO2S (LR) terminal D and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 7.
		No	Go to the next step.
5	**INSPECT HO2S HEATER (LR)** • Inspect HO2S heater (LR). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S (LR), then go to Step 7. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0058 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace or repair PCM, go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0101 [AJ]

E6U010200000W28

DTC P0101	MAF sensor inconsistent with TP sensor
DETECTION CONDITION	• The PCM monitors mass intake air flow amount when the engine is running. — If the mass intake airflow amount is the **8.4—81 l/s or below** (the value depends on engine speed) for **5 s** and the throttle opening angle is **50% or above** with the engine speed is **above 1,000 rpm**, the PCM determines that the detected mass intake airflow amount is too low. — If the mass intake airflow amount is **73 l /s or above** for **5 s** and the engine speed is **2,500 rpm or below** with engine running, the PCM determines that the detected mass intake airflow amount is too high. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • TP sensor malfunction • Voltage drops in MAF signal circuit • Electrical corrosion in MAF signal circuit • Electrical corrosion in MAF RETURN circuit • Voltage drops in ground circuit • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS or equivalent to DLC-2. • Start engine. • Access ECT, TP1 and MAF PIDs. • Warm up engine until ECT PID is **70 °C {158 °F} or above**. • Drive vehicle. • Read MAF PID when TP1 PID is **50% or above**. • Is MAF PID reading the **threshold or below**?	Yes	Make sure that TP1 PID changes smoothly when gradually opening throttle valve. • If not, replace throttle body and go to Step 7. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].) • For other, go to the next step.
		No	Go to the next step.
4	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS or equivalent to DLC-2. • Start engine. • Access ECT, MAF and RPM PIDs. • Warm up engine until ECT PID is **70 °C {158°F} or above**. • Read MAF PID when RPM PID is **2,500 rpm or below**. • Is MAF PID reading **73 l/s or above**?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to "INTERMITTENT CONCERNS TROUBLESHOOTING". (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
5	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Replace MAF/IAT sensor, then go to the next step. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
7	**VERIFY TROUBLESHOOTING OF DTC P0101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the memory using the WDS or equivalent. • Start engine. • Warm up engine until ECT PID is **70 °C {158 °F} or above**. • Read MAF and RPM PIDs. **Note** • MAF PID should indicate **73 l/s or below** when RPM PID is **2,500 rpm or below**. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0102 [AJ]

E6U010200000W29

DTC P0102	MAF circuit low input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAF sensor when the engine is running. If the input voltage at PCM terminal 1AK is **0.21 V or below**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Open circuit between main relay terminal C and MAF/IAT sensor terminal A • Open circuit between MAF/IAT sensor terminal C and PCM terminal 1AK • Short to ground circuit between MAF/IAT sensor terminal C and PCM terminal 1AK • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT MAF SENSOR POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between MAF/IAT sensor terminal A and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check continuity between MAF/IAT sensor terminal C and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT MAF SENSOR** • Inspect MAF sensor. (See 01–40C–32 MASS AIR FLOW (MAF) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace MAF/IAT sensor, then go to Step 9. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check for continuity between MAF/IAT sensor terminal C and PCM terminal 1AK. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0102 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0103 [AJ]

E6U010200000W30

DTC P0103	MAF circuit high input
DETECTION CONDITION	• The PCM monitors the input voltage from the MAF sensor when the engine is running. If the input voltage at PCM terminal 1AK is **4.9 V or above**, the PCM determines that the MAF circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• MAF sensor malfunction • Connector or terminal malfunction • Short to power circuit between MAF/IAT sensor terminal C and PCM terminal 1AK • Open circuit between MAF/IAT sensor terminal B and PCM terminal 1P • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT MAF SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between MAF/IAT sensor terminal C and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT MAF SENSOR** • Inspect MAF sensor. (See 01–40C–32 MASS AIR FLOW (MAF) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace MAF/IAT sensor, then go to Step 8. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT MAF SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check for continuity between MAF/IAT sensor terminal B and PCM terminal 1P. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0103 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0111 [AJ]

E6U010200000W31

DTC P0111	IAT circuit performance problem
DETECTION CONDITION	• If the intake air temperature is higher than the engine coolant temperature by **18 °C {32.4 °F}** for **1.2 s** with the ignition switch turn in the ON position*, the PCM determines that there is an IAT sensor circuit range/performance problem. *: Ignition switch is in the ON position when **6 h or more** have passed since the ignition switch was turned off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See 01–40C–31 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace MAF/IAT sensor, then go to Step 6. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P0111 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine and run engine under FREEZE FRAME DATA condition. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0112 [AJ]

E6U010200000W32

DTC P0112	IAT circuit low input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal at PCM terminal 1AT. If the PCM detects IAT sensor voltage of **0.16 V or below**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Connector or terminal malfunction • Short to ground circuit between MAF/IAT sensor terminal D and PCM terminal 1AT • Short each harness IAT sensor terminal D and E • PCM malfunction

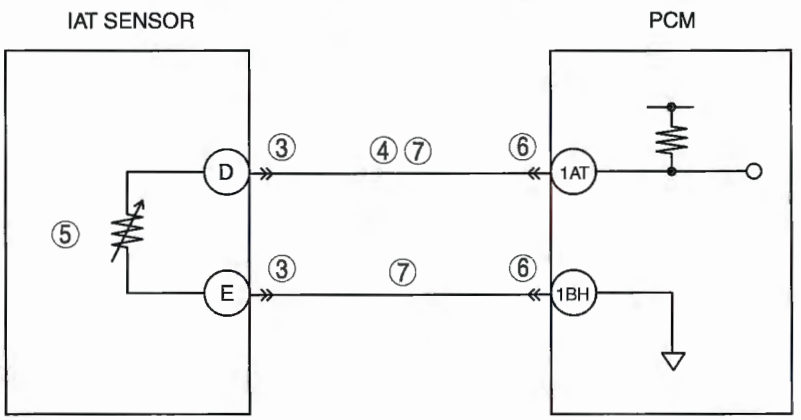
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check continuity between MAF/IAT sensor terminal D and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT IAT SENSOR CIRCUIT FOR SHORT WITH EACH OTHER** • Turn the ignition switch off. • Check continuity between MAF/IAT sensor terminal D and E. • Is there continuity?	Yes	Repair or replace harness for short with each other, then go to Step 8.
		No	Go to the next step.
6	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See 01–40C–31 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace MAF/IAT sensor, then go to Step 8. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

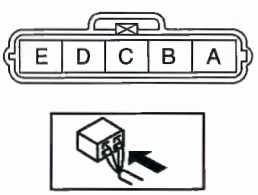
DTC P0113 [AJ]

E6U010200000W33

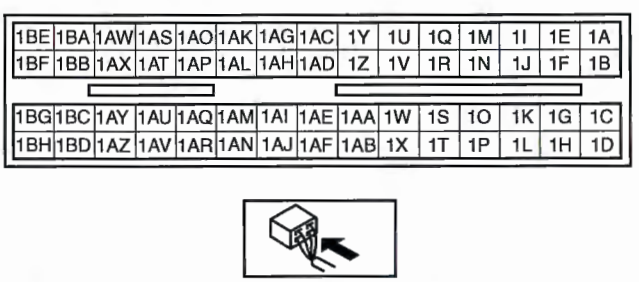
DTC P0113	IAT circuit high input
DETECTION CONDITION	• The PCM monitors the IAT sensor signal at PCM terminal 1AT. If the PCM detects IAT sensor voltage **of 4.84 V or above**, the PCM determines that the IAT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• IAT sensor malfunction • Connector or terminal malfunction • Short to power circuit between MAF/IAT sensor terminal D and PCM terminal 1AT • Open circuit between MAF/IAT sensor terminal D and PCM terminal 1AT • Open circuit between MAF/IAT sensor terminal E and PCM terminal 1BH • PCM malfunction



MAF/IAT SENSOR
HARNESS SIDE CONNECTOR



PCM
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT MAF/IAT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect MAF/IAT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT IAT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between MAF/IAT sensor terminal D and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT IAT SENSOR** • Inspect IAT sensor. (See 01–40C–31 INTAKE AIR TEMPERATURE (IAT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace MAF/IAT sensor, then go to Step 8. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT IAT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — MAF/IAT sensor terminal D and PCM terminal 1AT — MAF/IAT sensor terminal E and PCM terminal 1BH • Is there continuity?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0113 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0116 [AJ]

E6U010200000WC2

DTC P0116	Engine coolant temperature circuit range/performance
DETECTION CONDITION	• The PCM monitors the maximum value and minimum value of engine coolant temperature when the engine is started and **5 min** have been passed after leaving the vehicle **6 h or more**. If the difference between the maximum and the minimum values of the engine coolant temperature is **below 6°C {10.8°F}**, the PCM determines that there is an ECT circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunctioning condition in first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0116 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].))
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect the ECT sensor. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the ECT sensor, then go to Step 8.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**COMPARE ECT PID VALUE** • Prepare a new ECT sensor. • Clear the DTC from the PCM memory using the WDS or equivalent. • Connect the ECT sensor connector to the new ECT sensor without installing to the engine. • Turn the ignition switch to the ON position and record the ECT PID value. • Replace the malfunction ECT sensor with new one. • Start the engine and wait for **5 min**. • Record the ECT PID value. • Is the difference between ECT PID values **more than 6 °C {42 °F}**?	Yes	Go to the next step.
		No	Inspect the thermostat. • If the thermostat is normal, go to the next step. • If the thermostat is not normal, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0116 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Run Drive Mode 1 and 3. (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0117 [AJ]

E6U010200000W34

DTC P0117	ECT circuit low input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal at PCM terminal 2AQ. If the PCM detects ECT sensor voltage of **0.18 V or below**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • Short to ground circuit between ECT sensor terminal A and PCM terminal 2AQ • Short each harness ECT sensor terminal A and B • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect PCM connector. • Check continuity between ECT sensor terminal A and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR CIRCUIT FOR SHORT WITH EACH OTHER** • Turn the ignition switch off. • Check continuity between ECT sensor terminal A and B. • Is there continuity?	Yes	Repair or replace harness for short with each other, then go to Step 8.
		No	Go to the next step.
6	**INSPECT ECT SENSOR** • Inspect ECT sensor. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace ECT sensor, then go to Step 8. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0117 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0118 [AJ]

E6U010200000W35

DTC P0118	ECT circuit high input
DETECTION CONDITION	• The PCM monitors the ECT sensor signal at PCM terminal 2AQ. If the PCM detects ECT sensor voltage c **4.58 V or above**, the PCM determines that the ECT sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • Open circuit between ECT sensor terminal A and PCM terminal 2AQ • Short to power circuit between ECT sensor terminal A and PCM terminal 2AQ • Open circuit between ECT sensor terminal B and PCM terminal 2AJ • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT ECT SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between ECT sensor terminal A and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect ECT sensor. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace ECT sensor, then go to Step 8. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT ECT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — ECT sensor terminal A and PCM terminal 2AQ — ECT sensor terminal B and PCM terminal 2AJ • Is there continuity?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0118 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0122 [AJ]

E6U010200000W36

DTC P0122	TP sensor No.1 circuit low input
DETECTION CONDITION	• If the PCM detects that TP sensor No.1 voltage at PCM terminal 2AM is **0.1 V or below** after the ignition switch is ON, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal D and PCM terminal 2AR • Short to ground circuit between throttle body terminal F and PCM terminal 2AM • Open circuit between throttle body terminal F and PCM terminal 2AM • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.1 POWER CIRCUIT FOR OPEN CIRCUIT** **Note** • If DTC P0222 is also retrieved with P0122, then go to CONSTANT VOLTAGE troubleshooting procedure. • Turn the ignition switch to the ON position. • Measure voltage between throttle body terminal D and body ground. • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**VERIFY TP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between throttle body terminal F and body ground. • Is there continuity?	Yes	Repair or replace harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.1** • Inspect TP sensor No.1. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace throttle body, then go to Step 9. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**VERIFY TP SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between throttle body terminal F and PCM terminal 2AM. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0123 [AJ]

E6U010200000W37

DTC P0123	TP sensor No.1 circuit high input
DETECTION CONDITION	• If the PCM detects that TP sensor No.1 voltage at PCM terminal 2AM is **4.9 V or above** after ignition switch is ON, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • Connector or terminal malfunction • Short to power circuit between throttle body terminal F and PCM terminal 2AM • Open circuit between throttle body terminal E and PCM terminal 2AN • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between throttle body terminal F and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TP SENSOR NO.1** • Inspect TP sensor No.1. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace throttle body, then go to Step 8. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between throttle body terminal E and PCM terminal 2AN. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0125 [AJ]

E6U010200000W38

DTC P0125	Excessive time to enter closed loop fuel control
DETECTION CONDITION	• The PCM monitors the ECT sensor signal at PCM terminal 2AQ after the engine is cold started. If the Engine coolant temperature does not reach the expected temperature in a certain period, the PCM determines that it has taken an excessive amount of time for the engine coolant temperature to reach the temperature necessary to start the closed-loop fuel control. **Diagnostic support note** • This is a continuous monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Connector or terminal malfunction • Engine cooling system malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Start engine. • Warm up engine completely. • Access ECT PID using the WDS or equivalent. • Is ECT PID **60 °C {140 °F} or above**?	Yes	Intermittent concern exists. Go to "INTERMITTENT CONCERNS TROUBLESHOOTING". (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
		No	Go to the next step.
4	**INSPECT ECT SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect ECT sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
5	**INSPECT ECT SENSOR** • Inspect ECT sensor. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace ECT sensor, then go to Step 8. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT ENGINE COOLANT SYSTEM** • Inspect the following items. — Cooling system cap — Radiator — Thermostat — Water pump — Cooling fan • Are they normal?	Yes	Go to the next step.
		No	Repair or replace necessary part, then go to Step 8.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0125 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Access ECT PID using the WDS or equivalent. • Wait until ECT PID **8.4 °C {47.1 °F} or below**. • Start engine and warm up it completely. • Is PENDING CODE for this DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0126, P0128 [AJ]

E6U010200000W39

DTC P0126 DTC P0128	Coolant thermostat
DETECTION CONDITION	**DTC P0126** • If the ECT signal never exceeds **71 °C {160 °F}** after the engine runs for a certain period, the PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — IAT: **–10 °C {14 °F} or above** — Vehicle speed: **6.0 km/h {3.7 mph} or above** (MTX) — Vehicle speed: **9.4 km/h {5.8 mph} or above** (ATX) **DTC P0128** • The PCM monitors MAF, IAT, VSS and ECT signals and calculates the radiator heat radiation ratio when the following monitoring conditions are met. If the calculated value exceeds the threshold, the PCM determines that the coolant thermostat is stuck open. **MONITORING CONDITIONS** — ECT at engine start: **36 °C {97 °F} or below** — IAT: **–10 °C {14 °F} or above** — Difference between ECT at engine start and minimum IAT: **6 °C {10.8 °F} or below** — Vehicle speed: **30 km/h {18.6 mph} or above** (MTX) — Vehicle speed: **20 km/h {12.4 mph} or above** (ATX) **Diagnostic support note** • This is an intermittent monitor (Engine cooling system). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• ECT sensor malfunction • Coolant thermostat malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Engine cooling system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCS** • Have other DTCs been stored?	Yes	Go to appropriate DTC troubleshooting procedure, then go to the next step. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**INSPECT COOLANT THERMOSTAT IS WHETHER STUCK OPEN** • Inspect coolant thermostat. (See 01–12A–10 THERMOSTAT INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace coolant thermostat, then go to the next step. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Inspect ECT sensor. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [AJ].) • Replace ECT sensor if necessary, then go to the next step. (See 01–40C–29 ENGINE COOLANT TEMPERATURE (ECT) SENSOR REMOVAL/INSTALLATION [AJ].)

STEP	INSPECTION		ACTION
5	**VERIFY MONITORING CONDITION FOR REPAIR VERIFICATION** • Make sure to reconnect all disconnected connectors. • Cool down engine. **Note** • If temperature difference inside/ outside workshop is significant, PCM might not operate thermostat monitor. Therefore, it is recommended to cool down engine out of workshop. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Access ECT, IAT PIDs and make sure that each value is within following specifications. — ECT: **36 °C {97 °F} or below** (for P0128 only) — IAT: **–10°C {14°F} or above** — Difference between ECT and IAT: **6°C {43°F} or below** • Is there any PID that is out of specification?	Yes	Take corrective action (e.g. cool down engine), then repeat this step.
		No	Go to the next step for DTC P0126 or go to step 7 for DTC P0128.
6	**VERIFY TROUBLESHOOTING OF DTC P0126 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST#10: E1: 81 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops during every **5 min** of driving time (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Test period depends on ECT at engine start. (e.g. if ECT is **–10°C {14°F}**, monitoring period is **38 min** and ECT is **30 °C {86 °F}**, monitoring period is **8 min**) • Verify TEST #10: E1: 81 (ECT) value. • Is value above minimum value?	Yes	Go to Step 8.
		No	Replace PCM, then go to Step 8. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
7	**VERIFY TROUBLESHOOTING OF DTC P0128 COMPLETED** • Start engine and turn off E/L and A/C. • Access DIAGNOSTIC MONITORING TEST RESULTS using the WDS or equivalent and monitor TEST #10: E1: 80 (Heat radiation ratio) or #10: E1: 1 (ECT). **Note** • This test requires actual driving. Chassis roller cannot be used for this test. • During test drive, constant speed should be maintained, although 2 or 3 stops (e.g. for traffic signals) is acceptable. Stop-and-go (e.g. in case of traffic congestion) is not acceptable during the test period. • Verify TEST#10: E1: 80 (Heat radiation ratio) or #10: E2: 81 (ECT) value. • Are value of TEST#10: E1: 80 (Heat radiation ratio) below maximum value and value of TEST#10: E1: 81 (ECT) above minimum value?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)

STEP	INSPECTION		ACTION
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0131, P0151 [AJ]

E6U010200000WC3

DTC P0131 DTC P0151	**HO2S (RF) circuit low input** **HO2S (LF) circuit low input**
DETECTION CONDITION	• The PCM monitors the front HO2S output voltage when the following conditions are met. If output voltage is less than **0.1 V** for **41 s**, the PCM determines that the front HO2S signal remains lean. **MONITORING CONDITION** — Fuel injection control system status: feedback zone • The PCM monitors the input voltage from the front HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the front HO2S does not even **exceed 0.1 V** though the short term fuel trim is controlled up to **25%** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC Repair Verification Drive Mode — Following conditions are met • Time from engine start is **above 50 s** (ECT when engine start is **20 °C {68 °F}**). **Diagnostic support note** • This is a continuous monitor (HO2S). • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF) malfunction • Short to ground in wiring between HO2S (RF) terminal A and PCM terminal 2AK • Open circuit between HO2S (RF) terminal A and PCM terminal 2AK • Open circuit between HO2S (RF) terminal B and PCM terminal 2AV • HO2S (LR) malfunction • Short to ground in wiring between HO2S (LF) terminal A and PCM terminal 2AL • Open circuit between HO2S (LF) terminal A and PCM terminal 2AL • Open circuit between HO2S (LF) terminal B and PCM terminal 2AX • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0131 or P0151 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**INSPECT FRONT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT HARNESS** • Turn the ignition switch off. • Disconnect rear HO2S and PCM connectors. • Verify the continuity between following HO2S terminal A (wiring harness side) and body ground. • Is there continuity?	Yes	Replace short to ground circuit, then go to Step 8.
		No	Go to the next step.
6	**INSPECT FRONT HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT FRONT HO2S** • Rear HO2S connector disconnected. • Verify the continuity between following HO2S terminal A (part side) and body ground. • Is there continuity?	Yes	Replace suspected HO2S then go to the next step.
		No	Go to the next step.
7	**INSPECT FRONT HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — HO2S terminal A and PCM terminal 2AK (RF), 2AL (LF) — HO2S terminal B and PCM terminal 2AV (RF), 2AX (LF) • Is there continuity?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0131 OR P0151 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0132, P0152 [AJ]

E6U010200000W40

DTC P0132 DTC P0152	**HO2S (RF) circuit high input** **HO2S (LF) circuit high input**
DETECTION CONDITION	• PCM monitors the input voltage the from HO2S (RF, LF). If the PCM detected HO2S (RF, LF) voltage **above 1.2 V** for **0.8 s**, the PCM determines that the circuit input is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF, LF) malfunction • Short to power supply in the wiring harness between the following terminals: — For P0132: HO2S (RF) terminal A and PCM terminal 2AK — For P0152: HO2S (LF) terminal A and PCM terminal 2AL • HO2S (RF, LF) or the PCM terminal is shorted • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCs** • Turn the ignition switch to off, then ON (Engine off). • Verify the pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0132 or P0152 in the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**INSPECT HO2S (RF, LF) SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect the HO2S (RF, LF) connector. • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals: — For P0132: HO2S (RF) terminal A and body ground — For P0152: HO2S (LF) terminal A and body ground • Is there any voltage?	Yes	Replace a short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HO2S (RF, LF)** • Perform the "HEATED OXYGEN SENSOR (HO2S) INSPECTION". (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is the front HO2S normal?	Yes	Go to the next step.
		No	Replace the sensor, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0132 OR P0152 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the 0PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0133, P0153 [AJ]

E6U010200000W41

DTC P0133 **DTC P0153**	**HO2S (RF) circuit malfunction** **HO2S (LF) circuit malfunction**
DETECTION CONDITION	• The PCM monitors the inversion cycle period, lean-to-rich response time and rich-to-lean response time of the sensor. The PCM calculated the average of the invention cycle period specified invention cycles, average response time from lean-to-rich, and from rich-to-lean when the following monitoring conditions are met. If the following condition, the PCM determines that the circuit has a malfunction. — The average valve of invention cycle period or lean-to-rich/rich-to-lean response time is more than the threshold value. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are to be met: • Calculation load **18—58%**, (at engine speed **2,000 rpm**) • Engine speed **1,400—2,500 rpm** (MTX) • Engine speed **1,200—2,500 rpm** (ATX) • Engine coolant temperature is **–10 °C {14 °F} or above** • Front HO2S signal invention cycle is **above 10 cycle** • The inversion cycle period and the lean-to-rich/ rich-to-lean response time cannot be measured even once even though the accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are to be met: • Calculation load **18—58%**, (at engine speed **2,000 rpm**) • Engine speed **1,400—2,500 rpm** (MTX) • Engine speed **1,200—2,500 rpm** (ATX) • Engine coolant temperature is **–10 °C {14 °F} or above** **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF, LF) deterioration • HO2S (RF, LF) heater malfunction • Looseness front HO2S • Leakage exhaust system • Fuel filter clogged or restricted • Fuel pump malfunction • Fuel leakage on fuel line from fuel distribution pipe and fuel pump • Pressure regulator malfunction • Fuel return hose clogged • Purge solenoid hoses improper connection • Purge solenoid valve malfunction • Insufficient compression • Engine malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn the ignition switch to off, then ON (Engine off). • Verify pending codes or stored DTCs using the WDS or equivalent. • Are the following DTCs also present? — P0442 or P0443 with P0133 — P0442 or P0443 with P0153	Yes	Go to the appropriate DTC troubleshooting procedures, then go to Step 13. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0133 or P0153 in the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access the O2S11 for P0133 or O2S21 for P0153 PID using the WDS or equivalent. • Check the PID under the following accelerator pedal conditions (in PARK or NEUTRAL). • Is the PID reading normal? — **0.55 V or more** when the accelerator pedal is suddenly depressed (rich condition). — **0.55 V or less** just after release of accelerator pedal (lean condition).	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF HO2S (RF, LF)** • Check if the HO2S (RF, LF) is loosely installed. • Is the sensor installed securely?	Yes	Go to the next step.
		No	Retighten the HO2S (RF, LF), then go to Step 13. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between the exhaust manifold and the HO2S (RF, LF). (See 01–15C–1 EXHAUST SYSTEM INSPECTION [AJ].) • Is there gas leakage?	Yes	Repair or replace any faulty exhaust parts, then go to Step 13. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Replace the HO2S (RF, LF), then go to Step 13. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
8	**INSPECT LONG TERM FUEL TRIM** • Access the following PIDs: — For P0133: LONGFT1 — For P0153: LONGFT2 • Compare it with the FREEZE FRAME DATA recorded in Step 1. • Is it below the FFD value?	Yes	Engine is driven under a rich condition. Go to the next step.
		No	Engine is driven under a lean condition. Go to Step 10.
9	**INSPECT FUEL LINE PRESSURE (EXCESSIVE FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect fuel line pressure when engine running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 13. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE (LOW FUEL LINE PRESSURE)** • Turn the ignition switch off. • Inspect the fuel line pressure when the engine is running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to step 13.
11	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace the suspected fuel line, then go to Step 13.
		No	Inspect the low-pressure side fuel filter for the following: • Foreign material or staining inside fuel filter Perform the following actions as result. • If foreign material or staining is found inside fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace the fuel pump unit. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].) Then go to Step 13.

STEP	INSPECTION		ACTION
12	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing the radiator cap when the radiator is hot is dangerous. Scalding coolant and steam may shoot out and cause serious injury.** • **When removing the radiator cap, wrap a thick cloth around it and turn it slowly.** • Remove radiator cap. • Bleed air from the engine coolant, then run the engine at idle. • Are there any small bubbles, which make engine coolant white at the filler opening? **Note** • Large bubbles are normal since they are remaining air coming from the engine coolant passage.	Yes	Air penetrates due to poor sealing on the head gasket or other areas between the combustion chamber and the engine coolant passage. Repair or replace malfunctioning parts, then go to the next step.
		No	Go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0133 or P0153 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position (Engine off). • Clear the DTC from memory using the WDS or equivalent. • Start the engine. • Run DRIVE MODE 1 and 3. (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Stop the vehicle and access the ON BOARD SYSTEM READINESS TEST (Mode 1) to inspect the DRIVE MODE completion status. • Verify O2S_EVAL PID changes to Yes. — If not, run the DRIVE MODE again. • Access the DIAGNOSTIC MONITORING TEST RESULTS. • Verify the following TEST # values: (See 01–02C–12 DIAGNOSTIC MONITORING TEST RESULTS [AJ].) — For P0133: • 10: 01: 05 (HO2S (RF) rich-to-lean response time). • 10: 01: 06 (HO2S (RF) lean-to-rich response time). • 10: 01: 0A (HO2S (RF) inversion cycles) — For P0153: • 10: 05: 05 (HO2S (LF) rich-to-lean response time • 10: 05: 06 (HO2S (LF) lean-to-rich response time • 10: 05: 0A (HO2S (LF) inversion cycles • Are they all below the MAX value?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0134, P0154 [AJ]

E6U010200000W42

DTC P0134 **DTC P0154**	**HO2S (RF) circuit no activity detected** **HO2S (LF) circuit no activity detected**
DETECTION CONDITION	• The PCM monitors the input voltage from the HO2S (RF,LF) when the following conditions are met. Unde the following monitoring conditions, if the input voltage from the front HO2S does not even **exceed 0.55 V** though the short term fuel trim is controlled up to **25%** for **9.6 s**, the PCM determines that sensor circuit is not activated. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are to be met • Time from engine start is **above 50 s** (ECT when engine start is **20 °C {68 °F}**). — HO2S (RF,LF) voltage is **above 0.1 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF, LF) deterioration • HO2S heater (RF, LF) malfunction • Leakage exhaust system • Open or short to ground circuit between HO2S (RF, LF) terminal and PCM terminal — For P0134: HO2S (RF) terminal A and PCM terminal 2AK — For P0154: HO2S (LF) terminal A and PCM terminal 2AL • Insufficient compression • Engine malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** **Note** • If fuel monitor DTC, DTC P0131, P0132, P0151 or P0152 is retrieved, ignore it until P0134 or P0154 is fixed. • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedures. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0134 or P0154 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S11 for P0134 or O2S21 for P0154 PID using the WDS or equivalent. • Verify PID when racing engine (in PARK or NEUTRAL). • Is PID reading normal? — **0.55 V or more** when the accelerator pedal is suddenly depressed (rich condition). — **0.55 V or less** just after release of accelerator pedal (lean condition)	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF HO2S (RF, LF)** • Check if HO2S (RF, LF) is loosely installed. • Is HO2S (RF, LF) installed securely?	Yes	Go to the next step.
		No	Install HO2S (RF, LF) securely, then go to Step 10. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between exhaust manifold and HO2S (RF, LF). (See 01–15C–1 EXHAUST SYSTEM INSPECTION [AJ].) • Is there gas leakage?	Yes	Repair or replace any faulty exhaust parts, then go to Step 10. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	• Inspect the following harnesses for open or short to ground, repair or replace harness if necessary: — HO2S (RF) terminal A to PCM terminal 2AK — HO2S (LF) terminal A to PCM terminal 2AL • Repair or replace harness if necessary. • If all items above are normal, replace faulty sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing radiator cap when radiator is hot is dangerous. Scalding coolant and steam may shoot out and cause serious injury.** • **When removing radiator cap, wrap a thick cloth around and turn it slowly.** • Remove radiator cap. • Implement procedure to bleed air from engine coolant, then run engine at idle. • Are there any small bubbles, which make engine coolant white at filling opening? **Note** • Large bubbles are normal since they are remaining air coming out from engine coolant passage.	Yes	Air gets in from poor sealing on head gasket or other areas between combustion chamber and engine coolant passage. Repair or replace faulty parts, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0134 or P0154 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0137, P0157 [AJ]

E6U010200000WC4

DTC P0137 DTC P0157	**HO2S (RR) circuit low input** **HO2S (LR) circuit low input**
DETECTION CONDITION	• The PCM monitors input voltage from rear HO2S. If the input voltage from the rear HO2S sensor is below **0.1 V** for **41.6 s** the PCM determines that circuit input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met. • Engine speed is **above 1,500 rpm.** • Engine coolant temperature **above 70 °C {158 °F}.** • Fuel injector control in rear HO2S closed loop control • The PCM monitors the input voltage from the rear HO2S when the following conditions are met. Under the following monitoring conditions, if the input voltage from the rear HO2S does not even **exceed 0.1 V** though the short term fuel trim is controlled up to **25%** for **9.6 s**, the PCM determines that sensor circuit input is low. **MONITORING CONDITIONS** — HO2S, HO2S heater and TWC repair verification drive mode — Following conditions are met for **above 32 s** • Engine speed is **above 1,500 rpm.** • Engine coolant temperature is **above 70 °C {158 °F}.** **Diagnostic support note** • This is a continuous monitor (HO2S). • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RR) malfunction • Short to ground in wiring between HO2S (RR) terminal A and PCM terminal 2AG • Open circuit between HO2S (RR) terminal A and PCM terminal 2AG • Open circuit between HO2S (RR) terminal B and PCM terminal 2AY • HO2S (LR) malfunction • Short to ground in wiring between HO2S (LR) terminal A and PCM terminal 2AH • Open circuit between HO2S (LR) terminal A and PCM terminal 2AH • Open circuit between HO2S (LR) terminal B and PCM terminal 2BA • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on the repair order, then go to next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. If the vehicle is not repaired, go to next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCs** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0137 or P0157 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT HARNESS** • Turn the ignition switch off. • Disconnect rear HO2S and PCM connectors. • Verify the continuity between following HO2S sensor terminal A (wiring harness side) and body ground. • Is there continuity?	Yes	Replace short to ground circuit, then go to Step 8.
		No	Go to the next step.
6	**INSPECT REAR HO2S SIGNAL CIRCUIT FOR SHORT TO GROUND AT FRONT HO2S** • Rear HO2S connector disconnected. • Verify the continuity between following HO2S sensor terminal A (part side) and body ground. • Is there continuity?	Yes	Replace suspected HO2S then go to the next step.
		No	Go to the next step.
7	**INSPECT REAR HO2S CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — HO2S terminal A and PCM terminal 2AG (RR), 2AH (LR) — HO2S terminal B and PCM terminal 2AY (RR), 2BA (LR) • Is there continuity?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0137 OR P0157 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is there any DTC present?	Yes	Go to applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0138, P0158 [AJ]

E6U010200000W43

DTC P0138 DTC P0158	HO2S (RR) circuit high input HO2S (LR) circuit high input
DETECTION CONDITION	• The PCM monitors input voltage from front HO2S (RR, LR). If the PCM detected HO2S (RR, LR) voltage **above 1.2 V** for **0.8 s**, the PCM determines that the circuit input is high. **Diagnostic support note** • This is a continuous monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RR, LR) malfunction • Short to power supply in the wiring harness between the following terminals: — For P0138: HO2S (RR) terminal A and PCM terminal 2AG — For P0158: HO2S (LR) terminal A and PCM terminal 2AH • HO2S (RR, LR) or PCM terminal is shorted • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCS** • Turn the ignition switch off, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Are other DTCs present?	Yes	Go to the appropriate DTC troubleshooting procedures. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0138 or P0158 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**INSPECT HO2S (RR, LR) SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch off. • Disconnect the HO2S (RR, LR) connector. • Turn the ignition switch to the to ON position (Engine off). • Measure the voltage between the following terminals. — For P0138: HO2S (RR) terminal A and body ground — For P0158: HO2S (LR) terminal A and body ground • Is there any voltage?	Yes	Replace short to power supply, then go to Step 7.
		No	Go to the next step.
6	**INSPECT HO2S (RR, LR)** • Perform the "HEATED OXYGEN SENSOR (HO2S) INSPECTION". (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is the front HO2S normal?	Yes	Go to the next step.
		No	Replace the sensor, then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0138 OR P0158 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0139, P0159 [AJ]

E6U010200000W44

DTC P0139 DTC P0159	HO2S (RR) circuit problem HO2S (LR) circuit problem
DETECTION CONDITION	• The PCM monitors the rich **(0.4 V)** to lean **(0.3 V)** response time of the HO2S (RR, LR). The PCM measure the response time when the following conditions are met, The PCM determines the HO2S (RR, LR) response deterioration malfunction when the measured response time is more than the threshold value **(180 ms)** five consecutive times. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are met: • Fuel cut during deceleration. • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • HO2S (RR, LR) output voltage is **above 0.4 V**. • The PCM monitors for a time-out malfunction (when HO2S (RR, LR) remains **above 0.3 V** for longer than a specified period of time during fuel cut control). The PCM measures the amount of time from when the following conditions are met until the HO2S (RR, LR) output voltage drops **below 0.3 V**. The PCM determines a HO2S time-out malfunction when the detected time is more than the threshold value **(6 s)** three consecutive times. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are met: • Fuel cut during deceleration. • Engine speed is **above 500 rpm**. • Engine coolant temperature is **above 70 °C {158 °F}**. • HO2S (RR, LR) is activated **(more than 0.55 V)**. **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory. • DIAGNOSTIC MONITORING TEST RESULT is available.
POSSIBLE CAUSE	• HO2S (LR, RR) deterioration • HO2S (LR, RR) malfunction • Loose HO2S (LR, RR) • Pressure regulator (built-in fuel pump unit) malfunction • Fuel pump malfunction • Fuel filter (built-in fuel pump unit) clogged or restricted • Fuel leakage on fuel line from fuel distributor and fuel pump • Purge solenoid valve malfunction • Improper connection of purge solenoid hoses • Insufficient compression • Engine malfunction (Engine coolant leakage)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Information availability. • Is any related Service Information available?	Yes	Perform the repair or diagnosis according to the available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTC** • Turn the ignition switch off, then ON (Engine off). • Verify pending and /or stored DTCs using the WDS or equivalent. • Is DTC P0443 also present?	Yes	Go to the DTC P0443 troubleshooting procedures, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0139 or P0159 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the troubleshooting procedures for the DTC in the FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up the engine. • Access O2S12 (with DTC P0139) or O2S22 (with DTC P0159) PID using the WDS or equivalent. • Inspect the PID under the following accelerator pedal conditions in PARK (ATX) or NEUTRAL (MTX). • Is the PID normal? — **More than 0.55 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.55 V** just after release of the accelerator pedal (lean condition).	Yes	Go to step 7.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF REAR HO2S** • Inspect for loose the HO2S (LR, RR) installation. • Is the sensor installed securely?	Yes	Inspect the HO2S (LR with DTC P0139 or RR with DTC P0159). • If normal, go to step 11 • If there is a malfunction, replace suddenly depress HO2S, then go to Step 11
		No	Retighten the sensor, then go to Step 11.
7	**INSPECT LONG TERM FUEL TRIM** • Access the LONGFT1 (with DTC P0139) or LONGFT2 (with DTC P0159) PID • Compare it with the FREEZE FRAME DATA recorded in Step 1. • Is it below the FFD value?	Yes	Engine is driven under a rich condition. Go to the next step.
		No	Engine is driven under a lean condition. Go to step 9.
8	**INSPECT FUEL LINE PRESSURE (Excessive fuel line pressure)** • Turn the ignition switch off. • Inspect fuel line pressure while the engine is running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to step 10.
		No	Inspect the fuel pump maximum pressure and the fuel return pipe for clogging. (See 01–14A–21 FUEL PUMP UNIT INSPECTION [L3, AJ].) • If there is any problem, repair or replace the parts. • If all items above are normal, replace the fuel pump unit. Then go to Step 11.
9	**INSPECT FUEL LINE PRESSURE (Low fuel line pressure)** • Turn the ignition switch off. • Inspect the fuel line pressure while the engine is running. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is the fuel line pressure normal?	Yes	Go to step 10.
		No	Inspect the fuel filters for the following: • Foreign material or staining inside the fuel filter (low-pressure side) Perform the following actions according to the result. • If foreign material or staining is found inside the fuel filter (low-pressure side), clean the fuel tank and filter. • If normal, replace fuel pump unit. Then go to Step 11.
10	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** • Perform "ENGINE COOLANT LEAKAGE INSPECTION." (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Repair or replace the malfunctioning part according to inspection results. Then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0139 OR P0159 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. (Engine off) • Clear the DTC from the memory using the WDS or equivalent. • Run Drive Mode 1 and 3 (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0140, P0160 [AJ]

E6U010200000W45

DTC P0140 **DTC P0160**	**HO2S (RR) circuit no activity detected** **HO2S (LR) circuit no activity detected**
DETECTION CONDITION	• The PCM monitors the input voltage from the HO2S (RR, LR) when the following monitoring conditions are met. If the input voltage never **exceeds 0.55 V** through the short fuel trim is controlled up to **25%** for **9.6 s**, the PCM determines that the sensor circuit is not activated. **MONITORING CONDITIONS** — Drive mode 3 — The following conditions are to be met tor **32 s**: • The engine speed is **1,500 rpm or above**. • The engine coolant temperature is **70 °C {158 °F} or above**. — HO2S (RR, LR) voltage is **above 0.1 V** **Diagnostic support note** • This is an intermittent monitor (HO2S). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RR, LR) deterioration • HO2S heater (RR, LR) malfunction • Leakage exhaust system • Open or short circuit to ground circuit between HO2S (RR, LR) terminal and PCM terminal — For P0140: HO2S (RR) terminal A and PCM terminal 2AG — For P0160: HO2S (LR) terminal A and PCM terminal 2AH • Insufficient compression • Engine malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** **Note** • If fuel monitor DTC, DTC P0131, P0132, P0151 or P0152 is retrieved, ignore it until P0140 or P0160 is fixed. • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Go to appropriate DTC troubleshooting procedures. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P0140 or P0160 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Warm up engine. • Access O2S12 for P0140 or O2S22 for P0160 PID using the WDS or equivalent. • Verify PID when racing engine at least **10 times** (in PARK or NEUTRAL). • Is PID reading normal? — **0.55 V or more** at least once during engine racing.	Yes	Go to step 8.
		No	Go to the next step.
6	**INSPECT INSTALLATION OF HO2S (RR, LR)** • Check if HO2S (RR, LR) is loosely installed. • Is sensor installed securely?	Yes	Go to the next step.
		No	Install HO2S (RR, LR) securely, then go to Step 10. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
7	**INSPECT GAS LEAKAGE FROM EXHAUST SYSTEM** • Visually check if any gas leakage is found between exhaust pipe and HO2S (RR, LR). (See 01–15C–1 EXHAUST SYSTEM INSPECTION [AJ].) • Is there gas leakage?	Yes	Repair or replace any faulty exhaust parts, then go to Step 10. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	• Inspect the following harnesses for open or short circuit to ground circuit, repair or replace harness if necessary. — HO2S (RR) terminal A to PCM terminal 2AG — HO2S (LR) terminal A to PCM terminal 2AH • Repair or replace harness if necessary. • If all items above are normal, replace faulty sensor. Then go to Step 10.
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing radiator cap when radiator is hot is dangerous. Scalding coolant and steam may shoot out and cause serious injury.** • **When removing radiator cap, wrap a thick cloth around and turn it slowly.** • Remove radiator cap. • Implement procedure to bleed air from engine coolant, then run engine at idle. • Are there any small bubbles, which make engine coolant white at filling opening? **Note** • Large bubbles are normal since they are remaining air coming out from engine coolant passage.	Yes	Air gets in from poor sealing of head gasket or other areas between combustion chamber and engine coolant passage. Repair or replace faulty parts, then go to Step 10.
		No	Go to the next step.
9	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0140 or P0160 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0222 [AJ]

E6U010200000W46

DTC P0222	TP sensor No.2 circuit low input
DETECTION CONDITION	• If the PCM detects that TP sensor No.2 voltage at PCM terminal 2AI is **0.1 V or below** after the ignition switch is ON, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between throttle body terminal D and PCM terminal 2AR • Short to ground circuit between throttle body terminal C and PCM terminal 2AI • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 POWER CIRCUIT FOR OPEN CIRCUIT** **Note** • If DTC P0122 is also retrieved with P0222, then go to CONSTANT VOLTAGE troubleshooting procedure. • Turn the ignition switch to the ON position. • Measure voltage between throttle body terminal D and body ground. • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**VERIFY TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between throttle body terminal C and body ground. • Is there continuity?	Yes	Repair or replace harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT TP SENSOR NO.2** • Inspect TP sensor No.2. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace throttle body, then go to Step 9. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**VERIFY TP SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between throttle body terminal C and PCM terminal 2AI. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0222 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0223 [AJ]

E6U010200000W47

DTC P0223	TP sensor No.2 circuit high input
DETECTION CONDITION	• If the PCM detects that TP sensor No.2 voltage at PCM terminal 2AI is **4.9 V or above** after the ignition switch is ON, the PCM determines that the TP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.2 malfunction • Connector or terminal malfunction • Short to power circuit between throttle body terminal C and PCM terminal 2AI • Open circuit between throttle body terminal E and PCM terminal 2AN • Open circuit between throttle body terminal C and PCM terminal 2AI • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect throttle body connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between throttle body terminal C and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TP SENSOR NO.2** • Inspect TP sensor No.2. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace throttle body, then go to Step 8. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check for continuity between throttle body terminal E and PCM terminal 2AN. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0223 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0300 [AJ]

E6U010200000W48

DTC P0300	Random misfire detected
DETECTION CONDITION	• The PCM monitors the CKP sensor input signal interval time. The PCM calculates the change of the interval time for each cylinder. If the change of interval time exceeds the pre programmed criteria, the PCM detects a misfire in the corresponding cylinder. when the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates the misfire ratio for each crankshaft revolution. If the ratio exceeds the pre programmed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • MIL illuminates if the PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in the PCM. • MIL flashes if the PCM detects the misfire which can damage the catalytic converter during first drive cycle. • PENDING CODE is available if the PCM detects the misfire which affects emission performance during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor malfunction • CKP sensor malfunction • Ignition coil malfunction • Ignition system malfunction • MAF sensor contamination • Excess air suction in intake air system (between MAF/IAT sensor and dynamic chamber) • Vacuum hoses damages or improper connection • Fuel pump malfunction • Fuel pressure regulator malfunction • Fuel line clogged • Fuel filter clogged • Fuel runout • Poor quality fuel • Fuel leakage in fuel line • Insufficient compression • Variable valve timing control system improper operation • Purge control solenoid valve malfunction • PCV valve malfunction • EGR valve malfunction • Related connector and terminal malfunction • Related wiring harness malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM, TP_REL and VSS PIDs using the WDS or equivalent. (See 01–40C–6 PCM INSPECTION [AJ].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs at idle?	Yes	Inspect suspected circuit or part or both according to inspection results. (See 01–40C–6 PCM INSPECTION [AJ].) Then go to Step 19.
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as in Step 4 when simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit or part or both according to inspection results. (See 01–40C–6 PCM INSPECTION [AJ].) Then go to Step 19.
		No	Go to the next step.
6	**INSPECT CMP SENSOR** • Inspect CMP sensor. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Inspect installation condition and damages on timing belt and gears, repair faulty parts. • If it is normal, replace CMP sensor. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [AJ].) Then go to Step 19.
		No	Go to the next step.
7	**VERIFY CKP SENSOR INSTALLATION CONDITION** • Check for CKP sensor looseness. • Is CKP sensor loose?	Yes	Retighten CKP sensor, then go to Step 19. (See 01–40C–40 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**INSPECT IGNITION SYSTEM OPERATION** • Perform Spark Test. (See 01–03C–68 Spark Test.) • Is result of Spark Test normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result, then go to Step 19.
9	**INSPECT MAF PID** • Start engine. • Access MAF PID using the WDS or equivalent. • Verify that MAF PID changes quickly according to race engine RPM. • Is MAF PID response normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 19. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
10	**INSPECT EXCESSIVE AIR SUCTION IN INTAKE AIR SYSTEM** • Inspect for air leakage at the following: — Between MAF/IAT sensor and throttle body — Between throttle body and dynamic chamber • Is there any malfunction?	Yes	Repair or replace suspected part, then go to Step 19.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Turn the ignition switch off. • Inspect fuel line pressure. (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	If fuel line pressure is too low, go to the next step. If fuel line pressure is excessively high, check as follows: • Fuel pump maximum pressure • Fuel return line for clogging — If all above are normal, replace pressure regulator. (See 01–14A–35 PRESSURE REGULATOR INSPECTION [L3, AJ].) Then go to Step 19.
		No	Go to step 18.
12	**INSPECT FUEL LINE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect for fuel leakage in fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 19.
		No	Inspect low-pressure side fuel filter for the following: • Foreign material or stain inside fuel filter Perform the following actions as result: • If foreign material or stain is found inside fuel filter (low-pressure side), clean of fuel tank and filter. • If normal, replace fuel pump unit. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3, AJ].) Then, go to Step 22.

STEP	INSPECTION		ACTION
13	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is it normal?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 19.
14	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation. (See 01–03C–74 Variable Valve Timing Control System Operation Inspection.) • Does variable timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to variable valve timing control system inspection results, then go to Step 19.
15	**INSPECT OPERATION OF PURGE CONTROL SOLENOID VALVE** • Inspect purge control system operation. (See 01–03C–69 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to purge control system inspection results, then go to Step 19.
16	**INSPECT PCV VALVE OPERATION** • Turn the ignition switch off. • Remove PCV valve and check valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [AJ].) • Is PCV valve operation normal?	Yes	Replace PCV valve, then go to Step 19.
		No	Go to the next step.
17	**INSPECT OPERATION OF EGR VALVE** • Remove EGR valve. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].) • Visually check whether it is stuck to open. • Is EGR valve stuck to open?	Yes	Go to the next step.
		No	Repair or replace EGR valve, then go to Step 19. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].)
8	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing radiator cap when radiator is hot is dangerous. Scalding coolant and steam may shoot out and cause serious injury.** • **When removing radiator cap, wrap thick cloth around and turn it slowly.** • Remove radiator cap. • Implement procedure to bleed air from engine coolant, then run engine at idle. • Are there any small bubbles which make engine coolant white at filling opening? **Note** • Large bubbles are normal since they are remaining air coming out from engine coolant passage.	Yes	Air gets in from poor sealing of head gasket or other areas between combustion chamber and engine coolant passage. Repair or replace faulty parts, then go to the next step.
		No	Go to the next step.
19	**VERIFY TROUBLESHOOTING OF DTC P0300 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
20	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0301, P0302, P0303, P0304, P0305, P0306 [AJ]

E6U010200000W49

DTC P0301 **DTC P0302** **DTC P0303** **DTC P0304** **DTC P0305** **DTC P0306**	**Cylinder No.1 misfire detected** **Cylinder No.2 misfire detected** **Cylinder No.3 misfire detected** **Cylinder No.4 misfire detected** **Cylinder No.5 misfire detected** **Cylinder No.6 misfire detected**
DETECTION CONDITION	• The PCM monitors the crankshaft position sensor input signal interval time. The PCM calculates the change of the interval time for each cylinder. If the change of interval time exceeds the pre programmed criteria, the PCM detects a misfire in the corresponding cylinder. when the engine is running, the PCM counts the number of misfires that occurred at **200 crankshaft revolutions** and **1,000 crankshaft revolutions** and calculates the misfire ratio for each crankshaft revolution. If the ratio exceeds the pre programmed criteria, the PCM determines that a misfire, which can damage the catalytic converter or affect emission performance, has occurred. **Diagnostic support note** • This is a continuous monitor (Misfire). • MIL illuminates if the PCM detects the misfire which affects emission performance in two consecutive drive cycles or in one drive cycle while DTC for the same malfunction has been stored in the PCM. • MIL flashes if the PCM detects the misfire which can damage the catalytic converter during the first drive cycle. • PENDING CODE is available if the PCM detects the misfire which affects emission performance during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Spark plug malfunction • Ignition system malfunction • Ignition coil malfunction • Fuel injector malfunction • Air suction in intake air system (between dynamic chamber and cylinder head) • Inadequate engine compression due to engine internal malfunction • Related connector or terminal malfunction • Related wiring harness malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Misfire related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is other DTCs present?	Yes	Go to appropriate DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON /IDLE)** • Access APP1, APP2, ECT, IAT, MAF, RPM TP_REL and VSS PIDs using the WDS or equivalent. (See 01–40C–6 PCM INSPECTION [AJ].) • Is there any signal that is far out of specification when ignition switch is ON and engine runs at idle?	Yes	Inspect suspected circuit or part or both according to inspection results. Then go to Step 13. (See 01–40C–6 PCM INSPECTION [AJ].)
		No	Go to the next step.
5	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as in Step 4 when simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected circuit or part or both according to inspection results. Then go to Step 13. (See 01–40C–6 PCM INSPECTION [AJ].)
		No	Go to the next step.
6	**INSPECT SPARK PLUG CONDITION** • Turn the ignition switch off. • Remove spark plug from suspected cylinder. • Check spark plug condition: — Cracks — Excess wear — Gap — Wet • Is any problem found on spark plug?	Yes	• If spark plug is wet, fuel flooding is suspected. Go to step 9. • If spark plug has a crack, excess wear or improper gap, replace faulty spark plug. Then go to Step 13. (See 01–18A–4 SPARK PLUG REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
7	**INSPECT IGNITION SYSTEM OPERATION FOR SUSPECTED CYLINDER** • Perform Spark Test for suspected cylinder. (See 01–03C–68 Spark Test.) • Is result of Spark Test normal?	Yes	Go to the next step.
		No	Replace or replace malfunctioning part according to spark test results, then go to Step 13.
8	**INSPECT FUEL INJECTOR HARNESS** • Remove intake air system parts. • Disconnect fuel injector connector on suspected cylinder. • Connect noid light to fuel injector connector terminals. • Check light dimness during cranking. • Does noid light illuminate?	Yes	Go to the next step.
		No	Check fuel injector harnesses. Repair or replace it if necessary, then go to Step 13.
9	**INSPECT FUEL INJECTOR OPERATION** • Remove fuel injector from suspected cylinder. (See 01–14A–27 FUEL INJECTOR REMOVAL/INSTALLATION [AJ].) • Swap injector with injector on other cylinder. • Start engine and run it at idle. • Is there misfire DTC for the cylinder which has a suspected fuel injector?	Yes	Replace injector, then go to step 13. (See 01–14A–27 FUEL INJECTOR REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
10	**INSPECT FOR AIR SUCTION AT INTAKE AIR SYSTEM** • Inspect for air leakage at the following: — Around connection of dynamic chamber and intake manifold — Around connection of intake manifold and cylinder head • Is air leakage found?	Yes	Repair or replace suspected part, then go to Step 13.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT SEALING OF ENGINE COOLANT PASSAGE** **Warning** • **Removing radiator cap when radiator is hot is dangerous, Scalding coolant and steam may shoot out and cause serious injury.** • **When removing radiator cap, wrap thick cloth around and turn it slowly.** • Remove radiator cap. • Implement procedure to bleed air from engine coolant, then run engine at idle. • Are there any small bubbles which make engine coolant white at filling opening? **Note** • Large bubbles are normal since they are remaining air coming out from engine coolant passage.	Yes	Air gets in from poor sealing of head gasket or other areas between combustion chamber and engine coolant passage. Repair or replace faulty parts, then go to Step 1
		No	Go to the next step.
12	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul the engine, then go to the next step.
13	**VERIFY TROUBLESHOOTING OF MISFIRE DTC COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0327 [AJ]

E6U010200000W50

DTC P0327	KS circuit low input
DETECTION CONDITION	• The PCM monitors input signal from the KS when the engine is running. If the input voltage at PCM terminals between 2AF and 2AC is **below 0.01 V**, the PCM determines that the KS circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• KS malfunction • Connector or terminal malfunction • Open circuit or short to ground in wiring harness between KS connector terminal B and PCM terminal 2AF • Open circuit or short to ground in wiring harness between KS connector terminal A and PCM terminal 2AC • Short KS two wires • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect the KS connector. • Inspect for poor connection at terminals A and B (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT KS** • Perform KS inspection. (See 01–40C–38 KNOCK SENSOR (KS) INSPECTION [AJ]) • Is KS normal?	Yes	Go to the next step.
		No	Replace the KS, then go to the next step.
5	**INSPECT KS CIRCUITS FOR SHORT TO GROUND** • Inspect the continuity between following terminals: — KS female terminal A and body ground — KS female terminal B and body ground • Is there continuity?	Yes	Repair or replace suspected wiring harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT FOR SHORT CIRCUITS** • Inspect for continuity between KS female terminals A and B. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection at terminals 2AF and 2AC (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT KS CIRCUITS FOR OPEN CIRCUIT** • Disconnect the PCM connector. • Inspect for continuity between the following terminals: — KS female terminal A and PCM terminal 2AF — KS female terminal B and PCM terminal 2AC • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 9.
9	**VERIFY TROUBLESHOOTING OF DTC P0327 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0328 [AJ]

E6U010200000W51

DTC P0328	KS circuit high input
DETECTION CONDITION	• The PCM monitors the input signal from the KS when the engine is running. If the input voltage at PCM terminals between 2AF and 2AC is **above 4.79 V**, the PCM determines that KS circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• KS malfunction • Connector or terminal malfunction • Short to power supply in wiring harness between KS terminal A and PCM terminal 2AF • Short to power supply in wiring harness between KS terminal B and PCM terminal 2AC • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT KS CONNECTOR TERMINAL** • Turn the ignition switch off. • Disconnect KS connector. • Inspect for poor connection at terminals A and B (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair the terminal, then go to step 7.
		No	Go to the next step.
4	**INSPECT KS** • Perform KS inspection. (See 01–40C–38 KNOCK SENSOR (KS) INSPECTION [AJ].) • Is the KS normal?	Yes	Go to the next step.
		No	Replace the KS, then go to step 7.
5	**INSPECT KNOCK SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between KS terminal A and body ground and KS terminal B and body ground? • Is any voltage reading?	Yes	Repair or replace wiring harness for short to power supply, then go to step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR** • Disconnect PCM connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0328 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0335 [AJ]

E6U010200000W52

DTC P0335	CKP sensor circuit malfunction
DETECTION CONDITION	• If the PCM does not receive the input voltage from the CKP sensor for **4.2 s** when MAF is **1.95 g/s {0.258 lb/min} or above**, the PCM determines that the CKP sensor circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CKP sensor malfunction • Connector or terminal malfunction • CKP sensor is dirty • CKP sensor pulse wheel malfunction • Short to ground circuit between CKP sensor terminal B and PCM terminal 2Z • Short to ground circuit between CKP sensor terminal A and PCM terminal 2Y • Short to power circuit between CKP sensor terminal B and PCM terminal 2Z • Short to power circuit between CKP sensor terminal A and PCM terminal 2Y • Short each harness CKP sensor terminal A and B • Open circuit between CKP sensor terminal B and PCM terminal 2Z • Open circuit between CKP sensor terminal A and PCM terminal 2Y • PCM malfunction

2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D

Diagnostic procedure

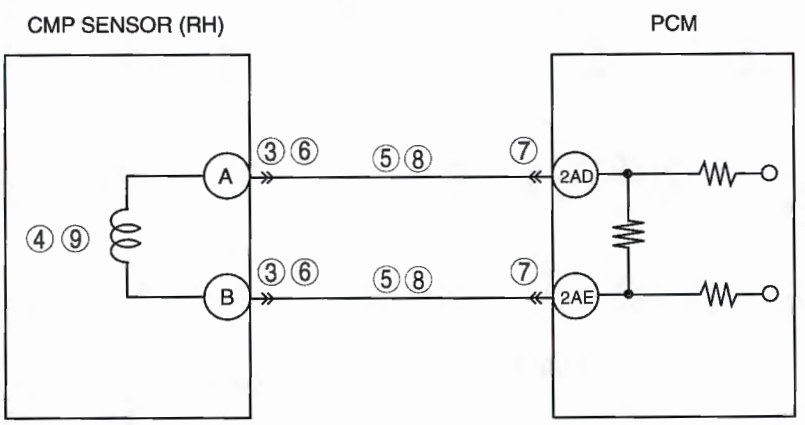
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CKP SENSOR VOLTAGE** • Disconnect CKP sensor connector. • Connect voltmeter between CKP sensor connector terminals A and B. • Check the voltage in AC range when cranking the engine. • Is there a voltage reading?	Yes	Go to the next step.
		No	Go to step 9.
4	**VERIFY CKP SENSOR RESISTANCE** • Measure CKP sensor resistance. (See 01–40C–41 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [AJ].) • Is resistance normal?	Yes	Check CKP sensor pulse wheel for damage. • If there is any malfunction, replace CKP sensor pulse wheel and go to Step 10. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
		No	If resistance is **0 ohm**, then go to the next step. If resistance is infinity, then go to Step 7.
5	**INSPECT CKP SENSOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between the following circuits: — CKP sensor terminal A and body ground — CKP sensor terminal B and body ground • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 11.
		No	Go to the next step.
6	**INSPECT CKP SENSOR CIRCUIT FOR SHORT WITH EACH OTHER** • Turn the ignition switch off. • Disconnect CKP sensor connector. • Check continuity between CKP sensor terminal A and B. • Is there continuity?	Yes	Repair or replace harness for short with each other, then go to Step 11.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
8	**INSPECT CKP SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — CKP sensor terminal A and PCM terminal 2Z — CKP sensor terminal B and PCM terminal 2Y • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 11.
9	**INSPECT CKP SENSOR** • Inspect CKP sensor. (See 01–40C–41 CRANKSHAFT POSITION (CKP) SENSOR INSPECTION [AJ]) • Is there any malfunction?	Yes	Replace CKP sensor, then go to the next step. (See 01–40C–40 CRANKSHAFT POSITION (CKP) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT CKP SENSOR CIRCUIT FOR SHORT TO POWER** • Turn ignition switch to ON (Engine off). • Disconnect CKP sensor connector. • Measure voltage between the following terminal and body ground. — CKP sensor terminal A — CKP sensor terminal B • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to the next step.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0335 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Access MAF PID using the WDS or equivalent. **Note** • MAF PID should indicate **1.95 g/s {0.258 lb/min} or above** during this test • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0340 [AJ]

E6U010200000W53

DTC P0340	CMP sensor (RH) circuit malfunction
DETECTION CONDITION	• The PCM monitors input voltage from the CMP sensor (RH) when the engine is running. If the CMP sensor (RH) signal timing inferred from the CKP sensor signal has deviated, PCM determines that CMP sensor (RH) circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor (RH) malfunction • Connector or terminal malfunction • CMP sensor (RH) is dirty • CMP sensor (RH) malfunction • Short to ground circuit between CMP sensor (RH) terminal A and PCM terminal 2AD • Short to ground circuit between CMP sensor (RH) terminal B and PCM terminal 2AE • Short to power circuit between CMP sensor (RH) terminal A and PCM terminal 2AD • Short to power circuit between CMP sensor (RH) terminal B and PCM terminal 2AE • Short each harness CMP sensor (RH) terminal A and B • Open circuit between CMP sensor (RH) terminal A and PCM terminal 2AD • Open circuit between CMP sensor (RH) terminal B and PCM terminal 2AE • Timing chain or improper valve timing • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction



CMP SENSOR (RH)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CMP SENSOR (RH) VOLTAGE** • Disconnect CMP sensor (RH) connector. • Connect voltmeter between CMP sensor (RH) connector terminals A and B. • Check the voltage in AC range when cranking the engine. • Is there a voltage reading?	Yes	Go to the next step.
		No	Go to step 9.
4	**VERIFY CMP SENSOR (RH) RESISTANCE** • Measure CMP sensor (RH) resistance. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is resistance normal?	Yes	Check CMP sensor (RH) pulse wheel for damage. • If there is any malfunction, replace CMP sensor (RH) pulse wheel and go to Step 12. (See 01–10C–6 TIMING CHAIN REMOVAL/INSTALLATION [AJ].)
		No	If resistance is **0 ohm**, then go to the next step. If resistance is infinity, then go to Step 7.
5	**INSPECT CMP SENSOR (RH) CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between the following circuits: — CMP sensor (RH) terminal A and body ground — CMP sensor (RH) terminal B and body ground • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 12.
		No	Go to the next step.
6	**INSPECT CMP SENSOR (RH) CIRCUIT FOR SHORT WITH EACH OTHER** • Turn the ignition switch off. • Disconnect CMP sensor (RH) connector. • Check continuity between CMP sensor (RH) terminal A and B. • Is there continuity?	Yes	Repair or replace harness for short with each other, then go to Step 12.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 12.
		No	Go to the next step.
8	**INSPECT CMP SENSOR (RH) CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — CMP sensor (RH) terminal A and PCM terminal 2AD — CMP sensor (RH) terminal B and PCM terminal 2AE • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 12.
9	**INSPECT CMP SENSOR (RH)** • Inspect CMP sensor (RH). (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace CMP sensor (RH), then go to the next step. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT STOPPER PIN MECHANISM** • Remove timing chain. • Inspect stopper pin. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR INSPECTION [AJ].) • Is stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator (RH), then go to Step 12. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
11	**TIMING CHAIN INSTALLATION** • Verify timing chain installation. (See 01–10C–6 TIMING CHAIN REMOVAL/INSTALLATION [AJ].) • Is timing chain installed properly?	Yes	Go to the next step.
		No	Reinstall timing chain, then go to the next step.
12	**VERIFY TROUBLESHOOTING OF DTC P0340 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Access MAF PID using the WDS or equivalent. **Note** • MAF PID should indicate **1.95 g/s {0.258 lb/min} or above** during this test • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0345 [AJ]

E6U010200000W54

DTC P0345	CMP sensor (LH) circuit malfunction
DETECTION CONDITION	• The PCM monitors the input voltage from the CMP sensor (LH) when the engine is running. If the PCM does not receive the input voltage from the CMP sensor (LH) when the PCM receives the input signal from the CKP sensor, the PCM determines that the CMP circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• CMP sensor (LH) malfunction • Connector or terminal malfunction • CMP sensor (LH) is dirty • CMP sensor (LH) malfunction • Short to ground circuit between CMP sensor (LH) terminal A and PCM terminal 2AA • Short to ground circuit between CMP sensor (LH) terminal B and PCM terminal 2AB • Short to power circuit between CMP sensor (LH) terminal A and PCM terminal 2AA • Short to power circuit between CMP sensor (LH) terminal B and PCM terminal 2AB • Short each harness CMP sensor (LH) terminal A and B • Open circuit between CMP sensor (LH) terminal A and PCM terminal 2AA • Open circuit between CMP sensor (LH) terminal B and PCM terminal 2AB • Timing chain or improper valve timing • Loose timing chain or improper valve timing • Loose camshaft sprocket lock bolt • Loose crankshaft pulley lock bolt • PCM malfunction

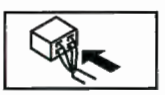
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0340 also present?	Yes	Go to the DTC P0340 inspection. (See 01–02C–102 DTC P0340 [AJ].) • If the DTC P0340 dose not stored, go to the next step.
		No	Go to the next step.
4	**VERIFY CMP SENSOR (LH) VOLTAGE** • Disconnect CMP sensor (LH) connector. • Connect voltmeter between CMP sensor (LH) connector terminals A and B. • Check the voltage in AC range when cranking the engine. • Is there a voltage reading?	Yes	Go to the next step.
		No	Go to step 10.
5	**VERIFY CMP SENSOR (LH) RESISTANCE** • Measure CMP sensor (LH) resistance. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is resistance normal?	Yes	Check CMP sensor (LH) pulse wheel for damage. • If there is any malfunction, replace CMP sensor (LH) pulse wheel and go to Step 13. (See 01–10C–6 TIMING CHAIN REMOVAL/ INSTALLATION [AJ].)
		No	If resistance is **0 ohm**, then go to the next step. If resistance is infinity, then go to Step 8.
6	**INSPECT CMP SENSOR (LH) CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between the following circuits: — CMP sensor (LH) terminal A and body ground — CMP sensor (LH) terminal B and body ground • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 13.
		No	Go to the next step.
7	**INSPECT CMP SENSOR (LH) CIRCUIT FOR SHORT WITH EACH OTHER** • Turn the ignition switch off. • Disconnect CMP sensor (LH) connector. • Check continuity between CMP sensor (LH) terminal A and B. • Is there continuity?	Yes	Repair or replace harness for short with each other, then go to Step 13.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 13.
		No	Go to the next step.
9	**INSPECT CMP SENSOR (LH) CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — CMP sensor (LH) terminal A and PCM terminal 2AA — CMP sensor (LH) terminal B and PCM terminal 2AB • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 13.

STEP	INSPECTION		ACTION
10	**INSPECT CMP SENSOR (LH)** • Inspect CMP sensor (LH). (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace CMP sensor (LH), then go to Step 13. (See 01–40C–39 CAMSHAFT POSITION (CMP) SENSOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
11	**INSPECT STOPPER PIN MECHANISM** • Remove timing chain. • Inspect stopper pin. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR INSPECTION [AJ].) • Is stopper pin mechanism normal?	Yes	Go to the next step.
		No	Replace variable valve timing actuator (LH), then go to Step 13. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
12	**INSPECT ROTOR POSITION** • Remove variable valve timing actuator (LH). (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].) • Is rotor position at maximum valve timing retard?	Yes	**VARIABLE VALVE TIMING MECHANISM IS NORMAL** **Note** • This DTC is detected by intermittent concern. • Intermittent concern might be removed by cleaning mode of variable valve timing control function. Go to the next step.
		No	Replace variable valve timing actuator, go to the next step. (See 01–10C–40 VARIABLE VALVE TIMING ACTUATOR REMOVAL/INSTALLATION [AJ].)
13	**VERIFY TROUBLESHOOTING OF DTC P0345 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start engine. • Access MAF PID using the WDS or equivalent. **Note** • MAF PID should indicate **1.95 g/s {0.268 lb/min} or above** during this test • Is same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0401 [AJ]

E6U010200000W55

DTC P0401	EGR flow insufficient detected
DETECTION CONDITION	• The PCM monitors the difference in intake manifold pressures when the EGR is operated and when it is stopped. If the difference is too small, the PCM determines that the EGR flow is insufficient. **Diagnostic support note** • This is an intermittent monitor (EGR). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • EGR boost sensor malfunction • EGR boost sensor solenoid valve malfunction • EGR valve gasket malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EGR related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FOR OTHER DTCs** • Turn ignition switch to OFF then ON (Engine off). • Have other DTCs been stored?	Yes	Repair circuit malfunction for applicable DTCs. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONDITION** • Inspect vacuum hoses for clogs, damage, freezing, or vacuum leakage. • Is there any malfunction?	Yes	Replace vacuum hoses, then go to Step 9.
		No	Go to the next step.
5	**INSPECT EGR VALVE** • Inspect EGR valve. (See 01–16A–18 EGR VALVE INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace EGR valve, then go to Step 9. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT EGR BOOST SENSOR** • Inspect EGR boost sensor. (See 01–40C–37 EGR BOOST SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace EGR boost sensor, then go to Step 9.
		No	Go to the next step.
7	**INSPECT EGR BOOST SENSOR SOLENOID VALVE** • Inspect EGR boost sensor solenoid valve. (See 01–16A–20 EGR BOOST SENSOR SOLENOID VALVE INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace EGR boost sensor solenoid valve, then go to Step 9.
		No	Go to the next step.
8	**INSPECT EGR VALVE GASKET** • Turn the ignition switch off. • Remove EGR valve. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].) • Is EGR valve gasket normal?	Yes	Go to the next step.
		No	Replace EGR valve gasket, then go to the next step. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].)
9	**MONITOR EGR SYSTEM BY DRIVE MODE** • Clear the DTC from the PCM memory using the WDS or equivalent. • Run Drive Mode 1 (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Stop vehicle and access ON BOARD READINESS TEST to inspect DRIVE MODE completion status. • Verify FUEL_EVAL PID status. • Does FUEL_EVAL PID change to Yes?	Yes	Retry this step.
		No	Go to the next step.
10	**MONITOR EGR SYSTEM BY DRIVE MODE** • Run Drive Mode 2. (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Stop vehicle and access ON BOARD SYSTEM READINESS TEST to input DRIVE MODE completion status. • Verify EGR_EVAL PID status. • Does EGR_EVAL PID change to Yes?	Yes	Go to the next step.
		No	Retry this step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0401 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Go to the next step.
		No	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0403 [AJ]

E6U010200000W56

DTC P0403	EGR valve (stepper motor) circuit malfunction
DETECTION CONDITION	• The PCM monitors the EGR valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the EGR control circuit problem. — The PCM turns the EGR valve off, but the voltage of the EGR valve control signal remains low. — The PCM turns the EGR valve on, but the current of the EGR valve control signal remains high. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR valve malfunction • Connector or terminal malfunction • Open circuit between main relay terminal C and EGR valve terminal C • Open circuit between main relay terminal C and EGR valve terminal D • Short to ground circuit between EGR valve terminal A and PCM terminal 2R • Short to ground circuit between EGR valve terminal B and PCM terminal 2S • Short to ground circuit between EGR valve terminal E and PCM terminal 2Q • Short to ground circuit between EGR valve terminal F and PCM terminal 2O • Short to power circuit between EGR valve terminal A and PCM terminal 2R • Short to power circuit between EGR valve terminal B and PCM terminal 2S • Short to power circuit between EGR valve terminal E and PCM terminal 2Q • Short to power circuit between EGR valve terminal F and PCM terminal 2O • Open circuit between EGR valve terminal A and PCM terminal 2R • Open circuit between EGR valve terminal B and PCM terminal 2S • Open circuit between EGR valve terminal E and PCM terminal 2Q • Open circuit between EGR valve terminal F and PCM terminal 2O • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Turn ignition switch to OFF then ON (Engine off). • Is same DTC present?	Yes	Go to the next step.
		No	Go to intermittent concern. (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
4	**INSPECT EGR VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EGR valve connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT EGR VALVE POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between following circuits: — EGR valve terminal C and body ground — EGR valve terminal D and body ground • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 11.
6	**INSPECT EGR VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between the following circuits: — EGR valve terminal A and body ground — EGR valve terminal B and body ground — EGR valve terminal E and body ground — EGR valve terminal F and body ground • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 11.
		No	Go to the next step.
7	**INSPECT EGR VALVE** • Inspect EGR valve. (See 01–16A–18 EGR VALVE INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace EGR valve, then go to Step 11. (See 01–16A–17 EGR VALVE REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
9	**INSPECT EGR VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following circuits: — EGR valve terminal A and PCM terminal 2R — EGR valve terminal B and PCM terminal 2S — EGR valve terminal E and PCM terminal 2Q — EGR valve terminal F and PCM terminal 2O • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 11.
10	**INSPECT EGR VALVE CONTROL SENSOR CIRCUIT FOR SHORT TO POWER** • Turn ignition switch to ON (Engine off). • Disconnect EGR valve connector. • Measure voltage between the following terminal and body ground. — EGR valve terminal A — EGR valve terminal B — EGR valve terminal E — EGR valve terminal F • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to the next step.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0403 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0421, P0431 [AJ]

E6U010200000W57

DTC P0421 DTC P0431	**Warm-up catalyst system (RH) efficiency below threshold** **Warm-up catalyst system (LH) efficiency below threshold**
DETECTION CONDITION	• The PCM compares the number of front HO2S and rear HO2S inversions for a predetermined time. The PCM monitors the rear HO2S inversion counts when the following conditions are met: The PCM detects inversion ratio. If the inversion ratio is below threshold, the PCM determine that catalyst system has deteriorated. — The front HO2S inversion counts is as prescribed when the following monitoring conditions are met: — The accumulated occurrence time of the following monitoring conditions has exceeded the prescribed time limit: **MONITORING CONDITION** — The engine speed is **1,250—2,750 rpm.** — Calculated TWC temperature is **above 400 °C {752 °F}** — The calculated load is **15—44%** **Diagnostic support note** • This is an intermittent monitor (Catalyst). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• WU-TWC deterioration or malfunction • Exhaust gas leakage • Looseness of HO2S (RF, LF, RR, LR) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Catalyst related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Are other DTCs present?	Yes	Go to appropriate DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**INSPECT EXHAUST SYSTEM FOR EXHAUST GAS LEAKAGE** • Visually inspect for exhaust gas leakage in exhaust system. (See 01–15C–1 EXHAUST SYSTEM INSPECTION [AJ].) • Is there any exhaust gas leakage?	Yes	Repair or replace faulty exhaust system parts, then go to Step 7. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
5	**INSPECT HO2S INSTALLATION** • Inspect for looseness of HO2S (RF, LF, RR, LR). • Is HO2S installation normal?	Yes	Go to the next step.
		No	Retighten HO2S, then go to Step 7. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)

STEP	INSPECTION		ACTION
6	**INSPECT WU-TWC** • Clear the DTC from the PCM memory using the WDS or equivalent. • Cycle ignition switch to OFF, then back to ON. • Inspect WU-TWCs each bank. (See 01–16A–23 WARM-UP THREE-WAY CATALYTIC CONVERTER (WU-TWC) INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace malfunctioning WU-TWC, then go to the next step. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0421 OR P0431 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the memory using the WDS or equivalent. • Start engine and perform DRIVE MODE except for DRIVE MODE 6. (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0441 [AJ]

E6U010200000W58

DTC P0441	EVAP control system incorrect purge flow
DETECTION CONDITION	• The PCM measures the purge line pressure, which is the vacuum, when the following conditions are met. If the vacuum between the charcoal canister and intake manifold does not reach the specification, the PCM determines that the EVAP system is clogged. **MONITORING CONDITION** — Engine speed: **1,500—3,550 rpm** (MTX) — Engine speed: **1,220—3,000 rpm** (ATX) — Throttle opening angle: **25%** (At engine speed is **2500 rpm**) — Vehicle speed: **69.5—136 km/h {43.2—84.5 mph}** (MTX) — Vehicle speed: **34.5—136 km/h {21.4—84.5 mph}** (ATX) **Diagnostic support note** • This is an intermittent monitor (EVAP). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Charcoal canister malfunction • Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • EVAP hose damaged or loose • EVAP pipe damaged • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 present?	Yes	Go to appropriate DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**DETERMINE IF LEAK CONCERN OR BLOCKAGE CONCERN** • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test result failed?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace purge solenoid valve, then go to Step 11.
		No	Inspect following parts for clogging. • Vacuum hoses between intake manifold and charcoal canister • Charcoal canister Repair or replace part, then go to Step 11.
6	**LOCATE LEAK POINT** • Check the following for leakage using ultrasonic leak detector: — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Replace EVAP system leak detection pump, then go to Step 10. (See 01–16A–5 EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. (See 01–14A–10 FUEL TANK REMOVAL/ INSTALLATION [L3, AJ].) • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.

STEP	INSPECTION		ACTION
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step
11	**VERIFY TROUBLESHOOTING OF DTC P0441 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0442 [AJ]

E6U010200000W59

DTC P0442	EVAP control system leak detected (small leak)
DETECTION CONDITION	• The PCM measures the pump load current (EVAP line pressure) when a certain period has passed after the EVAP system is sealed when the following monitoring conditions are met. If the load does not reach the reference current value within a certain period, PCM determines that the EVAP system has a small leak. **MONITORING CONDITION** — Ignition switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Charcoal canister malfunction • Fuel filler cap malfunction • Fuel tank malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • EVAP pipe damaged

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.

STEP	INSPECTION		ACTION
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	Go to appropriate DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
5	**LOCATE LEAK POINT** • Check leakage for the following using EVAP system tester: — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 12.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace purge solenoid valve, then go to Step 12.
		No	Go to the next step.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Replace EVAP system leak detection pump, then go to Step 12. (See 01–16A–5 EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
9	**INSPECT FUEL TANK INSTALLATION** • Remove fuel tank. (See 01–14A–10 FUEL TANK REMOVAL/ INSTALLATION [L3, AJ].) • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0442 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0443 [AJ]

E6U010200000W60

DTC P0443	EVAP control system purge control valve circuit malfunction
DETECTION CONDITION	• The PCM monitors the purge solenoid valve control signal voltage and current. If the following conditions are met, the PCM determines that there is the purge solenoid valve control circuit problem. — The PCM turns the purge solenoid valve off, but the voltage of the purge solenoid valve control signal remains low. — The PCM turns the purge solenoid valve on, but the current of the purge solenoid valve control signal remains high. **Diagnostic support note** • This is an continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Purge solenoid valve malfunction • Connector or terminal malfunction • Short to ground between purge solenoid valve terminal B and PCM terminal 1BF • Open circuit between main relay terminal C and purge solenoid valve terminal A • Short to power circuit between purge solenoid valve terminal B and PCM terminal 1BF • Open circuit between purge solenoid valve terminal B and PCM terminal 1BF • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Turn ignition switch to OFF, then start engine. • Is same DTC present?	Yes	Go to the next step.
		No	Intermittent concern exists. Go to "INTERMITTENT CONCERNS TROUBLESHOOTING". (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
4	**CLASSIFY OPEN CIRCUIT OR SHORT TO GROUND MALFUNCTION** • Disconnect purge solenoid valve tube that is connected to intake manifold. • Connect vacuum pump to purge solenoid valve. • Pump vacuum pump several times and stop. • Wait **a few seconds**. • Is vacuum maintained?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT PASSAGE CONTROL OF PURGE SOLENOID VALVE** • Turn the ignition switch off. • Disconnect purge solenoid valve connector. • Pump vacuum pump several times and wait **a few seconds**. • Is vacuum maintained?	Yes	Repair or replace the following harness for short to ground, then go to Step 12. — Purge solenoid valve terminal B to PCM terminal 1BF
		No	Replace purge solenoid valve, then go to Step 12.
6	**INSPECT PURGE SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect purge solenoid valve connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 12.
		No	Go to the next step.
7	**INSPECT PURGE SOLENOID VALVE POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Measure voltage between purge solenoid valve terminal A and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 12.
8	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch off. • Measure voltage between purge solenoid valve terminal B and body ground. • Is voltage reading?	Yes	Repair or replace harness for short to power, then go to Step 12.
		No	Go to the next step.
9	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace purge solenoid valve, then go to Step 12.
		No	Go to the next step.
10	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 12.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**INSPECT PURGE SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between purge solenoid valve terminal B and PCM terminal 1BF. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
12	**VERIFY TROUBLESHOOTING OF DTC P0443 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
13	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0446 [AJ]

E6U010200000W61

DTC P0446	Change over valve (EVAP system leak detection pump) stuck close
DETECTION CONDITION	• The PCM monitors the pump load current (EVAP line pressure), while the EVAP leak monitor is operating. When the decrease in pump load current is less than the specification after the reference current value has been obtained, the PCM determines that the change over valve in the EVAP system leak detection pump has a malfunction. **Diagnostic support note** • This is an intermittent monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Damaged change over valve (in EVAP system leak detection pump) • Short to power circuit between EVAP system leak detection pump terminal C and PCM terminal 1BA • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnostic according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP CONTROL CIRCUIT FOR SHORT TO POWER** • Turn ignition switch to ON (Engine off). • Disconnect EVAP system leak detection pump connector. • Measure voltage between EVAP system leak detection pump terminal C and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 5.
		No	Go to the next step.
4	**INSPECT CHANGE OVER VALVE (IN EVAP SYSTEM LEAK DETECTION PUMP)** • Perform EVAP system leak detection pump inspection. (See 01–16A–11 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace EVAP system leak detection pump, then go to the next step. (See 01–16A–5 EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0446 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0455 [AJ]

E6U010200000W62

DTC P0455	EVAP control system leak detected (large leak)
DETECTION CONDITION	• The PCM measures the pump load current (EVAP line pressure) when a certain period has passed after the EVAP system is sealed when the following monitoring conditions are met. If the load does not reach th reference current value within a certain period, the PCM determines that the EVAP system has a large leak. **MONITORING CONDITION** — Ignition switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • DIAGNOSTIC MONITORING TEST RESULTS is available. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Loose, missing or defective fuel filler cap • Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • EVAP hose damaged or loose • Fuel tank malfunction • Charcoal canister malfunction • Poor connection or damaged vacuum hose • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is DTC P0443 or P0446 or both present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP System Leak Inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
		No	Go to the next step.
5	**INSPECT FUEL FILLER CAP** **Note** • When fuel-filler caps other than OEM caps are attached, it is considered a malfunction. • Verify that fuel-filler cap is neither disconnected nor loose or damaged. • It is normal?	Yes	Go to the next step.
		No	Retighten fuel-filler cap or replace it, if it is damaged. Go to Step 17.

STEP	INSPECTION		ACTION
6	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 17.
7	**INSPECT CHANGE OVER VALVE (IN EVAP SYSTEM LEAK DETECTION PUMP)** • Perform EVAP system leak detection pump inspection. (See 01–16A–11 EVAPORATIVE EMISSION (EVAP) SYSTEM LEAK DETECTION PUMP INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace EVAP system leak detection pump, then go to Step 18. (See 01–16A–5 EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
8	**INSPECT IF EVAP CONTROL SYSTEM FOR LEAKAGE OR BLOCKAGE** **Note** • If EVAP tester is not available, then go to the next step. • Perform EVAP System Leak Inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Is system test normal?	Yes	Go to the next step.
		No	Repair or replace faulty area, then go to Step 17.
9	**INSPECT CHARCOAL CANISTER TO FUEL PUMP FOR LEAKAGE** • Disconnect fuel tank side vacuum hose at charcoal canister. • Apply vacuum **1.7 kPa (13 mmHg, 0.5 inHg}** to disconnected vacuum hose using vacuum hose. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 13.
		No	Go to the next step.
10	**VERIFY VACUUM HOSE FOR POOR CONNECTION** • Verify vacuum hose installation condition between fuel tank and charcoal canister. • Is there poor connection detected?.	Yes	Connect vacuum hose correctly, then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. (See 01–14A–10 FUEL TANK REMOVAL/ INSTALLATION [L3, AJ].) • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
12	**INSPECT FUEL TANK** • Inspect fuel tank. • Is it normal?	Yes	Replace vacuum hose from charcoal canister to fuel tank, then go to the next step.
		No	Replace fuel tank, then go to the next step. (See 01–14A–10 FUEL TANK REMOVAL/INSTALLATION [L3, AJ].)
13	**INSPECT LEAKAGE FROM CHARCOAL CANISTER TO PURGE SOLENOID VALVE** • Disconnect purge solenoid valve side vacuum hose to at charcoal canister. • Apply vacuum **3.3 kPa {25 mmHg, 1.0 inHg}** to disconnected vacuum hose using vacuum hose. • Does vacuum hold for minimum of **2 min**?	Yes	Go to Step 17.
		No	Go to the next step.
14	**VERIFY VACUUM HOSE FOR POOR CONNECTION** • Verify vacuum hose installation condition between purge solenoid valve and charcoal canister. • Is there poor connection detected?	Yes	Connect vacuum hose correctly, then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**INSPECT PURGE SOLENOID VALVE FOR DAMAGE OR AIR LEAK** • Remove purge solenoid valve and inspect for damage and air leak. • Is it normal?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 17.
16	**INSPECT CHARCOAL CANISTER** • Remove charcoal canister and inspect for plugging, damage or pinhole. • Is it normal?	Yes	Replace vacuum hose from charcoal canister to purge solenoid valve, then go to the next step.
		No	Replace charcoal canister, then go to the next step.
17	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors. • Perform EVAP System Leak Inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.
18	**VERIFY TROUBLESHOOTING OF DTC P0455 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0456 [AJ]

E6U010200000W63

DTC P0456	EVAP control system leak detected (very small leak)
DETECTION CONDITION	• The PCM measures the pump load current (EVAP line pressure) when a certain period has passed after the EVAP system is sealed when monitoring condition are met. If the load does not reach the reference load value or a rate of load increase lower than specified within a certain period, the PCM determines that the EVAP system has a very small leak. **MONITORING CONDITION** — Ignition switch OFF — IAT: **5—35 °C {40—95 °F}** — Battery voltage: **11 V or above** — Atmospheric pressure: **72.2 kPa {542 mmHg, 21.3 inHg} or above** — Fuel tank level: **15—85%** **Diagnostic support note** • This is an intermittent monitor (EVAP). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EVAP pipe damaged • Purge solenoid valve malfunction • EVAP system leak detection pump malfunction • Fuel pump unit poor seal • EVAP hose damaged or loose • Charcoal canister malfunction • Fuel cap malfunction • Fuel tank malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (EVAP related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF then ON (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	Go to appropriate DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**CLASSIFY INTERMITTENT CONCERN OR CONTINUOUS CONCERN** • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Go to the next step.
		No	Intermittent concern exists. Inspect purge solenoid valve and EVAP system leak detection pump circuit for intermittent concern. (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
5	**LOCATE LEAK POINT** • Check leakage for the following using EVAP system tester: — Charcoal canister — Fuel filler cap — EVAP hoses and pipes — Fuel tank • Is leakage found?	Yes	Repair leakage or replace part, then go to Step 10.
		No	Go to the next step.
6	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Replace purge solenoid valve, then go to Step 10.
7	**INSPECT EVAP SYSTEM LEAK DETECTION PUMP** • Connect all disconnected connectors and hoses. • Place clamp on EVAP system leak detection pump hose between EVAP system leak detection pump and air filter. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Go to Step 9.
		No	Go to the next step.
8	**CONFIRM EVAP SYSTEM LEAK DETECTION PUMP LEAKAGE** • Remove clamp. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Does it fail test?	Yes	Replace EVAP system leak detection pump, then go to Step 10. (See 01–16A–5 EVAPORATIVE EMISSION (EVAP) CONTROL SYSTEM COMPONENT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
9	**INSPECT FUEL PUMP UNIT INSTALLATION** • Remove fuel tank. (See 01–14A–10 FUEL TANK REMOVAL/ INSTALLATION [L3, AJ].) • Visually inspect for damage, insufficient sealing or poorly installed pump unit. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace fuel tank or sealing, then go to the next step.
10	**PERFORM LEAK INSPECTION** • Connect all disconnected connectors and hoses. • Perform EVAP system leak inspection. (See 01–03C–70 Evaporative Emission (EVAP) System Leak Inspection.) • Is test result failed?	Yes	Leakage still exists. Locate leak point and repair. Then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0456 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0461 [AJ]

E6U010200000W64

DTC P0461	Fuel gauge sender unit circuit range/performance
DETECTION CONDITION	• The PCM monitors the fuel level difference before and after the PCM-calculated fuel consumption has reached **more than 25.0 L {26.4 US qt., 22.0 Imp qt.}**. If the difference **less than 5%**, the PCM determines that there is the fuel gauge sender unit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Turn the ignition switch off. • Inspect instrument cluster. (See 09–22–5 INSTRUMENT CLUSTER INSPECTION.) • Is instrument cluster normal?	Yes	Go to the next step.
		No	Replace instrument cluster, then go to the next step. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
4	**INSPECT FUEL GAUGE SENDER UNIT** • Turn the ignition switch off. • Inspect fuel gauge sender unit. (See 09–22–23 FUEL GAUGE SENDER UNIT INSPECTION [EXCEPT AWD].) • Is fuel gauge sender unit normal?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Repair or replace fuel gauge sender unit, then go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0462 [AJ]

E6U010200000W65

DTC P0462	Fuel gauge sender unit circuit low input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too low, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace suspected malfunction, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0462 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0463 [AJ]

E6U010200000W66

DTC P0463	Fuel gauge sender unit circuit high input
DETECTION CONDITION	• The PCM monitors the fuel level signal and fuel gauge sender unit output voltage from the instrument cluster. If the PCM detects a fuel level or fuel gauge sender unit output voltage that is too high, the PCM determines that the fuel gauge sender unit circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INSTRUMENT CLUSTER** • Perform "INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE" procedure. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is there any malfunction?	Yes	Repair or replace suspected malfunction, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0463 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0480 [AJ]

E6U010200000W67

DTC P0480	Fan control circuit malfunction
DETECTION CONDITION	• The PCM monitors the input voltages from the fan control module. If the voltage at PCM terminal 1U remains low or high, the PCM determines that the fan control circuit has a malfunction. **Diagnostic support note** • This is an continuous monitor (Other). • The MIL does not illuminate. • PENDING CODE is available if the PCM detects the above malfunction condition. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Fan control module malfunction • Connector or terminal malfunction • Open circuit between fan control module terminal 1B and PCM terminal 1U • Short to power circuit between fan control module terminal 1B and PCM terminal 1U • Short to ground circuit between fan control module terminal 1B and PCM terminal 1U • PCM malfunction

Diagnostic procedure

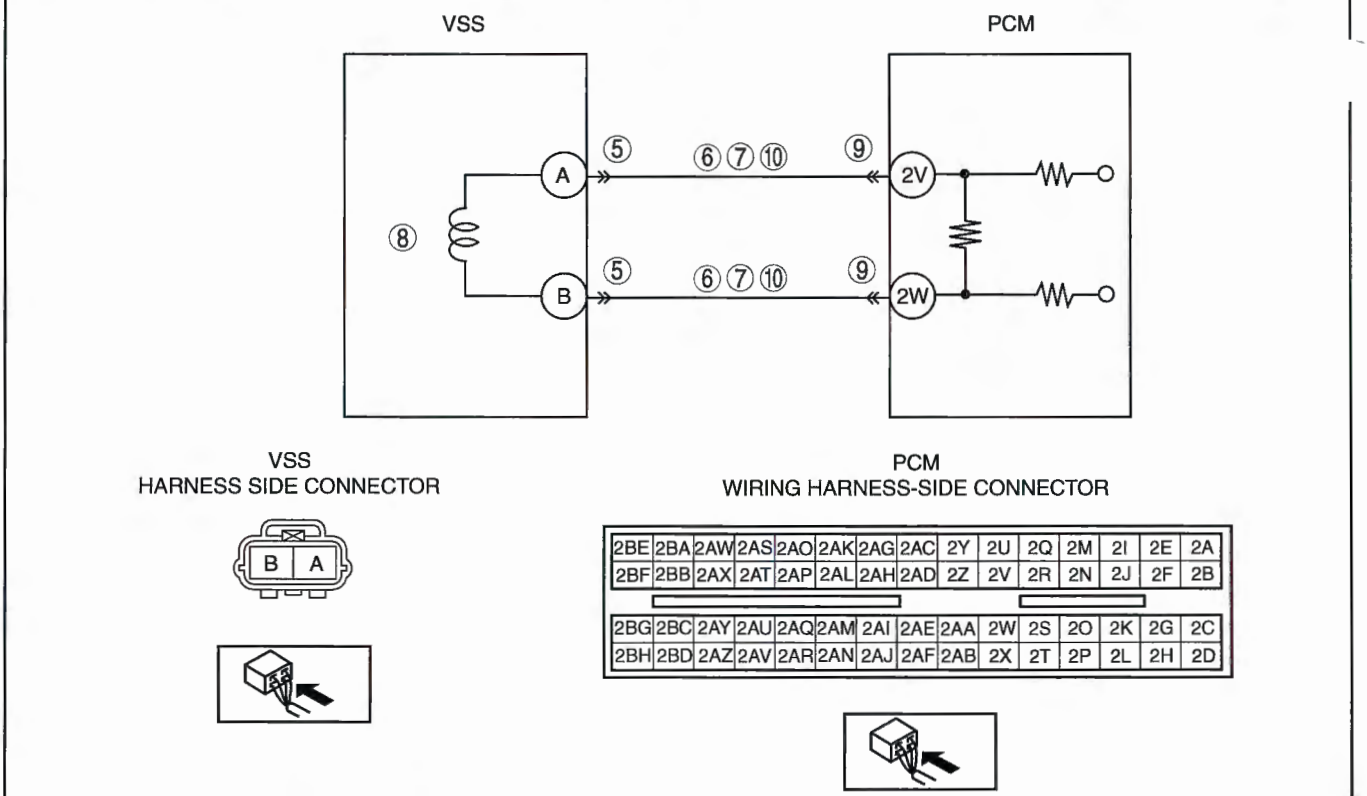
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FAN CONTROL MODULE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect fan control module connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between fan control module connector terminal 1B and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 9.
		No	Go to the next step.
5	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between fan control module terminal 1B and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT FAN CONTROL MODULE SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between fan control module terminal 1B and PCM terminal 1U. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
8	**INSPECT FAN CONTROL MODULE** • Inspect fan control module. (See 01–12A–15 FAN CONTROL MODULE INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace fan control module, then go to the next step.
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0480 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0500 [AJ]

E6U010200000W68

DTC P0500	VSS circuit malfunction
DETECTION CONDITION	**With ABS/TCS** • If an error in the wheel speed signal from the ABS/TCS HU/CM is detected by CAN when the following conditions are met, the PCM detects a malfunction in the vehicle speed signal. — In a shift range other than P, N or R position (ATX). — The neutral switch and clutch pedal position switch are OFF (MTX). — The load is **40% or above.** — The engine speed is **2,000 rpm or above**. — Brake switch is off **MTX without ABS/TCS** • The vehicle speed signal from the vehicle speed sensor is **3.7 km/h {2.3 mph} or below** when the following conditions are met: — The neutral switch and clutch pedal position switch are OFF. — The load is **40% or above**. — The engine speed is **2,000 rpm or above**. — Brake switch is off **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	**With ABS/TCS** • Front ABS wheel speed sensor malfunction • ABS/TCS HU/CM malfunction • Connector or terminal malfunction • PCM malfunction **MTX without ABS/TCS** • VSS malfunction • Connector or terminal malfunction • Short to ground circuit between VSS terminal A and PCM terminal 2V • Short to ground circuit between VSS terminal B and PCM terminal 2W • Short to power circuit between VSS terminal A and PCM terminal 2V • Short to power circuit between VSS terminal B and PCM terminal 2W • Open circuit between VSS terminal A and PCM terminal 2V • Open circuit between VSS terminal B and PCM terminal 2W • PCM malfunction

DTC P0500	VSS circuit malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME PID DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Information availability. • Is any related Service Information available?	Yes	Perform repair or diagnosis according to available Service Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS-IS CONCERN INTERMITTENT OR CONSTANT** • Connect WDS or equivalent to DLC-2. • Start engine. • Access VSS PID using the WDS or equivalent. — Vehicle speed **20 km/h {12.4 mph}: 20km/h {12.4 mph}** — Vehicle speed **40 km/h {24.8 mph}: 40km/h {24.8 mph}** • Are PID readings within specification?	Yes	Intermittent concern exists. Go to "INTERMITTENT CONCERNS TROUBLESHOOTING". (See 01–03C–5 INTERMITTENT CONCERN TROUBLESHOOTING [AJ].)
		No	Go to the next step.
4	**VERIFY VEHICLE TYPE** • Verify the vehicle type. • Is the vehicle MTX without ABS/TCS?	Yes	Go to the next step.
		No	**ATX without ABS/TCS** • Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].) **With ABS/TCS** • Go to the applicable DTC inspection. (See 04–02A–2 ABS/TCS ON-BOARD DIAGNOSIS.)
5	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect VSS connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT VSS CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between the following circuits: — VSS terminal A and body ground — VSS terminal B and body ground • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 11.
		No	Go to the next step.
7	**INSPECT VSS CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch off. • Disconnect VSS connector. • Measure voltage between the following circuits: — VSS terminal A and body ground — VSS terminal B and body ground • Is voltage reading?	Yes	Repair or replace harness for short to power, then go to Step 11.
		No	Go to the next step.
8	**INSPECT VSS** • Inspect VSS. (See 05–15B–5 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [A65M-R].) • Is there any malfunction?	Yes	Replace VSS, then go to Step 11. (See 05–15B–4 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS) [A65M-R].)
		No	Go to the next step.
9	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 11.
		No	Go to the next step.
10	**INSPECT VSS CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between the following harnesses: — VSS terminal A and PCM terminal 2V — VSS terminal B and PCM terminal 2W • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0500 COMPLETED** • Make sure to reconnect all disconnected connectors. • Turn the ignition switch to the ON position. • Clear the DTC from the PCM memory using the WDS or equivalent. • Warm-up engine. • Access RPM and LOAD PID using the WDS or equivalent. • Drive vehicle under following conditions for **18 s**. — Engine speed: **2,000 rpm or above** — Gear: Gear is in other than NEUTRAL — Load: **40% or above** • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0505 [AJ]

E6U010200000W69

DTC P0505	Idle control system malfunction
DETECTION CONDITION	• The PCM cannot control idle speed at the target idle speed during the KOER self test.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator control circuit malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to available repair Information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**VERIFY RELATED PENDING OR STORED DTCs** • Turn ignition switch to OFF, then ON. (Engine off) • Verify pending code or stored DTCs using the WDS or equivalent. • Does DTC P0506, P0507, P2100, P2101, P2105, P2107, P2110, P2112 or P2119 present?	Yes	Perform applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
3	**INSPECT ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform electronic throttle control system operation inspection. (See 01–03C–66 Electronic Throttle Control Inspection.) • Does electronic throttle control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to electronic throttle control system operation inspection results, then go to Step 9.
4	**INSPECT A/C MAGNETIC CLUTCH OPERATION** **Note** • The following test should be performed for A/C. Go to the next step for vehicles without A/C. • Turn blower motor switch to off. • Is magnetic clutch still on?	Yes	Go to "A/C ALWAYS ON / A/C COMPRESSOR RUNS CONTINUOUSLY" of ENGINE SYMPTOM TROUBLESHOOTING, then go to step 9. (See 01–03C–54 NO.24 A/C ALWAYS ON/A/C COMPRESSOR RUNS CONTINUOUSLY [AJ].)
		No	Go to the next step.
5	**INSPECT GENERATOR CONTROL CIRCUIT MALFUNCTION** • Apply electrical load at idle. • Is engine speed increased?	Yes	Go to the next step.
		No	Repair short to power supply in generator control circuit, then go to Step 9.
6	**INSPECT AIR CLEANER ELEMENT** • remove air cleaner element with engine running. • Is engine speed increased?	Yes	Clean or replace air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT THROTTLE BODY PASSAGE** • Is throttle body clogged?	Yes	Clean or replace throttle body passage, then go to Step 9.
		No	Go to the next step.
8	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul engine, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0505 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0506 [AJ]

E6U010200000W70

DTC P0506	Idle control system RPM lower than expected
DETECTION CONDITION	• The actual idle speed is lower than expected by **100 rpm** for **14 s** when the brake pedal is depressed (brake switch is ON) and the steering wheel is held straight ahead (power steering pressure switch is OFI **Note** • If the atmospheric pressure is **72.2 kPa {542 mmHg, 21.3 inHg} or below**, or the intake air temperature is **–10 °C {14 °F} or below**, the PCM cancels diagnosis of P0506. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Air cleaner element clogged • Air intake passage clogged • A/C relay control circuit malfunction • Generator malfunction • Purge solenoid valve malfunction • Low engine compression (Over capacity of blow-by gas) • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Repair applicable DTCs. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**INSPECT A/C MAGNET CLUTCH OPERATION** • Turn blower motor switch off. • Is magnet clutch still on?	Yes	Refer to "A/C is always on or A/C compressor runs continuously." of ENGINE SYMPTOM TROUBLESHOOTING, then go to Step 9. (See 01–03C–54 NO.24 A/C ALWAYS ON/A/C COMPRESSOR RUNS CONTINUOUSLY [AJ].)
		No	Go to the next step.
5	**INSPECT PURGE SOLENOID VALVE** • Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace purge solenoid valve, then go to Step 9.
		No	Go to the next step.
6	**INSPECT AIR CLEANER ELEMENT** • Remove air cleaner element with engine running. • Is engine speed increased?	Yes	Replace air cleaner element, then go to Step 9.
		No	Go to the next step.
7	**INSPECT ENGINE COMPRESSION** • Inspect engine compression. (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is engine compression normal?	Yes	Go to the next step.
		No	Overhaul engine, then go to Step 9.
8	**INSPECT GENERATOR** • Inspect generator. (See 01–17A–5 GENERATOR INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace generator, then go to the next step. (See 01–17A–4 GENERATOR REMOVAL/INSTALLATION [L3, AJ].)
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0506 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress brake pedal for **14 s or more**. • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0507 [AJ]

E6U010200000W71

DTC P0507	Idle control system RPM higher than expected
DETECTION CONDITION	• The actual idle speed is higher than expected by **200 rpm** for **14 s** when the brake pedal is depressed (brake switch is ON) and the steering wheel is held straight ahead (power steering pressure switch is OFI **Note** • If the atmospheric pressure is **72.2 kPa {542 mmHg, 21.3 inHg} or below,** or the intake air temperature is **–10 °C {14 °F} or below**, the PCM cancels diagnosis of P0507. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Vacuum hose misconnection • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, then go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	Repair applicable DTCs. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**INSPECT VACUUM HOSE CONNECTION** • Are vacuum hoses connecting accurately? (See 01–13C–2 VACUUM HOSE ROUTING DIAGRAM [AJ].)	Yes	Go to the next step.
		No	Reconnect vacuum hose accurately, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0507 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Depress brake pedal for **14 s or more.** • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0550 [AJ]

E6U010200000W72

DTC P0550	PSP switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the PSP switch signal at PCM terminal 2T. If the input voltage is low (switch stays on) for **1 min** when the VSS is **60.2 km/h {37.4 mph} or above** and the ECT is **60 °C {140 °F} or above**, the PCM determines that the PSP switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• PSP switch malfunction • Connector or terminal malfunction • Short to ground circuit between PSP switch terminal A and PCM terminal 2T • PCM malfunction

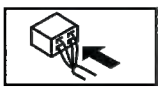
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT PSP SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PSP switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT PSP SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between PSP switch terminal A and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 7.
		No	Go to the next step.
5	**INSPECT PSP SWITCH** • Inspect PSP switch. (See 01–40C–25 POWER STEERING PRESSURE (PSP) SWITCH INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace PSP switch, then go to Step 7. (See 06–12–32 POWER STEERING OIL PUMP DISASSEMBLY/ASSEMBLY [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P0550 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle **60.2 km/h {37.4 mph} or above** for **1 min.** • Verify that ECT PID **60 °C {140 °F} or above** using the WDS or equivalent. • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0564 [AJ]

E6U010200000W73

DTC P0564	Cruise control switch circuit malfunction
DETECTION CONDITION	• The PCM monitors the cruise control switch signal at PCM terminal 1AS. If the PCM detects that any one of following switches (Main, CANCEL, SET/COAST, RESUME/ACCEL) remains on for **2 min**, the PCM determines that the cruise control switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Cruise control switch malfunction • Connector or terminal malfunction • Short to power circuit between cruise control switch terminal B and PCM terminal 1AS • Short to ground circuit between cruise control switch terminal B and PCM terminal 1AS • Open circuit between cruise control switch terminal C and body ground • Open circuit between cruise control switch terminal B and PCM terminal 1AS • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT CRUISE CONTROL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect cruise control switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
4	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between cruise control switch terminal B and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 10.
		No	Go to the next step.
5	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between cruise control switch terminal B and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 10.
		No	Go to the next step.
6	**INSPECT CRUISE CONTROL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between cruise control switch terminal C and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 10.
7	**INSPECT CRUISE CONTROL SWITCH** • Inspect cruise control switch. (See 01–20A–1 CRUISE CONTROL SWITCH INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace cruise control switch, then go to Step 10.
		No	Go to the next step.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 10.
		No	Go to the next step.
9	**INSPECT CRUISE CONTROL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between cruise control switch terminal B and PCM terminal 1AS. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF P0564 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Drive vehicle with cruise control **2 min or more**. • Is same DTC present?	Yes	Replace PCM go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0571 [AJ]

E6U010200000W74

DTC P0571	Brake switch circuit malfunction
DETECTION CONDITION	• The PCM monitors changes the input voltage for brake switch No.1 and No.2. If the PCM detects that both brake switches No.1 and No.2 remain on or off for **15 s**, the PCM determines that the brake switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (Other). • The MIL does not illuminate. • FREEZE FRAME DATA is not available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Connector or terminal malfunction • Open circuit between brake switch terminal C and body ground • Short to ground circuit between brake switch terminal A and PCM terminal 1AF • Open circuit between brake switch terminal A and PCM terminal 1AF • PCM malfunction

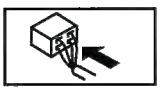
1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BRAKE SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect brake switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT BRAKE SWITCH NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Check continuity between brake switch terminal C and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.

STEP	INSPECTION		ACTION
5	**INSPECT BRAKE SWITCH NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the ON position. • Check continuity between brake switch terminal A and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT BRAKE SWITCH NO.2** • Inspect brake switch No.2. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace brake switch, then go to Step 9. (See 04–11–8 BRAKE PEDAL REMOVAL/ INSTALLATION.)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT BRAKE SWITCH NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between brake switch terminal A and PCM terminal 1AF. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF P0571 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Turn the ignition switch to the ON position. • Depress and release brake pedal **5 times or more**. • Is same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P050A [AJ]

E6U010200000WC7

DTC P050A	Cold start idle air control system performance
DETECTION CONDITION	• Actual Idle speed is lower than expected by **100 rpm** for **8.4 s** when target idle speed is **above 0 rpm** at cold start or ignition retard value is **above 8.9 °C {48 °F}.** **Note** • If atmospheric pressure is **less than 72.3 kPa {542 mmHg, 21.3 inHg}** or intake air temperature is **below -10 °C {14 °F}**, the PCM cancels diagnosis of P050A. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Throttle valve stuck or blockage • Air suction in intake-air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the freeze frame data and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050A on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on freeze frame data. (See 01–02C–13 DTC TABLE [AJ].)
4	**CHECK AIR SUCTION IN INTAKE-AIR SYSTEM** • Start the engine. • Check air suction between MAF sensor and intake manifold. • Is there any air suction in the intake-air system?	Yes	Repair or replace malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the Electronic Throttle Control System Operation Inspection. (See 01–03C–66 Electronic Throttle Control Inspection.) • Does the electronic throttle control system operate properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result. Then go to Step 7.
6	**VERIFY THROTTLE VALVE** • Turn the ignition switch to off. • Remove the throttle valve with connector connected. • Access ETC_DSD PID using the WDS or equivalent. • Turn the ignition switch to ON position (Engine off). • Move the throttle valve using the ETC_DSD PID simulation function. • Dose the throttle valve move smoothly?	Yes	Go to the next step.
		No	Clean the throttle valve and retest. If the problem does not resolve, replace the throttle body. Then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P050A COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P050B [AJ]

E6U010200000WC8

DTC P050B	Cold start ignition timing performance
DETECTION CONDITION	• The PCM monitors actual ignition timing while electronic spark advance control last idle correction operating. If the ignition timing is out of specified range, the PCM determines that the ignition timing at co condition has performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Electronic throttle control system malfunction • Throttle valve stuck or blockage • Air suction in intake-air system • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (CCM related) been recorded?	Yes	Go to the next step.
		No	Record the freeze frame data and diagnostic monitoring test results on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is P050B on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on freeze frame data. (See 01–02C–13 DTC TABLE [AJ].)
4	**CHECK AIR SUCTION IN INTAKE-AIR SYSTEM** • Start the engine. • Check air suction between MAF sensor and intake manifold. • Is there any air suction in the intake-air system?	Yes	Repair or replace malfunctioning part, then go to Step 7.
		No	Go to the next step.
5	**VERIFY ELECTRONIC THROTTLE CONTROL SYSTEM OPERATION** • Perform the Electronic Throttle Control System Operation Inspection. (See 01–03C–66 Electronic Throttle Control Inspection.) • Does the electronic throttle control system operate properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result. Then go to Step 7.
6	**VERIFY THROTTLE VALVE** • Turn the ignition switch to off. • Remove the throttle valve with connector connected. • Access ETC_DSD PID using the WDS or equivalent. • Turn the ignition switch to ON position (Engine off). • Move the throttle valve using the ETC_DSD PID simulation function. • Dose the throttle valve move smoothly?	Yes	Go to the next step.
		No	Clean the throttle valve and retest. If the problem does not resolve, replace the throttle body. Then go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P050B COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTC present?	Yes	Go to the applicable DTC troubleshooting. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0601 [AJ]

E6U010200000W75

DTC P0601	PCM memory check sum error
DETECTION CONDITION	• PCM internal memory check sum error • PCM has internal abnormalities **Diagnostic support note** • This is a continuous monitor (CCM). • PCM has internal abnormalities • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal memory malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0601 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P0602 [AJ]

E6U010200000W76

DTC P0602	PCM programming error
DETECTION CONDITION	• No configuration data in PCM. **Note** • If the "PCM CONFIGURATION" is successful, the PCM stores DTC P0602 and illuminates the MIL (system is normal). Clear DTC P0602 using the WDS or equivalent after the "PCM CONFIGURATION". • The MIL goes out after three drive cycles with no failure (DTCs remain in PCM). **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Complete configuration has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Perform PCM configuration procedure, then go to the next step. (See 01–40C–23 PCM REPLACEMENT [AJ].)
3	**VERIFY TROUBLESHOOTING OF DTC P0602 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0604 [AJ]

E6U010200000W77

DTC P0604	PCM random access memory error
DETECTION CONDITION	• PCM internal random access memory error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal RAM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0604 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P0606 [AJ]

E6U010200000W78

DTC P0606	ECM/PCM processor
DETECTION CONDITION	• PCM internal CPU malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• PCM internal CPU malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0606 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0610 [AJ]

E6U010200000W79

DTC P0610	Control module vehicle options error
DETECTION CONDITION	• PCM data configuration error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Configuration procedure has not been completed • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Perform PCM configuration procedure, then go to the next step. (See 01–40C–23 PCM REPLACEMENT [AJ].)
3	**VERIFY TROUBLESHOOTING OF DTC P0610 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0638 [AJ]

E6U010200000W80

DTC P0638	Throttle actuator control circuit range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with the target TP when the engine is running. If the difference is more than the specification, the PCM determines that there is a throttle actuator control circuit range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then to the ON position (Engine off). • Verify the related PENDING CODE or stored DTCs. • Are other DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF P0638 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the PCM, go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P0703 [AJ]

E6U010201089W01

DTC P0703	Brake switch No.1 input malfunction
DETECTION CONDITION	• The PCM monitors changes in input voltage from brake switch No.1. If the PCM does not detect voltage changes at PCM terminal 1AJ when alternately accelerated and decelerated **8 times**, the PCM determine that brake switch No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Brake switch malfunction • Connector or terminal malfunction • Open circuit between battery positive terminal and brake switch terminal B • Short to power circuit between brake switch terminal D and PCM terminal 1AJ • Open circuit between brake switch terminal D and PCM terminal 1AJ • PCM malfunction

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT BRAKE SWITCH CONNECTOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect brake switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion, etc.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT BRAKE SWITCH NO.1 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between brake switch terminal B and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between brake switch terminal D and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 9.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
7	**INSPECT BRAKE SWITCH NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between brake switch terminal D and PCM terminal 1AJ. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
8	**INSPECT BRAKE SWITCH NO.1** • Inspect brake switch No.1. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace brake switch, then go to the next step. (See 04–11–8 BRAKE PEDAL REMOVAL/ INSTALLATION.)
		No	Go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0703 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive vehicle **30 km/h {18.6 mph} or more.** • Depress and release brake pedal **8 times or more** when driving vehicle. • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0704 [AJ]

E6U010201089W02

DTC P0704	Clutch switch input malfunction
DETECTION CONDITION	• The PCM monitors changes in input voltage from the clutch pedal position switch. If the PCM does not detect voltage changes at PCM terminal 1AB when the vehicle run with vehicle speed **above 30 km/h {18.6 mph}** and stop **8 times** alternately, the PCM determines that the clutch pedal position switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Clutch switch malfunction • Connector or terminal malfunction • Open circuit between clutch pedal position switch terminal D and body ground • Open circuit between clutch pedal position switch terminal B and PCM terminal 1AB • Short to ground circuit between clutch pedal position switch terminal B and PCM terminal 1AB • PCM malfunction

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect WDS or equivalent to DLC-2. • Access CPP PID. • Verify CPP PID during clutch pedal operation. • Is CPP PID always OFF?.	Yes	Go to the next step.
		No	Go to Step 10.

STEP	INSPECTION		ACTION
4	**INSPECT CLUTCH PEDAL POSITION SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect clutch pedal position switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY CLUTCH PEDAL POSITION SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP PID. • Connect a jumper wire between clutch pedal position switch terminals B and D. • Is CPP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT CLUTCH PEDAL POSITION SWITCH** • Inspect clutch pedal position switch. (See 01–40C–23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace clutch pedal position switch, then go to Step 14. (See 05–10–7 CLUTCH PEDAL REMOVAL/ INSTALLATION [G35M-R, A65M-R].)
		No	Go to Step 14.
7	**INSPECT CLUTCH PEDAL POSITION SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between clutch pedal position switch terminal D and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT CLUTCH PEDAL POSITION SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between clutch pedal position switch terminal B and PCM terminal 1AB. • Is there continuity?	Yes	Go to Step 14.
		No	Repair or replace harness for open circuit, then go to Step 14.
10	**INSPECT CLUTCH PEDAL POSITION SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect clutch pedal position switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
11	**CLASSIFY CLUTCH PEDAL POSITION SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP PID. • Verify that CPP PID changes from ON to OFF when clutch pedal position switch connector is disconnected. • Does CPP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT CLUTCH PEDAL POSITION SWITCH** • Inspect clutch pedal position switch. (See 01–40C–23 CLUTCH PEDAL POSITION (CPP) SWITCH INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace clutch pedal position switch, then go to Step 14. (See 05–10–7 CLUTCH PEDAL REMOVAL/ INSTALLATION [G35M-R, A65M-R].)
		No	Go to Step 14.
13	**INSPECT CLUTCH PEDAL POSITION SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between clutch pedal position switch terminal B and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
14	**VERIFY TROUBLESHOOTING OF DTC P0704 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Operate clutch pedal when the vehicle run and stop **8 times** alternately. • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P0850 [AJ]

E6U010201089W03

DTC P0850	Neutral switch input malfunction
DETECTION CONDITION	• The PCM monitors changes in input voltage from the neutral switch. If the PCM does not detect voltage changes at PCM terminal 2X voltage when running the vehicle at a vehicle speed of **30 km/h {18.6 mph} or above** clutch pedal turns press and depress **10 times** repeatedly, the PCM determines that the neutral switch circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• Neutral switch malfunction • Connector or terminal malfunction • Open circuit between neutral switch terminal A and body ground • Open circuit between neutral switch terminal B and PCM terminal 2X • Short to ground circuit between neutral switch terminal B and PCM terminal 2X • PCM malfunction

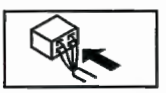
2BH	2BD	2AZ	2AV	2AR	2AN	2AJ	2AF	2AB	2X	2T	2P	2L	2H	2D



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**CLASSIFY HIGH INPUT OR LOW INPUT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Verify CPP/PNP PID when gear in neutral position. • Is CPP/PNP PID always OFF?.	Yes	Go to the next step.
		No	Go to Step 10.
4	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect neutral switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
5	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Connect a jumper wire between neutral switch terminals A and B. • Is CPP/PNP PID on?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT NEUTRAL SWITCH** • Inspect neutral switch. (See 01–40C–24 NEUTRAL SWITCH INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace neutral switch, then go to Step 14. (See 05–15B–4 NEUTRAL SWITCH REMOVAL/ INSTALLATION [A65M-R].)
		No	Go to Step 14.
7	**INSPECT NEUTRAL SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between neutral switch terminal A and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 14.
8	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.
9	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between neutral switch terminal B and PCM terminal 2X. • Is there continuity?	Yes	Go to Step 14.
		No	Repair or replace harness for open circuit, then go to Step 14.
10	**INSPECT NEUTRAL SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect neutral switch connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 14.
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	**CLASSIFY NEUTRAL SWITCH OR CIRCUIT** • Connect WDS or equivalent to DLC-2. • Access CPP/PNP PID. • Verify that CPP/PNP PID changes from ON to OFF when neutral switch connector is disconnected. • Does CPP/PNP PID change from ON to OFF?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT NEUTRAL SWITCH** • Inspect neutral switch. (See 01–40C–24 NEUTRAL SWITCH INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace neutral switch, then go to Step 14. (See 05–15B–4 NEUTRAL SWITCH REMOVAL/ INSTALLATION [A65M-R].)
		No	Go to Step 14.
13	**INSPECT NEUTRAL SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between neutral switch terminal B and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to the next step.
		No	Go to the next step.
14	**VERIFY TROUBLESHOOTING OF DTC P0850 COMPLETED** • Make sure to reconnect all disconnected connectors. • Start engine. • Clear the DTC from the PCM memory using the WDS or equivalent. • Operate clutch pedal when driving vehicle **30 km/h {18.6 mph} or below 10 times** alternately. • Is PENDING CODE same as DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
15	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2088 [AJ]

E6U010200000W81

DTC P2088	OCV actuator (RH) circuit low
DETECTION CONDITION	• The PCM monitors the OCV (RH) voltage. if the PCM detects that the OCV control voltage (calculated from OCV) is below the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• OCV (RH) malfunction • Connector or terminal malfunction • Open circuit between main relay terminal C and OCV (RH) terminal B • Short to ground circuit between OCV (RH) terminal A and PCM terminal 2M • Open circuit between OCV (RH) terminal A and PCM terminal 2M • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (RH) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect OCV (RH) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV (RH) POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between OCV (RH) terminal B and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT OCV (RH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect OCV (RH) connector. • Check continuity between OCV (RH) terminal A and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT OCV (RH)** • Inspect OCV (RH). (See 01–10C–42 OIL CONTROL VALVE (OCV) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace OCV (RH), then go to Step 9. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV (RH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between OCV (RH) terminal A and PCM terminal 2M. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2088 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2089 [AJ]

E6U010200000W82

DTC P2089	OCV actuator (RH) circuit high
DETECTION CONDITION	• The PCM monitors the OCV (RH) voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• OCV (RH) malfunction • Connector or terminal malfunction • Short to power circuit between OCV (RH) terminal A and PCM terminal 2M • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (RH) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect OCV (RH) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV (RH)** • Inspect OCV (RH). (See 01–10C–42 OIL CONTROL VALVE (OCV) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace OCV (RH), then go to Step 7. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**INSPECT OCV (RH) CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between OCV (RH) terminal A and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2089 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2092 [AJ]

E6U010200000W83

DTC P2092	OCV actuator (LH) circuit low
DETECTION CONDITION	• The PCM monitors the OCV (LH) voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is below the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• OCV (LH) malfunction • Connector or terminal malfunction • Open circuit between main relay terminal C and OCV (LH) terminal B • Short to ground circuit between OCV (LH) terminal A and PCM terminal 2N • Open circuit between OCV (LH) terminal A and PCM terminal 2N • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (LH) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect OCV (LH) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion.). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT OCV (LH) POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between OCV (LH) terminal B and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**INSPECT OCV (LH) CONTROL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Disconnect OCV (LH) connector. • Check continuity between OCV (LH) terminal A and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
6	**INSPECT OCV (LH)** • Inspect OCV (LH). (See 01–10C–42 OIL CONTROL VALVE (OCV) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace OCV (LH), then go to Step 9. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT OCV (LH) CONTROL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between OCV (LH) terminal A and PCM terminal 2N. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2092 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2093 [AJ]

E6U010200000W84

DTC P2093	OCV actuator (LH) circuit high
DETECTION CONDITION	• The PCM monitors the OCV (LH) voltage. If the PCM detects that the OCV control voltage (calculated from OCV) is above the threshold voltage (calculated from battery positive voltage), the PCM determines that the OCV circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in PCM memory.
POSSIBLE CAUSE	• OCV (LH) malfunction • Connector or terminal malfunction • Short to power circuit between OCV (LH) terminal A and PCM terminal 2N • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT OCV (LH) CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect OCV (LH) connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT OCV (LH)** • Inspect OCV (LH). (See 01–10C–42 OIL CONTROL VALVE (OCV) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace OCV (LH), then go to Step 7. (See 01–10C–41 OIL CONTROL VALVE (OCV) REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT OCV (LH) CONTROL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between OCV (LH) terminal A and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 7.
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2093 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2096, P2098 [AJ]

E6U010200000

DTC P2096 DTC P2098	**Target A/F feedback system too lean (Right bank)** **Target A/F feedback system too lean (Left bank)**
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is more than the specification, the PCM determines that the target A/F feedback system too lean. **MONITORING CONDITION** — Rear HO2S voltage is **above 0.1 V** **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • HO2S (RR, LR) malfunction • IAT sensor malfunction • ECT sensor malfunction • Air suction in intake-air system • HO2S (RF, LF) malfunction • MAF sensor malfunction • Insufficient fuel line pressure • Fuel pump unit malfunction • Leakage fuel • Improper operation ignition system • Insufficient engine compression • Fuel injector malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is the DTC P2177 or P2187 (with P2096), P2179 or P2189 (with P2098) also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2096 or P2098 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Start the engine and warm it up completely. • Access O2S12 (with P2096) or O2S22 (with P2098) PID using the WDS or equivalent. • Read O2S12 or O2S22 PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and rear HO2S. • If there is no leakage, replace rear HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 16.
6	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 16.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 6 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair if necessary. Then go to Step 16.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • Access O2S11 (with P2096) or O2S21 (with P2098) PID using the WDS or equivalent. • Read O2S11 or O2S21 PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 16.

STEP	INSPECTION		ACTION
9	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the WDS or equivalent. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 16.
10	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for loosen, cracks or damages hose in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 16.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to Step 16.
		No	Replace the fuel pump unit, then go to Step 16. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
13	**INSPECT IGNITION SYSTEM** • Carry out spark test for right bank cylinders (with P2096) or left bank cylinders (with P2098). (See 01–03C–68 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test result. Then go to Step 16.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression for right bank cylinders (with P2096) or left bank cylinders (with P2098). (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Overhaul engine, then go to Step 16.
15	**INSPECT FUEL INJECTOR** • Inspect fuel injector for right bank cylinders (with P2096) or left bank cylinders (with P2098). (See 01–14A–32 FUEL INJECTOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to the next step. (See 01–14A–27 FUEL INJECTOR REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
16	**VERIFY TROUBLESHOOTING OF DTC P2096 AND P2098 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the DRIVE MODE. • Stop vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the DRIVE MODE again. • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
17	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2097, P2099 [AJ]

E6U010200000W86

DTC P2097 DTC P2099	**Target A/F feedback system too rich (Right bank)** **Target A/F feedback system too rich (Left bank)**
DETECTION CONDITION	• The PCM monitors the target A/F fuel trim when under the target A/F feedback control. If the fuel trim is less than specification, the PCM determines that the target A/F feedback system is too rich. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Leakage exhaust gas • HO2S (RR, LR) malfunction • IAT sensor malfunction • ECT sensor malfunction • HO2S (RF, LF) malfunction • Excessive fuel line pressure • Fuel pump unit malfunction • Purge solenoid valve malfunction • Insufficient engine compression • PCM malfunction

Diagnostic procedure

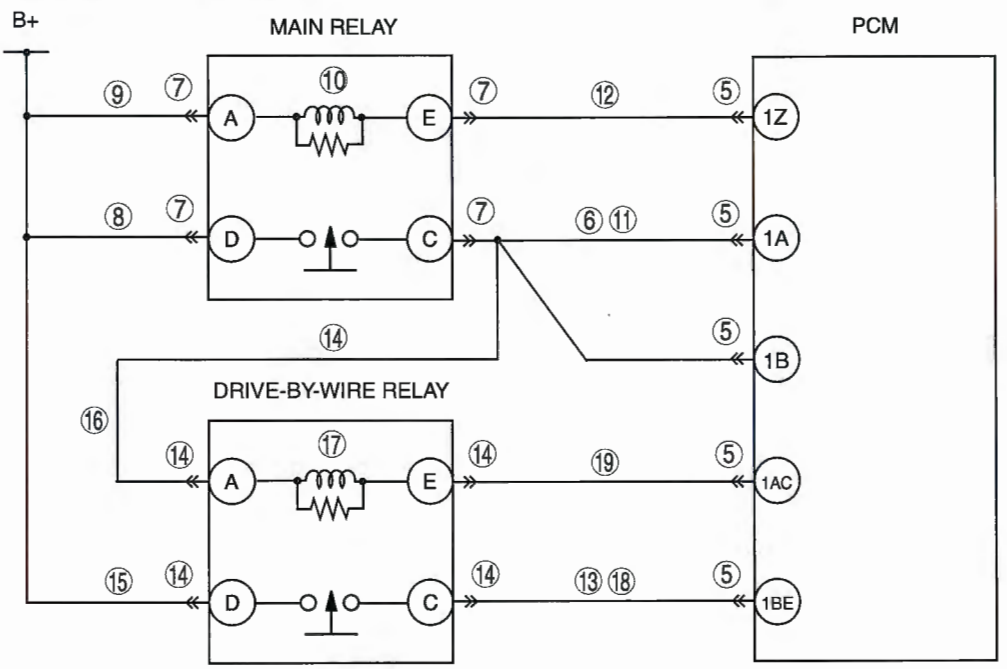
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON position (Engine off). • Verify the related PENDING CODE or stored DTCs using the WDS or equivalent. • Is the DTC P2178 or P2188 (with P2097), P2180 or P2190 (with P2099) also present?	Yes	Go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2097 or P2099 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting for DTC on FREEZE FRAME DATA. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS OF REAR HO2S** • Start the engine and warm it up completely. • Access O2S12 (with P2097) or O2S22 (with P2099) PID WDS or equivalent. • Read O2S12 or O2S22 PID under following accelerator pedal condition (in PARK). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between TWC and rear HO2S. • If there is no leakage, replace rear HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 11.

STEP	INSPECTION		ACTION
6	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 11.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 6 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 11.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • O2S11 (with P2097) or O2S21 (with P2099) PID using the WDS or equivalent. • Read O2S11 or O2S21 PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for the exhaust gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 11.
9	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to Step 11. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)
		No	Go to the next step.
10	**INSPECT LONG TERM FUEL TRIM** • Access LONGFT1 (with P2097) or LONGFT2 (with P2099) PID using the WDS or equivalent. • Compare the LONGFT1 PID with recorded FREEZE FRAME DATA at Step1. • Is the LONGFT1 or LONGFT2 PID above FREEZE FRAME DATA?	Yes	Inspect purge solenoid valve. (See 01–16A–13 PURGE SOLENOID VALVE INSPECTION [L3, AJ].) • If there is any malfunction, replace purge solenoid valve. (See 01–13C–2 VACUUM HOSE ROUTING DIAGRAM [AJ].) Then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2097 AND P2099 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Perform the DRIVE MODE. • Stop vehicle and access ON BOARD READINESS TEST to inspect drive mode completion status. • Verify FUEL_EVAL PID changes to yes. — If not, perform the DRIVE MODE again • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

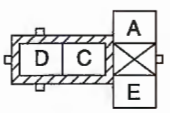
DTC P2101 [AJ]

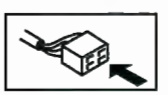
E6U010200000W87

DTC P2101	Throttle actuator control motor circuit range/performance
DETECTION CONDITION	• The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay on. If the input voltage is **less than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is low. • The PCM monitors the input voltage from the drive-by-wire relay when the PCM turns the drive-by-wire relay off. If the input voltage is **more than 5.0 V**, the PCM determines that the drive-by-wire relay control circuit voltage is high. **Diagnostic support note** • This is a continuous monitor. (CCM) • MIL illuminates if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• drive-by-wire relay and related circuit malfunction • Main relay and related circuit malfunction • Throttle position sensor No.1 and related circuit malfunction • Throttle position sensor No.2 and related circuit malfunction • PCM malfunction

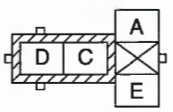


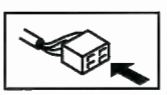
MAIN RELAY





DRIVE-BY-WIRE RELAY





PCM

1BH	1BD	1AZ	1AV	1AR	1AN	1AJ	1AF	1AB	1X	1T	1P	1L	1H	1D

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING AND STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify pending and stored DTCs using the WDS or equivalent. • Is any DTC present?	Yes	Go to appropriate DTC troubleshooting procedure.
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2101 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
6	**INSPECT MAIN RELAY OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect PCM connector. • Turn ignition switch to ON (Engine off). • Measure voltage between PCM terminal 1A and body ground. • Is voltage **B+**?	Yes	Go to Step 13.
		No	Go to the next step.
7	**INSPECT MAIN RELAY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect main relay. • Inspect for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
8	**INSPECT POWER SUPPLY OF MAIN RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between main relay terminal D and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
9	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF MAIN RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between main relay terminal A and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
10	**INSPECT MAIN RELAY** • Inspect main relay. (See 09–21–7 RELAY INSPECTION.) • Is main relay normal?	Yes	Go to the next step.
		No	Replace main relay, then go to Step 22.
11	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Disconnect main relay and PCM connector. • Check continuity between main relay terminal C and PCM terminal 1A. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
12	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check continuity between main relay terminal E and PCM terminal 1Z. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.

STEP	INSPECTION		ACTION
13	**INSPECT DRIVE-BY-WIRE RELAY OUTPUT VOLTAGE** • Turn ignition switch to ON (Engine off). • Measure voltage between PCM terminal 1BE and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for short to power supply, then go to Step 22.
14	**INSPECT POOR CONNECTION OF DRIVE-BY-WIRE RELAY CONNECTOR** • Turn the ignition switch off. • Disconnect drive-by-wire relay. • Check drive-by-wire relay connector for poor connection (such as damaged, pulled out terminals, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 22.
		No	Go to the next step.
15	**INSPECT POWER SUPPLY OF DRIVE-BY-WIRE RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between drive-by-wire relay terminal D and body ground.	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
16	**INSPECT POWER SUPPLY FOR CONTROL CIRCUIT OF DRIVE-BY-WIRE RELAY** • Turn ignition switch to ON (Engine off). • Measure voltage between drive-by-wire relay terminal A and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit between drive-by-wire relay terminal A and main relay terminal C, then go to Step 22.
17	**INSPECT DRIVE-BY-WIRE RELAY** • Inspect drive-by-wire relay. (See 09–21–7 RELAY INSPECTION.) • Is drive-by-wire relay normal?	Yes	Go to the next step.
		No	Replace drive-by-wire relay, then go to Step 22.
18	**INSPECT POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between drive-by-wire relay terminal C and PCM terminal 1BE. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
19	**INSPECT CONTROL CIRCUIT FOR OPEN CIRCUIT** • Check continuity between drive-by-wire relay E and PCM terminal 1AC.	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 22.
20	**INSPECT THROTTLE POSITION SENSOR NO.1 OUTPUT VOLTAGE** • Turn the ignition switch off. • Connect PCM connector. • Turn ignition switch to ON (Engine off). • Check voltage between PCM terminal 2AM and body ground. • Is voltage **0.40—0.60 V**?	Yes	Go to the next step.
		No	Check throttle position sensor No.1 and related circuits and terminal. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) Repair or replace if necessary, then go to Step 22.
21	**INSPECT THROTTLE POSITION SENSOR NO.2 OUTPUT VOLTAGE** • Turn ignition switch to ON (Engine off). • Check voltage between PCM terminal 2AI and body ground. • Is voltage **4.40—4.60 V**?	Yes	Go to the next step.
		No	Check throttle position sensor No.2 and related circuits and terminal. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) Repair or replace as necessary, then go to the next step.
22	**VERIFY TROUBLESHOOTING OF DTC P2101 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
23	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2107 [AJ]

E6U010200000W88

DTC P2107	Throttle actuator control module processor problem
DETECTION CONDITION	• Throttle actuator control module internal processor error **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module internal processor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2107 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2108 [AJ]

E6U010200000W89

DTC P2108	Throttle actuator control module performance problem
DETECTION CONDITION	• Throttle actuator control module internal communication error • PCM internal communication error • APP sensor internal communication error • PCM has internal abnormalities **Diagnostic support note** • This is a continuous monitor (CCM). • PCM has internal abnormalities • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module malfunction • PCM malfunction • APP sensor malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2108 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2109 [AJ]

E6U010200000W90

DTC P2109	TP sensor minimum stop range/performance problem
DETECTION CONDITION	• The PCM monitors the minimum TP when the closed TP learning is completed. If the TP is **less than 2.34%** or **more than 18.9%**, the PCM determines that there is a TP sensor minimum stop range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13C–6 THROTTLE ACTUATOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ], 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01–13C–6 THROTTLE ACTUATOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ], 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2109 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2112 [AJ]

E6U010200000W91

DTC P2112	Throttle actuator control system range/performance problem
DETECTION CONDITION	• The PCM monitors the throttle actuator control duty ratio when the engine is running. If the duty ratio is **more than 95%**, the PCM determines that there is a throttle actuator control system range/performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P2112 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2119 [AJ]

E6U010200000W92

DTC P2119	Throttle actuator control throttle body range/performance problem
DETECTION CONDITION	• The PCM compares the actual TP with initial setting TP when the engine is running. If the difference is les than the specification, the PCM determines that there is a throttle actuator control circuit range/ performance problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Throttle actuator malfunction • Throttle valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE ACTUATOR** • Inspect the throttle actuator. (See 01–13C–6 THROTTLE ACTUATOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 5. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
4	**INSPECT THROTTLE VALVE** • Inspect the throttle valve. (See 01–13C–6 THROTTLE ACTUATOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the throttle body, then go to the next step. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P2119 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2122 [AJ]

E6U010200000W93

DTC P2122	APP sensor No.1 circuit low input
DETECTION CONDITION	• The PCM monitors the APP sensor No.1 signal at PCM terminal 1AO. If the PCM detects APP sensor No.1 voltage of **0.35 V or below**, the PCM determines that the APP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal D and PCM terminal 1AR • Short to ground circuit between APP sensor terminal D and PCM terminal 1AR • Short to ground circuit between APP sensor terminal F and PCM terminal 1AO • Open circuit between APP sensor terminal F and PCM terminal 1AO • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect APP sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between APP sensor terminal D and body ground. • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**VERIFY APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between APP sensor terminal F and body ground. • Is there continuity?	Yes	Repair or replace harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01–40C–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace accelerator pedal, then go to Step 9. (See 01–13C–7 ACCELERATOR PEDAL REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**VERIFY APP SENSOR NO.1 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between APP sensor terminal F and PCM terminal 1X. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2122 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2123 [AJ]

E6U010200000W94

DTC P2123	APP sensor No.1 circuit high input
DETECTION CONDITION	• The PCM monitors the APP sensor No.1 signal at PCM terminal 1AO. If the PCM detects APP sensor No.1 voltage of **4.8 V or above**, the PCM determines that the APP sensor No.1 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • Connector or terminal malfunction • Short to power circuit between APP sensor terminal F and PCM terminal 1AO • Open circuit between APP sensor terminal E and PCM terminal 1X • PCM malfunction

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect APP sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.1 SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between APP sensor terminal F and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.1** • Inspect APP sensor No.1. (See 01–40C–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace accelerator pedal, then go to Step 8. (See 01–13C–7 ACCELERATOR PEDAL REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.1 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between APP sensor terminal E and PCM terminal 1X. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2123 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2127 [AJ]

E6U010200000W95

DTC P2127	APP sensor No.2 circuit low input
DETECTION CONDITION	• The PCM monitors the APP sensor No.2 signal at PCM terminal 1AP. If the PCM detects APP sensor No.2 voltage of **0.35 V or below**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Open circuit between APP sensor terminal A and PCM terminal 1AV • Short to ground circuit between APP sensor terminal A and PCM terminal 1AV • Open circuit between APP sensor terminal C and PCM terminal 1AP • Short to ground circuit between APP sensor terminal C and PCM terminal 1AP • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect APP sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 POWER CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between APP sensor terminal A and body ground. • Is voltage **within 4.5—5.5 V**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
5	**VERIFY APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch off. • Check continuity between APP sensor terminal C and body ground. • Is there continuity?	Yes	Repair or replace harness, then go to Step 9.
		No	Go to the next step.
6	**INSPECT APP SENSOR NO.2** • Inspect APP sensor No.2. (See 01–40C–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace accelerator pedal, then go to Step 9. (See 01–13C–7 ACCELERATOR PEDAL REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
8	**VERIFY APP SENSOR NO.2 SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between APP sensor terminal C and PCM terminal 1AP. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2127 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2128 [AJ]

E6U010200000W96

DTC P2128	APP sensor No.2 circuit high input
DETECTION CONDITION	• The PCM monitors the APP sensor No.2 signal at PCM terminal 1AP. If the PCM detects APP sensor No.2 voltage of **4.8 V or above**, the PCM determines that the APP sensor No.2 circuit has a malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.2 malfunction • Connector or terminal malfunction • Short to power circuit between APP sensor terminal C and PCM terminal 1AP • Open circuit between APP sensor terminal B and PCM terminal 1T • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect APP sensor connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
4	**INSPECT APP SENSOR NO.2 SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position. • Measure voltage between APP sensor terminal C and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for short to power, then go to Step 8.
		No	Go to the next step.
5	**INSPECT APP SENSOR NO.2** • Inspect APP sensor No.2. (See 01–40C–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace accelerator pedal, then go to Step 8. (See 01–13C–7 ACCELERATOR PEDAL REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
6	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Check for poor connection (such as damaged, pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
7	**INSPECT APP SENSOR NO.2 GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch off. • Check continuity between APP sensor terminal B and PCM terminal 1T. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P2128 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2135 [AJ]

E6U010200000W97

DTC P2135	TP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from TP sensor No.1 with the input voltage from TP sensor No.2 when the engine is running. If the difference is more than the specification, the PCM determines that there is a TP sensor No.1/No.2 voltage correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• TP sensor No.1 malfunction • TP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT THROTTLE BODY CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the throttle body connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT TP SENSOR** • Inspect the TP sensor. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the throttle body, then go to Step 6. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2135 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2138 [AJ]

E6U010200000W98

DTC P2138	APP sensor No.1/No.2 voltage correlation problem
DETECTION CONDITION	• The PCM compares the input voltage from APP sensor No.1 with the input voltage from APP sensor No.2 If the difference is more than the specification, the PCM determines that there is an APP sensor No.1/No. angle correlation problem. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• APP sensor No.1 malfunction • APP sensor No.2 malfunction • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT APP SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the APP sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 6.
		No	Go to the next step.
4	**INSPECT APP SENSOR** • Inspect the APP sensor. (See 01–40C–26 ACCELERATOR PEDAL POSITION (APP) SENSOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the APP sensor, then go to Step 6. (See 01–13C–7 ACCELERATOR PEDAL REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect the PCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to the next step.
		No	Go to the next step.
6	**VERIFY TROUBLESHOOTING OF DTC P2138 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	DTC troubleshooting completed.

DTC P2144 [AJ]

E6U010200000W99

DTC P2144	EGR boost sensor solenoid valve circuit low input
DETECTION CONDITION	• PCM monitors EGR boost sensor solenoid valve control signal at PCM terminal 1AX. if the PCM turns EGR boost sensor solenoid valve off but voltage at PCM terminal 1AX still remains low, PCM determines that EGR boost sensor solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR boost sensor solenoid valve malfunction • Open circuit in wiring harness between main relay and EGR boost sensor solenoid valve terminal A • Open circuit in wiring harness between EGR boost sensor solenoid valve terminal B and PCM terminal 1AX • Short to ground in wiring harness between EGR boost sensor solenoid valve terminal B and PCM terminal 1AX • Connector or terminal malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EGR BOOST SENSOR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EGR boost sensor solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 9.
		No	Go to the next step.
4	**INSPECT EGR BOOST SENSOR SOLENOID VALVE MALFUNCTION** • Perform EGR boost sensor solenoid valve inspection. (See 01–16A–20 EGR BOOST SENSOR SOLENOID VALVE INSPECTION [AJ].) • Is EGR boost sensor solenoid valve normal?	Yes	Go to the next step.
		No	Replace EGR boost sensor solenoid valve, then go to step 9.
5	**INSPECT EGR BOOST SENSOR SOLENOID VALVE POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the ON position. • Measure voltage between EGR boost sensor solenoid valve terminal A and body ground. • Is voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to Step 9.
6	**INSPECT EGR BOOST SENSOR SOLENOID VALVE CONTROL CIRCUIT FOR SHORT TO GROUND** • Inspect continuity between EGR boost sensor solenoid valve terminal B and body ground. • Is there continuity?	Yes	Repair or replace harness for short to ground, then go to Step 9.
		No	Go to the next step.
7	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Disconnect PCM connector. • Inspect for poor connection at terminal 1AX. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 9.
		No	Go to the next step.
8	**INSPECT EGR BOOST SENSOR SOLENOID VALVE CONTROL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between EGR boost sensor solenoid valve terminal A and PCM terminal 1AX. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P2144 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2145 [AJ]

E6U010200000WA0

DTC P2145	EGR boost sensor solenoid valve circuit high input
DETECTION CONDITION	• PCM monitors EGR boost sensor solenoid valve control signal at PCM terminal 1AX. if the PCM turns EGR boost sensor solenoid valve on but voltage at PCM terminal 1AX still remains high, PCM determines that EGR boost sensor solenoid valve circuit has malfunction. **Diagnostic support note** • This is a continuous monitor (CCM). • MIL illuminates if the PCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• EGR boost sensor solenoid valve malfunction • Short to power supply between EGR boost sensor solenoid valve terminal B and PCM terminal 1AX • Shorted EGR boost sensor solenoid valve or PCM connector • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA on repair order, then go t the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Check for related Service Bulletins and/or on-line repair information availability. • Is any repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT EGR BOOST SENSOR SOLENOID VALVE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect EGR boost sensor solenoid valve connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 7.
		No	Go to the next step.
4	**INSPECT EGR BOOST SENSOR SOLENOID VALVE MALFUNCTION** • Perform EGR boost sensor solenoid valve inspection. (See 01–16A–20 EGR BOOST SENSOR SOLENOID VALVE INSPECTION [AJ].) • Is VIS solenoid valve normal?	Yes	Go to the next step.
		No	Replace EGR boost sensor solenoid valve, then go to Step 7.
5	**INSPECT PCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch off. • Disconnect PCM connector. • Inspect for poor connection at terminal 1AX. (such as damaged, pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair terminal, then go to Step 7.
		No	Go to the next step.
6	**INSPECT EGR BOOST SENSOR SOLENOID VALVE CONTROL CIRCUIT SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position. • Measure voltage between EGR boost sensor solenoid valve terminal A and body ground. • Is voltage **B+**?	Yes	Repair or replace harness for open circuit, then go to the next step.
		No	Go to the next step.
7	**VERIFY TROUBLESHOOTING OF DTC P2145 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOEO or KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Is any DTC present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2177, P2179 [AJ]

E6U010200000WA1

DTC P2177 DTC P2179	**Fuel system too lean at off idle (Right bank)** **Fuel system too lean at off idle (Left bank)**
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • HO2S (RF, LF) deterioration • HO2S heater (RF, LF) malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCS** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2177 or P2179 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when igniting ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses repair or replace it. Then go to Step 17.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • Access O2S11 (with P2177) or O2S21 (with P2179) PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 15.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.
10	**INSPECT PURGE SOLENOID OPERATION** • Carry out Purge Control System Inspection. (See 01–03C–69 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 17.

STEP	INSPECTION		ACTION
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	If fuel pressure is too high, replace fuel pump unit, then go to Step 17. If fuel line pressure is low, go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL LEAKAGE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 16.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Carry out spark test for right bank cylinders (with P2177) or left bank cylinders (with P2179). (See 01–03C–68 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test results, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression for right bank cylinders (with P2177) or left bank cylinders (with P2189). (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation for right bank cylinders (with P2177) or left bank cylinders (with P2189). (See 01–03C–74 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove right bank (with P2177) or left bank (with P2179) fuel injectors. • Inspect fuel injector (resistance, injection amount). (See 01–14A–32 FUEL INJECTOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace suspected fuel injector, then go to the next step.
		No	Go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2177 AND P2179 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2178, P2180 [AJ]

E6U010200000WA2

DTC P2178 **DTC P2180**	**Fuel system too rich at off idle (Right bank)** **Fuel system too rich at off idle (Left bank)**
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel contr at off-idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at off-idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • HO2S (RF, LF) deterioration • HO2S heater (RF, LF) malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • EGR valve improper operation • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Variable valve timing control system improper operation • PCV valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to the appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2178 or P2180 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 15.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses repair or replace it. Then go to Step 15.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • Access O2S11 (with P2178) or O2S21 (with P2180) PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 15.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Start the engine. • Access the MAF PID using the WDS or equivalent. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 15.
9	**INSPECT PURGE SOLENOID OPERATION** • Carry out Purge Control System Inspection. (See 01–03C–69 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 15.
10	**INSPECT PCV VALVE OPERATION** • Inspect PCV valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [AJ].) • Is PCV valve normal?	Yes	Go to the next step.
		No	Replace PCV valve, then go to Step 15.
'1	**INSPECT EGR VALVE OPERATION** • Carry out EGR Control System Inspection. (See 01–03C–69 EGR Control System Inspection.) • Does EGR control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 15.
12	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	If fuel pressure is too high, replace fuel pump unit, then go to Step 15. If fuel line pressure is low, go to the next step.
		No	Go to Step 14.
13	**INSPECT FUEL LEAKAGE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 16.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 15.
14	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation for right bank (with P2178) or left bank (with P2180). (See 01–03C–74 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection results, then go to the next step.

STEP	INSPECTION		ACTION
15	**VERIFY TROUBLESHOOTING OF DTC P2178 AND P2180 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2187, P2189 [AJ]

E6U010200000WA3

DTC P2187 DTC P2189	**Fuel system too lean at idle (Right bank)** **Fuel system too lean at idle (Left bank)**
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT) and long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too lean at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • HO2S (RF, LF) deterioration • HO2S heater (RF, LF) malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Fuel filter clogged or restricted • Fuel leakage on fuel line from fuel delivery pipe and fuel pump • Leakage exhaust system • Purge solenoid valve malfunction • Purge solenoid hoses improper connection • Air suction in intake-air system • Insufficient engine compression • Variable valve timing control system improper operation • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2187 or P2189 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when igniting ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 17.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 5 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses repair or replace it. Then go to Step 17.
		No	Go to the next step.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • Access O2S11 (with P2187) or O2S21 (with P2189) PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **More than 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Less than 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 17.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 17.
9	**INSPECT FOR EXCESSIVE AIR SUCTION OF INTAKE AIR SYSTEM** • Visually inspect for loosen, cracks or damages hoses on intake-air system. • Is there any malfunction?	Yes	Repair or replace source of air suction, then go to Step 17.
		No	Go to the next step.

STEP	INSPECTION		ACTION
10	**INSPECT PURGE SOLENOID VALVE STUCK OPEN** • Turn the ignition switch off. • Disconnect both hoses from purge solenoid valve. • Blow air through purge solenoid valve. • Does air blow through?	Yes	Replace purge solenoid valve. Then go to Step 17.
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	If fuel pressure is too high, replace fuel pump unit, then go to Step 17. If fuel line pressure is low, go to the next step.
		No	Go to Step 13.
12	**INSPECT LEAKAGE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 17.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 17.
13	**INSPECT IGNITION SYSTEM** • Carry out spark test for right bank cylinders (with P2187) or left bank cylinders (with P2189). (See 01–03C–68 Spark Test.) • Is strong blue spark visible at each cylinder?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to spark test results, then go to Step 17.
14	**INSPECT ENGINE COMPRESSION** • Inspect the engine compression for right bank cylinders (with P2187) or left bank cylinders (with P2189). (See 01–10C–6 COMPRESSION INSPECTION [AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Implement engine overhaul for repairs, then go to Step 17.
15	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation for right bank (with P2187) or left bank (with P2189). (See 01–03C–74 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection results, then go to Step 17.
16	**INSPECT FUEL INJECTOR OPERATION** • Remove fuel injector for right bank cylinder (with P2187) or left bank cylinders (with P2189). • Inspect fuel injector (resistance, injection amount). (See 01–14A–32 FUEL INJECTOR INSPECTION [AJ].) • Is fuel injector normal?	Yes	Go to the next step.
		No	Replace suspected fuel injector, then go to the next step.
17	**VERIFY TROUBLESHOOTING OF DTC P2187 AND P2189 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
18	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2188, P2190 [AJ]

E6U010200000WA4

DTC P2188 DTC P2190	**Fuel system too rich at idle (Right bank)** **Fuel system too rich at idle (Left bank)**
DETECTION CONDITION	• PCM monitors short term fuel trim (SHRTFT), long term fuel trim (LONGFT) during closed loop fuel control at idle. If the LONGFT and the sum total of these fuel trims exceed preprogrammed criteria. PCM determines that fuel system is too rich at idle. **Diagnostic support note** • This is a continuous monitor. (Fuel system) • MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • DTC is stored in the PCM memory.
POSSIBLE CAUSE	• Misfire • HO2S (RF, LF) deterioration • HO2S heater (RF, LF) malfunction • MAF sensor malfunction • Pressure regulator (built-in fuel injection pump) malfunction • Fuel pump malfunction • Stuck open EGR valve • Purge solenoid valve improper operation • Purge solenoid valve malfunction (stuck open) • Purge solenoid hoses improper connection • Variable valve timing control system improper operation • PCV valve malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (Fuel system related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTCs** • Turn ignition switch to OFF, then ON (Engine off). • Verify related pending code or stored DTCs using the WDS or equivalent. • Is other DTC present?	Yes	If misfire DTC is present, go to Step 8. If other DTC is present, go to appropriate DTC troubleshooting procedure. (See 01–02C–13 DTC TABLE [AJ].)
		No	If driveability concern is present, go to Step 8. If not, go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2188 or P2190 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to troubleshooting procedures for DTC on FREEZE FRAME DATA.
5	**VERIFY CURRENT INPUT SIGNAL STATUS (KEY TO ON/IDLE)** • Access APP1, APP2, ECT, MAF, TP and VSS PIDs using the WDS or equivalent. • Is there any signal that is far out of specification when ignition switch is ON and engine runs?	Yes	Inspect suspected sensor and excessive resistance in related wiring harnesses. Repair or if necessary. Then go to Step 15.
		No	Go to the next step.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER TROUBLE CONDITION** • Inspect same PIDs as Step 4 while simulating FREEZE FRAME DATA condition. • Is there any signal which causes drastic changes?	Yes	Inspect suspected sensor and related wiring harnesses, repair or replace it. Then go to Step 15.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF FRONT HO2S** • Start the engine and warm it up completely. • Access O2S11 (with P2188) or O2S21 (with P2190) PID using the WDS or equivalent. • Check PID under following accelerator pedal condition (in PARK (ATX) or NEUTRAL (MTX)). • Is PID reading normal? — **Above 0.45 V** when accelerator pedal is suddenly depressed (rich condition). — **Below 0.45 V** just after release of accelerator pedal (lean condition).	Yes	Go to the next step.
		No	Visually inspect for any gas leakage between exhaust manifold and front HO2S. • If there is no leakage, replace front HO2S. (See 01–15C–2 EXHAUST SYSTEM REMOVAL/ INSTALLATION [AJ].) Then go to Step 15.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace MAF/IAT sensor, then go to Step 15.
9	**INSPECT PURGE SOLENOID OPERATION** • Carry out Purge Control System Inspection. (See 01–03C–69 Purge Control System Inspection.) • Does purge control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection result, then go to Step 15.
10	**INSPECT PCV VALVE OPERATION** • Inspect PCV valve operation. (See 01–16A–23 POSITIVE CRANKCASE VENTILATION (PCV) VALVE INSPECTION [AJ].) • Is PCV valve normal?	Yes	Go to the next step.
		No	Replace PCV valve, then go to Step 15.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	If fuel pressure is too high, replace fuel pump unit, then go to Step 15. If fuel line pressure is low, go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL LEAKAGE FROM FUEL PUMP TO FUEL DELIVERY PIPE** • Visually inspect fuel line for any leakage. • Is any fuel leakage found?	Yes	Replace suspected fuel line, then go to Step 14.
		No	Inspect for foreign materials or stain inside fuel filter (low-pressure). If for foreign materials or stain inside fuel filter (low-pressure), clean of fuel tank and filter. Then go to Step 15.
13	**INSPECT VARIABLE VALVE TIMING CONTROL SYSTEM OPERATION** • Inspect variable valve timing control system operation for right bank (with P2188) or left bank (with P2190). (See 01–03C–74 Variable Valve Timing Control System Operation Inspection.) • Does variable valve timing control system work properly?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part according to inspection results, then go to Step 15.
14	**INSPECT EGR VALVE STUCK OPEN** • Remove EGR valve. • Does EGR valve stuck open?	Yes	Clean or replace EGR valve, then go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
15	**VERIFY TROUBLESHOOTING OF DTC P2188 AND P2190 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from PCM memory using WDS or equivalent. • Perform the KOER SELF TEST using the WDS or equivalent. (See 01–02C–8 KOEO/KOER SELF TEST [AJ].) • Is the PENDING CODE same DTC present?	Yes	Replace PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
16	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2195, P2197 [AJ]

E6U010200000WA5

DTC P2195 DTC P2197	**HO2S (RF) signal stuck lean** **HO2S (LF) signal stuck lean**
DETECTION CONDITION	• The PCM monitors the HO2S (RF, LF) output voltage when the following conditions are met. If output voltage is less than **0.45 V** for **41 s**, the PCM determines that the HO2S (RF, LF) signal remains lean. **MONITORING CONDITION** — Fuel injection control system status: feedback zone — HO2S (RF, LH) voltage is **above 0.1 V** **Diagnostic support note** • This is an intermittent monitor. (HO2S) • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF, LF) malfunction • Fuel injector malfunction • Insufficient fuel line pressure • Leakage exhaust gas • Air suction at intake-air system malfunction • Leakage fuel • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P2177, P2187 (with DTC P2195) or P2179, P2189 (with DTC P2197) also present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2195 or P2197 on FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the FREEZE FRAME DATA DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40C–6 PCM INSPECTION [AJ].) — APP1 — APP2 — ECT — MAF — TP_REL — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 13.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. (See 01–40C–6 PCM INSPECTION [AJ].) — APP1 — APP2 — ECT — MAF — TP_REL — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 13.
7	**INSPECT INTAKE AIR SYSTEM FOR EXCESSIVE AIR SUCTION** • Visually inspect for looseness, cracks or damage to the hoses in intake-air system. • Is there any malfunction?	Yes	Repair or replace the malfunctioning part, then go to Step 13.
		No	Go to the next step.
8	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 13.
9	**INSPECT HO2S (RF, LF)** • Inspect the HO2S (RF) (with DTC P2195) or the HO2S (LF) (with DTC P2197). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the malfunctioning HO2S, then go to Step 13.
		No	Go to the next step.
10	**INSPECT FUEL INJECTOR** • Inspect the fuel injector for the right bank (with DTC P2195) or the left bank (with DTC P2197). (See 01–14A–32 FUEL INJECTOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 13. (See 01–14A–27 FUEL INJECTOR REMOVAL/ INSTALLATION [AJ].)
		No	Go to the next step.
11	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 13.
12	**INSPECT FUEL SYSTEM FOR FUEL LEAKAGE** • Visually inspect for fuel leakage in the fuel system. • Is there fuel leakage?	Yes	Repair or replace the malfunctioning part, then go to the next step.
		No	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/ INSTALLATION [L3, AJ].)

STEP	INSPECTION		ACTION
13	**VERIFY TROUBLESHOOTING OF DTC P2195 AND P2197 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Run Drive Mode 1 and 3 (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2196, P2198 [AJ]

E6U010200000WA6

DTC P2196 DTC P2198	**HO2S (RF) signal stuck rich** **HO2S (LF) signal stuck rich**
DETECTION CONDITION	• The PCM monitors the HO2S (RF, LF) output voltage when the following conditions are met. If output voltage is more than **0.45 V** for **41 s**, the PCM determines that the HO2S (RF, LF) signal remains rich. **MONITORING CONDITION** — Fuel injection control system status: feedback zone **Diagnostic support note** • This is an intermittent monitor (HO2S). • The MIL illuminates if the PCM detects the above malfunctioning condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the PCM. • PENDING CODE is available if the PCM detects the above malfunction conditions during the first drive cycle. • FREEZE FRAME DATA is available. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• HO2S (RF, LF) malfunction • Fuel injector malfunction • Excessive fuel pressure • Restriction in intake-air system • MAF sensor malfunction • ECT sensor malfunction • PCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA AND DIAGNOSTIC MONITORING TEST RESULTS HAVE BEEN RECORDED** • Have FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS (HO2S related) been recorded?	Yes	Go to the next step.
		No	Record FREEZE FRAME DATA and DIAGNOSTIC MONITORING TEST RESULTS on repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform the repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY RELATED PENDING CODE OR STORED DTC** • Turn the ignition switch off, then ON (Engine off). • Verify the related PENDING CODE or stored DTCs. • Is the DTC P0178, P2188 (with DTC P2196) or P0180, P2190 (with DTC P2198) also present?	Yes	Go to the appropriate DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**IDENTIFY TRIGGER DTC FOR FREEZE FRAME DATA** • Is DTC P2196 or P2198 in the FREEZE FRAME DATA?	Yes	Go to the next step.
		No	Go to the FREEZE FRAME DATA DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)

STEP	INSPECTION		ACTION
5	**VERIFY CURRENT INPUT SIGNAL STATUS** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs. (See 01–40C–6 PCM INSPECTION [AJ].) — APP1 — APP2 — ECT — MAF — TP_REL — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
6	**VERIFY CURRENT INPUT SIGNAL STATUS UNDER FREEZE FRAME DATA CONDITION** • Connect the WDS or equivalent to the DLC-2. • Verify the following PIDs under the FREEZE FRAME DATA condition. — APP1 — APP2 — ECT — MAF — TP_REL — VSS • Are the PIDs normal?	Yes	Go to the next step.
		No	Inspect the malfunctioning part according to the inspection results. Then go to Step 11.
7	**VERIFY CURRENT INPUT SIGNAL STATUS OF MAF SENSOR** • Connect the WDS or equivalent to the DLC-2. • Start the engine. • Access the MAF PID. • Verify that the MAF PID changes quickly according to the engine speed. • Is the PID normal?	Yes	Go to the next step.
		No	Replace the MAF/IAT sensor, then go to Step 11.
8	**INSPECT HO2S (RF, LF)** • Inspect the HO2S (RF) (with DTC P2196) or HO2S (LF) (with DTC P2198). (See 01–40C–33 HEATED OXYGEN SENSOR (HO2S) INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace HO2S malfunction, then go to Step 11.
		No	Go to the next step.
9	**INSPECT FUEL INJECTOR** • Inspect fuel injector for the right bank (with DTC P2196) or the left bank (with DTC P2198). (See 01–14A–32 FUEL INJECTOR INSPECTION [AJ].) • Is there any malfunction?	Yes	Replace the suspected fuel injector, then go to Step 11. (See 01–14A–27 FUEL INJECTOR REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
10	**INSPECT FUEL LINE PRESSURE** • Perform the "FUEL LINE PRESSURE INSPECTION". (See 01–14A–7 FUEL LINE PRESSURE INSPECTION [L3, AJ].) • Is there any malfunction?	Yes	Replace the fuel pump unit, then go to the next step. (See 01–14A–13 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3, AJ].)
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2196 AND P2198 COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the PCM memory using the WDS or equivalent. • Run Drive Mode 1 and 3 (See 01–02C–8 OBD-II DRIVE MODE [AJ].) • Is the PENDING CODE for this DTC present?	Yes	Replace the PCM, then go to the next step. (See 01–40C–5 PCM REMOVAL/INSTALLATION [AJ].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "AFTER REPAIR PROCEDURE". (See 01–02C–7 AFTER REPAIR PROCEDURE [AJ].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Troubleshooting completed.

DTC P2227 [AJ]

E6U010200000WA7

DTC P2227	EGR boost sensor circuit performance problem
