C1235	Right rear ABS wheel-speed sensor/sensor rotor	(See 04–02B–22 DTC C1148, C1158, C1168, C1178, C1233, C1234, C1235, C1236 [DSC].)
C1236	Left rear ABS wheel-speed sensor/sensor rotor	(See 04–02B–22 DTC C1148, C1158, C1168, C1178, C1233, C1234, C1235, C1236 [DSC].)
C1242	Left rear pressure reduction solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1246	Right rear pressure reduction solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1250	Left rear pressure retention solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1254	Right rear ABS pressure retention solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1266	Fail-safe relay	(See 04–02B–24 DTC C1186, C1266 [DSC].)
C1280	Combined sensor	(See 04–02B–26 DTC C1280, C1730, C1951, C1952, C1959 [DSC].)
C1400	Right front traction switch solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1410	Left front traction switch solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1414	DSC HU/CM	(See 04–02B–28 DTC C1414 [DSC].)
C1507	DSC control	(See 04–02B–28 DTC C1507, C1508 [DSC].)
C1508	DSC control	(See 04–02B–28 DTC C1507, C1508 [DSC].)
C1510	Right front solenoid valve, motor or ABS wheel-speed sensor/sensor rotor	(See 04–02B–29 DTC C1510, C1511, C1512, C1513 [DSC].)
C1511	Left front solenoid valve, motor or ABS wheel-speed sensor/sensor rotor	(See 04–02B–29 DTC C1510, C1511, C1512, C1513 [DSC].)
C1512	Right rear solenoid valve, motor or ABS wheel-speed sensor/sensor rotor	(See 04–02B–29 DTC C1510, C1511, C1512, C1513 [DSC].)
C1513	Left rear solenoid valve, motor or ABS wheel-speed sensor/sensor rotor	(See 04–02B–29 DTC C1510, C1511, C1512, C1513 [DSC].)
C1730	Combined sensor	(See 04–02B–26 DTC C1280, C1730, C1951, C1952, C1959 [DSC].)
C1949	Combined sensor	(See 04–02B–30 DTC C1949, C1950 [DSC].)
C1950	Combined sensor	(See 04–02B–30 DTC C1949, C1950 [DSC].)
C1951	Combined sensor	(See 04–02B–26 DTC C1280, C1730, C1951, C1952, C1959 [DSC].)
C1952	Combined sensor	(See 04–02B–26 DTC C1280, C1730, C1951, C1952, C1959 [DSC].)
C1953	Brake fluid pressure sensor	(See 04–02B–32 DTC C1953, C1954 [DSC].)
C1954	Brake fluid pressure sensor	(See 04–02B–32 DTC C1953, C1954 [DSC].)

DTC WDS or equivalent	Diagnosis system component	Page
C1955	Steering angle sensor	(See 04–02B–33 DTC C1955, C1956 [DSC].)
C1956	Steering angle sensor	(See 04–02B–33 DTC C1955, C1956 [DSC].)
C1957	Right front stability control solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1958	Left front stability control solenoid valve	(See 04–02B–25 DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC].)
C1959	Combined sensor	(See 04–02B–26 DTC C1280, C1730, C1951, C1952, C1959 [DSC].)
U0073	CAN system communication error	(See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])
U0100	Communication error to PCM	(See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])
U0114	Communication error to AWD control module	(See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])
U0155	Communication error to instrument cluster	(See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])
U2511	Abnormal message from AWD control module	(See 04–02B–34 DTC U2511 [DSC].)

PID/DATA Monitor Table

PID Name (Definition)	Unit/Condition	Condition/Specification	Action	DSC HU/CM terminal
ABS_LAMP (ABS warning light driver output state)	On/Off	• ABS warning light is illuminated: ON • ABS warning light is not illuminated: Off	Inspect ABS warning light.	—
ABSLF_I (Left front ABS pressure retention solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSLF_O (Left front ABS pressure reduction solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSLR_I (Left rear ABS pressure retention solenoid valve output state)	On/Off	• During ABS or EBD control: On/Off (solenoid valve is activated/deactivated) • Not ABS and EBD control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSLR_O (Left rear ABS pressure reduction solenoid valve output state)	On/Off	• During ABS or EBD control: On/Off (solenoid valve is activated/deactivated) • Not ABS and EBD control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSRF_I (Right front ABS pressure retention solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—

PID Name (Definition)	Unit/Condition	Condition/Specification	Action	DSC HU/CM terminal
ABSRF_O (Right front ABS pressure reduction solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSRR_I (Right rear ABS pressure reduction solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSRR_O (Right rear ABS pressure reduction solenoid valve output state)	On/Off	• During ABS control: On/Off (solenoid valve is activated/deactivated) • Not ABS control: Off (solenoid valve is deactivated)	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
ABSPMPRLY (Motor relay output state)	On/Off	• Motor relay is activated: On • Motor relay is deactivated: Off	Inspect DSC HU/CM. (See 04–15–9 DSC HU/CM INSPECTION.)	—
ABSVLVRLY (Fail-safe relay output state)	On/Off	• Fail-safe relay is activated: On • Fail-safe relay is deactivated: Off	Inspect DSC HU/CM. (See 04–15–9 DSC HU/CM INSPECTION.)	—
ABS_VOLT (System battery voltage value)	V	• Ignition key at ON: **B+** • Idle: **Approx. 14—16 V**	Inspect power supply circuit. (See 04–15–9 DSC HU/CM INSPECTION.)	G
ACCLMTR (Forward-G sensor input)	G	• Vehicle is stopped or driving at a constant speed: **0 G** • Cornering to left: Changes between **0 G and 1.5 G** • Cornering to right: Changes between **0 G and -1.5 G**	Inspect combined sensor. (See 04–15–12 COMBINED SENSOR INSPECTION.)	V
AWD_MSG (Missing message from the AWD control module)	Present/ Not Present	• Present: Circuit in the AWD control module is normal. • Not Present: Circuit in the AWD control module is abnormal.	Inspect AWD control module. (See 03–19–3 AWD CONTROL MODULE INSPECTION) Inspect DSC HU/CM. (See 04–15–9 DSC HU/CM INSPECTION)	—
BOO_ABS (Brake pedal switch input)	On/Off	• Brake pedal is depressed: On • Brake pedal is released: Off	Inspect brake switch. (See 04–11–9 BRAKE SWITCH INSPECTION.)	—
BRK_FLUID (Brake fluid level sensor input)	OK/Low	• Brake fluid is above LOW: OK • Brake fluid is below LOW: Low	Inspect brake fluid level. Inspect brake fluid level sensor. (See 04–11–12 BRAKE FLUID LEVEL SENSOR INSPECTION.)	—
BRAKE_LMP (BRAKE system warning light output state)	On/Off	• BRAKE system warning light is illuminated: On • BRAKE system warning light is not illuminated: Off	Inspect BRAKE system warning light.	—
CCNTABS (Number of continuous codes)	—	DTC is detected: 1—255 DTC is not detected: 0	Perform inspection using appropriate DTC.	—

PID Name (Definition)	Unit/Condition	Condition/Specification	Action	DSC HU/CM terminal
IC_MSG (Missing message from the instrument cluster)	Present/ Not Present	• Present: Circuit in the instrument cluster is normal. • Not Present: Circuit in the instrument cluster is abnormal.	Inspect instrument cluster. (See 09–22–5 INSTRUMENT CLUSTER INSPECTION) Inspect DSC HU/CM. (See 04–15–9 DSC HU/CM INSPECTION)	—
LAT_ACCL (Lateral-G sensor input)	G	• Vehicle is stopped or driving straight: 0 G • Cornering to left: Changes between **0 G and 1.5 G** • Cornering to right: Changes between **0 G and -1.5 G**	Inspect combined sensor. (See 04–15–12 COMBINED SENSOR INSPECTION.)	O
L_DSC_O (Stability control solenoid valve (LF-RR))	On/Off	• Solenoid valve is activated: On • Solenoid valve is deactivated: Off	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
LF_WSPD (Left front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle is stopped: **0 KPH {0 MPH}** • Vehicle is driving: Indicates vehicle speed	Inspect ABS wheel-speed sensor/sensor rotor. (See 04–15–11 FRONT/ REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	F, J
LR_WSPD (Left rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle is stopped: **0 KPH {0 MPH}** • Vehicle is driving: Indicates vehicle speed	Inspect ABS wheel-speed sensor/sensor rotor. (See 04–15–11 FRONT/ REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	N, Q
MCYLI P (Brake fluid pressure sensor input)	Pa	• Brake pedal is released: **0 Pa** • Brake pedal is depressed: Changes between **0 Pa and 25.5 MPa**	Inspect DSC HU/CM. (See 04–15–9 DSC HU/CM INSPECTION.)	—
PCM_MSG (Missing message from the PCM)	Present/ Not Present	• Present: Circuit in the PCM is normal. • Not Present: Circuit in the PCM is abnormal.	Inspect PCM. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) Inspect DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
PMPSTAT (Pump motor output state)	On/Off	• Pump motor activate: On • Pump motor not activate: Off	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
R_DSC_O (Stability control solenoid valve (RF-LR))	On/Off	• Solenoid valve is activated: On • Solenoid valve is deactivated: Off	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
RF_WSPD (Right front ABS wheel-speed sensor input)	KPH, MPH	• Vehicle is stopped: **0 KPH {0 MPH}** • Vehicle is driving: Indicates vehicle speed	Inspect ABS wheel-speed sensor/sensor rotor. (See 04–15–11 FRONT/ REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	I, M
RPM (Engine speed signal input)	RPM	• Engine is stopped: **0 RPM** • Engine is running: Indicates engine speed	Inspect PCM. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)	—
RR_WSPD (Right rear ABS wheel-speed sensor input)	KPH, MPH	• Vehicle is stopped: **0 KPH {0 MPH}** • Vehicle is driving: Indicates vehicle speed	Inspect ABS wheel-speed sensor/sensor rotor. (See 04–15–11 FRONT/ REAR ABS WHEEL-SPEED SENSOR INSPECTION.)	H, K

PID Name (Definition)	Unit/Condition	Condition/Specification	Action	DSC HU/CM terminal
SWA_POS (Steering angle sensor input)	°	• Steering wheel is in neutral position: **0 °** • Steering wheel is turned to left: Changes between **0 ° and -1,640 °** • Steering wheel is turned to right: Changes between **0 ° and 1,640 °**	Inspect steering angle sensor. (See 09–18–20 STEERING ANGLE SENSOR INSPECTION.)	R, U, W, X
TC LVAL (Traction switch solenoid valve (LF-RR))	On/Off	• Solenoid valve is activated: On • Solenoid valve is deactivated: Off	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
TC RVAL (Traction switch solenoid valve (RF-LR))	On/Off	• Solenoid valve is activated: On • Solenoid valve is deactivated: Off	Internal fault of DSC HU/CM. Replace DSC HU/CM. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)	—
TPI (Throttle position signal input)	%	• Closed throttle position: **0%** • Wide open throttle: Changes between **0% and 100%**	Inspect PCM and throttle position sensor. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) (See 01–40B–27 THROTTLE POSITION (TP) SENSOR INSPECTION [L3 WITH TC].)	—
TRAC_SW (DSC OFF switch input)	On/Off	• DSC OFF switch is depressed: On • DSC OFF switch is released: Off	Inspect DSC OFF switch. (See 04–15–15 DSC OFF SWITCH INSPECTION.)	AA
TRANSGR (Transaxle gear position input)	1/2/3/4/5/6/R/N/ Error	• Transaxle gear /selector lever position* 1GR: 1 2GR: 2 3GR: 3 4GR: 4 5GR: 5 6GR: 6 Reverse: R Neutral: N When gear position estimation is disabled: Error	Inspect PCM. (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)	—
YAW_RATE (Yaw rate sensor input)	°/s	• Vehicle is stopped or driving straight: **0 °/s** • Cornering to left: Changes between **0 °/s and 150 °/s** • Cornering to right: Changes between **0 °/s and -150 °/s**	Inspect combined sensor. (See 04–15–12 COMBINED SENSOR INSPECTION.)	T

*3 : The displayed gear position is an estimated value based on the vehicle wheel speed and engine speed

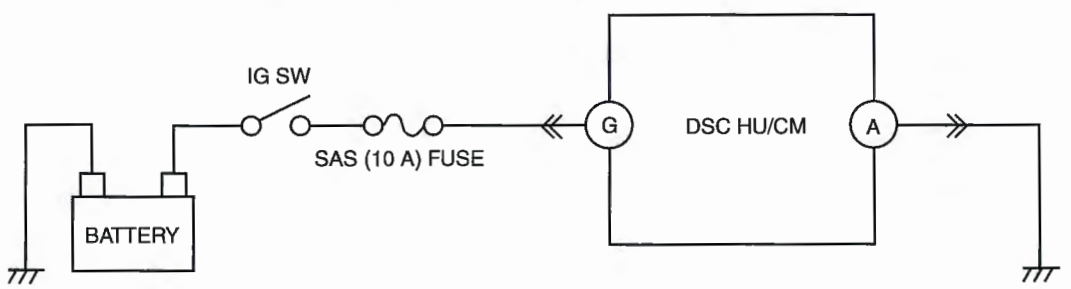
Active Command Modes Table

Command Name	Definition	Operation	Note
ABS_POWER	Fail-safe relay	On/Off	Ignition key at ON (Engine OFF), and driving
LATACCEL	Lateral-G sensor initialization	TRUE/FALSE	
LF_DSC_V	Stability control solenoid valve (LF-RR)	On/Off	
LF_INLET	Left front ABS pressure retention solenoid valve	On/Off	
LF_OUTLET	Left front ABS pressure reduction solenoid valve	On/Off	
LF_TC_VLV	Traction switch solenoid valve (LF-RR)	On/Off	
LR_INLET	Left rear ABS pressure retention solenoid valve	On/Off	
LR_OUTLET	Left rear ABS pressure reduction solenoid valve	On/Off	
PMP_MOTOR	ABS motor	On/Off	
RF_DSC_V	Stability control solenoid valve (RF-LR)	On/Off	
RF_INLET	Right front ABS pressure retention solenoid valve	On/Off	
RF_OUTLET	Right front ABS pressure reduction solenoid valve	On/Off	
RF_TC_VLV	Traction switch solenoid valve (RF-LR)	On/Off	
RR_INLET	Right rear ABS pressure retention solenoid valve	On/Off	
RR_OUTLET	Right rear ABS pressure reduction solenoid valve	On/Off	
STAB_IND	DSC indicator light	On/Off	
TRAC OFF	DSC OFF light	On/Off	
YAWRATE	Yaw rate sensor initialization	On/Off	

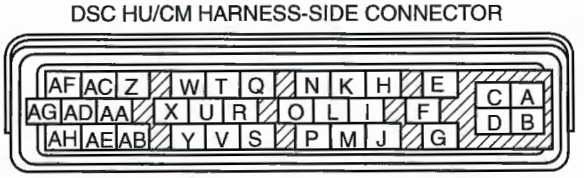
DTC B1318 [DSC]

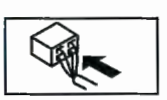
E6U040200000W19

DTC B1318	DSC power supply
DETECTION CONDITION	• Low voltage is detected at the voltage monitor of solenoid valve monitor, or the motor monitor
POSSIBLE CAUSE	• Malfunction of fuse (SAS 10 A) • Open or short to power circuit in harness between DSC HU/CM terminal G and battery positive termir • Open circuit in harness between body ground and DSC HU/CM terminal A • Battery and/or generator malfunction



DSC HU/CM HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY VOLTAGE** • Is battery terminal voltage normal?	Yes	Make sure that battery terminal connection is normal. Go to next step.
		No	Charge or replace battery, then go to Step 6.
2	**INSPECT BATTERY GRAVITY** • Is battery specific gravity as specified?	Yes	Go to next step.
		No	Replace battery, then go to Step 6.
3	**INSPECT CHARGING SYSTEM** • Are generator and drive belt tension normal?	Yes	Go to next step.
		No	Adjust drive belt tension as necessary. Replace generator and/or drive belt as necessary.
4	**INSPECT DSC HU/CM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Start engine. • Measure voltage between DSC HU/CM terminal G and ground. • Is voltage **above 10 V**?	Yes	Go to next step.
		No	Go to Step 6.
5	**INSPECT DSC HU/CM GROUND CIRCUIT FOR POOR GROUND OR OPEN CIRCUIT** • Turn ignition key to OFF. • Measure resistance between ground and DSC HU/CM terminal A. • Is resistance **within 0—1 ohm**?	Yes	Go to next step.
		No	If there is no continuity: • Repair or replace harness for open circuit between DSC HU/CM and ground, then go to next step. If resistance is not **within 0—1 ohm**: • Repair or replace harness for poor ground then go to next step.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

04–02B

DTC B1342 [DSC]

E6U040200000W20

DTC B1342	DSC HU/CM
DETECTION CONDITION	The on-board diagnostic function detects control module malfunction.
POSSIBLE CAUSE	• Malfunction of DSC HU/CM

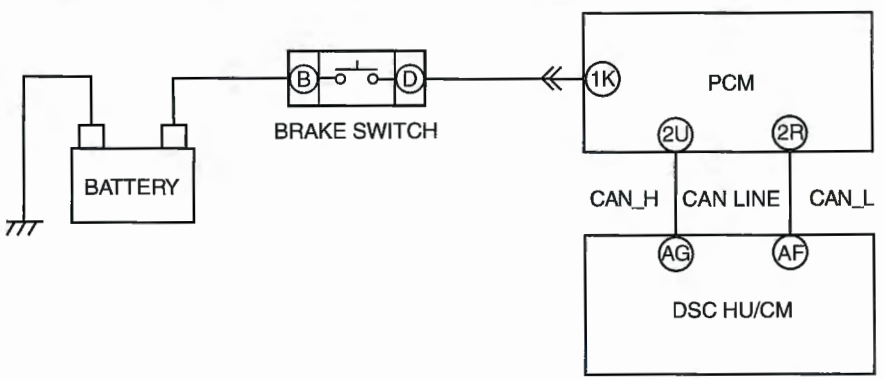
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above. • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Inspect intermittent concern using the same procedure as engine control system.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

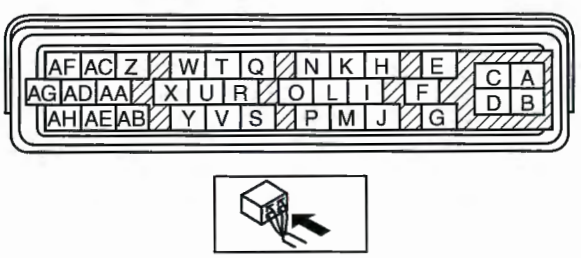
DTC B1483, B1484, B1486 [DSC]

E6U040200000W21

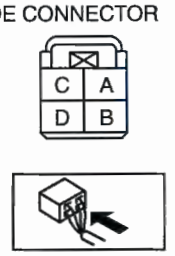
DTC B1483, B1484, B1486	Brake switch signal
DETECTION CONDITION	• B1483 — A signal error is input for **5 s or more** from the brake switch. • B1484 — The brake switch on signal is input continuously for **120 s or more** under the specified driving conditions. • B1486 — The brake switch off signal is input continuously for **150 s or more** even with **1.5 MPa or more** of brake fluid pressure.
POSSIBLE CAUSE	• B1483 — Malfunction of brake switch • B1484 — Short to power circuit in wiring harness between the brake switch and PCM terminal • B1486 — Short to ground circuit in wiring harness between the brake switch and PCM terminal — Open circuit in wiring harness between the brake switch and PCM terminal



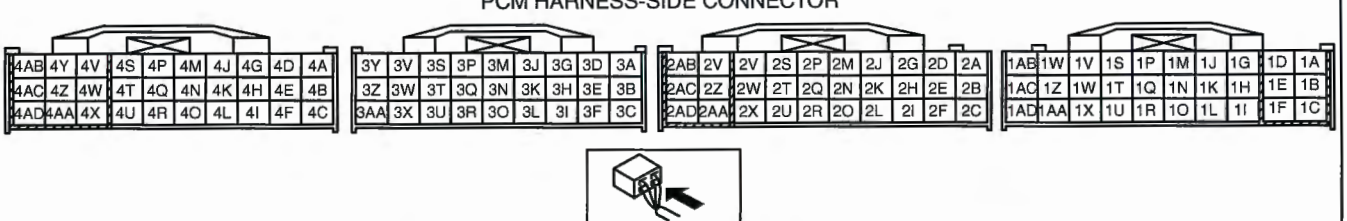
DSC HU/CM HARNESS-SIDE CONNECTOR



BRAKE SWITCH HARNESS-SIDE CONNECTOR



PCM HARNESS-SIDE CONNECTOR



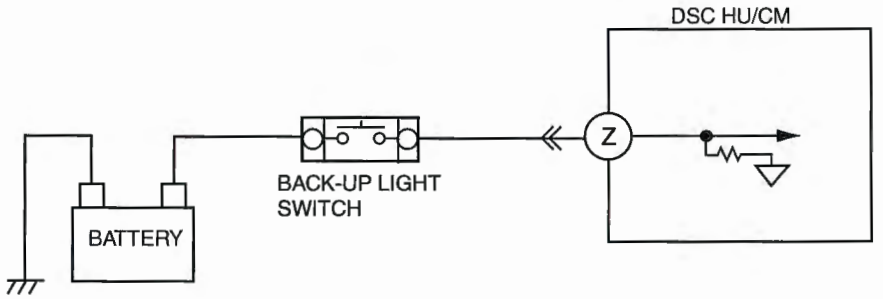
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OPEN OR SHORT CIRCUIT IN BRAKE SWITCH SIGNAL** • Turn the ignition switch to the ON position. • Measure the voltage between the PCM connector terminal 1K and body ground when the brake pedal is depressed and released. **Voltage** **Brake pedal depressed: B+** **Brake pedal released:** **1 V or less**	Yes	Go to Step 5.
		No	If it is **B+** under any condition, then go to the next step. If it is **1 V or less** under any condition, then go to Step 3.
2	**INSPECT BRAKE SWITCH SIGNAL FOR SHORT TO POWER SUPPLY CIRCUIT** • Disconnect the brake switch connector. • Measure the voltage between the brake switch connector terminal D (vehicle harness-side) and body ground. • Is the voltage **1 V or less**?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
3	**INSPECT BRAKE SWITCH SIGNAL FOR OPEN CIRCUIT** • Disconnect the PCM connectors. • Disconnect the brake switch connector. • Inspect continuity between the following PCM connector terminal 1K (vehicle harness-side) and brake switch terminal D. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness between the PCM and brake switch, then go to Step 5.
4	**INSPECT BRAKE SWITCH** • Inspect the brake switch. (See 04–11–9 BRAKE SWITCH INSPECTION.) • Is the brake switch normal?	Yes	Go to the next step.
		No	Replace the brake switch, then go to the next step. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)
5	**VERIFY THAT THE SAME DTC IS NOT PRESENT** • Reconnect all disconnected connectors. • Clear the DTCs from the memory. (See 04–02B–3 Clearing DTCs Procedures.) • Are the same DTCs present?	Yes	Repeat the inspection from Step 1. If the malfunction recurs, replace the DSC HU/CM, then go to the next step. (See 04–15–7 DSC HU/CM REMOVAL/INSTALLATION.)
		No	Go to the next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

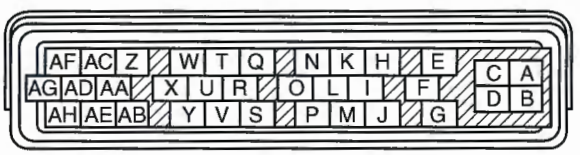
DTC B1627 [DSC]

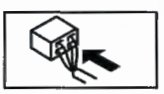
E6U040200000W22

DTC B1627	Reverse signal
DETECTION CONDITION	• Reverse signal is input for **10 s or more** while driving at a vehicle speed of **65 km/h {40 mph}**
POSSIBLE CAUSE	• Short to power circuit in harness between DSC HU/CM terminal Z and back-up light switch



DSC HU/CM HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BACK-UP LIGHT SWITCH** • Inspect back-up light switch. (See 09–18–19 BACK-UP LIGHT SWITCH INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace back-up light switch, then go to next step. (See 09–18–19 BACK-UP LIGHT SWITCH REMOVAL/ INSTALLATION [L3 WITH TC].)
2	**INSPECT REVERSE SIGNAL CIRCUIT FOR SHORT TO POWER** • Shift select lever to neutral position. • Turn ignition key to ON. • Measure voltage between DSC HU/CM terminal Z and ground. • Is voltage **above 10 V**?	Yes	Go to next step.
		No	Replace back-up light switch, then go to next step. (See 09–18–19 BACK-UP LIGHT SWITCH REMOVAL/ INSTALLATION [L3 WITH TC].) Replace reverse signal circuit, then go to next step.
3	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC B2477 [DSC]

E6U040200000W23

DTC B2477	Module configuration
DETECTION CONDITION	• Configuration write failure is detected
POSSIBLE CAUSE	• Module configuration procedure is not done properly.

Diagnostic procedure

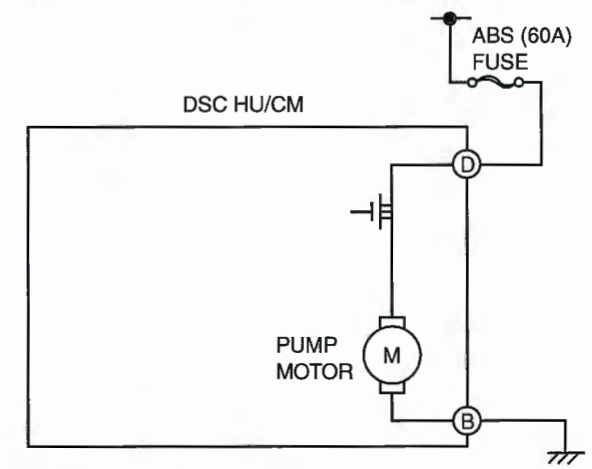
STEP	INSPECTION		ACTION
1	INSPECT WHETHER DSC HU/CM IS CONFIGURED • Is DSC HU/CM configured?	Yes	Go to next step.
		No	Configure DSC HU/CM using WDS or equivalent. (See 04–15–9 DSC HU/CM CONFIGURATION.)
2	VERIFY TROUBLESHOOTING COMPLETED • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
3	VERIFY THAT NO OTHER DTCS ARE PRESENT • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

04–02B

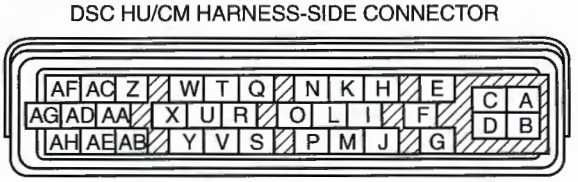
DTC C1095, C1096 [DSC]

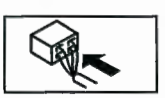
E6U040200000W24

DTC C1095, C1096	Motor relay, pump motor
DETECTION CONDITION	• C1095: — No motor monitor signal congruency is detected in relation to DSC HU/CM ON signal • C1096: — No motor monitor signal congruency is detected in relation to DSC HU/CM OFF signal — Motor monitor ON signal is not input after specified time when the motor signal is switched from ON to OFF by DSC HU/CM
POSSIBLE CAUSE	• Malfunction of fuse (ABS 60 A) • Open circuit in harness between DSC HU/CM terminal D and battery positive terminal • Open circuit in harness between DSC HU/CM terminal B and body ground • Open or short of motor relay and/or pump motor in DSC HU/CM • Stuck motor relay and/or pump motor in DSC HU/CM



DSC HU/CM HARNESS-SIDE CONNECTOR





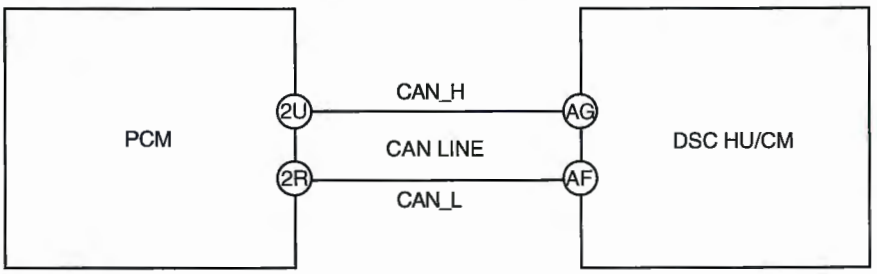
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OTHER DTC HAS BEEN RECORDED** • If any of DTC C1186 and/or C1266 has also been stored?	Yes	Go to applicable DTC inspection.
		No	Go to next step.
2	**INSPECT ABS FUSE CONDITION** • Is ABS fuse (60 A) normal?	Yes	Go to next step.
		No	Replace fuse, then go to Step 6.
3	**INSPECT MOTOR RELAY POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM connector. • Turn ignition key to ON (engine OFF). • Measure voltage between DSC HU/CM terminal D (harness side) and ground. • Is voltage **B+**?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between battery positive terminal and DSC HU/CM terminal D, then go to Step 9.
4	**INSPECT PUMP MOTOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal B (harness side) and ground. • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal B and ground, then go to Step 6.
5	**VERIFY PUMP MOTOR OPERATION** • Turn ignition key to OFF. • Connect all disconnected connectors. • Connect WDS or equivalent to DLC-2. • Turn ignition key to ON (engine OFF). • Access ABS_POWER and PMP_MOTOR active command modes using WDS or equivalent. • Does pump motor operate?	Yes	Go to next step.
		No	Repair DSC HU/CM, then go to next step.
6	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above. • Gradually slow down and stop vehicle. • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
7	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

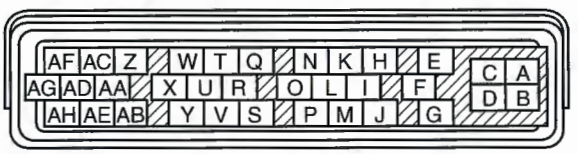
DTC C1119 [DSC]

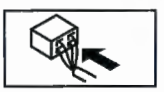
E6U040200000W25

DTC C1119	Engine control system
DETECTION CONDITION	• Engine RPM information through CAN is out of specification • Throttle information through CAN is out of specification
POSSIBLE CAUSE	• Malfunction of PCM • Malfunction of CAN

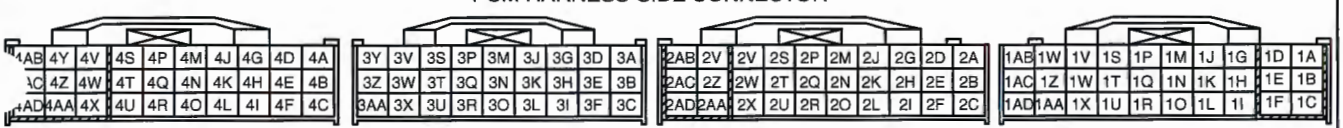


DSC HU/CU HARNESS-SIDE CONNECTOR





PCM HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR PCM FOR DTCs** • Turn ignition key to OFF. • Connect WDS or equivalent to DLC-2 • Turn ignition key to ON (engine OFF). • Is DTC for engine control system obtained?	Yes	Follow inspection procedures for engine control system.
		No	Go to next step.
2	**MONITOR CAN SIGNAL** • Access PID RPM and TP using WDS or equivalent. • Are engine speed and throttle position within specification?	Yes	Go to next step.
		No	Follow inspection procedures for engine control system.
3	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine. • Is the same DTC present?	Yes	Replace DSC HU/CM.
		No	DTC troubleshooting completed.

DTC C1125 [DSC]

E6U040200000W26

DTC C1125	Brake fluid level sensor
DETECTION CONDITION	• Brake fluid level remains low for **5 s or more**
POSSIBLE CAUSE	• Decrease in amount of brake fluid • Malfunction of brake fluid level sensor

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR CAN FOR DTCs** • Is any of DTC U0073 and/or U0155 has also been stored?	Yes	Follow inspection procedures for CAN system. (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])
		No	Go to next step.
2	**INSPECT BRAKE FLUID LEVEL** • Inspect brake fluid level. • Is it normal?	Yes	Go to next step.
		No	Add brake fluid to specified level, then go to Step 3.
3	**INSPECT BRAKE FLUID LEVEL SENSOR** • Turn ignition key to OFF. • Disconnect brake fluid level sensor connector. • Measure resistance between brake fluid level sensor terminals. — Brake fluid level above MIN: resistance about **500 ohms** — Brake fluid level below MIN: resistance within **0—1 ohm** • Is it normal?	Yes	Go to next step.
		No	Repair brake fluid level sensor, then go to Next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnected all disconnected connectors. • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1140 [DSC]

E6U040200000W27

DTC C1140	DSC HU/CM (pump)
DETECTION CONDITION	Right front and left rear wheels, or left front and right rear wheel-lock is detected during DSC operation.
POSSIBLE CAUSE	Stuck pump motor in DSC HU/CM

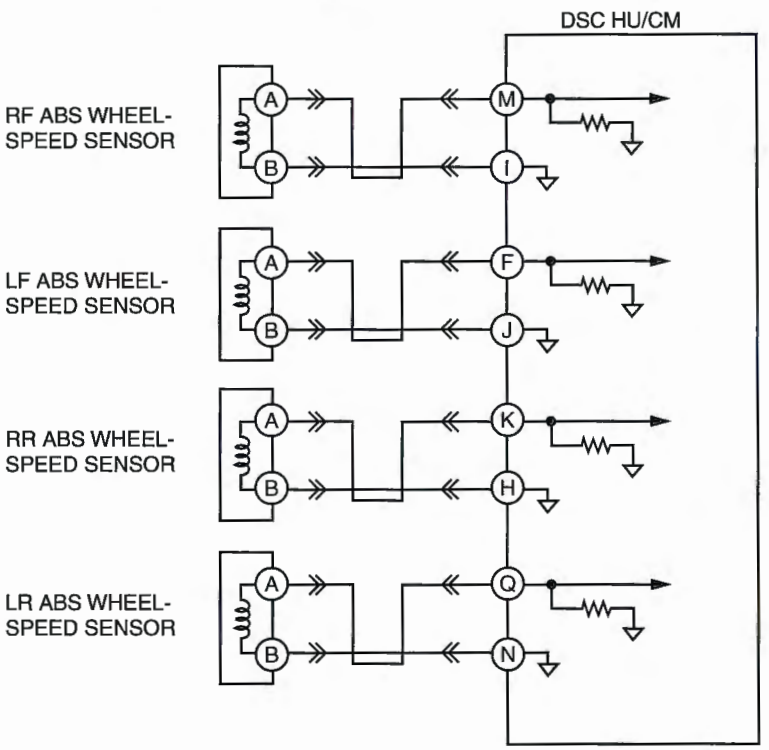
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC HU/CM OPERATION** • Perform DSC HU/CM system inspection. (See 04–15–4 DSC SYSTEM INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace DSC HU/CM, then go to Step 4.
2	**INSPECT CONVENTIONAL BRAKE OPERATION** • Inspect brake fluid level. • Start engine. • Perform a road test to verify conventional vehicle braking performance. • Is there any concern.	Yes	Inspect conventional brake line, then go to Step 4.
		No	Go to next step.
3	**INSPECT REAR BRAKE DRAGGING** • Turn ignition key to OFF. • Jack-up vehicle and support it with safety stand. • Release parking brake. • Turn rear wheel by hand and inspect for rear brake drag. • Is rear brake dragging?	Yes	Repair parking brake system, then go to next step.
		No	Go to next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above at least one minute. • Gradually slow down vehicle and stop. • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1145, C1155, C1165, C1175 [DSC]

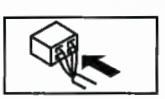
E6U040200000W28

DTC	C1145	RF ABS wheel-speed sensor
	C1155	LF ABS wheel-speed sensor
	C1165	RR ABS wheel-speed sensor
	C1175	LR ABS wheel-speed sensor
DETECTION CONDITION	• Abnormal input is detected.	
POSSIBLE CAUSE	• Open or short to ground circuit in harness between DSC HU/CM terminal and ABS wheel-speed sensor(s) terminal below — DSC HU/CM terminal M—RF ABS wheel-speed sensor terminal A — DSC HU/CM terminal I—RF ABS wheel-speed sensor terminal B — DSC HU/CM terminal F—LF ABS wheel-speed sensor terminal A — DSC HU/CM terminal J—LF ABS wheel-speed sensor terminal B — DSC HU/CM terminal K—RR ABS wheel-speed sensor terminal A — DSC HU/CM terminal H—RR ABS wheel-speed sensor terminal B — DSC HU/CM terminal Q—LR ABS wheel-speed sensor terminal A — DSC HU/CM terminal N—LR ABS wheel-speed sensor terminal B • Malfunction of ABS wheel-speed sensor(s)	

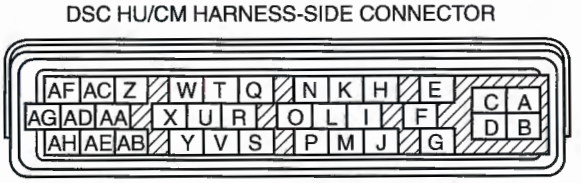


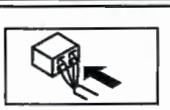
ABS WHEEL-SPEED SENSOR HARNESS-SIDE CONNECTOR

FRONT REAR



DSC HU/CM HARNESS-SIDE CONNECTOR





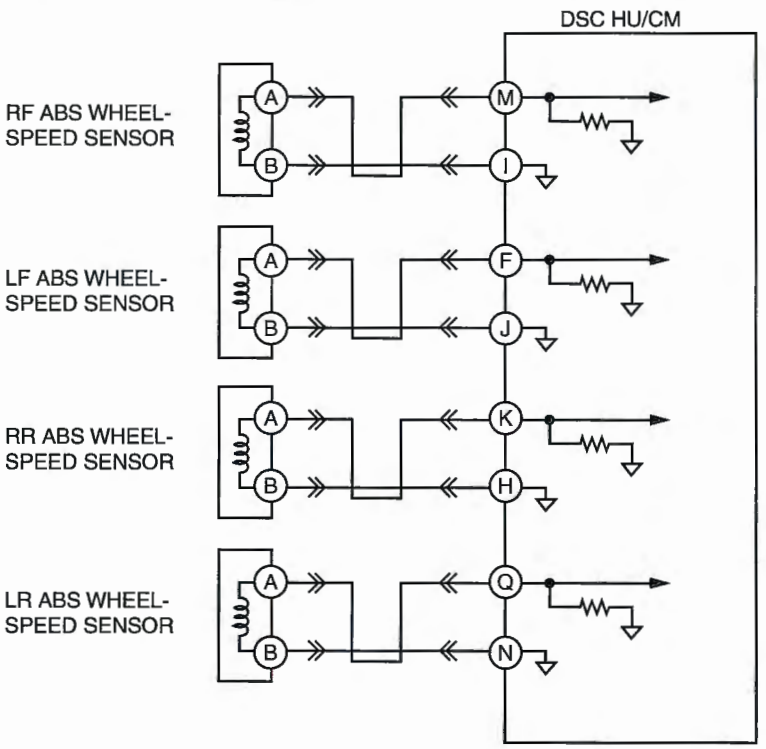
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS WHEEL-SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM connector. • Measure resistance between suspected sensor terminals of DSC HU/CM connector (harness side). — RF ABS wheel-speed sensor: M—I — LF ABS wheel-speed sensor: F—J — RR ABS wheel-speed sensor: K—H — LR ABS wheel-speed sensor: Q—N • Is resistance **within 1.3—1.7 kilohm**?	Yes	Go to next step.
		No	Go to Step 3.
2	**INSPECT ABS WHEEL-SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between suspected sensor terminal(s) of DSC HU/CM connector (harness side) and ground(s). — RF ABS wheel-speed sensor (+): M — RF ABS wheel-speed sensor (–): I — LF ABS wheel-speed sensor (+): F — LF ABS wheel-speed sensor (–): J — RR ABS wheel-speed sensor (+): K — RR ABS wheel-speed sensor (–): H — LR ABS wheel-speed sensor (+): Q — LR ABS wheel-speed sensor (–): N • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM and ABS wheel-speed sensor(s), then go to Step 5.
		No	Go to Step 5.
3	**INSPECT ABS WHEEL-SPEED SENSOR** • Turn ignition key to OFF. • Disconnect suspected sensor connector(s) and inspect resistance between sensor terminals (part side). • Is resistance **within 1.3—1.7 kilohm**?	Yes	Go to next step.
		No	Replace wheel-speed sensor, then go to Step 5.
4	**INSPECT DSC HU/CM TO ABS WHEEL-SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between suspected sensor terminal(s) of DSC HU/CM connector (harness side) and ABS wheel-speed sensor connector. (vehicle harness side) — RF ABS wheel-speed sensor (+): M—A — RF ABS wheel-speed sensor (–): I—B — LF ABS wheel-speed sensor (+): F—A — LF ABS wheel-speed sensor (–): J—B — RR ABS wheel-speed sensor (+): K—A — RR ABS wheel-speed sensor (–): H—B — LR ABS wheel-speed sensor (+): Q—A — LR ABS wheel-speed sensor (–): N—B • Is there continuity?	Yes	Repair or replace poor connections of DSC HU/CM connector and/or ABS wheel-speed sensor connector(s), then go to next step.
		No	Repair or replace harness for open circuits between DSC HU/CM and ABS wheel-speed sensor(s), then go to next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1148, C1158, C1168, C1178, C1233, C1234, C1235, C1236 [DSC]

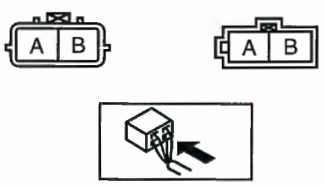
E6U040200000W29

DTC	C1148, C1234 C1158, C1233 C1168, C1235 C1178, C1236	**RF ABS wheel-speed sensor/sensor rotor** **LF ABS wheel-speed sensor/sensor rotor** **RR ABS wheel-speed sensor/sensor rotor** **LR ABS wheel-speed sensor/sensor rotor**
DETECTION CONDITION	• C1148, C1158, C1168, C1178: — Abnormal sensor output is detected on any of four vehicle ABS wheels when the vehicle goes from start to a speed of **10 km/h {6.2 mph}** — Greater than specified amount of ABS demand occurs from front ABS wheel sensors when vehicle is started • C1234, C1233, C1235, C1236: — Abnormal sensor output due to chipping of sensor rotor teeth, etc. is detected — ABS control operates for **60 s or more**	
POSSIBLE CAUSE	• Short to ground circuit of ABS wheel-speed sensor(s) circuit • Malfunction of ABS wheel-speed sensor(s) • Damaged sensor rotor(s) • Incorrect clearance between ABS wheel-speed sensor and sensor rotor • Poor installation of ABS wheel speed sensor and/or sensor rotor (If the sensor rotor is installed twisted, it may cause output of abnormal wave form at high speeds) • DSC HU/CM internal damage (Solenoid valve malfunction, pump motor malfunction, or pipe clogging)	

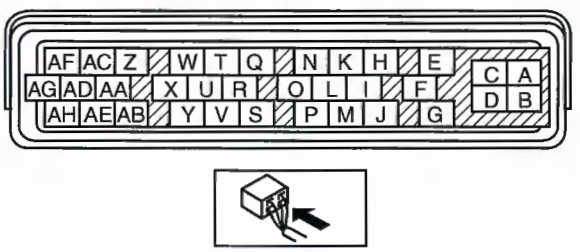


ABS WHEEL-SPEED SENSOR HARNESS-SIDE CONNECTOR

FRONT REAR



DSC HU/CM HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OTHER DTC HAS BEEN RECORDED** • Have DTCs related to solenoid valve, pump motor, or pump motor relay been stored?	Yes	Go to applicable DTC inspection.
		No	Go to next step.

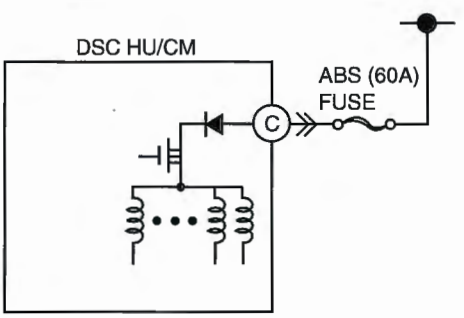
STEP	INSPECTION		ACTION
2	**VERIFY IF CURRENT CONCERNED INPUT SIGNAL STATUS IS INTERMITTENT OR CONSTANT** • Turn ignition key to OFF. • Connect WDS or equivalent to DLC-2. • Start engine and drive vehicle. • Access LF_WSPD, LR_WSPD, RF_WSPD and RR_WSPD using WDS or equivalent • Do vehicle speeds correspond approximately to the four PIDs above?	Yes	Go to Step 8.
		No	If there is a difference in speed of four wheels: Go to next step. If any wheel speed is **0 km/h {0 mph}**: Go to Step 4.
3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Start engine and drive vehicle. • Inspect output voltage pattern using an oscilloscope.  • Is output voltage pattern normal?	Yes	Go to Step 9.
		No	Go to Step 6.
4	**INSPECT ABS WHEEL-SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Disconnect DSC HU/CM and ABS wheel-speed sensor connectors. • Inspect continuity between suspected sensor terminal(s) of DSC HU/CM connector (harness side) and ground(s). — RF ABS wheel-speed sensor: M—ground — LF ABS wheel-speed sensor: F—ground — RR ABS wheel-speed sensor: K—ground — LR ABS wheel-speed sensor: Q—ground • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM and ABS wheel-sped sensor, then go to Step 9.
		No	Go to next step.
5	**INSPECT ABS WHEEL-SPEED SENSOR** • Turn ignition key to OFF. • Disconnect suspected ABS wheel-speed sensor connector(s) and inspect resistance between ABS wheel-speed sensor terminal(s) (part side). • Is resistance **within 1.3—1.7 kilohm**?	Yes	Go to next step.
		No	Replace ABS wheel-speed sensor, then go to Step 9.
6	**INSPECT SENSOR ROTOR CLEARANCE** • Jack-up vehicle and support it with safety stands. • Remove suspected wheel(s). • Inspect clearance between ABS wheel-speed sensor and sensor rotor. • Is clearance **within 0.3—1.1 mm {0.012—0.043 in}**?	Yes	Go to next step.
		No	Replace ABS wheel-speed sensor(s), then go to Step 9.
7	**INSPECT SENSOR ROTOR FOR DAMAGE** • Jack-up vehicle and support it with safety stands. • Remove suspected wheel(s). • Visually inspect sensor rotor for missing, deformed and obstructed teeth. **Number of teeth: 44** • Is sensor rotor normal?	Yes	Go to next step.
		No	Replace sensor rotor, then go to Step 9.

STEP	INSPECTION		ACTION
8	**INSPECT DSC HU/CM OPERATION** • Perform DSC HU/CM system inspection. (See 04–15–4 DSC SYSTEM INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace DSC HU/CM, then go to next step.
9	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear DTC from memory (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above. • Gradually slow down vehicle and stop. • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
10	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

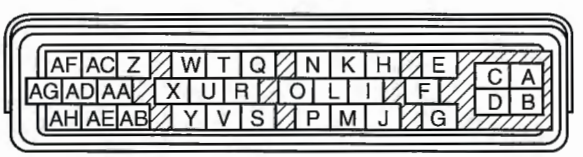
DTC C1186, C1266 [DSC]

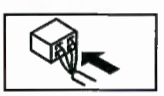
E6U040200000W30

DTC C1186, C1266	Fail-safe relay
DETECTION CONDITION	• C1186: — Fail-safe relay in DSC HU/CM stuck OFF when ignition switch is turned ON, fail-safe relay ON is commanded. • C1266: — Fail-safe relay in DSC HU/CM stuck ON when ignition switch is turned ON, fail-safe relay OFF is commanded.
POSSIBLE CAUSE	• Malfunction of fuse (ABS 60 A) • Open circuit in harness between DSC HU/CM terminal C and battery positive terminal • Open or short of fail-safe relay in DSC HU/CM • Stuck fail-safe relay in DSC HU/CM



DSC HU/CM HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT ABS FUSE CONDITION** • Is ABS fuse (60 A) normal?	Yes	Go to next step.
		No	Replace fuse, then go to Step 4.

STEP	INSPECTION		ACTION
2	**INSPECT FAIL-SAFE RELAY POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM connector. • Turn ignition key to ON (engine OFF). • Measure voltage between DSC HU/CM terminal C (harness side) and ground. • Is voltage **B+**?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between battery positive terminal and DSC HU/CM terminal C, then go to Step 4.
4	**VERIFY FAIL-SAFE OPERATION** • Turn ignition key to OFF. • Connect all disconnected connectors. • Connect WDS or equivalent to DLC-2. • Turn ignition key to ON (engine OFF). • Access ABS_POWER using WDS or equivalent. • Does fail-safe relay operate?	Yes	Go to next step.
		No	Replace DSC HU/CM, then go to next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
6	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1194, C1198, C1210, C1214, C1242, C1246, C1250, C1254, C1400, C1410, C1957, C1958 [DSC]

E6U040200000W31

DTC	**C1210**	**RF pressure reduction solenoid valve**
	C1214	**RF pressure retention solenoid valve**
	C1194	**LF pressure reduction solenoid valve**
	C1198	**LF pressure retention solenoid valve**
	C1246	**RR pressure reduction solenoid valve**
	C1254	**RR pressure retention solenoid valve**
	C1242	**LR pressure reduction solenoid valve**
	C1250	**LR pressure reduction solenoid valve**
	C1400	**RF traction switch solenoid valve**
	C1410	**LF traction switch solenoid valve**
	C1957	**RF stability control solenoid valve**
	C1958	**LF stability control solenoid valve**
DETECTION CONDITION	• Solenoid monitor signal does not track in response to solenoid On/Off command.	
POSSIBLE CAUSE	• Stuck solenoid valve in DSC HU/CM	

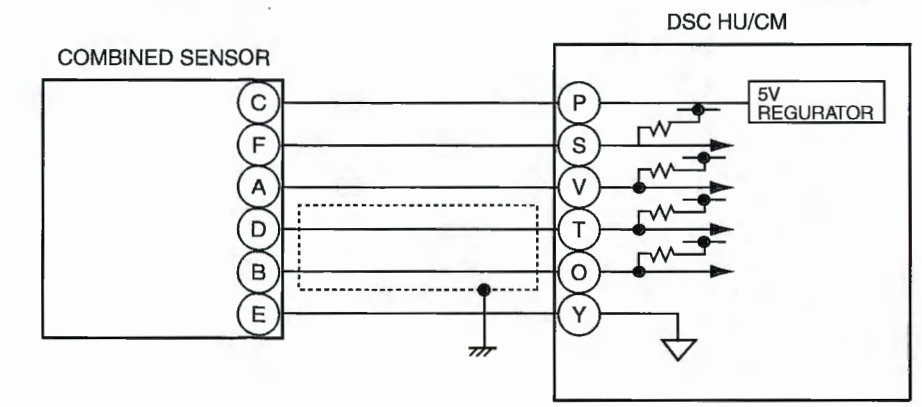
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY SOLENOID VALVE OPERATION** • Turn ignition key to OFF. • Connect WDS or equivalent to DLC-2. • Turn ignition key to ON (engine OFF). • Access solenoid valve(s) PIDs using WDS or equivalent. • Does solenoid valve operate?	Yes	Go to next step.
		No	Repair DSC HU/CM, then go to next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above. • Gradually slow down and stop vehicle. • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

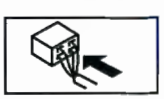
DTC C1280, C1730, C1951, C1952, C1959 [DSC]

E6U040200000W32

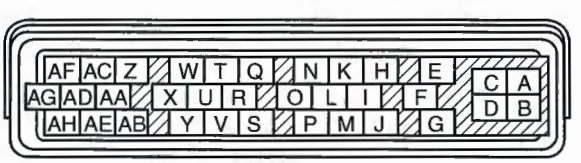
DTC C1280, C1730, C1951, C1952, C1959	Combined sensor
DETECTION CONDITION	• C1280: — Yaw rate sensor part 0-point correction value is **3 or more,** or **2 or less** — Output voltage value from yaw rate sensor part remains absolutely unchanged — Difference between estimated yaw rate value, calculated from ABS wheel speed-sensor, lateral-G sensor, steering angle sensor, and the value output from yaw rate sensor exceeds specification • C1730 — Voltage to combined sensor is detected out of range • C1952: — Voltage of yaw rate sensor monitor is detected at **3.5 V or less** • C1951: — Monitor voltage of lateral-G sensor is detected at **4.5 V or more**, or **0.5 V or less** — Monitor voltage difference of **1.25 V or more**, within 1 cycle is detected 8 times in **1 s** • C1959: — Lateral-G sensor part 0-point correction value is **3 or more,** or **2 or less** — Output voltage value from lateral-G sensor part remains absolutely unchanged — Difference between estimated lateral-G force calculated from steering angle sensor, and the value output from lateral-G sensor exceeds specification
POSSIBLE CAUSE	• Open circuit in harness between combined sensor terminal C and DSC HU/CM terminal P • Open, short to power, or short to ground circuit in harness between DSC HU/CM terminal T and combined sensor terminal D • Open circuit, short to power, or short to ground in harness between DSC HU/CM terminal O and combined sensor terminal B • Open circuit in harness between combined sensor terminal E and DSC HU/CM terminal Y • Open circuit, short to power, or short to ground in harness between DSC HU/CM terminal S and combined sensor terminal F • Malfunction of combined sensor

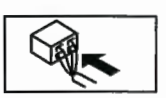


COMBINED SENSOR HARNESS-SIDE CONNECTOR



DSC HU/CM HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMBINED SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to ON (engine OFF). • Measure voltage between combined sensor terminal C (harness side) of and ground. • Is voltage **4.5—5.5 V**?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between yaw rate sensor terminal C and ignition switch, then go to Step 8.

STEP	INSPECTION		ACTION
2	**INSPECT COMBINED SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM and yaw rate sensor connectors. • Inspect continuity between DSC HU/CM terminal Y (harness side) and combined sensor terminal E (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal Y and yaw rate sensor terminal E, then go to Step 8.
3	**INSPECT YAW RATE SENSOR PART SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between DSC HU/CM terminal T (harness side) and combined sensor terminal D (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal T and yaw rate sensor terminal D, then go to Step 8.
4	**INSPECT LATERAL-G SENSOR PART SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between DSC HU/CM terminal O (harness side) and combined sensor terminal B (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal O and combined sensor terminal B, then go to Step 8.
5	**INSPECT YAW RATE SENSOR PART SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal T (harness side) and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal T and combined sensor terminal D, then go to Step 8.
		No	Go to next step.
6	**INSPECT LATERAL-G SENSOR PART SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal O (harness side) and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal O and combined sensor terminal B, then go to Step 8.
		No	Go to next step.
7	**INSPECT DIAGNOSIS SIGNAL CIRCUIT FOR SHORT FOR OPEN** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal S (harness side) and combined sensor terminal F. • Is there continuity?	Yes	Repair or replace harness for open circuit between DSC HU/CM terminal S and combined sensor terminal F, then go to Step 8.
		No	Go to next step.
8	**INSPECT DIAGNOSIS SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal S (harness side) and combined sensor terminal F. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal S and combined sensor terminal F, then go to Step 8.
		No	Go to next step.
9	**INSPECT COMBINED SENSOR** • Inspect combined sensor. (See 04–15–12 COMBINED SENSOR INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace combined sensor, then go to next step.
10	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
11	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1414 [DSC]

E6U040200000W33

DTC C1414	DSC HU/CM
DETECTION CONDITION	• Detection of situation where vehicle-type or drive system input signal and DSC HU/CM information remains incongruent through CAN information
POSSIBLE CAUSE	• Mismatched installation of DSC HU/CM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC HU/CM FOR MISMATCHED INSTALLATION** • Verify DSC HU/CM part number • Has a DSC HU/CM with the correct part number been installed?	Yes	Go to next step.
		No	Replace with correct DSC HU/CM part number, then go to Step 7.
2	**INSPECT RELATED WIRING HARNESS FOR MISMATCHED INSTALLATION** • Verify wiring harness part number • Has a wiring harness with the correct part number been installed?	Yes	Go to next step.
		No	Replace with correct DSC HU/CM part number, then go to next Step.
3	**CONFIGURE DSC HU/CM** • Can DSC HU/CM configure properly?	Yes	Go to next step.
		No	Replace DSC HU/CM
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnected all disconnect connectors. • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
5	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1507, C1508 [DSC]

E6U040200000W34

DTC C1507 C1508	DSC control
DETECTION CONDITION	• C1507: — Brake TCS or DSC controls continue operation for **20 s or more** • C1508: — Engine TCS control continues operation for **60 s or more**
POSSIBLE CAUSE	• System is normal For protection of solenoid valves in the DSC HU/CM, or protection of the engine, sustained and continual control of DSC and TCS is inhibited

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above. • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Inspect intermittent concern using the same procedure as engine control system.
2	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1510, C1511, C1512, C1513 [DSC]

E6U040200000W35

DTC	C1510	RF solenoid valve, motor or RF ABS wheel-speed sensor/sensor rotor.
	C1511	LF solenoid valve, motor or LF ABS wheel-speed sensor/sensor rotor.
	C1512	RR solenoid valve, motor or RR ABS wheel-speed sensor/sensor rotor.
	C1513	LR solenoid valve, motor or LR ABS wheel-speed sensor/sensor rotor.
DETECTION CONDITION	• Wheel lock is detected during ABS operation (pressure reduction inoperative). • Pressure reduction on a single wheel continues for **20 s or more**	
POSSIBLE CAUSE	• Malfunction of solenoid valve in DSC HU/CM • Malfunction of ABS wheel-speed sensor • Damaged sensor rotor • Stuck pump motor in DSC HU/CM	

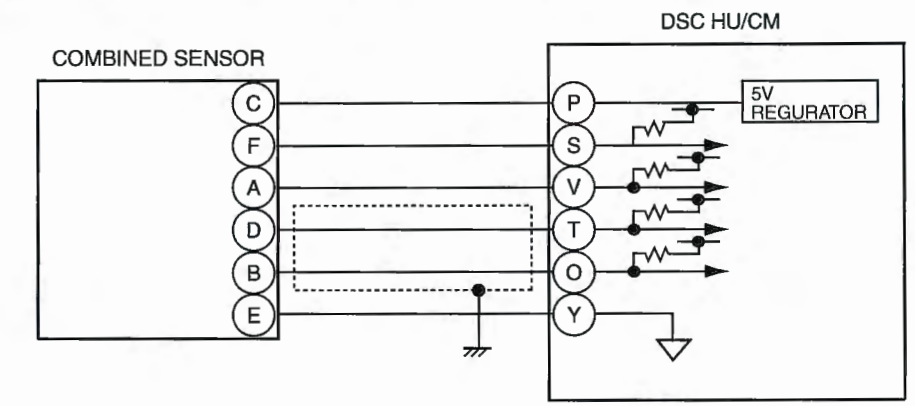
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY OTHER DTC HAS BEEN RECORDED** • Has any ABS wheel speed sensor, sensor rotor, solenoid valve, pump motor, or motor relay related DTC been output?	Yes	Go to applicable DTC inspection.
		No	Go to next step.
2	**INSPECT DSC HU/CM OPERATION** • Perform DSC HU/CM system inspection. (See 04–15–4 DSC SYSTEM INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace DSC HU/CM, then go to next step.
3	**VERIFY CURRENT STATUS OF MALFUNCTION** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Start engine and drive vehicle at **10 km/h {6.2 mph}** or above at least one minute. • Gradually slow down and stop vehicle. • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
4	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

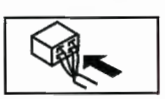
DTC C1949, C1950 [DSC]

E6U040200000W36

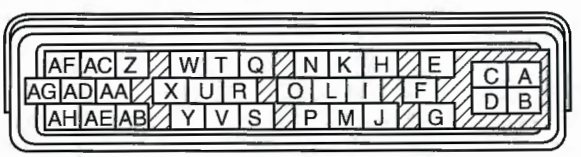
DTC C1949, C1950	Combined sensor (forward G-sensor)
DETECTION CONDITION	• C1949: — Monitor voltage of forward-G sensor is detected at **4.5 V or more**, or **0.5 V or less** — Monitor voltage difference of **0.4 V or more** within 1 cycle is detected 8 times in **1 s** • C1950: — Forward-G sensor 0-point correction value is default or more — Output voltage value from G sensor remains absolutely unchanged — Difference between estimated G-force calculated from 2 channels exceeds specification
POSSIBLE CAUSE	• Open circuit in harness between combined sensor terminal C and DSC HU/CM terminal P • Open circuit, short to power, or short to ground in harness between DSC HU/CM terminal V and combined sensor terminal A • Open circuit, short to power, or short to ground in harness between DSC HU/CM terminal S and combined sensor terminal F • Open circuit in harness between combined sensor terminal E and DSC HU/CM terminal Y • Malfunction of combined sensor

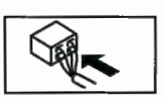


COMBINED SENSOR HARNESS-SIDE CONNECTOR



DSC HU/CM HARNESS-SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMBINED SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to ON (engine OFF). • Measure voltage between combined sensor terminal C (harness side) and ground. • Is voltage **4.5—5.5 V**?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between combined sensor terminal C and ignition switch, then go to Step 8.
2	**INSPECT COMBINED SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM and combined sensor connectors. • Inspect continuity between DSC HU/CM terminal Y (harness side) and combined sensor terminal E (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal Y and combined sensor terminal E, then go to Step 8.
3	**INSPECT FORWARD-G SENSOR PART SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between DSC HU/CM terminal V (harness side) and combined sensor terminal A (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal V and combined sensor terminal A, then go to Step 8.
4	**INSPECT FORWARD-G SENSOR PART SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal V (harness side) and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal V and combined sensor terminal A, then go to Step 8.
		No	Go to next step.
5	**INSPECT DIAGNOSIS SIGNAL CIRCUIT FOR SHORT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal S (harness side) and combined sensor terminal F. • Is there continuity?	Yes	Repair or replace harness for open circuit between DSC HU/CM terminal S and combined sensor terminal F, then go to Step 8.
		No	Go to next step.
6	**INSPECT DIAGNOSIS SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal S (harness side) and ground. • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal S and combined sensor terminal F, then go to Step 8.
		No	Go to next step.
7	**INSPECT COMBINED SENSOR** • Inspect combined sensor. • Is it normal?	Yes	Go to next step.
		No	Replace combined sensor, then go to next step.
8	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
9	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1953, C1954 [DSC]

E6U040200000W37

DTC C1953, C1954	Brake fluid pressure sensor
DETECTION CONDITION	• C1953: — Monitor voltage of the brake fluid pressure sensor is detected at **4.5 V or more**, or **0.5 V or less** — Monitor voltage difference of **0.4 V or more** within 1 cycle is detected 8 times in **1 s** • C1954: — Brake fluid pressure sensor 0-point correction value is **0.3 V or less**, or **0.9 V or more** — Output voltage value from brake fluid pressure sensor does not increase **above 0.06 V** — Difference between estimated brake pressure value and output value of brake fluid pressure sensor exceeds specification
POSSIBLE CAUSE	• Malfunction of brake fluid pressure sensor

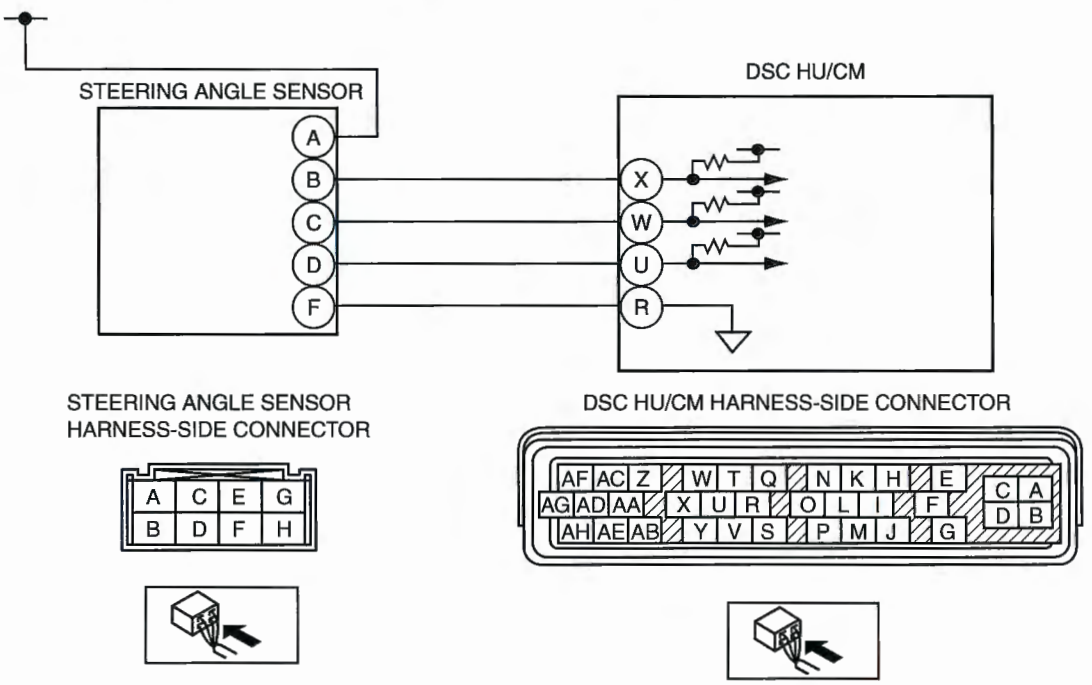
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID PRESSURE SENSOR** • Inspect PID/DATA in brake fluid pressure sensor. • Inspect MCYLIP item using WDS or equivalent. • Is pressure value change between **0—22.5 MPa** when brake pedal is pressed?	Yes	Go to next step.
		No	Replace DSC HU/CM, then go to next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
3	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC C1955, C1956 [DSC]

E6U040200000W38

DTC C1955, C1956	Steering angle sensor
DETECTION CONDITION	• C1955: — Output voltages from steering angle sensors 1 and 2 are not at **1 V or less**, or not at **3.25 V or more** • C1956: — Sensor 1 voltage remains unchanged, sensor 2 voltage changes — Sensor 2 voltage remains unchanged, sensor 1 voltage changes — When steering wheel is turned in specified direction, neutral position is detected even when rotated at **18 degrees or more**
POSSIBLE CAUSE	• Open circuit in harness between steering angle sensor terminal A and ignition switch • Open, short to power, or short to ground circuit in harness between DSC HU/CM terminal X and steering angle sensor terminal B • Open, short to power, or short to ground circuit in harness between DSC HU/CM terminal W and steering angle sensor terminal C • Open, short to power, or short to ground circuit in harness between DSC HU/CM terminal U and steering angle sensor terminal D • Open circuit in harness between DSC HU/CM terminal Rand steering angle sensor terminal F • Malfunction of steering angle sensor



04–02E

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT STEERING ANGLE SENSOR POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to ON (engine OFF). • Measure voltage between steering angle sensor terminal A (harness side) and ground. • Is voltage **B+**?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between steering angle sensor terminal A and ignition switch, then go to Step 7.
2	**INSPECT STEERING ANGLE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Turn ignition key to OFF. • Disconnect DSC HU/CM and steering angle sensor connectors. • Inspect continuity between DSC HU/CM terminal R (harness side) and steering angle sensor terminal F (harness side). • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal R and steering angle sensor terminal F, then go to Step 7.

STEP	INSPECTION		ACTION
3	**INSPECT STEERING ANGLE SENSOR SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect continuity between DSC HU/CM terminal (harness side) and steering angle sensor terminal (harness side) below. — Sensor 1: DSC HU/CM X and steering angle sensor B — Sensor 2: DSC HU/CM W and steering sensor C — Neutral: DSC HU/CM U and steering angle sensor D • Is there continuity?	Yes	Go to next step.
		No	Repair or replace harness for open circuit between DSC HU/CM terminal and steering angle sensor terminal, then go to Step 7.
4	**INSPECT STEERING ANGLE SENSOR SIGNAL CIRCUIT FOR SHORT TO POWER** • Turn ignition key to ON (engine OFF). • Measure voltage between DSC HU/CM terminal (harness side) and ground below. — Sensor 1: DSC HU/CM X and ground — Sensor 2: DSC HU/CM W and ground — Neutral: DSC HU/CM U and ground • Is voltage **B+**?	Yes	Repair or replace harness for short to power circuit between DSC HU/CM terminal and steering angle sensor terminal, then go to Step 7.
		No	Go to next step.
5	**INSPECT STEERING ANGLE SENSOR SIGNAL CIRCUIT FOR SHORT TO GROUND** • Turn ignition key to OFF. • Inspect continuity between DSC HU/CM terminal (harness side) and ground below. — Sensor 1: DSC HU/CM X and ground — Sensor 2: DSC HU/CM W and ground — Neutral: DSC HU/CM U and ground • Is there continuity?	Yes	Repair or replace harness for short to ground circuit between DSC HU/CM terminal and steering angle sensor terminal, then go to Step 7.
		No	Go to next step.
6	**INSPECT STEERING ANGLE SENSOR** • Inspect steering angle sensor. (See 09–18–20 STEERING ANGLE SENSOR INSPECTION.) • Is it normal?	Yes	Go to next step.
		No	Replace steering angle sensor, then go to next step.
7	**VERIFY TROUBLESHOOTING COMPLETED** • Clear DTC from memory. (See 04–02B–3 Clearing DTCs Procedures.) • Is the same DTC present?	Yes	Replace DSC HU/CM, then go to next step.
		No	Go to next step.
8	**VERIFY THAT NO OTHER DTCS ARE PRESENT** • Are any other DTCs output?	Yes	Go to the applicable DTC inspection. (See 04–02B–4 DTC Table.)
		No	DTC troubleshooting completed.

DTC U2511 [DSC]

E6U040200000W39

DTC U2511	Abnormal message from AWD control module
DETECTION CONDITION	• Detects that the communication signals from AWD control module is abnormal.
POSSIBLE CAUSE	• AWD control module signals have communication error.

Diagnostic procedure

- Follow inspection procedures for CAN. (See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC].)

04–03A SYMPTOM TROUBLESHOOTING [ABS/TCS]

ABS/TCS SYSTEM
WIRING DIAGRAM 04–03A–2

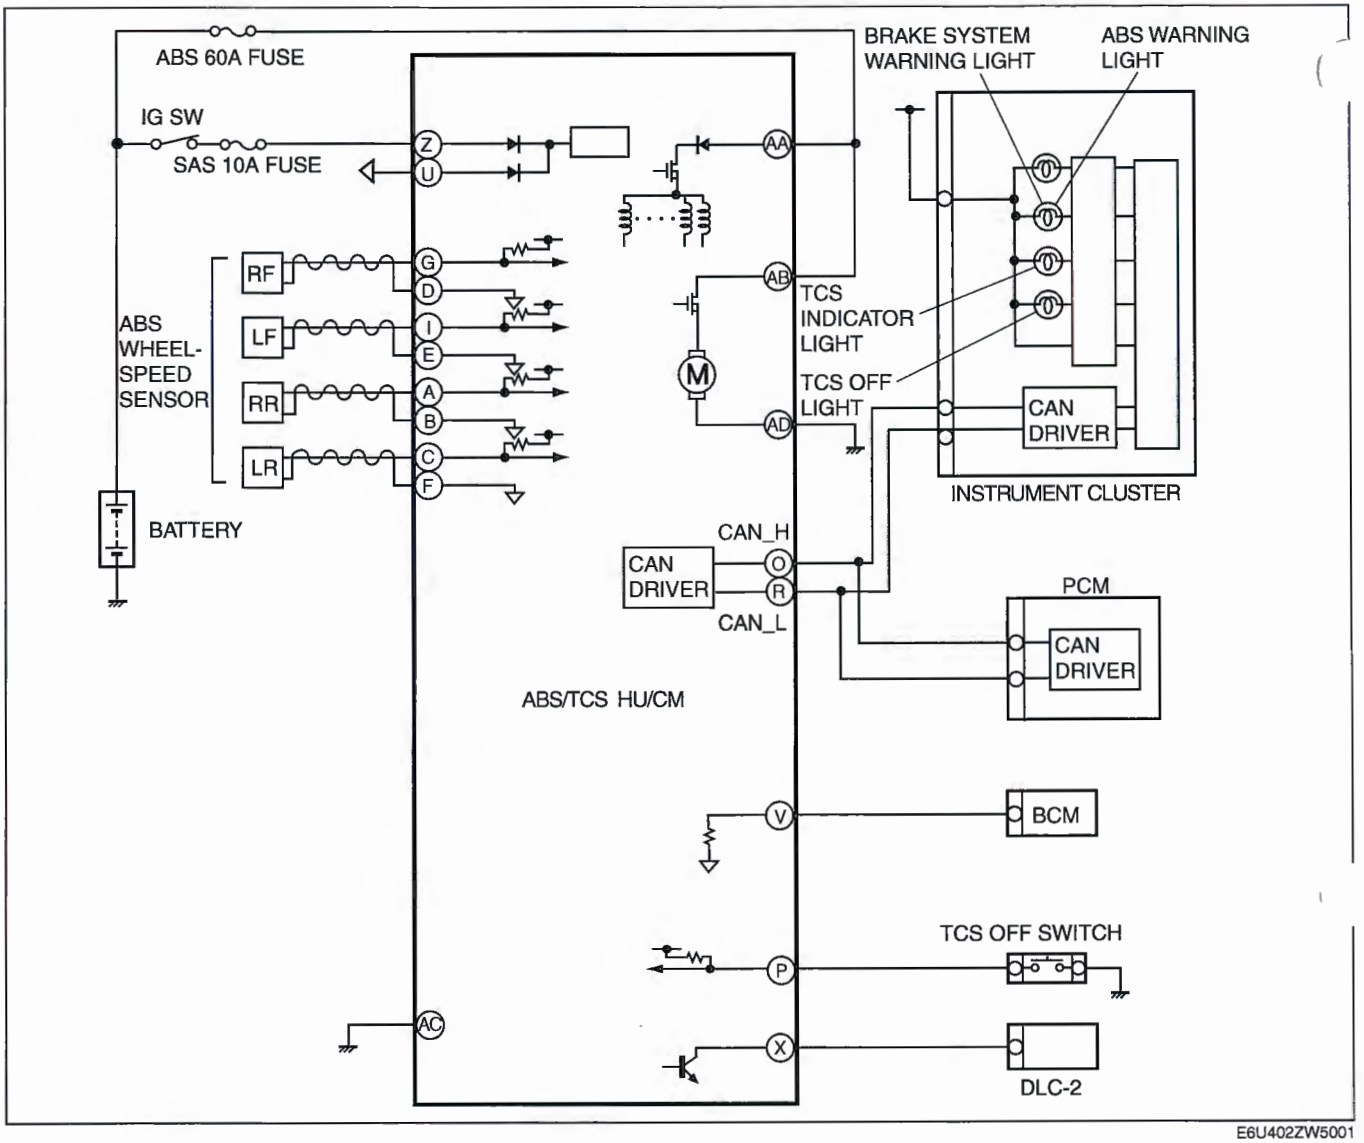
ABS/TCS SYSTEM WIRING DIAGRAM

E6U040367650W01



E6U402ZW5001

FOREWORD [ABS/TCS]

E6U040367650W02

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To check the DTC, follow the DTC Inspection steps.

PRECAUTION [ABS/TCS]

E6U040367650W03

1. Any one or a combination of the ABS warning light, BRAKE system warning light, TCS indicator light, and TCS OFF light illuminate even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS control
Any or all the following light (s) illuminate: • ABS warning light • BRAKE system warning light (*1)	Under any of the following conditions: • When the front wheels are jacked up, stuck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun for **more than 60 s**.	After turning ignition switch to OFF, vehicle is driven at speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	• ABS: Cuts control. • EBD: 1. Cuts control, in cases where the light may illuminate, only when ABS/TCS HU/CM detects that a wheel speed sensor determines that more than the two rear wheels are malfunctioning. 2. Operates control, if wheel speed sensor determines that more than 3 wheels are functioning correctly.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/ deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
All the following lights illuminate: • ABS warning light • BRAKE system warning light	Battery voltage at ABS/TCS HU/CM ignition terminal Z drops **below about 9 to 10 V.** (*2)	Battery voltage rises **above about 10 V.** (Only BRAKE system warning light goes out.)	ABS: Operates control. EBD: Operates control.

*1 : The light will illuminate only when ABS/TCS HU/CM detects that a rear wheel's speed sensor is malfunctioning.

*2 : If battery voltage drops **below 9 V** while vehicle speed is **greater than 6 km/h {3.7mph}**, ABS/TCS HU/CM records DTC B1318.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS control
The following light illuminates: • TCS OFF light	When the engine coolant temperature is below **0 °C {32 °F}**. (*1)	When engine is started and engine coolant temperature rises **above 0 °C {32 °F}**.	ABS: Cuts control. EBD: Cuts control. TCS: 1. If TCS is operating, cuts control after gradually released TCS control value. 2. If TCS is not operating, cuts control.
All the following lights flash: • ABS warning light • BRAKE system warning light • TCS OFF light	When confirming DTC, PID/ DATA and ACTIVE COMMAND MODES item using the WDS or equivalent.	When ABS ON-BOARD DIAGNOSTIC SYSTEM is released.	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control.
The following light illuminates: • TCS OFF light	For **1 s** after starting the engine.	**More than 1 s** after starting the engine.	ABS: Cuts control. EBD: Cuts control. TCS: Cuts control.
Warning lights that may illuminate and/or flash.	Cases in which the light may illuminate.	Conditions in which the light will go out.	ABS, EBD, TCS control.

*1 : DTC U2021 for past malfunction is not recorded in the ABS/TCS HU/CM. DTC U2021 for present malfunction displayed, but goes out when engine coolant temperature rises **above 0° C {32° F}.**

2. Precautions during servicing of ABS/TCS.
   The ABS/TCS is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.
   (1) Malfunctions in electrical system
   - The ABS/TCS HU/CM has an on-board diagnostic function. With this function, any one or a combination of the ABS warning light, BRAKE system warning light, TCS indicator light, and TCS OFF light will come on when there is a problem in the electrical system. Also, past and present malfunctions are recorded in the ABS/TCS HU/CM. This function can find malfunctions that do not occur during periodic inspections. Connect the WDS or equivalent to the DLC-2. Stored malfunctions will be displayed in the order of occurrence. To find out the causes of ABS/TCS malfunctions, use these on-board diagnostic results.
   - If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the harness. The ABS/TCS HU/CM usually operates normally. Be careful when searching for the cause of malfunction.
   - After repair, it is necessary to clear the DTC from the ABS/TCS HU/CM memory. Also, if the ABS/TCS related parts have been replaced, verify that the no DTC has been displayed after repairs.
   - After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the ABS/TCS HU/CM, the ABS warning light may not go off (*) even when the ignition switch is turned ON. In this case, drive the vehicle at a speed of **more than 10km/h {6.2mph}**, make sure that ABS warning light goes off, and then clear the DTC.
     * The BRAKE system warning light also illuminates when there is any rear wheel deformations.
   - When repairing, if the ABS/TCS related connectors are disconnected and the ignition switch is turned ON, the ABS/TCS HU/CM will mistakenly detect a fault and record it as a malfunction.
   - To protect the ABS/TCS HU/CM, make sure the ignition is off before connecting or disconnecting the ABS/TCS HU/CM connector.

   (2) Malfunctions in hydraulic system
   - Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in an ABS component or the conventional brake system.
   - The ABS hydraulic unit contains delicate mechanical parts. If foreign materials get into the component, the ABS may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the ABS does not. Make sure foreign materials do not get inside when servicing the ABS (e.g. brake fluid replacement, pipe removal).

Intermittent Concern Troubleshooting
Vibration method

- If malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform the steps below.

Note

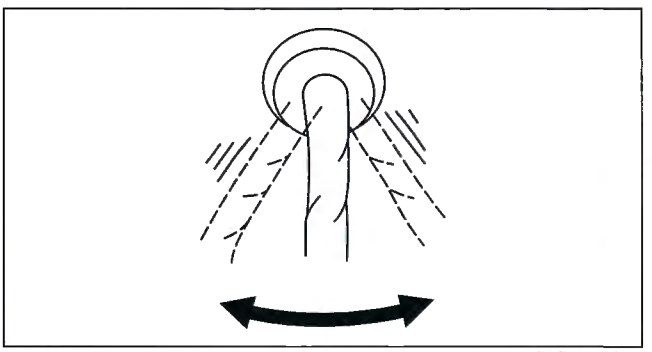
- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to check for are:
  — Connectors not fully seated.
  — Wire harnesses not having full play.
  — Wires laying across brackets or moving parts.
  — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, body panels, etc. are the major areas to be checked.

Inspection method for switch connectors or wires

1. Connect WDS or equivalent to DLC-2.
2. Turn ignition key to ON (engine off).

Note
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
   - If PID value is unstable, check for poor connection.



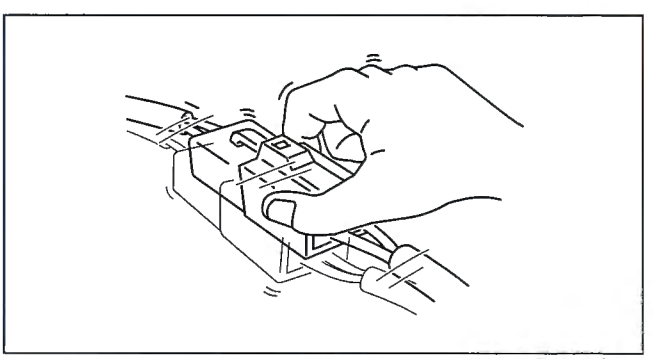
B3E0403W005

Inspection method for sensor connectors or wires

1. Connect WDS or equivalent to DLC-2.
2. Turn ignition key to ON (engine off).

Note
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
   - If PID value is unstable, check for poor connection.



B3E0403W006

Inspection method for sensors

1. Connect WDS or equivalent to DLC-2.
2. Turn ignition key to ON (engine off).

Note
- If engine starts and runs, perform the following steps at idle.

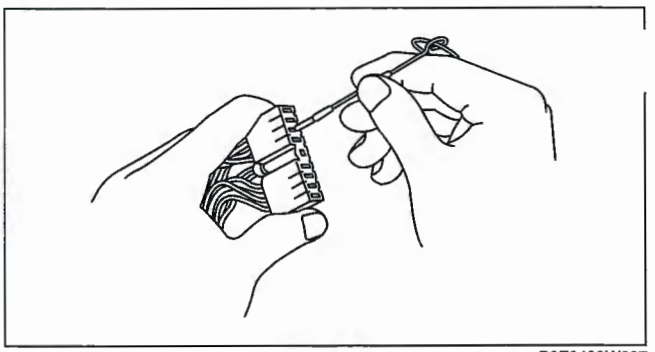
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If PID value is unstable or malfunction occurs, check for poor connection and/or poorly mounted sensor.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal check method

1. Check the connection condition of each female terminal.
2. Insert male terminal; fit the female terminal side to female terminal and check to see whether the malfunction is in the female terminal or not.



B3E0403W007

SYMPTOM TROUBLESHOOTING [ABS/TCS]

E6U040367650W04

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	ABS warning light, BRAKE system warning light, TCS indicator light, TCS OFF light do not illuminate with ignition key to ON.
2	Neither ABS warning light nor BRAKE system warning light illuminate with ignition key to ON.
3	ABS warning light does not illuminate with ignition key to ON.
4	BRAKE system warning light and TCS indicator light do not illuminate with ignition key to ON.
5	TCS OFF light does not illuminate with ignition key to ON.
6	Both ABS warning light and BRAKE system warning light stay on **more than 4 s** with ignition key to ON.
7	ABS warning light stays on **more than 4 s** with ignition key to ON.
8	BRAKE system warning light stays on **more than 4 s** with ignition key to ON. (Parking brake is released.)
9	TCS OFF light stays on **more than 4 s** with ignition key to ON.
10	TCS does not work correctly.
11	There is a malfunction in the system even though ABS warning light, BRAKE system warning light, TCS OFF light, TCS indicator light do not illuminate.

x: Applicable

E6U403ZW5003

NO.1 ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS OFF LIGHT, TCS INDICATOR LIGHT DO NOT ILLUMINATE WITH IGNITION KEY TO ON [ABS/TCS]

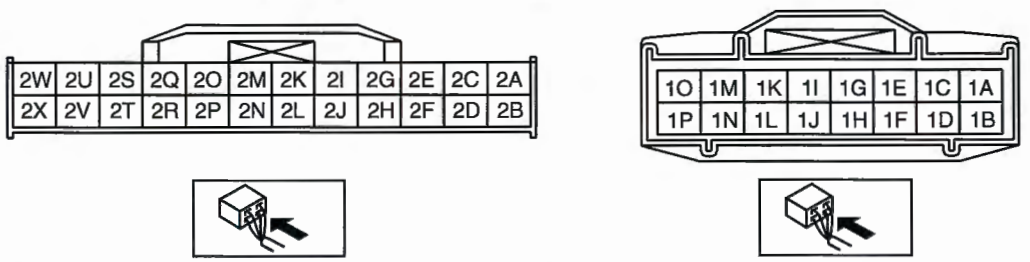
E6U040367650W05

1	**ABS warning light, BRAKE system warning light, TCS OFF light, TCS indicator light do not illuminate with ignition key to ON.**

[TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**
- **Improper configuration (instrument cluster)**

STEP	INSPECTION		ACTION
1	**VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHTS' COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Do other warning and indicator lights illuminate when ignition switch is turned to ON?	Yes	Go to step 4.
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Is instrument cluster ignition power supply fuse okay?	Yes	Go to the next step.
		No	Check for a short to ground on circuit of blown fuse. Repair or replace if necessary. Install appropriate amperage fuse.
*3	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Turn ignition key to ON. • Measure voltage at instrument cluster connector (24 pin) terminal 2V. • Is voltage **approximately 12V?**	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Check for open circuit between instrument cluster and ground. Repair or replace if necessary.
4	**CONFIRM DTC U1900 USING WDS OR EQUIVALENT** • Retrieve DTC from PCM, ABS/TCS and instrument cluster. • Is DTC U1900 retrieved?	Yes	Go to the next step.
		No	Inspect instrument cluster. If okay, then go to step 6.
5	**CONFIRM THE FOLLOWING PIDs USING WDS OR EQUIVALENT:** • ABS_MSG • PCM_MSG • Is "not present" message displayed on WDS or equivalent?	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Network communication, for related system is malfunction. Repair or replace if necessary.
6	**CONFIRM DTC B2477 FOR INSTRUMENT CLUSTER USING WDS OR EQUIVALENT** • Is DTC B2477 retrieved?	Yes	Re-configure the instrument cluster.
		No	Replace ABS/TCS HU/CM.

INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR



- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.2 NEITHER ABS WARNING LIGHT NOR BRAKE SYSTEM WARNING LIGHT ILLUMINATE WITH IGNITION KEY TO ON [ABS/TCS]

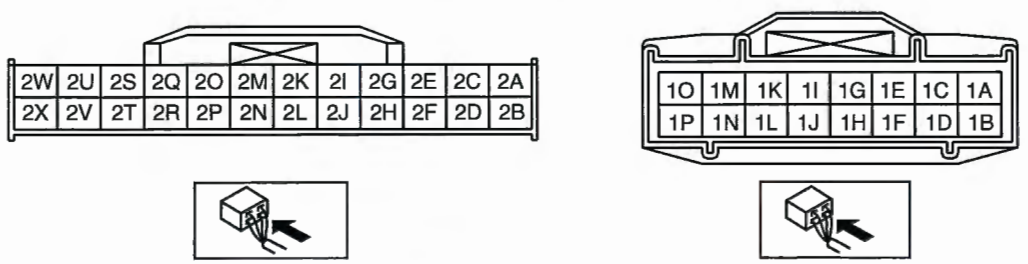
E6U040367650W06

2	Neither ABS warning light nor BRAKE system warning light illuminate with ignition key to ON.

TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**
- **Improper configuration (instrument cluster)**

STEP	INSPECTION		ACTION
1	**VERIFY WHETHER MALFUNCTION IS IN WARNING LIGHTS AND INDICATOR LIGHTS' COMMON POWER SUPPLY, OR IN OTHER WARNING LIGHTS AND INDICATOR LIGHTS** • Do other warning and indicator lights illuminate when ignition switch is turned to ON?	Yes	Go to step 4.
		No	Go to the next step.
2	**INSPECT INSTRUMENT CLUSTER POWER SUPPLY FUSE** • Is instrument cluster ignition power supply fuse okay?	Yes	Go to the next step.
		No	Check for a short to ground on circuit of blown fuse. Repair or replace if necessary. Install appropriate amperage fuse.
*3	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN INSTRUMENT CLUSTER POWER SUPPLY AND INSTRUMENT CLUSTER FOR CONTINUITY) OR INSTRUMENT CLUSTER** • Turn ignition key to ON. • Measure voltage at instrument cluster connector (24 pin) terminal 2V. • Is voltage **approximately 12V?**	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Check for open circuit between instrument cluster and ground. Repair or replace if necessary.
4	**CONFIRM DTC U1900 USING WDS OR EQUIVALENT** • Retrieve DTC from PCM, ABS/TCS and instrument cluster. • Is DTC U1900 retrieved?	Yes	Go to the next step.
		No	Inspect instrument cluster. If okay, then go to step 6.
5	**CONFIRM THE FOLLOWING PIDs USING WDS OR EQUIVALENT:** • ABS_MSG • PCM_MSG • Is "not present" message displayed on WDS or equivalent?	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Network communication, for related system is malfunction. Repair or replace if necessary.
6	**CONFIRM DTC B2477 FOR INSTRUMENT CLUSTER USING WDS OR EQUIVALENT** • Is DTC B2477 retrieved?	Yes	Re-configure the instrument cluster.
		No	Replace ABS/TCS HU/CM.

INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR



NO.3 ABS WARNING LIGHT DOES NOT ILLUMINATE WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W07

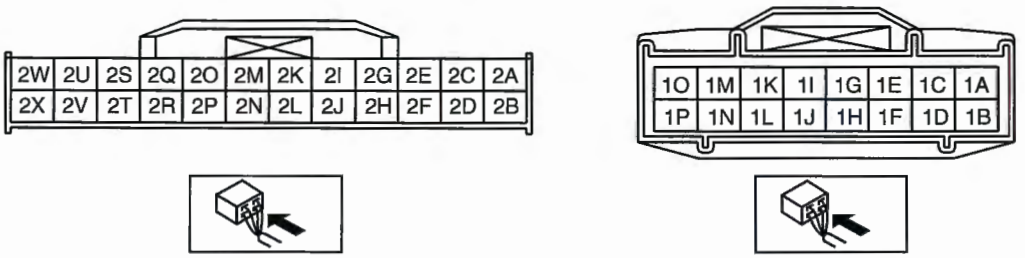
3	ABS warning light does not illuminate with ignition key to ON.

[TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DTC U1900 USING WDS OR EQUIVALENT** • Retrieve DTC from PCM, ABS/TCS and instrument cluster. • Is DTC U1900 retrieved?	Yes	Go to the next step.
		No	Inspect instrument cluster. If okay, then go to the next step.
2	**CONFIRM THE FOLLOWING PIDs USING WDS OR EQUIVALENT:** • ABS_MSG • PCM_MSG • Is "not present" message displayed on WDS or equivalent?	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Network communication, for related system is malfunction. Repair or replace if necessary.

INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR



NO.4 BRAKE SYSTEM WARNING LIGHT DOES NOT ILLUMINATE WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W08

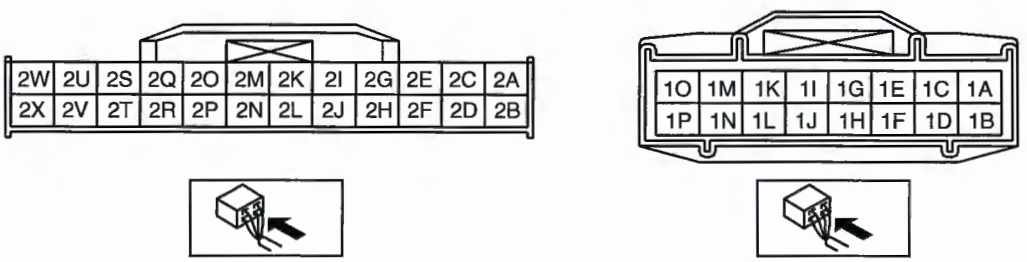
4	BRAKE system warning light does not illuminate with ignition key to ON.

[TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CONFIRM DTC U1900 USING WDS OR EQUIVALENT** • Retrieve DTC from PCM, ABS/TCS and instrument cluster. • Is DTC U1900 retrieved?	Yes	Go to the next step.
		No	Inspect instrument cluster. If okay, then go to the next step.
2	**CONFIRM THE FOLLOWING PIDs USING WDS OR EQUIVALENT:** • ABS_MSG • PCM_MSG • Is "not present" message displayed on WDS or equivalent?	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Network communication, for related system is malfunction. Repair or replace if necessary.

INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR



NO.5 TCS OFF LIGHT AND TCS INDICATOR LIGHT DO NOT ILLUMINATE WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W09

5	TCS OFF light and TCS indicator light do not illuminate with ignition key to ON.

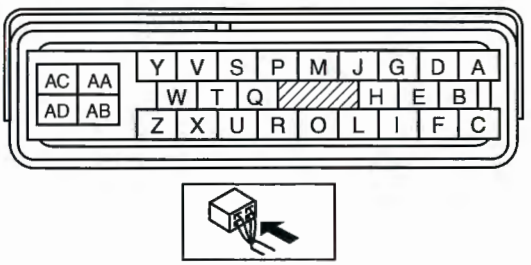
TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**
- **Improper configuration (ABS/TCS HU/CM)**

Diagnostic procedure

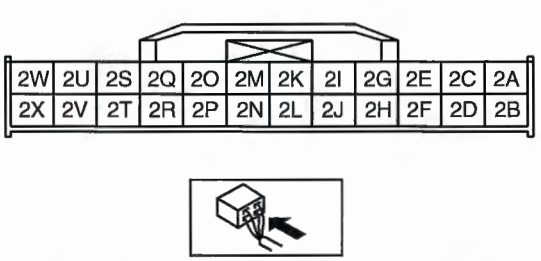
STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Activate TRAC_OFF (TCS OFF light) using the WDS or equivalent. • Is error message displayed regarding communication between ABS/TCS CM and WDS or equivalent?	Yes	If a communication error message is displayed even after inspecting according to procedures displayed on the WDS or equivalent, go to Step 6.
		No	Go to the next step.
2	**CHECK TCS OFF LIGHT BULB FOR MALFUNCTIONS BY USING INSPECTION FUNCTION IN ABS/TCS HU/CM** • Activate TRAC_OFF (TCS OFF light) using the WDS or equivalent • Does TCS OFF light illuminate?	Yes	Go to the next step.
		No	Go to next step 3.
3	**CONFIRM DTC U1900 USING WDS OR EQUIVALENT** • Retrieve DTC from PCM, ABS/TCS and instrument cluster. • Is DTC U1900 retrieved?	Yes	Go to the next step.
		No	Inspect instrument cluster. If okay, then go to step 6.
4	**CONFIRM THE FOLLOWING PIDs USING WDS OR EQUIVALENT:** • ABS_MSG • PCM_MSG • Is "not present" message displayed on WDS or equivalent?	Yes	Replace instrument cluster (open circuit in instrument cluster).
		No	Network communication, for related system is malfunction. Repair or replace if necessary.
5	**CONFIRM DTC B2477 FOR INSTRUMENT CLUSTER USING WDS OR EQUIVALENT** • Is DTC B2477 retrieved?	Yes	Re-configure the instrument cluster.
		No	Replace ABS/TCS HU/CM.
*6	**INSPECT WIRING HARNESS BETWEEN ABS/TCS CM AND DLC-2 FOR CONTINUITY** • Is there continuity between connector terminal X and DLC-2?	Yes	Go to the next step.
		No	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
*7	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO B+** • Is voltage **approximately 12 V** at connector terminal X?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Go to the next step.
8	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO GROUND** • If there continuity between connector terminal X and ground?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Replace ABS/TCS HU/CM (communication circuit malfunction in ABS/TCS HU/CM).

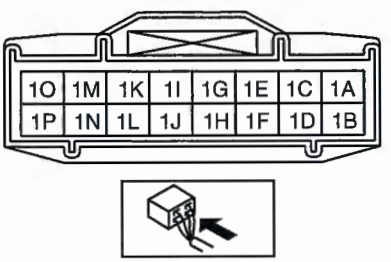
STEP	INSPECTION	ACTION

ABS/TCS HU/CM HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR





- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.6 BOTH ABS WARNING LIGHT AND BRAKE SYSTEM WARNING LIGHT STAY ON MORE THAN 4 S WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W10

6	**Both ABS warning light and BRAKE system warning light stay on more than 4 s with ignition key to ON.**

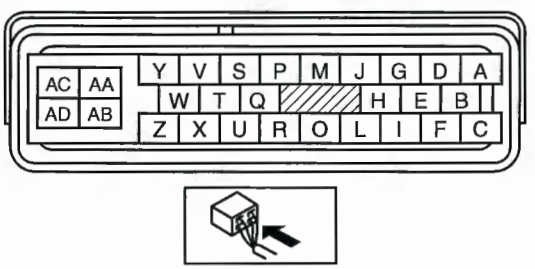
[TROUBLESHOOTING HINTS]
- **ABS/TCS HU/CM detects ABS proportioning system malfunction.**
- **ABS/TCS HU/CM detects low voltage in power supply (ABS/TCS CM ingestion terminal Z voltage is below about 9 to 10 V).**
- **ABS/TCS HU/CM does not operate.**
- **Malfunction of communication network.**

Diagnostic procedure

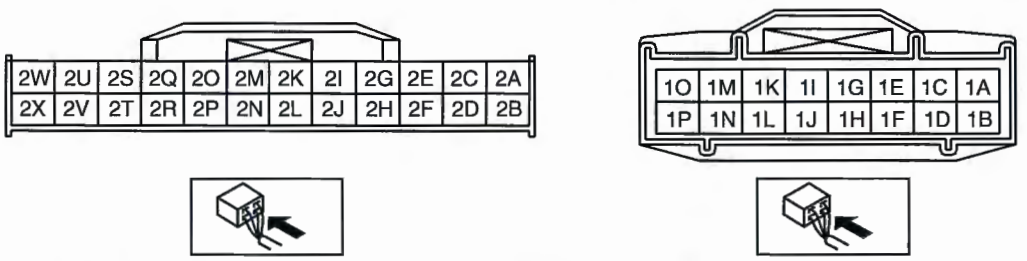
STEP	INSPECTION		ACTION
1	**INSPECT ABS/TCS HU/CM POWER SUPPLY FUSE** • Is ABS/TCS HU/CM ignition power supply fuse okay?	Yes	Go to the next step.
		No	Check for a short to ground on circuit of blown fuse. Repair or replace if necessary. Install appropriate amperage fuse.
2	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is error message displayed regarding communication between ABS/TCS HU/CM and WDS or equivalent?	Yes	If a communication error message is displayed even after inspecting according to procedure displayed on WDS or equivalent, go to step 10.
		No	Go to the next step.
3	**INSPECT FOR DTCS IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
4	**INSPECT PID/DATA IN ABS/TCS HU/CM** • Inspect the following items using the WDS or equivalent PID/DATA monitor function. — ABS_LAMP (ABS warning light) — BRAKE_ LMP (BRAKE system warning light) — ABS_VOLT (power supply voltage) • Is ABS_LAMP and BRAKE_LMP ON after **more than 4 seconds** with ignition key to ON?	Yes	Go to the next step.
		No	Inspect instrument cluster.
5	**INSPECT ABS/TCS HU/CM IGNITION POWER SUPPLY SYSTEM (TERMINAL Z)** • Check the voltage for PID/DATA monitor ABS_VOLT item. **Specification: about 10 V** • Is voltage within specification?	Yes	Replace ABS/TCS HU/CM (open circuit or short in ground circuit in ABS/TCS HU/CM)
		No	Go to the next step.
6	**INSPECT BATTERY** • Is battery voltage normal?	Yes	Go to the next step.
		No	Inspect battery and charging system.
7	**INSPECT CHARGING SYSTEM** • Is battery voltage normal with electrical load (A/C, headlight, etc.) on and engine idling?	Yes	Go to the next step.
		No	Inspect charging system (drive belt tension, generator, etc.).
*8	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM POWER SUPPLY AND ABS/TCS HU/CM FOR CONTINUITY** • Disconnect ABS/TCS HU/CM connector. • Is voltage **approx. 12 V** at connector terminal Z?	Yes	Go to the next step.
		No	Check for connection of ABS/TCS HU/CM connector securely.
*9	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM GROUND FOR CONTINUITY** • Turn ignition switch to LOCK. • Is there continuity between connector terminal AC and ground?	Yes	If a malfunction error message is displayed on WDS or equivalent in Step 1 inspection, go to the next step. If a malfunction error message is not displayed on WDS or equivalent in Step 1 inspection, troubleshooting is completed.
		No	Repair wiring harness between ABS/TCS HU/CM and ground.
*10	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY** • Is there continuity between connector terminal X and DLC-2?	Yes	Go to the next step.
		No	Repair wiring harness between ABS/TCS HU/CM and DLC-2.

STEP	INSPECTION		ACTION
11	*INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO BATTERY • Is voltage **approx. 12 V** at connector terminal X?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Go to the next step.
12	*INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO GROUND • Is there continuity between connector Terminal X and DLC-2?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Replace ABS/TCS HU/CM (communication circuit malfunction in ABS/TCS HU/CM)

ABS/TCS HU/CM HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR



NO.7 ABS WARNING LIGHT STAYS ON MORE THAN 4 S WITH IGNITION KEY TO ON [ABS/TCS]

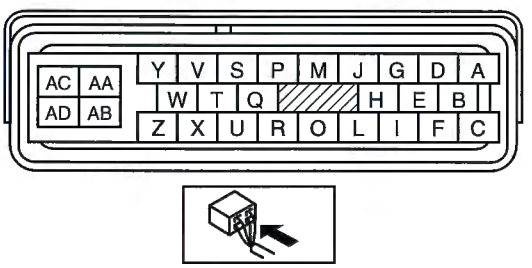
E6U040367650W11

7	ABS warning light stays on more than 4 seconds with ignition key to ON.
[TROUBLESHOOTING HINTS] • ABS/TCS HU/CM detects ABS system malfunction.	

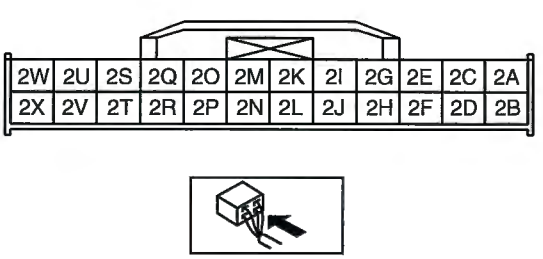
Diagnostic procedure

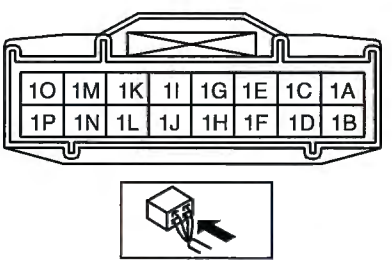
STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is error message displayed regarding communication between ABS/TCS HU/CM and WDS or equivalent?	Yes	If the communication error message is displayed even after inspecting according to procedures displayed in the WDS or equivalent, go to Step 4.
		No	Go to the next step.
2	**INSPECT FOR DTCs IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
3	**INSPECT PID/DATA IN ABS/TCS HU/CM** • Inspect the following items using the WDS or equivalent PID/DATA monitor function. — ABS_LAMP (ABS warning light) • Is ABS_LAMP ON after **more than 4 seconds** with ignition key to ON?	Yes	Replace ABS/TCS HU/CM (open circuit or short to ground in ABS/TCS HU/CM).
		No	Inspect instrument cluster.
*4	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY** Disconnect ABS/TCS HU/CM connector. • Is there continuity between connector terminal X and DLC-2?	Yes	Go to the next step.
		No	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
*5	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO B+** • Is voltage **approx. 12V** at connector terminal X?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Go to the next step.
*6	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO GROUND** • Is there continuity between connector terminal X and ground?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Replace ABS/TCS HU/CM (communication circuit malfunction is ABS/TCS HU/CM).

ABS/TCS HU/CM HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR





- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.8 BRAKE SYSTEM WARNING LIGHT STAYS ON MORE THAN 4 S WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W12

8	**BRAKE system warning light stays on more than 4 s with ignition key to ON. (Parking brake is released.)**

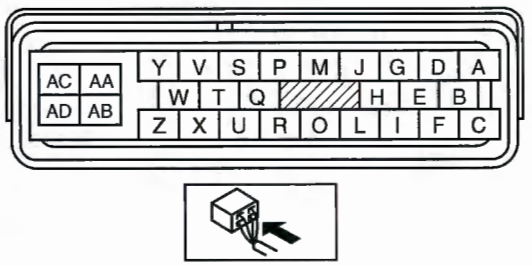
[TROUBLESHOOTING HINTS]
- **Malfunction of instrument cluster or ABS/TCS HU/CM**
- **Short to ground in circuit in parking brake switch and/or brake fluid level sensor**

Diagnostic procedure

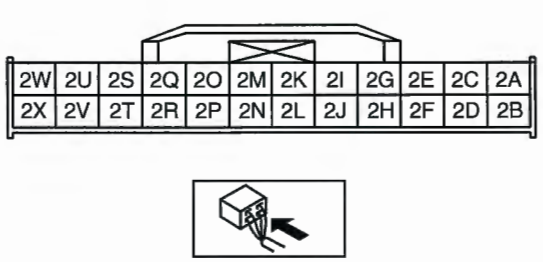
STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID LEVEL** • Is brake fluid level okay?	Yes	Go to the next step.
		No	Add brake fluid.
*2	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Inspect the following items using the WDS or equivalent PID/DATA monitor function. — BRAKE_LMP (BRAKE system warning light) • Is error message displayed regarding communication between ABS/TCS HU/CM and WDS or equivalent?	Yes	If a communication error message is displayed even after inspecting according to procedures displayed on WDS or equivalent. Go to next step 6.
		No	Go to the next step.
3	**INSPECT FOR DTCs IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
4	**INSPECT PID/DATA IN ABS/TCS HU/CM** • Inspect (BRAKE system warning light) using the WDS or equivalent PID/DATA monitor function. • Is BRAKE_LMP on after **more than 4 s** with ignition key to ON?	Yes	Replace ABS/TCS HU/CM.
		No	Go to the next step.
5	**VERIFY WHETHER MALFUNCTION IS IN PARKING BRAKE SWITCH OR BRAKE FLUID LEVEL SENSOR, OR IN SOME OTHER PART** • Disconnect the following in order: 1. Parking brake switch connector 2. Brake fluid level sensor connector • Does BRAKE system warning light go out with ignition key to ON?	Yes	Replace parking brake switch and/or brake fluid level sensor (shorted on some internal part).
		No	Perform the following inspections. Repair if necessary. • Short to ground in wiring harness between instrument cluster (BRAKE system warning light) and parking brake switch. • Short to ground in wiring harness between instrument cluster (BRAKE system warning light) and brake fluid level sensor. Inspect instrument cluster.
*6	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY** • Disconnect ABS/TCS HU/CM connector. • Is there continuity between connector terminal X and DLC-2?	Yes	Go to the next step.
		No	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
*7	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO B+** • Is voltage **approx. 12 V** at connector terminal X?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Go to the next step.
*8	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO GROUND** • Is there continuity between connector terminal X and ground?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Replace ABS/TCS HU/CM (communication circuit malfunction in ABS/TCS HU/CM).

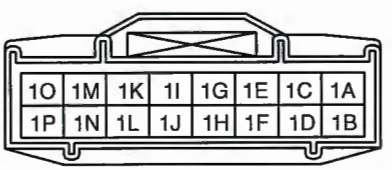
STEP	INSPECTION	ACTION

ABS/TCS HU/CM HARNESS-SIDE CONNECTOR



INSTRUMENT CLUSTER HARNESS-SIDE CONNECTOR





- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

NO.9 TCS OFF LIGHT STAYS ON MORE THAN 4 S WITH IGNITION KEY TO ON [ABS/TCS]

E6U040367650W13

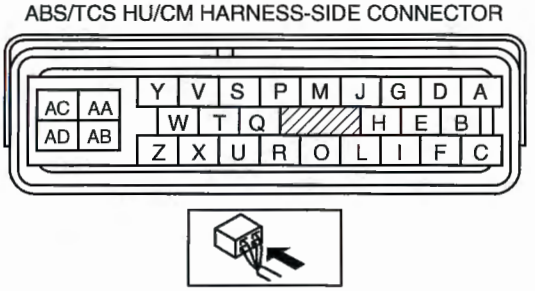
9	TCS OFF light stays on more than 4 s with ignition key to ON

[TROUBLESHOOTING HINTS]
- **Warning light circuit open or shorted to ground in ABS/TCS HU/CM**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR CONTINUITY AND SHORT CIRCUIT** • Perform DTC inspection. • Is error message displayed regarding communication between ABS/TCS HU/CM and WDS or equivalent?	Yes	If a communication error message is displayed even after inspecting according to procedures displayed on WDS or equivalent, go to Step 7.
		No	Go to the next step.
2	**INSPECT FOR DTCS IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
3	**INSPECT PID/DATA IN ABS/TCS HU/CM** • Inspect the following items using the WDS or equivalent PID/DATA monitor function. — TRAC_SW (TCS OFF switch) • Is TRAC_SW ON displayed on WDS or equivalent?	Yes	Go to Step 5 (TCS OFF switch system malfunction).
		No	Go to the next step.
*4	**CHECK FOR SHORT CIRCUIT TO GROUND IN ABS/TCS HU/CM** • Disconnect ABS/TCS HU/CM connector. • Does TCS OFF light go out with ignition key to ON?	Yes	Replace ABS/TCS HU/CM (short to ground in ABS/TCS HU/CM).
		No	Inspect instrument cluster.
*5	**INSPECT TCS OFF SWITCH** • Disconnect TCS OFF switch connector. • Is TRAC_SW ON displayed on WDS or equivalent?	Yes	Go to the next step.
		No	Replace TCS OFF switch (TCS will not turn off, even though switch is OFF).
*6	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN ABS/TCS HU/CM AND TCS OFF SWITCH, CHECK FOR SHORT CIRCUIT TO GROUND) OR ABS/TCS HU/CM** • Is there continuity between connector terminal P and ground?	Yes	Repair wiring harness between ABS/TCS HU/CM (termina P) and TCS OFF switch.
*7	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO B+** • Is voltage **approx. 12 V** at connector terminal X?	Yes	Repair wiring harness between ABS/TCS HU/CM (terminal P) and DLC-2.
		No	Go to the next step.
*8	**INSPECT WIRING HARNESS BETWEEN ABS/TCS HU/CM AND DLC-2 FOR SHORT CIRCUIT TO GROUND** • Is there continuity between connector terminal X and ground?	Yes	Repair wiring harness between ABS/TCS HU/CM and DLC-2.
		No	Replace ABS/TCS HU/CM (communication circuit malfunction in ABS/TCS HU/CM).

ABS/TCS HU/CM HARNESS-SIDE CONNECTOR



- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged

NO.10 TCS DOES NOT WORK CORRECTLY [ABS/TCS]

E6U040367650W14

10	TCS does not work correctly.

TROUBLESHOOTING HINTS]

There is a difference in size or air pressure between the front and rear tires

- **There is a malfunction in the engine control system.**
- **ABS/TCS HU/CM detects TCS system malfunction**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Are size and air pressure as specified?	Yes	Go to the next step.
		No	Replace with specified tires or adjust tire air pressure.
2	**INSPECT FOR DTCS IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
3	**INSPECT FOR DTCS IN PCM** • Inspect the DTC for the PCM ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
4	**INSPECT FOR TCS OPERATION** • Jack up the front of the vehicle on level ground and support it on safety support. • Start the engine, and depress the accelerator pedal. • Does engine speed decrease?	Yes	System is normal. Recheck customer's complaint.
		No	Replace ABS/TCS HU/CM.

04–03A

NO.11 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, TCS OFF LIGHT, TCS INDICATOR LIGHT DO NOT ILLUMINATE [ABS/TCS]

E6U040367650W15

11	There is a malfunction in the system even though ABS warning light, BRAKE system warning light, TCS OFF light, TCS indicator light do not illuminate.

TROUBLESHOOTING HINTS]

- **There is a difference in size or air pressure between the front and rear tires**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCs IN ABS/TCS HU/CM** • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to the next step.
2	**INSPECT ABS HYDRAULIC UNIT** • Perform ABS/TCS hydraulic unit system inspection. • Is system okay?	Yes	Inspect conventional brake system.
		No	**If wheels do not rotate:** Replace ABS/TCS HU/CM. **If wheels rotate but order in which wheels rotate is incorrect:** Inspect brake pipe passage to ABS/TCS HU/CM.

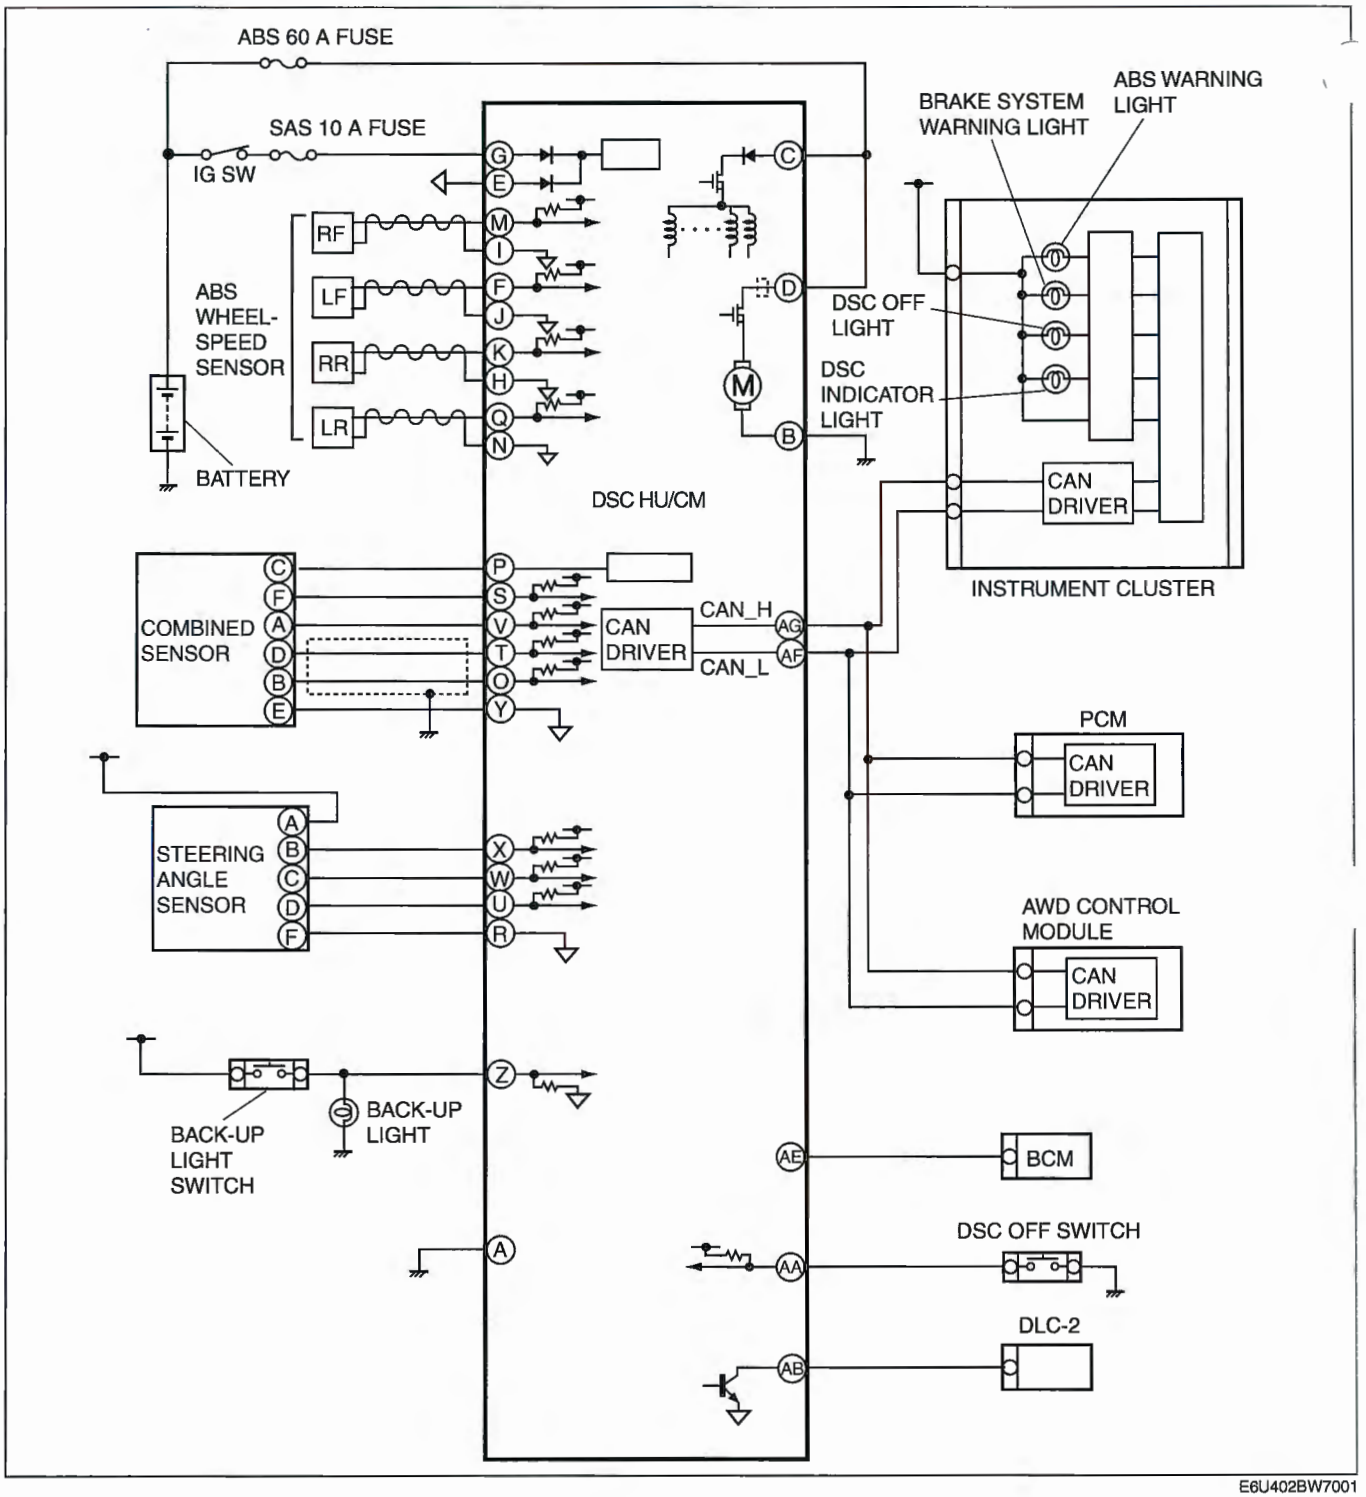
DSC SYSTEM WIRING DIAGRAM

E6U040300000W22



E6U402BW7001

FOREWORD [DSC]

E6U040300000W23

- Before performing the steps in Symptom Troubleshooting, perform the On-board Diagnostic Inspection. To check the DTC, follow the DTC Inspection steps.

PRECAUTION [DSC]

E6U040300000W24

1. The ABS warning light and/or BRAKE system warning light and/or DSC indicator light and/or DSC OFF light illuminate even when the system is normal.

Warning lights that may illuminate and/or flash	Cases in which the light may illuminate	Conditions in which the light will go out	ABS, EBD, TCS and DSC control
• ABS warning light • BRAKE system warning light • DSC indicator light • DSC OFF light	Under any of the following conditions: • When the front wheels are jacked up, struck, or placed on a chassis roller, and only the front wheel ABS wheel speed sensors are spun for **more than 60 s.**	After turning ignition switch OFF, vehicle is driven at speed **greater than 10 km/h {6.2 mph}** and normal operation is confirmed.	• ABS: Cuts control. • EBD: Cuts control. • TCS: Cuts control. • DSC: Cuts control.
	Parking brake is not fully released while driving.		
	Brake drag.		
	Sudden acceleration/deceleration.		
	Left/right or front/rear tires are different. (Size, radius, tire pressure, or wear is other than that listed on tire label.)		
	Battery voltage at DSC HU/CM ignition terminal drops **below about 9.5 V.**	Battery voltage rises **above about 9.5 V.**	ABS: Operates control. EBD: Operates control. TCS: Operates control. DSC: Operates control.
• Brake system warning light • DSC indicator light • DSC OFF light	Brake fluid amount is low.	Brake fluid level lower than recommended amount.	ABS: Operates control. EBD: Operates control. TCS: Cuts control. DSC: Cuts control.

. Precautions during servicing of DSC The DSC is composed of electrical and mechanical parts. It is necessary to categorize malfunctions as being either electrical or hydraulic when performing troubleshooting.

(1) Malfunction in electrical system

- The control module has an on-board diagnostic function. With this function, the ABS warning light and/or BRAKE system warning light and/or DSC indicator light and/or DSC OFF light will come on when there is a problem in the electrical system.
  Also, past and present malfunctions are recorded in the control module. This function can find malfunction that do not occur during periodic inspections. Connect the WDS or equivalent to the DLC-2. The stored malfunctions will be displayed in the order of occurrence. To fine out the causes of DSC malfunction, use these on-board diagnostic results.
- If a malfunction occurred in the past but is now normal, the cause is likely a temporary poor connection of the harness.
  The control module usually operates normally. Be careful when searching for the cause of malfunction.
- After repair, it is necessary to clear the DTC from the control module memory.
  Also, if the DSC related parts have been replaced, verify that the no DTC has been displayed after repairs.
- After repairing the ABS wheel-speed sensor or ABS sensor rotor, or after replacing the control module, the ABS warning light may not go off even when the ignition switch is turned on. In this case, drive the vehicle at a speed of **more than 10 km/h {6.2 mph}**, make sure the ABS warning light goes off, and then clear the DTC.
- When repairing, if the DSC related connectors are disconnected and the ignition switch is turned on, the control module will mistakenly detect a fault and record it as a malfunction.

Caution

- **In DSC vehicles, when any DSC HU/CM, steering angle sensor, combined sensor are replaced. Perform the sensor standard point installation of each sensor.**

- To protect the control module, make sure the ignition is off before connecting or disconnecting the control module connector.

(2) Malfunctions in hydraulic system
- Symptoms in a hydraulic system malfunction are similar to those in a conventional brake malfunction. However, it is necessary to determine if the malfunction is in a DSC component or the conventional brake system.
- The hydraulic unit contains delicate mechanical parts. If foreign materials get into the component, the DSC may fail to operate. Also, it will likely become extremely difficult to find the location of the malfunction in the event that the brakes operate but the DSC does not. Make sure foreign materials do not get inside when servicing the DSC (e.g.brake fluid replacement, pipe removal).

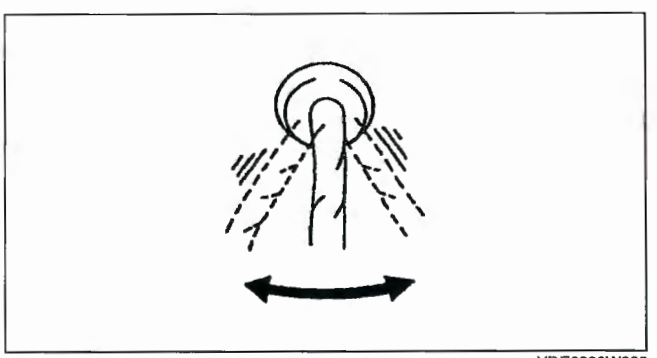
Intermittent Concern Troubleshooting
Vibration method
- If malfunction occurs or becomes worse while driving on a rough road or when engine is vibrating, perform the steps below.

Note
- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to check for are:
  — Connectors not fully seated.
  — Wire harnesses not having full play.
  — Wires laying across brackets or moving parts.
  — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wire harnesses pass through the firewall, body panels, etc. are the major areas to be checked.

Inspection method for switch connectors or wires
1. Connect WDS or equivalent to DLC.
2. Turn ignition switch to ON (Engine OFF).

Note
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Turn switch on manually.
5. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
   - If PID value is unstable, check for poor connection.



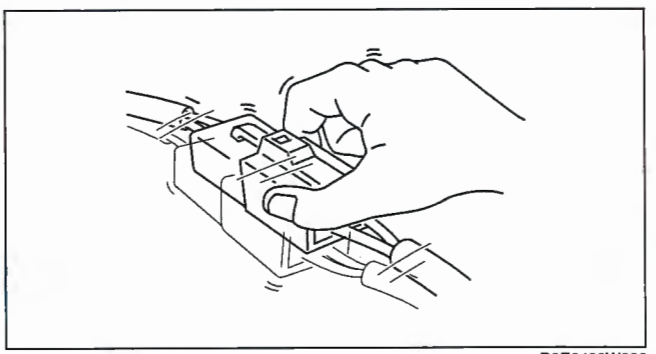
YDE6980W003

Inspection method for sensor connectors or wires

1. Connect WDS or equivalent to DLC.
2. Turn ignition switch to ON (Engine OFF).

Note
- If engine starts and runs, perform the following steps at idle.

3. Access PIDs for the switch you are inspecting.
4. Shake each connector or wire harness a bit vertically and horizontally while monitoring the PID.
   - If PID value is unstable, check for poor connection.



B3E0403W006

Inspection method for sensors

1. Connect WDS or equivalent to DLC.
2. Turn ignition switch to ON (Engine OFF).

Note
- If engine starts and runs, perform the following steps at idle.

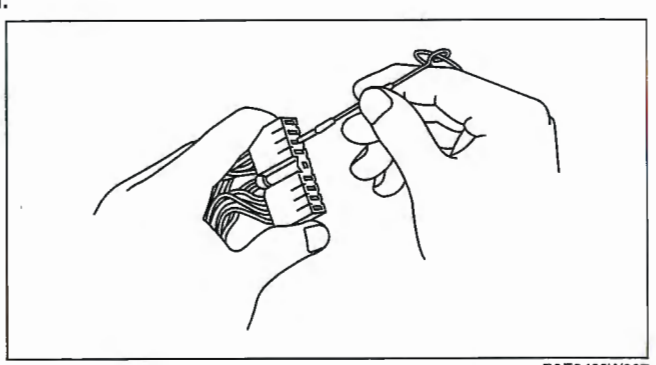
3. Access PIDs for the switch you are inspecting.
4. Vibrate the sensor slightly with your finger.
   - If PID value is unstable or malfunction occurs, check for poor connection and/or poorly mounted sensor.

Malfunction data monitor method

1. Perform malfunction reappearance test according to malfunction reappearance mode and malfunction data monitor. The malfunction cause is found in the malfunction data.

Connector terminal check method

1. Check the connection condition of each female terminal.
2. Insert male terminal; fit female terminal size to female terminal and check to see whether malfunction is in female terminal or not.



B3E0403W007

SYMPTOM TROUBLESHOOTING [DSC]

E6U040300000W25

- Verify the symptoms, and perform troubleshooting according to the appropriate number.

No.	Symptom
1	Any of the following lights do not illuminate with ignition switch on. • ABS warning light • BRAKE system warning light • DSC indicator light • TCS OFF light
2	Any of the following lights stay on: • ABS warning light. • BRAKE system warning light • DSC indicator light • TCS OFF light
3	There is a malfunction in the system even though ABS warning light, BRAKE system warning light, DSC indicator light and TCS OFF light do not illuminate.
4	ABS or TCS*1 operates frequently.
	TCS does not work correctly.
5	DSC*2 operates frequently.
	DSC does not work correctly.
6	DSC indicator light flashes (when neither the TCS nor the DSC are operating).

*1 : DSC system contains traction control function, DSC indicator light goes on and off while DSC operates.
*2 : DSC indicator light goes on and off while DSC operates.

x: Applicable

	Possible factor / Troubleshooting item	DSC HU/CM	Instrument cluster	CAN communication	ABS warning light circuit	BRAKE system warning light circuit	DSC indicator light circuit	DSC OFF light circuit	Each sensor installation	Battery	Charging system	Brake fluid	Parking brake	Tire	Tire air pressure	Control module power supply system	Control module ground system	Instrument cluster power supply system	Instrument cluster ground system	Conventional brake	Module configuration

E6U403BW7001

NO.1 ANY OF THE FOLLOWING LIGHTS DO NOT ILLUMINATE WITH IGNITION SWITCH ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT) [DSC]

E6U040300000W

1	**Any of the following lights do not illuminate with ignition switch on: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light).**

[TROUBLESHOOTING HINTS]
- **Inspect each light in the instrument cluster for malfunction**
- **Poor connection at DSC HU/CM connector**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCS IN DSC HU/CM** • Inspect the DTC for the DSC ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to next step.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN INSTRUMENT CLUSTER SYSTEM OR OTHER SYSTEM** • Do other warning and indicator lights illuminate when IG switch is turned ON?	Yes	Go to next step.
		No	Inspect or repair instrument cluster (power supply system, ground system).
3	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is DSC HU/CM securely connected?	Yes	Go to next step.
		No	Connect DSC HU/CM connector securely, then go to next step.
4	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are DSC HU/CM connector terminal, or instrument cluster connector terminal, or related connector terminals securely connected?	Yes	Go to next step.
		No	Connect DSC HU/CM connector terminal etc. related connector terminal securely.
5	**INSPECT FOR DTC IN CAN COMMUNICATION** • Reconnect all disconnected connectors. • Clear the DTC from DSC HU/CM memory using the WDS or equivalent. • Turn the ignition switch to ON. • Inspect the DTC for DSC ON-BOARD DIAGNOSTIC SYSTEM. • Is the DTC U1900 stored?	Yes	Inspect and repair CAN communication related harness or connectors. If the harness and connectors are normal, replace DSC HU/CM.
		No	Inspect and repair the instrument cluster.

NO.2 ANY OF THE FOLLOWING LIGHTS STAY ON: (ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND/OR DSC OFF LIGHT) [DSC]

E6U040300000W27

2	**Any of the following lights stay on: (ABS warning light, BRAKE system warning light, DSC indicator light and/or DSC OFF light)**

[TROUBLESHOOTING HINTS]
- **Brake fluid amount is low**
- **Parking brake does not release**
- **No connection at DSC HU/CM HU/CM connector (when DSC HU/CM connector comes off, ABS warning light and BRAKE system warning light illuminate)**
- **DSC HU/CM detected malfunction (input and output device malfunction)**
- **DSC HU/CM detects low voltage in power supply**
- **DSC HU/CM ground malfunction (when DSC HU/CM ground is not securely connected, ABS warning light and BRAKE system warning light illuminate but diagnostic trouble code does not display)**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BRAKE FLUID AMOUNT AND VERIFY THAT PARKING BRAKE RELEASES** • Is brake fluid amount normal? • Is parking brake lever released?	Yes	Go to next step.
		No	Add brake fluid or release parking brake lever.
2	**INSPECT FOR DTCS IN DSC HU/CM** • Inspect the DTC for the DSC ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to next step.
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CONTROL MODULE CONNECTOR, TERMINAL OR OTHER** • Do ABS warning light and BRAKE system warning light go off after **4 s** with ignition switch on?	Yes	Temporary poor connection in control module connector. Inspect DSC HU/CM connector, then go to Step 6. Inspect DSC HU/CM connector terminal, then go to Step 7.
		No	Go to next step.
4	**INSPECT BATTERY** • Is battery voltage normal?	Yes	Go to next step.
		No	Inspect battery and charging system.
5	**INSPECT CHARGING SYSTEM** • Is battery voltage normal with electrical load (A/C, headlight, etc.) on and engine idling?	Yes	Go to next step.
		No	Inspect charging system (drive belt tension, generator, etc.).
6	**VERIFY THAT DSC HU/CM CONNECTOR IS CONNECTED** • Is DSC HU/CM securely connected?	Yes	Go to next step.
		No	Connect DSC HU/CM connector securely, then go to next step.
7	**VERIFY THAT DSC HU/CM CONNECTOR TERMINAL OR RELATED CONNECTOR TERMINALS ARE CONNECTED** • Are DSC HU/CM connector terminal or instrument cluster connector terminal etc. related connector terminals securely connected?	Yes	Inspect and repair followings: • DSC HU/CM power supply and ground system wiring harness. • Instrument cluster
		No	Connect DSC HU/CM connector terminal etc. related connector terminals securely.

NO.3 THERE IS A MALFUNCTION IN THE SYSTEM EVEN THOUGH ABS WARNING LIGHT, BRAKE SYSTEM WARNING LIGHT, DSC INDICATOR LIGHT AND DSC OFF LIGHT DO NOT ILLUMINATE [DSC]

E6U040300000W28

3	**There is a malfunction in the system even though ABS warning light, BRAKE system warning light. DSC indicator light and DSC OFF light do not illuminate.**

[TROUBLESHOOTING HINTS]
- **There is a mechanical malfunction in system**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC HU/CM FOR DTCS** • Inspect the DTC for the DSC ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to next step.
2	**INSPECT DSC SYSTEM** • Perform DSC system inspection. • Is the system normal?	Yes	Inspect conventional brake system.
		No	Repair or replace malfunctioning part.

NO.4 ABS OR TCS*1 OPERATES FREQUENTLY/TCS DOES NOT WORK CORRECTLY*1: DSC SYSTEM FUNCTION CONTAINS TRACTION CONTROL FUNCTION, DSC INDICATOR LIGHT GOES ON AND OFF WHILE DSC OPERATES [DSC]

E6U040300000W29

4	**ABS or TCS (*1) operates frequently./TCS does not work correctly.** **(*1): DSC system function contains traction control function, DSC indicator light goes on and off while DSC operates.**

[TROUBLESHOOTING HINTS]
- **There is a difference in size or air pressure between the front and rear tires**
- **Incorrect ABS wheel-speed signal is inputted to DSC HU/CM**
- **There is a malfunction in the engine control system (TCS malfunction)**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR DTCS IN DSC HU/CM** • Check the DTC for the DSC ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to next step.
2	**INSPECT TIRE SIZE AND AIR PRESSURE** • Inspect tire size and air pressure. • Are size and air pressure as specified?	Yes	Go to next step.
		No	Replace with specified tires and adjust tire air pressure.
3	**INSPECT ABS WHEEL-SPEED SENSOR OUTPUT PULSE** • Inspect the output value from the ABS wheel-speed sensor. • Is output value normal?	Yes	Found malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING".
		No	• ABS wheel-speed sensor installation inspection: Inspect the ABS wheel-speed sensor for looseness and confirm it is securely adhered. • ABS sensor rotor installation inspection: Inspect the ABS sensor rotor for poor installation.

NO.5 DSC*2 OPERATES FREQUENTLY/DSC DOES NOT WORK CORRECTLY*2: DSC INDICATOR LIGHT GOES ON AND OFF WHILE DSC OPERATES [DSC]

E6U040300000W30

5	DSC (*2) operates frequently. /DSC does not work correctly. (*2): DSC indicator light goes on and off while DSC operates.

[TROUBLESHOOTING HINTS]
- DSC HU/CM detected malfunction (input and output device malfunction)
- Poor installation with combined sensor and/or steering angle sensor
  (If any of the above sensors are poorly installed, DSC may operate intermittently)
- When replacing DSC HU/CM, combined sensor or steering angle sensor, initialization is not performed.
  (If initialization is not performed correctly, DSC may not work correctly)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DSC HU/CM FOR DTCS** • Inspect the DTC for the DSC ON-BOARD DIAGNOSTIC SYSTEM. • Have DTCs been recorded in memory?	Yes	Perform inspection using appropriate DTC.
		No	Go to next step.
2	**VERIFY THAT EACH SENSOR IS INSTALLED** • Are combined sensor and steering angle sensor securely installed?	Yes	Go to next step.
		No	Install malfunctioning sensor securely.
*3	**VERIFY THAT EACH SENSOR IS INITIALIZED** • Did each sensor initialize after replacement of DTC HU/CM, combined sensor or steering angle sensor?	Yes	Find malfunctioning part according to "INTERMITTENT CONCERN TROUBLESHOOTING."
		No	Perform initialization procedure.

NO.6 DSC INDICATOR LIGHT FLASHES (WHEN NEITHER THE TCS NOR THE DSC ARE OPERATING) [DSC]

E6U040300000W31

6	DSC indicator light flashes (when neither the TCS nor the DSC are operating)

[TROUBLESHOOTING HINTS]
- Non-completion of module configuration.
  (If the module configuration is not carried out after replacing the DSC HU/CM, a DSC indicator light will flash. In this case, the DSC is not detected.)

04–10 GENERAL PROCEDURES

GENERAL PROCEDURES
(BRAKES) 04–10–1
Wheel and Tire Installation 04–10–1
Brake Lines Disconnection..... 04–10–1
Brake Pipe Flare Nut Tightening 04–10–1
Connector Disconnection 04–10–1
ABS/DSC Related Parts 04–10–1
DSC Related Parts Sensor Initialization Procedure 04–10–1

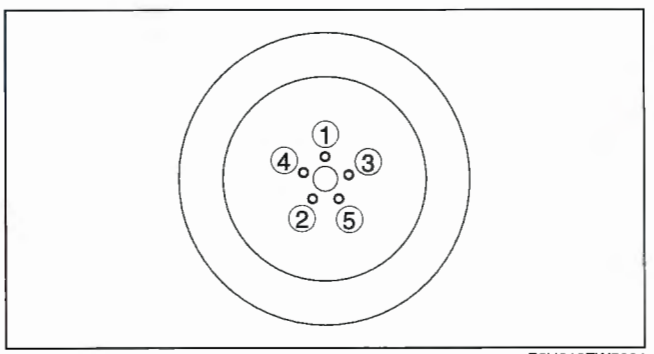
GENERAL PROCEDURES (BRAKES)

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque
88—118 N·m {9.0—12.0 kgf·m, 65.0—87.0 ft·lbf}

E6U041000000W02



E5U610ZW5001

Brake Lines Disconnection

1. If any brake line has been disconnected during the procedures, add brake fluid, bleed the brakes, and inspect for leakage after the procedure has been completed.

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

Brake Pipe Flare Nut Tightening

1. Tighten the brake pipe flare nut using the **SST** (49 0259 770B) or any commercially available flare nut wrench.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01–17A–1 BATTERY REMOVAL/INSTALLATION [L3, AJ].) (See 01–17B–2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

ABS/DSC Related Parts

1. Make sure that there are no DTCs in the ABS/DSC memory after working on ABS/DSC related parts. If there are any DTCs in the memory, clear them.

DSC Related Parts Sensor Initialization Procedure

Warning
- **If the initialization procedure is not completed, the DSC will not operate properly and it might cause an unexpected accident. Therefore, when replacing or removing the following parts, make sure to perform the initialization procedure to ensure proper DSC operation.**

1. When replacing or removing the following parts, perform the initialization procedure. (See 04–15–14 COMBINED SENSOR INITIALIZATION PROCEDURE.)
   — DSC HU/CM
   — Combined sensor

AIR BLEEDING [L3, AJ]

E6U041143001W01

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

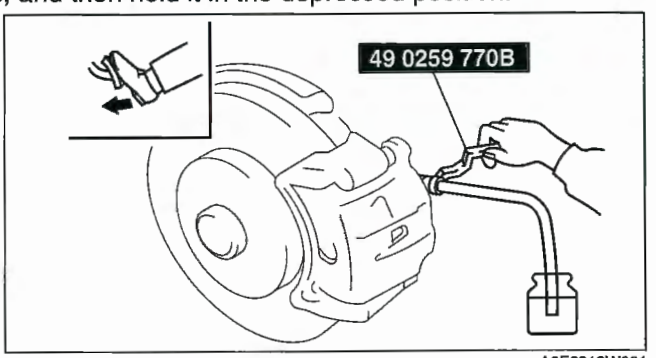
Note
- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type
SAE J1703, FMVSS 116 DOT-3

1. Remove the bleeder cap and attach a vinyl tube to the bleeder screw.
2. Place the other end of the vinyl tube in a clear, fluid-filled container.
3. One person should depress the brake pedal a few times, and then hold it in the depressed position.
4. A second person should loosen the bleeder screw, drain out the fluid and close the screw using the **SST**.

   Tightening torque
   6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}

5. Repeat steps 3 and 4 until no air bubbles are seen.
6. Bleed air from each component by following the procedure above.
7. After air bleeding, check the following:
   - Brake operation
   - Fluid leakage
   - Fluid level



A6E6912W001

AIR BLEEDING [L3 WITH TC]

E6U041143001W02

Caution
- **Brake fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If it is spilled, wipe it off immediately.**

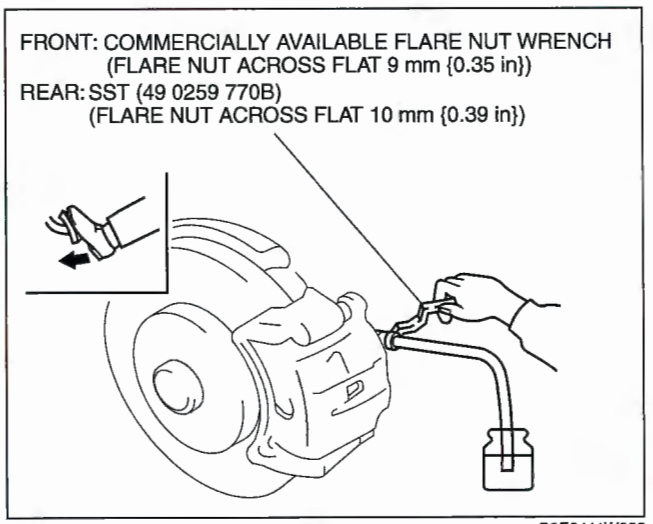
Note
- Keep the fluid level in the reserve tank at 3/4 full or more during the air bleeding.
- Begin air bleeding with the brake caliper that is furthest from the master cylinder.

Brake fluid type
SAE J1703, FMVSS 116 DOT-3

1. Remove the bleeder cap on the brake caliper, and attach a vinyl tube to the bleeder screw.
2. Place the other end of the vinyl tube in a clear container and fill the container with fluid during air bleeding.
3. Working with two people, one should pump the brake pedal several times and depress and hold the pedal down.

4. While the brake pedal is depressed, the other should loosen the bleeder screw using the **SST** or any commercially available flare nut wrench, drain out any fluid containing air bubbles, and tighten the bleeder screw.

   Tightening torque
   Front: 7.0—9.0 N·m {72—91 kgf·cm, 70—79 in·lbf}
   Rear: 6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}



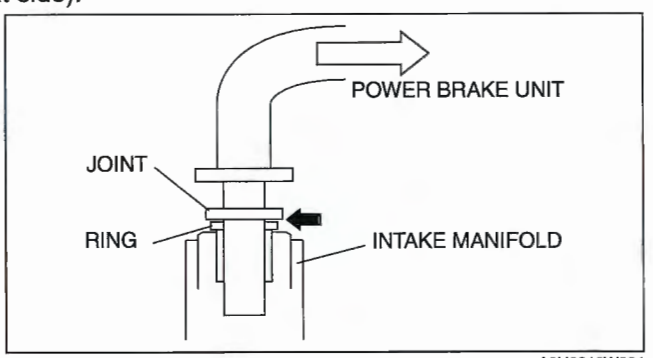
B3E0411W020

5. Repeat Steps 3 and 4 until no air bubbles are seen.
6. Perform air bleeding as described in the above procedures for all brake calipers.
7. After air bleeding, inspect the following:
   - Brake operation
   - Fluid leakage
   - Fluid level

VACUUM HOSE CHECK VALVE INSPECTION (POWER BRAKE UNIT)

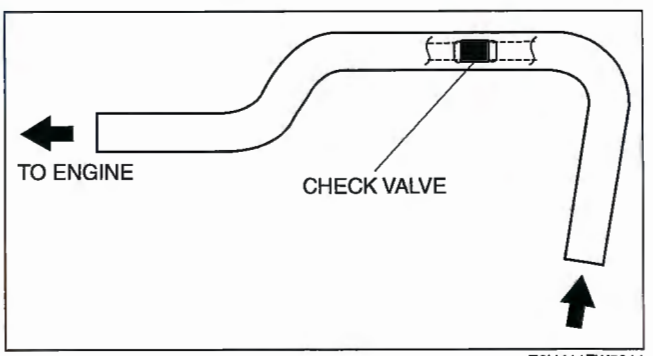
E6U041143640W01

1. Remove the clamps and vacuum hose (power brake unit side).
2. For engine side, insert a small flathead screwdriver in the direction of the arrow shown in the figure, push the ring down and remove the vacuum hose. (L3, L3 WITH TC)
3. Remove the clamps and vacuum hose (engine-side). (AJ)



A6U6912W301

4. Apply both suction and pressure to the engine-side hose, and verify that air blows only toward that side.
   - If air flows in both directions or not at all, replace the vacuum hose.



E6U411ZW5011

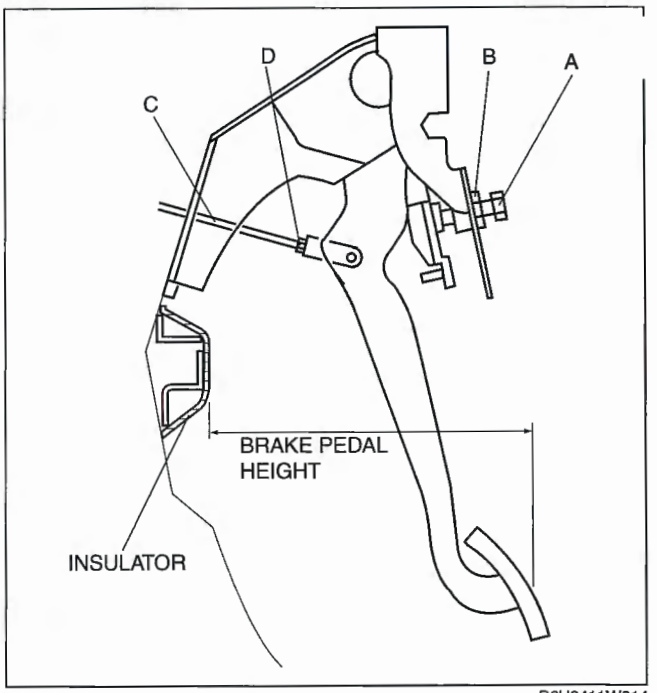
BRAKE PEDAL INSPECTION

E6U041143300W01

Brake Pedal Height Inspection

1. Verify that the distance from the insulator to the center of the upper surface of the pedal pad is as specified.

   Brake pedal height (reference value)
   187 mm {7.36 in}



B6U0411W014

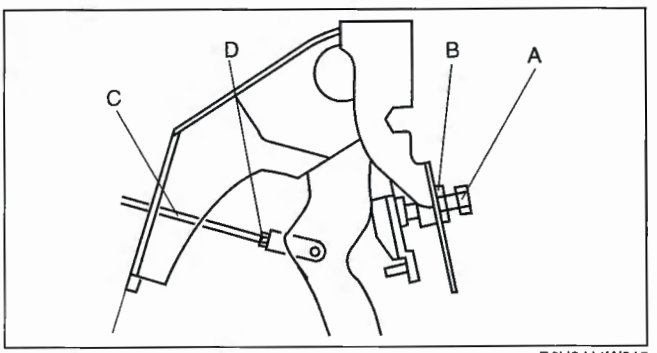
Brake Pedal Height Adjustment

Caution
- **The brake switch may not operate normally after adjusting the pedal height. Whenever adjusting the pedal height, replace the brake switch with a new one.**

1. Loosen locknut B and turn the bolt A until it does not contact the pedal.
2. Loosen locknut D and turn rod C to adjust the height.
3. Tighten the bolt with locknut B.

   Tightening torque
   9.8—14.7 N·m
   {100—149 kgf·cm, 116—130 in·lbf}

4. After adjustment, inspect the pedal play and the brake light operation.



B6U0411W015

Brake Pedal Play Inspection

1. Depress the pedal a few times to eliminate the vacuum in the system.
2. Remove the spring pin, verify that the holes in the fork and in the pedal are aligned, and reinstall the pin. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)
3. Gently depress the pedal by hand until resistance is felt, and check the pedal play.

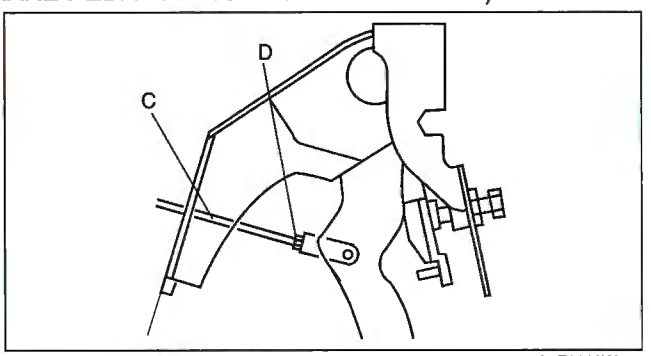
   Brake pedal play
   0—3 mm {0—0.1 in}

Brake Pedal Play Adjustment

1. Remove the spring pin and clevis pin. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)
2. Loosen locknut D and turn rod C to align the holes in the fork and in the pedal.
3. Install the clevis pin and the spring pin.
4. Tighten locknut D.

   Tightening torque
   15.7—21.6 N·m {1.60—2.20 kgf·m, 11.6—15.9 ft·lbf}

5. Check the pedal height and the brake light operation.

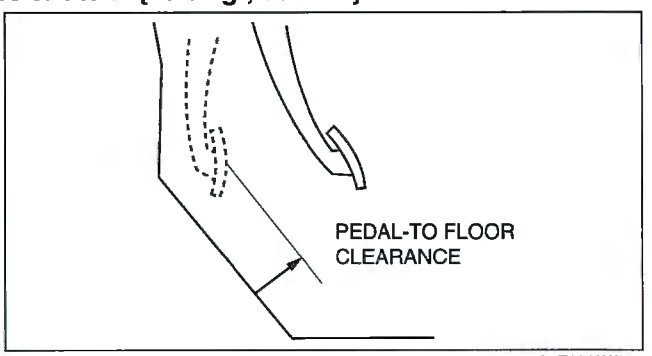


A6E6912W027

Pedal-to-floor Clearance Inspection

1. Start the engine and depress the brake pedal with a force of **147 N {15.0 kgf, 33.0 lbf}**
2. Verify that the distance from the floor panel to the pedal pad center is as specified when the pedal is depressed.
   - If the distance is less than specified, check for air in brake system.

   Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33 lbf})
   68 mm {2.7 in} min.



A6E6912W003

BRAKE PEDAL REMOVAL/INSTALLATION

E6U041143300W02

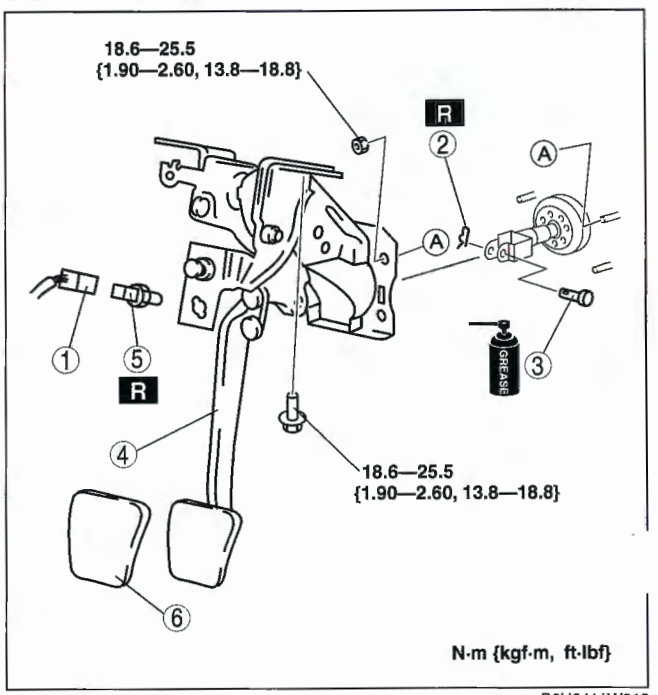
Caution

- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch connector is connected after the brake switch has been properly installed. If the brake switch is not properly installed or the connector is connected before installation, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake switch is properly installed before connecting the connector.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**

1. For models with an interlock cable unit, remove the lock unit with the brake switch.
2. Remove in the order indicated in the table.

1	Brake switch connector (See 04–11–8 Brake Switch Connector Installation Note)
2	Spring pin
3	Clevis pin
4	Brake pedal
5	Brake switch (See 04–11–8 Brake switch Installation Note)
6	Pedal pad

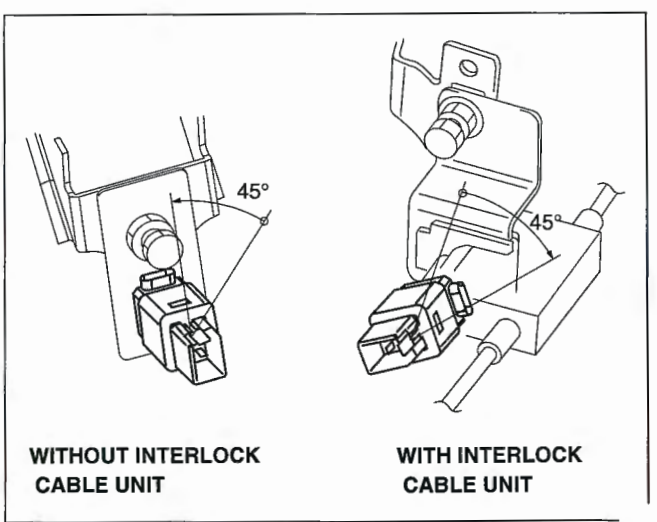
3. Install in the reverse order of removal.



B6U0411W018

Brake switch Installation Note

1. Fix the new brake switch on the brake pedal bracket or interlock cable unit by pressing down at **50 N {5.1 kgf, 11 lbf}**.
2. Rotate the brake switch **45°** counterclockwise (without interlock cable unit) or clockwise (with interlock cable unit).
3. Verify that the brake switch is locked securely.



B6U0411V

Brake Switch Connector Installation Note

1. Inspect the brake pedal. (See 04–11–6 BRAKE PEDAL INSPECTION.)
2. With the brake pedal in its original position, install the brake switch to the brake switch connector.

BRAKE SWITCH INSPECTION

E6U041166490W01

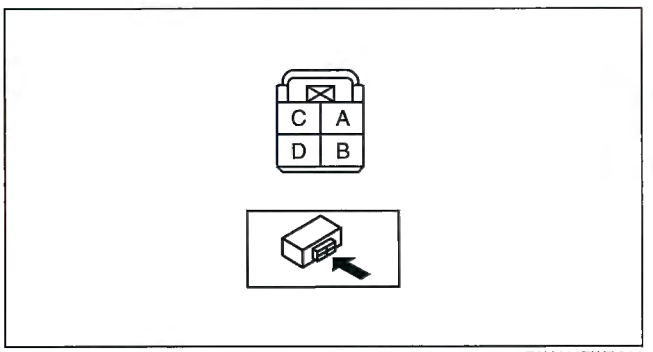
Caution
- **If the brake switch is removed from the brake pedal, its proper functioning cannot be guaranteed when reinstalled. Therefore, inspect the brake switch by either not removing the brake switch, or by replacing it if removed.**

1. Disconnect the negative battery cable.
2. Disconnect the brake switch connector.
3. Inspect for continuity between the brake switch connector terminals.
   - If not as specified, replace the brake switch.

O—O : Continuity

Condition	Terminal			
	A	B	C	D
When the brake pedal is depressed		O		O
When the brake pedal is not depressed (With auto cruise)	O		O	

D6E411ZW3009



E6U411ZWB011

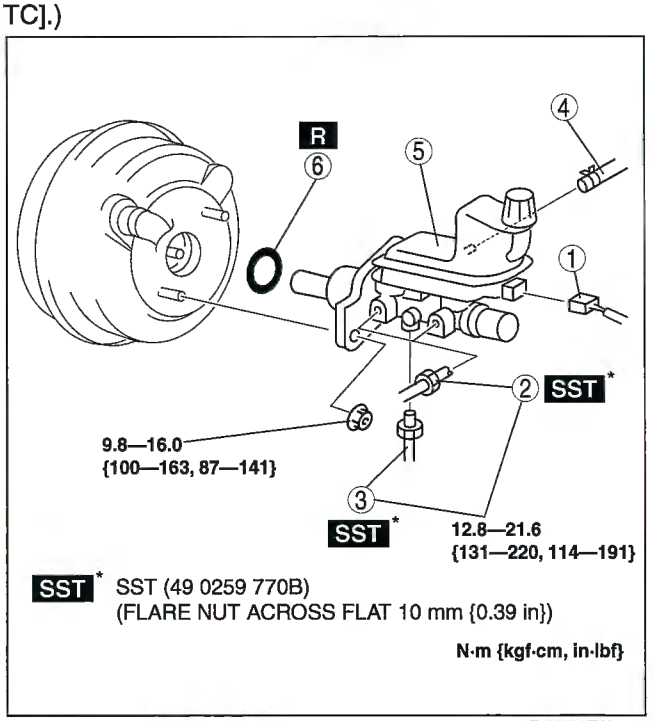
MASTER CYLINDER REMOVAL/INSTALLATION

E6U041143400W01

1. Remove the battery and battery tray. (See 01–17A–1 BATTERY REMOVAL/INSTALLATION [L3, AJ].) (See 01–17B–2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove in the order indicated in the table.

1	Brake fluid level sensor connector
2	Brake pipe
3	Brake pipe (without ABS/TCS or DSC)
4	Hose (MTX)
5	Master cylinder (See 04–11–9 Master Cylinder Installation Note
6	O-ring

3. Install in the reverse order of removal.



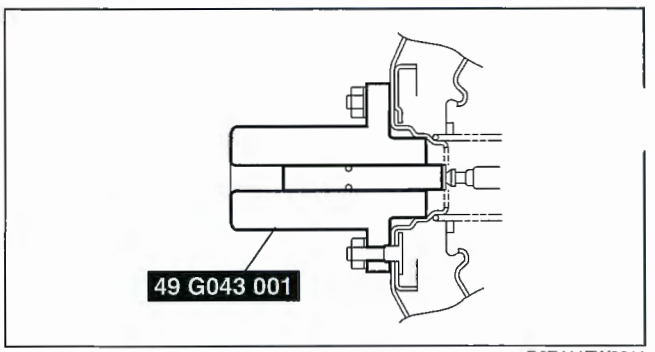
E6U411ZW5018

Master Cylinder Installation Note

Caution
- **If the master cylinder is installed at a slanted angle to the power brake unit, the master cylinder piston may jam against the push rod retainer of the power brake unit, causing improper air bleeding, brake drag or other malfunctions. Be sure to install the master cylinder at a level, perpendicular angle to the power brake unit.**
- **Always install the gasket of the power brake unit push rod before performing measurement inspections or adjustments.**

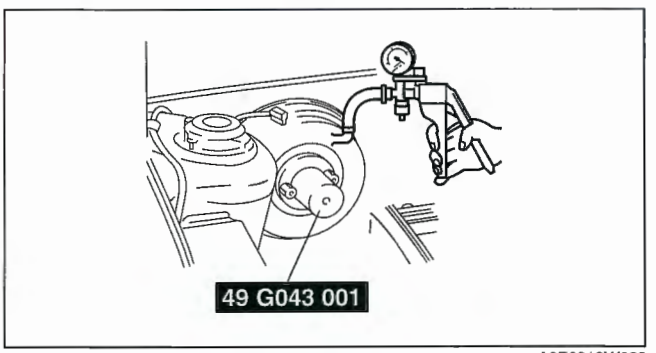
1. Install the **SST** to the power brake unit as shown, and tighten within the specified torque.

   Tightening torque
   9.8—16.0 N·m
   {100—163 kgf·cm, 87—141 in·lbf}



D6E411ZW3011

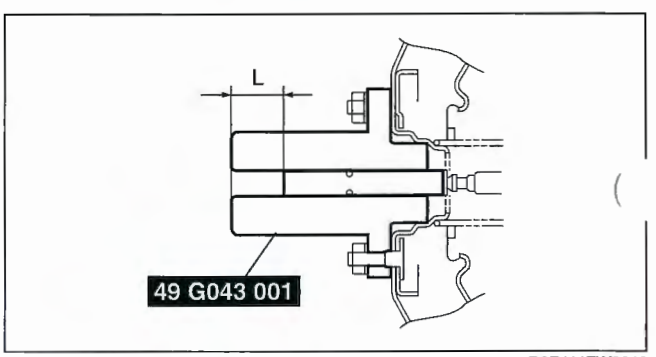
2. Using a vacuum gauge, create a vacuum pressure of **66.7 kPa {500 mmHg, 19.7 inHg}** in the power brake unit.



A6E6912W029

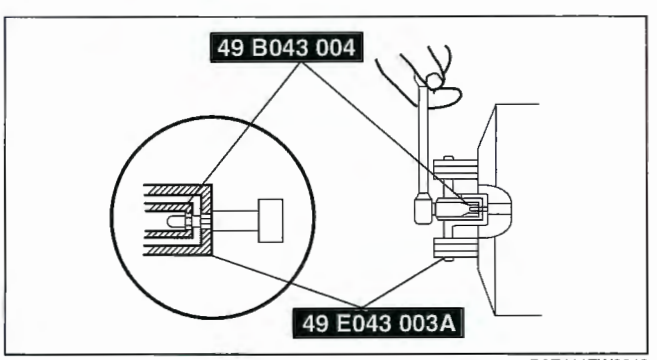
3. Using calipers, measure dimension L as shown.

   Specification
   25.9—26.1 mm {1.020—1.027 in}



D6E411ZW3012

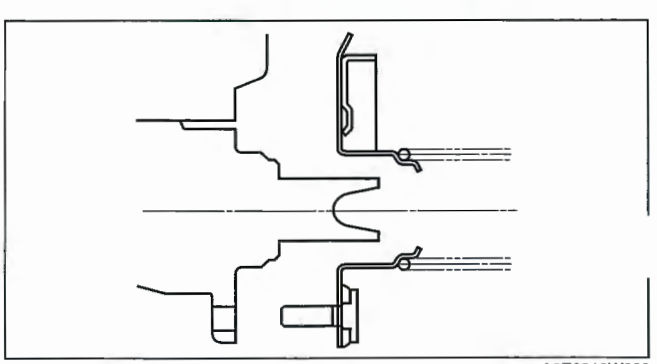
4. If dimension L is not within the specification as shown, remove **SST** (49 G043 001) and use **SST** (49 B043 004) to adjust the length of the push rod while using **SST** (49 E043 003A) to keep the push rod from rotating.
5. Remove the **SSTs**, replace **SST** (49 G043 001) and measure dimension L again.



D6E411ZW3013

6. Install the master cylinder to the power brake unit.

   Caution
   - **If, after installing the master cylinder, air does not bleed properly from the brake lines even after performing air bleeding, brake drag occurs or other characteristics are present, it is possible that the master cylinder piston is jammed against the power brake unit. If air cannot be bled properly, brake drag exists or other malfunctions occur, remove the master cylinder and reinstall properly.**



A6E6912W032

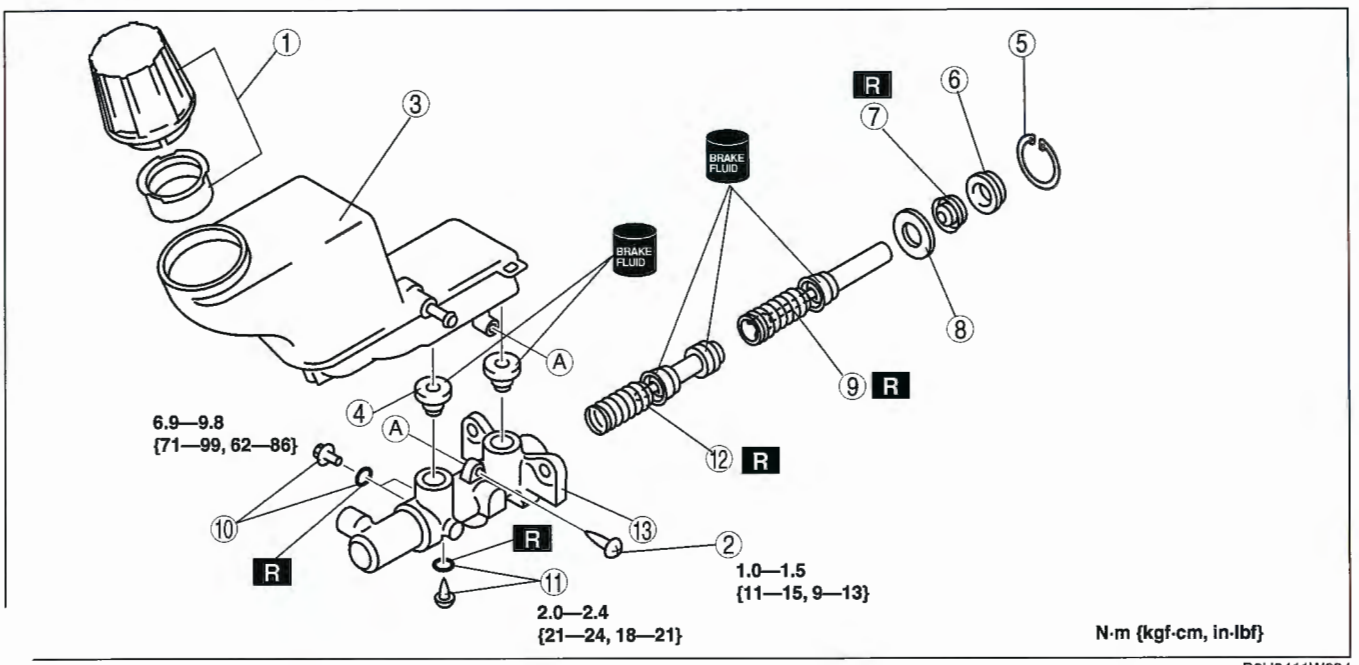
MASTER CYLINDER DISASSEMBLY/ASSEMBLY

E6U041143400W02

Caution

- **If the master cylinder body is damaged, replace the unit as a component. When securing the master cylinder in a vise, tighten only the flange of the master cylinder.**

1. Remove the battery and battery try. (See 01–17A–1 BATTERY REMOVAL/INSTALLATION [L3, AJ].) (See 01–17B–2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disassemble in the order indicated in the table.
3. Assemble in the reverse order of disassembly.



B6U0411W004

1	Cap set
2	Screw
3	Reservoir
4	Joint bushing
5	Snap ring
6	Piston guide
7	Cup
8	Stopper

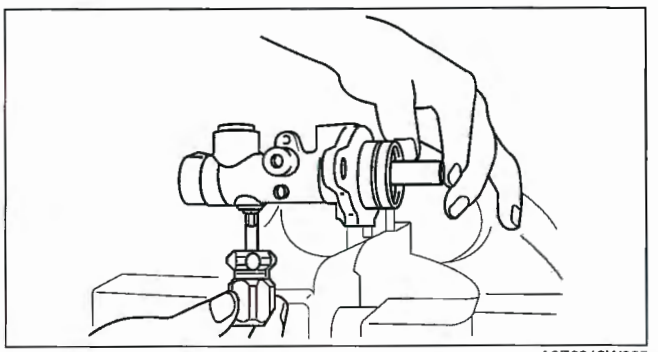
9	Primary piston
10	Stop pin and O-ring (with ABS/TCS or DSC) (See 04–11–12 Stop Pin and O-ring (with ABS/TCS or DSC) Assembly Note)
11	Stop screw and O-ring (without ABS/TCS or DSC) (See04–11–12 Stop Screw and O-ring (without ABS/TCS or DSC) Assembly Note)
12	Secondary piston
13	Master cylinder body

Stop Screw and O-ring (without ABS/TCS or DSC) Assembly Note

1. Install the secondary piston and primary piston.
2. Install the new O-ring onto the stop screw.
3. Push the primary piston assembly in full.
4. Install and tighten the stop screw.

   Tightening torque
   2.0—2.4 N·m {21—24 kgf·cm, 18—21 in·lbf}

5. Push and release the secondary piston component to verify that it is held properly by the stop screw.



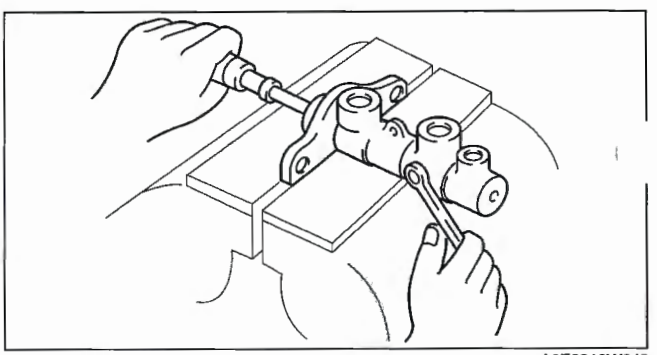
A6E6912W025

Stop Pin and O-ring (with ABS/TCS or DSC) Assembly Note

1. Install the secondary piston with the piston hole facing the stop pin and primary piston.
2. Install the new O-ring onto the stop pin.
3. Push the primary piston assembly in fully.
4. Install and tighten the stop pin.

   Tightening torque
   6.9—9.8 N·m {71—99 kgf·cm, 62—86 in·lbf}

5. Push and release the secondary piston component to verify that it is held properly by the stop pin.



A6E6912W043

BRAKE FLUID LEVEL SENSOR INSPECTION

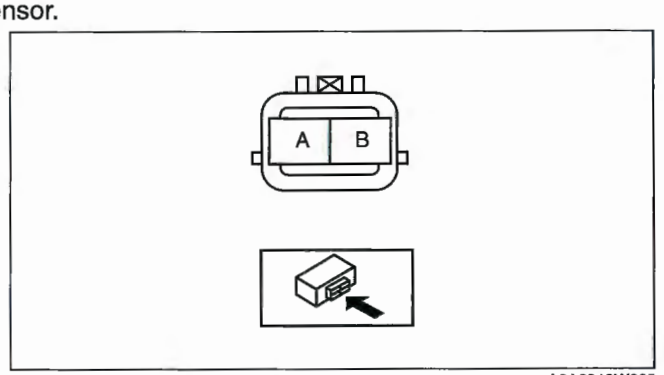
E6U041143400W05

1. Disconnect the negative battery cable.
2. Disconnect the sensor connector.
3. Inspect for continuity between terminals of fluid level sensor.
   - If not as specified, replace the fluid level sensor.

O—O : Continuity

Fluid level	A	B
Above approx. 3 mm {0.1 in} above MIN line		
Below approx. 3 mm {0.1 in} above MIN line	O	O

B6U0411W019



A6A6912W005

POWER BRAKE UNIT INSPECTION

E6U041143800W01

Warning
- **The following inspection methods are simple inspection methods to judge the function of the power brake unit.**
- **If there is a malfunction in the power brake unit, replace the power brake unit as a component.**

Power Brake Unit Function Check (Simple Method)

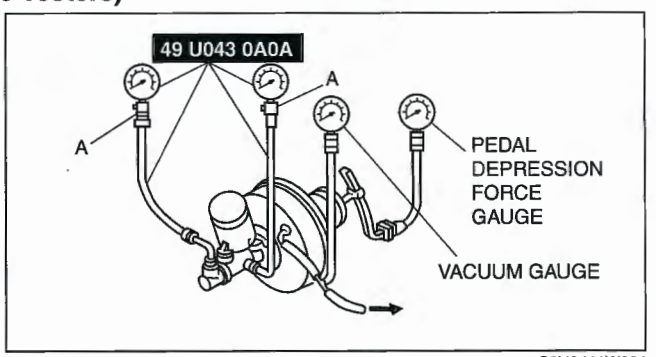
Step 1
1. With the engine stopped, depress the pedal a few times.
2. With the pedal depressed, start the engine.
3. If the pedal moves down slightly immediately after the engine starts, the unit is operating.

Step 2
1. Start the engine.
2. Stop the engine after it has run for **1 or 2 minutes**.
3. Depress the pedal with the usual force.
4. If the first pedal stroke is long and becomes shorter with subsequent strokes, the unit is operating.
   - If a problem is found, inspect for damage of the vacuum hose, and vacuum tank. Repair if necessary, and inspect it again.

Step 3
1. Start the engine.
2. Depress the pedal with usual force.
3. If the pedal height does not change, the unit is operating.
4. Hold the pedal down for **about 30 s**.
5. If the pedal height does not change, the unit is operating.

Power Brake Unit Function Check (Inspection Using The Testers)

1. Connect the **SSTs**, vacuum gauge, and pedal depression force gauge as shown in the figure to bleed the air from the **SSTs** and brake line. (Bleed the air from the **SSTs** using a air bleed valve A.)



C6U0411W001

Checking for vacuum loss (unloaded condition)

1. Stop the engine when the vacuum gauge reading reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
2. Observe the vacuum gauge for **15 s**.
   - If the gauge shows **63.3—66.7 kPa {475—500 mmHg, 18.7—19.6 inHg}**, the unit is operating.
   - If not, inspect for damage on the check valve or vacuum hose, and examine the installation. Repair as necessary, and inspect it again.

Checking for vacuum loss (loaded condition)

1. Start the engine.
2. Depress the brake pedal with a force of **196 N {20 kgf, 44 lbf}**.
3. Stop the engine when the vacuum gauge reading reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
4. Observe the vacuum gauge for **15 s**.
5. If the gauge shows **63.3—66.7 kPa {475—500 mmHg, 18.7—19.6 inHg}**, the unit is operating.

Checking for hydraulic pressure

1. When the engine is stopped (vacuum **0 kPa {0 mmHg, 0 inHg}**) and the fluid pressure is within the specification, the unit is operating.

   Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf, 44 lbf}
   At 0 kPa {0 mmHg, 0 inHg}: 590 kPa {6.02 kgf/cm^2, 85.6 psi}

2. Start the engine. Depress the brake pedal when the vacuum reaches **66.7 kPa {500 mmHg, 19.7 inHg}**.
   - If the fluid pressure is within the specification, the unit is operating.
   - If the fluid pressure is not as specified, inspect for damage to the check valve or vacuum hose, and fluid leakage of the hydraulic line. Repair as necessary, and inspect again.

   Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf, 44 lbf}
   At 66.7 kPa {500 mmHg, 19.7 inHg}: 8,780 kPa {89.53 kgf/cm^2, 1,273 psi}

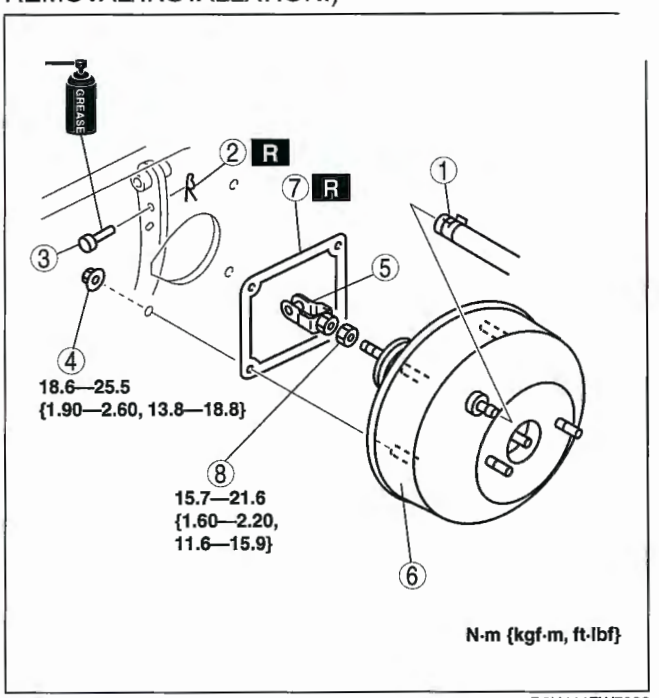
POWER BRAKE UNIT REMOVAL/INSTALLATION

E6U041143800W02

1. Remove the battery and battery try. (See 01–17A–1 BATTERY REMOVAL/INSTALLATION [L3, AJ].) (See 01–17B–2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the air cleaner (L3 WITH TC). (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the air cleaner bracket (L3 WITH TC).
4. Remove the cooler pipe No.3 bracket.
5. Remove the master cylinder. (See 04–11–9 MASTER CYLINDER REMOVAL/INSTALLATION.)
6. Remove the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
7. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
8. Remove the windshield wiper motor. (See 09–19–5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
9. Remove the cowl panel. (See 09–10–17 COWL PANEL REMOVAL/INSTALLATION.)
10. Remove in the order indicated in the table.

1	Vacuum hose
2	Snap pin
3	Clevis pin
4	Nut
5	Fork
6	Power brake unit
7	Gasket
8	Nut

11. Install in the reverse order of removal.

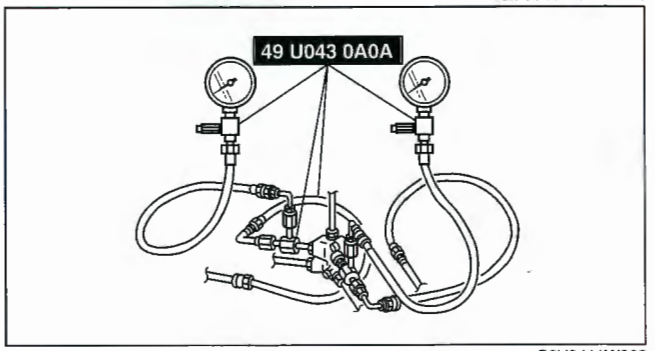


D6U411ZW7002

DUAL PROPORTIONING VALVE INSPECTION (WITHOUT ABS/TCS OR DSC)

E6U041143900W01

1. Connect the **SSTs** to the brake pipes as shown in the figure.
   Bleed the air from the brake system.
2. Measure the fluid pressure of the master cylinder and the rear brake.
   - If not within the specification, replace the dual proportioning valve.

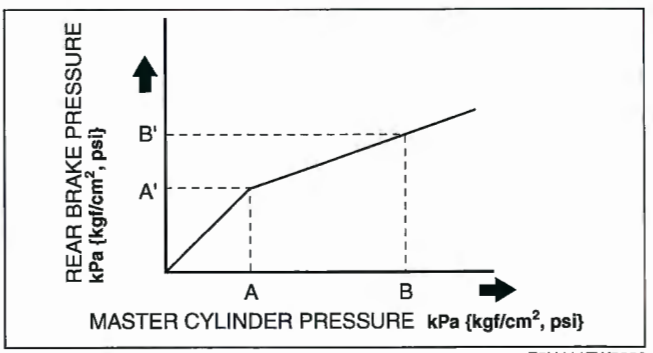


C6U0411W002

Dual proportioning valve fluid pressure (without ABS (ABS/TCS) or DSC)

Rear brake fluid pressure when front brake fluid pressure at 2,450 kPa {24.98 kgf/cm^2, 355.3 psi} (A): 2,250 kPa {22.95 kgf/cm^2, 326.4 psi} —2,650 kPa {27.02 kgf/cm^2, 384.3 psi} (A')

Rear brake fluid pressure when front brake fluid pressure at 5,880 kPa {60 kgf/cm^2, 853 psi} (B): 3,180 kPa {32.43 kgf/cm^2, 461.3 psi}—3,780 kPa {38.54 kgf/cm^2, 548.2 psi} (B')



E5U411ZW5020

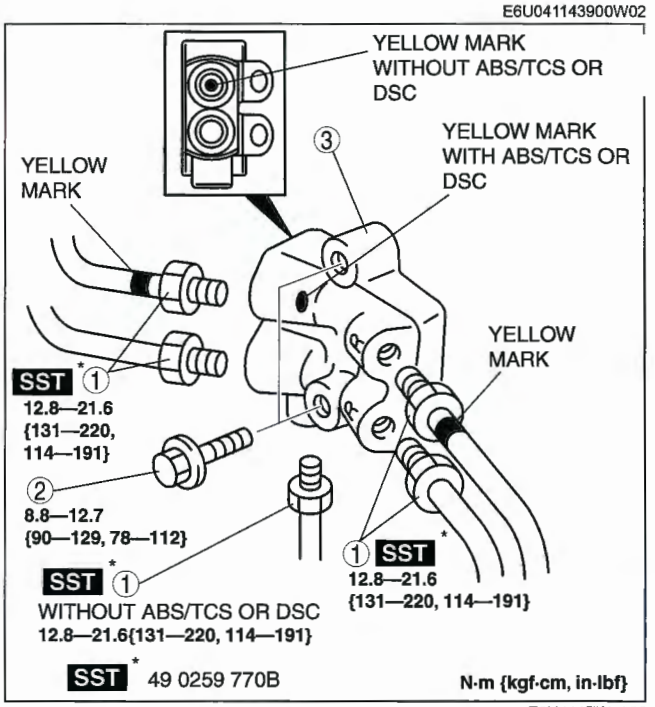
DUAL PROPORTIONING VALVE (WITHOUT ABS/TCS OR DSC) AND BRAKE PIPE JOINT (WITH ABS/TCS OR DSC) REPLACEMENT

1. Remove in the order indicated in the table.

1	Brake pipe
2	Bolt
3	Dual proportioning valve (without ABS/TCS or DSC) or brake pipe joint (with ABS/TCS or DSC) (See 04–11–16 Dual Proportioning Valve (Without ABS/TCS or DSC) or Brake Pipe Joint (With ABS/TCS or DSC) Installation Note)

2. Install in the reverse order of removal.

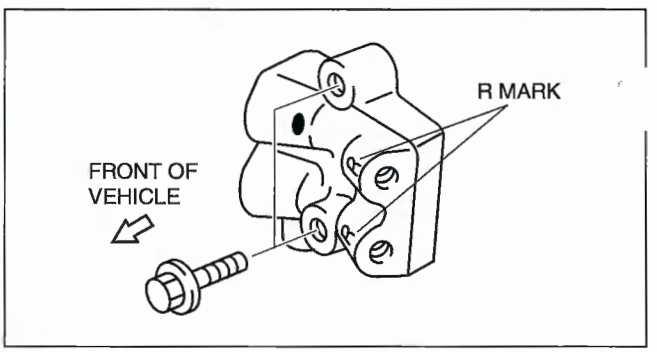
E6U041143900W02



E6U411ZW7002

Dual Proportioning Valve (Without ABS/TCS or DSC) or Brake Pipe Joint (With ABS/TCS or DSC) Installation Note

1. Install the dual proportioning valve (without ABS/TCS or DSC) or brake pipe joint (with ABS/TCS or DSC) so that the R mark faces the left side of the vehicle.



B6U0411W007

FRONT BRAKE (DISC) INSPECTION

E6U041133980W01

Brake Judder Repair Hints

Description

1. Brake judder concern has the following 3 characteristics:

Steering wheel vibration

1. Steering wheel vibrates in the rotation direction. This characteristic is most noticeable when applying brakes at a vehicle speed of **100—140 km/h {62.1—86.8 mph}**.

Floor vibration

1. When applying the brakes, the vehicle body shakes back and forth. The seriousness of the shaking is not influenced by vehicle speed.

Brake pedal vibration

1. When applying brakes, a pulsating force tries to push the brake pad back. The pulsation is transmitted to the brake pedal.
2. The following are the main possible causes of brake judder:

Due to an excessive runout (side-to-side wobble) of the disc plate, the thickness of the disc plate is uneven.

1. If the runout is **more than 0.05 mm {0.002 in}** at the position **10 mm {0.39 in}** from the disc plate edge, uneven wear occurs on the disc plate because the pad contacts the plate unevenly.
2. If the runout is **less than 0.05 mm {0.002 in}**, uneven wear does not occur.

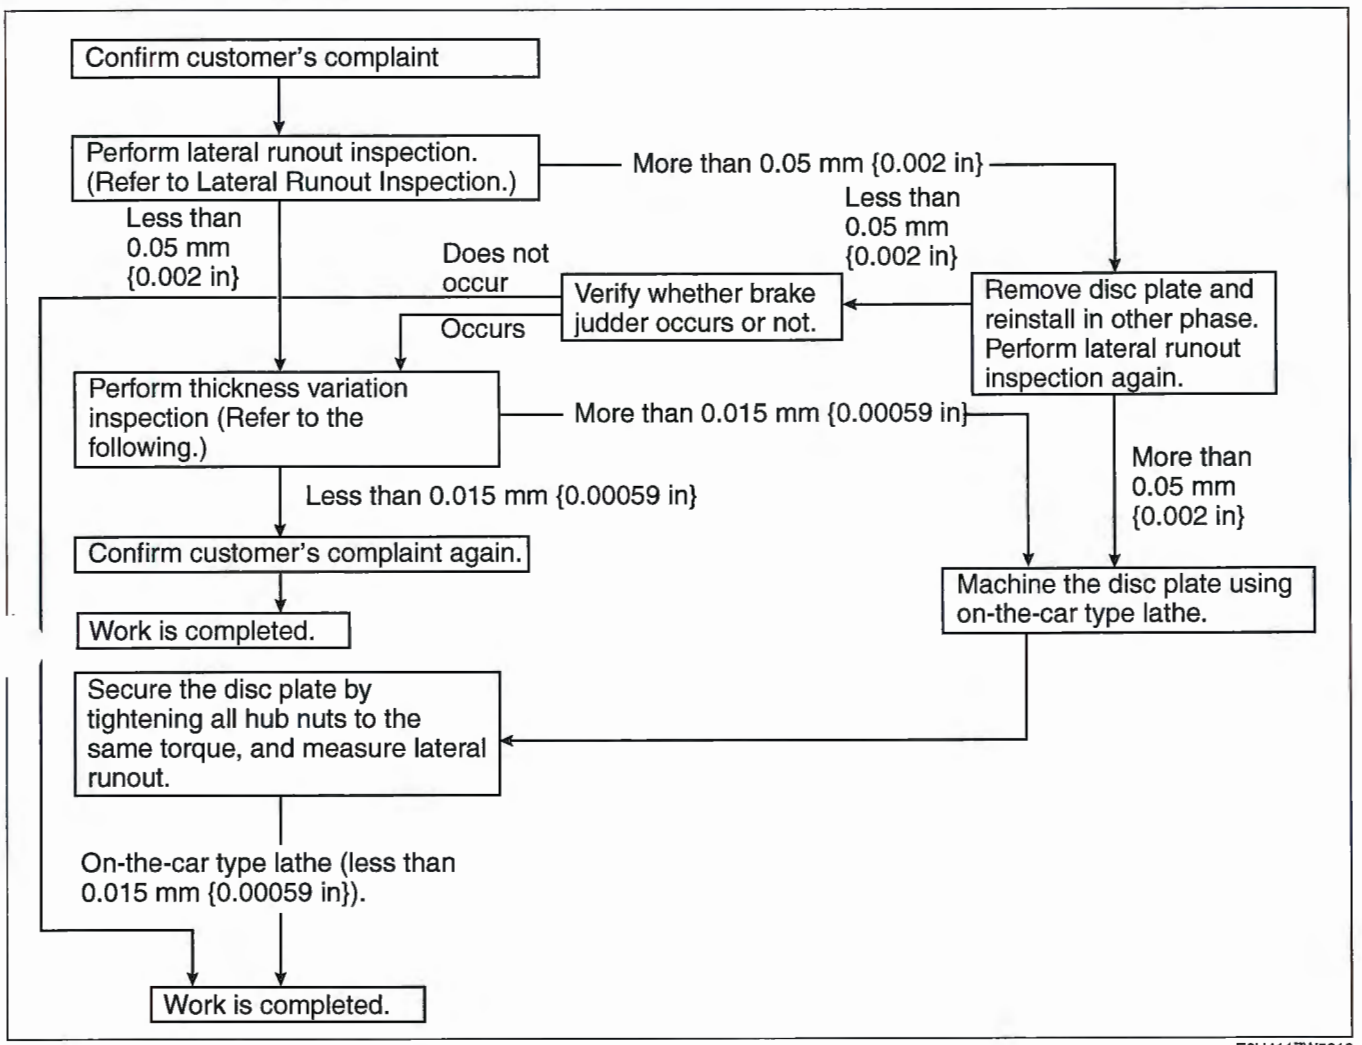
The disc plate is deformed by heat.

1. Repeated panic braking may raise the temperature in some portions of disc plate by **approx. 1,000 °C {1,832 °F}**. This results in a deformed disc plate.

.e to corrosion, the thickness and friction coefficient of disc plate change.

1. If a vehicle is parked in damp conditions for a long time, corrosion occurs on the friction surface of disc plate.
2. The thickness of corrosion is uneven and sometimes appears like a wave pattern, which changes the friction coefficient and causes a reaction force.

Inspection and repair procedure



E6U411ZW5010

Lateral runout inspection

1. To secure the disc plate and the hub, tighten the hub nuts upside down or insert a washer (thickness **10 mm {0.39 in}**, inner diameter **more than 12 mm {0.47 in}**) between the hub bolt and the hub nut.

Note

- The component parts of the **SST** (49 B017 001 or 49 G019 003) can be used as a suitable washer.

2. After tightening all the hub nuts to the same torque, put the dial gauge on the friction surface of disc plate **10 mm {0.39 in}** from the disc plate edge.
3. Rotate the disc plate one time and measure the runout.

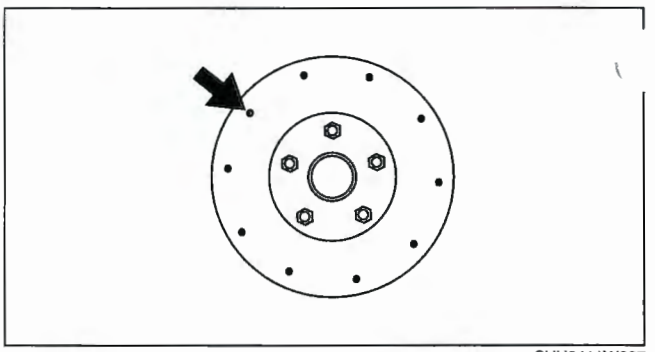
Front disc plate runout limit
0.05 mm {0.002 in}

Thickness variation inspection

1. Clean the disc plate-to-pad friction surface using a brake cleaner.
2. Measure the points indicated in the illustration using a caliper (micrometer).
3. Subtract the minimum value from the maximum, and if the result is not within specification, machine the disc plate using a lathe.

Thickness variation limit
0.015 mm {0.0005 in}

Warning
- **Do not exceed minimum disc plate thickness.**



CHU0411W027

Disc Plate Thickness Inspection

Caution
- **Excessive runout may result if the disc plate is removed from the vehicle then machined. Machine the disc plate while installed on the vehicle.**

1. Measure the thickness of the disc plate.
   - If the thickness is not within the specification, replace the disc plate.

Minimum front disc plate thickness
23 mm {0.91 in}

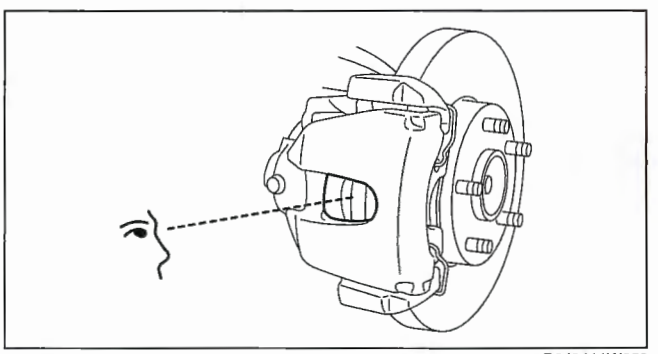
Minimum front disc plate thickness after machining using a brake lathe on-vehicle
23.8 mm {0.94 in}

Disc Pad Thickness Inspection

1. Jack up the front of the vehicle and support it with safety stands.
2. Remove the wheel and tires.
3. Verify the remaining thickness of the pads.

Minimum front disc pad thickness
L3, AJ: 2.0 mm {0.079 in} min.
L3 WITH TC: 1.5 mm {0.059 in} min.

4. Replace the pads as a set: right and left wheels, if either one is at or less than the minimum thickness.

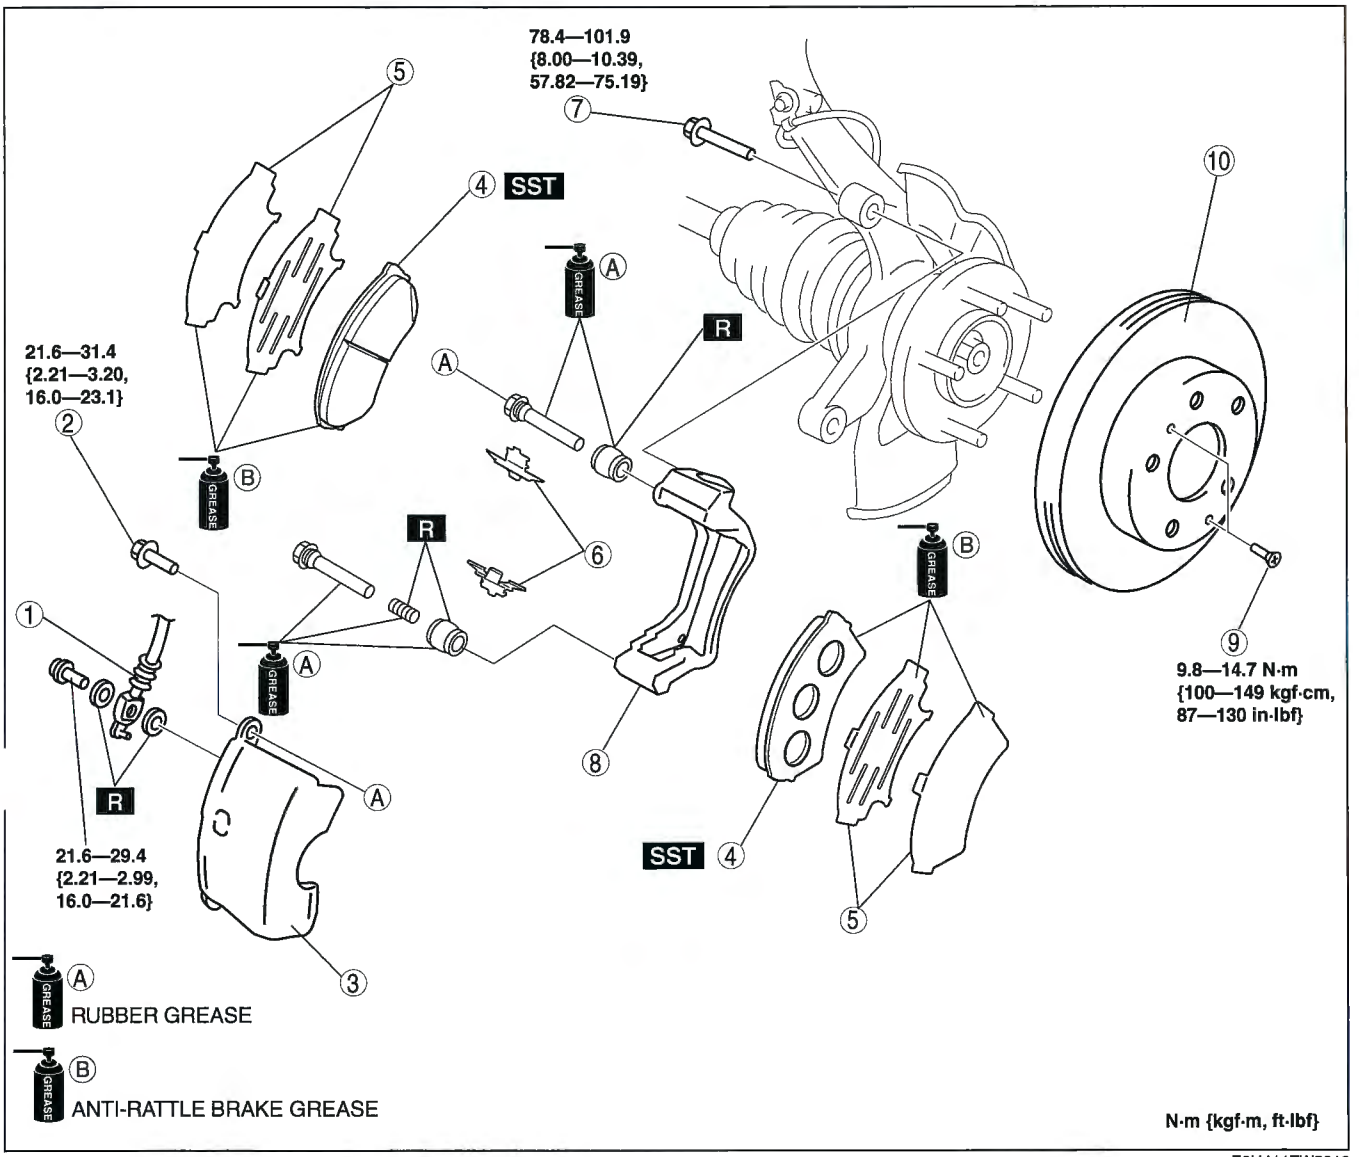


B3J0411W059

FRONT BRAKE (DISC) REMOVAL/INSTALLATION [L3, AJ]

E6U041133980W02

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
   After installation, depress the pedal a few times, rotate the wheel by hand, and verify that the brake does not drag.



E6U411ZW5012

1	Flexible hose
2	Bolt
3	Caliper
4	Disc pad (See 04–11–20 Disc Pad Installation Note)
5	Shim

6	Guide plate
7	Bolt
8	Mounting support

RKING BRAKE (LEVER TYPE) INSPECTION

E6U041244300W02

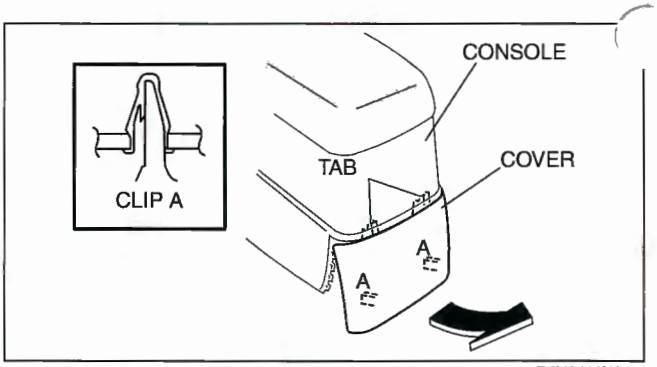
1. Pull the parking brake lever a few times.
2. Depress the brake pedal a few times.
3. Inspect the parking brake stroke by pulling the parking brake lever with a force of **98 N {10 kgf, 22 lbf}**.

Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}
2—5 notches

PARKING BRAKE (LEVER TYPE) ADJUSTMENT

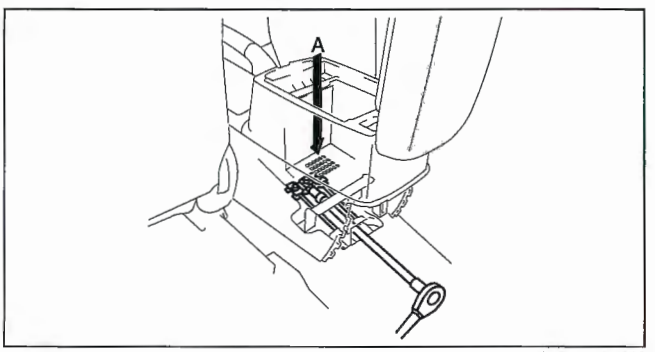
E6U041244300W03

1. Start the engine and depress the brake pedal several times.
2. Stop the engine.
3. Pull the underside of the cover in the direction shown by the arrow and remove clips A from the console.
4. Disengage the hooks from the console and remove the cover.



B6U0412W011

5. Verify the position of the adjusting nut while looking in from above the console (A) as shown, and set the socket on the nut.
6. Turn the adjusting nut to adjust the parking brake lever.
7. After adjustment, inspect the following points:
   (1) Turn the ignition switch to ON, pull the parking brake lever one notch, and verify that the parking brake warning light illuminates.
   (2) Verify that the rear brakes do not drag.



A6E6914W012

PARKING BRAKE (LEVER TYPE) REMOVAL/INSTALLATION

E6U041244300W04

1. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
2. Remove the rear seat cushion (Sedan) or rear seat (5-Door, Sport Wagon). (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–13–17 REAR SEAT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].) (See 09–13–14 REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6].)
3. Remove the propeller shaft (L3 WITH TC). (See 03–15–4 PROPELLER SHAFT REMOVAL/INSTALLATION.)
4. Remove the exhaust pipe insulator.
5. Remove in the order indicated in the table.
6. Install in the reverse order of removal.

ABS/TCS HU/CM SYSTEM INSPECTION

E6U041343780W01

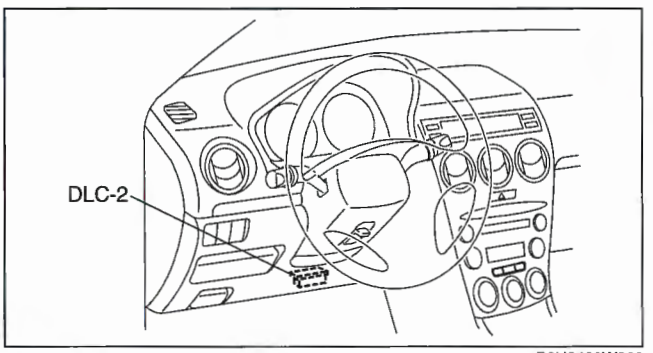
System Inspection

Preparation

1. Verify that the battery is fully charged. With the ignition switch at ON, verify that the ABS and BRAKE system warning lights go out after **3 s**.
2. If the lights stay on after **3 s**, the ABS/TCS HU/CM detects a failure. Follow the troubleshooting procedures.
3. Turn the ignition switch off.
4. On level ground, jack up the vehicle and support it evenly on safety stands. Shift the transaxle to N position.
5. Release the parking brake.
6. Rotate the wheels by hand, and inspect for brake drag.

Operation of ABS inspection

1. Perform the "Preparation."
2. Connect WDS or equivalent to the DLC-2.
3. Set up an active command mode inspection according to the combination of commands below.



B6U0402W002

OPERATION	COMMAND NAME				COMMAND TYPE
	PMP_MOTOR	RF_OUTLET	RF_INLET	ABS_POWER	
Pressure retention	Off	Off	On	On	Manual
Pressure reduction	On	On	On	On	

The chart above shows an example of a right wheel inspection.

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

4. Send the command while pressing on the brake pedal and attempting to rotate the wheel being inspected.
5. When pressure is being maintained, and a click sound indicating the solenoid is operating comes from the ABS/TCS HU/CM, confirm that the wheel does not rotate. When pressure is being reduced, and a click sound indicating the solenoid is operating comes from the ABS/TCS HU/CM, confirm that the wheel rotates, even though the brake pedal is being depressed.

Note

- To protect the ABS/TCS HU/CM, the solenoid valve used for simulations and the ABS motor stay on for **10 s** each time they are switched on.
- Performing the inspections above determines the following.
  - — The ABS/TCS HU/CM brake lines are normal.
  - — The ABS/TCS HU/CM hydraulic system is not significantly abnormal.
  - — The ABS/TCS HU/CM wiring is normal.
- However, the following items cannot be checked.
  - — ABS/TCS HU/CM input system harness and parts.
  - — Extremely small leaks in the ABS/TCS HU/CM internal hydraulic system
  - — Unusual intermittent occurrences in the above items.

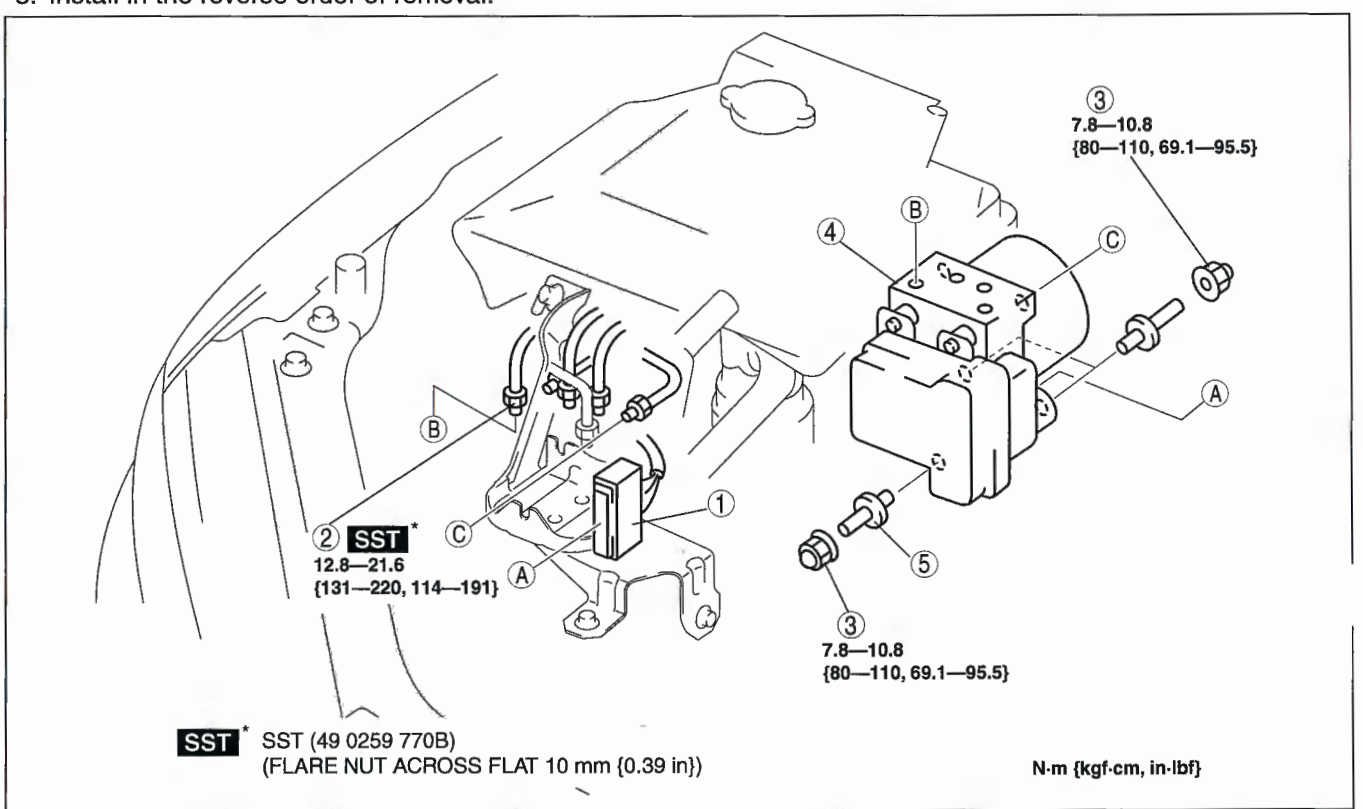
ABS/TCS HU/CM REMOVAL/INSTALLATION

E6U041343780W02

Caution

- **When replacing the ABS/TCS HU/CM, the configuration procedure must be done before removin the ABS/TCS HU/CM. If the configuration is not completed before removing the ABS/TCS HU/CM, TCS will not work properly after installation of the ABS/TCS HU/CM.**
- **Do not drop the ABS/TCS HU/CM. Replace it if it is subjected to an impact.**

1. Configurate the ABS/TCS HU/CM (only when replacing it). (See 04–13–6 ABS/TCS HU/CM CONFIGURATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



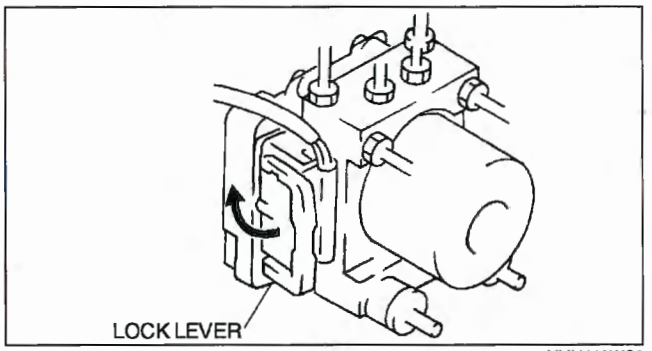
E6U413ZW5004

1	Connector (See 04–13–5 Connector Removal Note) (See 04–13–5 Connector Installation Note
2	Brake pipe (See 04–13–5 Brake Pipe Removal Note) (See 04–13–5 Brake Pipe Installation Note)
3	Nut

4	ABS/TCS HU/CM (See 04–13–5 ABS/TCS HU/CM Removal/ Installation Note)
5	Stud

Connector Removal Note

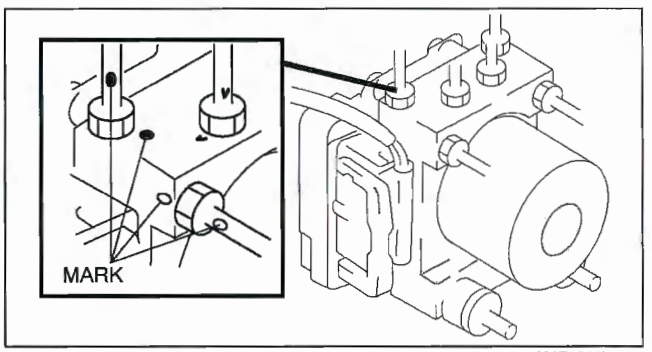
1. Release the lock lever to unlock it.
2. Remove the connector.



YMU413WC8

Brake Pipe Removal Note

1. Mark the brake pipe connecting positions before removal for reference during installation.



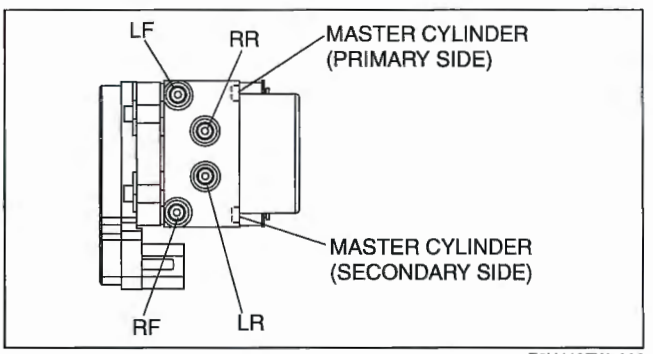
AME6918W006

ABS/TCS HU/CM Removal/Installation Note

1. When removing/installing the ABS/TCS HU/CM from/to the vehicle, attach a strip of protective tape on the ABS/TCS HU/CM connector to prevent brake fluid from entering.

Brake Pipe Installation Note

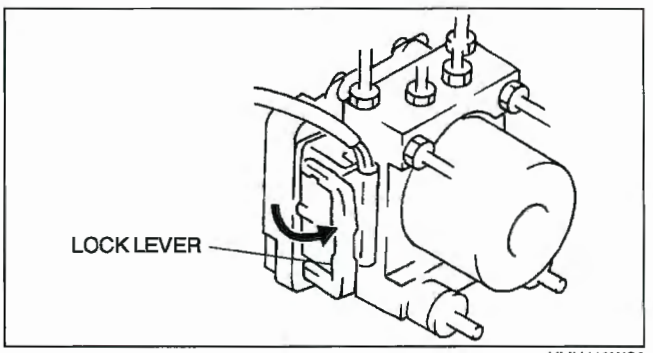
1. When installing the brake pipe, align the marks made before removal with the ABS/TCS HU/CM as shown in the figure.



E6U413ZW5003

Connector Installation Note

1. Verify that the lock lever of the harness connector is securely locked.

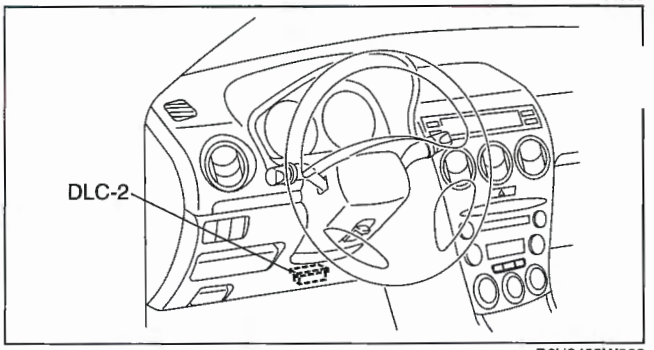


YMU413WC9

ABS/TCS HU/CM CONFIGURATION

1. Connect the WDS or equivalent to the DLC-2.
2. Input vehicle information following the directions on the WDS or equivalent screen.
3. Select "MODULE PROGRAMMING".
4. Select "PROGRAMMABLE MODULE INSTALLATION".
5. Select "ABS/TCS".
6. Retrieve DTCs using the WDS or equivalent, then verify that there is no DTC present.
   - If any DTC is present, perform applicable DTC inspection.

E6U041343780W03



B6U0402W002

ABS/TCS HU/CM INSPECTION

E6U041367650W01

1. Disconnect the ABS/TCS HU/CM connector.
2. Connect the negative battery cable.
3. Attach the tester lead to the ABS/TCS HU/CM wiring harness-side connector, then inspect the voltage, continuity, or resistance according to the standard (reference) on the table.

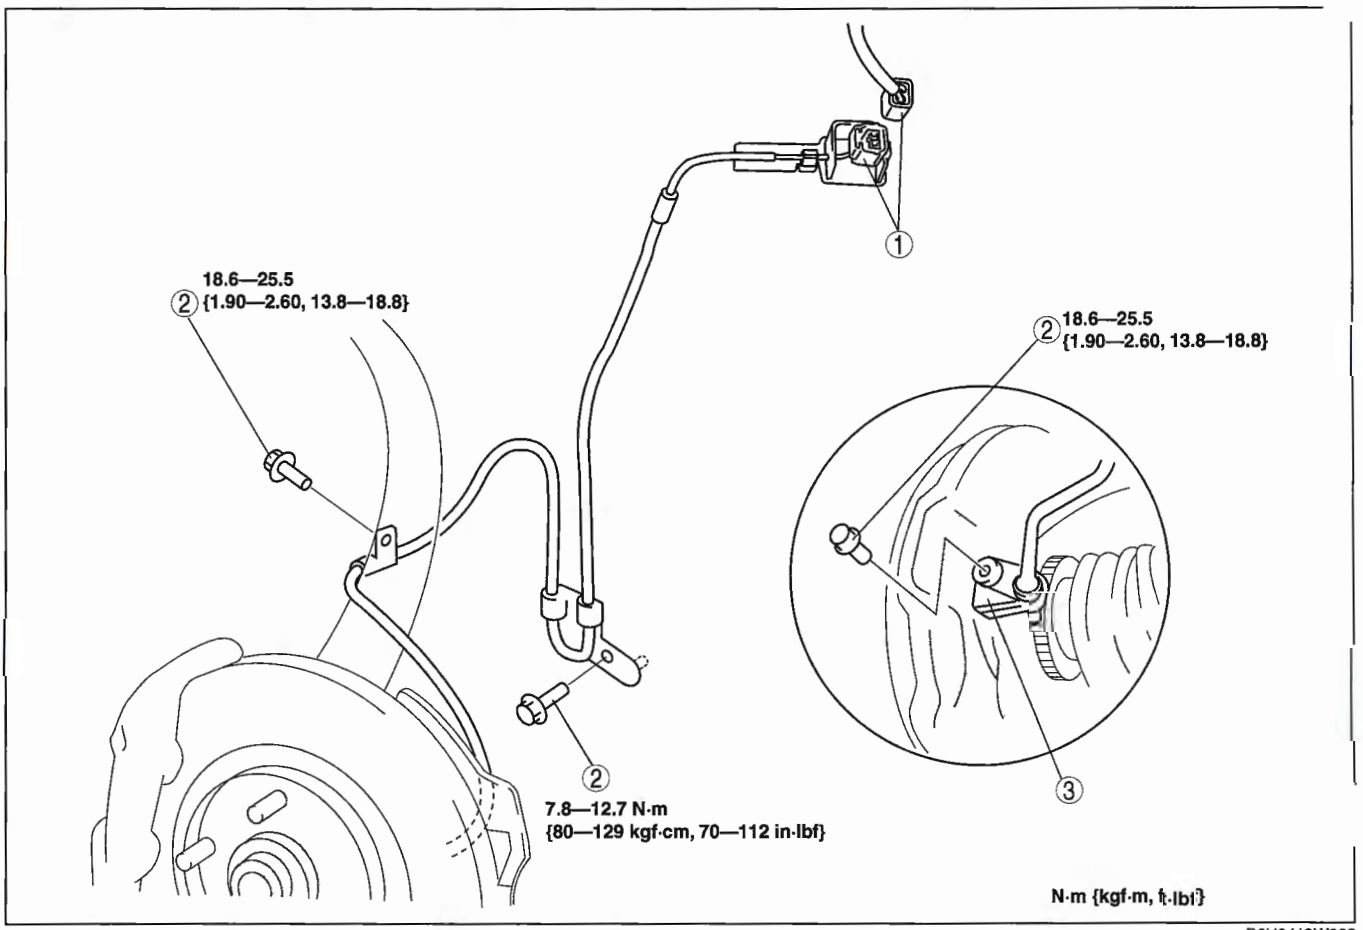
FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

E6U041343720W01

1. Remove the mudguard.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



B6U0413W002

1	Connector
2	Bolts
3	Front ABS wheel-speed sensor

FRONT/REAR ABS WHEEL-SPEED SENSOR INSPECTION

E6U041343720W02

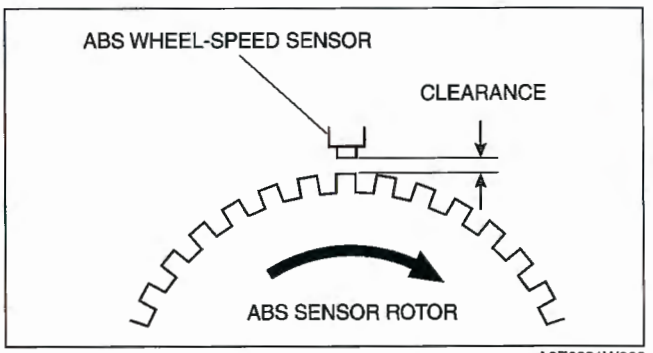
Visual Inspection

1. Remove the wheel and tire, and inspect the sensor for looseness and damage. Replace the sensor if necessary.

Clearance Inspection

1. Inspect the clearance between the wheel-speed sensor and the sensor rotor.

Clearance
0.3—1.1 mm {0.012—0.043 in}



A6E6921W003

Resistance Inspection

1. Disconnect the ABS wheel-speed sensor connector.
2. Inspect the resistance at the ABS wheel-speed sensor.
   - If not as specified, replace the ABS wheel-speed sensor.

Resistance
1.3—1.7 kilohm

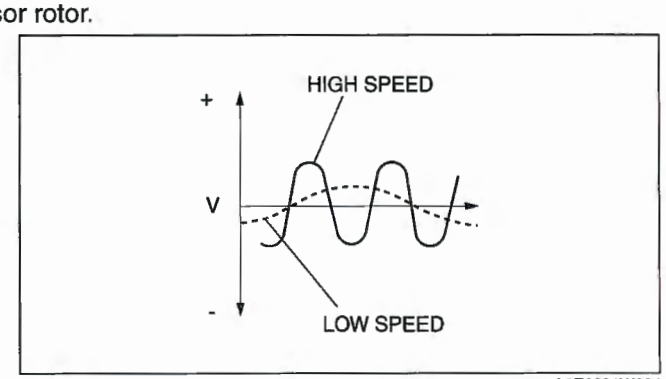
Voltage Inspection

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Disconnect the ABS wheel-speed sensor connector.
3. Inspect each sensor by rotating each wheel one revolution per second.
   - If not as specified, replace the ABS wheel-speed sensor.

Voltage
0.25—1.2 V (AC)

Voltage Pattern Inspection

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Disconnect the ABS wheel-speed sensor connector.
3. Using an oscilloscope, inspect the voltage pattern for distortion and noise by rotating each wheel.
   - If there is distortion or noise, inspect the ABS sensor rotor.



A6E6921W004

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

E6U041343710W01

1. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.

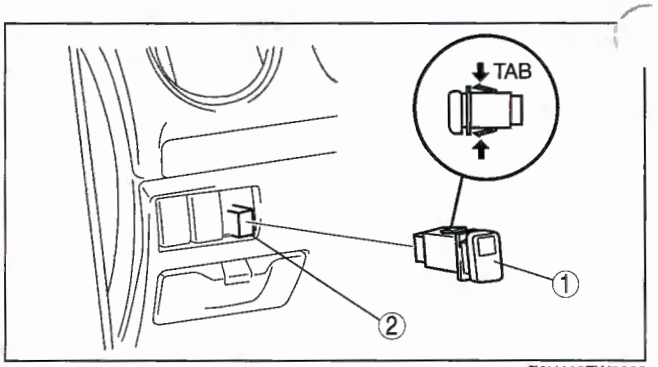
2	Connector

3. Install in the reverse order of removal.



E6U413ZW5002

TCS Off Switch Removal Note

1. Insert your hand from the lower side of the dashboard and squeeze the tabs of the TCS off switch.
2. Pull the TCS off switch forward to remove it.

TCS OFF SWITCH INSPECTION

E6U041466400W02

1. Remove the TCS OFF switch.
2. Inspect for continuity between the TCS OFF switch terminals using an ohmmeter.
   - If not as specified, replace the TCS OFF switch.

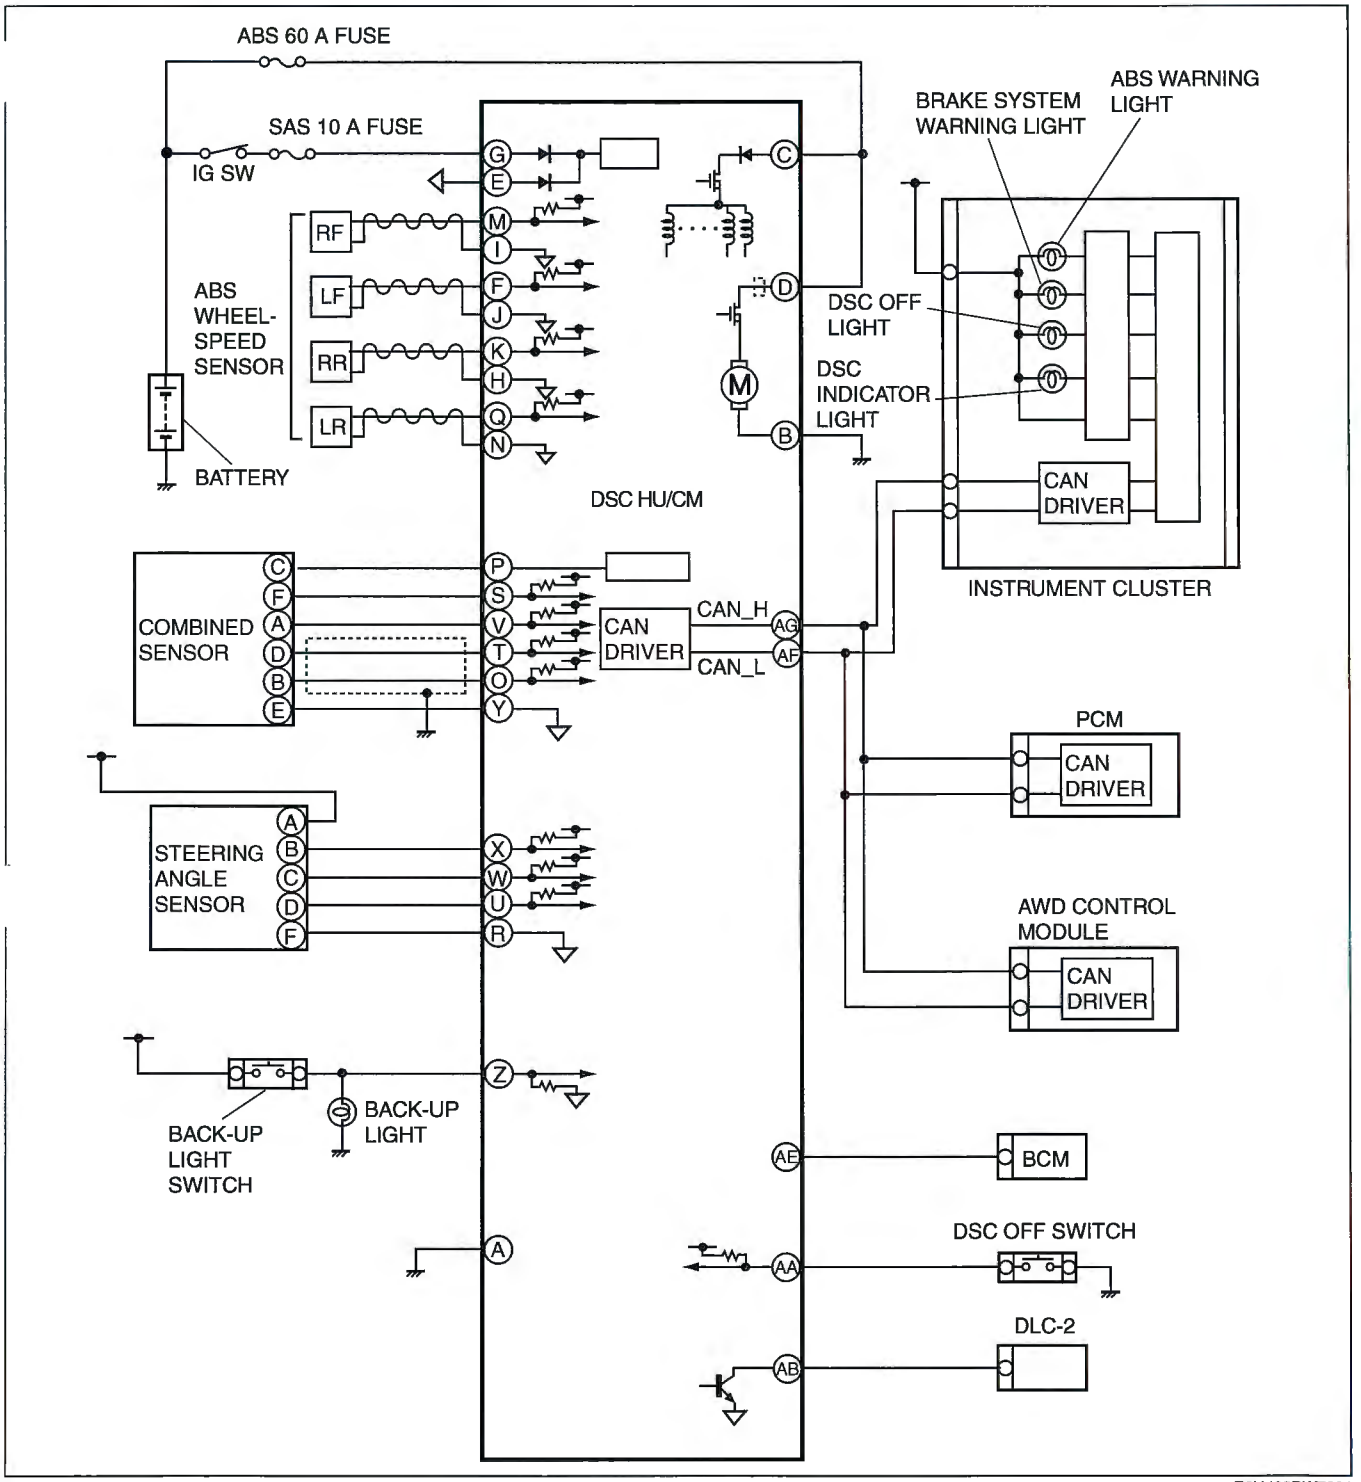
DSC SYSTEM WIRING DIAGRAM

E6U041500000W02



E6U402BW7001

DSC SYSTEM INSPECTION

E6U041500000W03

Preparation

1. Verify that the battery is fully charged.
2. With ignition switch on, verify that the ABS warning light goes out after **2.4 s.**
3. Turn the ignition switch off.
4. On level ground, jack up the vehicle and support it evenly on safety stands.
5. Shift the transaxle to N position.
6. Release the parking brake.
7. Rotate the wheels by hand, and inspect for brake drag.

Operation of DSC Inspection

1. Perform the "Preparation."
2. Connect WDS or equivalent to the DLC-2.
3. Set up an active command modes inspection according to the combination of commands below.

Note

- When working with two people, one should press on the brake pedal, the other should attempt to rotate the wheel being inspected.

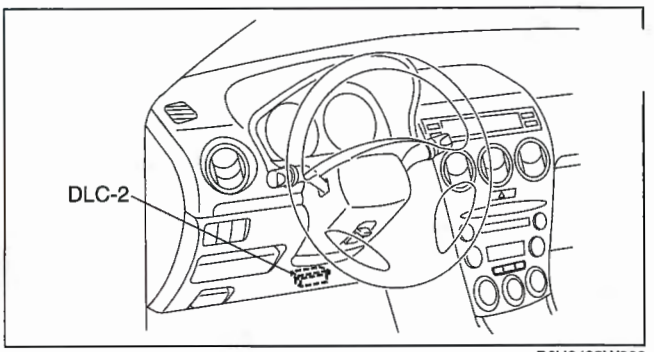
Note

- To protect the DSC HU/CM, the solenoid valve used for simulations and the ABS motor stay on for **10 s** each time they are switched on.

4. Send the command while pressing on the brake pedal and attempting to rotate the wheel being inspected.
5. When pressure is being maintained, and a click sound indicating the solenoid is operating comes from the DSC HU/CM, confirm that the wheel does not rotate. When pressure is being reduced, and a click sound indicating the solenoid is operating comes from DSC HU/CM, confirm that the wheel rotates, even though the brake pedal is being depressed.
   - Performing the inspections above determines the following.
     - — The DSC HU/CM brake lines are normal
     - — The DSC HU/CM hydraulic system is not significantly abnormal
     - — The DSC HU/CM wiring is normal
     - — Output system harness in DSC HU/CM (solenoid, relay) are normal
   - However, the following items cannot be checked.
     - — The DSC HU/CM input system harness and parts
     - — Extremely small leaks in the DSC HU/CM internal hydraulic system
     - — Unusual intermittent occurrences in the above items

DSC Control Inspection

1. Perform the "Preparation."
2. Connect WDS or equivalent to the DLC-2.
3. Set up an active command modes inspection according to the combination of commands below.



B6U0402W002

DSC HU/CM REMOVAL/INSTALLATION

E6U041543750W02

Caution

- **When replacing the DSC HU/CM, configuration procedure must be done before removing the DSC HU/CM. If configuration is not completed before removing the DSC HU/CM, DTC B2477 will be detected.**
- **The internal parts of the DSC HU/CM could be damaged if dropped. Be careful not to drop the DSC HU/CM. Replace the DSC HU/CM if it is subjected to an impact.**

1. Configurate the DSC HU/CM (only when replacing it). (See 04–15–9 DSC HU/CM CONFIGURATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. Perform the initialization procedures for the combined sensor. (See 04–15–14 COMBINED SENSOR INITIALIZATION PROCEDURE.)

FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

E6U041543720W01

1. Remove or install the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04–13–8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)

FRONT/REAR ABS WHEEL-SPEED SENSOR INSPECTION

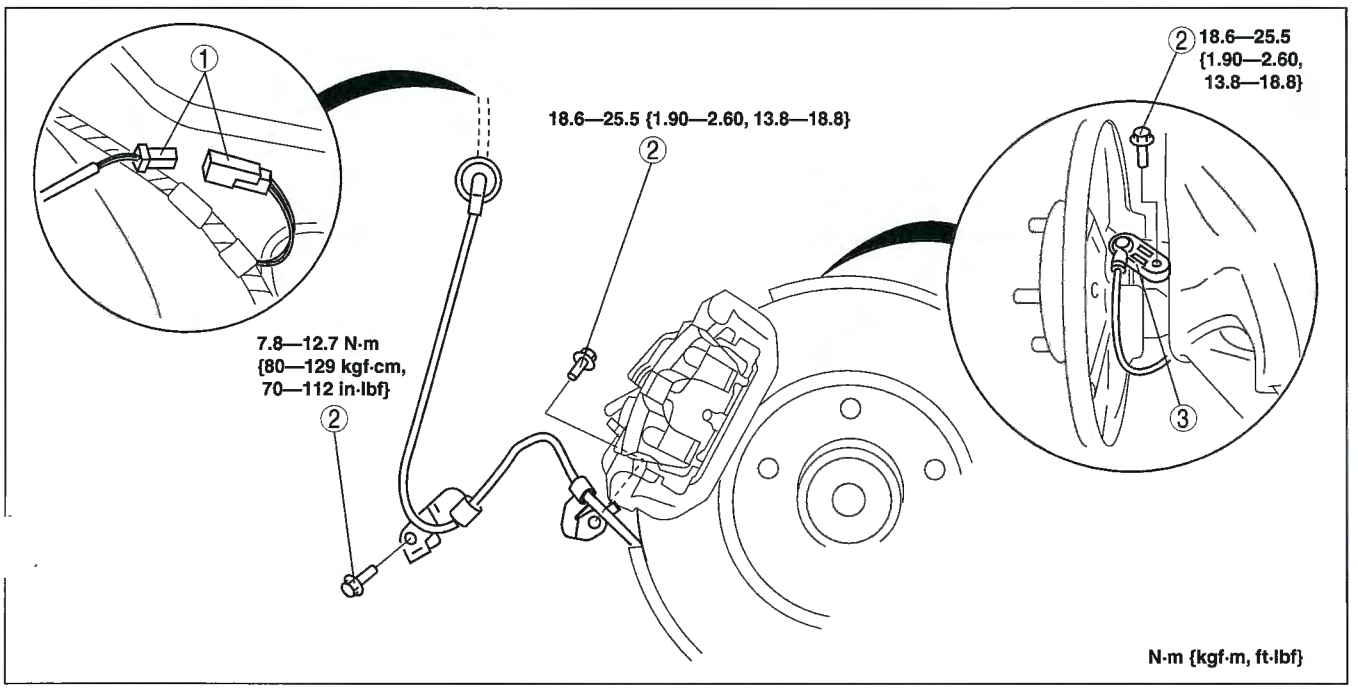
E6U041543720W02

1. Inspect the front ABS wheel-speed sensor in the same order of vehicles with ABS. (See 04–13–9 FRONT/REAR ABS WHEEL-SPEED SENSOR INSPECTION.)

REAR ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION

E6U041543710W01

1. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



E6U415ZW7002

1	Connector
2	Bolt

3	Rear ABS wheel-speed sensor

COMBINED SENSOR REMOVAL/INSTALLATION

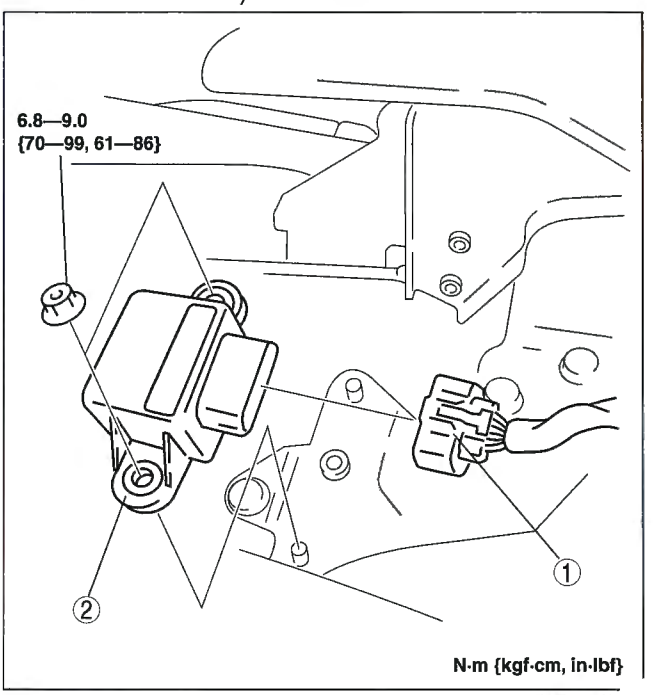
E6U041543773W01

Caution
- **The internal parts of the combined sensor could be damaged if dropped. Be careful not to drop th combined sensor. Replace the combined sensor if it is subjected to an impact. Also, do not use a impact wrench or other similar air tools when removing/installing the sensor.**

1. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Combined sensor connector
2	Combined sensor

3. Install in the reverse order of removal.
4. After installation, perform the combined sensor initialization procedure. (See 04–15–14 COMBINED SENSOR INITIALIZATION PROCEDURE.)



A6E6920W

COMBINED SENSOR INSPECTION

E6U041543773W02

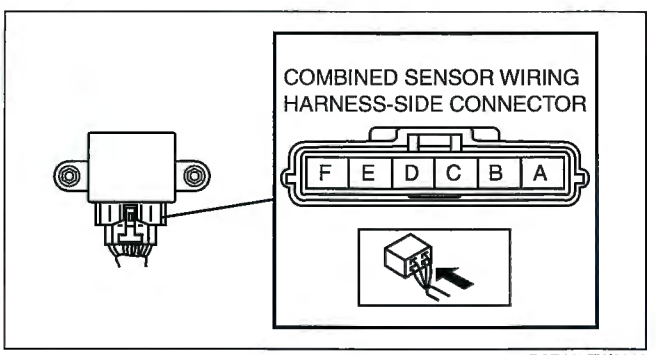
Caution
- **The internal parts of the combined sensor could be damaged if dropped. Be careful not to drop the combined sensor. Replace the combined sensor if it is subjected to an impact. Also, do not use an impact wrench or other similar air tools when removing/installing the sensor.**

Lateral-G Sensor Inspection

1. Connect the connector.
2. Turn ignition switch on, verify the voltage between terminals B and ground terminal E under the following conditions.
   - If not within the specification, replace the combined sensor.

   (1) Horizontal

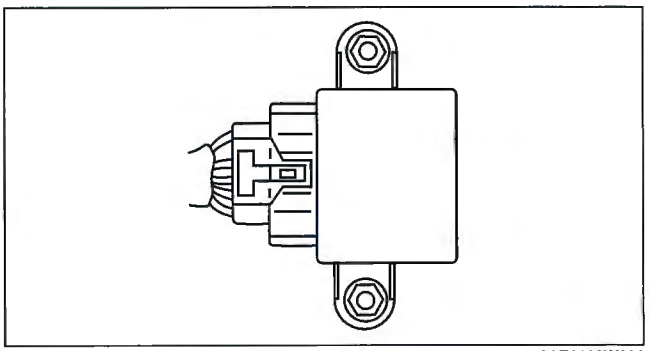
Voltage
2.4—2.6 V



D6E415ZW3010

(2) Facing up (inclined **90°** from horizontal)

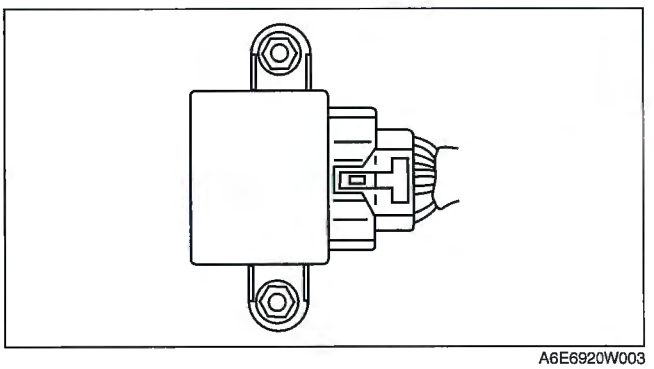
Voltage
3.3—3.7 V



A6E6920W002

(3) Facing down (declined **90°** from horizontal)

Voltage
1.3—1.7 V

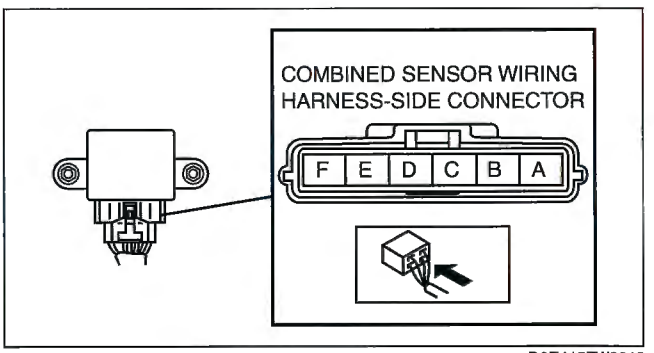


A6E6920W003

Yaw Late Sensor Inspection

1. Connect the connector.
2. Turn ignition switch on, verify the voltage between terminals D and ground terminal E under the following conditions.
   (1) Measure combined sensor voltage under static condition.

Voltage
2.3—2.7 V

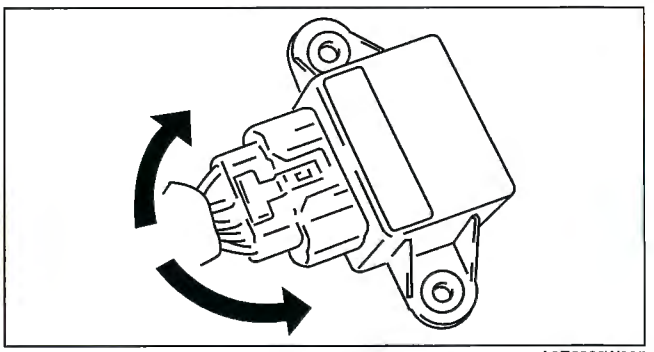


D6E415ZW3010

(2) Measure voltage at output terminal D and ground terminal E when the combined sensor is rotated left and right.

Caution
- **Be careful when turning the combined sensor rotation position while it is in a reversed state because the rotation direction and voltage will be reversed.**

Voltage
Right rotation: fluctuation between 2.5—4.62 V
Left rotation: fluctuation between 2.5—0.33 V

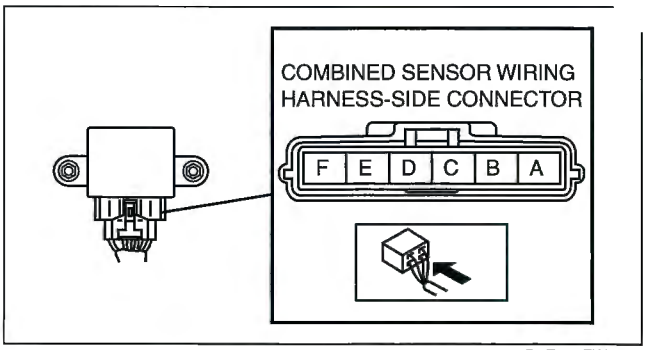


A6E6920W005

Forward-G Sensor Inspection

1. Connect the connector.
2. Turn ignition switch on, verify the voltage between terminals A and ground terminal E under the following conditions.
   (1) Horizontal

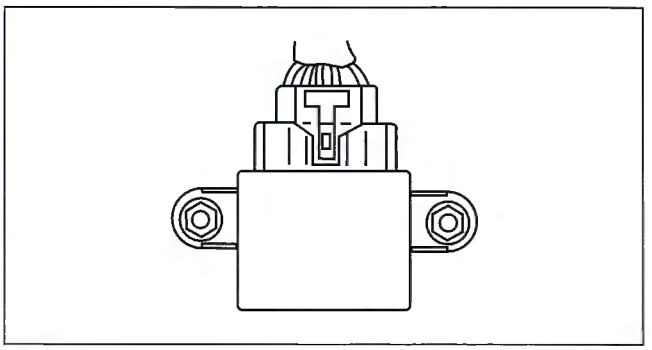
Voltage
2.2—2.8 V



D6E415ZW3010

(2) Acceleration (inclined **90°** from horizontal)

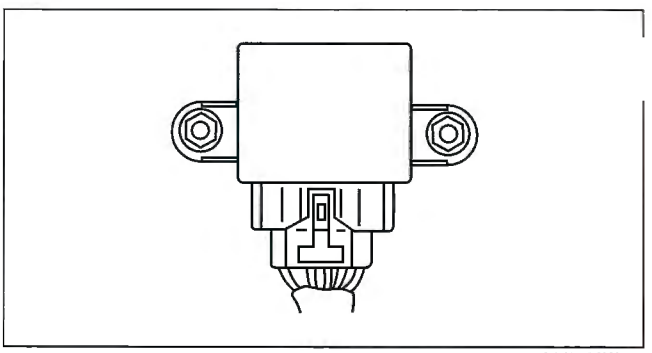
Voltage
3.1—3.9 V



A6J6920W104

(3) Deceleration (decline **90°** from horizontal)

Voltage
1.2—1.8 V

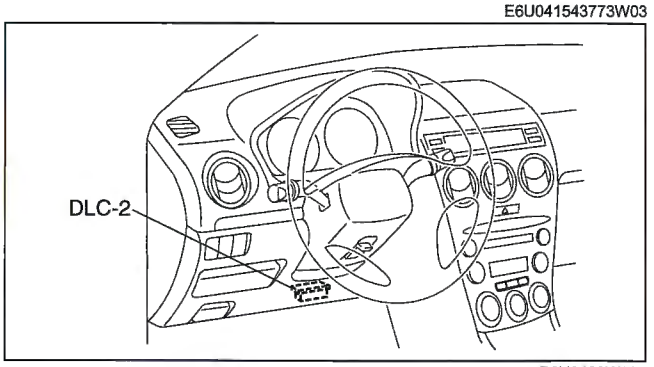


A6J6920W103

COMBINED SENSOR INITIALIZATION PROCEDURE

1. Set the WDS or equivalent to the DLC-2.
2. Access the active command mode and select the YAWRATE, then follow the indication on the monitor.
3. Select the LATACCEL and follow the indication on the monitor.

E6U041543773W03



B6U0402W002

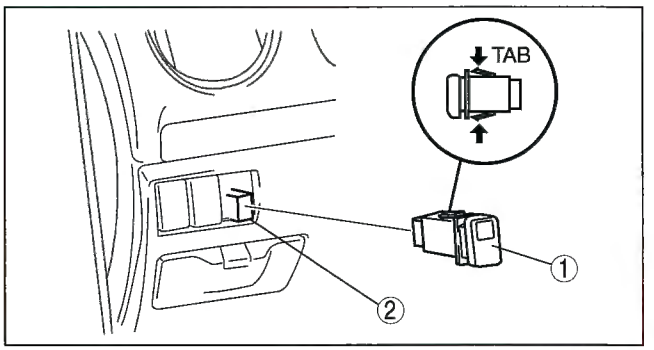
DSC OFF SWITCH REMOVAL/INSTALLATION

E6U041566410W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	DSC OFF switch (See 04–15–15 DSC OFF Switch Removal Note)
2	Connector

3. Install in the reverse order of removal.



E6U413ZW5002

DSC OFF Switch Removal Note

1. Insert your hand from the lower side of the dashboard and squeeze the tabs of the DSC OFF switch.
2. Pull the DSC OFF switch forward to remove it.

DSC OFF SWITCH INSPECTION

E6U041566410W02

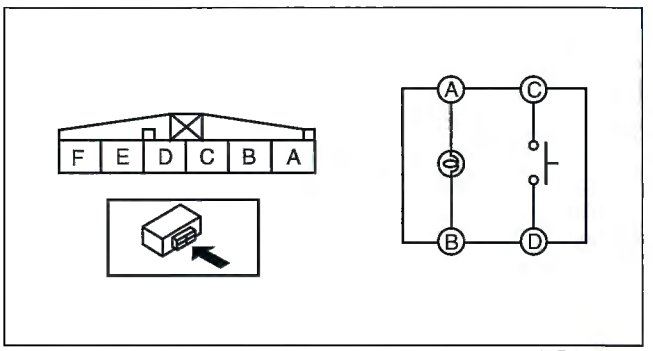
1. Remove the DSC OFF switch.
2. Inspect for continuity between the DSC OFF switch terminals using an ohmmeter.

○-⊗-○ : Bulb ○—○: Continuity

Condition	Terminal			
	A	B	C	D
When the switch is pressed	○—⊗—○		○—○	
When the switch is released	○—⊗—○			

A6E6921W010

- If not within the specification, replace the DSC OFF switch.



A6E6921W009

04–50 TECHNICAL DATA

BRAKES TECHNICAL DATA 04–50–1

BRAKES TECHNICAL DATA

E6U045000000W01

Item	Specification
Brake fluid type	SAE J1703, FMVSS 116 DOT-3
Brake pedal height (reference value)	187 mm {7.36 in}
Brake pedal play	0—3 mm {0—0.1 in}
Brake pedal-to-floor clearance (Brake pedal when depressed at 147 N {15.0 kgf, 33 lbf})	68 mm {2.7 in} min.
Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf, 44 lbf}	At 0 kPa {0 mmHg, 0 inHg}: 590 kPa {6.02 kgf/cm^2, 85.6 psi}
Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf, 44 lbf}	At 66.7 kPa {500 mmHg, 19.7 inHg}: 8,780 kPa {89.53 kgf/cm^2, 1,273 psi}
Dual proportioning valve fluid pressure (without ABS (ABS/TCS) or DSC)	Rear brake fluid pressure when front brake fluid pressure at 2,450 kPa {24.98 kgf/cm^2, 355.3 psi}: 2,250 kPa {22.95 kgf/cm^2, 326.4 psi} — 2,650 kPa {27.02 kgf/cm^2, 384.3 psi} Rear brake fluid pressure when front brake fluid pressure at 5,880 kPa {60 kgf/cm^2, 853 psi}: 3,180 kPa {32.43 kgf/cm^2, 461.3 psi}—3,780 kPa {38.54 kgf/cm^2, 548.2 psi}
Front disc plate runout limit	0.05 mm {0.002 in}
Minimum front disc plate thickness	23 mm {0.91 in}
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	23.8 mm {0.94 in}
Minimum front disc pad thickness	L3, AJ: 2.0 mm {0.079 in} min. L3 WITH TC: 1.5 mm {0.059 in} min.
Rear disc plate runout limit	0.05 mm {0.002 in}
Minimum rear disc plate thickness	L3, AJ: 8 mm {0.31 in} L3 WITH TC: 9 mm {0.35 in}
Minimum rear disc plate thickness after machining using a brake lathe on-vehicle	L3, AJ: 8.8 mm {0.35 in} L3 WITH TC: 9.8 mm {0.39 in}
Minimum rear disc pad thickness	2.0 mm {0.079 in} min.
Parking brake lever stroke when pulled at 98 N {10 kgf, 22 lbf}	2—5 notches

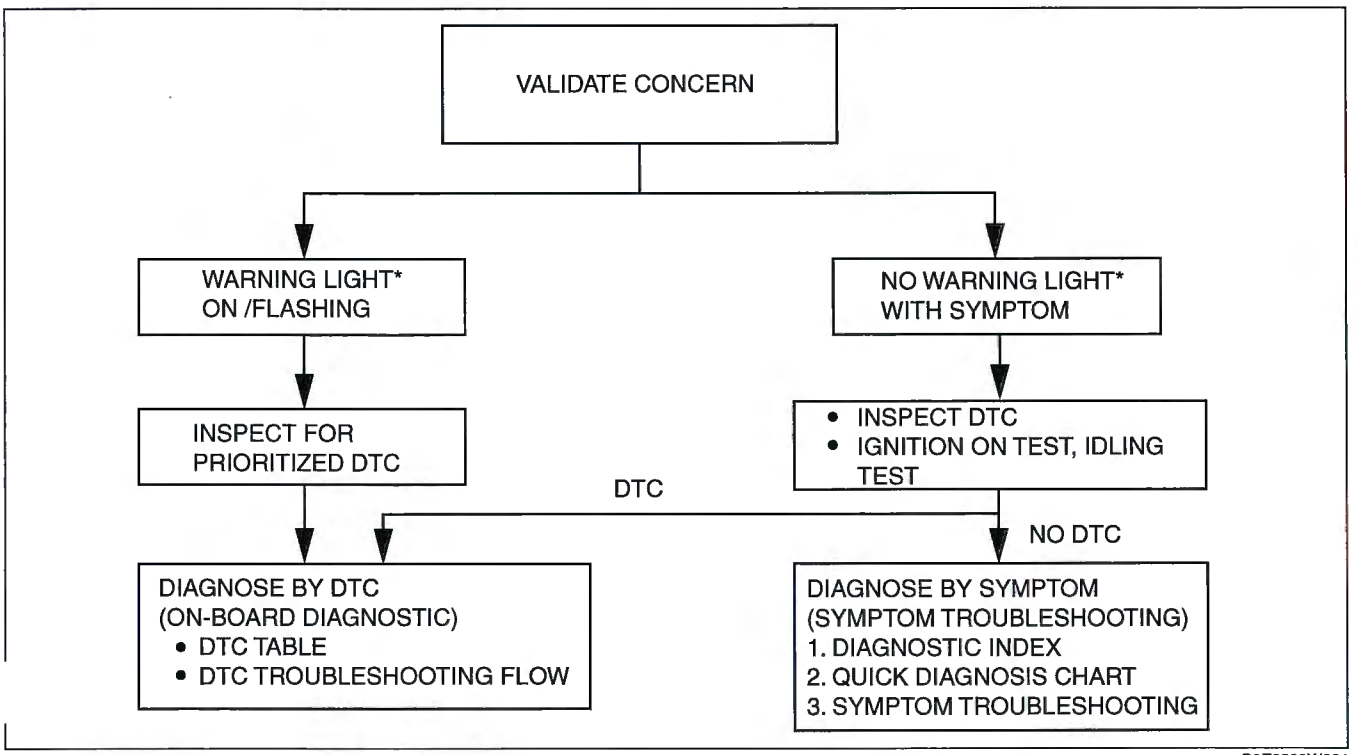
FOREWORD [FS5A-EL]

E6U050200000W58

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL), AT warning light indication, and TCM memory for diagnostic trouble code (DTC), then diagnose the malfunction according to the following flowchart.
  - — If a DTC exists, diagnose the applicable DTC. (See 05–02A–8 DTC TABLE [FS5A-EL].)
  - — If no DTC exists, the MIL does not illuminate, and AT warning light does not illuminate. Diagnose the applicable symptom troubleshooting. (See 05–03A–5 SYMPTOM TROUBLESHOOTING ITEM TABLE [FS5A-EL].)



B3E0502W001

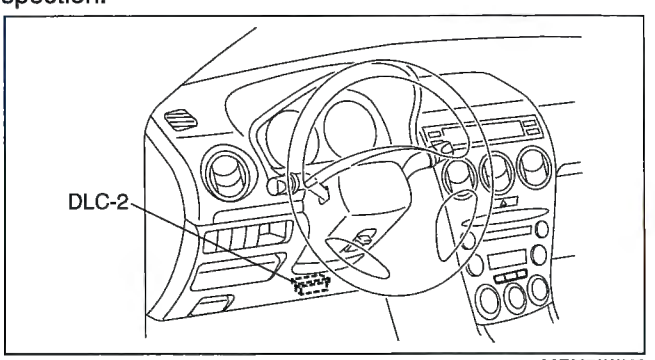
*: Malfunction indicator lamp (MIL), AT warning light

AUTOMATIC TRANSAXLE ON-BOARD DIAGNOSTIC FUNCTION [FS5A-EL]

E6U050200000W59

DTC Reading Procedure

1. Perform the necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located at the left side of the dashboard.
3. Retrieve DTCs using the WDS or equivalent.



A6E3970W002

AFTER REPAIR PROCEDURE [FS5A-EL]

E6U050200000W60

Caution

- **After repairing a malfunction, perform the following procedure to verify that the malfunction has been corrected.**
- **When performing this procedure, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the WDS or equivalent to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).
3. Verify that DTCs are cleared from memory.
4. Perform the following DTC inspections to ensure that the DTCs have been resolved:

DTC No.	inspection
P0706, P0707, P0708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range at **20 km/h {12.4 mph} or more** for **100 s or more**. vii. Go to Step 5.
P0711	i. Start the engine then wait **180 s or more**. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. iv. Drive the vehicle in D range, at **60 km/h {37 mph}** for **60 s or more**. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Drive the vehicle in D range, at **within 25—59 km/h {16—36 mph}** for **90 s or more**. viii. Drive the vehicle in D range, at **60 km/h {37 mph} or more** for **60 s or more**. ix. Go to Step 5.
P0712, P0713	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **150 s or more**. iv. Go to Step 5.
P0715	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range, at **41 km/h {25 mph} or more** for **0.7 s or more**. iv. Go to Step 5.
P0720	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **4.5 s or more**. • Turbine speed (TSS PID): **1,500 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 5.
P0731	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 1GR • Throttle opening angle (THOP PID): **4.14% or more** iv. Go to Step 5.
P0732	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 3 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 2GR iv. Go to Step 5.
P0733	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 3GR iv. Go to Step 5.

DTC No.	inspection
J734	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D or M range, 4GR iv. Go to Step 5.
P0735	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D or M range, from 1GR to 5GR iv. Go to Step 5.
P0741	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Go to Step 5.
P0742	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Go to Step 5.
P0744, P0753, P0758, P0763, P0768, P0773, P0778, P0841, P1783, P2709	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR and TCC is operated. vii. Go to Step 5.
P0745	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range. iv. Go to Step 5.
P0751	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **15 s or more.** • Vehicle speed (VSS PID): **36 km/h {22 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 5.
J752	i. Start the engine. ii. Warm up the engine and ATX. iii. Selector lever position: D range iv. Depress the brake pedal. v. Turn the ignition switch to the LOCK position. vi. Start the engine. vii. Selector lever position: D range viii. Depress the brake pedal. ix. Go to Step 5.

DTC No.	inspection
P0756	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR vii. Go to Step 5.
P0757, P0766	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle at closed throttle position • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 2GR and 4GR vii. Go to Step 5.
P0761	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 1GR and 2GR vii. Go to Step 5.
P0762	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Turbine speed (TSS PID): **225—4,987 rpm** • Differential gear case (output) revolution speed (OSS PID): **35 rpm or more** • Selector lever position: D range, 3GR vii. Go to Step 5.

DTC No.	inspection
P0767	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more.** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 3GR vii. Go to Step 5.
P0771	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions for **5 s or more**. • Vehicle speed (VSS PID): **60—100 km/h {38—62 mph}** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR vii. Go to Step 5.
P0772	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions. • Vehicle speed (VSS PID): **70 km/h {43 mph} or less** • Turbine speed (TSS PID): **225—4,987 rpm** • Selector lever position: D range, 4GR • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. vii. Go to Step 5.
P0777	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 5GR vii. Go to Step 5.
P0791	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle in D range at **40 km/h {25 mph} or more** for **4.5 s or more.** iv. Go to Step 5.

DTC No.	inspection
P2707	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 3GR or 4GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 3GR or 4GR vii. Go to Step 5.
P2708	i. Start the engine. ii. Warm up the engine and ATX. iii. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 5GR iv. Turn the ignition switch to the LOCK position. v. Start the engine. vi. Drive the vehicle under the following conditions 4 times or more. • Turbine speed (TSS PID): **225—4,987 rpm** • Throttle opening angle (THOP PID): **4.14% or more** • Selector lever position: D range, 5GR vii. Go to Step 5.
P0894	i. Start the engine. ii. Warm up the engine and ATX. iii. Depress the brake pedal. iv. Throttle opening angle at closed throttle position. v. Shift the selector lever from the N position to the D range and hold for **3 s or more**. vi. Go to Step 6.

5. Gradually slow down and stop the vehicle.
6. Make sure that the repaired DTC does not recur.

DTC TABLE [FS5A-EL]

E6U050200000W61

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0706	Transaxle range (TR) switch circuit range/ performance	ON	YES	2	CCM	X	(See 05–02A–11 DTC P0706 [FS5A-EL].)
P0707	Transaxle range (TR) switch circuit low input	ON	YES	1	CCM	X	(See 05–02A–12 DTC P0707 [FS5A-EL].)
P0708	Transaxle range (TR) switch circuit high input	ON	YES	2	CCM	X	(See 05–02A–14 DTC P0708 [FS5A-EL].)
P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)	ON	NO	2	CCM	X	(See 05–02A–16 DTC P0711 [FS5A-EL].)
P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)	ON	YES	1	CCM	X	(See 05–02A–17 DTC P0712 [FS5A-EL].)
P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)	ON	YES	1	CCM	X	(See 05–02A–19 DTC P0713 [FS5A-EL].)
P0715	Input/turbine speed sensor circuit malfunction	ON	YES	1	CCM	X	(See 05–02A–21 DTC P0715 [FS5A-EL].)
P0720	Vehicle speed sensor (VSS) circuit malfunction	ON	YES	1	CCM	X	(See 05–02A–23 DTC P0720 [FS5A-EL].)

DTC No.	Condition	MIL	AT warning light illuminates	DC	Monitor item	Memory function	Page
P0731	Gear 1 incorrect (incorrect gear ratio detected)	OFF	YES	1	CCM	X	(See 05–02A–25 DTC P0731 [FS5A-EL].)

DTC P0706 [FS5A-EL]

E6U050200000W62

DTC P0706	Transaxle range (TR) switch range/performance
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Engine speed **530 rpm or more** — Vehicle speed **20 km/h {12 mph} or more** — Voltage at TCM terminal 2H **0.5 V or more** — P, R, N, or D range/position not detected **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TR switch misadjustment • TCM malfunction

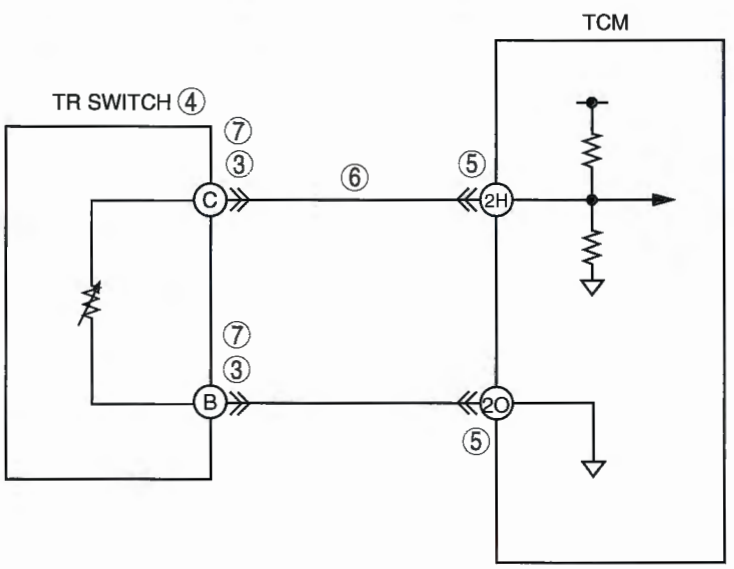
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)	Yes	Adjust the TR switch, then go to the next step. (See 05–17A–17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)
		No	Replace the TR switch, then go to the next step. (See 05–17A–14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
4	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in each range (D and R) for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

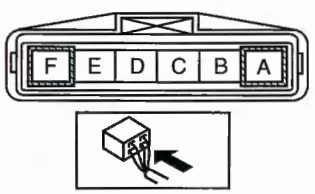
DTC P0707 [FS5A-EL]

E6U050200000W63

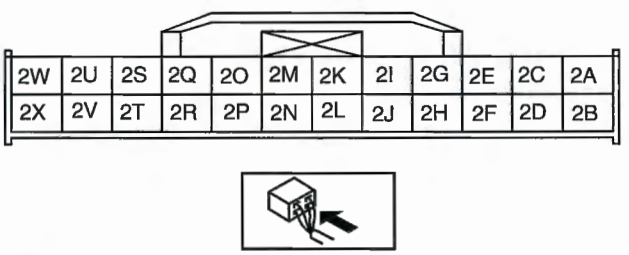
DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal 2H **0.5 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Short to ground in wiring harness between TR switch terminal C and TCM terminal 2H • TR switch signal and TR switch ground circuits shorted each other • TCM malfunction



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



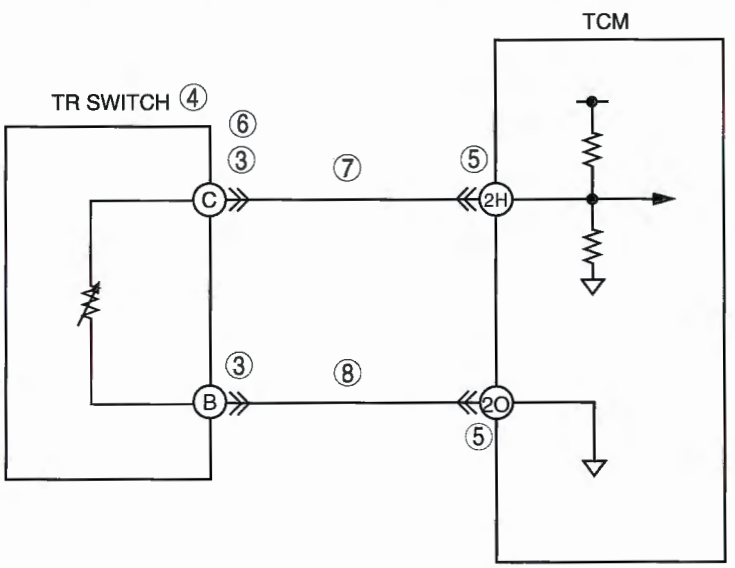
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection at TR switch terminals B and C (part-side) (such as damaged/pulled-out pins, corrosion) • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 8. (See 05–17A–14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
4	**INSPECT TR SWITCH** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 8. (See 05–17A–14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals 2H and 2O (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 8.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TR switch terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness for short to ground, then go to Step 8.
		No	Go to the next step.
7	**INSPECT TR SWITCH CIRCUIT FOR SHORT CIRCUIT** • Inspect for continuity between TR switch terminals B and C (wiring harness-side). • Is there continuity?	Yes	Repair or replace the wiring harness for short circuit, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID): **530 rpm or more** — Vehicle speed (VSS PID): **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

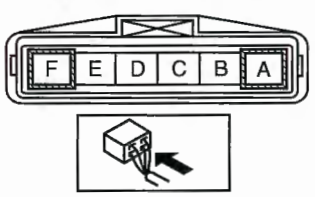
DTC P0708 [FS5A-EL]

E6U050200000W64

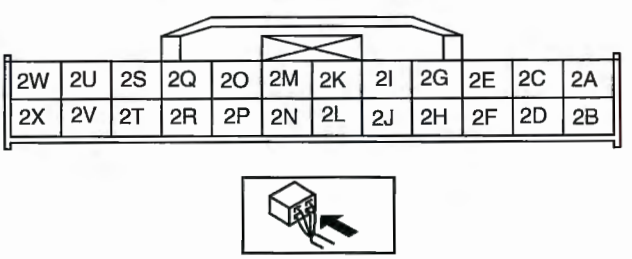
DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• When all conditions below are satisfied and **100 s or more** have passed. — Vehicle speed **20 km/h {12 mph} or more** — Engine speed **530 rpm or more** — Voltage at TCM terminal 2H **4.79 V or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • Open circuit in wiring harness between TR switch terminal C and TCM terminal 2H • Short to power supply in wiring harness between TR switch terminal C and TCM terminal 2H • Open circuit in wiring harness between TR switch terminal B and TCM terminal 2O • Poor connection of TR switch or TCM connectors • TCM malfunction



TR SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TR SWITCH CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TR switch connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are TR switch terminals normal?	Yes	Go to the next step.
		No	Repair terminals or replace the TR switch, then go to Step 9. (See 05–17A–14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
4	**INSPECT TR SWITCH** • Inspect for resistance between TR switch terminals B and C (part-side). • Is the resistance normal? (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)	Yes	Go to the next step.
		No	Replace the TR switch, then go to Step 9. (See 05–17A–14 TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection at terminals 2H and 2O (such as damaged/pulled-out pins, corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to step 9.
		No	Go to the next step.
6	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between TR switch terminal C and (wiring harness-side) body ground. • Is the voltage **B+**?	Yes	Repair or replace the wiring harness for short to power supply, then go to Step 9.
		No	Go to the next step.
7	**INSPECT TR SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal C (wiring harness-side) and TCM terminal 2H. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to step 9.
8	**INSPECT TR SWITCH GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TR switch terminal B (wiring harness-side) and TCM terminal 2O. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for open circuit, then go to the next step.
9	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle for **100 s or more** under the following conditions: — Engine speed (RPM PID) **530 rpm or more** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
0	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0711 [FS5A-EL]

E6U050200000W65

DTC P0711	Transaxle fluid temperature (TFT) sensor circuit range/performance (stuck)
DETECTION CONDITION	• When all conditions below are satisfied. — When **180 s** have passed after the engine is started, vehicle is driven for **90 s or more** at vehicle spee **between 25—59 km/h {15—36 mph}**, then **60 km/h {37 mph} or more** for **60 s or more.** — P0712, P0713 not output — Variation in ATF voltage **0.03 V or less** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light does not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Connector corrosion • TCM malfunction

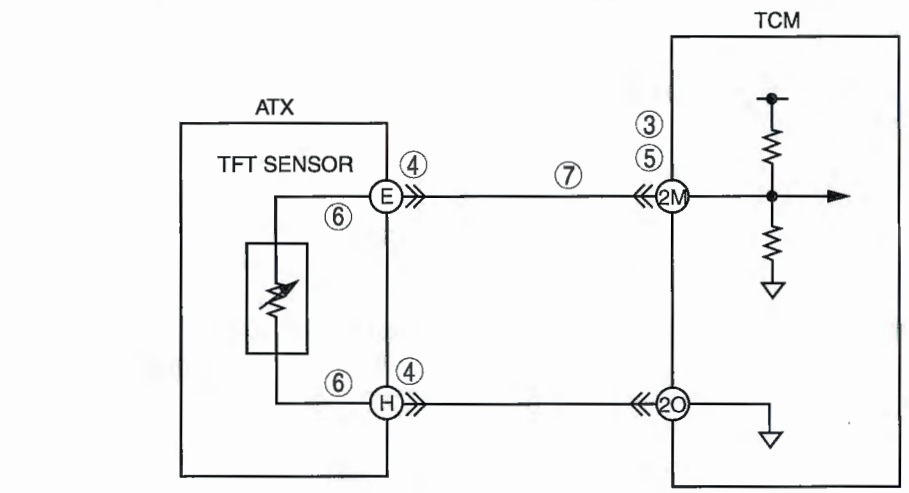
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TFT SENSOR VOLTAGE** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal 2M. • Record terminal 2M voltage. • Start the engine. • Drive the vehicle at **60 km/h {37 mph} or more** for **330 s or more.** • Record terminal 2M voltage again. • Is the variation in voltage **0.03 V or more**?	Yes	Go to Step 5.
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect terminals for corrosion. • Are terminals normal?	Yes	Go to the next step.
		No	Repair or replace the terminals, then go to the next step.
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Decrease ATF temperature to **20 °C {68 °F} or less.** • Start the engine and wait for **180 s or more.** • Drive the vehicle at a vehicle speed **between 25—59 km/h {15—36 mph}** for **90 s or more.** • Drive the vehicle at a vehicle speed **60 km/h {37 mph} or more** for **60 s or more.** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

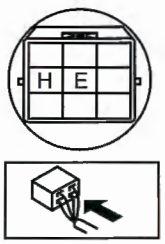
DTC P0712 [FS5A-EL]

E6U050200000W66

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the TCM detects either of the following conditions for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **0.06 V or less** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Short to ground in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Short to ground in wiring harness between transaxle connector (primary) terminal E and TCM terminal 2M • Damaged connectors between TFT sensor and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR

2W	2U	2S	2Q	2O	2M	2K	2I	2G	2E	2C	2A
2X	2V	2T	2R	2P	2N	2L	2J	2H	2F	2D	2B

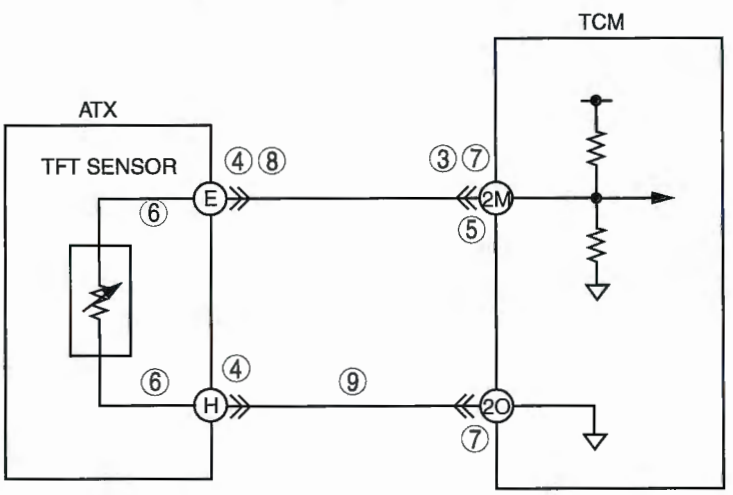
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at TCM terminal 2M. • Is the voltage **0.06 V or more**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
		No	Go to the next step.
4	**INSPECT TERMINAL CONDITION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are the terminals bent?	Yes	Repair or replace the terminals, then go to Step 8. • If the terminals cannot be repaired, replace the wiring harness, then go to Step 8.
		No	Go to the next step.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Verify that the voltage changes to **4.67 V or more** at TCM terminal 2M when transaxle connector (primary) is disconnected. • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 8.
6	**INSPECT TFT SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) and body ground. — E and body ground — H and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Replace the TFT sensor, then go to Step 8. (See 05–17A–20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal E (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following condition for **150 s or more.** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more.** • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

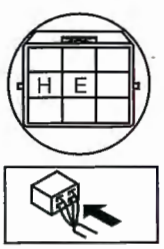
DTC P0713 [FS5A-EL]

E6U050200000W67

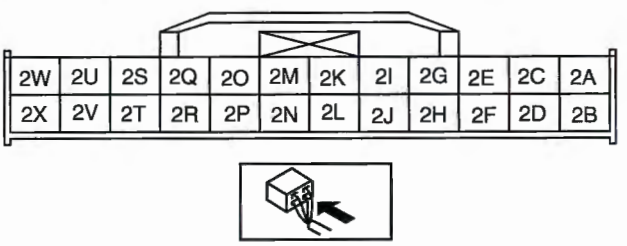
DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (open circuit)
DETECTION CONDITION	• If the TCM detects the following condition for **150 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — TFT sensor voltage **4.67 V or more** and vehicle speed **20 km/h {12 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal E • Open circuit in wiring harness between TFT sensor and transaxle connector (primary) terminal H • Open circuit in wiring harness between transaxle connector (primary) terminal E and TCM terminal 2M • Open circuit in wiring harness between transaxle connector (primary) terminal H and TCM terminal 2O • Damaged connectors between TFT sensor and TCM • TCM malfunction



TRANSAXLE CONNECTOR (PRIMARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

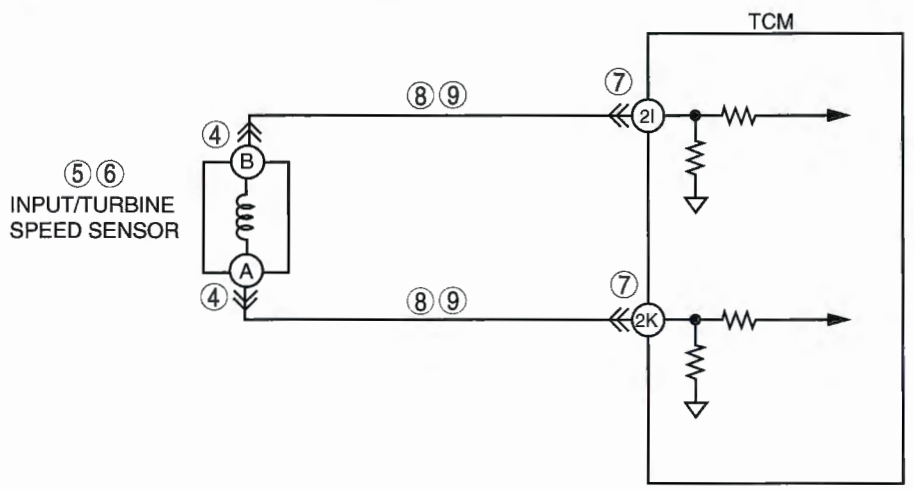
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal 2M. • Is the voltage **4.67 V or less**?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Inspect transaxle connector (primary) connection. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT TFT SENSOR CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Measure the voltage at TCM terminal 2M when connect between transaxle connector (primary) terminals E and H (wiring harness-side) using jumper wire. • Verify that voltage changes to **0.06 V or less.** • Does the voltage change?	Yes	Go to the next step.
		No	Go to Step 7.
6	**INSPECT TFT SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between transaxle connector (primary) terminals (transaxle case side) E and H. • Is there continuity?	Yes	Replace the TFT sensor, then go to Step 10. (See 05–17A–20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
		No	Repair or replace the wiring harness, then go to Step 10.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT WIRING HARNESS FOR OPEN CIRCUIT** • Disconnect the transaxle connector (primary). • Connect the TCM connector. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal E (vehicle wiring harness-side). • Is the voltage **5 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal H (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following condition for **150 s or more.** — Vehicle speed (VSS PID) **20 km/h {12 mph} or more.** • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

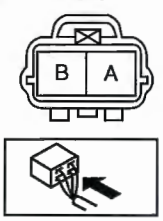
DTC P0715 [FS5A-EL]

E6U050200000W68

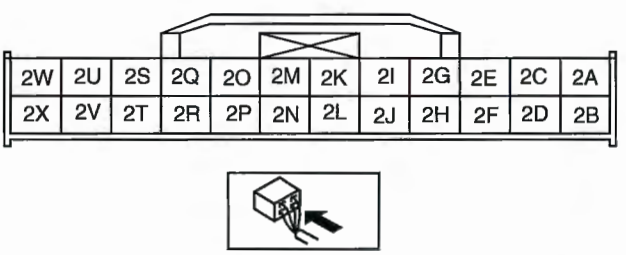
DTC P0715	Input/turbine speed sensor circuit malfunction
DETECTION CONDITION	• When all conditions below are satisfied and **0.7 s or more** have passed. — D range of TR switch input — Driving vehicle at vehicle speed of **41 km/h {25 mph} or more** — Input/turbine speed sensor signal not input **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Short to ground in wiring harness between input/turbine speed sensor terminal A and TCM terminal 2K • Short to ground in wiring harness between input/turbine speed sensor terminal B and TCM terminal 2I • Open circuit in wiring harness between input/turbine speed sensor terminal A and TCM terminal 2K • Open circuit in wiring harness between input/turbine speed sensor terminal B and TCM terminal 2I • Damaged connectors between input/turbine speed sensor and TCM • TCM malfunction



INPUT/TURBINE SPEED SENSOR WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

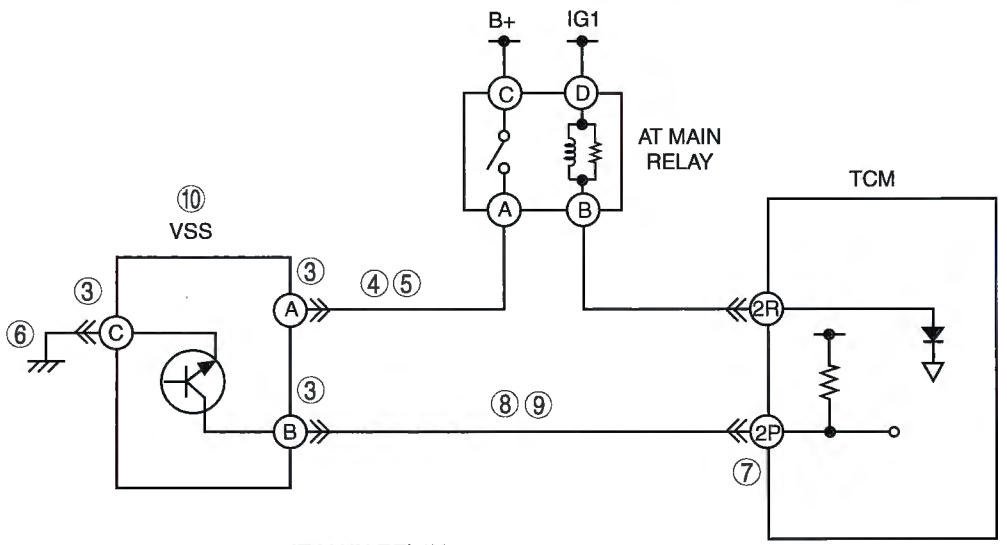
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**VERIFY CURRENT INPUT SIGNAL STATUS** • Turn the ignition switch to the LOCK position. • Start the engine. • Measure the frequency of input/turbine speed sensor using a oscilloscope. — IG ON: **0 Hz** — Idle: **Within 320—374 Hz** (P, N position) • Are frequencies of input/turbine speed sensor within specifications?	Yes	Go to the intermittent concern troubleshooting procedure. (See 01–03A–7 INTERMITTENT CONCERN TROUBLESHOOTING [L3].)
		No	Go to the next step.
4	**INSPECT INPUT/TURBINE SPEED SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT INPUT/TURBINE SPEED SENSOR RESISTANCE** • Measure the resistance between the input/ turbine speed sensor terminals (part-side). • Is the resistance **within 250—600 ohms** between input/turbine speed sensor terminals (part-side)? (See 05–17A–22 INPUT/TURBINE SPEED SENSOR INSPECTION [FS5A-EL].)	Yes	Go to the next step.
		No	Replace the input/turbine speed sensor, then go to Step 10. (See 05–17A–23 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
6	**INSPECT INPUT/TURBINE SPEED SENSOR** • Remove input/turbine speed sensor. • Is there iron powder stuck on input/turbine speed sensor? (See 05–17A–23 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL].)	Yes	Clean the input/turbine speed sensor, then go to Step 10.
		No	Go to the next step.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
8	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR OPEN CIRCUIT** • Inspect the following input/turbine speed sensor terminals (wiring harness-side) and TCM terminals (wiring harness-side): — A and 2K — B and 2I • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT INPUT/TURBINE SPEED SENSOR CIRCUIT FOR SHORT TO GROUND** • Inspect input/turbine speed sensor terminal (wiring harness-side) and body ground. — A and body ground — B and body ground • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0715 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle a vehicle speed **41 km/h {25 mph} or more** for **0.7 s or more**. • Is the same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

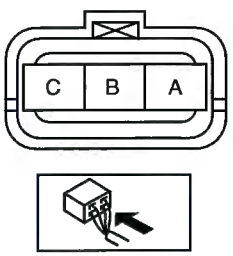
DTC P0720 [FS5A-EL]

E6U050200000W69

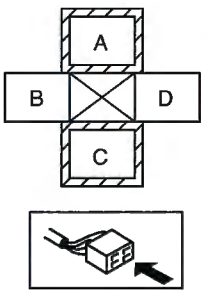
DTC P0720	Vehicle speed sensor (VSS) circuit malfunction
DETECTION CONDITION	• Vehicle speed signal is not input after the following conditions are met and **4.5 s or more** have passed. — D range switch ON — Engine coolant temperature **60 °C {140 °F} or more** — Turbine speed **1,500 rpm or more** — Secondary gear revolution speed **50 rpm or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit in wiring harness between VSS terminal B and TCM terminal 2P • Short to ground in wiring harness between VSS terminal B and TCM terminal 2P • Open circuit in wiring harness between VSS terminal A and main relay terminal C • Short to ground in wiring harness between VSS terminal A and AT main relay terminal A • Open circuit in wiring harness between VSS terminal C and body ground • Damaged connectors between VSS and TCM • TCM malfunction



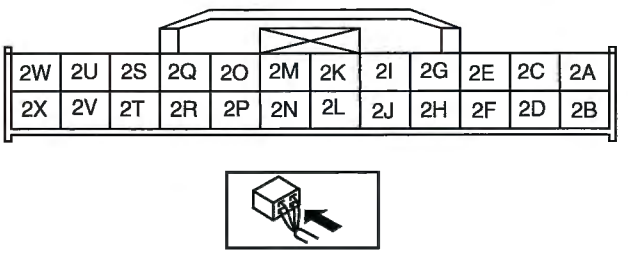
VSS WIRING HARNESS-SIDE CONNECTOR



AT MAIN RELAY WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VSS CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT VSS POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between VSS terminal A (wiring harness-side) and ground. • Is the voltage **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT VSS POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between VSS terminal A (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
6	**INSPECT VSS GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the VSS connector is disconnected. • Inspect for continuity between VSS (wiring harness-side) terminal C and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
8	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the TCM connector and VSS connector. • Inspect for continuity between VSS terminal B and TCM terminal 2P. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT VEHICLE SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verity that the VSS connector and TCM connector are disconnected. • Inspect for continuity between TCM terminal 2P and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the VSS, then go to the next step. (See 05–17A–27 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL].)
10	**INSPECT VEHICLE SPEED SENSOR** • Inspect the VSS. (See 05–17A–25 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].) • Is VSS normal?	Yes	Go to the next step.
		No	Repair or replace the VSS, then go to Step 11.

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0720 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Warm up engine. • Drive the vehicle under the following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp (ECT PID): **60 °C {140 °F} or more** — Drive in D or M range — Frequency of input/turbine speed sensor: **800 Hz or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0731 [FS5A-EL]

E6U050200000W70

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors the revolution ratio of the forward clutch drum revolution to secondary gear revolution when the following monitoring conditions are met. If the revolution ratio is **2.157 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Throttle opening angle **4.14% or more** — Differential gear case (output) revolution speed **35 rpm or more**. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Pressure control solenoid A stuck • Line pressure low • One-way clutch slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECT SHIFT SOLENOID A** • Perform operation inspection. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) • Verify the click sound of shift solenoid A when applying B+ to transaxle terminal A. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid that you could not hear a click sound, then go to Step 8. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17A–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **20 km/h {12 mph}** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)

STEP	INSPECTION		ACTION
8	**VERIFY REPAIR OF DTC P0731** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 4 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 1GR — Throttle opening angle (THOP PID): **4.14% or more** — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

05–02A

DTC P0732 [FS5A-EL]

E6U050200000W71

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If revolution ratio is **1.249 or less** or **2.157 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 2 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • Forward clutch slipping • Control valve stuck • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECTION SHIFT SOLENOID VALVE A, B AND C FOR CLICK SOUND** • Perform operation inspection. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) • Verify the click sound of shift solenoid A, B, and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05–17A–30 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17A–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **40 km/h {24 mph}** — Drive in the D range, 2GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
8	**VERIFY REPAIR OF DTC P0732** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions at least 3 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 2GR — Vehicle speed (VSS PID): **3.8 km/h {2.4 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0733 [FS5A-EL]

E6U050200000W72

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.863 or less**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **2.175 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 1.345—1.644**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3 GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **26 km/h {16 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A or C stuck • Pressure control solenoid A stuck • Line pressure low • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass, TCC or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECTION SHIFT SOLENOID VALVE A AND C FOR CLICK SOUND** • Perform operation inspection. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) • Verify the click sound of shift solenoid A and C when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear a click sound, then go to Step 8. (See 05–17A–30 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17A–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **60 km/h {37 mph}** — Drive in the D range, 3GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
8	**VERIFY REPAIR OF DTC P0733** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 2 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR — Vehicle speed (VSS PID): **4 km/h {3 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0734 [FS5A-EL]

E6U050200000W73

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **0.6 or less** or **1.249 or more**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Vehicle speed **28 km/h {17 mph} or more** — Throttle opening angle at closed throttle position — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 • The TCM monitors revolution ratio of the forward clutch drum revolution to the secondary gear case revolution when the following monitoring conditions are met. If the revolution ratio is **within 0.91—1.09**, the TCM determines that there is a malfunction. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D or M range — Torque converter clutch (TCC) not operating — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B or C stuck • Pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Forward clutch slipping • Control valve stuck (Bypass or 3-4 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 8.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)

STEP	INSPECTION		ACTION
4	**INSPECT SHIFT SOLENOID A AND D FOR CLICK SOUND** • Perform operation inspection. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) • Verify the click sound of shift solenoids A and D when applying B+ to each transaxle terminal. **Note** • The click from solenoid D is barely audible. Remove solenoids to correctly inspect if necessary. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound then go to Step 8. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the primary control valve body, then go to Step 8. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17A–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)
7	**INSPECT FREQUENCY OF INPUT/TURBINE SPEED SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 1,300 Hz**?	Yes	Go to the next step.
		No	Replace the primary control valve body, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
8	**VERIFY REPAIR OF DTC P0734** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **0%** — Vehicle speed (VSS PID): **28 km/h {17 mph} or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0735 [FS5A-EL]

E6U050200000W74

DTC P0735	Gear 5 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• The TCM monitors revolution ratio of the secondary gear revolution to the differential gear case revolution when the following monitoring conditions are met. When any of the following conditions are met: — Revolution ratio of the secondary gear and the differential gear case is **1.11 or less** when driving in 3GR or 4GR. — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Monitoring conditions:** — Engine running — ATF temperature **20 °C {68 °F} or more** — Throttle opening angle **4.14% or more** — Secondary gear revolution speed **50 rpm or more** — Turbine speed **within 225—4,987 rpm** — Vehicle speed **29 km/h {18 mph} or more** — Differential gear case (output) revolution speed **35 rpm or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2707, P2708, P2709 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate. • The AT warning light illuminates if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is not available. • A PENDING CODE is not available. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck • Pressure control solenoid B stuck • Line pressure low • Direct clutch slipping • Reduction brake slipping • Control valve stuck (Bypass or 4-5 shift valve) • Oil pump malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 9.
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 9. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECT SHIFT SOLENOID F AND PRESSURE CONTROL SOLENOID B FOR CLICK SOUND** • Perform operation inspection. (See 05–17A–31 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].) • Verify the click sound of shift solenoid F and pressure control solenoid B when applying B+ to each transaxle terminal. • Was a click heard from solenoids?	Yes	Go to the next step.
		No	Replace the solenoid where you could not hear click sound, then go to Step 9. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)

STEP	INSPECTION		ACTION
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 9. Any ranges: Replace the secondary control valve body, then go to Step 8. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17A–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 9. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)
7	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of intermediate sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **80 km/h {49 mph}** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the intermediate sensor at **approx. 4,800 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
8	**INSPECT FREQUENCY OF INTERMEDIATE SENSOR WHEN DRIVING VEHICLE** • Turn the ignition switch to the LOCK position. • Connect the WDS or equivalent. • Start the engine. • Measure the frequency of input/turbine speed sensor while driving vehicle under the following conditions: — Vehicle speed (VSS PID): **90 km/h {56 mph}** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **approx. 25%** • Was the frequency of the input/turbine speed sensor at **approx. 4,100 Hz**?	Yes	Go to the next step.
		No	Replace the secondary control valve body, then go to the next step. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BOD INSTALLATION [FS5A-EL].)
9	**VERIFY REPAIR OF DTC P0735** • Make sure to reconnect all the disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Warm up the transaxle. • Drive the vehicle under the following conditions for **more than 5 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **4.14% or more** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
10	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0741 [FS5A-EL]

E6U050200000W75

DTC P0741	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0741 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **5 s or more.** — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC operation) — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0742 [FS5A-EL]

E6U050200000W76

DTC P0742	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following throttle conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Engine running — Turbine speed **within 225—4,987 rpm** — Vehicle speed **70 km/h {43 mph} or less** — Torque converter clutch (TCC) not operating — Difference between engine speed and turbine speed **50 rpm or less** — DTC P0734 not output • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle is at closed throttle position and **5 s or more** have passed. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoids A, B, C, D, E, and pressure control solenoid A stuck • Line pressure low • 2-4 brake band slipping • 3-4 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

TEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 4. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
3	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 6. • Any ranges: Replace the automatic transaxle, then go to Step 6. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)

STEP	INSPECTION		ACTION
5	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**VERIFY TROUBLESHOOTING OF DTC P0742 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR (TCC not in operation) — Vehicle speed (VSS PID): **70 km/h {43 mph} or less**. • Throttle conditions — Throttle opening angle (THOP PID) **6.25% or more** and **5 s or more** have passed. — Throttle opening angle (THOP PID) **within 3.13—6.25%** and **3 s or more** have passed. — Throttle opening angle at closed throttle position and **5 s or more** have passed. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0744 [FS5A-EL]

E6U050200000W77

DTC P0744	Slip control malfunction
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **18.75% or less** — Torque converter clutch (TCC) operating — Drive the vehicle at 3GR, 4GR, or 5GR, slip control operation — When any of the following conditions are met: • Revolution ratio of the forward clutch drum to secondary gear is **1.344 or less** or **1.645 or more** when driving in 2GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.91 or less** or **1.09 or more** when driving in 3GR. • Revolution ratio of the forward clutch drum to secondary gear is **0.636 or less** or **0.817 or more** when driving in 4GR. — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the TCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and TCM terminal 1A • Shift solenoid A stuck on • Short to power supply in wiring harness between shift solenoid D terminal A and TCM terminal 1F • Shift solenoid D stuck on • Short to ground in wiring harness between shift solenoid E terminal A and TCM terminal 1H • Shift solenoid E stuck off • TCM malfunction

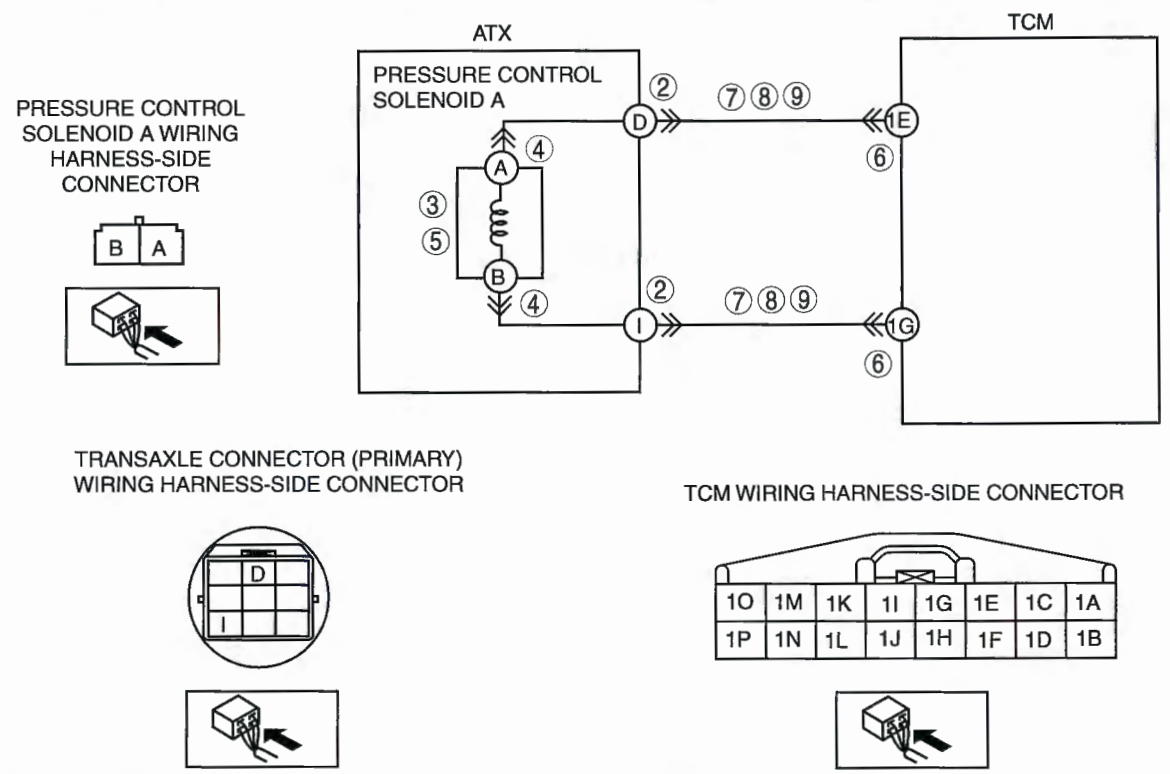
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the TCM memory. • Are DTCs P0752, P0753, P0767, P0768, P0771, and P0773 output?	Yes	Go to the applicable DTC inspection.
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0744 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Warm up the engine. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **18.75% or less** • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0745 [FS5A-EL]

E6U050200000W78

DTC P0745	Pressure control solenoid A malfunction
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that pressure control solenoid A circuit has a malfunction. — Pressure control solenoid A voltage stuck **0 V** after engine start — Pressure control solenoid A voltage stuck **B+** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if TCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Pressure control solenoid A malfunction • Open circuit in wiring harness between pressure control solenoid A terminal B and transaxle connector (primary) terminal I • Open circuit in wiring harness between transaxle connector (primary) terminal I and TCM terminal 1G • Short to ground in wiring harness between transaxle connector (primary) terminal D and TCM terminal 1E • Short to power supply in wiring harness between transaxle connector (primary) terminal D and TCM terminal 1E • Open circuit in wiring harness between pressure control solenoid terminal A and transaxle connector (primary) terminal D • Open circuit in wiring harness between transaxle connector (primary) terminal D and TCM terminal 1E • Damaged connector between pressure control solenoid A and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
2	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.

STEP	INSPECTION		ACTION
3	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminals D and I (transaxle case side). • Is the resistance **within 2.4—7.3 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 6.
		No	Go to the next step.
4	**INSPECT PRESSURE CONTROL SOLENOID CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
5	**INSPECT RESISTANCE** • Inspect the resistance between the pressure control solenoid terminals A and B. • Is the resistance **within 2.4—7.3 ohms**? (See 05–17A–29 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 10.
		No	Verify pressure control solenoid installation. • If solenoid installed correctly, replace the pressure control solenoid, then go to Step 10. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
6	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 10.
7	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between the TCM (wiring harness-side) and transaxle connector (primary) (wiring harness-side). — TCM terminal 1E and transaxle connector (primary) terminal D — TCM terminal 1G and transaxle connector (primary) terminal I • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, the go to Step 10.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal D (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 10.
9	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between transaxle connector (primary) terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Go to the next step.
10	**VERIFY TROUBLESHOOTING OF DTC P0745 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Make sure to wait **more than 1 s** after turning the ignition switch to the ON position. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
11	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0751 [FS5A-EL]

E6U050200000W79

DTC P0751	Shift solenoid A stuck off
DETECTION CONDITION	• When P0731, P0732, and P0733 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Vehicle speed **36 km/h {22 mph} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Torque converter clutch (TCC) not operating — Revolution ratio of forward clutch drum revolution to secondary gear revolution **within 0.91—1.09** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0751 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **36 km/h {22 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0752 [FS5A-EL]

E6U050200000W80

DTC P0752	Shift solenoid A stuck on
DETECTION CONDITION	• When P0734 is not output, and all conditions below are satisfied in 1GR and 2GR. — Engine running — ATF temperature **20 °C {68 °F} or more** — D range selected — Brake pedal depressed — Throttle opening angle at closed throttle position — Vehicle speed **0 km/h {0 mph}** — Input/turbine speed sensor signal **187.5 rpm or more.** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck on • Control valve stuck • TCM malfunction

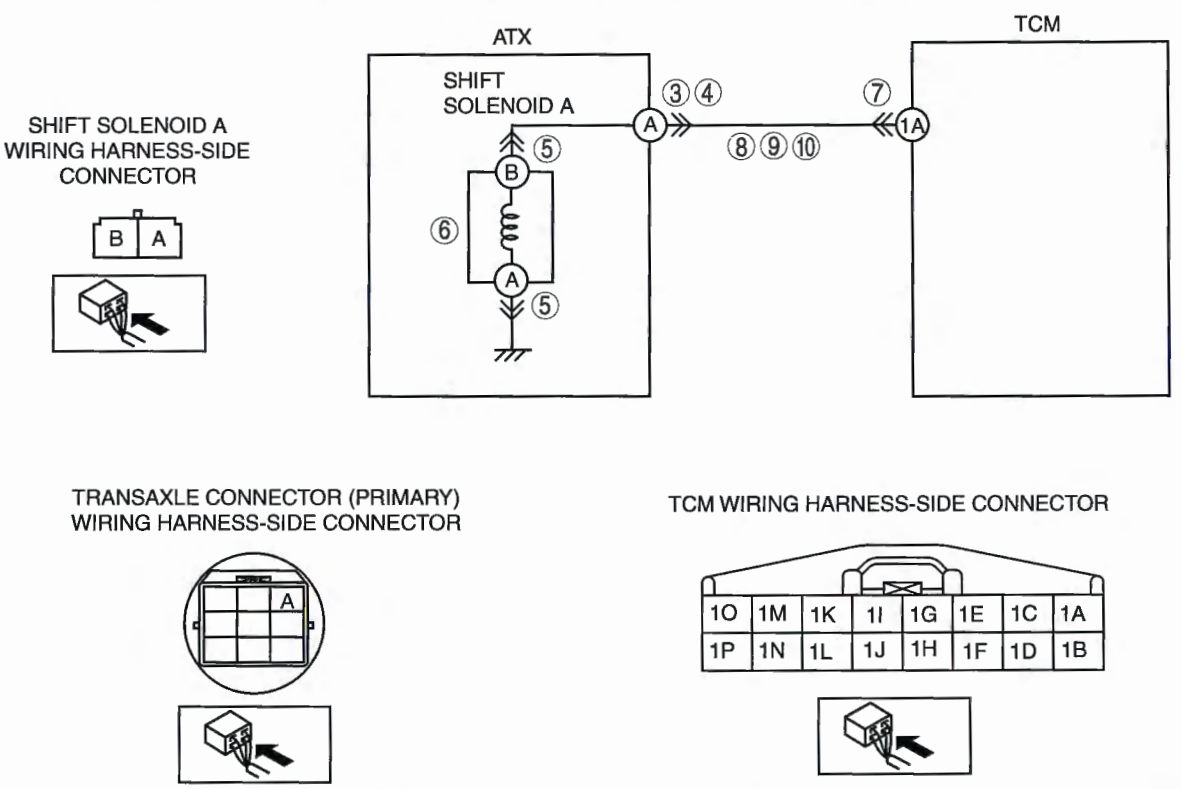
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0752 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0753 [FS5A-EL]

E6U050200000W81

DTC P0753	Shift solenoid A malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions, TCM determines that shift solenoid A circuit has a malfunction. — Shift solenoid A voltage stuck at **B+** after engine start — Shift solenoid A voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid A malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal A and TCM terminal 1A • Short to power supply in wiring harness between transaxle connector (primary) terminal A and TCM terminal 1A • Open circuit in wiring harness between shift solenoid A terminal B and transaxle connector (primary) terminal A • Open circuit in wiring harness between transaxle connector (primary) terminal A and TCM terminal 1A • Open circuit in wiring harness between shift solenoid A terminal A and body ground • Damaged connector between shift solenoid A and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID A CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid A terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–29 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid A installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1A (wiring harness-side) and transaxle connector (primary) terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0753 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0756 [FS5A-EL]

E6U050200000W82

DTC P0756	Shift solenoid B stuck off
DETECTION CONDITION	• When DTC P0732, P0733, and P0734 are not output, and all conditions below are satisfied. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR at D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle (THOP PID) **4.14% or more** — Revolution ratio of forward clutch drum revolution to secondary gear revolution **2.157 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0756 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **450 rpm or more** — Throttle opening angle (THOP PID): **4.14% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0757 [FS5A-EL]

E6U050200000W83

DTC P0757	Shift solenoid B stuck on
DETECTION CONDITION	• When DTC P0731 and P0733 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 2GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied with driving in 4GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Vehicle speed **28 km/h {17 mph}** • Throttle opening angle at closed throttle position • Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.6 or less** or **1.249 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first dri cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid B stuck on • Control valve stuck • TCM malfunction

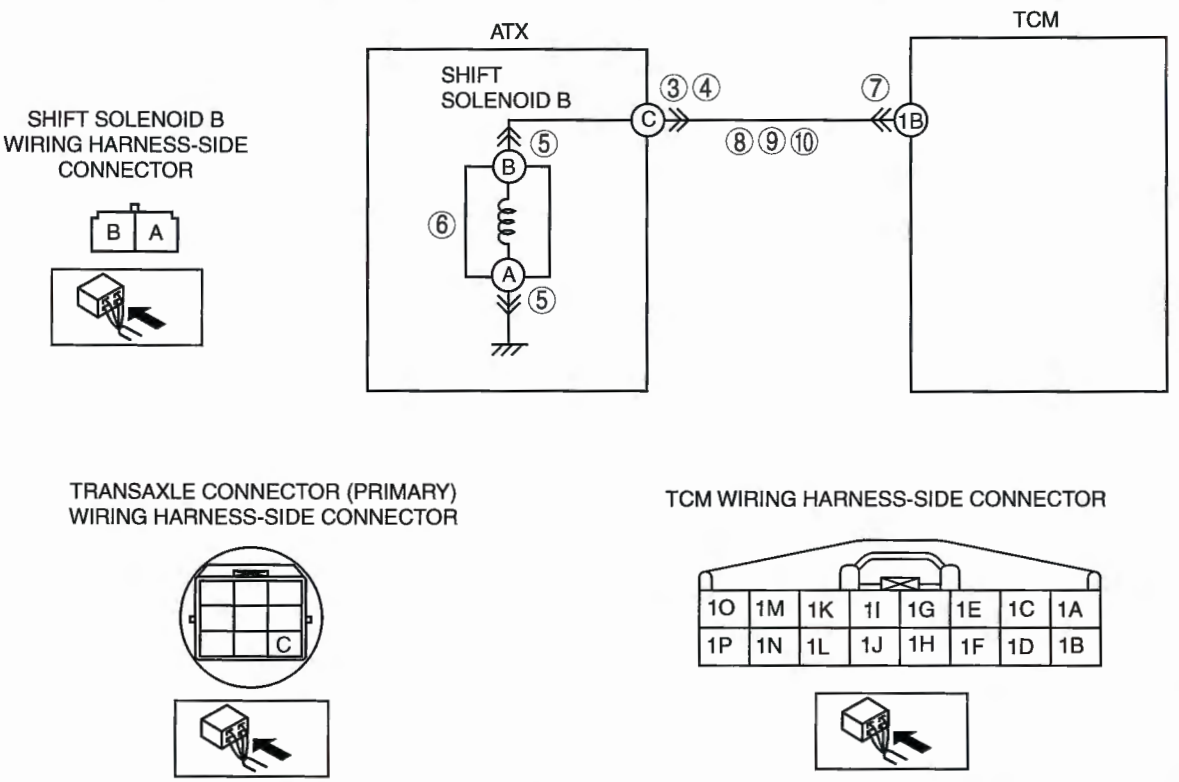
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0757 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Engine speed (RPM PID): **450 rpm or more** — Throttle opening angle (THOP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **28 km/h {17 mph}** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0758 [FS5A-EL]

E6U050200000W84

DTC P0758	Shift solenoid B malfunction (electrical)
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that shift solenoid B circuit has malfunction. — Shift solenoid B voltage stuck at **B+** after engine start — Shift solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid B malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal C and TCM terminal 1B • Short to power supply in wiring harness between transaxle connector (primary) terminal C and TCM terminal 1B • Open circuit in wiring harness between shift solenoid B terminal B and transaxle connector (primary) terminal C • Open circuit in wiring harness between transaxle connector (primary) terminal C and TCM terminal 1B • Open circuit in wiring harness between shift solenoid B terminal A and body ground • Damaged connector between shift solenoid B and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal C (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–29 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1B (wiring harness-side) and transaxle connector (primary) terminal C (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage at transaxle connector (primary) terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1B (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0758 SHIFT SOLENOID B COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0761 [FS5A-EL]

E6U050200000W85

DTC P0761	Shift solenoid C stuck off
DETECTION CONDITION	• When DTC P0733 and P0734 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 1GR • Engine running • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Throttle opening angle (THOP PID) **4.14% or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **2.157 or less** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied while driving in 2GR • ATF temperature **20 °C {68 °F} or more** • Driving in D or M range • Engine running • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **1.249 or less** or **2.157 or more** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0761 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that the gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **4.14% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0762 [FS5A-EL]

E6U050200000W86

DTC P0762	Shift solenoid C stuck on
DETECTION CONDITION	• When DTC P0731 and P0732 are not output, and both the following conditions are satisfied. — When all conditions below are satisfied while driving in 3GR. • Engine running • ATF temperature **20 °C {68 °F} or more.** • Driving in D or M range • Vehicle speed **26 km/h {16 mph} or more** • Turbine speed **within 225—4,987 rpm** • Secondary gear revolution speed **50 rpm or more** • Torque converter clutch (TCC) not operating • Differential gear case (output) revolution speed **35 rpm or more** • Revolution ratio of forward clutch drum revolution to secondary gear revolution **within 1.345—1.644** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck on • Control valve stuck • TCM malfunction

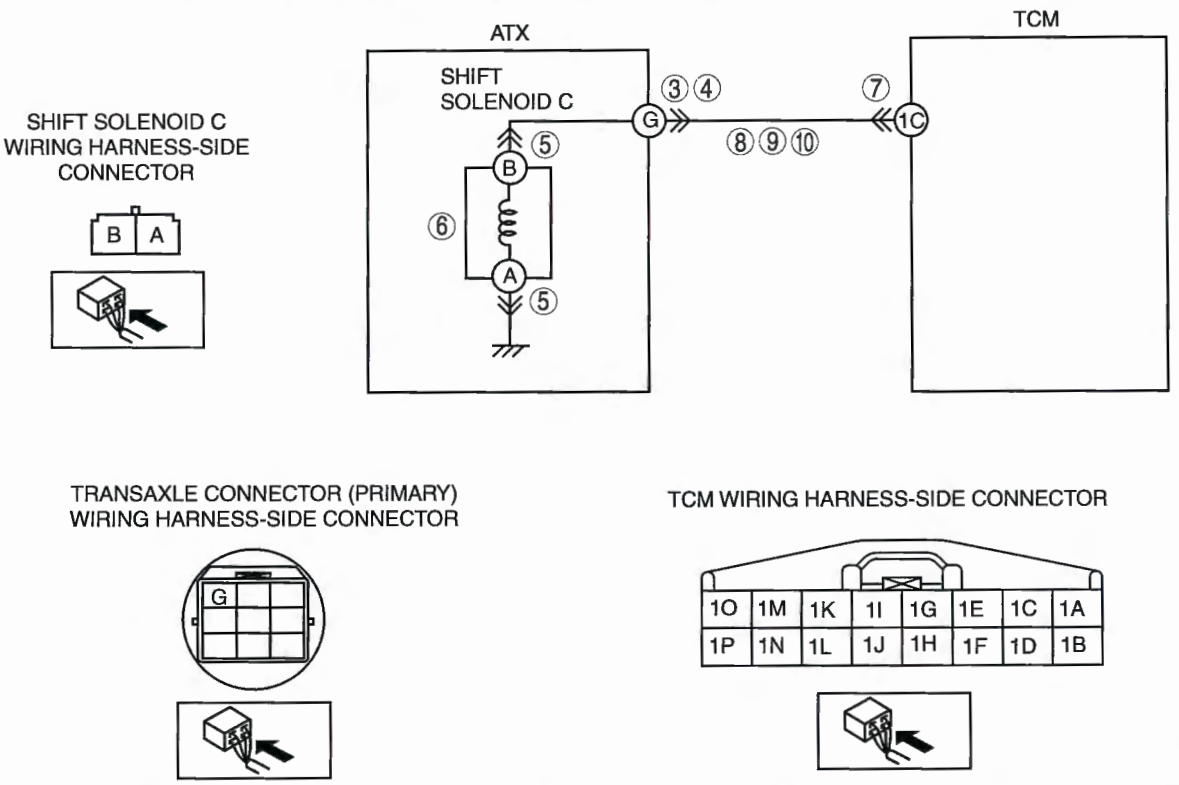
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0762 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **26 km/h {16 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0763 [FS5A-EL]

E6U050200000W87

DTC P0763	Shift solenoid C malfunction (electrical)
DETECTION CONDITION	• If the TCM detects either of the following conditions, the TCM determines that shift solenoid C circuit has malfunction. — Shift solenoid C voltage stuck at **B+** after engine start — Shift solenoid C voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid C malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal G and TCM terminal 1C • Short to power supply in wiring harness between transaxle connector (primary) terminal G and TCM terminal 1C • Open circuit in wiring harness between shift solenoid C terminal B and transaxle connector (primary) terminal G • Open circuit in wiring harness between transaxle connector (primary) terminal G and TCM terminal 1C • Open circuit in wiring harness between shift solenoid C terminal A and body ground • Damaged connector between shift solenoid C and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal G (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID C CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid C terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–29 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid C installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1C (wiring harness-side) and transaxle connector (primary) terminal G (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal G (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0763 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0766 [FS5A-EL]

E6U050200000W88

DTC P0766	Shift solenoid D stuck off
DETECTION CONDITION	• When any of DTC P0732, and P0733 not output (correct judgment), and all conditions below are satisfied — Is DTC P0731 not output while driving in 1GR at D range — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Vehicle speed **28 km/h {17 mph} or more** — Throttle opening angle at closed throttle position — Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.6 or less** or **1.249 or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0766 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Throttle opening angle (THOP PID): **0%** (4GR only) — Vehicle speed (VSS PID): **28 km/h {17 mph} or more.** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0767 [FS5A-EL]

E6U050200000W89

DTC P0767	Shift solenoid D stuck on
DETECTION CONDITION	• When any of DTC P0731, P0732, P0734, and P0741 are not output, and all conditions below are satisfie — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 3GR at D or M range — Turbine speed **within 225—4,987 rpm** — Differential gear case (output) revolution speed **35 rpm or more** — Revolution ratio of forward clutch drum revolution to secondary gear revolution **0.863 or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck on • Control valve stuck • TCM malfunction

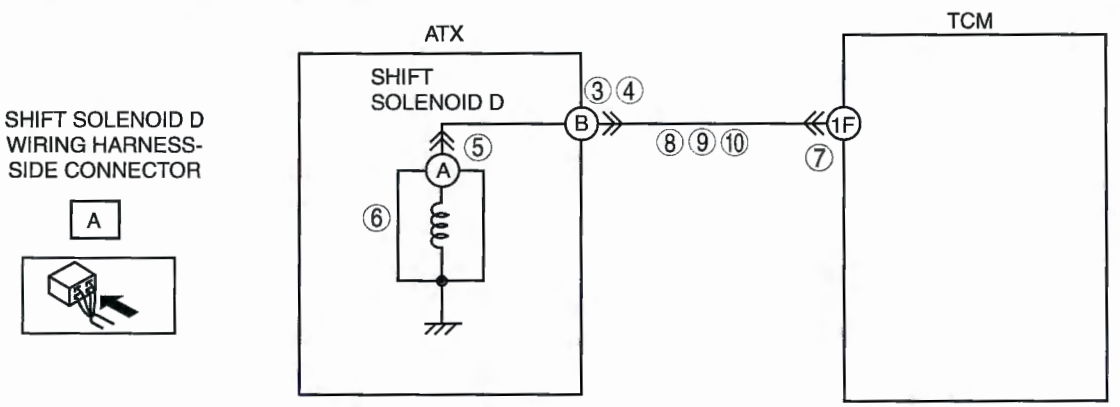
Diagnostic procedure

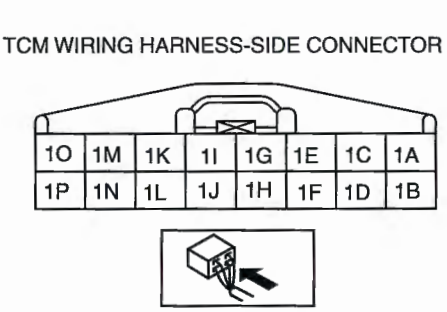
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0767 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0768 [FS5A-EL]

E6U050200000W90

DTC P0768	Shift solenoid D malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 4GR at D range, the TCM determines the shift solenoid D circuit has a malfunction. — Shift solenoid D voltage stuck at **B+** after engine start — Shift solenoid D voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid D malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal B and TCM terminal 1F • Short to power supply in wiring harness between transaxle connector (primary) terminal B and TCM terminal 1F • Open circuit in wiring harness between shift solenoid D terminal A and transaxle connector (primary) terminal B • Open circuit in wiring harness between transaxle connector (primary) terminal B and TCM terminal 1F • Damaged connector between shift solenoid D and TCM • TCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid D terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid D installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1F (wiring harness-side) and transaxle connector (primary) terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1F (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0768 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0771 [FS5A-EL]

E6U050200000W91

DTC P0771	Shift solenoid E stuck off
DETECTION CONDITION	• When any of DTC P0732, and P0734 are not output, and all conditions below are satisfied. — Is DTC P0731 not output while driving in 1GR at D range — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D range — Turbine speed **within 225—4,987 rpm** — Vehicle speed **within 60—100 km/h {37—62 mph}** — Torque converter clutch (TCC) operating — Shift solenoid A duty value exceeds **99%** — Difference between engine speed and turbine speed **more than 100 rpm** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck off • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0771 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **within 60—100 km/h {37—62 mph}** (4GR only). • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0772 [FS5A-EL]

E6U050200000W92

DTC P0772	Shift solenoid E stuck on
DETECTION CONDITION	• When any of DTC P0731, P0733, and P0734 are not output, and all of the following conditions are satisfie under each of the following throttle conditions. — Engine running — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR at D or M range — Turbine speed **within 225—4,987 rpm** — Vehicle speed **70 km/h {43 mph} or less** — Torque converter clutch (TCC) not operating — Difference between engine speed and turbine speed **50 rpm or less** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0773, P0791 • Throttle conditions — Throttle opening angle (THOP PID) is **6.25% or more** and **5 s or more** have passed — Throttle opening angle (THOP PID) is **within 3.13—6.25%** and **3 s or more** have passed — Throttle opening angle is at closed throttle position and **5 s or more** have passed **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck on • Control valve stuck • TCM malfunction

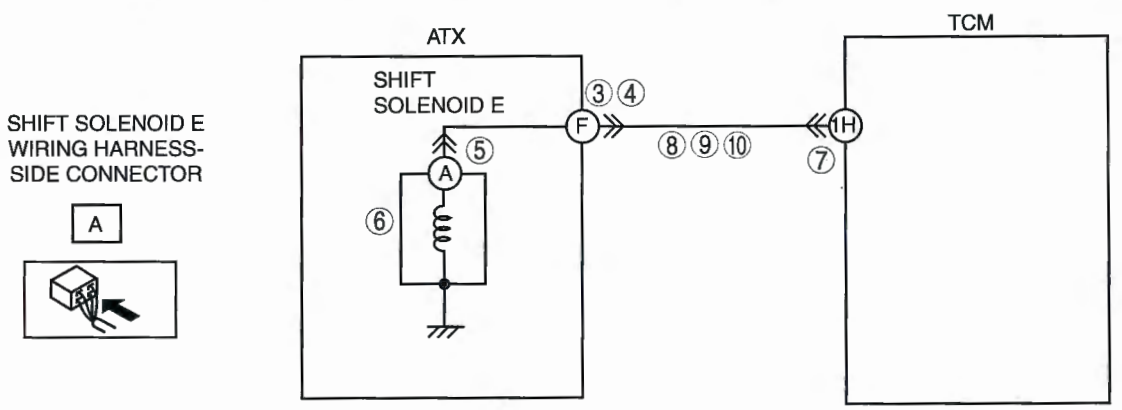
Diagnostic procedure

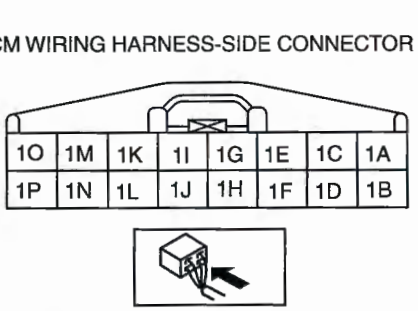
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the primary control valve body. • Disassemble the primary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0772 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 4GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range — Vehicle speed (VSS PID): **70 km/h {43 mph} or less** (4GR only) • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0773 [FS5A-EL]

E6U050200000W93

DTC P0773	Shift solenoid E malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 4GR at D range with TCC operating, TCM determines that shift solenoid E circuit has a malfunction. — Shift solenoid E voltage stuck at **B+** after engine start — Shift solenoid E voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid E malfunction • Short to ground in wiring harness between transaxle connector (primary) terminal F and TCM terminal 1H • Short to power supply in wiring harness between transaxle connector (primary) terminal F and TCM terminal 1H • Open circuit in wiring harness between shift solenoid E terminal A and transaxle connector (primary) terminal F • Open circuit in wiring harness between transaxle connector (primary) terminal F and TCM terminal 1H • Damaged connector between shift solenoid E and TCM • TCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (primary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (primary) terminal F (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–28 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID E CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid E terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–29 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid E installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–30 SOLENOID VALVE REMOVAL/ INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1H (wiring harness-side) and transaxle connector (primary) terminal F (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (primary) terminal F (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1H (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0773 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 4GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0777 [FS5A-EL]

E6U050200000W94

DTC P0777	Pressure control solenoid B stuck on
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **4.14% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0778, P0791, P2707, P2708, P2709 — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Pressure control solenoid B stuck on • Control valve stuck • TCM malfunction

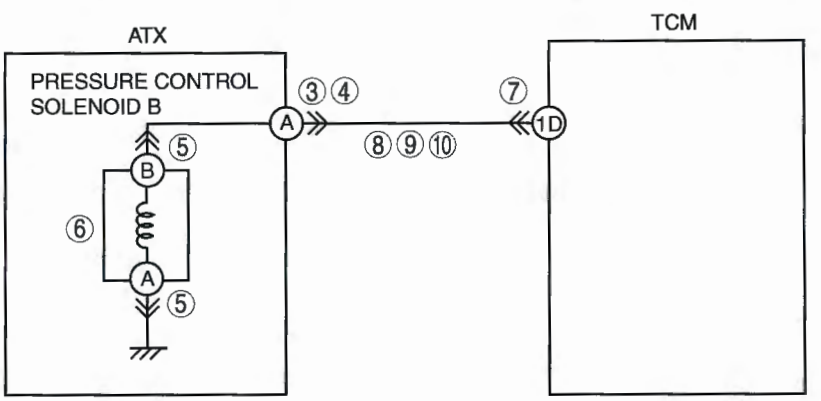
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P0777 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR: — ATF temperature (TFT PID) (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **4.14% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

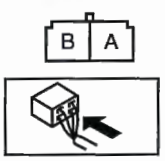
DTC P0778 [FS5A-EL]

E6U050200000W95

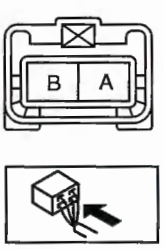
DTC P0778	Pressure control solenoid B malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions, TCM determines that pressure control solenoid B circuit has a malfunction. — Pressure control solenoid B voltage stuck at **B+** after engine start — Pressure control solenoid B voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Pressure control solenoid B malfunction • Short to ground in wiring harness between transaxle connector (secondary) terminal A and TCM terminal 1D • Short to power supply in wiring harness between transaxle connector (secondary) terminal A and TCM terminal 1D • Open circuit in wiring harness between pressure control solenoid B terminal B and transaxle connector (secondary) terminal A • Open circuit in wiring harness between transaxle connector (secondary) terminal A and TCM terminal 1D • Open circuit in wiring harness between pressure control solenoid B terminal A and body ground • Damaged connector between pressure control solenoid B and TCM • TCM malfunction



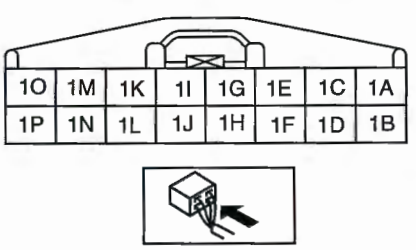
PRESSURE CONTROL SOLENOID B WIRING HARNESS-SIDE CONNECTOR



TRANSAXLE CONNECTOR (SECONDARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

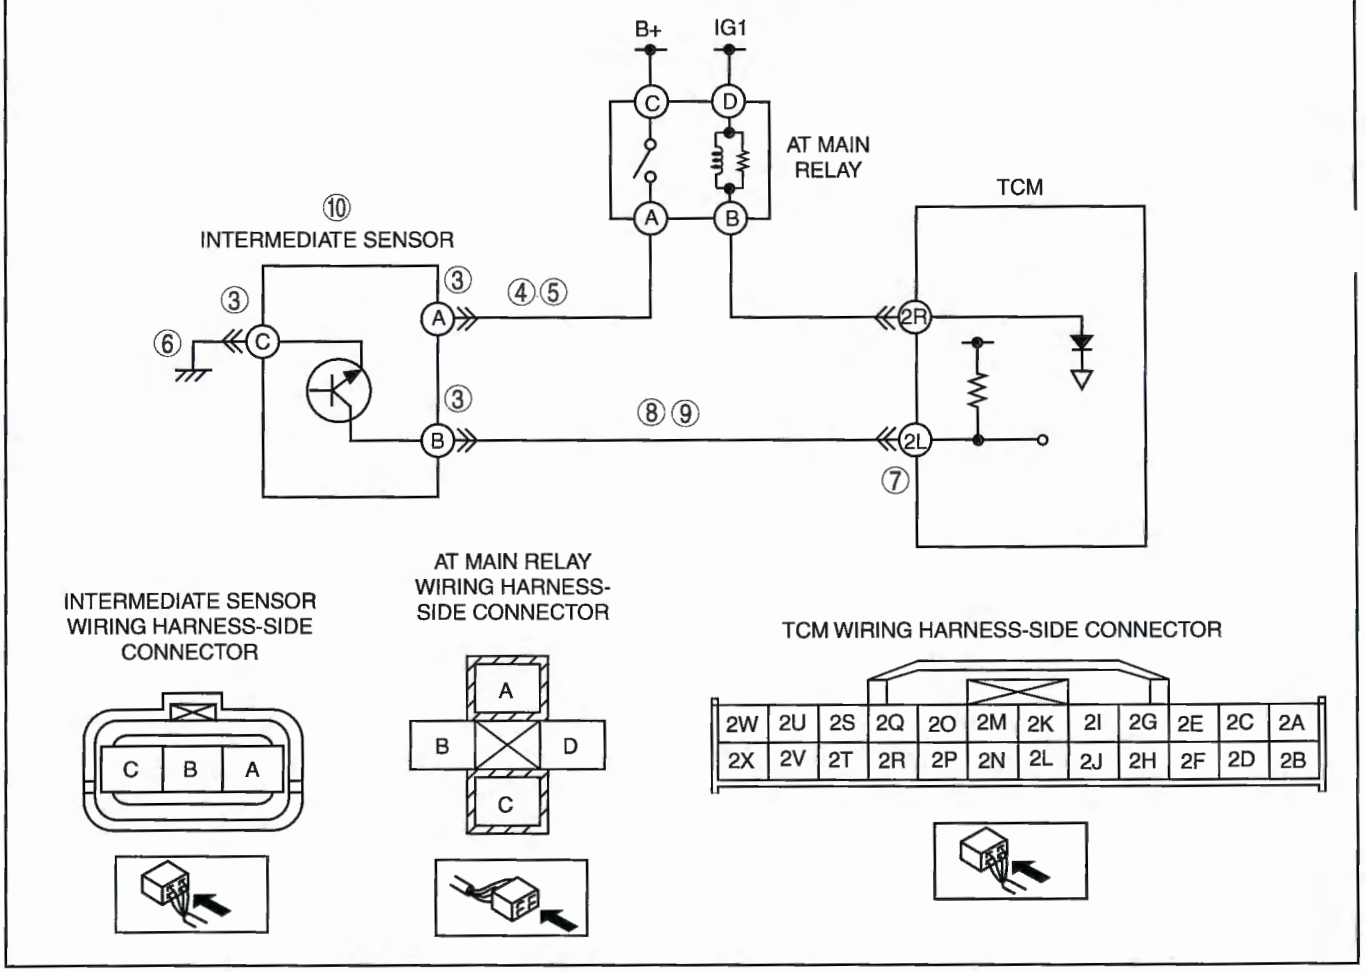
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (secondary. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (secondary) terminal A (transaxle case side) and body ground. • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–31 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT PRESSURE CONTROL SOLENOID B CONNECTOR FOR POOR CONNECTION** • Disconnect the pressure control solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between pressure control solenoid B terminals A and B (part-side). • Is the resistance **within 1.0—4.2 ohms**? (See 05–17A–32 Resistance Inspection (Off-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift pressure control solenoid B installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–32 SOLENOID VALVE REMOVAL/ INSTALLATION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1D (wiring harness-side) and transaxle connector (secondary) terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (secondary) terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1D (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P0778 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0791 [FS5A-EL]

E6U050200000W96

DTC P0791	Intermediate sensor circuit malfunction
DETECTION CONDITION	• Secondary gear revolution speed signal is not input after the following conditions are met and **4.5 s or more** have passed. — D range selected — Engine coolant temperature **60 °C {140 °F} or more** — Engine speed **500 rpm or more** — Vehicle speed **40 km/h {25 mph} or more** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Intermediate sensor malfunction • Open circuit in wiring harness between intermediate sensor terminal B and TCM terminal 2L • Short to ground in wiring harness between intermediate sensor terminal B and TCM terminal 2L • Open circuit in wiring harness between intermediate sensor terminal A and AT main relay terminal A • Short to ground in wiring harness between intermediate sensor terminal A and AT main relay terminal A • Open circuit in wiring harness between intermediate sensor terminal C and body ground • Damaged connectors between intermediate sensor and TCM • TCM malfunction



Diagnostic procedure

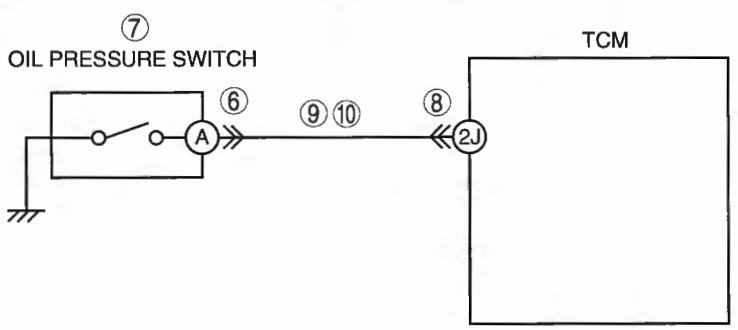
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT INTERMEDIATE SENSOR CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the intermediate sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
4	**INSPECT INTERMEDIATE SENSOR POWER CIRCUIT FOR OPEN CIRCUIT** • Verify that the intermediate sensor connector is disconnected. • Turn the ignition switch to the ON position (engine off). • Inspect the voltage between intermediate sensor terminal A (wiring harness-side) and ground. • Is the voltage **B+**?	Yes	Go to Step 6.
		No	Go to the next step.
5	**INSPECT INTERMEDIATE SENSOR POWER CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between intermediate sensor terminal A (wiring harness-side) and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
6	**INSPECT INTERMEDIATE SENSOR GROUND CIRCUIT FOR OPEN CIRCUIT** • Verify that the intermediate sensor connector is disconnected. • Inspect for continuity between intermediate sensor (wiring harness-side) terminal C and ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the pin or connector, then go to Step 11.
8	**INSPECT SECONDARY GEAR REVOLUTION SPEED SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Disconnect the TCM connector and intermediate sensor connector. • Inspect for continuity between intermediate sensor terminal B and TCM terminal 2L. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT SECONDARY GEAR REVOLUTION SPEED SIGNAL CIRCUIT FOR SHORT TO GROUND** • Verity that the intermediate sensor connector and TCM connector are disconnected. • Inspect for continuity between TCM terminal 2L and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the intermediate sensor, then go to the next step. (See 05–17A–25 INTERMEDIATE SENSOR REMOVAL/ INSTALLATION [FS5A-EL].)

STEP	INSPECTION		ACTION
10	**INSPECT INTERMEDIATE SENSOR** • Inspect the intermediate sensor. (See 05–17A–23 INTERMEDIATE SENSOR INSPECTION [FS5A-EL].) • Is intermediate sensor normal?	Yes	Go to the next step.
		No	Repair or replace the intermediate sensor, then go to the next step. (See 05–17A–25 INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
11	**VERIFY TROUBLESHOOTING OF DTC P0791 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Warm up engine. • Drive the vehicle under the following conditions for **4.5 s or more** while monitoring PIDs. — Engine coolant temp (ECT PID): **60 °C {140 °F} or more** — Drive in D range — Vehicle speed (VSS PID): **40 km/h {25 mph} or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

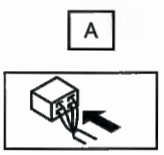
DTC P0841 [FS5A-EL]

E6U050200000W97

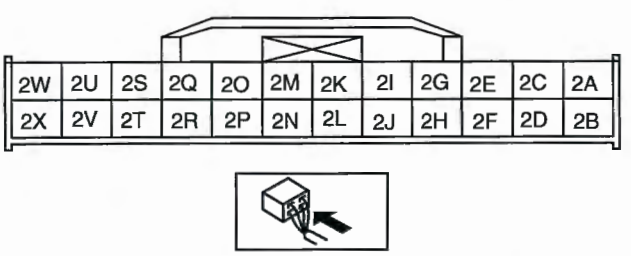
DTC P0841	Oil pressure switch circuit malfunction
DETECTION CONDITION	• When DTC P0731, P0732, P0733 and P0734 are not output and **10 s or more** has passed. — When all the conditions below are satisfied while driving in 1GR, 2GR or 3GR • ATF temperature **20 °C {68 °F} or more** • Oil pressure switch OFF • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.91—3.07** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 — When all conditions below are satisfied while driving in 4GR or 5GR • ATF temperature **20 °C {68 °F} or more** • Oil pressure switch ON • Revolution ratio of forward clutch drum revolution to differential gear case revolution **within 0.64—0.81** • None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0751, P0752, P0753, P0756, P0757, P0758, P0761, P0762, P0763, P0766, P0767, P0768, P0771, P0772, P0773, P0791 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light does not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Line pressure low • Oil pressure switch malfunction • Open circuit in wiring harness between oil pressure switch terminal A and TCM terminal 2J • Short to ground in wiring harness between oil pressure switch terminal A and TCM terminal 2J • Damaged connector between oil pressure switch and TCM • Control valve stuck • TCM malfunction



OIL PRESSURE SWITCH WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

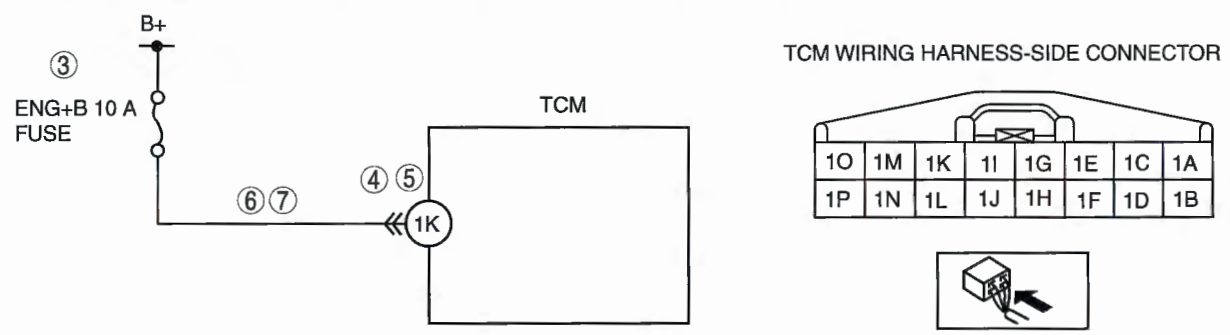
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED SERVICE INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair Information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Replace the ATF, then go to Step 11.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 11. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 11. Any ranges: Replace the primary control valve body, then go to Step 11. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–47 PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].)
6	**INSPECT OIL PRESSURE SWITCH CONNECTOR FOR POOR CONNECTION** • Disconnect the shift oil pressure switch connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step11.
7	**INSPECT CONTINUITY** • Inspect for continuity between oil pressure switch terminal A (part-side) and body ground. • Is there continuity?	Yes	Replace the oil pressure switch, then go to Step 11. (See 05–17A–22 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
9	**INSPECT OIL PRESSURE SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 2J (wiring harness-side) and transaxle connector terminal A (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 2J (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to the next step.
		No	Replace the oil pressure switch, then go to the next step. (See 05–17A–22 OIL PRESSURE SWITCH REMOVAL/ INSTALLATION [FS5A-EL].)

STEP	INSPECTION		ACTION
11	**VERIFY TROUBLESHOOTING OF DTC P0841 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle and make sure that gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P0882 [FS5A-EL]

E6U050200000W98

DTC P0882	Battery back-up power supply circuit
DETECTION CONDITION	• When the signal of the battery back-up power supply circuit is **less than 2.5 V.** **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Melted ENG+B 10 A fuse • Open circuit in wiring harness between battery positive terminal and TCM terminal 1K • Short to ground in wiring harness between battery positive terminal and TCM terminal 1K • Poor connection of TCM connector • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and or/on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUSE** • Turn the ignition switch to the LOCK position. • Inspect ENG+B 10 A fuse malfunction. • Is it normal?	Yes	Go to the next step.
		No	• If fuse has been melted, go to the next step. • If fuse is not installed correctly, install it correctly, then go to Step 13.
4	**INSPECT VOLTAGE OF POWER SUPPLY CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage TCM connector terminal 1K (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Go go to Step 6.
5	**INSPECT TERMINAL TCM CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable. • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go go to Step 8.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Disconnect the positive battery cable. • Inspect for continuity between the TCM terminal 1K and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 8.
		No	Go to the next step.
7	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1K and ENG+B 10 A fuse terminal (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to the next step.
8	**VERIFY TROUBLESHOOTING OF DTC P0882 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02A–8 DTC TABLE [FS5A-EL].)
		No	Troubleshooting completed.

DTC P0894 [FS5A-EL]

E6U050200000W99

DTC P0894	Forward clutch power transmission malfunction
DETECTION CONDITION	• With the engine running, all of the following conditions are met: — ATF temperature **20 °C {68 °F} or more** — Vehicle speed **0 km/h {0 mph}** (brake on) — Even when 3 s or more have passed since the selector lever was shifted from the N position to the D range, the turbine speed will not decrease to less than 187 rpm. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects above malfunction conditions during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • DTCs are stored in the TCM memory.
POSSIBLE CAUSE	• Forward clutch not engaged or slipped • Short to power supply in wiring harness between shift solenoid A terminal B and TCM terminal 1A • Shift solenoid A stuck on • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY DTCS** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTCs in the TCM memory. • Are DTCs P0720, P0752, and P0753 output?	Yes	Go to the applicable DTC inspection.
		No	Replace the forward clutch, then go to the next step.
3	**VERIFY TROUBLESHOOTING OF DTC P0894 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Warm up the engine. • With the selector lever in the D range and the vehicle stopped (brake on), wait **3 s or more**. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P1783 [FS5A-EL]

E6U050200000WA0

DTC P1783	ATF high oil temperature malfunction
DETECTION CONDITION	• When all conditions below are satisfied. — P0712, P0713 not output — ATF temperature **149.5 °C {301°F} or more** — ATF oil temperature signal of **0.06 V or more** is input to TCM terminal 2H. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects above malfunction conditions during the first drive cycle. • The PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• High engine load drive (Driving a steep gradient at a low speed.) • Insufficient or excess level of ATF • Deteriorated ATF • TFT sensor circuit malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY VEHICLE DRIVING CONDITIONS** • Verify each PID monitor of the HTM_CNT and HTM_DIS. • Verify vehicle driving conditions when a DTC P1783 is output. • Has the vehicle been driven at a high engine load?	Yes	• Go to Step 6. • Inform the customer that the ATX temperature is high due to high engine load driving.
		No	Go to the next step.
4	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 6. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to the next step. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
6	**VERIFY TROUBLESHOOTING OF DTC P1783 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P2707 [FS5A-EL]

E6U050200000WA1

DTC P2707	Shift solenoid F stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **4.14% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2708, P2709 — Revolution ratio of the secondary gear and the differential gear case is **1.11 or less** when driving in 3GR or 4GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck off • Secondary control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P2707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Throttle opening angle (THOP PID): **4.14% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC P2708 [FS5A-EL]

E6U050200000WA2

DTC P2708	Shift solenoid F stuck on
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Turbine speed **within 225—4,987 rpm** — Secondary gear revolution speed **50 rpm or more** — Differential gear case (output) revolution speed **35 rpm or more** — Throttle opening angle **4.14% or more** — None of the following DTCs are present: P0706, P0707, P0708, P0712, P0713, P0715, P0720, P0777, P0778, P0791, P2707, P2709 — Revolution ratio of the secondary gear and differential gear case is **1.11 or more** when driving in 5GR. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition in two consecutive drive cycles or in one drive cycle while the DTC for the same malfunction has been stored in the TCM. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck on • Secondary control valve stuck • TCM malfunction

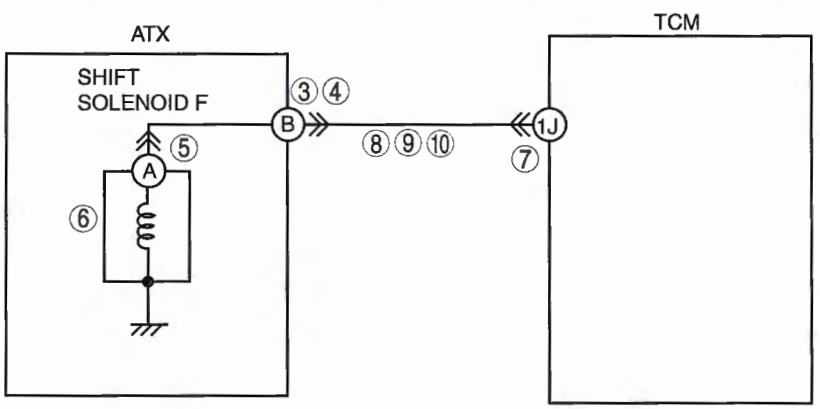
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Milky: Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17A–10 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 5. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17A–5 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to Step 7. • Any ranges: Replace the automatic transaxle, then go to Step 7. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
6	**INSPECT OPERATION OF EACH VALVE AND EACH SPRING** • Turn the ignition switch to the LOCK position. • Remove the secondary control valve body. • Disassemble the secondary control valve body. • Is each valve operation normal and is the return spring normal? (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)	Yes	Replace the automatic transaxle, then go to the next step. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
		No	Repair or replace the shift valve and return spring, then go to the next step. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].) (See 05–17A–49 SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL].) (See ATX Workshop Manual FS5A-EL.)
7	**VERIFY TROUBLESHOOTING OF DTC P2708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up the ATX. • Drive the vehicle under the following conditions and make sure that gears shift smoothly from 1GR to 5GR. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Throttle opening angle (THOP PID): **4.14% or more** • Is the PENDING CODE present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

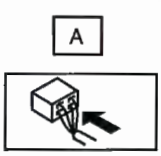
DTC P2709 [FS5A-EL]

E6U050200000WA3

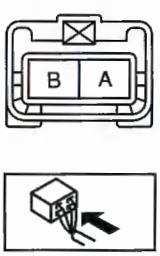
DTC P2709	Shift solenoid F malfunction (electrical)
DETECTION CONDITION	• If TCM detects either of the following conditions while driving in 5GR at D range, the TCM determines that shift solenoid F circuit has a malfunction. — Shift solenoid F voltage stuck at **B+** after engine start — Shift solenoid F voltage stuck at **0 V** after engine start **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction conditions during the first drive cycle. • The PENDING CODE is available if the TCM detects the above malfunction condition during the first drive cycle. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid F malfunction • Short to ground in wiring harness between transaxle connector (secondary) terminal B and TCM terminal 1J • Short to power supply in wiring harness between transaxle connector (secondary) terminal B and TCM terminal 1J • Open circuit in wiring harness between shift solenoid F terminal A and transaxle connector (secondary) terminal B • Open circuit in wiring harness between transaxle connector (secondary) terminal B and TCM terminal 1J • Damaged connector between shift solenoid F and TCM • TCM malfunction



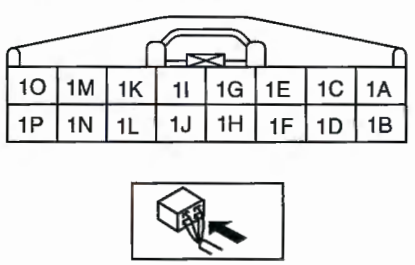
SHIFT SOLENOID F WIRING HARNESS-SIDE CONNECTOR



TRANSAXLE CONNECTOR (SECONDARY) WIRING HARNESS-SIDE CONNECTOR



TCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.

STEP	INSPECTION		ACTION
3	**INSPECT TRANSAXLE CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the transaxle connector (secondary). • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
4	**INSPECT RESISTANCE** • Inspect the resistance between transaxle connector (secondary) terminal B (transaxle case side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–31 Resistance Inspection (On-Vehicle Inspection).)	Yes	Go to Step 7.
		No	Go to the next step.
5	**INSPECT SHIFT SOLENOID D CONNECTOR FOR POOR CONNECTION** • Disconnect the shift solenoid F connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
6	**INSPECT RESISTANCE** • Inspect the resistance between shift solenoid F terminal A (part-side) and body ground. • Is the resistance **within 10.9—26.2 ohms**? (See 05–17A–31 Resistance Inspection (On-Vehicle Inspection).)	Yes	Replace the solenoid wiring harness, then go to Step 11.
		No	Verify shift solenoid F installation. • If solenoid installed correctly, replace the solenoid, then go to Step 11. (See 05–17A–32 SOLENOID VALVE REMOVAL/ INSTALLATION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)
7	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Is the connection normal?	Yes	Go to the next step.
		No	Repair or replace the connector and/or terminals, then go to Step 11.
8	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM terminal 1J (wiring harness-side) and transaxle connector (secondary) terminal B (wiring harness-side). • Is there continuity between terminals?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
9	**INSPECT TRANSAXLE CONNECTOR CIRCUIT FOR SHORT TO POWER SUPPLY** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at transaxle connector (secondary) terminal B (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 11.
10	**INSPECT TCM CIRCUIT FOR SHORT TO GROUND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between TCM terminal 1J (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the wiring harness, then go to Step 11.
		No	Go to the next step.
11	**VERIFY TROUBLESHOOTING OF DTC P2709 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 5GR. • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
		No	No concern is detected. Go to the next step.
12	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02A–4 AFTER REPAIR PROCEDURE [FS5A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

PID/DATA MONITOR INSPECTION [FS5A-EL]

E6U050200000WA4

1. Connect the WDS or equivalent to the DLC-2.
2. Measure the PID value.

Note

- Perform part inspection for the output device after TCM inspection.
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the TCM. Therefore, if a monitored value of an output device is out of specification, it is necessary to inspect the monitored value of the input device related to the output device control. Since an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device, it is necessary to inspect the output device individually using methods such as the simulation function.

PID/DATA MONITOR AND RECORD function table

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	TCM terminal
DTCCNT (Number of DTC detected)	—	• DTCs is detected: 1—255 • No DTCs are detected: 0	Perform applicable DTC troubleshooting. (See 05–02A–8 DTC TABLE [FS5A-EL].)	N/A
DWN SW (Down switch)	On/Off	• M range, downshift: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	2F
ECT TCM (ECT sensor)	°C / °F	Indicates engine coolant temperature	Inspect the ECT sensor. (See 01–40A–35 ENGINE COOLANT TEMPERATURE (ECT) SENSOR INSPECTION [L3].) Inspect the PCM (See 01–40A–9 PCM INSPECTION [L3].)	N/A
GEAR_SEL	1/2/3/4/5	• 1GR: 1 • 2GR: 2 • 3GR: 3 • 4GR: 4 • 5GR: 5	Inspect the following PIDs: SSA/SS1, SSB/SS2, SSC/SS3, SSD/SS4, SSD_SS5, SSF_SS6	N/A
HTM_CNT	—	Indicates number of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) operations • 0—255	N/A	N/A
HTM_DIS	km	Indicates travel distance after operation of high oil temperature mode (ATF temperature at 130 °C {266 °F} or more) • 0—2550 km	N/A	N/A
ISS (Intermediate shaft speed)	RPM	Indicates secondary gear revolution speed • Vehicle speed **0 km/h {0 mph}**: **0 RPM** • Vehicle speed **25 km/h {16 mph}**: **200—230 RPM**	Inspect the intermediate sensor. (See 05–17A–23 INTERMEDIATE SENSOR INSPECTION [FS5A-EL].)	2L
LINEDES	kPa / inHg	Indicates target line pressure	Inspect the following PIDs: ISS, OSS, TFT, TFTV, THOP, TR, TSS	N/A
LPS (Pressure control solenoid A)	A	Change current value according to throttle opening angle	Inspect the pressure control solenoid A. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1E, 1G
LPS B (Pressure control solenoid B)	%	• 4GR→ 5GR: **99%** • others: **0%**	Inspect the pressure control solenoid B. (See 05–17A–31 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)	1D
MNL SW (M range switch)	On/Off	• M range: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	2B
OP_SW_B (Oil pressure switch)	On/Off	• 1GR, 2GR or 3GR: On • Other: Off	Inspect the oil pressure switch. (See 05–17A–21 OIL PRESSURE SWITCH INSPECTION [FS5A-EL].)	2J
OSS (Output shaft speed)	RPM	Indicates output shaft speed • Vehicle speed **0 km/h {0 mph}**: **0 RPM** • Vehicle speed 25 km/h {16 mph}: **200—230 RPM**	Inspect the VSS. (See 05–17A–25 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].)	2P

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	TCM terminal
RPM_TCM (Engine speed)	RPM	Ignition switch ON: **0 RPM** Idle: **700—800 RPM**	Inspect the TCM. (See 05–17A–33 TCM INSPECTION [FS5A-EL].)	N/A
SSA/SS1 (Shift solenoid A)	%	• 4GR: **99%** • others: **0%**	Inspect the shift solenoid A. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1A
SSB/SS2 (Shift solenoid B)	%	• 1GR at D range: **99%** • Others: **0%**	Inspect the shift solenoid B. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1B
SSC/SS3 (Shift solenoid C)	%	• 1GR/2GR: **99%** • Others: **0%**	Inspect the shift solenoid C. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1C
SSD/SS4 (Shift solenoid D)	On/Off	• P/N position, 4GR at D range, 1GR at M range: On • Others: Off	Inspect the shift solenoid D. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1F
SSE_SS5 (Shift solenoid E)	On/Off	• TCC operating: On • TCC non operating: Off	Inspect the shift solenoid E. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)	1H
SSF_SS6 (Shift solenoid F)	On/Off	• 1GR/2GR/3GR/4GR: On • 5GR: Off	Inspect the shift solenoid F. (See 05–17A–31 SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)	1J
TFT (Transaxle fluid temperature)	°C / °F	Indicates transaxle fluid temperature	Inspect the TFT sensor. (See 05–17A–18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [FS5A-EL].)	2M
TFTV (Transaxle fluid signal voltage)	V	• ATF **20 °C {68 °F}: Approx. 3.3 V** • ATF **40 °C {104 °F}: Approx. 2.4 V** • ATF **60 °C {140 °F}: Approx. 1.5 V**	Inspect the TFT sensor. (See 05–17A–18 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [FS5A-EL].)	2M
THOP (Throttle position sensor)	%	• CTP: **12%** • WOT: **75%**	Inspect the TP sensor. (See 01–40A–30 THROTTLE POSITION (TP) SENSOR INSPECTION [L3].)	N/A
TR (Transaxle range)	P/R/N/D	• P position: P • R position: R • N position: N • D range: D	Inspect the TR switch. (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)	2H
TR_SENS (TR switch)	V	• P position: **4.34—4.79 V** • R position: **3.83—4.18 V** • N position: **3.05—3.50 V** • D range: **2.23—2.66 V**	Inspect the TR switch. (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)	2H
TSS (Input/turbine speed)	RPM	Indicates Input/turbine speed • Ignition switch ON: **0 RPM** • Idle: **700—800 RPM** (P, N position)	Inspect the input/turbine speed sensor. (See 05–17A–22 INPUT/TURBINE SPEED SENSOR INSPECTION [FS5A-EL].)	2I, 2K
UP SW (Up switch)	On/Off	• M range, upshift: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	2D
VPWR_TCM (Battery voltage)	V	B+	Inspect the main relay. (See 09–21–7 RELAY INSPECTION.)	1K
VSS (Vehicle speed)	KPH	• Vehicle speed **20 km/h {12.5 mph}: 20 KPH** • Vehicle speed **40 km/h {25 mph}: 40 KPH**	Inspect the VSS. (See 05–17A–25 VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL].)	2P

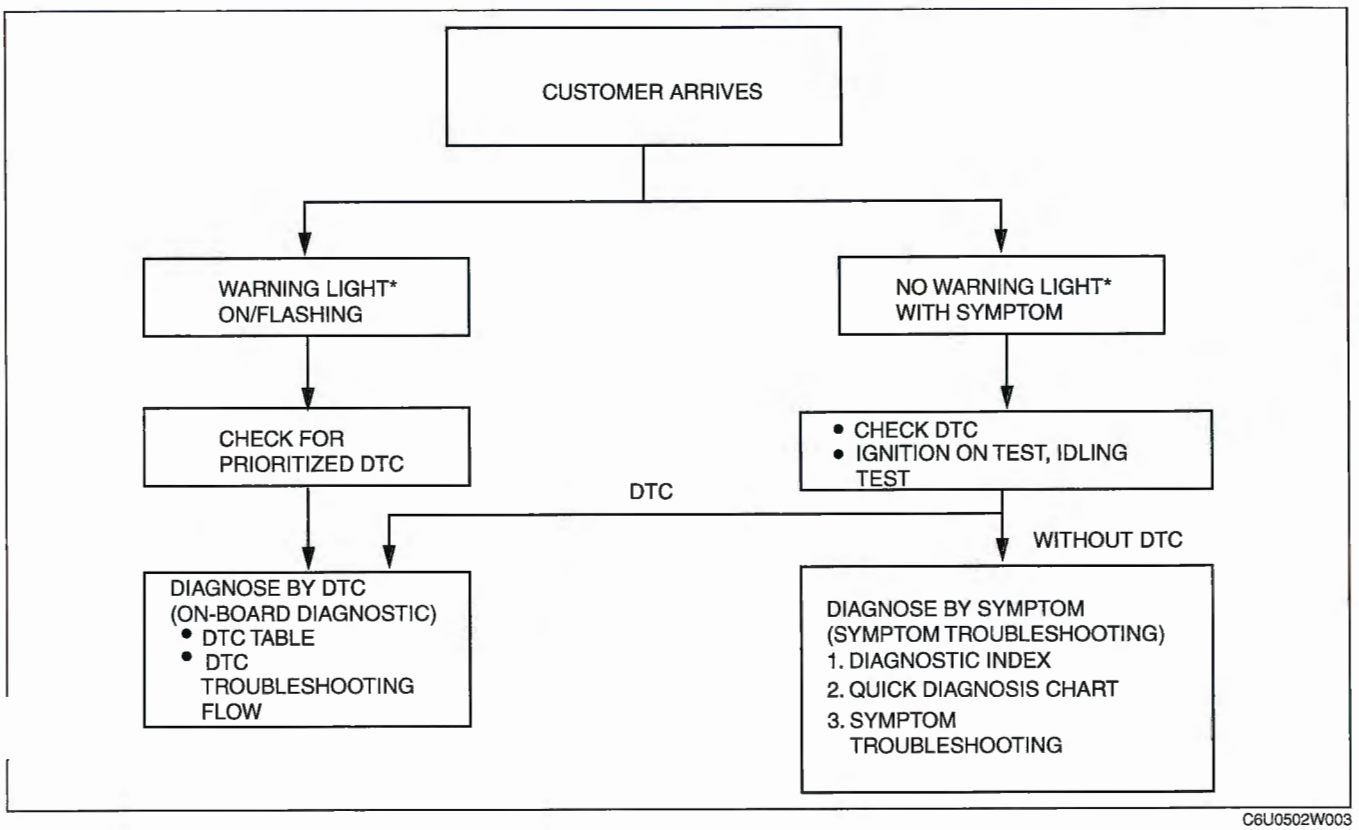
FOREWORD [AW6A-EL]

E6U050200000W02

- When the customer reports vehicle malfunction, check the malfunction indicator lamp (MIL) indication, AT warning indication, and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
  - — If a DTC does not exist and the MIL and AT warning lights do not illuminate, diagnose the applicable symptom troubleshooting. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)



C6U0502W003

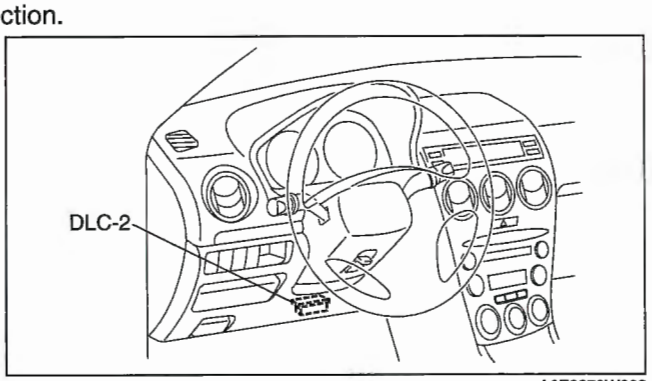
*: Malfunction Indicator Lamp (MIL), AT warning light

AUTOMATIC TRANSAXLE ON-BOARD DIAGNOSTIC FUNCTION [AW6A-EL]

E6U050200000W03

DTC Reading Procedure

1. Perform necessary vehicle preparation and visual inspection.
2. Connect the WDS or equivalent to the vehicle DLC-2 16-pin connector located on the left side of the center console.
3. Retrieve DTCs using the WDS or equivalent.



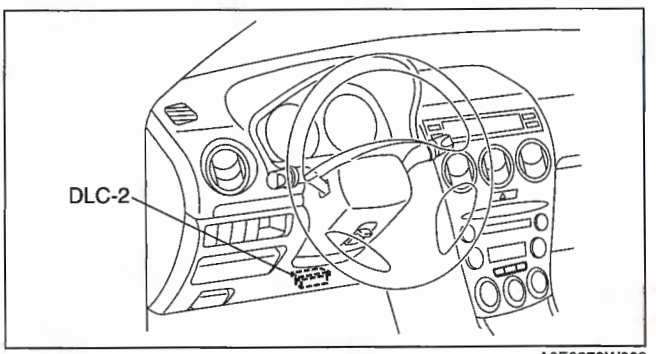
A6E3970W002

AFTER REPAIR PROCEDURE [AW6A-EL]

E6U050200000W04

Caution
- **After repairing a malfunction, perform this procedure to verify that the malfunction has been corrected.**
- **When this procedure is carried out, be sure to drive the vehicle at lawful speed and pay attention to the other vehicles.**

1. Connect the WDS or equivalent to the DLC-2.
2. Turn the ignition switch to the ON position (engine off).
3. Select the clear code function and clear the DTC.
4. Perform the following trouble code inspections to ensure that the DTC has been resolved:
   - For P0601, P0603, P0604, P0780, P0817, P0882, P0883, P0942, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999, P1700, P2762, P2763, P2764
     i. Start the engine.
     ii. Warm up the engine and ATX.
     iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 6GR.
     iv. Go to Step 5.
   - For P0706, P0707, P0708
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Depress the brake pedal, and shift the selector lever from P to D for **5 s or more**.
     iv. Gradually slow down and stop the vehicle.
     v. Turn the ignition switch to the LOCK position.
     vi. Go to Step 5.
   - For P0711
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Drive the vehicle in D range for **15 min or more**.
     iv. Gradually slow down and stop the vehicle.
     v. Turn the ignition switch to the LOCK position.
     vi. Go to Step 5
   - For P0712, P0713
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Drive the vehicle in D range for **150 s or more**.
     iv. Gradually slow down and stop the vehicle.
     v. Turn the ignition switch to the LOCK position.
     vi. Go to Step 5.
   - For P0717, P0722
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Drive the vehicle, two separate times, in D range at **20 km/h {12 mph} or more** for **150 s or more**.
     iv. Gradually slow down and stop the vehicle.
     v. Turn the ignition switch to the LOCK position.
     vi. Go to Step 5.
   - For P0731, P0732
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Drive the vehicle in D range, at **10 km/h {6 mph} or more** for **2 s or more**.
     iv. Go to Step 5.
   - For P0733
     i. Start the engine.
     ii. Warm up the engine to normal operating temperature.
     iii. Drive the vehicle in D range, at **20 km/h {12 mph} or more** for **2 s or more**.
     iv. Go to Step 5.



A6E3970W002

- For P0729, P0734, P0735
  i. Start the engine.
  ii. Warm up the engine to normal operating temperature.
  iii. Drive the vehicle in D range, at **40 km/h {25 mph} or more** for **2 s or more**.
  iv. Go to Step 5.
- For P0736
  i. Start the engine.
  ii. Warm up the engine to normal operating temperature.
  iii. Drive the vehicle in R range.
  iv. Go to Step 5.
- For P0819
  i. Start the engine.
  ii. Warm up the engine to normal operating temperature.
  iii. Drive the vehicle in M range, and shift the selector lever (operate up and down switches) between 1GR to 6GR for **10 s or more**.
  iv. Go to Step 5.
- For P2757
  i. Start the engine.
  ii. Warm up the engine and ATX.
  iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 6GR and TCC is operated.
  iv. Go to Step 5.
- For P2758
  i. Start the engine.
  ii. Warm up the engine to normal operating temperature.
  iii. Drive the vehicle in D range and make sure that the gears shift smoothly from 1GR to 6GR and TCC is no operated.
  iv. Go to Step 5.

5. Gradually slow down and stop the vehicle.
6. Make sure that no DTCs occur.

DTC TABLE [AW6A-EL]

E6U050200000W05

X: Available

DTC No.	Condition	MIL	AT warning light	DC	Monitor item	Memory function	Page
P0601	Flash ROM malfunction	X	X	1	CCM	X	(See 05–02B–8 DTC P0601 [AW6A-EL])
P0603	EEPROM malfunction	X	X	1	–	X	(See 05–02B–9 DTC P0603 [AW6A-EL])
P0604	RAM malfunction	X	X	1	CCM	X	(See 05–02B–10 DTC P0604 [AW6A-EL])
P0706	Transaxle range (TR) switch circuit range/ performance	X	X	1	Other	X	(See 05–02B–11 DTC P0706 [AW6A-EL])
P0707	Transaxle range (TR) switch circuit low input	X	X	1	CCM	X	(See 05–02B–12 DTC P0707 [AW6A-EL])
P0708	Transaxle range (TR) switch circuit high input	X	X	1	CCM	X	(See 05–02B–13 DTC P0708 [AW6A-EL])
P0711	Transaxle fluid temperature (TFT) sensor malfunction (stuck)	X	X	1	CCM	X	(See 05–02B–14 DTC P0711 [AW6A-EL])
P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)	X	X	1	CCM	X	(See 05–02B–16 DTC P0712 [AW6A-EL])
P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to power/open circuit)	X	X	1	CCM	X	(See 05–02B–18 DTC P0713 [AW6A-EL])

DTC No.	Condition	MIL	AT warning light	DC	Monitor item	Memory function	Page
P0717	Input/turbine speed sensor circuit malfunction (open circuit/short circuit)	X	X	1	CCM	X	(See 05–02B-20 DTC P0717 [AW6A-EL])
P0722	Vehicle speed sensor (VSS) circuit malfunction (open circuit/short circuit)	X	X	1	CCM	X	(See 05–02B–22 DTC P0722 [AW6A-EL])
P0729	Gear 6 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–24 DTC P0729 [AW6A-EL])
P0730	Gear 1 and engine brake operation incorrect (incorrect gear ratio detected)	–	X	1	CCM	X	(See 05–02B–26 DTC P0730 [AW6A-EL])
P0731	Gear 1 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–28 DTC P0731 [AW6A-EL])
P0732	Gear 2 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–30 DTC P0732 [AW6A-EL])
P0733	Gear 3 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–32 DTC P0733 [AW6A-EL])
P0734	Gear 4 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–34 DTC P0734 [AW6A-EL])
P0735	Gear 5 incorrect (incorrect gear ratio detected)	X	X	1	CCM	X	(See 05–02B–36 DTC P0735 [AW6A-EL])
P0736	Gear reverse incorrect (incorrect gear ratio detected)	–	X	1	–	X	(See 05–02B–38 DTC P0736 [AW6A-EL])
P0780	Valve control solenoid circuit malfunction (valve stuck)	–	X	1	CCM	X	(See 05–02B–41 DTC P0817 [AW6A-EL])
P0817	Stater relay No.2 circuit malfunction (open circuit/short circuit)	–	X	1	–	X	(See 05–02B–41 DTC P0817 [AW6A-EL])
P0819	Manual switch/up switch/down switch circuit malfunction (open circuit/short circuit)	–	X	1	–	X	(See 05–02B–44 DTC P0819 [AW6A-EL])
P0882	TCM B+ low	–	–	1	CCM	X	(See 05–02B–47 DTC P0882 [AW6A-EL])
P0883	TCM B+ high	–	–	1	CCM	X	(See 05–02B–50 DTC P0883 [AW6A-EL])
P0942	Valve control solenoid circuit malfunction at D range (valve stuck)	X	X	1	CCM	X	(See 05–02B–51 DTC P0942 [AW6A-EL])
P0961	Line pressure control solenoid range/ performance (stuck)	X	X	1	CCM	X	(See 05–02B–52 DTC P0961 [AW6A-EL])
P0962	Line pressure control solenoid circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B–53 DTC P0962 [AW6A-EL])
P0963	Line pressure control solenoid circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–55 DTC P0963 [AW6A-EL])
P0973	Shift solenoid A circuit malfunction (short to ground)	X	X	1	CCM	X	(See 05–02B–57 DTC P0973 [AW6A-EL])

DTC No.	Condition	MIL	AT warning light	DC	Monitor item	Memory function	Page
0974	Shift solenoid A circuit malfunction (short to power/open circuit)	X	X	1	CCM	X	(See 05–02B–59 DTC P0974 [AW6A-EL])
P0976	Shift solenoid B circuit malfunction (short to ground)	–	X	1	–	X	(See 05–02B–61 DTC P0976 [AW6A-EL])
P0977	Shift solenoid B circuit malfunction (short to power/open circuit)	–	X	1	–	X	(See 05–02B–63 DTC P0977 [AW6A-EL])
P0978	Shift solenoid C range/performance (stuck)	X	X	1	CCM	X	(See 05–02B–65 DTC P0978 [AW6A-EL])
P0979	Shift solenoid C circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B–66 DTC P0979 [AW6A-EL])
P0980	Shift solenoid C circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–68 DTC P0980 [AW6A-EL])
P0981	Shift solenoid D range/performance (stuck)	X	X	1	CCM	X	(See 05–02B–70 DTC P0981 [AW6A-EL])
P0982	Shift solenoid D circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B–71 DTC P0982 [AW6A-EL])
P0983	Shift solenoid D circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–73 DTC P0983 [AW6A-EL])
P0984	Shift solenoid E range/performance (stuck)	X	X	1	CCM	X	(See 05–02B–75 DTC P0984 [AW6A-EL])
P0985	Shift solenoid E circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B–76 DTC P0985 [AW6A-EL])
P0986	Shift solenoid E circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–78 DTC P0986 [AW6A-EL])
P0997	Shift solenoid F range/performance (stuck)	X	X	1	CCM	X	(See 05–02B–80 DTC P0997 [AW6A-EL])
P0998	Shift solenoid F circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B–81 DTC P0998 [AW6A-EL])
P0999	Shift solenoid F circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–83 DTC P0999 [AW6A-EL])
P1700	Valve control solenoid circuit malfunction at R range (valve stuck)	–	X	1	–	X	(See 05–02B–85 DTC P1700 [AW6A-EL])
P2757	Torque converter clutch (TCC) stuck off	X	X	1	CCM	X	(See 05–02B–87 DTC P2757 [AW6A-EL])
P2758	Torque converter clutch (TCC) stuck on	X	X	1	CCM	X	(See 05–02B–89 DTC P2758 [AW6A-EL])
P2762	TCC control solenoid range/performance (stuck)	X	X	1	CCM	X	(See 05–02B–91 DTC P2762 [AW6A-EL])
P2763	TCC control solenoid circuit malfunction (short to power)	X	X	1	CCM	X	(See 05–02B–92 DTC P2763 [AW6A-EL])

DTC No.	Condition	MIL	AT warning light	DC	Monitor item	Memory function	Page
P2764	TCC control solenoid circuit malfunction (short to ground/open circuit)	X	X	1	CCM	X	(See 05–02B-94 DTC P2764 [AW6A-EL])
U0073	CAN BUS OFF	(See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)])

U0140	TCM cannot receive any signals from instrument cluster	(See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)])					
U0415	Invalid data received from ABS HU/CM (wheel speed)	(See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)])					

MIL: Malfunction Indicator Lamp
DC: Drive Cycle
CCM: Comprehensive Component Monitor
– : N/A

DTC P0601 [AW6A-EL]

E6U050200000W06

DTC P0601	Flash ROM malfunction
DETECTION CONDITION	• Flash ROM (in TCM) internal circuit malfunction is detected. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0601 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0603 [AW6A-EL]

E6U050200000W07

DTC P0603	EEPROM malfunction
DETECTION CONDITION	• Different numeric values for EEPRROM and RAM (in TCM) are detected. **Diagnostic support note:** • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0603 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0604 [AW6A-EL]

E6U050200000W08

DTC P0604	RAM malfunction
DETECTION CONDITION	• RAM (in TCM) read/write error is detected. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0604 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0706 [AW6A-EL]

E6U050200000W09

DTC P0706	Transaxle range (TR) switch circuit range/performance
DETECTION CONDITION	• TCM detects stuck TR switch when ignition switch is at ON position. **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0706 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in each range (P—D). • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0707 [AW6A-EL]

E6U050200000W10

DTC P0707	Transaxle range (TR) switch circuit low input
DETECTION CONDITION	• TR switch position voltage input to TCM is less than 0.127 V when ignition switch is at ON position. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0707 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in each range (P—D). • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0708 [AW6A-EL]

E6U050200000W11

DTC P0708	Transaxle range (TR) switch circuit high input
DETECTION CONDITION	• TR switch position voltage input to TCM is 4.84 V or more when ignition switch is at ON position. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TR switch malfunction • TCM malfunction

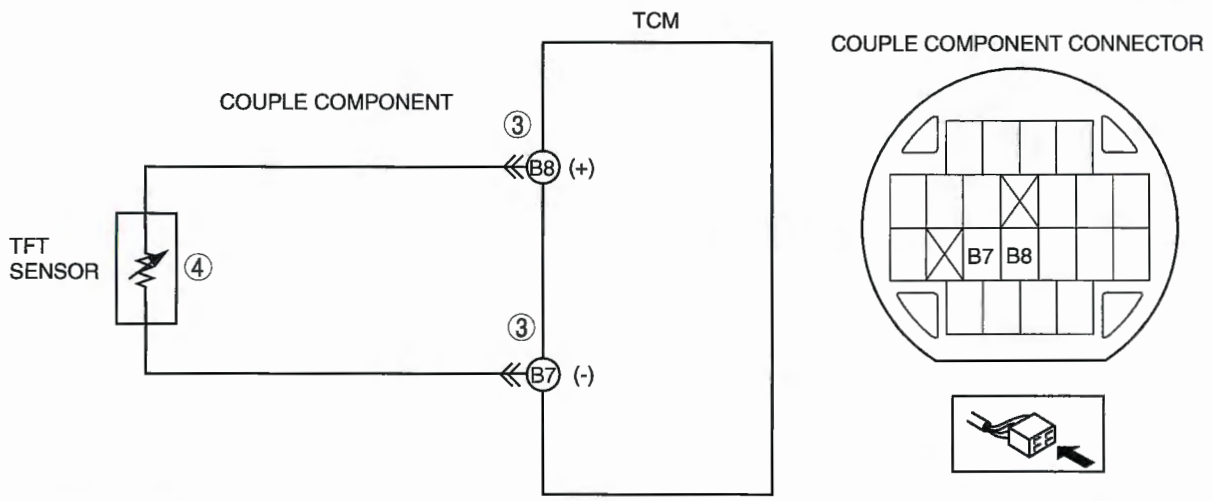
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
3	**VERIFY TROUBLESHOOTING OF DTC P0708 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in each range (P—D). • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
4	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0711 [AW6A-EL]

E6U050200000W12

DTC P0711	Transaxle fluid temperature (TFT) sensor malfunction (stuck)
DETECTION CONDITION	• Change in ATF temperature cannot be detected for 15 min or more when driving in D range. **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Damaged connector TCM • TCM malfunction



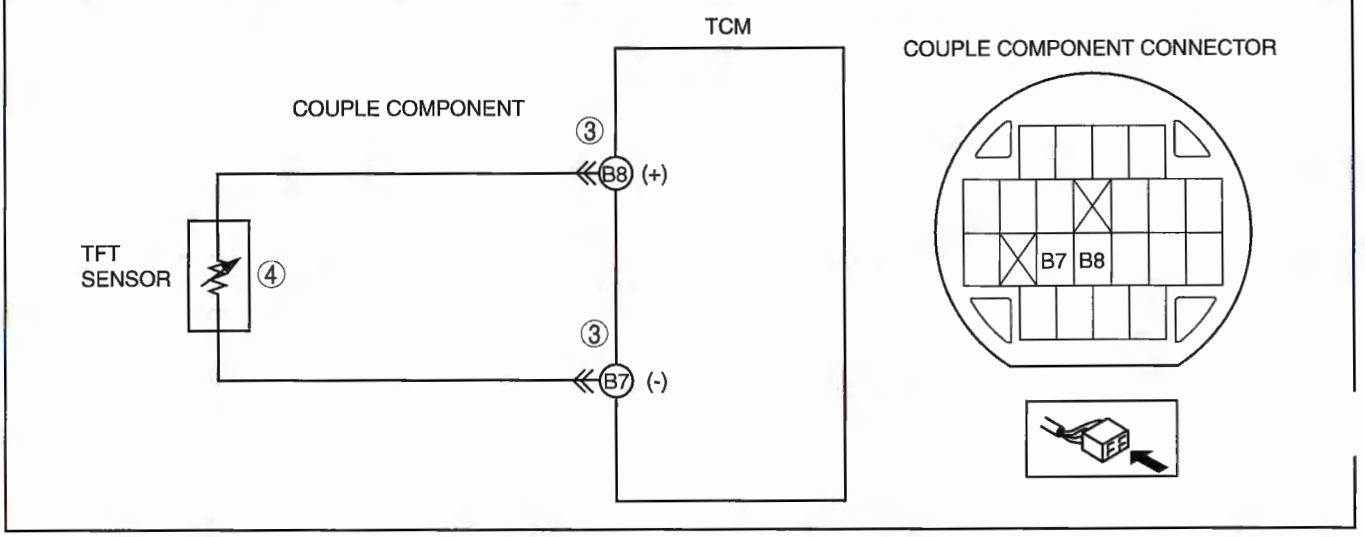
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 5.
4	**INSPECT RESISTANCE OF TFT SENSOR CIRCUIT** • Inspect for resistance between couple component terminals B8 and B7 (wiring harness-side). • Is resistance as shown below? — ATF temperature **10°C {50°F}: 5.62—7.31 kilohms** — ATF temperature **25°C {77°F}: 3.5 kilohms** — ATF temperature **110°C {230°F}: 0.22—0.27 kilohms** (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Replace the TFT sensor, then go to the next step. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
5	**VERIFY TROUBLESHOOTING OF DTC P0711 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0712 [AW6A-EL]

E6U050200000W13

DTC P0712	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to ground)
DETECTION CONDITION	• If the TCM detects the following condition for **10 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — ATF temperature **200 °C {392 °F} or more** **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Short to ground in wiring harness between TFT sensor and TCM terminal B8 • Short to ground in wiring harness between TFT sensor and TCM terminal B7 • Damaged connector TCM • TCM malfunction



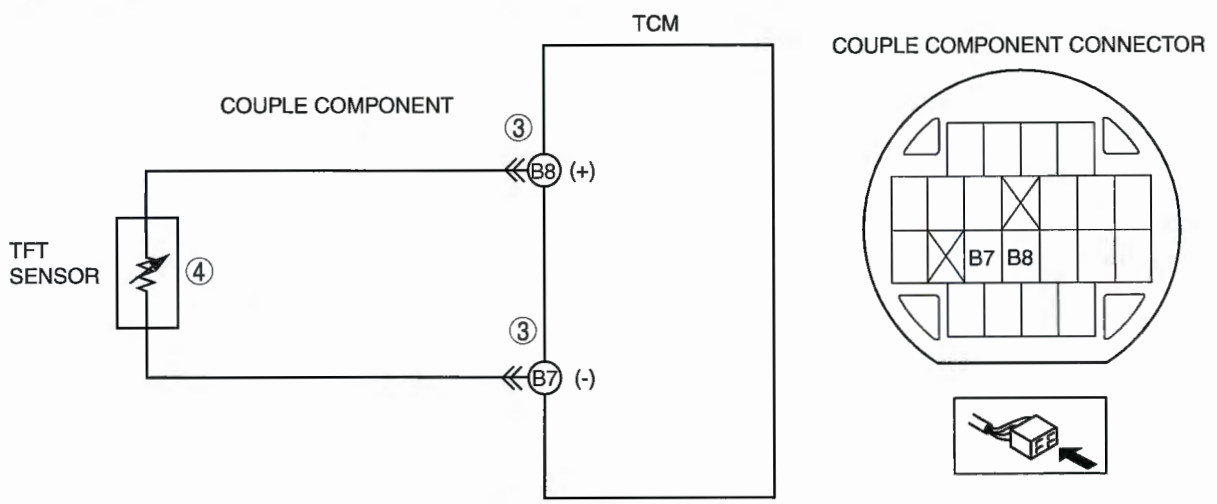
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 5.
4	**INSPECT RESISTANCE OF TFT SENSOR CIRCUIT** • Inspect for resistance between couple component terminals B8 and B7 (wiring harness-side). • Is resistance as shown below? — ATF temperature **10°C {50°F}: 5.62—7.31 kilohms** — ATF temperature **25°C {77°F}: 3.5 kilohms** — ATF temperature **110°C {230°F}: 0.22—0.27 kilohms** (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Replace the TFT sensor, then go to the next step. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
5	**VERIFY TROUBLESHOOTING OF DTC P0712 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0713 [AW6A-EL]

E6U050200000W14

DTC P0713	Transaxle fluid temperature (TFT) sensor circuit malfunction (short to power/open circuit)
DETECTION CONDITION	• If the TCM detects the following condition for **1 s or more**, the TCM determines that the TFT sensor circuit has a malfunction. — Engine warmed-up — ATF temperature **less than –43 °C {–45.4 °F}** **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• TFT sensor malfunction • Open circuit in wiring harness between TFT sensor and TCM terminal B8 • Open circuit in wiring harness between TFT sensor and TCM terminal B7 • Short to power in wiring harness between TFT sensor and TCM terminal B8 • Short to power in wiring harness between TFT sensor and TCM terminal B7 • Damaged connector TCM • TCM malfunction



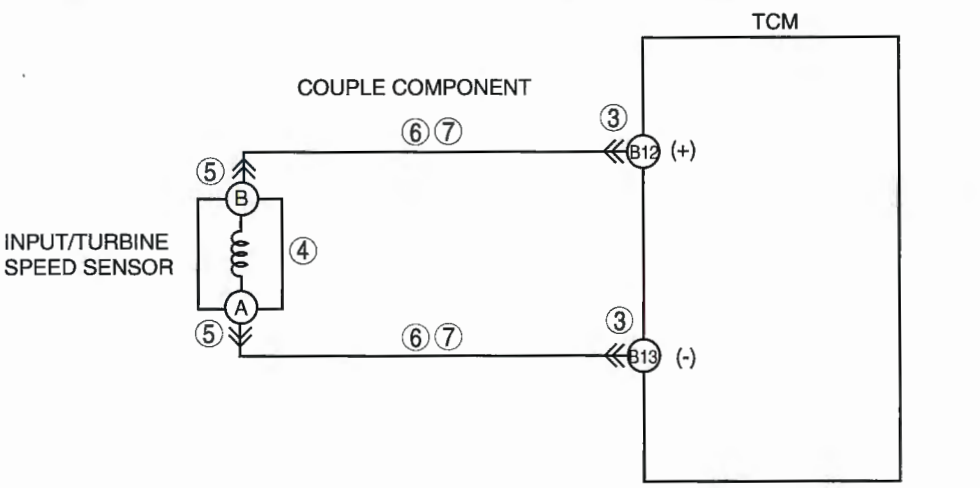
Diagnostic procedure

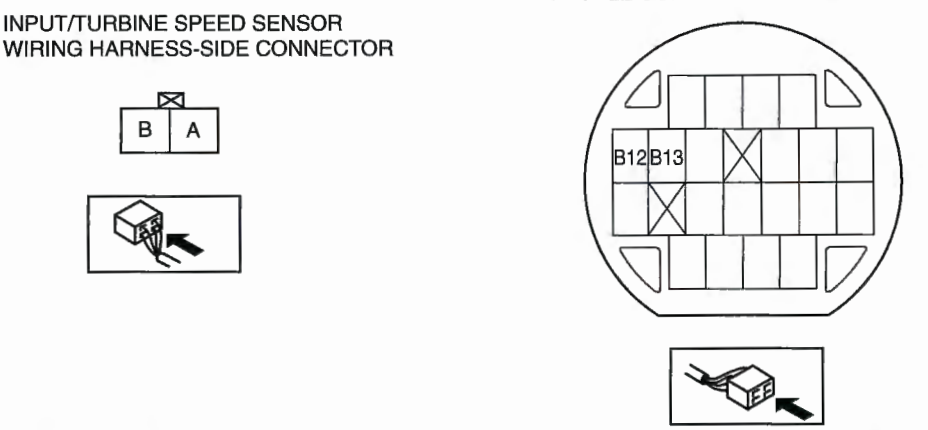
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 5.
4	**INSPECT RESISTANCE OF TFT SENSOR CIRCUIT** • Inspect for resistance between couple component terminals B8 and B7 (wiring harness-side). • Is resistance as shown below? — ATF temperature **10°C {50°F}: 5.62—7.31 kilohms** — ATF temperature **25°C {77°F}: 3.5 kilohms** — ATF temperature **110°C {230°F}: 0.22—0.27 kilohms** (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Replace the TFT sensor, then go to the next step. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
5	**VERIFY TROUBLESHOOTING OF DTC P0713 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
6	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0717 [AW6A-EL]

E6U050200000W15

DTC P0717	Input/turbine speed sensor circuit malfunction (open circuit/short circuit)
DETECTION CONDITION	• When all conditions below are satisfied. — D range of TR switch input — Driving vehicle at vehicle speed of **20 km/h {12 mph} or more** — Vehicle speed signal 24 pulse input — Input/turbine speed sensor signal not input • Normal turbine speed signal is not input. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Input/turbine speed sensor malfunction • Open circuit between input/turbine speed sensor terminal B and TCM terminal B12 • Open circuit between input/turbine speed sensor terminal A and TCM terminal B13 • Short to ground in wiring harness between input/turbine speed sensor terminal B and TCM terminal B12 • Short to ground in wiring harness between input/turbine speed sensor terminal A and TCM terminal B13 • Short to power in wiring harness between input/turbine speed sensor terminal B and TCM terminal B12 • Short to power in wiring harness between input/turbine speed sensor terminal A and TCM terminal B13 • Damaged connector between input/turbine speed sensor and TCM • TCM malfunction





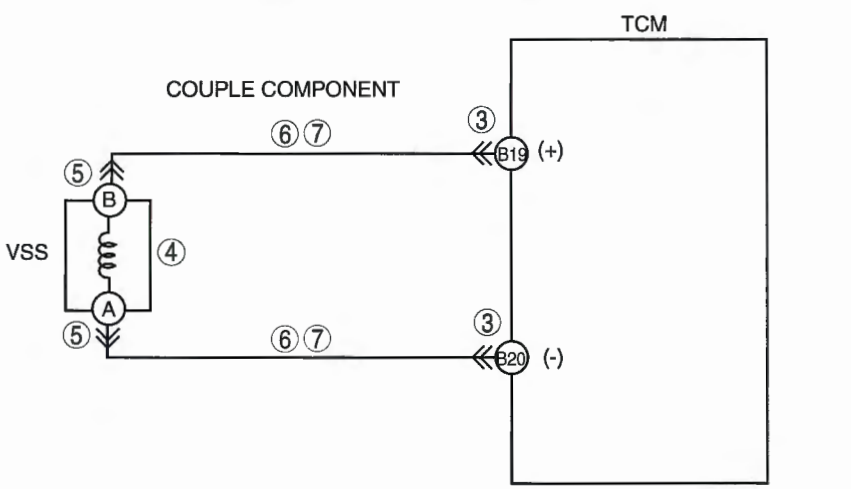
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT CONTINUITY OF INPUT/TURBINE SPEED SENSOR CIRCUIT** • Inspect for continuity between the couple component terminals B12 and B13 (wiring harness-side). • Is there continuity?	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL INPUT/TURBINE SPEED SENSOR FOR POOR CONNECTION** • Disconnect the input/turbine speed sensor connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals (wiring harness-side) and input/turbine speed sensor terminals (wiring wiring harness-side). — Terminal B12 and terminal B — Terminal B13 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO CIRCUIT** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B12 and all terminals except B12/ B13 (wiring harness-side). — Terminal B13 and all terminals except B12/ B13 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the input/turbine speed sensor, then go to the next step. (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0717 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0722 [AW6A-EL]

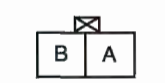
E6U050200000W16

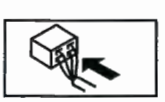
DTC P0722	Vehicle speed sensor (VSS) circuit malfunction (open circuit/short circuit)
DETECTION CONDITION	• When all conditions below are satisfied. — D range of TR switch input — Driving vehicle at vehicle speed of **20 km/h {12 mph} or more** — Turbine speed signal 16 pulse input — VSS signal not input • Normal vehicle speed signal is not input for 0.1 s or more. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• VSS malfunction • Open circuit between VSS terminal B and TCM terminal B19 • Open circuit between VSS terminal A and TCM terminal B20 • Short to ground in wiring harness between VSS terminal B and TCM terminal B19 • Short to ground in wiring harness between VSS terminal A and TCM terminal B20 • Short to power in wiring harness between VSS terminal B and TCM terminal B19 • Short to power in wiring harness between VSS terminal A and TCM terminal B20 • Damaged connector between VSS and TCM • TCM malfunction

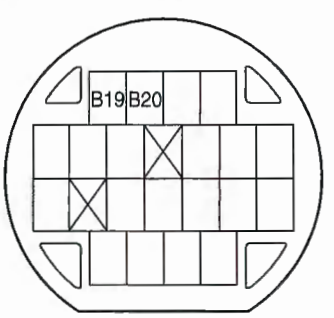


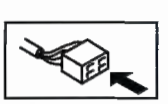
COUPLE COMPONENT CONNECTOR

VSS WIRING HARNESS-SIDE CONNECTOR









Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT CONTINUITY OF VSS CIRCUIT** • Inspect for continuity between the couple component terminals B19 and B20 (wiring harness-side). • Is there continuity?	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL VSS FOR POOR CONNECTION** • Disconnect the VSS connector. • Inspect for poor connection (such as damaged/pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals (wiring harness-side) and VSS terminals (wiring harness-side). — Terminal B19 and terminal B — Terminal B20 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO CIRCUIT** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B19 and all terminals except B19/B20 (wiring harness-side). — Terminal B20 and all terminals except B19/B20 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0722 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0729 [AW6A-EL]

E6U050200000W17

DTC P0729	Gear 6 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 6GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Shift solenoid E stuck • Line pressure control solenoid stuck • Line pressure low • B1 brake slipping • C2 clutch slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0729 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 6GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0730 [AW6A-EL]

E6U050200000W18

DTC P0730	Gear 1 and engine brake operation incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Engine braking is detected to be not operating when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in M range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid A stuck • Shift solenoid B stuck • Line pressure control solenoid stuck • Line pressure low • B2 brake slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0730 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the M range, 1GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0731 [AW6A-EL]

E6U050200000W19

DTC P0731	Gear 1 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 1GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Shift solenoid E stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Line pressure low • C1 clutch slipping • One-way clutch slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0731 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 1GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0732 [AW6A-EL]

E6U050200000W20

DTC P0732	Gear 2 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 2GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Shift solenoid E stuck • Line pressure control solenoid stuck • Line pressure low • C1 clutch slipping • B1 brake slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0732 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 2GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0733 [AW6A-EL]

E6U050200000W21

DTC P0733	Gear 3 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 3GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Line pressure low • C1 clutch slipping • C3 clutch slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0733 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 3GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0734 [AW6A-EL]

E6U050200000W22

DTC P0734	Gear 4 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Line pressure low • C1 clutch slipping • C2 clutch slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0734 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0735 [AW6A-EL]

E6U050200000W23

DTC P0735	Gear 5 incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in 5GR in D range — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Line pressure low • C2 clutch slipping • C3 clutch slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0735 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 5GR — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0736 [AW6A-EL]

E6U050200000W24

DTC P0736	Gear reverse incorrect (incorrect gear ratio detected)
DETECTION CONDITION	• Incorrect gear ratio detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **20 °C {68 °F} or more** — Driving in R position — Engine running — Accelerator opening angle **10% or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Shift solenoid D stuck • Shift solenoid E stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Line pressure low • C3 clutch slipping • B2 brake slipping • Control valve stuck • Oil pump malfunction • VSS malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Inspect the ATF condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the transaxle, then go to Step 8.
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 8.
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 8. Any ranges: Replace the control valve body, then go to Step 8. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go to Step 8. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
7	**INSPECT VSS** • Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Inspect the coupler component. • If the coupler component is normal, replace the automatic transaxle, then go to the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0736 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle under the following conditions at least 12 times for **more than 1 s**: — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the R position — Accelerator opening angle (THOP PID): **10% or more** • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0780 [AW6A-EL]

E6U050200000W25

DTC P0780	Valve control solenoid circuit malfunction (valve stuck)
DETECTION CONDITION	• Irregular shift control detected when following conditions are satisfied while driving: **Monitoring condition:** — ATF temperature **65 °C {149 °F} or more** — Engine running — Driving in D range — Counter drive gear (output) revolution speed **300 rpm or more** (VSS) — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid C stuck • Shift solenoid D stuck • Shift solenoid E stuck • Shift solenoid F stuck • Line pressure control solenoid stuck • Control valve stuck • TCM malfunction

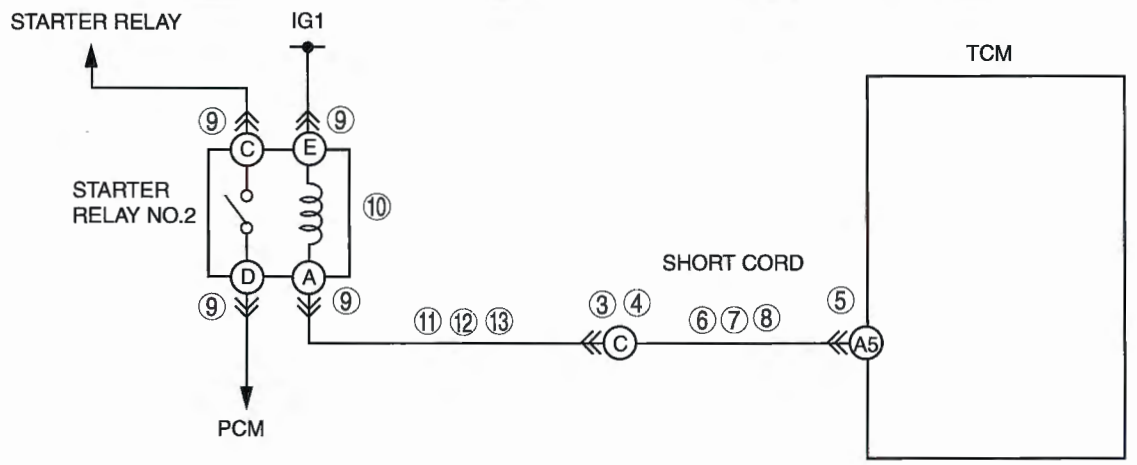
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT SOLENOID VALVE** • Inspect the solenoid valve. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
4	**VERIFY TROUBLESHOOTING OF DTC P0780 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

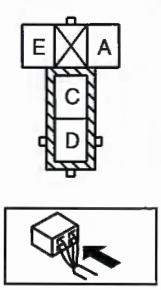
DTC P0817 [AW6A-EL]

E6U050200000W26

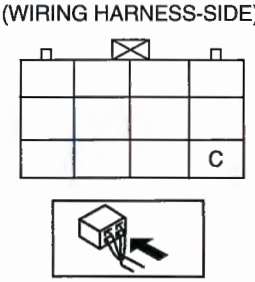
DTC P0817	Stater relay No.2 circuit malfunction (open circuit/short circuit)
DETECTION CONDITION	• Any of the following conditions are met when ignition switch is at ON position: — 0 V detected at TCM terminal A5 when in D range or R position — 12 V detected at TCM terminal A5 when in P or N position **Diagnostic support note:** • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between starter relay No.2 terminal A and TCM terminal A5 • Short to ground in wiring harness between starter relay No.2 terminal A and TCM terminal A5 • Short to power in wiring harness between starter relay No.2 terminal A and TCM terminal A5 • Starter relay No.2 malfunction • Damaged connector between starter relay No.2 and TCM • TCM malfunction



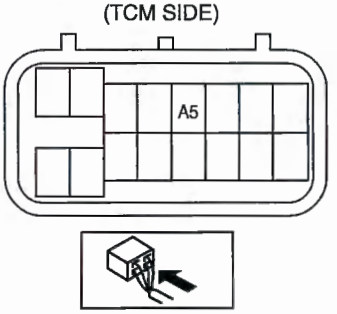
STARTER RELAY NO.2 CONNECTOR WIRING HARNESS-SIDE



TCM SHORT CORD CONNECTOR (WIRING HARNESS-SIDE)



TCM SHORT CORD CONNECTOR (TCM SIDE)



Diagnostic procedure

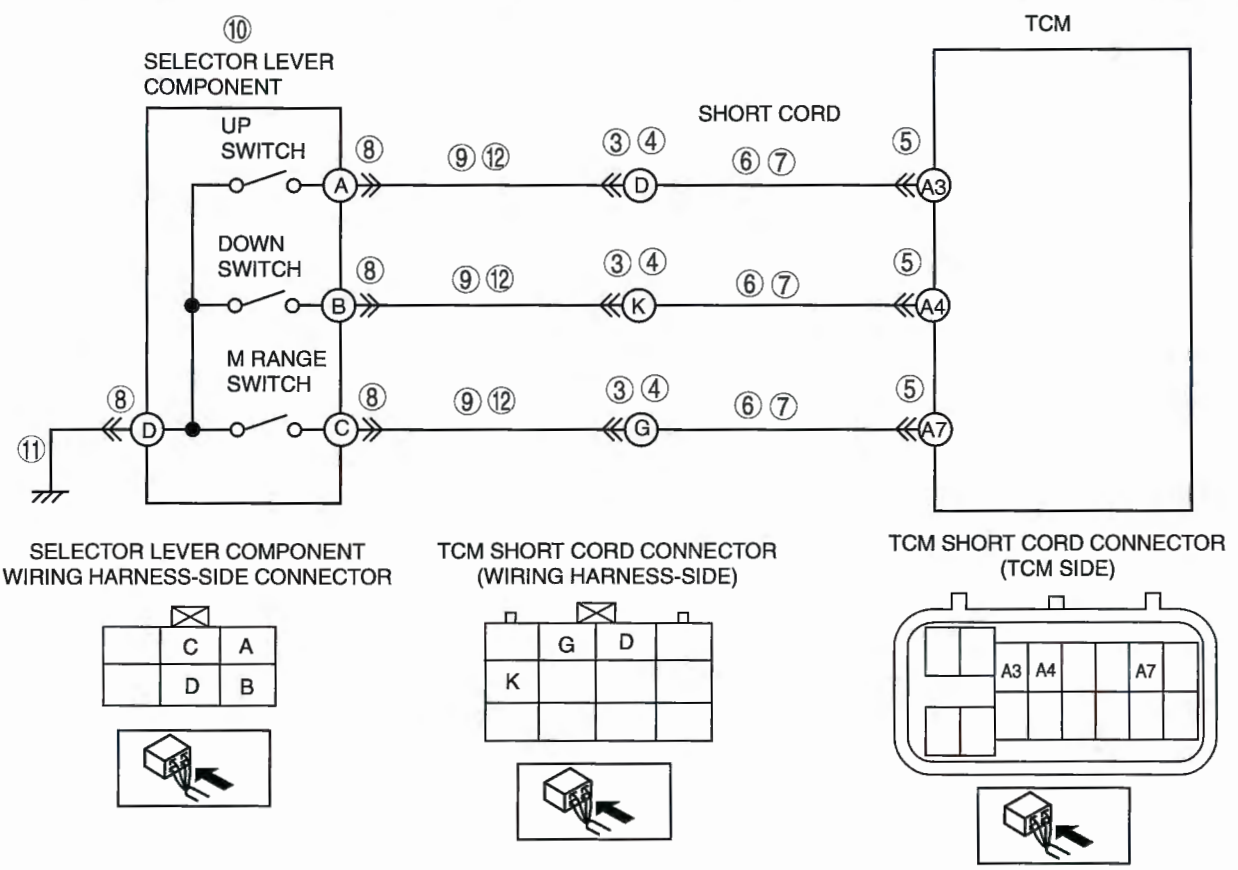
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VOLTAGE OF STARTER RELAY NO.2 CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Shift the selector lever to P or N position. • Inspect for voltage TCM short cord connector terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to go to Step 7.
		No	Go to the next step.
4	**INSPECT TERMINAL TCM SHORT CORD CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM short cord connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 18.
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 18.
6	**INSPECT TCM SHORT CORD CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminal C and TCM terminal A5 (wiring harness-side). • Is there continuity?	Yes	Go to Step 18.
		No	Repair or replace the wiring harness, then go to Step 18.
7	**INSPECT VOLTAGE OF STARTER RELAY NO.2 CIRCUIT** • Shift the selector lever to D range or R position. • Inspect for voltage TCM short cord connector terminal C (wiring harness-side). • Is the voltage **B+**?	Yes	Go to go to Step 18.
		No	Go to the next step.
8	**INSPECT VOLTAGE OF STARTER RELAY NO.2 TERMINAL E** • Inspect for voltage starter relay No.2 terminal E (wiring harness-side). • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 18.
9	**INSPECT STARTER RELAY NO.2 FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the starter relay No.2 connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 18.
10	**INSPECT STARTER RELAY NO.2** • Inspect the starter relay No.2. (See 09–21–7 RELAY INSPECTION) • Is the relay normal?	Yes	Go to the next step.
		No	Replace the starter relay No.2, then go to Step 18.

STEP	INSPECTION		ACTION
11	**INSPECT TERMINAL TCM SHORT CORD CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM short cord connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 18.
12	**INSPECT STARTER RELAY NO.2 CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminal C and starter relay No.2 terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 18.
13	**INSPECT STARTER RELAY NO.2 CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between starter relay No.2 terminal A (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the harness, then go to Step 18.
		No	Go to the next step.
14	**INSPECT STARTER RELAY NO.2 CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at starter relay No.2 terminal A (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to Step 18.
15	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 18.
16	**INSPECT TCM SHORT CORD CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TCM short cord connector terminal C (wiring harness-side) and body ground. • Is there continuity?	Yes	Repair or replace the harness, then go to Step 18.
		No	Go to the next step.
17	**INSPECT TCM SHORT CORD CIRCUIT FOR SHORT TO POWER** • Turn the ignition switch to the ON position (engine off). • Inspect the voltage at TCM short cord connector terminal C (wiring harness-side). • Is the voltage **0 V**?	Yes	Go to the next step.
		No	Repair or replace the wiring harness, then go to the next step.
18	**VERIFY TROUBLESHOOTING OF DTC P0817 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
19	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0819 [AW6A-EL]

E6U050200000W27

DTC P0819	Manual switch/up switch/down switch circuit malfunction (open circuit/short circuit)
DETECTION CONDITION	• Any of the following conditions are detected for **10 s or more** when engine is running: — **5 V** detected at TCM terminals A7 when in any position except D or M range. — **0 V** detected at TCM terminal A7 when **5 V** are input to TCM terminal A3 or A4. **Diagnostic support note:** • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• M range switch malfunction • Up switch malfunction • Down switch malfunction. • Open circuit in wiring harness between selector lever component terminal A and TCM terminal A3 • Open circuit in wiring harness between selector lever component terminal B and TCM terminal A4 • Open circuit in wiring harness between selector lever component terminal C and TCM terminal A7 • Open circuit in wiring harness between selector lever component terminal D and ground • Short to ground in wiring harness between selector lever component terminal A and TCM terminal A3 • Short to ground in wiring harness between selector lever component terminal B and TCM terminal A4 • Short to ground in wiring harness between selector lever component terminal C and TCM terminal A7 • Damaged connector between selector lever component and TCM • TCM malfunction



Diagnostic procedure

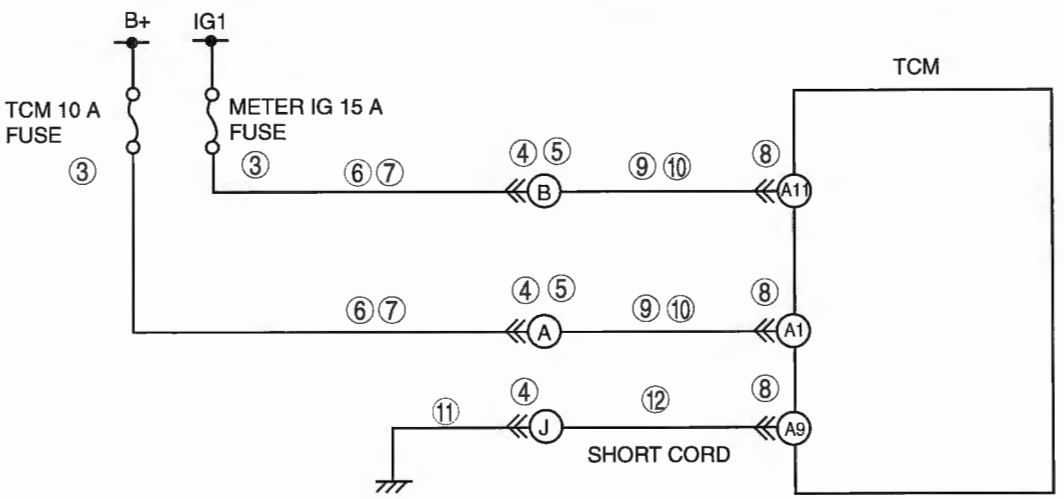
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT VOLTAGE OF M RANGE SWITCH, UP SWITCH, AND DOWN SWITCH CIRCUIT** • Turn the ignition switch to the ON position. (engine off) • Shift the selector lever to any except M range. • Inspect for voltage between TCM short cord connector terminals (wiring harness-side) — Terminal G and ground (M range switch) — Terminal D and ground (up switch) — Terminal K and ground (down switch) • Is the voltage **B+**?	Yes	Go to go to Step 13.
		No	Go to the next step.
4	**INSPECT TERMINAL TCM SHORT CORD CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM short cord connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 13.
5	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 13.
6	**INSPECT TCM SHORT CORD CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminals and TCM terminals (wiring harness-side). — Terminal G and terminal A7 (M range switch) — Terminal D and terminal A3 (up switch) — Terminal K and terminal A4 (down switch) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 13.
7	**INSPECT TCM SHORT CORD CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TCM short cord connector terminals (wiring harness-side) and body ground. — Terminal G and body ground (M range switch) — Terminal D and body ground (up switch) — Terminal K and body ground (down switch) • Is there continuity?	Yes	Repair or replace the harness, then go to the next step.
		No	Go to the next step.
8	**INSPECT SELECTOR LEVER COMPONENT FOR POOR CONNECTION** • Disconnect the selector lever component connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 13.

STEP	INSPECTION		ACTION
9	**INSPECT M RANGE SWITCH, UP SWITCH, AND DOWN SWITCH CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between selector lever component terminals (wiring harness-side) and body ground. — Terminal C and body ground (M range switch) — Terminal A and body ground (up switch) — Terminal B and body ground (down switch) • Is there continuity?	Yes	Repair or replace the harness, then go to Step 13.
		No	Go to the next step.
10	**INSPECT M RANGE SWITCH, UP SWITCH, AND DOWN SWITCH** • Inspect the M range switch, up switch, and down switch. (See 05–18–6 SELECTOR LEVER INSPECTION) • Are the switches normal?	Yes	Go to the next step.
		No	Replace the selector lever, then go to Step 13. (See 05–18–7 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)
11	**INSPECT M RANGE SWITCH, UP SWITCH, AND DOWN SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between selector lever component terminal D (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 13.
12	**INSPECT M RANGE SWITCH, UP SWITCH, AND DOWN SWITCH CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminals and selector lever component terminals (wiring harness-side). — Terminal G and terminal C (M range switch) — Terminal D and terminal A (up switch) — Terminal K and terminal B (down switch) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0819 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in M range, and change gears by shifting the selector lever (operating the up and down switches). • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

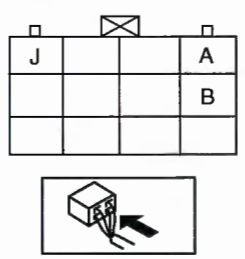
DTC P0882 [AW6A-EL]

E6U050200000W28

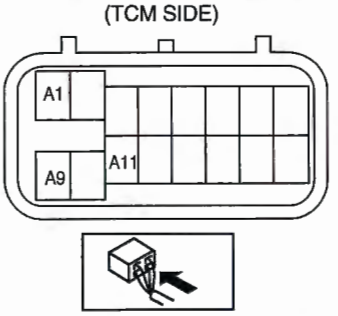
DTC P0882	TCM B+ low
DETECTION CONDITION	• Voltage of less than 9 V detected at TCM terminals A1 and A11 when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Melted METER IG 15 A fuse • Melted TCM 10 A fuse • Open circuit in wiring harness between TCM 10 A fuse and TCM terminal A1 • Open circuit in wiring harness between METER IG 15 A fuse and TCM terminal A11 • Open circuit in wiring harness between TCM terminal A9 and body ground • Short to ground in wiring harness between TCM 10 A fuse and TCM terminal A1 • Short to ground in wiring harness between ROOM 15 A fuse and TCM terminal A11 • Poor connection of TCM connector • TCM malfunction



TCM SHORT CORD CONNECTOR (WIRING HARNESS-SIDE)



TCM SHORT CORD CONNECTOR (TCM SIDE)



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT FUSE** • Turn the ignition switch to the LOCK position. • Inspect METER IG 15 A fuse and TCM 10 A fuse for malfunction. • Is it normal?	Yes	Go to the next step.
		No	• If fuse has been melted, go to the next step. • If fuse is not installed correctly, install it correctly, then go to Step 13.
4	**INSPECT VOLTAGE OF POWER SUPPLY CIRCUIT** • Turn the ignition switch to the ON position (engine off). • Inspect for voltage TCM short cord connector terminal A and B (wiring harness-side). • Is the voltage **B+**?	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL TCM SHORT CORD CONNECTOR FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Disconnect the TCM short cord connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 13.
6	**INSPECT POWER SUPPLY CIRCUIT FOR SHORT TO GROUND** • Disconnect the positive battery cable. • Inspect for continuity between the fuse terminals and body ground. — ROOM 15 A fuse terminal and body ground — TCM 10 A fuse terminal and body ground • Is there continuity?	Yes	Repair or replace the wiring harness and install new fuse, then go to Step 13.
		No	Go to the next step.
7	**INSPECT POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminals and fuse terminals (wiring harness-side). — Terminal A and TCM 10 A fuse — Terminal B and METER IG 15 A fuse • Is there continuity?	Yes	Go to Step 11.
		No	Repair or replace the harness, then go to Step 13.
8	**INSPECT TCM CONNECTOR FOR POOR CONNECTION** • Disconnect the TCM connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 13.
9	**INSPECT TCM SHORT CORD CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminals and TCM terminals (wiring harness-side). — Terminal A and terminal A1 — Terminal B and terminal A11 • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 13.

STEP	INSPECTION		ACTION
10	**INSPECT TCM SHORT CORD CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between TCM short cord connector terminals (wiring harness-side) and body ground. — Terminal A and body ground — Terminal B and body ground • Is there continuity?	Yes	Repair or replace the harness, then go to Step 13.
		No	Go to the next step.
11	**INSPECT GROUND CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminal J (wiring harness-side) and body ground. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to Step 13.
12	**INSPECT TCM SHORT CORD CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between TCM short cord connector terminal J and TCM terminal A9 (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the harness, then go to the next step.
13	**VERIFY TROUBLESHOOTING OF DTC P0882 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
14	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0883 [AW6A-EL]

E6U050200000W29

DTC P0883	TCM B+ high
DETECTION CONDITION	• Voltage of 18 V or more detected at TCM terminals A1 and A11 when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light not illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Generator malfunction • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**VERIFY DTC** • Turn the ignition switch to the LOCK position, then to the ON position. • Verify the DTC in the PCM memory. • Are DTC P2504 output?	Yes	Go to the applicable DTC inspection. (See 01–02C–13 DTC TABLE [AJ].)
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING OF DTC P0883 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine and warm it up completely. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
5	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0942 [AW6A-EL]

E6U050200000W30

DTC P0942	Valve control solenoid circuit malfunction at D range (valve stuck)
DETECTION CONDITION	• Difference of less than 150 rpm between engine and turbine speeds detected when following conditions are satisfied while driving: **Monitoring condition:** — Engine running — Driving in D range — Counter drive gear (output) revolution speed **500 rpm or more** (VSS) — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid A stuck • Shift solenoid B stuck • Shift solenoid C stuck • Line pressure control solenoid stuck • C1 clutch slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 6. Any ranges: Replace the control valve body, then go to Step 6. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
4	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go the Step 6. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
5	**INSPECT SOLENOID VALVE** • Inspect the solenoid valve. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0942 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0961 [AW6A-EL]

E6U050200000W31

DTC P0961	Line pressure control solenoid range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Line pressure control solenoid stuck • Control valve stuck • TCM malfunction

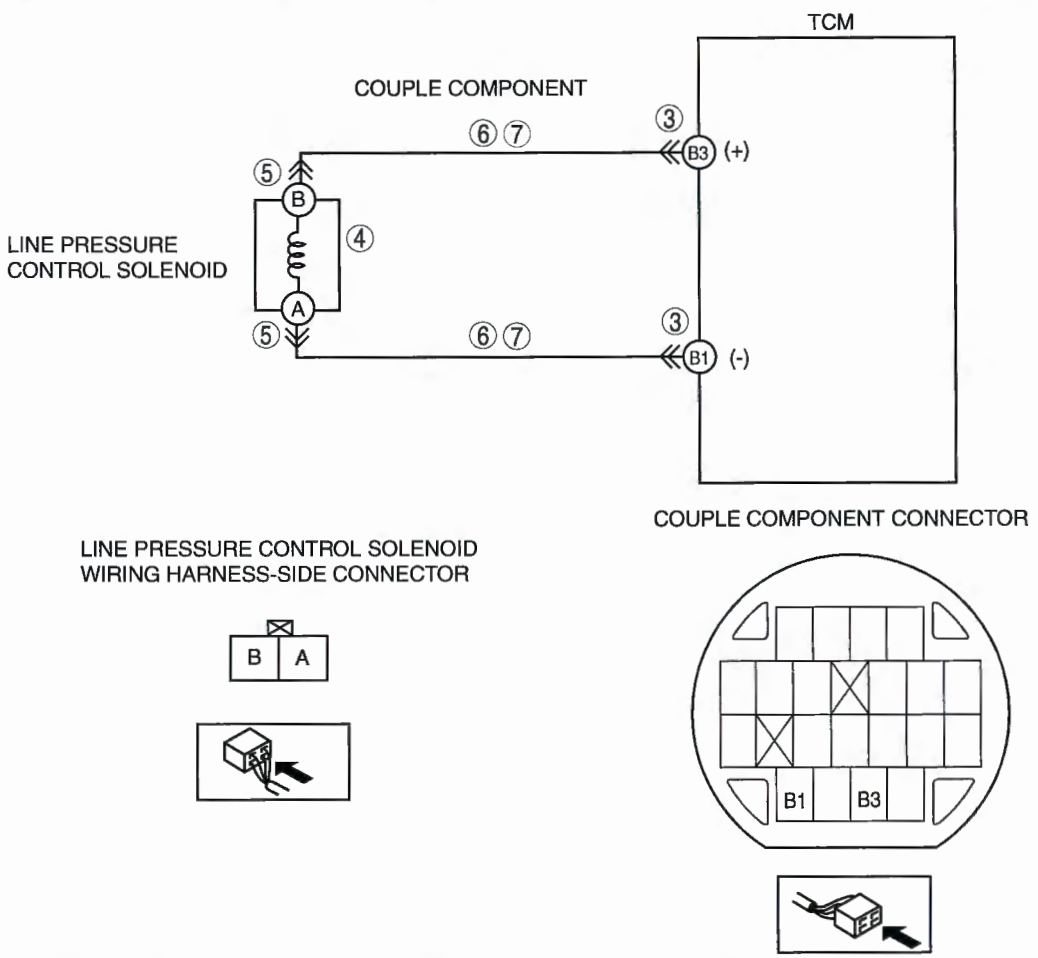
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0961 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0962 [AW6A-EL]

E6U050200000W32

DTC P0962	Line pressure control solenoid circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in line pressure control solenoid signal system (The solenoid circuit current value input to the TCM is continuously **less than 23 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between line pressure control solenoid terminal B and TCM terminal B3 • Open circuit between line pressure control solenoid terminal A and TCM terminal B1 • Short to ground in wiring harness between line pressure control solenoid terminal B and TCM terminal B3 • Short to ground in wiring harness between line pressure control solenoid terminal A and TCM terminal B1 • Line pressure control solenoid malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



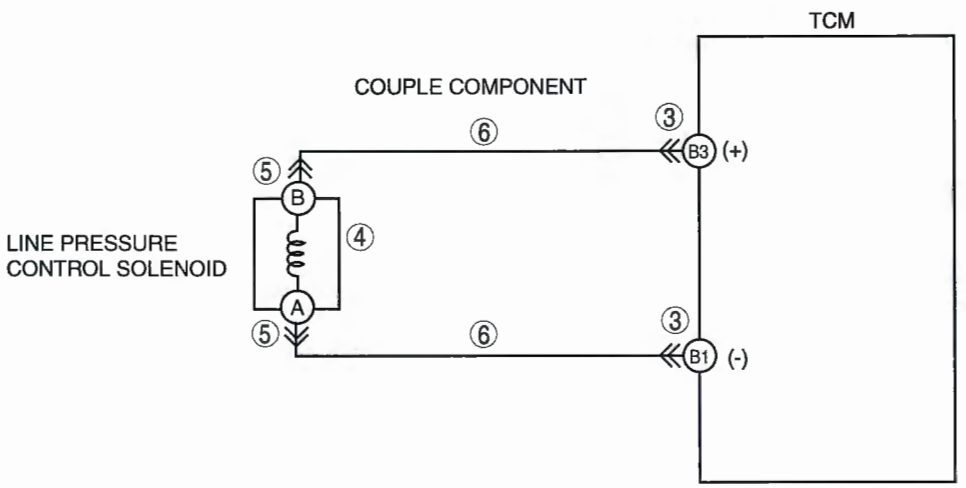
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF LINE PRESSURE CONTROL SOLENOID CIRCUIT** • Inspect for resistance between couple component terminals B3 and B1 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL LINE PRESSURE CONTROL SOLENOID FOR POOR CONNECTION** • Disconnect the line pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B3 and terminal B — Terminal B1 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B3 and all terminals except B3/B1 — Terminal B1 and all terminals except B3/B1 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0962 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0963 [AW6A-EL]

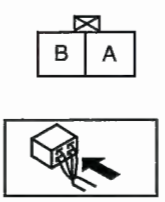
E6U050200000W33

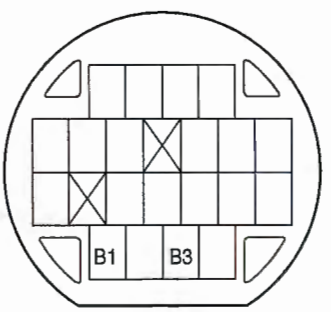
DTC P0963	Line pressure control solenoid circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in line pressure control solenoid signal system (The solenoid circuit current value input to the TCM is continuously **more than 1,333 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between line pressure control solenoid terminal B and TCM terminal B3 • Short to power in wiring harness between line pressure control solenoid terminal A and TCM terminal B1 • Line pressure control solenoid malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



COUPLE COMPONENT CONNECTOR

LINE PRESSURE CONTROL SOLENOID
WIRING HARNESS-SIDE CONNECTOR





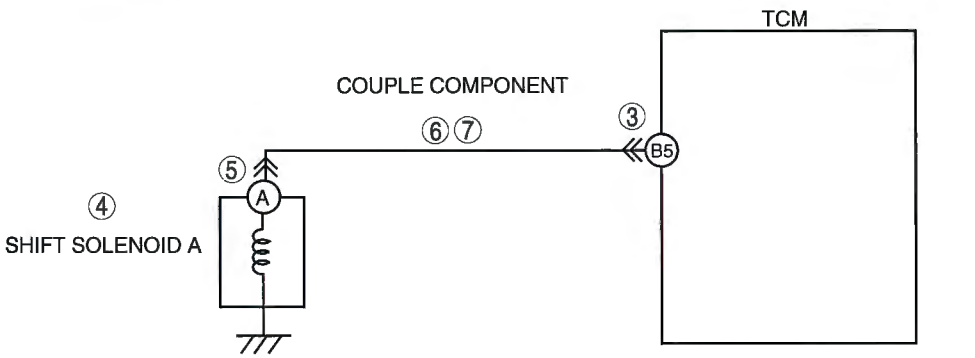
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF LINE PRESSURE CONTROL SOLENOID CIRCUIT** • Inspect for resistance between couple component terminals B3 and B1 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL LINE PRESSURE CONTROL SOLENOID FOR POOR CONNECTION** • Disconnect the line pressure control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B3 and all terminals except B3/B1 — Terminal B1 and all terminals except B3/B1 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0963 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0973 [AW6A-EL]

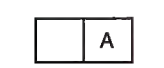
E6U050200000W34

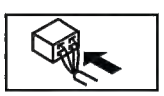
DTC P0973	Shift solenoid A circuit malfunction (short to ground)
DETECTION CONDITION	• Short to ground in shift solenoid A signal system (The solenoid remains off continuously for **100 ms or more** even if the TCM sends a solenoid on command). **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to ground in wiring harness between shift solenoid A terminal A and TCM terminal B5 • Shift solenoid A malfunction • Damaged connector between shift solenoid A and TCM • TCM malfunction

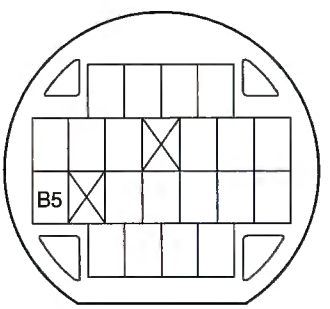


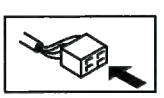
COUPLE COMPONENT CONNECTOR

SHIFT SOLENOID A WIRING HARNESS-SIDE CONNECTOR









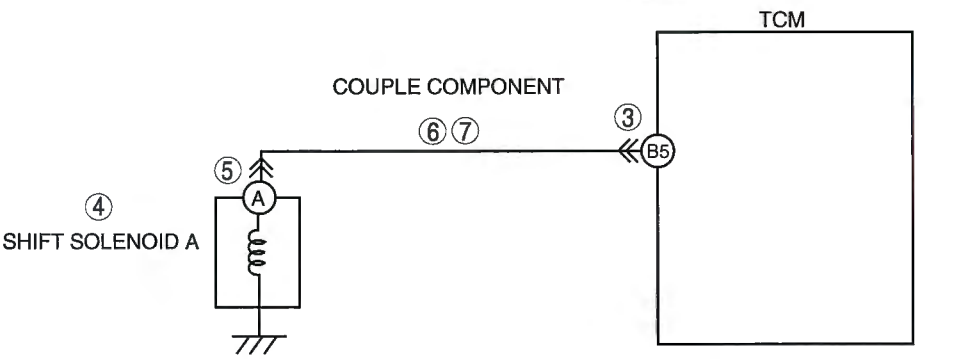
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID A CIRCUIT** • Inspect for resistance between couple component terminal B5 (wiring harness-side) and ground. • Is resistance **within 11—15 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID A FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminal B5 and all terminals except B5 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0973 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

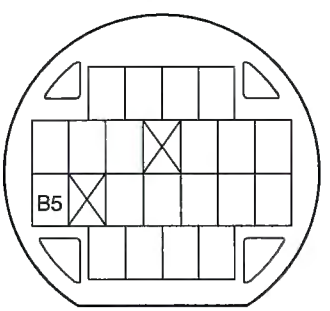
DTC P0974 [AW6A-EL]

E6U050200000W35

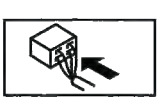
DTC P0974	Shift solenoid A circuit malfunction (short to power/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid A signal system (The solenoid remains on continuously for **100 ms or more** even if the TCM sends a solenoid off command). **Diagnostic support note:** • This is continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit in wiring harness between shift solenoid A terminal A and TCM terminal B5 • Short to power in wiring harness between shift solenoid A terminal A and TCM terminal B5 • Shift solenoid A malfunction • Damaged connector between shift solenoid A and TCM • TCM malfunction

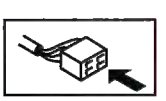


COUPLE COMPONENT CONNECTOR



SHIFT SOLENOID A WIRING HARNESS-SIDE CONNECTOR





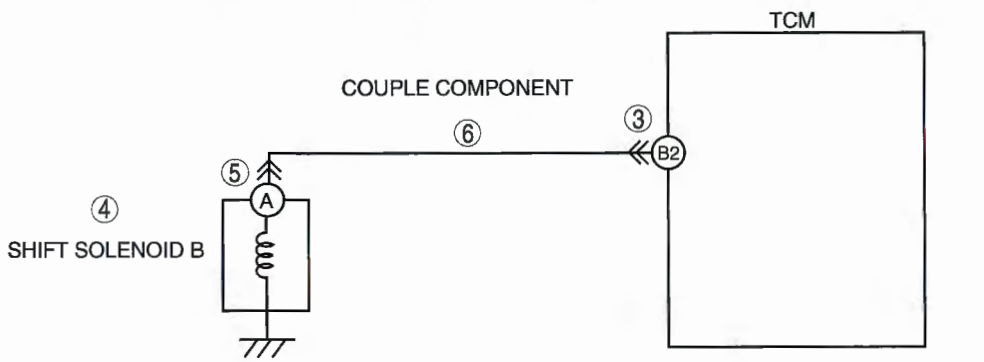
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID A CIRCUIT** • Inspect for resistance between couple component terminal B5 (wiring harness-side) and ground. • Is resistance **within 11—15 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID A FOR POOR CONNECTION** • Disconnect the shift solenoid A connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminal B5 (wiring harness-side) and shift solenoid A terminal A wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminal B5 and all terminals except B5 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0974 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

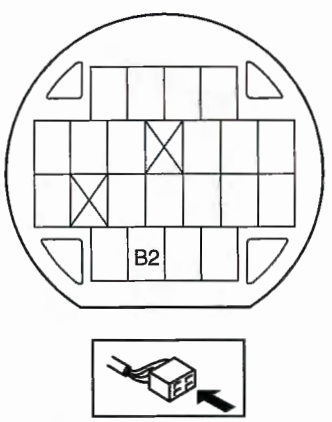
DTC P0976 [AW6A-EL]

E6U050200000W36

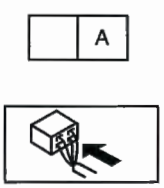
DTC P0976	Shift solenoid B circuit malfunction (short to ground)
DETECTION CONDITION	• Short to ground in shift solenoid B signal system (The solenoid remains off continuously for **100 ms or more** even if the TCM sends a solenoid on command). **Diagnostic support note:** • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to ground in wiring harness between shift solenoid B terminal A and TCM terminal B2 • Shift solenoid B malfunction • Damaged connector between shift solenoid B and TCM • TCM malfunction



COUPLE COMPONENT CONNECTOR



SHIFT SOLENOID B WIRING HARNESS-SIDE CONNECTOR



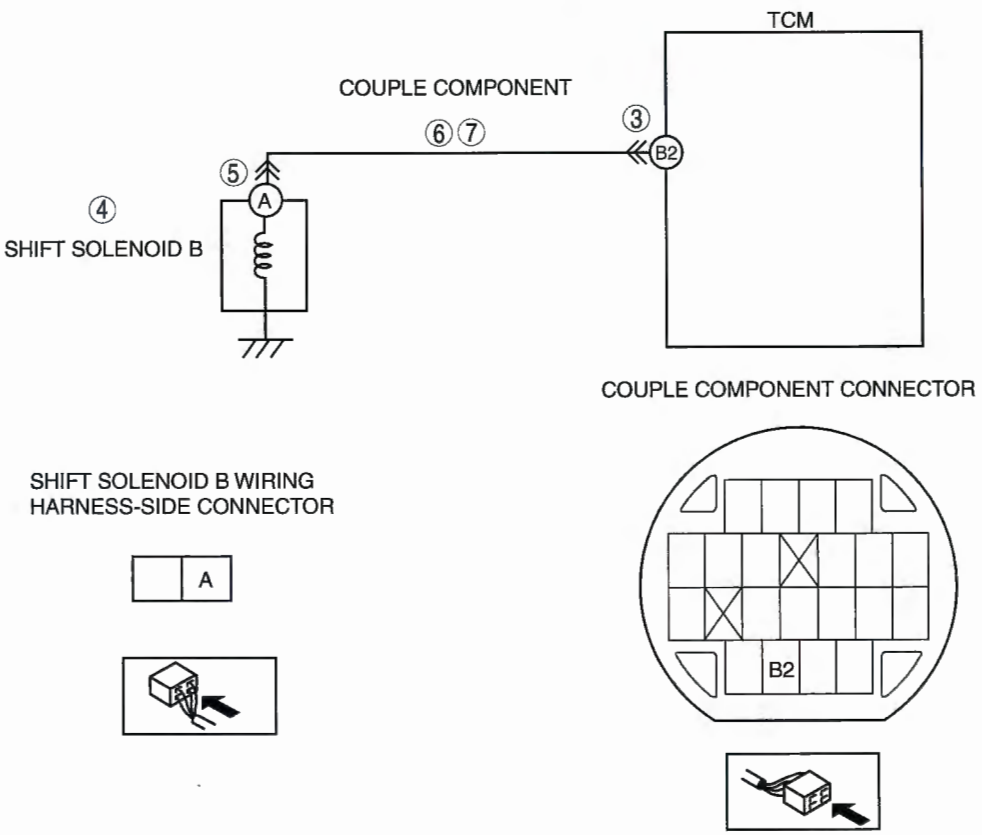
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID B CIRCUIT** • Inspect for resistance between couple component terminal B2 (wiring harness-side) and ground. • Is resistance **within 11—15 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID B FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminal B2 and all terminals except B2 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0976 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0977 [AW6A-EL]

E6U050200000W37

DTC P0977	Shift solenoid B circuit malfunction (short to power/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid B signal system (The solenoid remains on continuously for **100 ms or more** even if the TCM sends a solenoid off command). **Diagnostic support note:** • The MIL illuminates if the TCM detects the above malfunction condition during first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit in wiring harness between shift solenoid B terminal A and TCM terminal B2 • Short to power in wiring harness between shift solenoid B terminal A and TCM terminal B2 • Shift solenoid B malfunction • Damaged connector between shift solenoid A and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID B CIRCUIT** • Inspect for resistance between couple component terminal B2 (wiring harness-side) and ground. • Is resistance **within 11—15 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID B FOR POOR CONNECTION** • Disconnect the shift solenoid B connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminal B2 (wiring harness-side) and shift solenoid A terminal A wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminal B2 and all terminals except B2 (wiring harness-side). • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0977 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0978 [AW6A-EL]

E6U050200000W38

DTC P0978	Shift solenoid C range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid C stuck • Control valve stuck • TCM malfunction

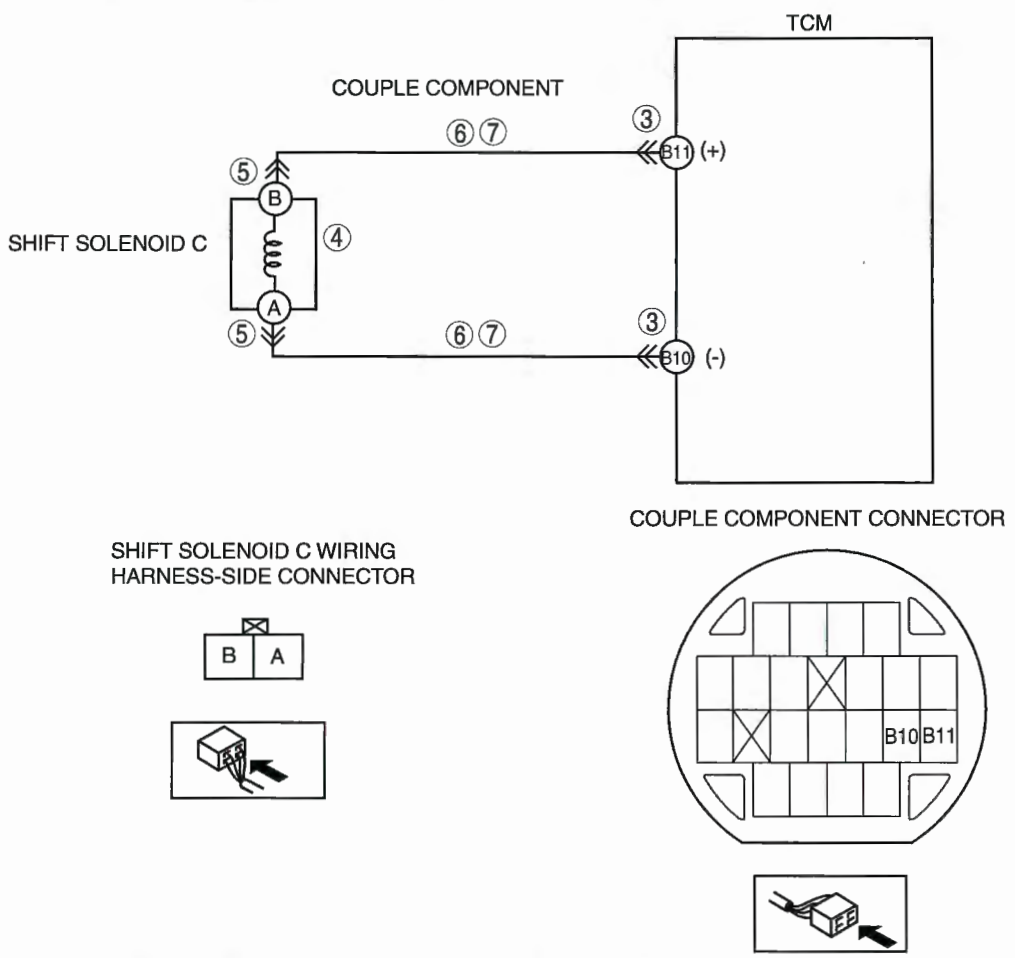
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0978 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0979 [AW6A-EL]

E6U050200000W39

DTC P0979	Shift solenoid C circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid C signal system (The solenoid circuit current value input to the TCM is continuously **less than 23 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between shift solenoid C terminal B and TCM terminal B11 • Open circuit between shift solenoid C terminal A and TCM terminal B10 • Short to ground in wiring harness between shift solenoid C terminal B and TCM terminal B11 • Short to ground in wiring harness between shift solenoid C terminal A and TCM terminal B10 • Shift solenoid C malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



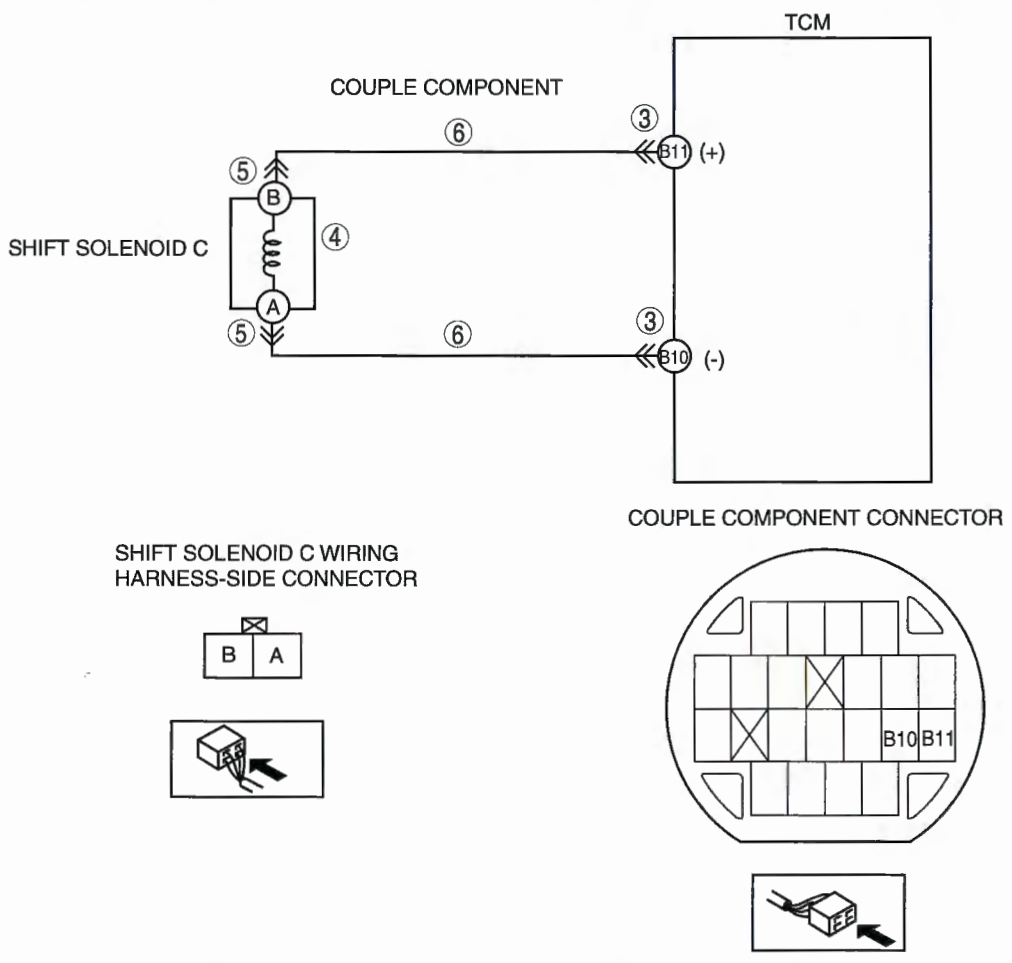
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID C CIRCUIT** • Inspect for resistance between couple component terminals B11 and B10 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID C FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B11 and terminal B — Terminal B10 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B11 and all terminals except B11/ B10 — Terminal B10 and all terminals except B11/ B10 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0979 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0980 [AW6A-EL]

E6U050200000W40

DTC P0980	Shift solenoid C circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in shift solenoid C signal system (The solenoid circuit current value input to the TCM is continuously **more than 1,333 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between shift solenoid C terminal B and TCM terminal B11 • Short to power in wiring harness between shift solenoid C terminal A and TCM terminal B10 • Shift solenoid C malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID C CIRCUIT** • Inspect for resistance between couple component terminals B11 and B10 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID C FOR POOR CONNECTION** • Disconnect the shift solenoid C connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B11 and all terminals except B11/ B10 — Terminal B10 and all terminals except B11/ B10 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0980 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0981 [AW6A-EL]

E6U050200000W41

DTC P0981	Shift solenoid D range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid D stuck • Control valve stuck • TCM malfunction

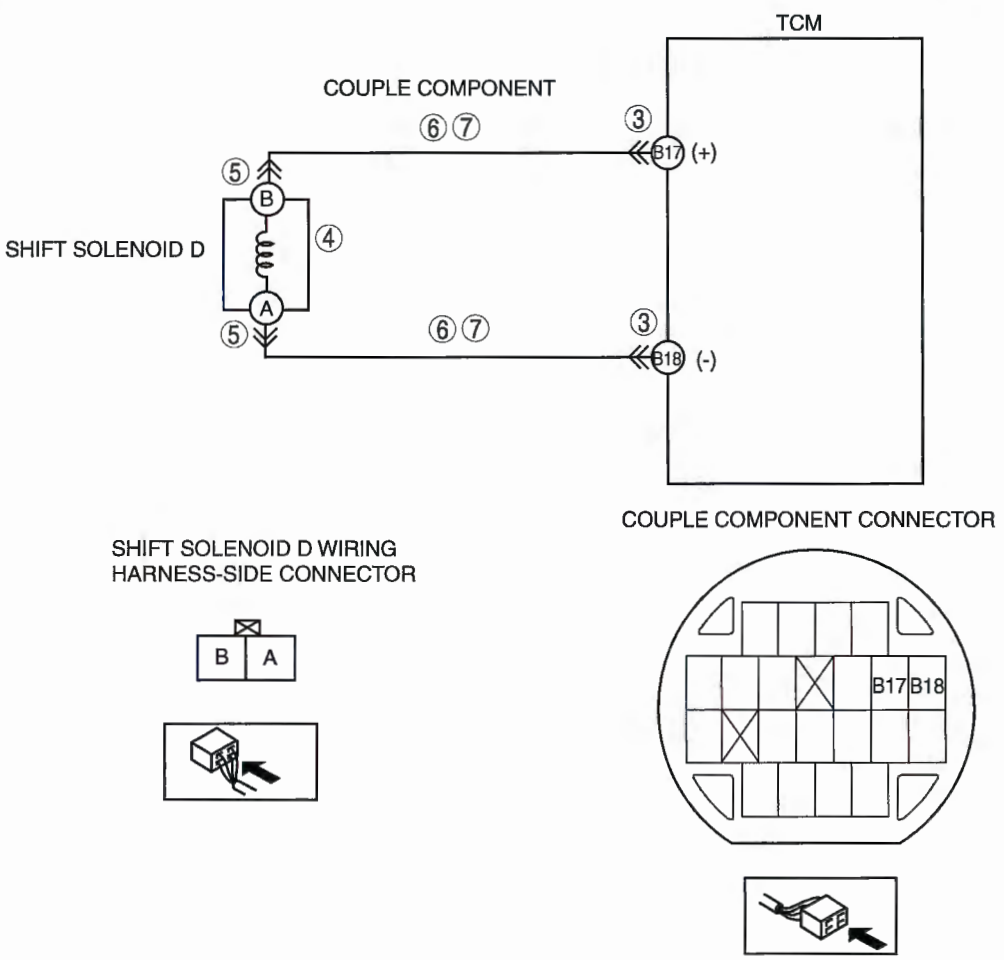
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0981 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0982 [AW6A-EL]

E6U050200000W42

DTC P0982	Shift solenoid D circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid D signal system (The solenoid circuit current value input to the TCM is continuously **less than 23 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between shift solenoid D terminal B and TCM terminal B17 • Open circuit between shift solenoid D terminal A and TCM terminal B18 • Short to ground in wiring harness between shift solenoid D terminal B and TCM terminal B17 • Short to ground in wiring harness between shift solenoid D terminal A and TCM terminal B18 • Shift solenoid D malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



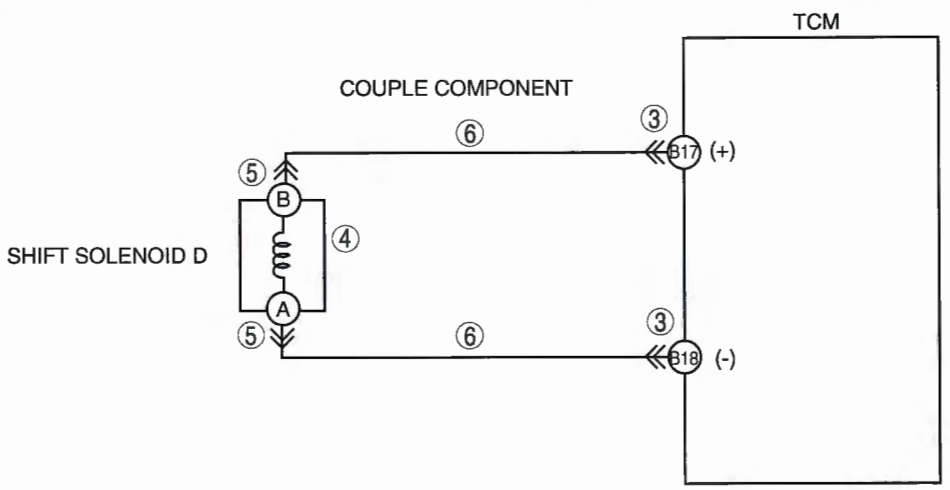
Diagnostic procedure

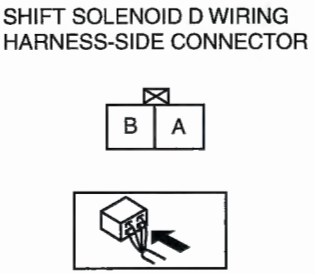
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID D CIRCUIT** • Inspect for resistance between couple component terminals B17 and B18 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID D FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B17 and terminal B — Terminal B18 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B17 and all terminals except B17/ B18 — Terminal B18 and all terminals except B17/ B18 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0982 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

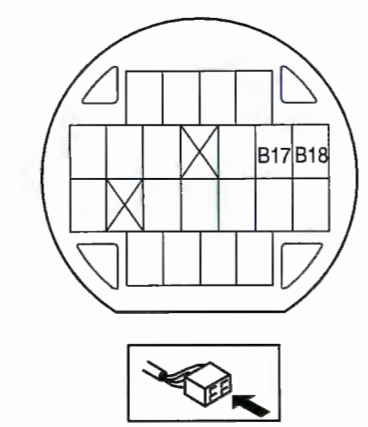
DTC P0983 [AW6A-EL]

E6U050200000W43

DTC P0983	Shift solenoid D circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in shift solenoid D signal system (The solenoid circuit current value input to the TCM is continuously **more than 1,333 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between shift solenoid D terminal B and TCM terminal B17 • Short to power in wiring harness between shift solenoid D terminal A and TCM terminal B18 • Shift solenoid D malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction







Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID D CIRCUIT** • Inspect for resistance between couple component terminals B17 and B18 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID D FOR POOR CONNECTION** • Disconnect the shift solenoid D connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B17 and all terminals except B17/ B18 — Terminal B18 and all terminals except B17/ B18 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0983 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0984 [AW6A-EL]

E6U050200000W44

DTC P0984	Shift solenoid E range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid E stuck • Control valve stuck • TCM malfunction

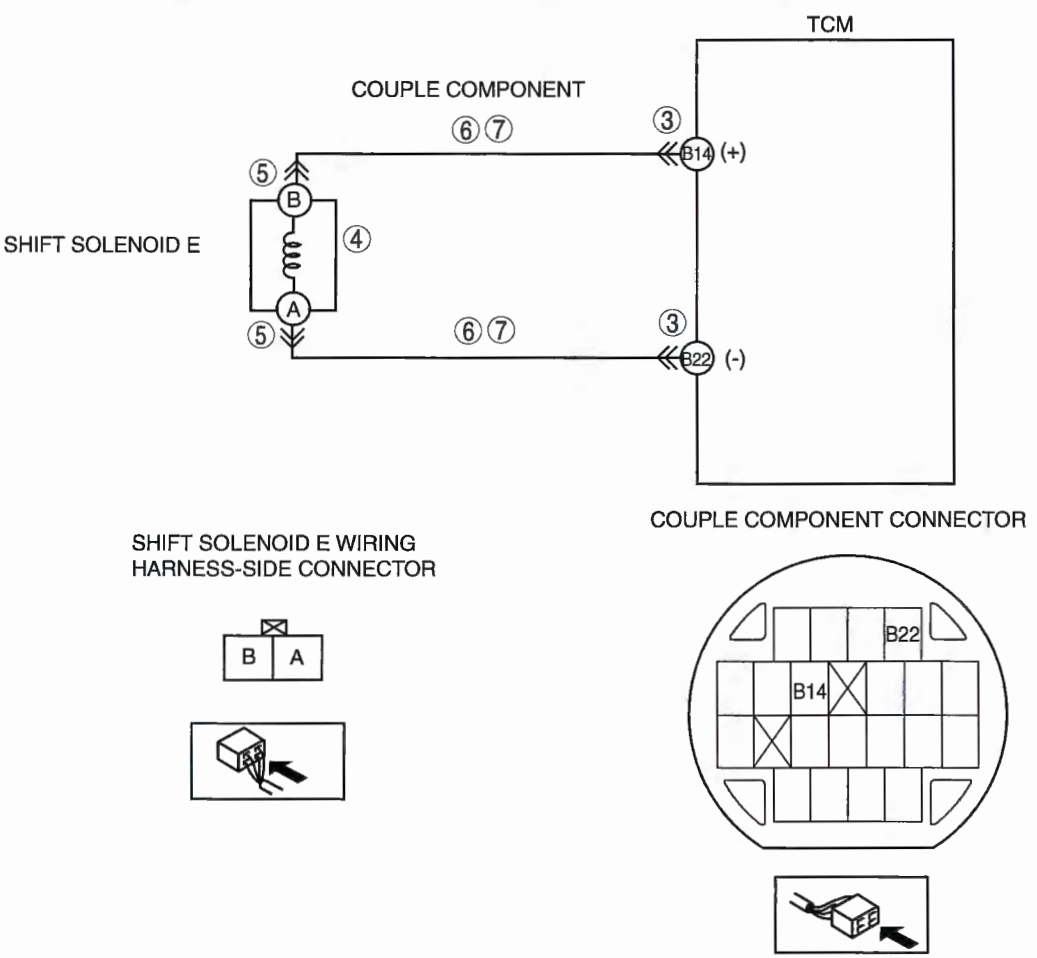
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0984 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0985 [AW6A-EL]

E6U050200000W45

DTC P0985	Shift solenoid E circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid E signal system (The solenoid circuit current value input to the TCM is continuously **less than 23 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between shift solenoid E terminal B and TCM terminal B14 • Open circuit between shift solenoid E terminal A and TCM terminal B22 • Short to ground in wiring harness between shift solenoid E terminal B and TCM terminal B14 • Short to ground in wiring harness between shift solenoid E terminal A and TCM terminal B22 • Shift solenoid E malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



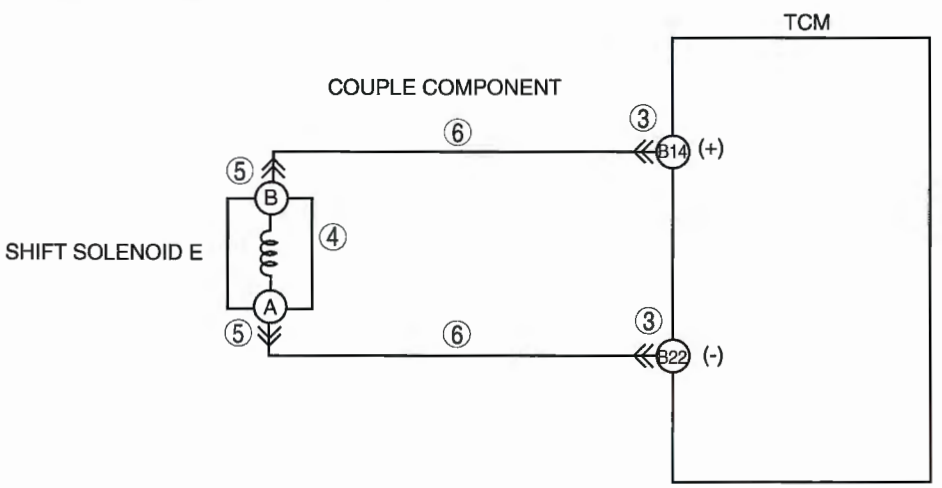
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID E CIRCUIT** • Inspect for resistance between couple component terminals B14 and B22 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID E FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B14 and terminal B — Terminal B22 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B14 and all terminals except B14/ B22 — Terminal B22 and all terminals except B14/ B22 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0985 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

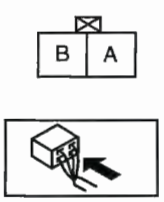
DTC P0986 [AW6A-EL]

E6U050200000W46

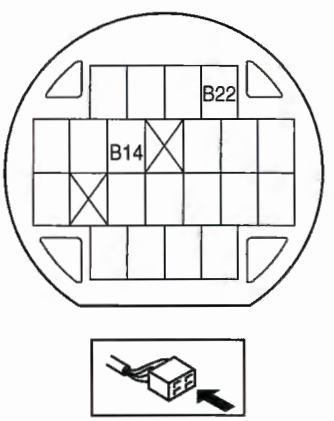
DTC P0986	Shift solenoid E circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in shift solenoid E signal system (The solenoid circuit current value input to the TCM is continuously **more than 1,333 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between shift solenoid E terminal B and TCM terminal B14 • Short to power in wiring harness between shift solenoid E terminal A and TCM terminal B22 • Shift solenoid E malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



SHIFT SOLENOID E WIRING HARNESS-SIDE CONNECTOR



COUPLE COMPONENT CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID E CIRCUIT** • Inspect for resistance between couple component terminals B14 and B22 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID E FOR POOR CONNECTION** • Disconnect the shift solenoid E connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B14 and all terminals except B14/ B22 — Terminal B22 and all terminals except B14/ B22 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0986 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0997 [AW6A-EL]

E6U050200000W47

DTC P0997	Shift solenoid F range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • Shift solenoid F stuck • Control valve stuck • TCM malfunction

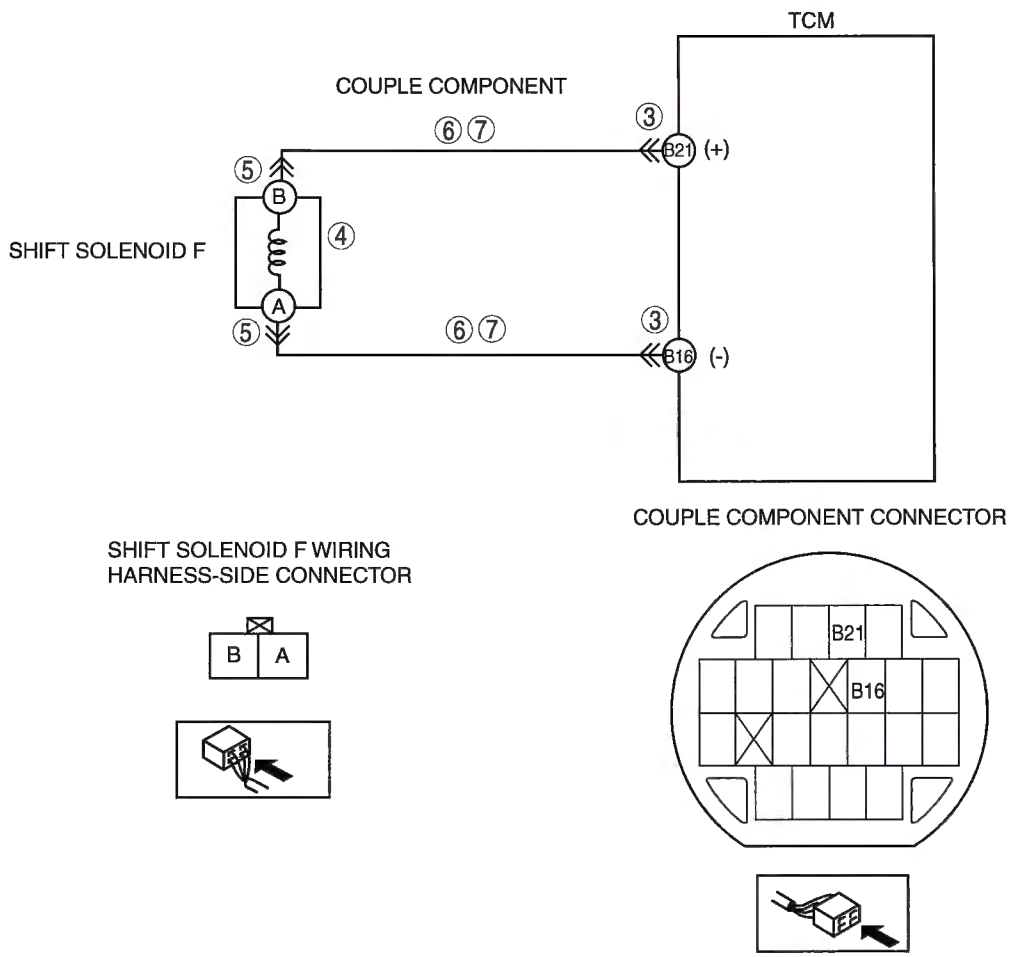
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P0997 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0998 [AW6A-EL]

E6U050200000W48

DTC P0998	Shift solenoid F circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in shift solenoid F signal system (The solenoid circuit current value input to the TCM is continuously **less than 23 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between shift solenoid F terminal B and TCM terminal B21 • Open circuit between shift solenoid F terminal A and TCM terminal B16 • Short to ground in wiring harness between shift solenoid F terminal B and TCM terminal B21 • Short to ground in wiring harness between shift solenoid F terminal A and TCM terminal B16 • Shift solenoid F malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



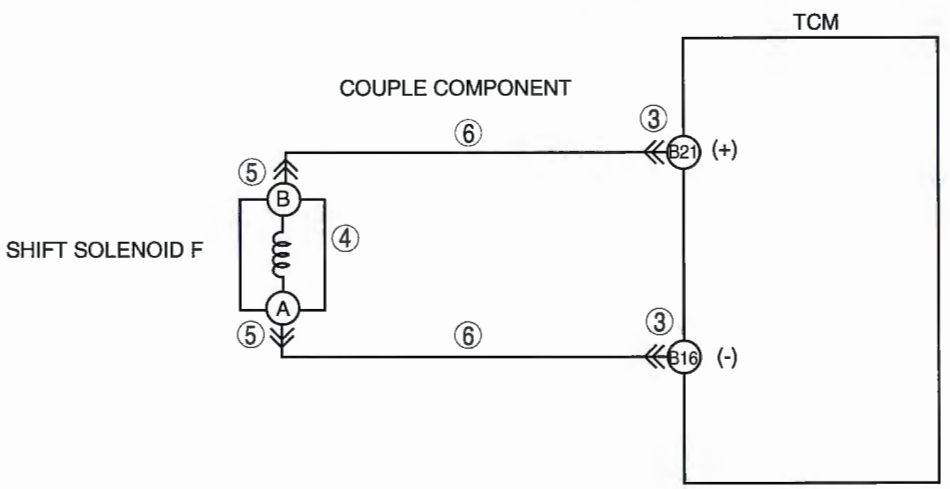
Diagnostic procedure

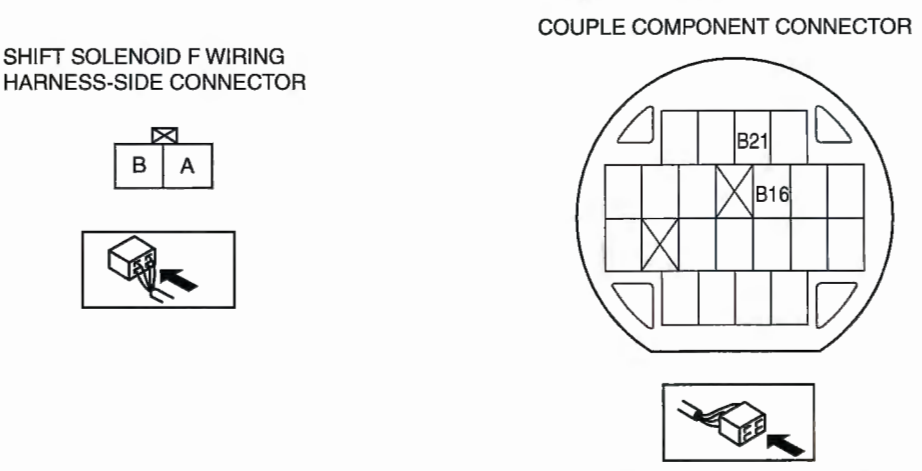
STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID F CIRCUIT** • Inspect for resistance between couple component terminals B21 and B16 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID F FOR POOR CONNECTION** • Disconnect the shift solenoid F connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B21 and terminal B — Terminal B16 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B21 and all terminals except B21/ B16 — Terminal B16 and all terminals except B21/ B16 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P0998 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P0999 [AW6A-EL]

E6U050200000W49

DTC P0999	Shift solenoid F circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in shift solenoid F signal system (The solenoid circuit current value input to the TCM is continuously **more than 1,333 mA** for **100 ms or more**). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between shift solenoid F terminal B and TCM terminal B21 • Short to power in wiring harness between shift solenoid F terminal A and TCM terminal B16 • Shift solenoid F malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF SHIFT SOLENOID F CIRCUIT** • Inspect for resistance between couple component terminals B21 and B16 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL SHIFT SOLENOID F FOR POOR CONNECTION** • Disconnect the shift solenoid F connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B21 and all terminals except B21/ B16 — Terminal B16 and all terminals except B21/ B16 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P0999 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P1700 [AW6A-EL]

E6U050200000W50

DTC P1700	Valve control solenoid circuit malfunction at R range (valve stuck)
DETECTION CONDITION	• When all of the following conditions are met while driving in R position and the counter drive gear (output} speed is **500 rpm or less**: — The difference between the engine and turbine shaft speeds is **less than 150 rpm** — The turbine shaft speed is more than the estimated turbine speed value, as derived from the counter drive gear (output) speed, plus **200 rpm**. — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Shift solenoid A stuck • Shift solenoid B stuck • Shift solenoid E stuck • Line pressure control solenoid stuck • C3 clutch slipping • B2 brake slipping • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 6. Any ranges: Replace the control valve body, then go to Step 6. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
4	**INSPECT STALL SPEED** • Measure the stall speed in D range. (See 05–17B–6 Stall Test.) • Is the stall speed within the specification?	Yes	Go to the next step.
		No	Replace the automatic transaxle, then go the Step 6. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
5	**INSPECT SOLENOID VALVE** • Inspect the solenoid valve. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P1700 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P2757 [AW6A-EL]

E6U050200000W51

DTC P2757	Torque converter clutch (TCC) stuck off
DETECTION CONDITION	• When all conditions below are satisfied. — ATF temperature **20 °C {68 °F} or more** — Driving in 4GR—6GR at D range — Engine running — Engine speed **less than 400 rpm** — Torque converter clutch (TCC) operating — Difference between engine speed and Counter drive gear (output) revolution speed **(VSS) 100 rpm or more** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • TCC control solenoid, and line pressure control solenoid stuck • Line pressure low • Control valve stuck. • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 7. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 7. Any ranges: Replace the control valve body, then go to Step 6. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT SOLENOID VALVE** • Inspect the solenoid valve. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P2757 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **2 s or more**. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Drive in the D range, 4GR—6GR (TCC operation) • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	DTC troubleshooting completed.

DTC P2758 [AW6A-EL]

E6U050200000W52

DTC P2758	Torque converter clutch (TCC) stuck on
DETECTION CONDITION	• All of the following conditions are satisfied under each of the following accelerator conditions. — ATF temperature **20 °C {68 °F} or more** — Driving in D range — Engine running — Engine speed **within 1,000—3,000rpm** — Torque converter clutch (TCC) no operating — Difference between engine speed and turbine revolution speed **less than 30 rpm** — None of the following present: DTC P0706, P0707, P0708, P0711, P0712, P0713, P0717, P0722, P0961, P0962, P0963, P0973, P0974, P0976, P0977, P0978, P0979, P0980, P0981, P0982, P0983, P0984, P0985, P0986, P0997, P0998, P0999 **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL does not illuminate if PCM detects the above malfunction conditions during first the drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is not available. • The AT warning light illuminates. • The DTC is stored in the PCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • TCC control solenoid, and line pressure control solenoid stuck • Line pressure low • Control valve stuck • TCM malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is milky or reddish brown, replace ATF, then go to Step 7. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 7. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	All ranges: Replace the oil pump, then go to Step 7. Any ranges: Replace the control valve body, then go to Step 6. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
6	**INSPECT SOLENOID VALVE** • Inspect the solenoid valve. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P2758 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Start the engine. • Warm up engine and ATX. • Drive the vehicle under the following conditions for **2 s or more**. — ATF temperature (TFT PID): **20 °C {68 °F} or more** — Engine speed: **less than 3,000 rpm** — Drive in the D range, 4GR—6GR (TCC no operation) • Are any DTCs present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	DTC troubleshooting completed.

DTC P2762 [AW6A-EL]

E6U050200000W53

DTC P2762	TCC control solenoid range/performance (stuck)
DETECTION CONDITION	• Feedback current corresponding to solenoid current command value is irregular when engine is running. **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• ATF level low • Deteriorated ATF • TCC control solenoid stuck • Control valve stuck • TCM malfunction

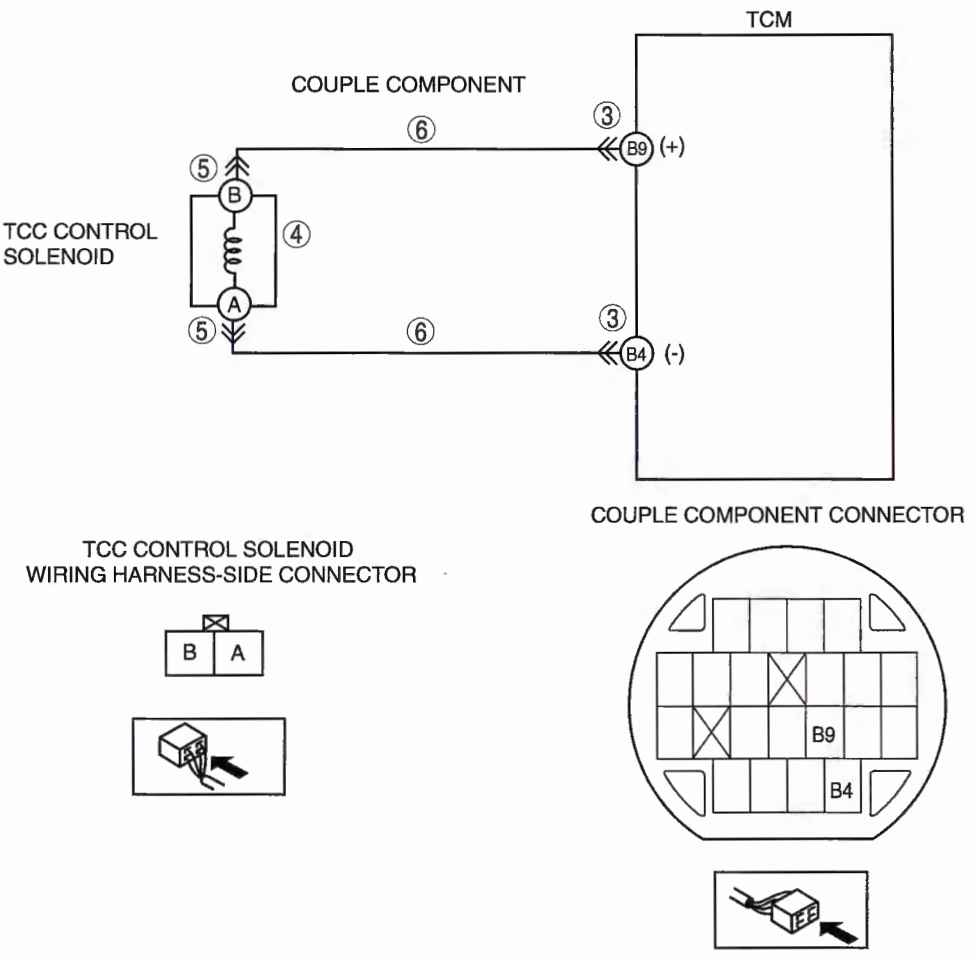
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT ATF CONDITION** • Turn the ignition switch to the LOCK position. • Inspect the ATF condition. — Clear red: Normal — Light red (pink): Water mixed in fluid — Reddish brown: Deteriorated ATF • Is it normal? (See 05–17B–11 Automatic Transaxle Fluid (ATF) Condition Inspection.)	Yes	Go to the next step.
		No	If the ATF color is light red or reddish brown, replace ATF, then go to Step 6. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
4	**INSPECT ATF LEVEL** • Start the engine. • Warm up the ATX. • Is the ATF level within the specification? (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)	Yes	Go to the next step.
		No	Add ATF to the specified level, then go to Step 6. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5	**INSPECT LINE PRESSURE** • Start the engine. • Measure the line pressures. (See 05–17B–4 Line Pressure Test.) • Are the line pressures within the specifications?	Yes	Go to the next step.
		No	• All ranges: Replace the oil pump or control valve body, then go to the next step. • Any ranges: Replace the ATX, then go the next step. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6	**VERIFY TROUBLESHOOTING OF DTC P2762 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
7	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P2763 [AW6A-EL]

E6U050200000W54

DTC P2763	TCC control solenoid circuit malfunction (short to power)
DETECTION CONDITION	• Short circuit in TCC control solenoid signal system (while TCM monitors solenoid output voltage, the voltage that differs from the signal output by CPU in TCM is detected). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Short to power in wiring harness between TCC control solenoid terminal B and TCM terminal B9 • Short to power in wiring harness between TCC control solenoid terminal A and TCM terminal B4 • TCC control solenoid malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



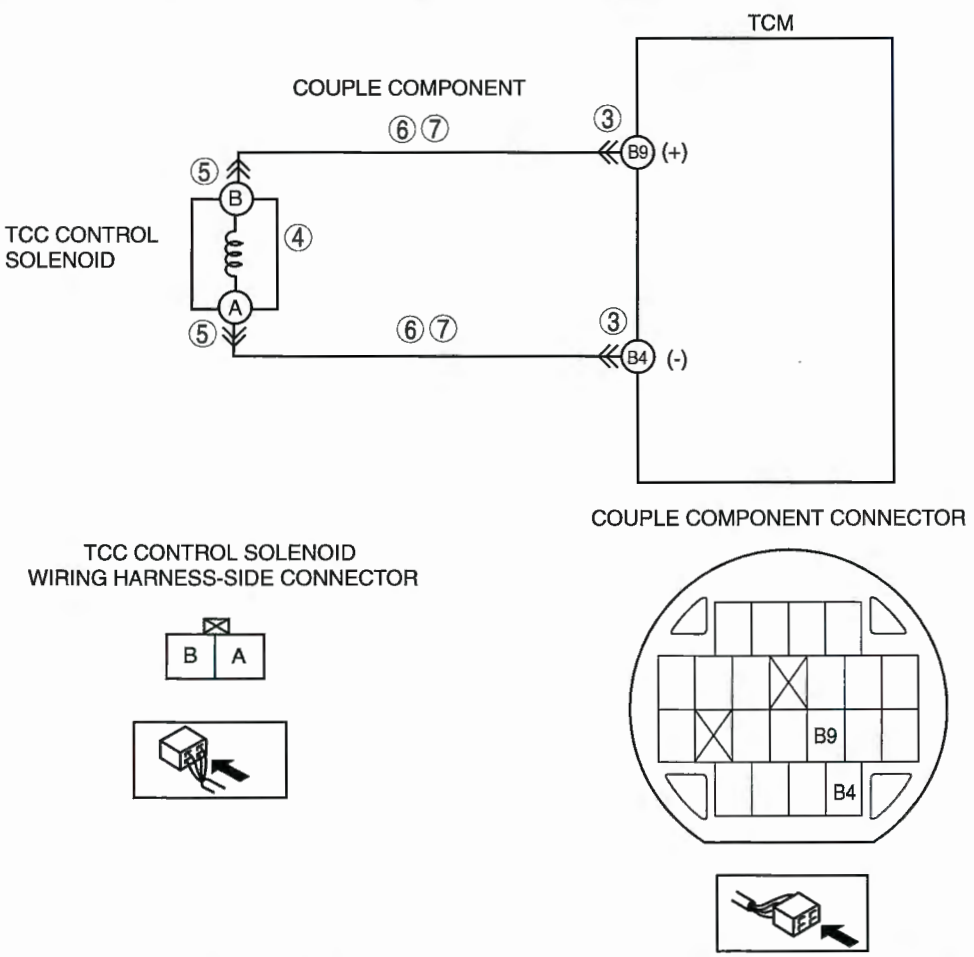
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
4	**INSPECT RESISTANCE OF TCC CONTROL SOLENOID CIRCUIT** • Inspect for resistance between couple component terminals B9 and B4 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 7.
		No	Go to the next step.
5	**INSPECT TERMINAL TCC CONTROL SOLENOID FOR POOR CONNECTION** • Disconnect the TCC control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 7.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO POWER** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B21 and all terminals except B21/ B16 — Terminal B16 and all terminals except B21/ B16 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	**VERIFY TROUBLESHOOTING OF DTC P2763 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
8	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

DTC P2764 [AW6A-EL]

E6U050200000W55

DTC P2764	TCC control solenoid circuit malfunction (short to ground/open circuit)
DETECTION CONDITION	• Open or short circuit in TCC control solenoid signal system (while TCM monitors solenoid output voltage the voltage that differs from the signal output by CPU in TCM is detected). **Diagnostic support note:** • This is a continuous monitor (CCM). • The MIL illuminates if the TCM detects the above malfunction condition during the first drive cycle. • A PENDING CODE is not available. • FREEZE FRAME DATA is available. • The AT warning light illuminates. • The DTC is stored in the TCM memory.
POSSIBLE CAUSE	• Open circuit between TCC control solenoid terminal B and TCM terminal B9 • Open circuit between TCC control solenoid terminal A and TCM terminal B4 • Short to ground in wiring harness between TCC control solenoid terminal B and TCM terminal B9 • Short to ground in wiring harness between TCC control solenoid terminal A and TCM terminal B4 • TCC control solenoid malfunction • Damaged connector between line pressure control solenoid and TCM • TCM malfunction



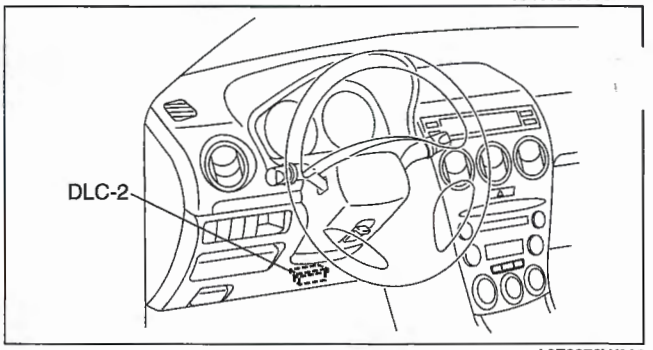
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY FREEZE FRAME DATA HAS BEEN RECORDED** • Has the FREEZE FRAME DATA been recorded?	Yes	Go to the next step.
		No	Record the FREEZE FRAME DATA on the repair order, then go to the next step.
2	**VERIFY RELATED REPAIR INFORMATION AVAILABILITY** • Verify related Service Bulletins and/or on-line repair information availability. • Is any related repair information available?	Yes	Perform repair or diagnosis according to the available repair information. • If the vehicle is not repaired, go to the next step.
		No	Go to the next step.
3	**INSPECT TERMINAL COUPLE COMPONENT FOR POOR CONNECTION** • Turn the ignition switch to the LOCK position. • Remove the TCM. (See 05–17B–25 TCM REMOVAL/ INSTALLATION [AW6A-EL].) • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
4	**INSPECT RESISTANCE OF TCC CONTROL SOLENOID CIRCUIT** • Inspect for resistance between couple component terminals B9 and B4 (wiring harness-side). • Is resistance **within 5.0—5.6 ohms**? (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	Yes	Go to go to Step 8.
		No	Go to the next step.
5	**INSPECT TERMINAL TCC CONTROL SOLENOID FOR POOR CONNECTION** • Disconnect the TCC control solenoid connector. • Inspect for poor connection (such as damaged/ pulled-out pins, corrosion). • Are terminals normal?	Yes	Go to the next step.
		No	Replace the couple component, then go to Step 8.
6	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between couple component terminals and line pressure control solenoid terminals (wiring harness-side). — Terminal B9 and terminal B — Terminal B4 and terminal A • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the couple component, then go to Step 8.
7	**INSPECT TERMINAL COUPLE COMPONENT CIRCUIT FOR SHORT TO GROUND** • Inspect for continuity between couple component terminals (wiring harness-side). — Terminal B9 and all terminals except B9/B4 — Terminal B4 and all terminals except B9/B4 • Is there continuity?	Yes	Repair or replace the couple component, then go to the next step.
		No	Replace the control valve body, then go to the next step. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
8	**VERIFY TROUBLESHOOTING OF DTC P2764 COMPLETED** • Make sure to reconnect all the disconnected connectors. • Clear the DTC from the memory using the WDS or equivalent. • Drive the vehicle in D range and make sure that gears shift smoothly from 1GR to 6GR. • Is same DTC present?	Yes	Replace the TCM, then go to the next step. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
		No	Go to the next step.
9	**VERIFY AFTER REPAIR PROCEDURE** • Perform the "After Repair Procedure". (See 05–02B–4 AFTER REPAIR PROCEDURE [AW6A-EL].) • Are any DTCs present?	Yes	Go to the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
		No	Troubleshooting completed.

PID/DATA MONITOR INSPECTION [A6WA-EL]

1. Connect the WDS or equivalent to the DLC-2.
2. Turn the ignition switch to the ON position.
3. Measure the PID value.

E6U050200000W56



A6E3970W002

Note

- Perform part inspection for the output device after TCM inspection.
- The PID/DATA MONITOR function monitors the calculated value of the input/output signals in the TCM. Therefore, if a monitored value of an output device is out of specification, it is necessary to inspect the monitored value of the input device related to the output device control. Since an output device malfunction is not directly indicated as a malfunction of the monitored value for the output device, it is necessary to inspect the output device individually using the simulation function.

PID/DATA MONITOR AND RECORD function table

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	TCM terminal
BOO TCM (Brake switch)	On/Off	• Brake pedal depressed: On • Other: Off	Inspect the brake switch. (See 04–11–9 BRAKE SWITCH INSPECTION.)	—
DTCCNT	—	Indicates number of DTC	Check DTC. (See 05–02B–5 DTC TABLE [AW6A-EL].)	—
DWN SW (Down switch)	On/Off	• Down shift at M range: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	A4
ECT TCM (ECT)	°C, °F	Indicates ECT	Inspect the TCM. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	—
FDPDTC (FREEZE FRAME DATA)	—	Indicates code of FREEZE FRAME DATA	Inspect the TCM. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	—
GEAR_RA (Gear ratio)	—	• 1GR: 4.148 • 2GR: 2.370 • 3GR: 1.555 • 4GR: 1.154 • 5GR: 0.859 • 6GR: 0.685	Inspect following PIDs: THOP, TSS, VSS	—
GEAR_SEL (Calculated gear range in TCM)	1st/2nd/3rd/ 4th/5th/6th	• 1GR: 1st • 2GR: 2nd • 3GR: 3rd • 4GR: 4th • 5GR: 5th • 6GR: 6th	Inspect following PIDs: THOP, TSS, VSS	—
LPS (Pressure control solenoid)	A	**100—1,000 mA**	Inspect the pressure control solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B1, B3
MNL SW (M range switch)	On/Off	• M range: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	A7
OSS (Output shaft speed)	RPM	• Ignition switch ON: **0 rpm** • Indicates output shaft speed	Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].)	B19, B20
PNP_TCM (Park/Neutral)	Drive/ Neutral	• P, N position: Neutral • D, M range or R position: Drive	Inspect the TR switch. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	–
RPM TCM (Engine speed)	RPM	• Ignition switch ON: **0 rpm** • Idle: **700—800 rpm**	Inspect the TCM. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	–

Monitor item (Definition)	Unit/ Condition	Condition/Specification	Action	TCM terminal
SC (Shift solenoid C)	A	• P, R, N position or D/M range (5GR, 6GR): solenoid on • Other: solenoid off — **100—1,000 mA**	Inspect the shift solenoid C. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B10, B11
SSD (Shift solenoid D)	A	• P, R, N position or D/M range (1GR, 2GR, 3GR): solenoid on • Other: solenoid off — **100—1,000 mA**	Inspect the shift solenoid D. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B17, B18
SSE (Shift solenoid E)	A	• R position (more than 11 km/h {4 mph}) or D/M range (1GR, 2GR, 4GR, 6GR): solenoid on • Other: solenoid off — **100—1,000 mA**	Inspect the shift solenoid E. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B14, B22
SSF (Shift solenoid F)	A	• P, R, N position or D/M range (1GR, 3GR, 4GR, 5GR): solenoid on • Other: solenoid off — **100—1,000 mA**	Inspect the shift solenoid F. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B16, B21
TCCC (TCC solenoid valve)	A	• TCC on: solenoid on • Other: solenoid off — **200—1,000 mA**	Inspect the TCC control solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)	B4, B9
TFT (ATF temperature)	°C, °F	Indicates ATF temperature	Inspect the TFT sensor. (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].)	B7, B8
TFTV (ATF temperature signal voltage)	V	• ATF temperature 10 °C {50 °F}: **4.78—4.81 V** • ATF temperature 25 °C {77 °F}: **4.61—4.65 V** • ATF temperature 110 °C {230 °F}: **2.30—2.45 V**	Inspect the TFT sensor. (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].)	B7, B8
TOP (Throttle position)	%	• CTP: 0% • WOT: 100%	Inspect the TP sensor. (See 01–40C–28 THROTTLE POSITION (TP) SENSOR INSPECTION [AJ].)	–
TR (TR switch)	R/N/D/P	• R position: R • N position: N • D range: D • P position: P	Inspect the TR switch. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	–
TRD (TR switch [D range])	On/Off	• D range: On • Other ranges and all positions: Off	Inspect the TR switch. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	–
TRR (TR switch [R position])	On/Off	• R position: On • Other positions and all ranges: Off	Inspect the TR switch. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)	–
TSS (Input/turbine speed sensor)	RPM	• Ignition switch ON: **0 rpm** • Idle: **700—800 rpm**	Inspect the input/turbine speed sensor. (See 05–17B–16 INPUT/TURBINE SPEED SENSOR INSPECTION [AW6A-EL].)	–
UP SW (Up switch)	On/Off	• Up shift at M range: On • Other: Off	Inspect the selector lever component. (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.)	A3
VSS (Vehicle speed)	KPH, MPH	Indicates vehicle speed	Inspect the VSS. (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].)	–

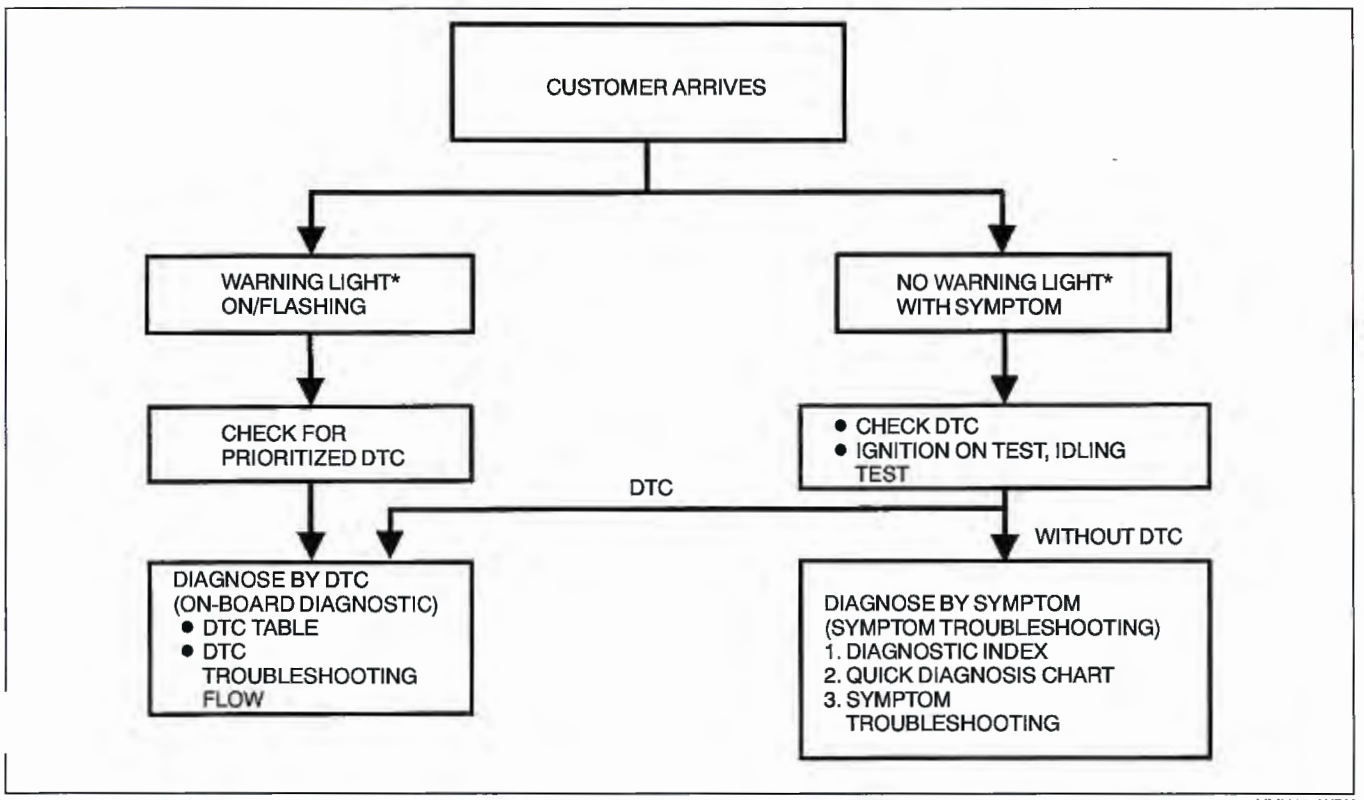
FOREWORD [FS5A-EL]

E6U050300000W37

- When the customer reports a vehicle malfunction, check the malfunction indicator lamp (MIL) indication, AT warning light flash, and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 05–02A–8 DTC TABLE [FS5A-EL].)
  - — If a DTC does not exist, the MIL does not illuminate and AT warning light illuminate, diagnose the applicable symptom troubleshooting. (See 05–03A–5 SYMPTOM TROUBLESHOOTING ITEM TABLE [FS5A-EL].)



YMU102WBX

*: Malfunction Indicator Lamp (MIL), AT warning light.

BASIC INSPECTION [FS5A-EL]

E6U050300000W38

STEP	INSPECTION		ACTION
1	Perform mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].) Is mechanical system okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts according to inspection result.
2	Turn IG SW to ON. When selector lever is moved, does selector illumination indicate synchronized position to lever location? Also, when other ranges are selected from N or P during idling, does vehicle move **within 1—2 seconds**?	Yes	Go to the next step.
		No	Inspect selector lever and TR switch. Repair or replace defective areas. (See 05–18–6 SELECTOR LEVER INSPECTION.) (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) If selector lever and TR switch are okay, go to the next step.
3	Inspect ATF color and condition. (See 05–17A–10 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].) Are ATF color and odor normal?	Yes	Go to the next step.
		No	Repair or replace any defective parts according to inspection result. Flush ATX and cooler line as necessary.
4	Perform line pressure test. (See 05–17A–5 Line Pressure Test.) Is line pressure okay?	Yes	Go to the next step.
		No	Adjust accelerator cable as necessary. Repair or replace any defective parts according to inspection result.
5	Perform stall test. (See 05–17A–6 Stall Test.) Is stall speed okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts according to inspection result.
6	Inspect value at the following PCM and TCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs:** • APP1 • APP2 • ECT • RPM • TP_REL • VPWR **TCM PIDs:** • TFT • TFTV • TR • TR_SENS • MNL SW • DWN SW • UP SW • THOP • TSS • OSS • VPWR TCM Is PID value okay?	Yes	Perform symptom troubleshooting and follow procedures.
		No	Repair or replace any defective parts according to inspection result.

SYMPTOM TROUBLESHOOTING ITEM TABLE [FS5A-EL]

E6U050300000W39

- Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
1	Vehicle does not move in D range, or in R position	Vehicle does not move when AP depressed.	(See 05–03A–9 NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION [FS5A-EL].)
2	Vehicle moves in N position	Vehicle creeps in N position. Vehicle creeps if brake pedal is not depressed in N position.	(See 05–03A–10 NO.2 VEHICLE MOVES IN N POSITION [FS5A-EL].)
3	Vehicle moves in P position, or parking gear does not disengage when P position is disengaged	Vehicle rolls when on a downward slope and tires do not lock in P position. Tires locked when P position is disengaged, vehicle does not move in D range, and R position when AP depressed, and engine remains in stall condition.	(See 05–03A–10 NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FS5A-EL].)
4	Excessive creep	Vehicle accelerates in D range, and R position without depressing accelerator pedal.	(See 05–03A–10 NO.4 EXCESSIVE CREEP [FS5A-EL].)
5	No creep at all	Vehicle does not move in D range, or R position when idling on flat, paved road.	(See 05–03A–11 NO.5 NO CREEP AT ALL [FS5A-EL].)
6	Low maximum speed and poor acceleration	Vehicle acceleration poor at start. Delayed acceleration when accelerator pedal depressed while driving.	(See 05–03A–12 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [FS5A-EL].)
7	No shifting	Single shift range only. Sometimes shifts correctly.	(See 05–03A–14 NO.7 NO SHIFTING [FS5A-EL].)
8	Does not shift to fifth gear (5GR)	Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. Vehicle does not shift to 5GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.	(See 05–03A–15 NO.8 DOES NOT SHIFT TO FIFTH GEAR (5GR) [FS5A-EL].)
9	Abnormal shifting	Shifts incorrectly (incorrect shift pattern).	(See 05–03A–17 NO.9 ABNORMAL SHIFTING [FS5A-EL].)
10	Frequent shifting	Downshifting occurs immediately even when accelerator pedal depressed slightly in D range.	(See 05–03A–18 NO.10 FREQUENT SHIFTING [FS5A-EL].)
11	Shift point is high or low	Shift point considerably different from automatic shift diagram. Shift delays when accelerating. Shift occurs quickly when accelerating and engine speed does not increase.	(See 05–03A–18 NO.11 SHIFT POINT IS HIGH OR LOW [FS5A-EL].)
12	Torque converter clutch (TCC) non-operation	TCC does not operate when vehicle reaches TCC operation range.	(See 05–03A–18 NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [FS5A-EL].)
13	No kickdown	Does not downshift when accelerator pedal fully depressed within kickdown range.	(See 05–03A–20 NO.13 NO KICKDOWN [FS5A-EL].)
14	Engine flares up or slips when upshifting or downshifting	When accelerator pedal is depressed, engine speed increases but vehicle speed increases slowly. When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.	(See 05–03A–20 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL].)
15	Engine flares up or slips when accelerating vehicle	Engine flares up when accelerator pedal is depressed for upshifting. Engine flares up suddenly when accelerator pedal is depressed for downshifting.	(See 05–03A–22 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [FS5A-EL].)
16	Judder upon torque converter clutch (TCC) operation	Vehicle jolts when TCC is engaged.	(See 05–03A–22 NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FS5A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
17	Excessive shift shock from N to D or N to R position/range	Strong shock is felt when shifting from N to D or N to R position/range at idle.	(See 05–03A–24 NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [FS5A-EL].)
18	Excessive shift shock is felt when upshifting and downshifting	Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05–03A–26 NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FS5A-EL].)
19	Excessive shift shock on torque converter clutch (TCC)	Strong shock is felt when TCC engaged.	(See 05–03A–28 NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FS5A-EL].)
20	Noise occurs at idle when vehicle is stopped in all positions/ranges	Transaxle is noisy in all positions and ranges when vehicle idling.	(See 05–03A–28 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [FS5A-EL].)
21	Noise occurs at idle when vehicle is stopped in D range, or in R position	Transaxle is noisy in driving ranges when vehicle idling.	(See 05–03A–29 NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION [FS5A-EL].)
22	No engine braking in 1GR position of M range	Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in 1GR position of M range at low vehicle speed.	(See 05–03A–29 NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [FS5A-EL].)
23	Transaxle overheats	Burnt smell emitted from transaxle. Smoke is emitted from transaxle.	(See 05–03A–30 NO.23 TRANSAXLE OVERHEATS [FS5A-EL].)
24	Engine stalls when shifted to D range, or in R position	Engine stalls when shifting from N or P position to D range or R position at idle.	(See 05–03A–31 NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION [FS5A-EL].)
25	Engine stalls when driving at slow speeds or stopping	Engine stalls when brake pedal is depressed while driving at low speed or stopping.	(See 05–03A–31 NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING [FS5A-EL].)
26	Starter does not work	Starter does not work even when P or N position is selected.	(See 05–03A–32 NO.26 STARTER DOES NOT WORK [FS5A-EL].)
27	Gear position indicator light does not illuminate in M range	Gear position indicator light in dashboard does not illuminate in M range and ignition switch at ON.	(See 05–03A–32 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL].)
28	Gear position indicator light illuminates in D range or P, N, R positions	Gear position indicator light in dashboard illuminates in D range or P, N, R positions and ignition switch at ON.	(See 05–03A–32 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS [FS5A-EL].)
29	Does not shift up in M range	Gear position indIcator light in dashboard illuminates but vehicle does not upshift when selector lever is pushed to "+"side.	(See 05–03A–33 NO.29 DOES NOT SHIFT UP IN M RANGE [FS5A-EL].)
30	Does not shift down in M range	Gear position indicator light in dashboard illuminates but vehicle does not downshift when selector lever is pushed to "–"side.	(See 05–03A–33 NO.30 DOES NOT SHIFT DOWN IN M RANGE [FS5A-EL].)

NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION [FS5A-EL]

E6U050300000W41

1	Vehicle does not move in D range, or in R position
DESCRIPTION	• Vehicle does not move when AP is depressed.
POSSIBLE CAUSE	• If the vehicle does not move in D range or R position, basically, the malfunction is in the ATX. (Vehicle will move even with a malfunction in the TCM.) Since a malfunction is in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related harnesses. 1. Clutch slipped, worn (D range-Forward clutch, R position-Reverse clutch, Low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Pressure control solenoid A malfunction • Pressure control solenoid B malfunction • Body GND malfunction • Control valve body malfunction 2. Selector lever malfunction 3. Parking mechanism not operating properly 4. Torque converter malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

05–03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	When vehicle is stopped on a flat, level road and engine is off, does vehicle move when pushed? (in D range or N, R positions and brake released)	Yes	Go to the next step.
		No	Check for parking mechanism. (See ATX Workshop Manual [FS5A-EL].)
2	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
3	Inspect Pressure control solenoid A. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Is it okay?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
4	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.2 VEHICLE MOVES IN N POSITION [FS5A-EL]

E6U050300000W42

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related harnesses. 1. Clutch burned (Forward clutch) • Control valve body malfunction 2. Selector lever position disparity (Although the selector indicator shows N position, hydraulic circuit shows D range or R position) **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does vehicle creep when selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Adjust selector lever. (See 05–18–7 SELECTOR CABLE ADJUSTMENT.)
2	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect TCM.
3	Inspect Pressure control solenoid A circuit. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Is it okay?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
4	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [FS5A-EL]

E6U050300000W43

3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls on a downward slope in P position. • Tires are locked when P is disengaged. Vehicle does not move in D range, and R position when AP is depressed, and engine remains in stall condition.
POSSIBLE CAUSE	1. Parking mechanism malfunction (May have effect on noise or shock from transaxle) 2. Improper adjustment of selector lever 3. If vehicle moves in N position, perform No.2 "VEHICLE MOVES IN N POSITION"

NO.4 EXCESSIVE CREEP [FS5A-EL]

E6U050300000W44

4	Excessive creep
DESCRIPTION	• Vehicle accelerates in D range, and R position without depressing accelerator pedal.
POSSIBLE CAUSE	1. Engine idle speed high (transaxle system is not cause of problem) 2. Go to No.9 "FAST IDLE/RUNS ON" (See 01–03A–33 NO.9 FAST IDLE/RUNS ON [L3].)

NO.5 NO CREEP AT ALL [FS5A-EL]

E6U050300000W45

5	No creep at all
DESCRIPTION	• Vehicle does not move in D range and R position when idling on flat, paved road.
POSSIBLE CAUSE	• Either transaxle is stuck in 3GR or 4GR position, or clutch slippage due to a stuck 3–4 clutch is stuck. 1. Clutch burned • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Electronic parts of output and input system have malfunction 3. Engine torque is not start • Torque converter malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does vehicle creep in any range/position?	Yes	Go to the next step.
		No	Inspect or adjust selector lever. (See 05–18–7 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.)
2	Check value at the following PCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • APP1 • APP2 • TP_REL Are PID values okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
4	Inspect Pressure control solenoid A. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Is it okay?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
5	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [FS5A-EL]

E6U050300000W46

6	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• If the clutch is stuck or does not stay in 3GR, the malfunction is in engine circuit. 1. Clutch slipped, burned • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Accelerator pedal position sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation of fail-safe function) • Short or open circuit in wiring • Poor connection of connector • Electronic parts of output and input system have malfunction 4. Insufficient starting torque (Suspected when in-gear condition, shift control and engine circuit are normal) • Torque converter have malfunction (Poor operation, stuck) 5. Engagement of TCC operation range (Operation of fail-safe function) • Transaxle fluid temperature sensor malfunction (Short or open circuit) 6. Transaxle fixed in M range • M range switch malfunction 7. TR switch adjustment incorrect **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With ignition switch at ON, does gear position indicator light indication correspond to selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.30 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS."
2	Go to No.12 "LACK/LOSS OF POWER-ACCELERATION/CRUISE". (See 01–03A–39 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [L3].) Is CIS system okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Disconnect transaxle connector. Does vehicle operate as follows? **D range: 3GR (fixed)** **R position: Reverse**	Yes	Go to the next step.
		No	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts.
4	Drive vehicle in D range. Does vehicle start from stop in first gear?	Yes	Go to the next step.
		No	Check value at the following. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs (using WDS or equivalent):** • APP1 • APP2 • TP_REL • VSS **TCM PIDs (using WDS or equivalent):** • TSS • OSS • TR Repair or replace any defective parts.
5	Inspect the value at the following TCM PIDs using WDS or equivalent. • SSA/SS1 • SSB/SS2 • SSC/SS3 • SSD/SS4 • SSF_SS6 Are the PID values normal?	Yes	Inspect for shift solenoid stuck. • If shift solenoids are okay, go to the next step.
		No	Check the value at the following. **PCM PIDs (using WDS or equivalent):** • APP • TP_REL **TCM PIDs (using WDS or equivalent):** • THOP • OSS • TSS • TR
6	Perform the stall test. (See 05–17A–6 Stall Test.) Is stall speed okay?	Yes	Reverify symptoms of malfunction.
		No	Overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
7	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.7 NO SHIFTING [FS5A-EL]

E6U050300000W47

7	No shifting
DESCRIPTION	• Single shift range only. • Sometimes it shifts correctly.
POSSIBLE CAUSE	• When the gear position is fixed in 3GR due to the fail-safe operation, the malfunction is in the ATX. • Perform malfunction diagnosis according to No.6 "LOW MAXIMUM SPEED AND POOR ACCELERATION". 1. Clutch slippage, burned • Line pressure low • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Accelerator pedal position sensor malfunction • TP sensor malfunction • Input/turbine speed sensor malfunction 3. Transaxle fixed in 3GR (Operation in fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Disconnected shift solenoid connector • Poor ground of shift solenoid 4. Transaxle fixed in M range • M range switch malfunction

NO.8 DOES NOT SHIFT TO FIFTH GEAR (5GR) [FS5A-EL]

E6U050300000W48

8	Does not shift to fifth gear (5GR)
ESCRIPTION	• Vehicle does not upshift from 4GR to 5GR even though vehicle speed is increased. • Vehicle does not shift to 5GR even though accelerator pedal is released in D range at **60 km/h {37 mph}**.
POSSIBLE CAUSE	• Basically, TCC does not operate when fail-safe is operating. Verify the DTCs first. If the TCC operates when driving at high speeds only, malfunction (improper adjustment) is in the M range switch circuit or TR switch circuit. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC piston slipped, burned • Line pressure low • TP sensor malfunction • Accelerator pedal position sensor malfunction • Engine coolant temperature sensor malfunction • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction 2. Transaxle fluid temperature sensor malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction 3. TR switch malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect 4. Pressure control solenoid B, shift solenoid A, shift solenoid B, shift solenoid D, Shift solenoid F valve malfunction • Short or open circuit in wiring harness • Poor connection of connector • Solenoid valve stuck 5. M range switch malfunction 6. Control valve body malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With ignition switch at ON, does gear position indicator light indication correspond to selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No. 30 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS."
2	Inspect voltage at the following TCM PIDs using WDS or equivalent. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) • TFT • TFTV Is voltage okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Inspect the value at the following TCM PIDs using WDS or equivalent. • LPS B • SSA/SS1 • SSB/SS2 • SSD/SS4 • SSF_SS6 Are the PID values normal?	Yes	Overhaul the control valve body and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].) If any problem remains, overhaul the transaxle and repair or replace any malfunctioning parts. (See ATX workshop manual [FS5A-EL].)
		No	Go to the next step.
4	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Check value at the following TCM PIDs using WDS or equivalent. **PCM PIDs (using WDS or equivalent):** • TR • TSS • OSS Repair or replace any defective parts.
		No	Repair open ground circuit. Reconnect TCM.
5	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.9 ABNORMAL SHIFTING [FS5A-EL]

E6U050300000W49

9	Abnormal shifting
DESCRIPTION	• Shift incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	• There is a malfunction in the signal circuit which controls shifting (accelerator pedal position sensor, TP sensor, input/turbine speed sensor, vehicle speed sensor), the control valve is stuck, the accumulator (forward or servo apply) is stuck, or the clutch circuit is stuck. 1. Clutch slipped, burned • Line pressure low • Control valve body malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid B malfunction • Body GND malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Input/turbine speed sensor malfunction 3. TR switch malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

05–03A

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit. Reconnect TCM.
2	Check value at the following. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs (using WDS or equivalent):** • APP • TP_REL **TCM PIDs (using WDS or equivalent):** • THOP • TSS • OSS • VSS Are they okay?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
3	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.10 FREQUENT SHIFTING [FS5A-EL]

E6U050300000W50

10	Frequent shifting
DESCRIPTION	• Downshifting occurs immediately even when accelerator pedal is depressed slightly in D range.
POSSIBLE CAUSE	• The circuit which is the cause is basically the same as No.9 "ABNORMAL SHIFTING". However, a malfunction of the input signal to the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, vehicle speed sensor (including the sensor GND, sensor harness and connector), or clutch slippage (clutch stuck, low pressure in line) may also be the cause.

NO.11 SHIFT POINT IS HIGH OR LOW [FS5A-EL]

E6U050300000W51

11	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs quickly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	• If the transaxle does not shift abnormally, there is a malfunction of the input signal to the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, or vehicle speed sensor (including sensor GND). • If the engine speed is high or low, regardless normal shifting, inspect the tachometer. • Verify that the output signal of the accelerator pedal position sensor and TP sensor change linearly.

NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [FS5A-EL]

E6U050300000W52

12	Torque converter clutch (TCC) non-operation
DESCRIPTION	• TCC does not operate when vehicle reaches TCC operation range.
POSSIBLE CAUSE	• Basically, the TCC does not operate when the fail-safe is operating. Verify the DTC first. **Caution** **• If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. TCC burned (1) Input sensor system malfunction • Vehicle speed sensor • Input/turbine speed sensor • Sensor GND (2) Output solenoid valve system malfunction (Sticking) • Shift solenoid E malfunction • Shift solenoid A malfunction (3) Control valve body malfunction system (Poor operation, stuck) • TCC hydraulic pressure system 2. TP sensor malfunction (Not operating linear) 3. Accelerator pedal position sensor malfunction (Not operating linear) 4. Input/turbine speed sensor or vehicle speed sensor malfunction 5. Brake switch malfunction (Always ON) 6. ECT sensor malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	With ignition switch at ON, does gear position indicator light indication correspond to selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.30 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS."
2	Check value at the following. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs (using WDS or equivalent):** • APP • TP_REL • VSS **TCM PIDs (using WDS or equivalent):** • THOP • OSS • TSS Are they okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness.
4	Measure resistance between TCM terminal 1A and transaxle connector terminal A, and between TCM terminal 1H and transaxle connector terminal F. Are the resistances **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair shift solenoid A or E circuit. Reconnect TCM.
5	Inspect shift solenoids A and E. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Are the shift solenoids operating properly?	Yes	Replace TCM.
		No	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
6	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.13 NO KICKDOWN [FS5A-EL]

E6U050300000W53

13	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	• If transaxle does not downshift though shifting is normal, malfunction is in accelerator pedal position sensor or TP sensor circuit (including sensor GND, sensor harness and connector).

NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [FS5A-EL]

E6U050300000W54

14	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When accelerator pedal is depressed for driveway, engine speed increases but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not.
POSSIBLE CAUSE	• There is clutch slip because clutch is stuck or line pressure is low. 1. Clutch stuck, slippage (forward clutch, 3–4 clutch, 2–4 brake band, one-way clutch) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Shift solenoid F malfunction • Pressure control solenoid A malfunction • Body GND malfunction • Control valve body malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Input/turbine speed sensor malfunction 3. Poor operation of mechanical pressure • Selector lever position disparity • TR switch position disparity **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Is shift point okay?	Yes	Go to the next step.
		No	Go to No.9 "ABNORMAL SHIFTING".
2	Check value at the following PCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • APP • TP_REL Are PID values okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness. Reconnect TCM.
4	Inspect LPS PID value. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the LPS PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
5	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [FS5A-EL]

E6U050300000W55

15	Engine flares up or slips when accelerating vehicle
DESCRIPTION	• Engine flares up when accelerator pedal is depressed for upshifting. • Engine flares up suddenly when accelerator pedal is depressed for downshifting.
POSSIBLE CAUSE	• The malfunction is basically the same as for No.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING". If conditions for No.14 worsen, the malfunction will develop to No.15.

NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [FS5A-EL]

E6U050300000W56

16	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	• Poor TCC engagement due to either slippage because the TCC is stuck or the line pressure is low **Caution** **• If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** 1. Torque converter clutch piston slipped, burned • Line pressure high • Shift solenoid A malfunction • Shift solenoid E malfunction • Control valve body malfunction • Body GND malfunction • Pressure control solenoid A malfunction 2. Signal malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TFT sensor malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Input/turbine speed sensor malfunction 3. Torque converter malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect voltage at the following TCM terminals. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) • 2I, 2K (Input/turbine speed sensor) Are they okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
2	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness.
3	Measure resistance between following TCM terminal and transaxle connector terminal. • TCM terminal 1A and transaxle connector terminal A • TCM terminal 1H and transaxle connector terminal F Is the resistance **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair shift solenoid A circuit.
4	Inspect shift solenoid. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Is the solenoid valve operating properly?	Yes	Go to the next step.
		No	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
5	Inspect LPS PID value. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the LPS PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Replace TCM.
6	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [FS5A-EL]

E6U050300000W57

17	Excessive shift shock from N to D or N to R position/range
DESCRIPTION	• Strong shock felt when shifting from N to D or N to R position/range.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. If no DTC is output, the shift shock may worse. due to poor operation of the control valve body or sticking of the clutch. 1. Clutch burned (N→D: Forward clutch, N→R: Reverse clutch or low and reverse brake) • Line pressure low, high • TP sensor malfunction • Accelerator pedal position sensor malfunction • Vehicle speed sensor malfunction • Input/turbine speed sensor malfunction • Shift solenoid B malfunction • Shift solenoid D malfunction • Shift solenoid A malfunction • Shift solenoid C malfunction • Pressure control solenoid A malfunction • Control valve body malfunction • Sensor GND malfunction • Body GND malfunction 2. Poor hydraulic operation (Malfunction in range change) • Forward accumulator malfunction • Servo apply accumulator malfunction • Pressure switch malfunction 3. Idle speed high 4. Poor tightening torque of engine mount, exhaust mount 5. Poor operation of mechanical pressure • Selector lever position disparity **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Does shift shock occur only when engine cold?	Yes	Go to the next step.
		No	Go to Step 3.
2	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Check value at the following. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs (using WDS or equivalent):** • APP • TP_REL **TCM PIDs (using WDS or equivalent):** • THOP • TFT • TFTV Repair or replace any defective parts.
		No	Repair harness. Reconnect TCM.
3	Perform stall test. (See 05–17A–6 Stall Test.) Is stall speed okay?	Yes	Go to the next step.
		No	Go to Step 5.
4	Inspect voltage at the following TCM PID using WDS or equivalent. (See05–17A–33 TCM INSPECTION [FS5A-EL].) • TR Is the PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
5	Check value at the following PCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • APP • TP_REL Are PID values okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
6	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness. Reconnect TCM.
7	Inspect LPS PID value. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the LPS PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
8	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.18 EXCESSIVE SHIFT SHOCK IS FELT WHEN UPSHIFTING AND DOWNSHIFTING [FS5A-EL]

E6U050300000W58

18	Excessive shift shock is felt when upshifting and downshifting
DESCRIPTION	• Excessive shift shock felt when depressing accelerator pedal to accelerate at upshifting. During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	• Shift shock may worsen when fail-safe is operating. The shift shock may worsen if the signal from the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, or vehicle speed sensor has a malfunction. 1. Clutch slipped, burned (Forward clutch, 2–4 brake band, 3–4 clutch) • Line pressure low, high • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid A malfunction • Shift solenoid B malfunction • Shift solenoid C malfunction • Pressure control solenoid B malfunction • Pressure control solenoid A malfunction • Accelerator pedal position sensor misadjustment • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • Transaxle temperature sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Input/turbine speed sensor malfunction 3. Poor hydraulic operation (Malfunction in range change) • Pressure switch malfunction • Forward accumulator malfunction • Servo apply accumulator malfunction 4. Engine mounts installation • Loose attaching bolts • Worn parts **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the engine mounts for loose tightening bolts or worn parts. Are all engine mounts normal?	Yes	Go to the next step.
		No	Readjust, tighten or replace engine mounts.
2	Perform stall test. (See 05–17A–6 Stall Test.) Is stall speed okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Check value at the following PCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • APP • TP_REL Are PID values okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
4	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness. Reconnect TCM.
5	Inspect LPS PID value. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the LPS PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
6	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [FS5A-EL]

E6U050300000W59

19	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when TCC engaged.
POSSIBLE CAUSE	• The troubleshooting flow is the same as No.16 "JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION".

NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [FS5A-EL]

E6U050300000W60

20	Noise occurs at idle when vehicle is stopped in all positions/ranges
DESCRIPTION	• Transaxle noisy in all positions and ranges when vehicle is idling.
POSSIBLE CAUSE	• The oil pump may cause a high-pitched noise to be emitted from the transaxle at idle. **Note** • If a noise is emitted during shifting only, the malfunction is in shift solenoid D, E, F or shift solenoid A, B, C, pressure control solenoid B. If a noise is emitted during shifting at certain gears only or during deceleration only, it is gear noise. • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect engine condition. Is there any engine concern (i.e. rough idle)?	Yes	Go to appropriate symptom troubleshooting. (See 01–03A–10 ENGINE SYMPTOM TROUBLESHOOTING [L3].)
		No	Go to the next step.
2	Does noise stop when transaxle connector is disconnected?	Yes	Go to the next step.
		No	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
3	Check value at the following. (See 01–40A–9 PCM INSPECTION [L3].) (See 05–17A–33 TCM INSPECTION [FS5A-EL].) **PCM PIDs (using WDS or equivalent):** • APP • TP_REL • VSS **TCM PIDs (using WDS or equivalent):** • THOP • OSS • TSS Are they okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
4	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness. Reconnect TCM.
5	Inspect LPS PID value. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the LPS PID value normal?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
6	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION [FS5A-EL]

E6U050300000W61

21	Noise occurs at idle when vehicle is stopped in D range, or in R position
DESCRIPTION	• Transaxle noisy in driving ranges when vehicle idling.
POSSIBLE CAUSE	• Although the malfunction is basically the same as No.20 "NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES", other causes may be selector lever position disparity or TR switch position disparity. **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [FS5A-EL]

E6U050300000W62

22	No engine braking in 1GR position of M range
DESCRIPTION	• Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in 1GR of M range at low vehicle speed.
POSSIBLE CAUSE	1. Clutch slippage, burned (low and reverse brake) • Line pressure low • Shift solenoid D malfunction • Shift solenoid E malfunction • Shift solenoid C malfunction • Pressure control solenoid B malfunction • Control valve body malfunction • Body GND malfunction 2. Signal malfunction • TP sensor malfunction • Accelerator pedal position sensor malfunction • Vehicle speed sensor malfunction • Sensor GND malfunction • Input/turbine speed sensor malfunction 3. M range switch ON not judged by TCM (short, or open circuit, poor operation) • M range switch signal malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Do the following symptoms concurrently occur? — Engine flares up or slips during acceleration. — Engine flares up or slips when shifting.	Yes	Go to symptom troubleshooting NO.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING" or No.15 "ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE".
		No	Repeat basic inspection and repair or replace any defective parts according to inspection result. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)
2	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.23 TRANSAXLE OVERHEATS [FS5A-EL]

E6U050300000W63

23	Transaxle overheats
DESCRIPTION	• Burnt smell emitted from transaxle. • Smoke emitted from transaxle.
POSSIBLE CAUSE	• The malfunction is restricted to hindrance of coolant at the oil cooler. In addition, overheating of the transaxle may be caused by a malfunction of the transaxle fluid temperature sensor. 1. Burned (TCC) • Line pressure low • Control valve body malfunction 2. Oil cooler malfunction (Foreign material mixed ATF) 3. Excessive amount of ATF 4. Torque converter malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect oil cooler pipes for bends, damage, corrosion or kinks. Are oil cooler pipes okay?	Yes	Go to the next step.
		No	Replace any defective parts.
2	Perform stall test. (See 05–17A–6 Stall Test.) Is stall speed okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
3	Check value at the following PCM PIDs using WDS or equivalent. (See 01–40A–9 PCM INSPECTION [L3].) • APP • TP_REL Are PID values okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts.
4	Disconnect TCM. Is resistance between TCM ground terminal 1P and body ground, and between TCM ground terminal 1O and body ground **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair harness. Reconnect TCM.
5	Inspect Pressure control solenoid A. (See 05–17A–28 SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].) Is it okay?	Yes	Overhaul control valve body and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].) If problem remains, overhaul transaxle and repair or replace any defective parts. (See ATX Workshop Manual [FS5A-EL].)
		No	Repair or replace any defective parts.
6	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION [FS5A-EL]

E6U050300000W64

24	Engine stalls when shifted to D range, or in R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D range or R position at idle.
POSSIBLE CAUSE	• The malfunction is on the engine control side (i.e. Electronic throttle control system). Otherwise, the malfunction is in the input/turbine speed sensor (engine sometimes starts) or TCC circuit (engine always stalls).

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01–03A–34 NO.10 LOW IDLE/STALLS DURING DECELERATION [L3].) Is engine control system okay?	Yes	Repeat basic inspection and repair or replace any defective parts according to inspection result. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)
		No	Repair or replace any defective parts according to inspection results.
2	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

05–03A

NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEEDS OR STOPPING [FS5A-EL]

E6U050300000W65

25	Engine stalls when driving at slow speeds or stopping
DESCRIPTION	• Engine stalls when brake pedal is depressed while driving at low speed or stopping.
POSSIBLE CAUSE	• The malfunction on engine control side (e.g. Fuel injection control, Electronic throttle control system) Otherwise, the malfunction is in the control valve body, shift solenoid E or TCC.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01–03A–34 NO.10 LOW IDLE/STALLS DURING DECELERATION [L3].) Does engine control system okay?	Yes	Go to the next step.
		No	Repair or replace any defective parts according to inspection results.
2	Go to symptom troubleshooting No.5 "ENGINE STALLS-AFTER START/AT IDLE". (See 01–03A–21 NO.5 ENGINE STALLS-AFTER START/AT IDLE [L3].) Is engine control system okay?	Yes	Repeat basic inspection and repair or replace any defective parts according to inspection result. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)
		No	Repair or replace any defective parts according to inspection results.
3	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.26 STARTER DOES NOT WORK [FS5A-EL]

E6U050300000W66

26	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	• Selector lever misadjustment • TR switch misadjustment • Open or short circuit in TR switch

NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [FS5A-EL]

E6U050300000W67

27	Gear position indicator light does not illuminate in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates in M range and ignition switch at ON.
POSSIBLE CAUSE	• M range switch, gear position indicator light or related wiring harness malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Are other indicator lights illuminated with ignition switch at ON?	Yes	Go to the next step.
		No	Inspect meter fuse.
2	Inspect voltage at TCM terminal 2B. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is voltage okay?	Yes	Inspect instrument cluster.
		No	Repair or replace any defective part.
3	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS [FS5A-EL]

E6U050300000W68

28	Gear position indicator light illuminates when in D range or P, N, R positions
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates in D range or P, N, R position and ignition switch at ON.
POSSIBLE CAUSE	• M range switch or related wiring harness malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect voltage at TCM terminal 2B. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is voltage okay?	Yes	Inspect instrument cluster.
		No	Repair or replace any defective part.
2	• Verify test results. — If okay, return to diagnostic index to service any additional symptoms. — If malfunction remains, inspect related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If vehicle repaired, troubleshooting completed. • If vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.29 DOES NOT SHIFT UP IN M RANGE [FS5A-EL]

E6U050300000W69

29	No shift up in M range
DESCRIPTION	• Gear position indicator light in dashboard illuminates, but vehicle does not upshift when selector lever is pushed to "+" side.
POSSIBLE CAUSE	• Up switch or related harness malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect UP SW PID value using the WDS or equivalent. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the UP SW PID value normal?	Yes	Inspect the instrument cluster.
		No	Inspect the up switch. • If the up switch is normal, inspect for continuity between the up switch and TCM terminal 2D.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle repaired, troubleshooting completed. • If the vehicle not repaired or additional diagnostic information not available, replace TCM.		

NO.30 DOES NOT SHIFT DOWN IN M RANGE [FS5A-EL]

E6U050300000W70

30	No shift up in M range
DESCRIPTION	• Gear position indicator light in dashboard illuminates, but vehicle does not downshift when selector lever is pushed to "–" side.
POSSIBLE CAUSE	• Down switch or related harness malfunction **Note** • Before following troubleshooting steps, make sure that Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03A–4 BASIC INSPECTION [FS5A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect DWN SW PID value using the WDS or equivalent. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) Is the DWN SW PID value normal?	Yes	Inspect the instrument cluster.
		No	Inspect the up switch. • If the up switch is normal, inspect for continuity between the up switch and TCM terminal 2F.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If the malfunction remains, inspect the Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle repaired, troubleshooting completed. • If the vehicle not repaired or additional diagnostic information not available, replace TCM.

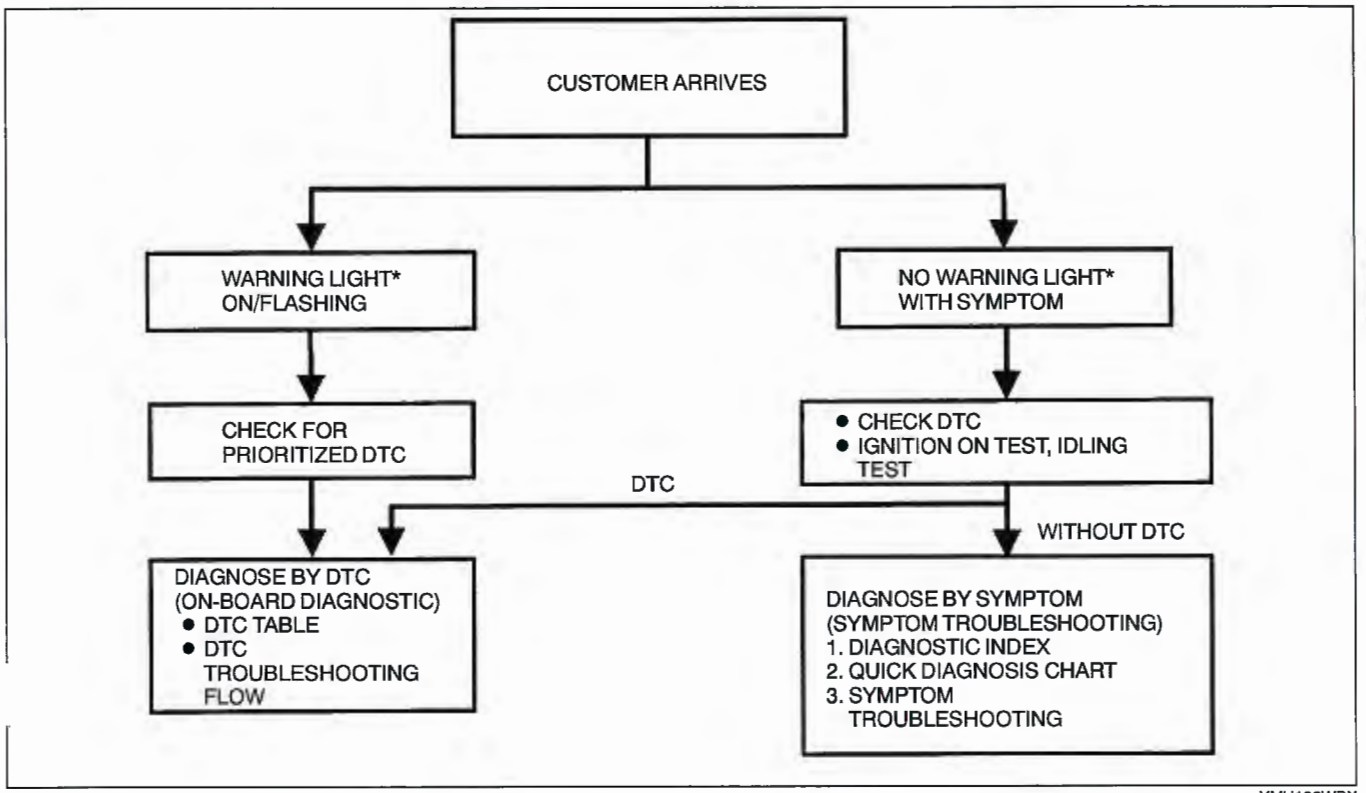
FOREWORD [AW6A-EL]

E6U050300000W02

- When the customer reports a vehicle malfunction, inspect the malfunction indicator lamp (MIL) indication, AT warning indicator light flash, and diagnostic trouble code (DTC), then diagnose the malfunction according to following flowchart.
  - — If a DTC exists, diagnose the applicable DTC inspection. (See 05–02B–5 DTC TABLE [AW6A-EL].)
  - — If a DTC does not exist, the MIL does not illuminate and the AT warning indicator light illuminate, diagnose the applicable symptom troubleshooting. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)



YMU102WBX

*: Malfunction Indicator Lamp (MIL), AT warning light.

BASIC INSPECTION [AW6A-EL]

E6U050300000W03

STEP	INSPECTION		ACTION
1	• Measure the battery voltage. • Is the battery voltage **10.0—14.0 V**?	Yes	Go to the next step.
		No	Replace or recharge the battery. (See 01–17A–3 BATTERY RECHARGING [L3, AJ].)
2	• Inspect the TCM related harnesses, connectors and fuses. • Are they normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
3	• Warm up the engine to normal operating temperature. • Retrieve DTC using the WDS or equivalent. • Is there any DTC present?	Yes	Record Freeze Frame Data and perform appropriate DTC troubleshooting procedures.
		No	Go to the next step.
4	• Perform the road test. • Is the ATX operating normally?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
5	• Perform the time lag test. • Is the ATX operating normally?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
6	• Perform the stall test. • Is the stall speed within the specified?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection result.
7	• Perform the line pressure test. • Is the line pressure within the specified?	Yes	Perform the symptom troubleshooting and follow the procedures.
		No	Repair or replace any malfunctioning parts according to the inspection result.
8	• Inspect following part or signal related PIDs using the WDS or equivalent. — TP sensor — TSS — VSS — TFT sensor — TR switch — M range switch — Up switch — Down switch — Brake switch — Engine speed • Are they normal?	Yes	Perform the symptom troubleshooting and follow the procedures.
		No	Repair or replace any malfunctioning parts according to the inspection result.

SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL]

E6U050300000W04

• Use the chart below to verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
1	• Vehicle does not move in D range, or in R position	• Vehicle does not move when accelerator pedal is depressed.	(See 05–03B–11 NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION [AW6A-EL].)
2	• Vehicle moves in N position	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.	(See 05–03B–12 NO.2 VEHICLE MOVES IN N POSITION [AW6A-EL].)
3	• Vehicle moves in P position, or parking gear does not disengage when P position is disengaged	• Vehicle rolls when on a downward slope and tires do not lock in P position. • Tires locked when P position is disengaged, vehicle does not move in D range, and R position when accelerator pedal is depressed, and engine remains in stalled condition.	(See 05–03B–12 NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [AW6A-EL].)
4	• Excessive creep	• Vehicle accelerates in D range, and R position when accelerator pedal is not depressed.	(See 05–03B–12 NO.4 EXCESSIVE CREEP [AW6A-EL].)
5	• No creep at all	• Vehicle does not move in D range, or R position when idling on flat paved road.	(See 05–03B–13 NO.5 NO CREEP AT ALL [AW6A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
6	• Low maximum speed and poor acceleration	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.	(See 05–03B–14 NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [AW6A-EL].)
7	• No shifting	• Single shift range only. • Sometimes shifts correctly.	(See 05–03B–15 NO.7 NO SHIFTING [AW6A-EL].)
8	• Does not shift to 6GR	• Vehicle does not upshift from 5GR to 6GR even though vehicle speed increased. • Vehicle does not shift to 6GR even though accelerator pedal is released in D range at **80 km/h {50 mph}**.	(See 05–03B–15 NO.8 DOES NOT SHIFT TO 6GR [AW6A-EL].)
9	• Abnormal shifting	• Shifts incorrectly (incorrect shift pattern).	(See 05–03B–17 NO.9 ABNORMAL SHIFTING [AW6A-EL].)
10	• Frequent shifting	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.	(See 05–03B–18 NO.10 FREQUENT SHIFTING [AW6A-EL].)
11	• Shift point is high or low	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs suddenly when accelerating and engine speed does not increase.	(See 05–03B–18 NO.11 SHIFT POINT IS HIGH OR LOW [AW6A-EL].)
12	• Torque converter clutch (TCC) non-operation	• TCC does not operate when vehicle reaches TCC operation range.	(See 05–03B–18 NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [AW6A-EL].)
13	• No kickdown	• Does not downshift when accelerator pedal is fully depressed within kickdown range.	(See 05–03B–20 NO.13 NO KICKDOWN [AW6A-EL].)
14	• Engine flares up or slips when upshifting or downshifting	• When accelerator pedal is depressed, engine speed increases normally but vehicle speed increases slowly. • When accelerator pedal is depressed while driving, engine speed increases but vehicle speed does not increase.	(See 05–03B–20 NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [AW6A-EL].)
15	• Engine flares up or slips when accelerating vehicle	• Engine flares up when accelerator pedal is depressed for upshifting. • Engine flares up suddenly when accelerator pedal is depressed for downshifting.	(See 05–03B–21 NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [AW6A-EL].)
16	• Judder upon torque converter clutch (TCC) operation	• Vehicle jolts when TCC is engaged.	(See 05–03B–21 NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [AW6A-EL].)
17	• Excessive shift shock from N to D or N to R position/range	• Strong shock is felt when shifting from N to D or N to R position/range at idle.	(See 05–03B–21 NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [AW6A-EL].)
18	• Excessive shift shock is given when upshifting and downshifting	• Excessive shift shock is felt when depressing accelerator pedal to accelerate at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.	(See 05–03B–23 NO.18 EXCESSIVE SHIFT SHOCK IS GIVEN WHEN UPSHIFTING AND DOWNSHIFTING [AW6A-EL].)
19	• Excessive shift shock on torque converter clutch (TCC)	• Strong shock is felt when TCC is engaged.	(See 05–03B–24 NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [AW6A-EL].)

No.	TROUBLESHOOTING ITEM	DESCRIPTION	PAGE
20	• Noise occurs at idle when vehicle is stopped in all positions/ranges	• Transaxle is noisy in all positions and ranges when vehicle is idling.	(See 05–03B–24 NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPE' IN ALL POSITIONS/RANGES [AW6A-EL].)
21	• Noise occurs at idle when vehicle is stopped in D range, or in R position	• Transaxle is noisy in driving ranges when vehicle is idling.	(See 05–03B–25 NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION [AW6A-EL].)
22	• No engine braking in 1GR position of M range	• Engine speed drops to idle but vehicle coasts when accelerator pedal is released during cruising at medium to high speeds. • Engine speed drops to idle but vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed.	(See 05–03B–25 NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [AW6A-EL].)
23	• Transaxle overheats	• Burnt smell emitted from the transaxle. • Smoke is emitted from the transaxle.	(See 05–03B–26 NO.23 TRANSAXLE OVERHEATS [AW6A-EL].)
24	• Engine stalls when shifted to D range, or in R position	• Engine stalls when shifting from N or P position to D range or R position at idle.	(See 05–03B–27 NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION [AW6A-EL].)
25	• Engine stalls when driving at slow speeds or stopping	• Engine stalls when brake pedal is depressed while driving at low speed or stopping.	(See 05–03B–27 NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEED OR STOPPING [AW6A-EL].)
26	• Starter does not work	• Starter does not work even when P or N position is selected.	(See 05–03B–28 NO.26 STARTER DOES NOT WORK [AW6A-EL].)
27	• Gear position indicator light does not illuminate in M range	• Gear position indicator light in instrument cluster does not illuminate in M range with ignition switch at ON.	(See 05–03B–28 NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [AW6A-EL].)
28	• Gear position indicator light illuminates in D range or P, N, R positions	• Gear position indicator light in instrument cluster illuminates in D range or P, N R positions with ignition switch at ON.	(See 05–03B–29 NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS [AW6A-EL].)
29	• Does not upshift in M range	• Gear position indicator light in instrument cluster illuminates but vehicle does not upshift when selector lever is pushed to "+" side.	(See 05–03B–29 NO.29 DOES NOT UPSHIFT IN M RANGE [AW6A-EL].)
30	• Does not downshift in M range	• Gear position indicator light in instrument cluster illuminates but vehicle does not downshift when selector lever is pushed to "–" side.	(See 05–03B–29 NO.30 DOES NOT DOWNSHIFT IN M RANGE [AW6A-EL].)

QUICK DIAGNOSIS CHART [AW6A-EL]

E6U050300000W05

	Symptom item / Cause of trouble	Selector lever is mis-adjisted	Not within line pressure specification	Not within Idle speed specification	Not within ignition timing specification	TR switch initial learning: N potition learning is not performed	TR switch initial learning: Garage shift learning is not performed	Parking mechanism not operating properly	Not within ATF amount	Electrical system components: CAN signal: Open/short	CAN signal: Engine speed (from PCM)	CAN signal: Throttle opening (from PCM)	CAN signal: Shift potition (to instrument cluster)	ATX outer parts: Open/short	ATX outer parts: TCM power supply/GND	TR switch: No signal input	TR switch: Abnormal signal input	M range switch: No signal input	M range switch: Abnormal signal input	Up switch: No signal input	Up switch: Abnormal signal input
1	Vehicle does not move in D range, or in R position	X	X			X		X							X						
2	Vehicle moves in N position	X	X			X															
3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged	X						X													
4	Excessive creep			X	X																
5	No creep at all		X																		
6	Low maximum speed and poor acceleration		X		X										X						
7	No shifting		X								X		X								
8	Does not shift to 6GR	X												X	X	X	X				
9	Abnormal shifting		X								X		X					X			
10	Frequent shifting		X								X		X					X			
11	Shift point is high or low										X

D6U503CW7004

NO.1 VEHICLE DOES NOT MOVE IN D RANGE, OR IN R POSITION [AW6A-EL]

E6U050300000W06

1	Vehicle does not move in D range, or in R position
DESCRIPTION	• Vehicle does not move when accelerator pedal is depressed.
POSSIBLE CAUSE	• If the vehicle does not move in D range or R position, basically, the malfunction is in the ATX. (Vehicle will move even with a malfunction in the TCM.) Since a malfunction is in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. — Clutch slippage, worn (D range-C1 clutch, One-way clutch, R position-C3 clutch, B2 brake) • Line pressure low • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Shift solenoid F malfunction • Sensor GND malfunction • Body GND malfunction • Control valve body malfunction — Selector lever malfunction — Parking mechanism not operating properly — Torque converter malfunction — N position learning is not performed **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

05–03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• When the vehicle is stopped on a flat, level road and the engine off, does the vehicle move when pushed? (in D range or N, R positions with the brake pedal released)	Yes	Go to the next step.
		No	Inspect for parking mechanism.
2	• Start the engine. • Does vehicle move when selector lever in between N position and D range?	Yes	Inspect or adjust selector lever. (See 05–18–6 SELECTOR LEVER INSPECTION.) (See 05–18–7 SELECTOR CABLE ADJUSTMENT.) Perform N position learning. (See 05–17B–28 Neutral Position Learning.)
		No	Go to the next step.
3	• Stop the engine. • Inspect following solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Shift solenoid F — Line pressure control solenoid • Are these normal?	Yes	Replace the ATX (clutch slippage, worn) (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Inspect the coupler component. If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
4	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.2 VEHICLE MOVES IN N POSITION [AW6A-EL]

E6U050300000W07

2	Vehicle moves in N position
DESCRIPTION	• Vehicle creeps in N position. • Vehicle creeps if brake pedal is not depressed in N position.
POSSIBLE CAUSE	• If the vehicle moves in N position, basically, the malfunction is in the ATX. Since a malfunction in the sensor circuit or output circuit is the cause of the malfunction in the ATX, inspect the sensors, output circuit, and the related wiring harnesses. — Clutch burnt (C1 clutch, C3 clutch, One-way clutch) • Line pressure low • Shift solenoid C malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Control valve body malfunction — Selector lever position disparity (Although the selector indicator shows N position, the hydraulic circuit shows D range or R position) • N position learning is not performed **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the vehicle creep when selector lever is moved slightly in N position?	Yes	Go to the next step.
		No	Inspect and adjust the selector lever. (See 05–18–6 SELECTOR LEVER INSPECTION.) (See 05–18–7 SELECTOR CABLE ADJUSTMENT.) Perform N position learning. (See 05–17B–28 Neutral Position Learning.)
2	• Inspect following solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D • Are these solenoids normal?	Yes	Replace the ATX (clutch slippage, worm). (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Inspect the coupler component. If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.3 VEHICLE MOVES IN P POSITION, OR PARKING GEAR DOES NOT DISENGAGE WHEN P IS DISENGAGED [AW6A-EL]

E6U050300000W08

3	Vehicle moves in P position, or parking gear does not disengage when P is disengaged
DESCRIPTION	• Vehicle rolls on a downward slope in P position. • Tires are locked when P is disengaged. Vehicle does not move in D range, and R position when the accelerator pedal is depressed, and the engine remains in a stalled condition.
POSSIBLE CAUSE	• Parking mechanism malfunction (May have effect on noise or shock from transaxle) • Improper adjustment of selector lever • If the vehicle moves in N position, perform No.2 "VEHICLE MOVES IN N POSITION"

NO.4 EXCESSIVE CREEP [AW6A-EL]

E6U050300000W09

4	Excessive creep
DESCRIPTION	• Vehicle accelerates in D range, and R position when accelerator pedal is not depressed.
POSSIBLE CAUSE	• Engine idle speed is high (transaxle system is not cause of problem) • Go to No.9 "FAST IDLE/RUNS ON" (See 01–03C–32 NO.9 FAST IDLE/RUNS ON [AJ].)

NO.5 NO CREEP AT ALL [AW6A-EL]

E6U050300000W10

5	No creep at all
DESCRIPTION	• Vehicle does not move in D range and R position when idling on a flat paved road.
POSSIBLE CAUSE	• Either engine output low or there is clutch slippage. — Clutch burnt (C1 clutch, C3 clutch) • Line pressure low • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Shift solenoid F malfunction • Body GND malfunction • Control valve body malfunction — Transaxle fixed in 3GR or 5GR* (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system — There is no engine torque • Torque converter malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

05–03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the vehicle creep in P and/or N position?	Yes	Inspect or adjust the selector lever. (See 05–18–6 SELECTOR LEVER INSPECTION.) (See 05–18–7 SELECTOR CABLE ADJUSTMENT.)
		No	Go to the next step.
2	• Stop the engine. • Inspect following solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Shift solenoid F — Line pressure control solenoid • Are these solenoids normal?	Yes	Go to the next step.
		No	Inspect the coupler component. If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
3	• Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].) • Inspect the torque converter. • Is the torque converter normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
		No	Replace the torque converter.
4	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

* : If case of shift solenoid C failure

NO.6 LOW MAXIMUM SPEED AND POOR ACCELERATION [AW6A-EL]

E6U050300000W11

6	Low maximum speed and poor acceleration
DESCRIPTION	• Vehicle acceleration is poor at start. • Delayed acceleration when accelerator pedal is depressed while driving.
POSSIBLE CAUSE	• If the clutch is stuck or does not stay in 4GR, malfunction is in engine circuit. — Clutch slippage, burnt (C1 clutch, C2 clutch, C3 clutch, B1 brake) • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Shift solenoid F malfunction • Body GND malfunction • Control valve body malfunction — Transaxle fixed in 3GR or 5GR* (Operation of fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Malfunction of electronic parts of output and input system — Insufficient starting torque (Suspected when in-gear, shift control and engine circuit are normal) • Torque converter malfunction (Poor operation, stuck) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• With the ignition switch at the ON position, does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANG OR P, N, R POSITIONS".
2	• Go to No.12 "LACK/LOSS OF POWER-ACCELERATION/CRUISE". (See 01–03C–38 NO.12 LACK/LOSS OF POWER-ACCELERATION/CRUISE [AJ].) • Does engine control system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
3	• Stop the engine. • Inspect following solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Shift solenoid F — Line pressure control solenoid • Are they normal?	Yes	Go to the next step.
		No	Inspect the coupler component. If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
4	• Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].) • Inspect the torque converter. • Is the torque converter normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
		No	Replace the torque converter.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

* : If case of shift solenoid C failure

NO.7 NO SHIFTING [AW6A-EL]

E6U050300000W12

7	No shifting
DESCRIPTION	• Single shift range only. • Sometimes it shifts correctly.
POSSIBLE CAUSE	• When the gear position is fixed in 3GR or 5GR* due to the fail-safe operation, malfunction is in the ATX. • Perform malfunction diagnosis according to No.6 "LOW MAXIMUM SPEED AND POOR ACCELERATION". — Clutch burnt (C1 clutch, C2 clutch, C3 clutch, B1 brake) • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Shift solenoid F malfunction • Control valve body malfunction — 3GR or 5GR* is fixed (Operation in fail-safe function) • Short or open circuit in wiring harness • Poor connection of connector • Poor ground of shift solenoid • Malfunction of electronic parts of output and input system

* : If case of shift solenoid C failure

NO.8 DOES NOT SHIFT TO 6GR [AW6A-EL]

E6U050300000W13

8	Does not shift to 6GR
DESCRIPTION	• Vehicle does not upshift from 5GR to 6GR even though vehicle speed is increased. • Vehicle does not shift to 6GR even though accelerator pedal is released in D range at **80 km/h {50 mph}**.
POSSIBLE CAUSE	• Basically, TCC does not operate when the fail-safe is operating. Verify the DTC at first. If the TCC operates when driving at high speeds only, the malfunction (improper adjustment) is in the M range switch circuit or TR switch circuit. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** — TCC slippage, burnt • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction — TFT sensor malfunction • Short or open circuit in wiring harness • Poor connection of connector • Sensor malfunction — TR switch malfunction • Selector lever adjustment incorrect • TR switch adjustment incorrect — TCC control solenoid malfunction • Short or open circuit in wiring harness • Poor connection of connector • Solenoid valve stuck — M range switch malfunction • Selector lever adjustment incorrect • Short or open circuit in wiring harness — Torque converter malfunction — Control valve body malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• With the ignition switch at the ON position. • Does the gear position indicator light indication correspond to selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS".
2	• Drive the vehicle in D range and inspect following: — 1–2 shift up and down — 2–3 shift up and down — 3–4 shift up and down — 4–5 shift up and down — 5–6 shift up and down • Are all shift-up and shift-down possible?	Yes	Go to the next step.
		No	**No shift at all:** • Go to No.7 "NO SHIFTING". **Abnormal shift:** • Go to No.9 "ABNORMAL SHIFTING".
3	• Stop the engine. • Inspect following solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Shift solenoid F — Line pressure control solenoid • Are they normal?	Yes	Go to the next step.
		No	Inspect for shift solenoid stuck. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)
4	• Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].) • Inspect the torque converter. • Is the torque converter normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
		No	Replace the torque converter.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.9 ABNORMAL SHIFTING [AW6A-EL]

E6U050300000W14

9	Abnormal shifting
DESCRIPTION	• Shift incorrectly (incorrect shift pattern).
POSSIBLE CAUSE	• There is a malfunction in the signal circuit which controls shifting (Throttle position signal, input/turbine speed sensor, VSS), the control valve is stuck, or the clutch circuit is stuck. — Clutch slippage, burnt (C1 clutch, C2 clutch, C3 clutch, B1 brake) • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • TCC control solenoid malfunction • Shift solenoid F malfunction • Body GND malfunction • Control valve body malfunction • TR switch adjustment incorrect **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

05–03B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect for continuity between the TCM terminal A9 and battery negative terminal. • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace ground circuit.
2	• Inspect following shift solenoids. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Line pressure control solenoid — TCC control solenoid — Shift solenoid F • Are they normal?	Yes	Inspect the TCM terminal for bend, damage, corrosion or poor contact.
		No	Inspect the coupler component. If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.10 FREQUENT SHIFTING [AW6A-EL]

E6U050300000W15

10	Frequent shifting
DESCRIPTION	• Downshifting occurs suddenly even when accelerator pedal is depressed slightly in D range.
POSSIBLE CAUSE	• The malfunctioning circuit is basically the same as No.9 "ABNORMAL SHIFTING". However, a malfunction of the input signal to the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, VSS (including the sensor GND, sensor wiring harness and connector), or clutch slippage (clutch stuck, low pressure in line) may also be the cause.

NO.11 SHIFT POINT IS HIGH OR LOW [AW6A-EL]

E6U050300000W16

11	Shift point is high or low
DESCRIPTION	• Shift point considerably different from automatic shift diagram. • Shift delays when accelerating. • Shift occurs quickly when accelerating and engine speed does not increase.
POSSIBLE CAUSE	• If the transaxle does not shift abnormally, there is a malfunction of the input signal to the TP sensor, input/turbine speed sensor, or VSS. • If the engine speed is high or low, regardless of normal shifting, inspect the tachometer. • Verify that the output signals of the accelerator pedal position sensor and TP sensor change linearly.

NO.12 TORQUE CONVERTER CLUTCH (TCC) NON-OPERATION [AW6A-EL]

E6U050300000W17

12	Torque converter clutch (TCC) non-operation
DESCRIPTION	• TCC does not operate when vehicle reaches TCC operation range.
POSSIBLE CAUSE	• Basically, TCC does not operate when the fail-safe is operating. Verify the DTC at first. If the TCC operates when driving at high speeds only, the malfunction (improper adjustment) is in the M range switch circuit or TR switch circuit. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** • TCC slippage, burnt — Line pressure low • Incorrect throttle position signal • Input/turbine speed sensor malfunction • VSS malfunction • Output solenoid valve system malfunction (Sticking) • TCC control solenoid malfunction • Control valve body system malfunction (Poor operation, sticking) • TCC hydraulic pressure system malfunction • Accelerator pedal position sensor malfunction (Not operating linearly) • Input/turbine speed sensor or VSS malfunction • Operation of fail-safe function. — Short to power or GND at TCC control solenoid related circuit. **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• With the ignition switch at the ON position. • Does the gear position indicator light indication correspond to the selector lever position?	Yes	Go to the next step.
		No	Go to No.27 "GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE", or No.28 "GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS".
2	• Disconnect the TCM. • Is the resistance between the TCM ground terminal A9 and the body GND **less than 5.0 ohms**?	Yes	Go to the next step.
		No	Repair open ground circuit.
3	• Inspect the line pressure control solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is the line pressure control solenoid normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
4	• Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].) • Inspect the torque converter. • Is the torque converter normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Replace the torque converter.
5	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.13 NO KICKDOWN [AW6A-EL]

E6U050300000W18

13	No kickdown
DESCRIPTION	• Does not downshift when accelerator pedal is fully depressed within kickdown range.
POSSIBLE CAUSE	• If transaxle does not downshift though shifting is normal, the malfunction is in the accelerator pedal position sensor and accelerator pedal position sensor circuits (including sensor GND, sensor wiring harness and connector).

NO.14 ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING [AW6A-EL]

E6U050300000W19

14	Engine flares up or slips when upshifting or downshifting
DESCRIPTION	• When the accelerator pedal is depressed for acceleration from standstill, engine speed increases but the vehicle speed increases slowly. • When the accelerator pedal is depressed while driving, engine speed increases but the vehicle speed does not.
POSSIBLE CAUSE	• There is clutch slippage because the clutch is stuck or the line pressure is low. — Clutch stuck, slippage (C1 clutch, C2 clutch, C3 clutch, B1 brake) • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • TCC control solenoid malfunction • Shift solenoid F malfunction • Body GND malfunction • Control valve body malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is the line pressure normal? (See 05–17B–4 Line Pressure Test.)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Is shift point normal? (See 05–17B–7 ROAD TEST [AW6A-EL].)	Yes	Go to the next step.
		No	Go to No.9 "ABNORMAL SHIFTING".
3	• Stop the engine. • Inspect following solenoids. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid C — Shift solenoid D — Shift solenoid E — Line pressure control solenoid — TCC control solenoid — Shift solenoid F • Are they normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
4	• Inspect the coupler component for open or short. • Are coupler component normal?	Yes	Go to the next step.
		No	Replace the coupler component.
5	• Inspect the ATF condition. • Are a large amount of specks found?	Yes	Replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.15 ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE [AW6A-EL]

E6U050300000W20

15	Engine flares up or slips when accelerating the vehicle
DESCRIPTION	• Engine flares up when the accelerator pedal is depressed for upshifting. • Engine flares up suddenly when the accelerator pedal is depressed for downshifting.
POSSIBLE CAUSE	• The malfunction is basically the same as for No.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING". — If conditions for No.14 worsen, the malfunction will develop to No.15.

NO.16 JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION [AW6A-EL]

E6U050300000W21

16	Judder upon torque converter clutch (TCC) operation
DESCRIPTION	• Vehicle jolts when TCC is engaged.
POSSIBLE CAUSE	• Poor TCC engagement due to either slippage because the TCC piston is stuck or the line pressure is low. **Caution** • **If the TCC is stuck, inspect it. In addition, inspect the oil cooler for foreign particles which may have mixed in with the ATF.** — TCC slippage, burnt • Line pressure low • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • Sensor GND malfunction • TCC control solenoid malfunction • Control valve body malfunction — Torque converter malfunction — Centrifugal hydraulic pressure clutch is not operating properly

NO.17 EXCESSIVE SHIFT SHOCK FROM N TO D OR N TO R POSITION/RANGE [AW6A-EL]

E6U050300000W22

17	Excessive shift shock from N to D or N to R position/range
DESCRIPTION	• Strong shock felt when shifting from N to D or N to R position/range at idle.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. If no DTC is output, the shift shock may worsen due to poor operation of the control valve body or sticking of the clutch. — Clutch burnt (N→D: C1 clutch, N→R: C3 clutch or B2 brake) • Line pressure low • Incorrect throttle position signal • Incorrect accelerator position signal • TFT sensor malfunction • Sensor GND malfunction • Shift solenoid C malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • Control valve body malfunction — Poor hydraulic operation (Malfunction in range change) — Idle speed high — Poor tightening torque of engine mount, exhaust mount — Line pressure high — Garage shift control is not learned • Initial learning did not perform **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the shift shock occur only when the engine is cold?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Inspect the TFT sensor and related wiring harness: vibration, intermittent open/short circuit. (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Repair or replace part if necessary.
3	• Perform the initial learning procedure. (See 05–03B–23 Initial Learning.) • Does symptom eliminate?	Yes	Troubleshooting is completed.
		No	Go to the next step.
4	• Is the line pressure normal? (See 05–17B–4 Line Pressure Test.)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
5	• Is stall speed normal? (See 05–17B–6 Stall Test.)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
6	• Stop the engine. • Inspect following solenoids. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Line pressure control solenoid — Shift solenoid C — Shift solenoid E • Are they normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
		No	• Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
7	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

Initial Learning

Warning
- **When performing a initial learning, be aware of other vehicles, people, and other impediments to order to avoid an accident.**

Note
- While self-learning control gradually reduces shock during normal driving, initial learning is performed to initially learn a certain amount of driving conditions.

1. Warm-up
   - Increase the ATF temperature by leaving the vehicle idling or performing city driving. Verify that the ATF temperature is **between 66—110 C {151—230 F}**. If the ATF temperature is outside this range, work to bring it inside the range.

Caution
- **Do not raise the ATF temperature by stalling the engine.**

Note
- If the ATF temperature is not **between 66—110 C {151—230 F}**, initial learning cannot be performed. Before learning, inspect for variable shift shock.

2. Garage shift learning
   - With the vehicle standing still, depress the brake pedal and keep the selector lever in N position for **3 s**. Then, shift the selector lever from the N position into D range, and maintain in this condition for **3 s**. Repeat this procedure **5 times**. Then repeat it **5 times** in the same way for R position.
3. Gear shift control learning
   - In D range, with the throttle opening between **25—30 %**, drive until you reach 6th gear and a vehicle speed of **80 km/h {50 mph}** or higher. Then, release the accelerator pedal and coast, and bring the vehicle to a stop in at least **60 s**. Repeat this procedure **10 times**.
4. Inspect learning results
   - Verify that variable speed shock and shift shock have decreased compared to the conditions before learning.

NO.18 EXCESSIVE SHIFT SHOCK IS GIVEN WHEN UPSHIFTING AND DOWNSHIFTING [AW6A-EL]

E6U050300000W23

18	Excessive shift shock is given when upshifting and downshifting
DESCRIPTION	• Excessive shift shock is felt when depressing the accelerator pedal at upshifting. • During cruising, excessive shift shock is felt when depressing accelerator pedal at downshifting.
POSSIBLE CAUSE	• Shift shock may worsen when the fail-safe is operating. The shift shock may worsen if the accelerator pedal position sensor, TP sensor, input/turbine speed sensor, or VSS signal malfunctions. — Clutch slippage, burnt (C1 clutch, C2 clutch, C3 clutch, B1 brake) • Line pressure low, high • Incorrect throttle position signal • VSS malfunction • Input/turbine speed sensor malfunction • TFT sensor malfunction • Shift solenoid C malfunction • Shift solenoid D malfunction • Shift solenoid E malfunction • Line pressure control solenoid malfunction • TCC control solenoid malfunction • Shift solenoid F malfunction • Body GND and sensor GND malfunction • Control valve body malfunction — Poor hydraulic operation (Malfunction in range change)

NO.19 EXCESSIVE SHIFT SHOCK ON TORQUE CONVERTER CLUTCH (TCC) [AW6A-EL]

E6U050300000W24

19	Excessive shift shock on torque converter clutch (TCC)
DESCRIPTION	• Strong shock is felt when the TCC is engaged.
POSSIBLE CAUSE	• The troubleshooting flow is the same as No.16 "JUDDER UPON TORQUE CONVERTER CLUTCH (TCC) OPERATION".

NO.20 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES [AW6A-EL]

E6U050300000W25

20	Noise occurs at idle when vehicle is stopped in all positions/ranges
DESCRIPTION	• Transaxle is noisy in all positions and ranges when the vehicle is idling.
POSSIBLE CAUSE	• The malfunction is in the pressure solenoid or oil pump which causes a high-pitched noise to be emitted from the transaxle at idle. **Note** • If a noise is emitted during shifting only, the malfunction is in the C1 clutch, C2 clutch, C3 clutch or B1 brake. • If a noise is emitted during shifting at certain gears only or during deceleration only, it is gear noise. • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect engine condition. • Is there any engine concern (e.g. Rough idle)?	Yes	Go to appropriate symptom troubleshooting. (See 01–03C–8 SYMPTOM DIAGNOSTIC INDEX [AJ].)
		No	Replace basic inspection and repair or replace any malfunctioning parts according to the inspection result
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.21 NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN D RANGE, OR IN R POSITION [AW6A-EL]

E6U050300000W26

21	Noise occurs at idle when vehicle is stopped in D range, or in R position
DESCRIPTION	• Transaxle is noisy in driving ranges when vehicle idling.
POSSIBLE CAUSE	• Although the malfunction is basically the same as No.20 "NOISE OCCURS AT IDLE WHEN VEHICLE IS STOPPED IN ALL POSITIONS/RANGES", other causes may include selector lever position disparity or TR switch position disparity.

NO.22 NO ENGINE BRAKING IN 1GR POSITION OF M RANGE [AW6A-EL]

E6U050300000W27

22	No engine braking in 1GR position of M range
DESCRIPTION	• Engine speed drops to idle but the vehicle coasts when the accelerator pedal is released during cruising at medium to high speeds. • Engine speed drops to idle but the vehicle coasts when accelerator pedal is released when in M range (1GR) at low vehicle speed.
POSSIBLE CAUSE	• Clutch slippage, burnt (B2 brake) — Line pressure low • VSS malfunction • Input/turbine speed sensor malfunction • Shift solenoid A or B malfunction • Sensor GND malfunction • Control valve body malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

05–03E

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Do the following symptoms occur concurrently? — Engine flares up or slips during acceleration — Engine flares up or slips when shifting	Yes	Go to No.14 "ENGINE FLARES UP OR SLIPS WHEN UPSHIFTING OR DOWNSHIFTING", or No.15 "ENGINE FLARES UP OR SLIPS WHEN ACCELERATING VEHICLE".
		No	Go to the next step.
2	• Stop the engine. • Inspect following solenoids. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) — Shift solenoid A — Shift solenoid B • Are the normal?	Yes	Inspect the ATF condition. • If a large amount of metal specks are found, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].) • If a large amount of metal specks are not found, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.23 TRANSAXLE OVERHEATS [AW6A-EL]

E6U050300000W28

23	TRANSAXLE OVERHEATS
DESCRIPTION	• Burnt smell emitted from transaxle. • Smoke emitted from transaxle.
POSSIBLE CAUSE	• The malfunction is restricted to the hindrance of coolant at the oil cooler. In addition, overheating of the transaxle may be caused by a malfunction of the TFT sensor. — Line pressure low • ATF level low • Incorrect throttle position signal — Oil cooler malfunction (Foreign material mixed in with ATF) — TFT sensor malfunction — Excessive amount of ATF **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is the line pressure normal? (See 05–17B–4 Line Pressure Test.)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Is stall speed normal? (See 05–17B–6 Stall Test.)	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
3	• Inspect the TFT sensor and related wiring harness: vibration, intermittent open/short circuit (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Repair or replace part if necessary.
4	• Inspect the line pressure control solenoid. (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].) • Is it normal?	Yes	Go to the next step.
		No	Replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/ INSTALLATION [AW6A-EL].)
5	• Inspect for bending, damage, corrosion or kinks of the oil cooler pipes. • Are oil cooler pipes normal?	Yes	Replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
		No	Replace any malfunctioning parts.
6	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.24 ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION [AW6A-EL]

E6U050300000W29

24	Engine stalls when shifted to D range, or in R position
DESCRIPTION	• Engine stalls when shifting from N or P position to D range or R position at idle.
POSSIBLE CAUSE	• The malfunction is on the engine control side (e.g. electronic controlled throttle system). Otherwise, the malfunction is in the input/turbine speed sensor (engine sometimes starts) or the TCC circuit (engine always stalls). **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Go to symptom troubleshooting No.5 "ENGINE STALLS-AFTER START/AT IDLE". (See 01–03C–20 NO.5 ENGINE STALLS-AFTER START/AT IDLE [AJ].) • Is the engine control system normal?	Yes	Go to the next step.
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].) • Inspect the torque converter. • Is the torque converter normal?	Yes	Inspect for bending, damage, corrosion or kinks of the oil cooler pipes. • If normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].) • If problem remains, replace the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
		No	Replace the torque converter.
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.25 ENGINE STALLS WHEN DRIVING AT SLOW SPEED OR STOPPING [AW6A-EL]

E6U050300000W30

25	Engine stalls when driving at slow speeds or stopping
DESCRIPTION	• Engine stalls when the brake pedal is depressed while driving at low speed or stopping.
POSSIBLE CAUSE	• The malfunction is in the engine control system (e.g. Fuel injection control, electronic controlled throttle system) **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Go to symptom troubleshooting No.10 "LOW IDLE/STALLS DURING DECELERATION". (See 01–03C–33 NO.10 LOW IDLE/STALLS DURING DECELERATION [AJ].) • Is the engine control system normal?	Yes	Go to No.24 "ENGINE STALLS WHEN SHIFTED TO D RANGE, OR IN R POSITION".
		No	Repair or replace any malfunctioning parts according to the inspection results.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.26 STARTER DOES NOT WORK [AW6A-EL]

E6U050300000W31

26	Starter does not work
DESCRIPTION	• Starter does not work even when in P or N position.
POSSIBLE CAUSE	• Selector lever mis-adjustment • TR switch malfunction • N position learning is not performed. • Transaxle operates in fail-safe function (Starter lock system related circuit open or short) • Immobilizer system operating or system malfunction.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Perform the N position learning. (See 05–17B–28 Neutral Position Learning.) • Does the problem eliminate?	Yes	Troubleshooting is completed. If the other symptom occurs, go to applicable troubleshooting procedure.
		No	Go to the next step.
2	• Inspect the TR switch. (See 05–17B–13 TRANSAXLE RANGE (TR) SWITCH INSPECTION [AW6A-EL].) • Is the TR switch normal?	Yes	Go to engine system troubleshooting No.3 "WILL NOT CRANK" troubleshooting procedure.
		No	Replace the TR switch and perform initial learning procedure. (See 05–03B–23 Initial Learning.)
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.27 GEAR POSITION INDICATOR LIGHT DOES NOT ILLUMINATE IN M RANGE [AW6A-EL]

E6U050300000W32

27	Gear position indicator light does not illuminate in M range
DESCRIPTION	• Gear position indicator light in instrument cluster does not illuminate in M range with the ignition switc at ON.
POSSIBLE CAUSE	• M range switch, gear position indicator light or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Do other indicator lights illuminate with the ignition switch at ON?	Yes	Go to the next step.
		No	Inspect the meter fuse.
2	• Inspect the voltage at the TCM terminal A7. (See 05–17B–21 TCM INSPECTION [AW6A-EL].) • Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the M range switch. If the M range switch is normal, inspect for continuity between the M range switch and TCM terminal A7.
3	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.28 GEAR POSITION INDICATOR LIGHT ILLUMINATES IN D RANGE OR P, N, R POSITIONS [AW6A-EL]

E6U050300000W33

28	Gear position indicator light illuminates when in D range or P, N, R positions
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates in D range or P, N, R position with the ignition switch at ON.
POSSIBLE CAUSE	• M range switch or related wiring harness malfunction **Note** • Before following the troubleshooting steps, make sure that the Automatic Transaxle On-Board Diagnostic and Automatic Transaxle Basic Inspection are conducted. (See 05–03B–4 BASIC INSPECTION [AW6A-EL].)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the voltage at the TCM terminal A7. (See 05–17B–21 TCM INSPECTION [AW6A-EL].) • Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the M range switch. If the M range switch is normal, inspect for continuity between the M range switch and TCM terminal A7.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.29 DOES NOT UPSHIFT IN M RANGE [AW6A-EL]

E6U050300000W34

29	Does not upshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not upshift when the selector lever is pushed to "+" side.
POSSIBLE CAUSE	• Up switch or related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the voltage at the TCM terminal A3. (See 05–17B–21 TCM INSPECTION [AW6A-EL].) Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the up switch. • If the up switch is normal, inspect for continuity between the up switch and TCM terminal A3.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.		

NO.30 DOES NOT DOWNSHIFT IN M RANGE [AW6A-EL]

E6U050300000W35

30	Does not downshift in M range
DESCRIPTION	• Gear position indicator light in instrument cluster illuminates, but the vehicle does not downshift when the selector lever is pushed to "–" side.
POSSIBLE CAUSE	• Down switch or related wiring harness malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	Inspect the voltage at the TCM terminal A4. (See 05–17B–21 TCM INSPECTION [AW6A-EL].) Is the voltage normal?	Yes	Inspect the instrument cluster.
		No	Inspect the down switch. • If the down switch is normal, inspect for continuity between the down switch and TCM terminal A4.
2	• Verify test results. — If normal, return to the diagnostic index to service any additional symptoms. — If malfunction remains, inspect the related Service Bulletins and/or On-line Repair Information and perform repair or diagnosis. • If the vehicle is repaired, troubleshooting completed. • If the vehicle is not repaired or additional diagnostic information is not available, replace the TCM.

GENERAL PROCEDURE

E6U051016003W02

Clutch Pipe Removal/Installation

Note
- A common reservoir is used for the clutch and brake system fluid.

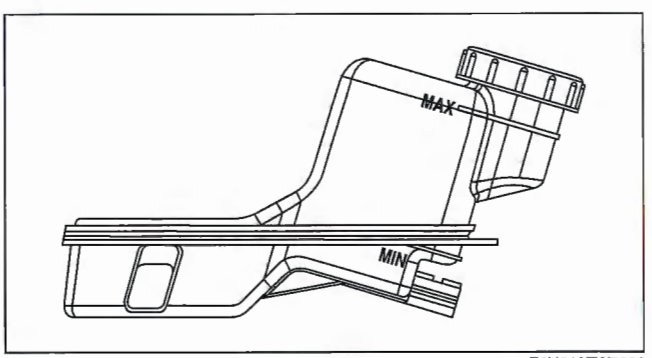
1. If clutch pipes have been disconnected any time during the procedure, add clutch fluid (brake fluid), bleed the air, and inspect for leakage after the procedure has been completed.
2. Remove the clutch pipe using the **SST** (49 0259 770B). Install the clutch pipe using torque wrench **SST** combination. (See 00–00–17 Torque Formulas.)

CLUTCH FLUID INSPECTION

E6U051016010W01

Note
- A common reservoir is used for the clutch and brake system fluid.

1. Verify that the fluid is between the MIN mark and the MAX mark.
   - If necessary, add the fluid.



E6U510ZW5002

CLUTCH FLUID AIR BLEEDING/REPLACEMENT

E6U051016010W05

Caution
- **Fluid will damage painted surfaces. Be careful not to spill any on painted surfaces. If fluid does get on painted surfaces, wipe it off immediately.**
- **Keep the fluid level in the reserve tank at 3/4 full or more during air bleeding.**

Note
- When replacing the fluid, drain the old fluid, fill the reserve tank with new fluid and then perform Steps 1—7 below.

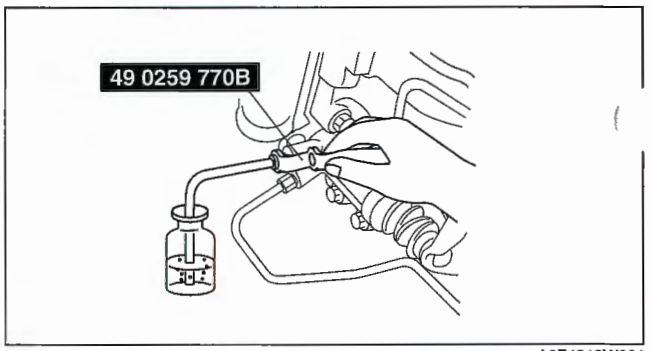
Specified fluid
SAE J1703, FMVSS 116 DOT-3

1. Remove the under cover.
2. Remove the bleeder cap from the clutch release cylinder, and connect a vinyl hose to the bleeder plug.
3. Place the other end of the vinyl tube in a clear container, and fill fluid in the container during air bleeding.
4. Working with two people, one should depress the clutch pedal a few times and then depress and hold the pedal down.
5. While the clutch pedal is being held down, the other person should loosen the bleeder screw using the **SST**, and bleed any fluid containing air bubbles. Once completed, tighten the bleeder screw.
6. Continue to perform Steps 4 and 5 until no air comes from the vinyl hose.

7. Tighten the bleeder screw using the **SST**.

   Tightening torque
   5.9—8.8 N·m {61—89 kgf·cm, 53—77 in·lbf}

8. Fill the reserve tank to MAX with the recommended fluid.
9. Perform the following inspections:
   - Clutch operation
   - Fluid leakage
   - Fluid level



A6E4912W001

CLUTCH PEDAL INSPECTION

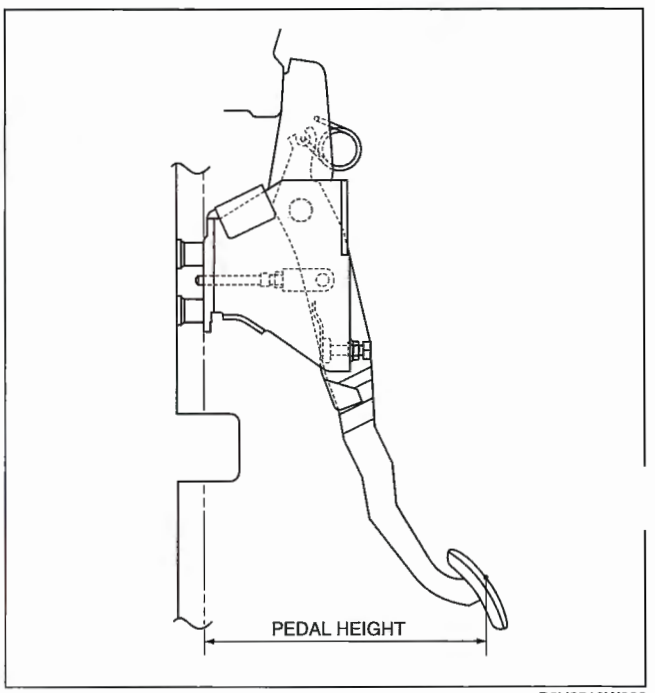
E6U051041030W01

Clutch Pedal Height Inspection

1. Measure the distance from the upper surface of the pedal pad.

   Clutch pedal height (Reference Value)
   210—216 mm {8.27—8.50 in}

2. Adjust the height if necessary. (See 05–10–5 Clutch Pedal Height.)



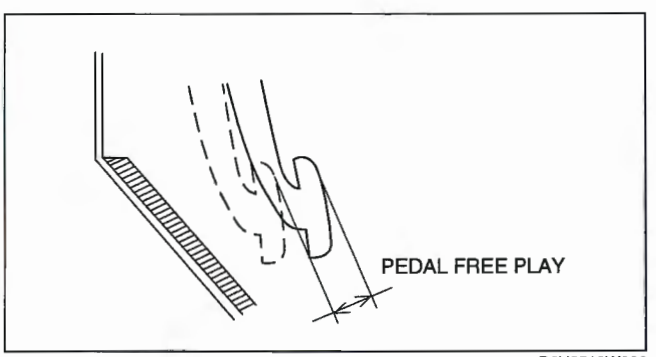
B6U0510W002

Clutch Pedal Free Play Inspection

1. Depress the clutch pedal by hand until clutch resistance is felt.

   Clutch pedal free play
   1.0—3.0 mm {0.04—0.11 in}

2. Adjust the free play if necessary. (See 05–10–5 Clutch Pedal Free Play.)



B6U0510W003

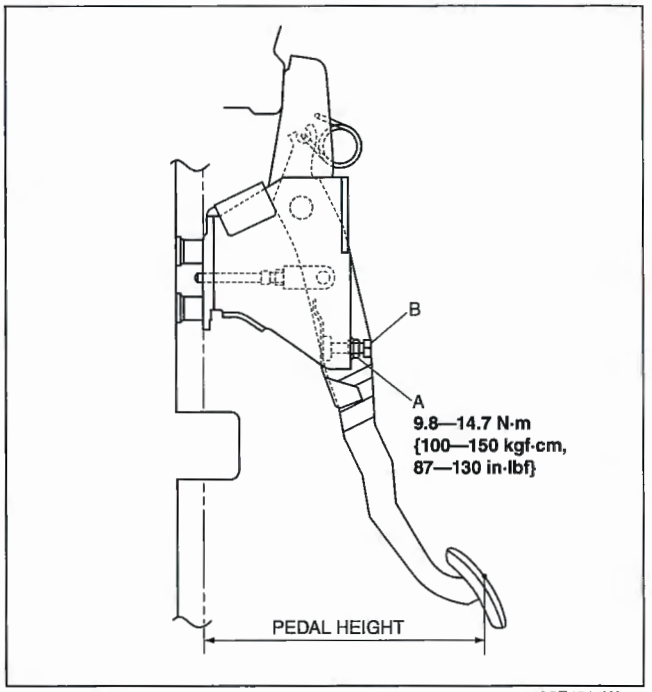
CLUTCH PEDAL ADJUSTMENT

E6U051041030W02

Clutch Pedal Height

1. Measure the distance from the upper surface of the pedal pad.
   - If not as specified, adjust the pedal height by turning adjustment bolt B and locknut A.

Clutch pedal height (Reference Value)
210—216 mm {8.27—8.50 in}



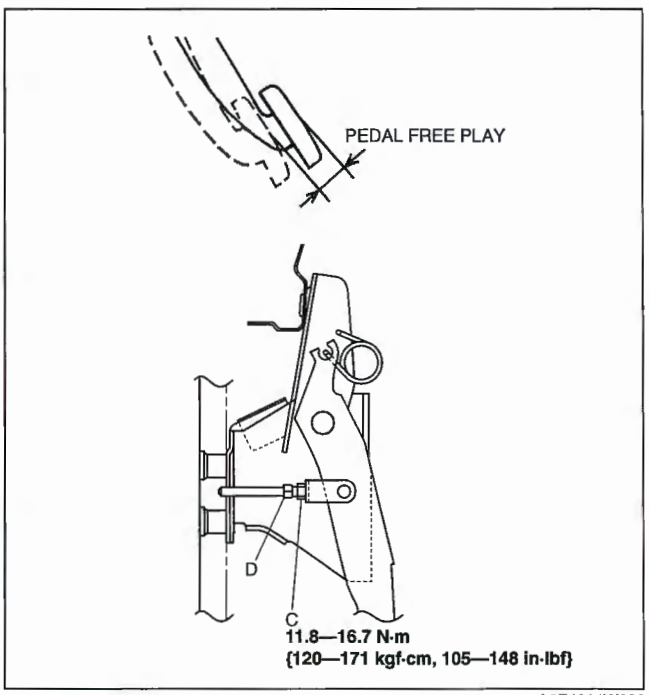
A6E4914W001

Clutch Pedal Free Play

1. Depress the clutch pedal by hand until clutch resistance is felt, and measure the pedal free play.
   - If not as specified, adjust the pedal free play by loosening locknut C and turning push rod D as necessary.

Clutch pedal free play
1.0—3.0 mm {0.04—0.11 in}

Clutch pedal push rod free play
0.1—0.5 mm {0.004—0.020 in} (Reference value)



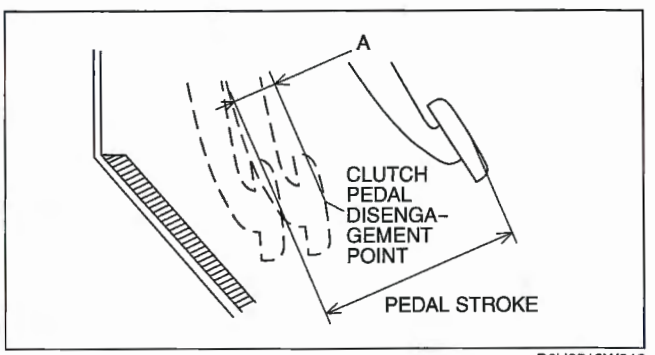
A6E4914W002

Clutch Pedal Disengagement Point

1. Apply the parking brake and fix the front and rear of the wheels with the wheel chocks.
2. Start the engine at idle.
3. Without depressing the clutch pedal, move the shift lever slowly to the reverse position.
4. Hold the lever when the gear noise is heard.
5. Depress the clutch pedal slowly.
6. Hold the pedal when the gear noise stops (clutch pedal disengagement point).
7. Measure distance A (the distance from the clutch pedal disengagement point to the fully depressed position) and the pedal stroke.
8. Verify that they are within specification.
   - If distance A or the pedal stroke is out of specification, adjust the pedal height or the clutch pedal free play to specification.

Clutch pedal disengagement stroke
Minimum: 20 mm {0.79 in} (Reference value)

Clutch pedal stroke
140 mm {5.51 in} (Reference value)

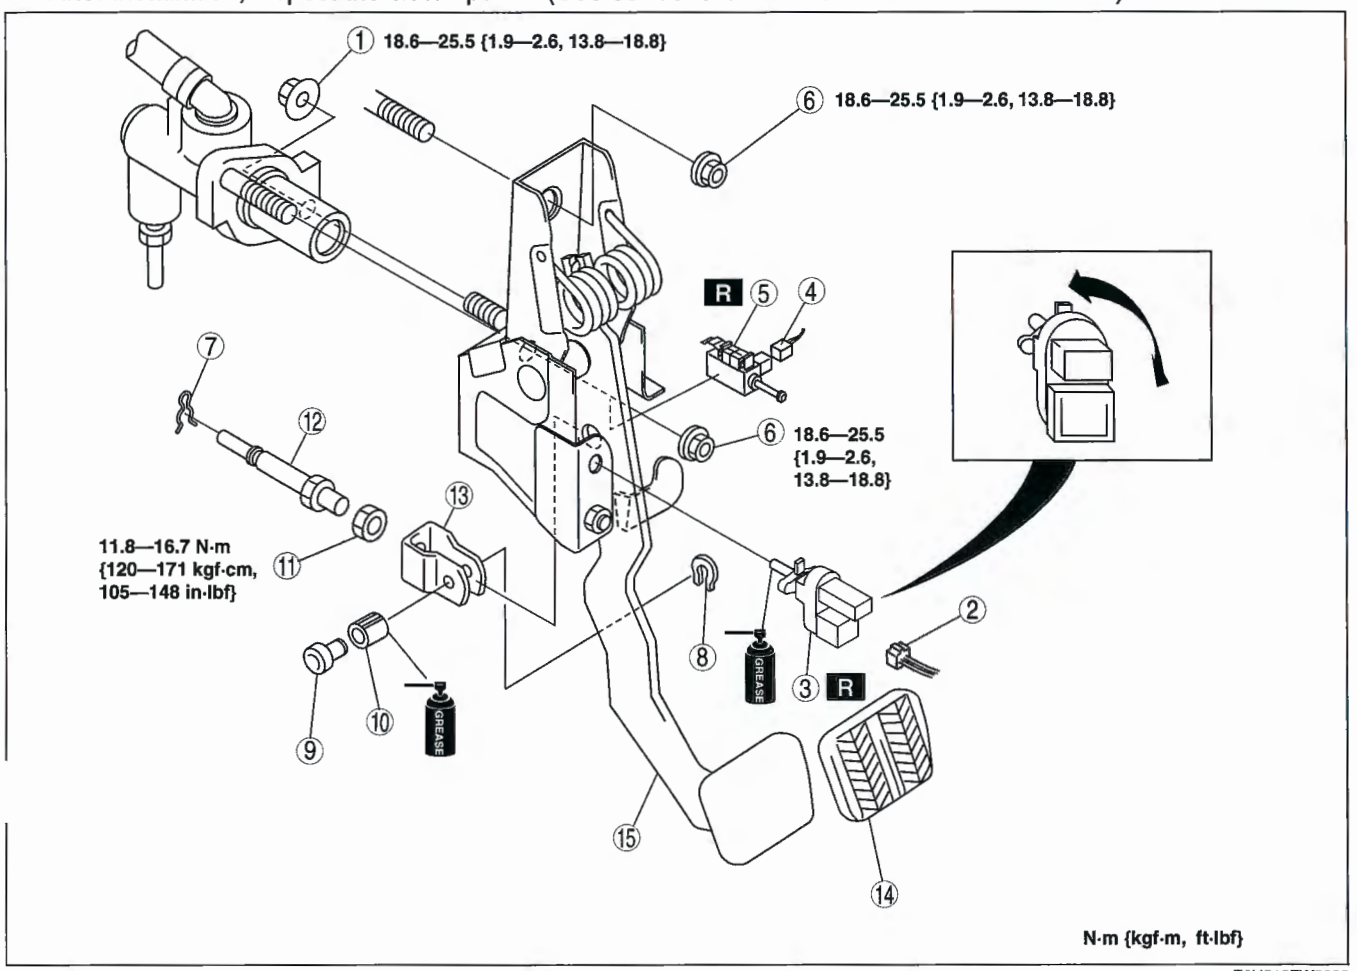


B6U0510W012

CLUTCH PEDAL REMOVAL/INSTALLATION [G35M-R, A65M-R]

E6U051041030W03

1. Remove the battery and battery tray.
2. Remove in the order indicated in the table.
   Install in the reverse order of removal.
3. After installation, inspect the clutch pedal. (See 05–10–5 CLUTCH PEDAL ADJUSTMENT.)



E6U510ZW5003

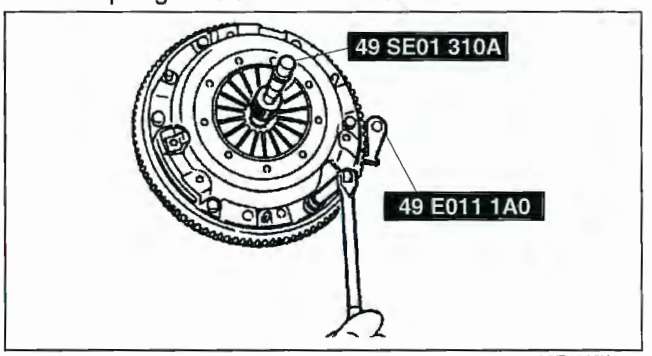
Clutch Cover and Disc Removal Note
G35M-R manual transaxle models

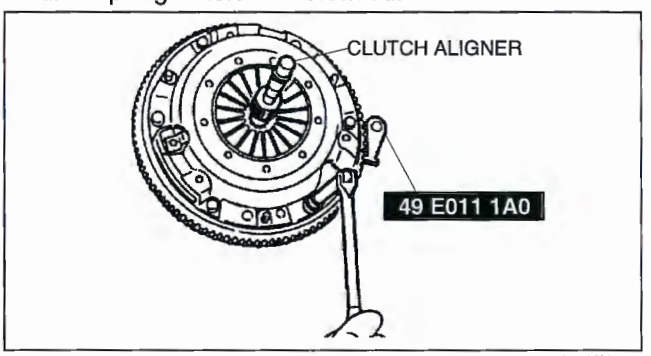
1. Install the **SSTs.**
   Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
2. Remove the clutch cover and disc.



A6E4920W002

A65M-R manual transaxle models

1. Install the clutch aligner and the **SST.**
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

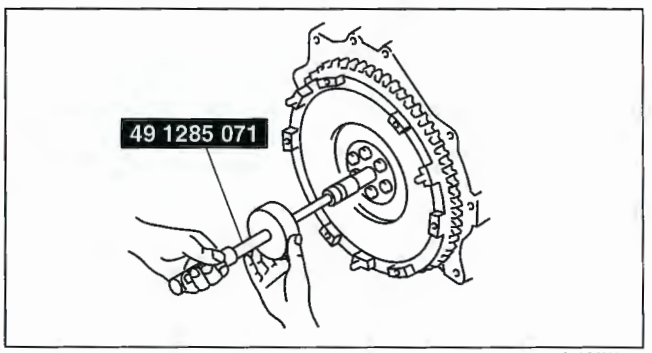


B6U0510W014

Pilot Bearing Removal Note

Note
- The pilot bearing does not need to be removed unless you are replacing it.

1. Use the **SST** to remove the pilot bearing.

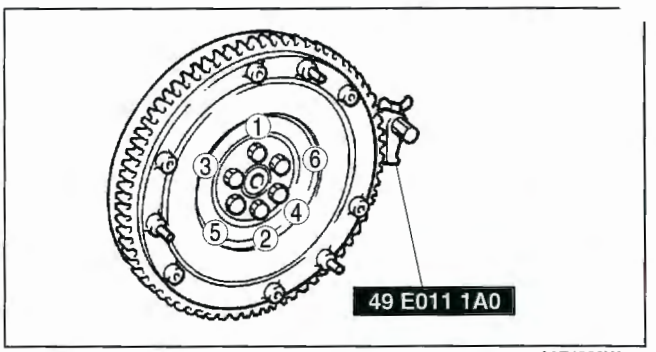


ADJ4920W005

Flywheel Removal Note

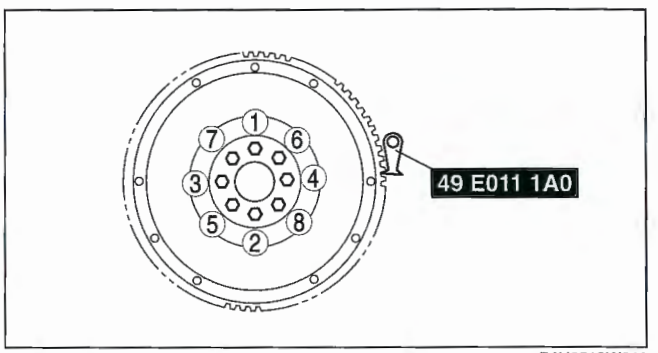
1. Hold the flywheel using the **SST**.
2. Remove the bolts evenly and gradually in a crisscross pattern.
3. Remove the flywheel.

G35M-R manual transaxle models



A6E4920W003

A65M-R manual transaxle models

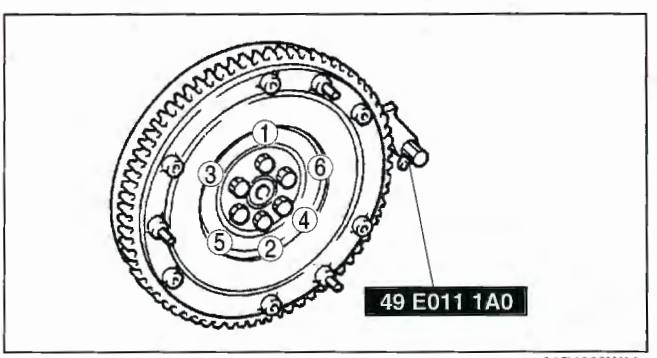


B6U0510W010

Flywheel Installation Note

1. Clean the crankshaft thread holes.
2. Install the flywheel to the crankshaft.
3. Hand-tighten the new flywheel lock bolts.
4. Install the **SST** to the flywheel.

G35M-R manual transaxle models



A6E4920W004

A65M-R manual transaxle models

5. Gradually tighten the flywheel lock bolts in a crisscross pattern.

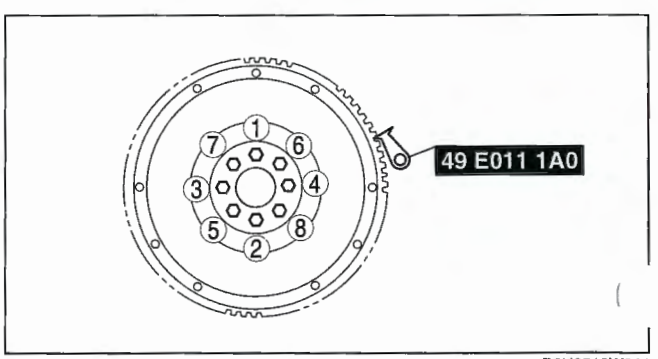
Tightening torque

G35M-R manual transaxle models

108—115 N·m {11.1—11.7 kgf·m, 79.7—84.8 ft·lbf}

A65M-R manual transaxle models

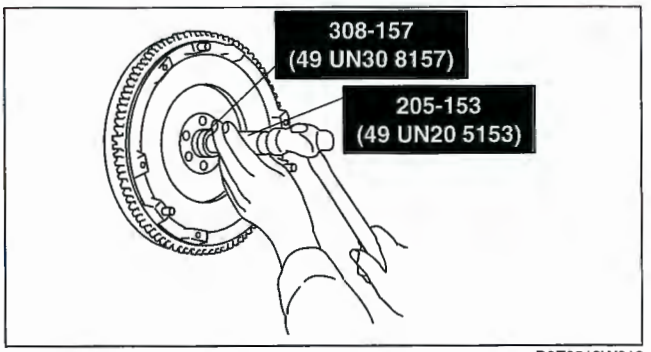
73—87 N·m {7.5—8.8 kgf·m, 54—64 ft·lbf}



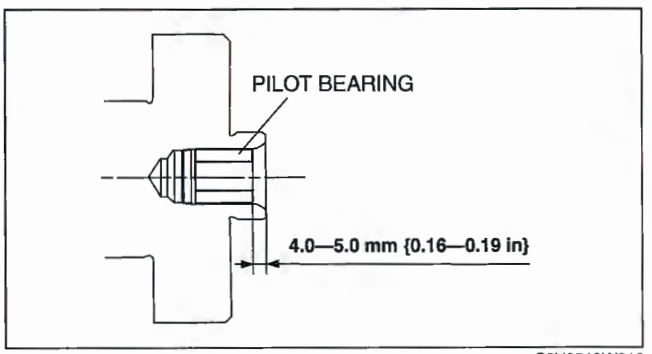
B6U0510W011

Pilot Bearing Installation Note

1. Use the **SSTs** to install the pilot bearing.



B3E0510W012

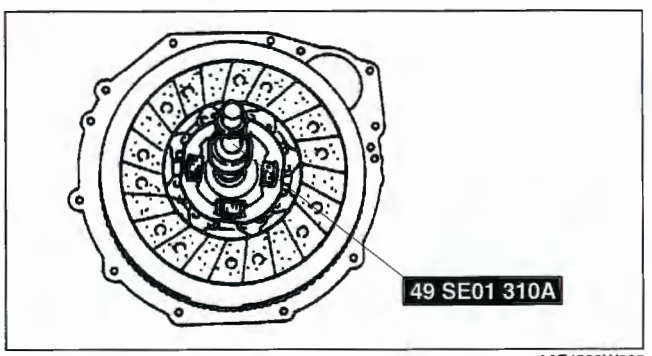


C3U0510W013

Clutch Disc Installation Note

G35M-R manual transaxle models

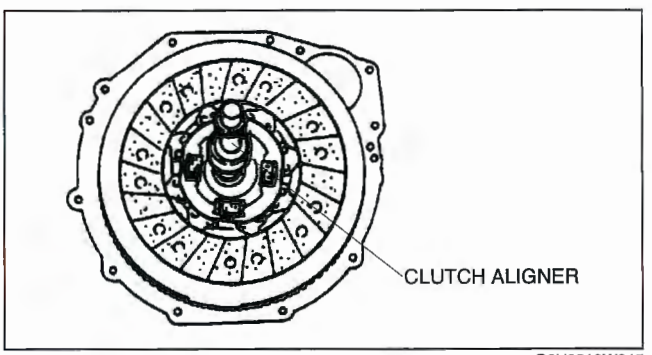
1. Hold the clutch disc position using the **SST**.



A6E4920W005

A65M-R manual transaxle models

1. Hold the clutch disc position using the clutch aligner.

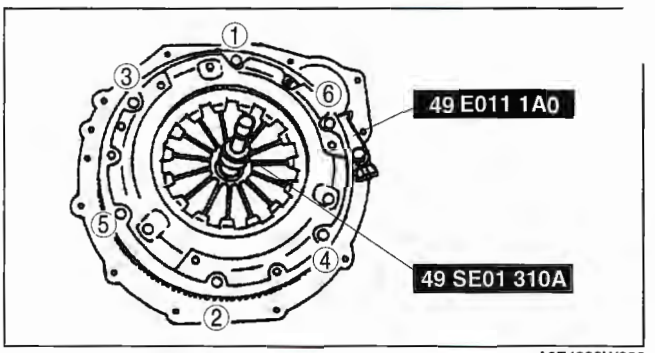


B6U0510W015

Clutch Cover Installation Note
G35M-R manual transaxle models

1. Install the **SSTs**.
2. Tighten the bolts evenly and gradually in a crisscross pattern.

Tightening torque
25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}

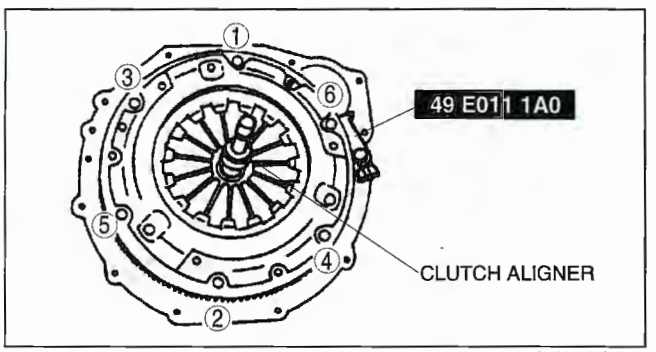


A6E4920W006

A65M-R manual transaxle models

1. Install the clutch aligner and the **SST**.
2. Tighten the bolts evenly and gradually in a crisscross pattern.

Tightening torque
25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}

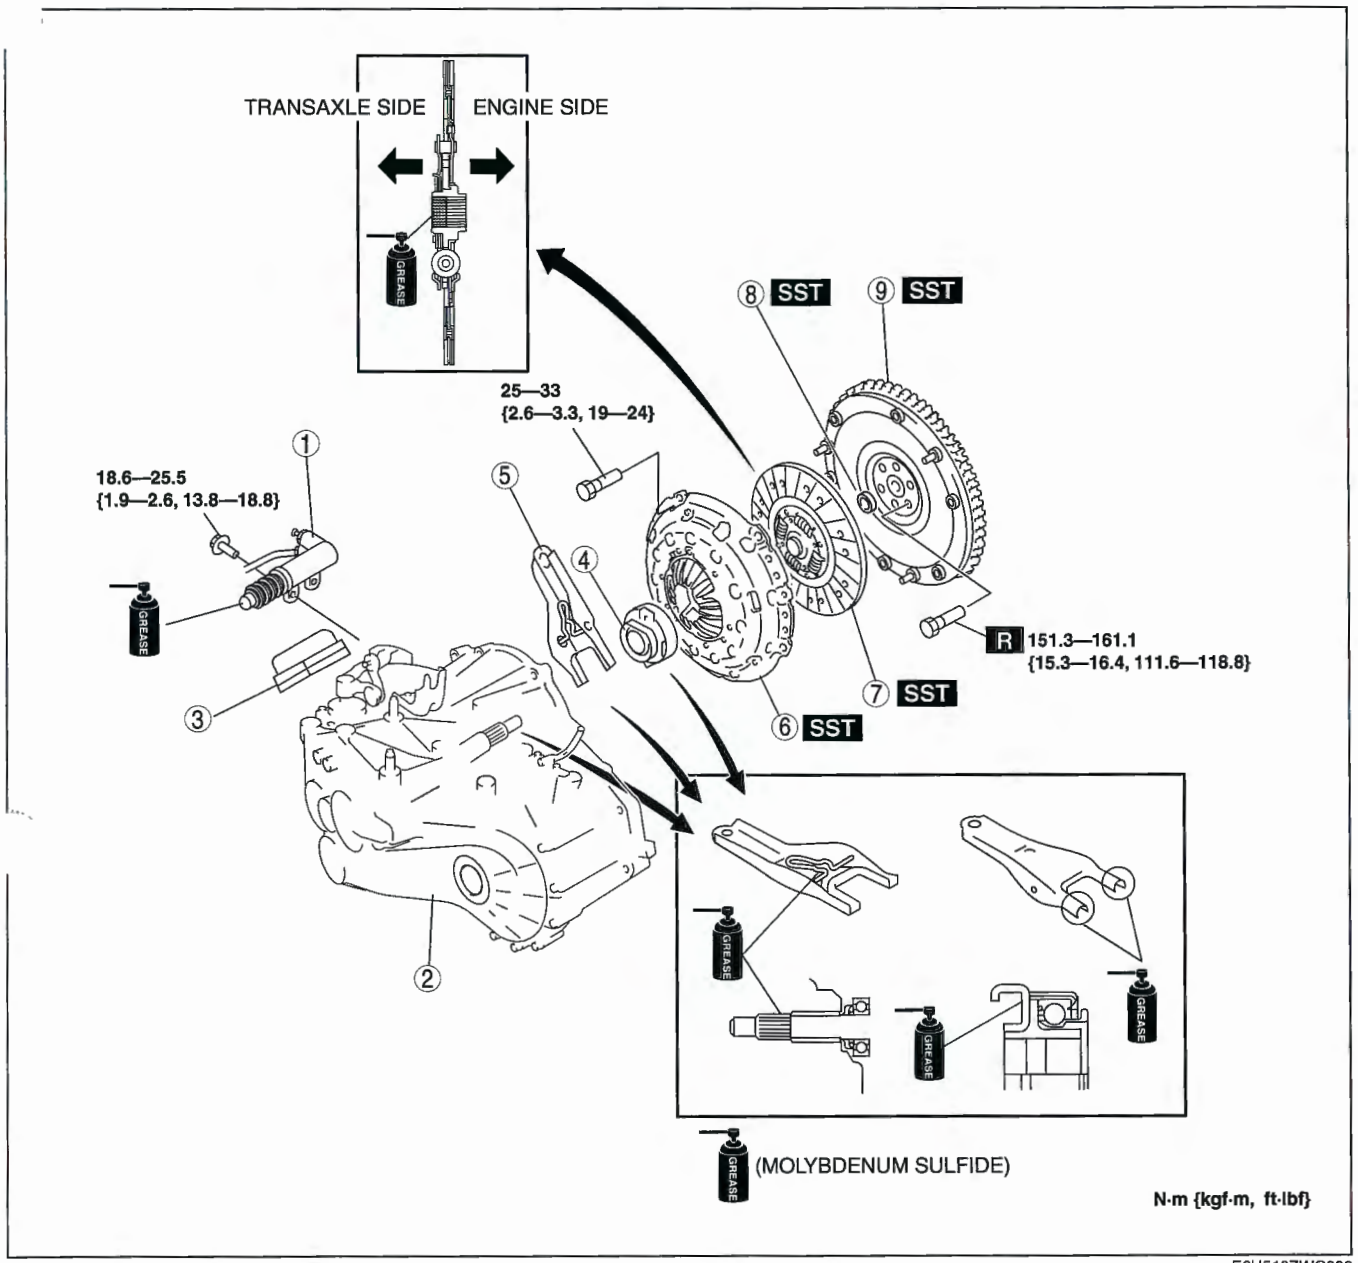


B6U0510W01

CLUTCH UNIT REMOVAL/INSTALLATION [A26MX-R]

E6U051016000W03

1. Remove in the order indicated in the table.
2. Install in the reverse order removal.



E6U510ZWC002

1	Clutch release cylinder
2	Manual transaxle (See 05–15C–4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26MX-R])
3	Boot
4	Clutch release collar
5	Clutch release fork

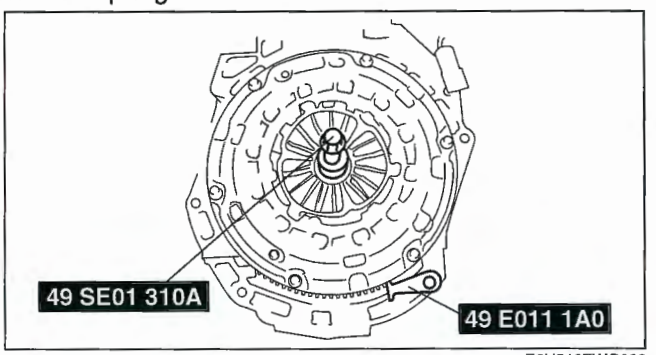
8	Pilot bearing (See 05–10–26 Pilot Bearing Removal Note.) (See 05–10–27 Pilot Bearing Installation Note.)
9	Flywheel (See 05–10–27 Flywheel Removal Note) (See 05–10–28 Flywheel Installation Note)

Clutch Cover and Disc Removal Note

Caution
- **When replacing components, always replace as a complete set.**
- **Due to the automatic adjustment function of clutch cover, if the old cover assembly is reused, it must be reinstalled together with its original clutch disc.**

1. Install the **SSTs**.
2. Loosen each bolt one turn at a time in a crisscross pattern until spring tension is released.
3. Remove the clutch cover and disc.

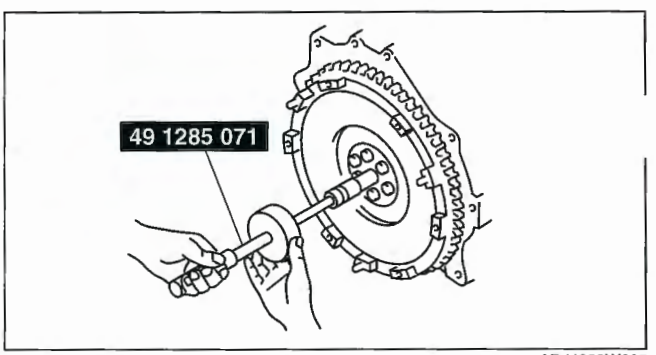


E6U510ZWC003

Pilot Bearing Removal Note

Note
- The pilot bearing does not need to be removed unless you are replacing it.

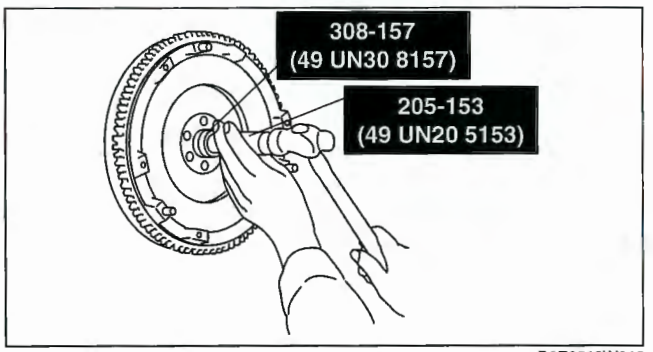
1. Use the **SST** to remove the pilot bearing.



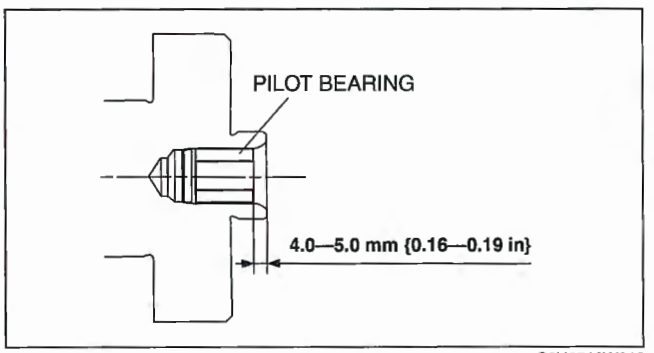
ADJ4920W005

Pilot Bearing Installation Note

1. Use the **SSTs** to install the pilot bearing.



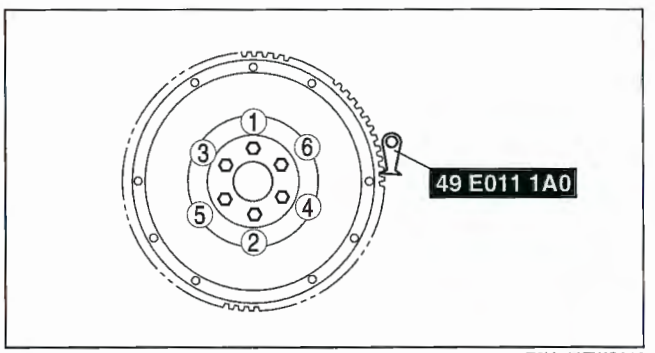
B3E0510W012



C3U0510W013

Flywheel Removal Note

1. Hold the flywheel using the **SST**.
2. Remove the bolts evenly and gradually in a crisscross pattern.
3. Remove the flywheel.



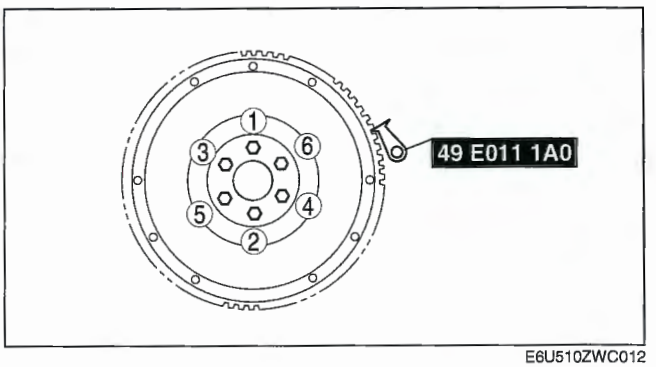
E6U510ZWC013

Flywheel Installation Note

Caution
- **Clean the crankshaft threads before tightening the bolts. The threads may be damaged if the bolt are tightened with any old sealant remaining.**

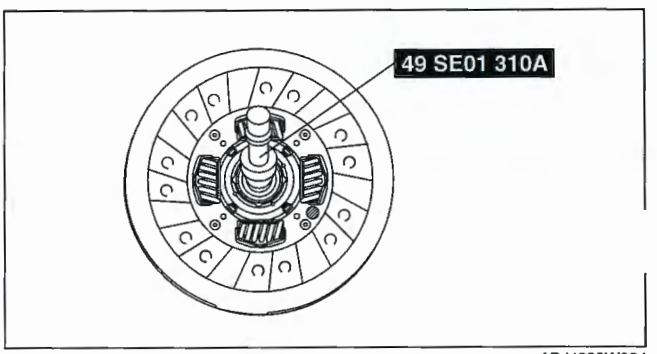
1. Clean the crankshaft thread holes.
2. Install the flywheel to the crankshaft.
3. Hand-tighten the new flywheel lock bolts.
4. Install the **SST** to the flywheel.
5. Gradually tighten the flywheel lock bolts in a crisscross pattern.

Tightening torque
151.3—161.1 N·m {15.3—16.4 kgf·m, 111.6—118.8 ft·lbf}



E6U510ZWC012

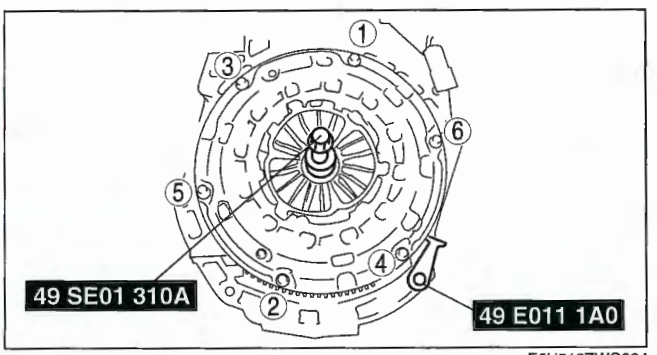
Clutch Disc Installation Note
1. Hold the clutch disc position using the **SST**.



ADJ4920W004

Clutch Cover Installation Note
1. Install the **SSTs**.
2. Tighten the bolts evenly and gradually in a crisscross pattern.

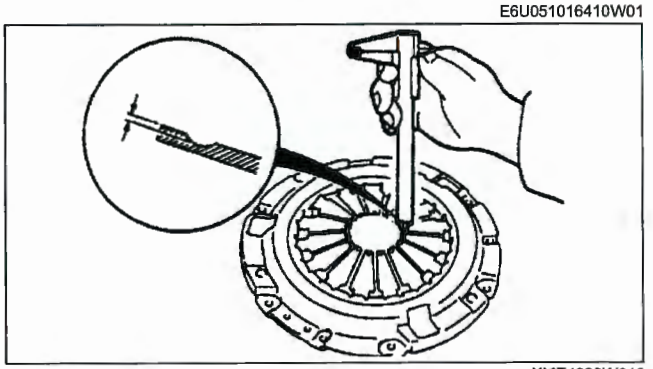
Tightening torque
25—33 N·m {2.6—3.3 kgf·m, 19—24 ft·lbf}



E6U510ZWC004

CLUTCH COVER INSPECTION [G35M-R, A65M-R]

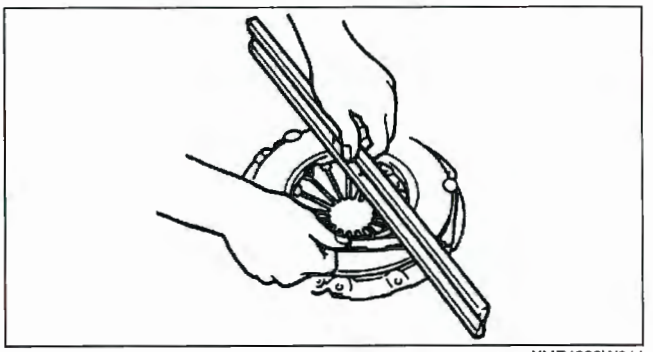
E6U051016410W01



XME4920W010

1. Measure the wear of the diaphragm spring fingers.
   - If not as specified, replace the clutch cover.

   Clutch cover diaphragm spring fingers maximum depth [G35M-R, A65M-R]
   0.6 mm {0.024 in} max.

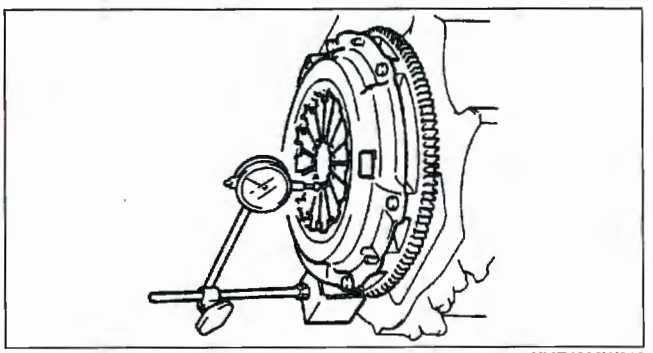


XME4920W011

2. Measure the flatness of the pressure plate with a straight edge and a feeler gauge.
   - If not as specified, replace the clutch cover.

   Maximum clearance of flatness of the pressure plate [G35M-R, A65M-R]
   0.3 mm {0.012 in} max.

3. When checking the diaphragm spring fingers, mount a dial indicator on the cylinder block.



XME4920W012

4. Rotate the flywheel and check for misaligned diaphragm spring fingers.
   - If not as specified, replace the clutch cover.

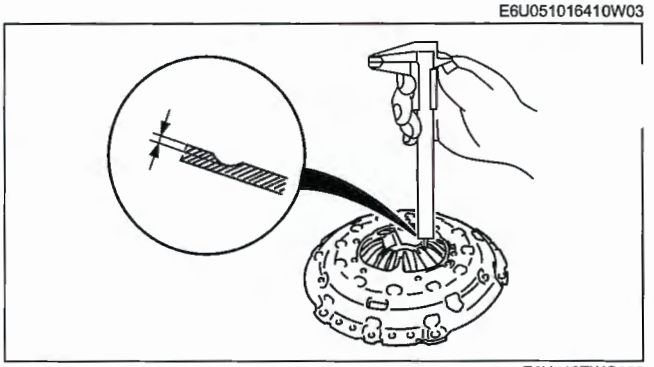
   Clutch cover diaphragm spring fingers maximum misalignment [G35M-R, A65M-R]
   0.6 mm {0.024 in} max.

CLUTCH COVER INSPECTION [A26MX-R]

1. Measure the wear of the diaphragm spring fingers.
   - If it exceeds the maximum specification, replace the clutch cover.

   Clutch cover diaphragm spring fingers maximum depth [A26MX-R]
   0.6 mm {0.024 in}

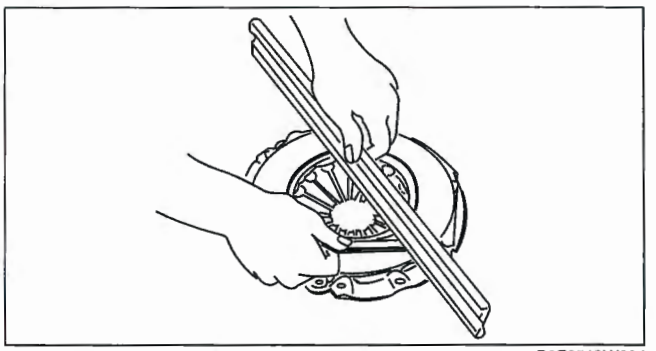
E6U051016410W03



E6U510ZWC008

2. Measure the flatness of the pressure plate with a straight edge and a feeler gauge.
   - If it exceeds the maximum specification, replace the clutch cover.

   Maximum clearance of flatness of the pressure plate [A26MX-R]
   0.3 mm {0.012 in}

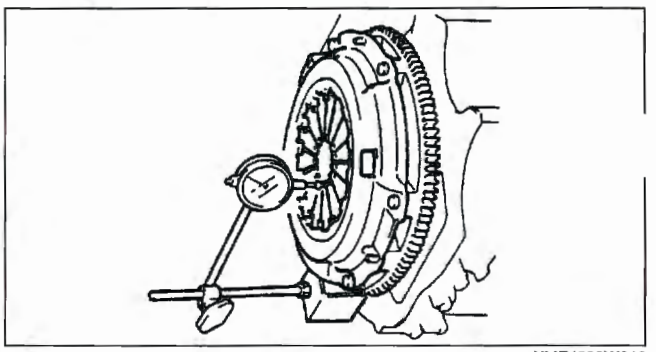


B3E0510W024

3. When checking the diaphragm spring fingers, mount a dial indicator on the cylinder block.

4. Rotate the flywheel and check for misaligned diaphragm spring fingers.
   - If it exceeds the maximum specification, replace the clutch cover.

   Clutch cover diaphragm spring fingers maximum misalignment [A26MX-R]
   1.0 mm {0.039 in}



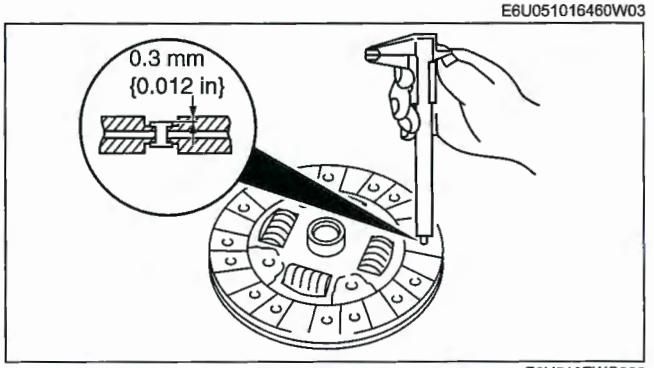
XME4920W012

CLUTCH DISC INSPECTION

E6U051016460W03

1. Using vernier calipers, measure the thickness of the lining at a rivet head on both sides.
   - If it less than the minimum specification, replace the clutch disc.

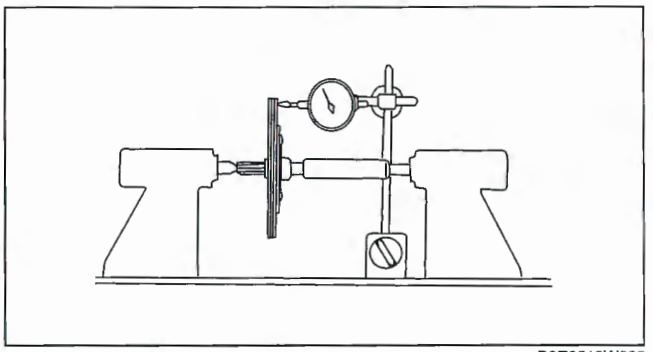
   Minimum clutch disc thickness
   0.3 mm {0.012 in}



E6U510ZWC009

2. Measure the clutch disc runout using a dial indicator.
   - If it exceeds the maximum specification, replace the clutch disc.

   Maximum clutch disc runout
   0.7 mm {0.028 in}



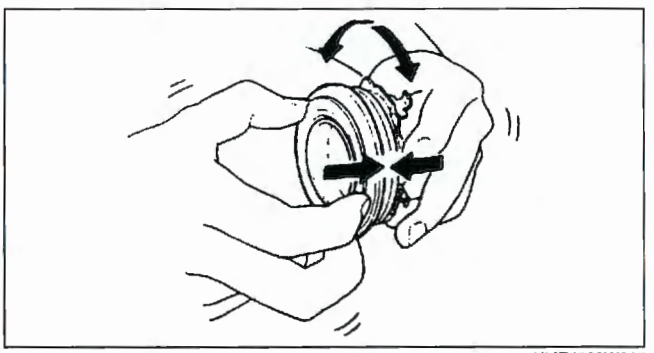
B3E0510W025

CLUTCH RELEASE COLLAR INSPECTION

E6U051016510W01

Caution
- **Cleaning the clutch release collar with cleaning fluids or a steam cleaner can wash the grease out of the sealed bearing.**

1. Turn the collar while applying force in the axial direction.
   - If the collar sticks or has excessive resistance, replace the clutch release collar.

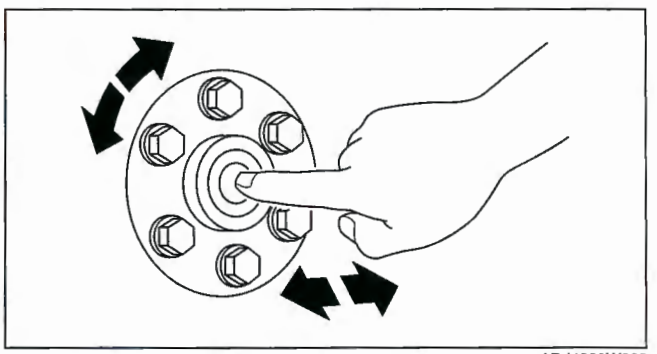


XME4920W015

PILOT BEARING INSPECTION

E6U051011501W01

1. Without removing the pilot bearing, turn the bearing while applying force in the axial direction.
   - If there is any malfunction, replace the pilot bearing.



ADJ4920W002

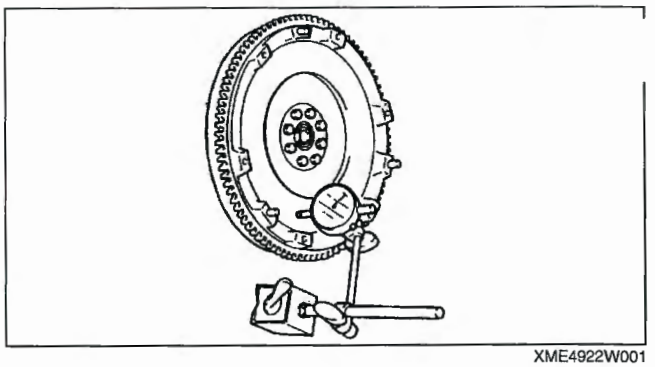
FLYWHEEL INSPECTION [G35M-R, A65M-R]

E6U051011500W01

1. Install a dial gauge on the cylinder block.
2. Measure the flywheel runout using a dial gauge.
   - If the runout is excessive, replace the flywheel.

Flywheel runout limit [G35M-R]
0.1 mm {0.004 in}

Flywheel runout limit [A65M-R]
0.05 mm {0.002 in}



XME4922W001

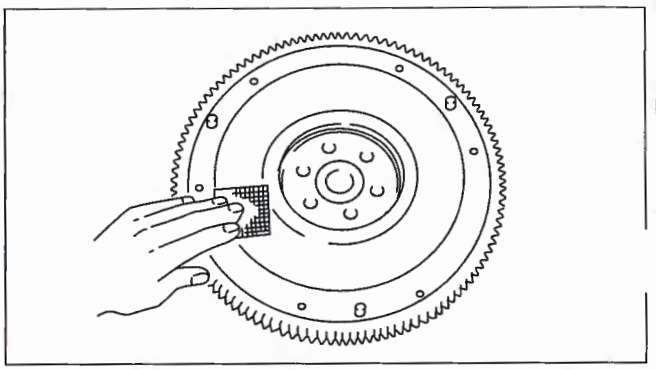
FLYWHEEL INSPECTION [A26MX-R]

E6U051011500W03

Caution
- **Do not rework the flywheel if it is distorted.**
- **Do not clean the dual mass flywheel with any kind of fluid. Clean the flywheel with a dry cloth only.**
- **Do not clean the gap between the primary and secondary mass. Only clean the bolt connection surface and the clutch surface.**

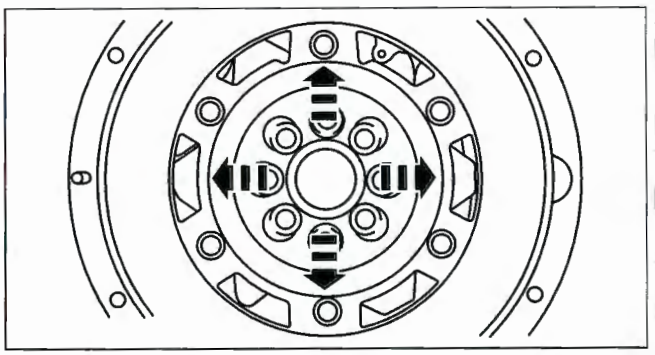
1. Remove the flywheel.

Note
- Correct slight scratches and discoloration using sandpaper.
- Inspect the runout of the surface that contacts the clutch disc with the flywheel installed to the crankshaft.



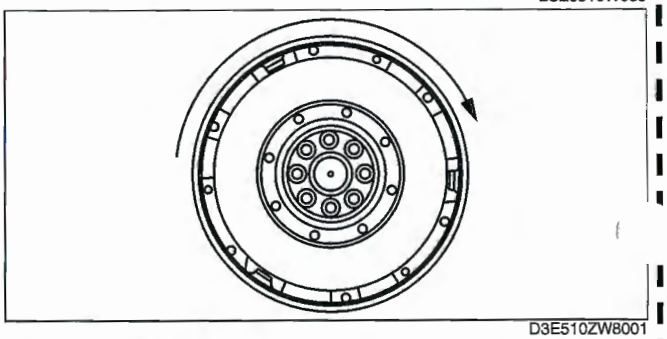
C3U0510W004

2. Inspect the flywheel.
   — Cracks
   — Worn ring gear teeth
   — Chipped or cracked ring gear teeth
   — Surface that contacts the clutch disc for scratches, nicks, and discoloration.
   - If there is any malfunction, replace the flywheel.
3. Inspect the flywheel for lateral movement.
   (1) Rotate the flywheel in either or both directions, or rock slightly on the axis in relation to the primary mass.
      - If there is any lateral movement, replace the flywheel with a new one.



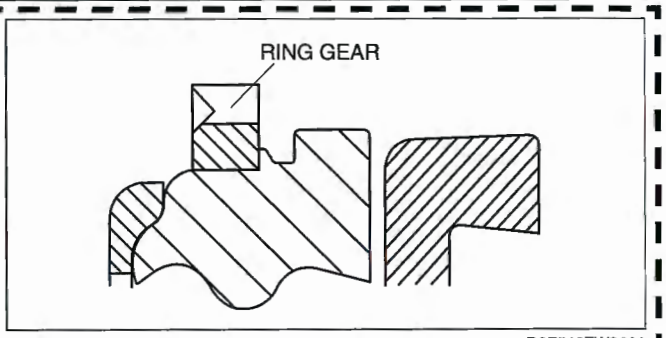
B3E0510W055

4. Verify that the secondary mass does not rotate by 15 teeth or more.
   - If it rotates by 15 teeth or more, replace the dual-mass flywheel.
5. Visually inspect the secondary mass.
   - If there is any damage, replace the dual-mass flywheel.



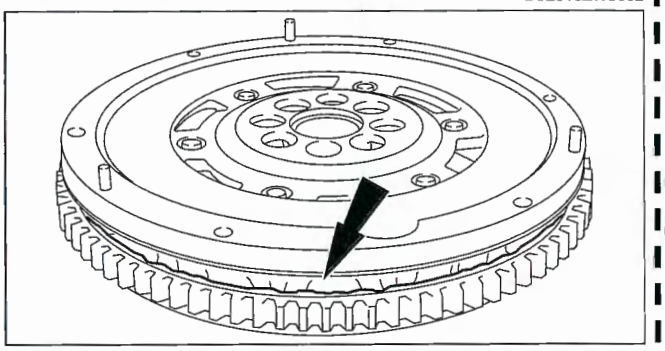
D3E510ZW8001

6. Visually inspect the ring gear on the dual-mass flywheel.
   - If there is any damage, replace the dual-mass flywheel.



D3E510ZW8002

7. Inspect the welded area of the dual-mass flywheel for grease leakage.
   - If there is grease leakage, replace the dual-mass flywheel.

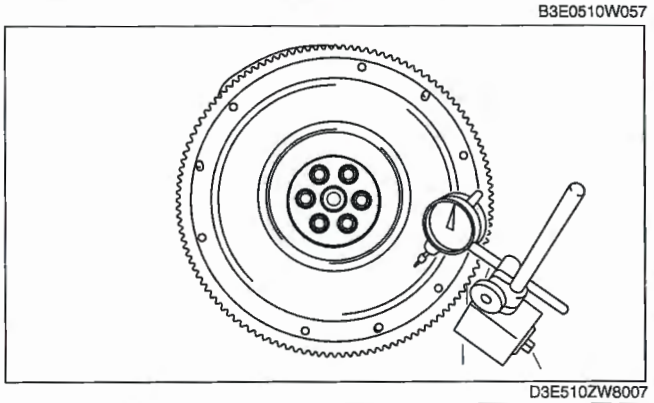


B3E0510W057

8. Inspect the dual-mass flywheel runout.

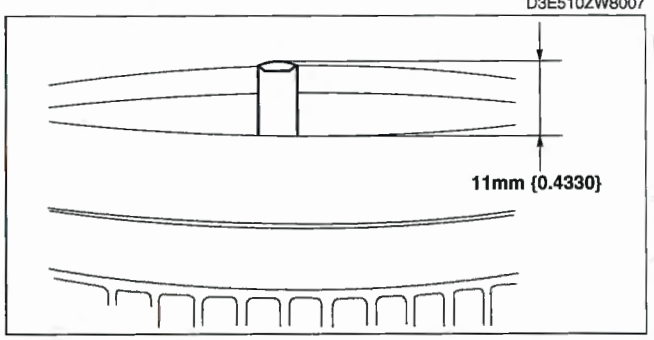
   Dual-mass flywheel maximum runout
   1.5 mm {0.059 in}

   - If it is more than the maximum specification, replace the dual-mass flywheel.



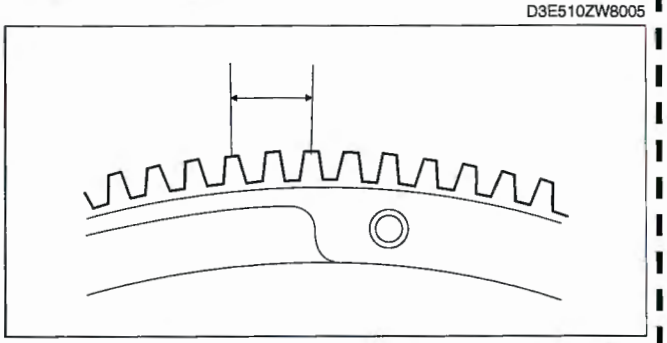
D3E510ZW8007

9. Inspect the dual-mass flywheel for the amount of guide pin projection.
   - If not within the specification, replace the dual-mass flywheel.



D3E510ZW8005

10. Rotate the secondary mass left and right and verify that it rotates within a range of three teeth without resistance.
    - If there is any resistance, replace the dual-mass flywheel.
11. Inspect the dual-mass flywheel for cracks.
    - If there are cracks, replace the dual-mass flywheel.



D3E510ZW8120

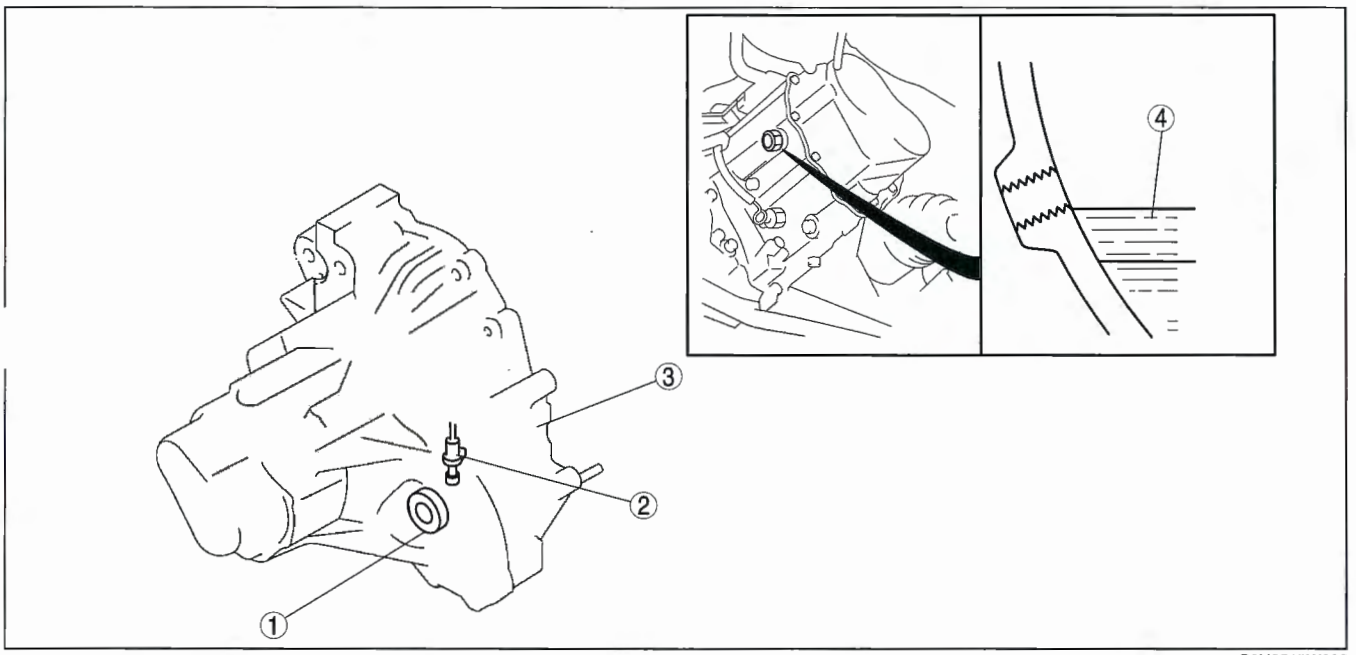
MANUAL TRANSAXLE LOCATION INDEX [G35M-R]

E6U051500000W01



C6U0515W002

1	Oil seal (differential) (See 05–15A–3 OIL SEAL (DIFFERENTIAL) REPLACEMENT [G35M-R].)
2	Vehicle speed sensor (See 05–15A–3 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS) [G35M-R].) (See 05–15A–4 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [G35M-R].)

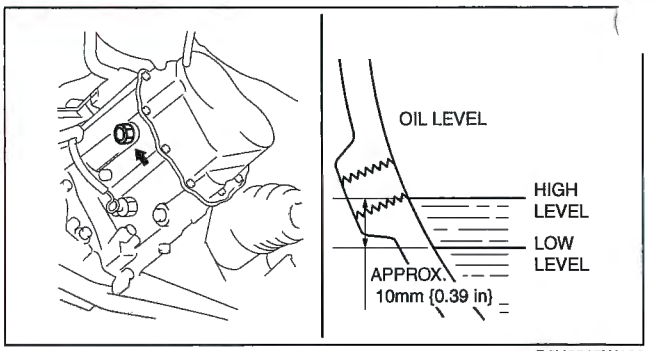
3	Manual transaxle (See 05–15A–4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R].)
4	Transaxle oil (See 05–15A–2 TRANSAXLE OIL INSPECTION [G35M-R].) (See 05–15A–2 TRANSAXLE OIL REPLACEMENT [G35M-R].)

TRANSAXLE OIL INSPECTION [G35M-R]

E6U051527001W01

1. Park the vehicle on level ground.
2. Remove the oil level plug and washer.
3. Verify that the oil is near the brim of the plug port.
   - If the oil level is lower than the low level, add the specified amount and type of oil through the oil level plug hole.

   Manual transaxle oil [G35M-R]
   Specified oil grade: API Service GL-4 or GL-5
   Specified oil viscosity (All-season): SAE 75W-90
   Specified oil viscosity (Above 10 °C {50 °F}): SAE 80W-90



B6U0515W102

4. Install a new washer and the oil level plug.

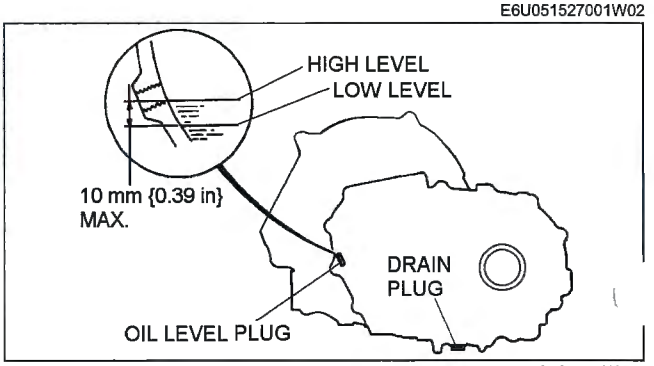
   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

TRANSAXLE OIL REPLACEMENT [G35M-R]

E6U051527001W02

1. Remove the drain plug with the washer.
2. Drain the oil into a suitable container.
3. Install a new washer and the drain plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}



A6A5112W001

4. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

   Manual transaxle oil [G35M-R]
   Specified oil grade: API Service GL-4 or GL-5
   Specified oil viscosity (All-season): SAE 75W-90
   Specified oil viscosity (Above 10 °C {50 °F}): SAE 80W-90
   Capacity (approximate quantity): 2.87 L {3.03 US qt, 2.53 Imp qt}

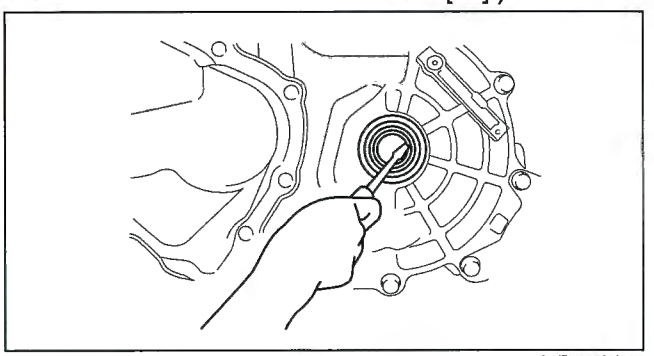
5. Install a new washer and the oil level plug.

   Tightening torque
   39—59 N·m {4.0—6.0 kgf·m, 29—43 ft·lbf}

OIL SEAL (DIFFERENTIAL) REPLACEMENT [G35M-R]

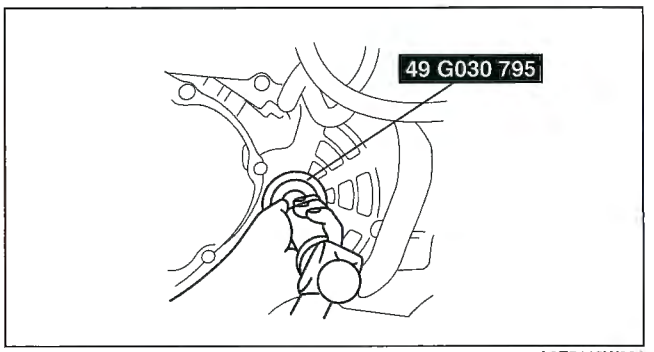
E6U051527238W01

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Drain the oil from the transaxle.
   Remove the front wheels and splash shields.
3. Separate the drive shaft and joint shaft from the transaxle. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC].) (See 03–13–3 JOINT SHAFT REMOVAL/INSTALLATION [L3].)
5. Remove the oil seals using a screwdriver.



A6E5112W009

6. Using the **SST** and a hammer, tap each new oil seal in evenly until the **SST** contacts the transaxle case.
7. Coat the lip of each oil seal with transaxle oil.
8. Insert the drive shaft and joint shaft to the transaxle. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC].) (See 03–13–3 JOINT SHAFT REMOVAL/INSTALLATION [L3].)
9. Install the wheels and splash shields.
10. Add the specified amount and type of oil. (See 05–15A–2 TRANSAXLE OIL REPLACEMENT [G35M-R].)



A6E5112W001

VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS) [G35M-R]

E6U051519200W01

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the under cover.
4. Disconnect the vehicle speed sensor connector.
5. Remove the vehicle speed sensor.
6. Apply transaxle oil to a new O-ring and install it on a vehicle speed sensor.
7. Install the vehicle speed sensor.

Tightening torque
7.8—11.3 N·m
{80—115 kgf·cm, 69.5—99.8 in·lbf}

8. Connect the vehicle speed sensor connector.
9. Install the under cover.
10. Install the battery and battery tray.
11. Connect the negative battery cable.

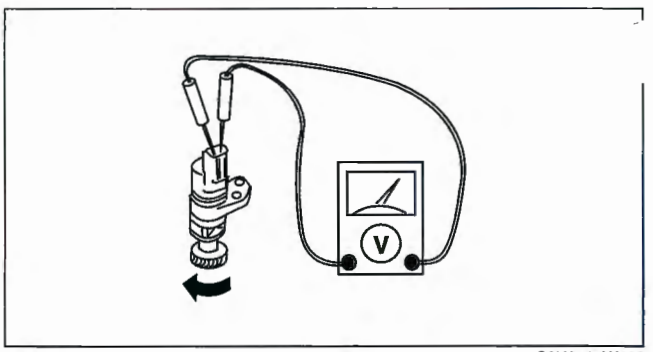
VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [G35M-R]

E6U051519200W02

1. Remove the vehicle speed sensor.
2. Measure voltage (AC range) between terminals of the vehicle speed sensor while the gear is turning.

Meter needle	Action
Moves slightly under **5 V** (AC range)	Repair wiring harness between instrument cluster and vehicle speed sensor.
Does not move	Replace vehicle speed sensor.

3. Install the vehicle speed sensor.



C3U0515W002

MANUAL TRANSAXLE REMOVAL/INSTALLATION [G35M-R]

E6U051500000W02

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
4. Remove the wheels, tires and splash shields.
5. Remove the under cover.
6. Remove the steering gear and linkage, and pipe assembly installation bolts from the front crossmember, then suspend the steering gear and linkage with a cable. (See 06–12–11 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [L3].)

   Pipe assembly tightening torque
   7.8—10.8 N·m {79.6—110.0 kgf·cm, 69.1—95.5 in·lbf}

7. Drain the transaxle oil into a suitable container.

   Warning
   - **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injur**

8. Remove in the order indicated in the table.
9. Install in the reverse order of removal.
10. Add the specified amount of specified transaxle oil.
11. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.

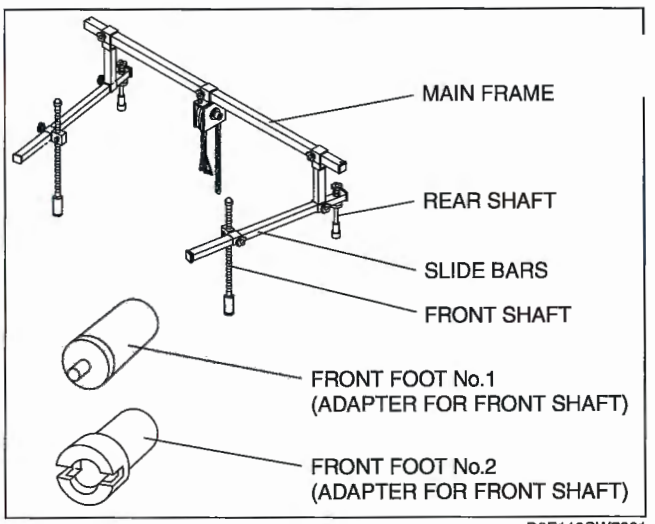
No.4 Engine Mount Bracket Removal Note

1. Install the **SST** using the following procedure.

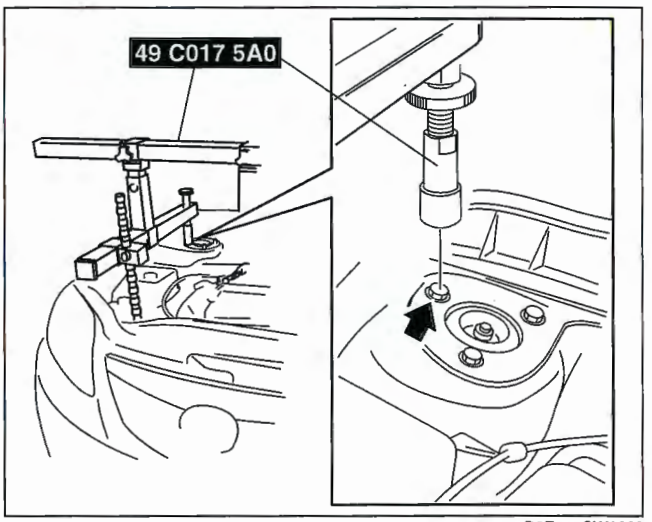
Caution

- **Refer to the SST instruction manual for the basic handing procedure.**



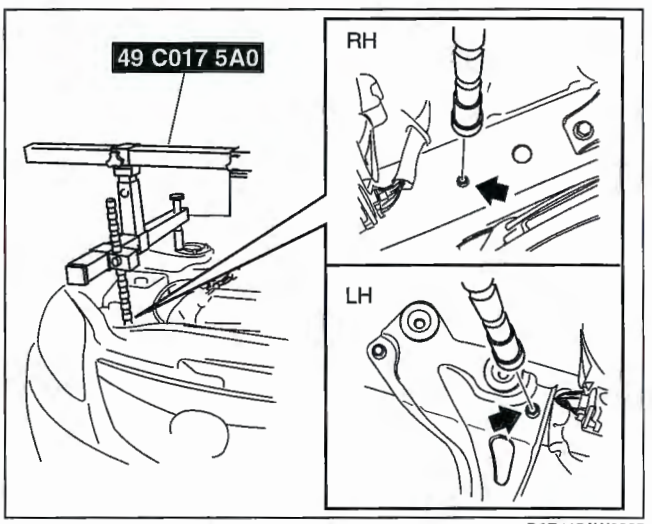
D6E110CW7001

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (Identical position to the right side)



D6E515CW3008

(3) Install the left/right front shaft of the **SST** with front foot No.2 to the bolt as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.

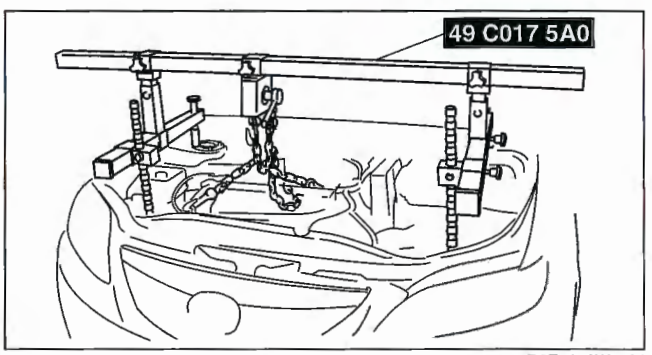


D6E515AW3005

2. Support the engine using the **SST**.

Note
- The **SST** (49 E017 5A0) can be used in place of the **SST** (49 C017 5A0).

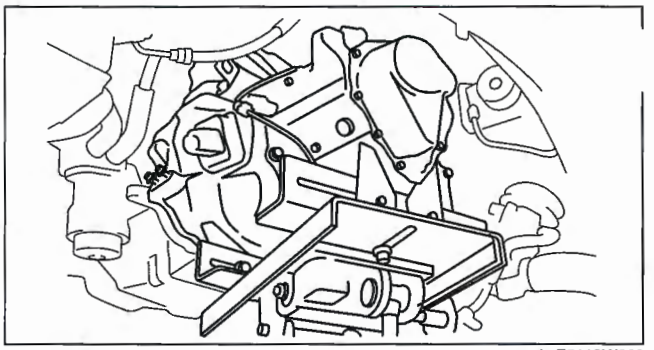
3. Remove the No.4 engine mount bracket.



D6E515AW3004

Manual Transaxle Removal Note

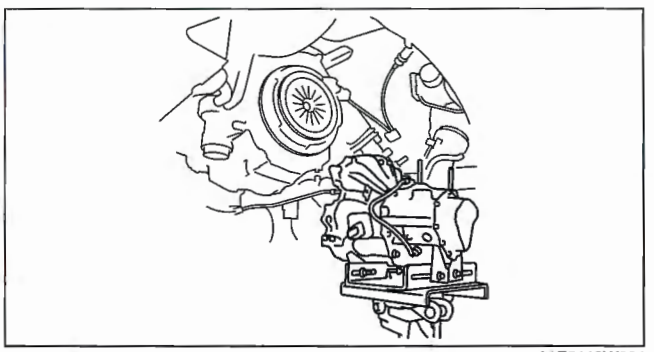
1. Lean the engine toward the transaxle.
2. Support the transaxle on a jack.
3. Remove the transaxle mounting bolts.
4. Remove the transaxle.



A6E5112W003

Manual Transaxle Installation Note

1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.
3. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.

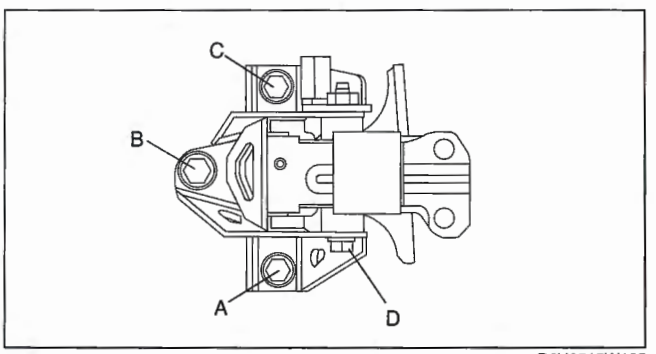


A6E5112W004

No.1 Engine Mount and No.4 Engine Mount Bracket Installation Note

1. Verify that the engine mount rubber is installed as shown.
2. By aligning the holes with the stud bolts, install the No.4 engine mount bracket to the transaxle.
3. By aligning the holes with the stud bolts, install the No.1 engine mount to the transaxle.
4. Align the hole of the No.4 engine mount bracket with the No.4 engine mount rubber on vehicle, and temporarily tighten bolt D.
5. Lightly tighten nuts B, C and bolt A.
6. Tighten nuts B, C in order of B→C, then bolt A.
7. Tighten bolt D.

Tightening torque
A, B, C: 66.6—93.1 N·m
{6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}
D: 85.3—116.6 N·m
{8.7—11.8 kgf·m, 62.9—85.9 ft·lbf}

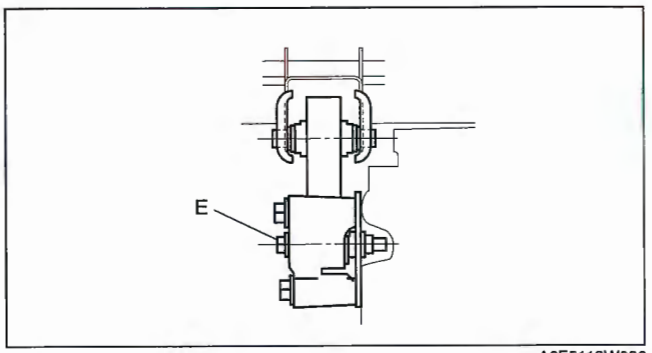


B6U0515W105

8. Tighten bolt E to the No.1 engine mount.

Tightening torque
E: 85.3—116.6 N·m
{8.7—11.8 kgf·m, 62.9—85.9 ft·lbf}

9. Remove the **SST** (49 C017 5A0).



A6E5112W006

INSPECTION AFTER TRANSAXLE INSTALLATION [G35M-R]

E6U051500000W03

Note
- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

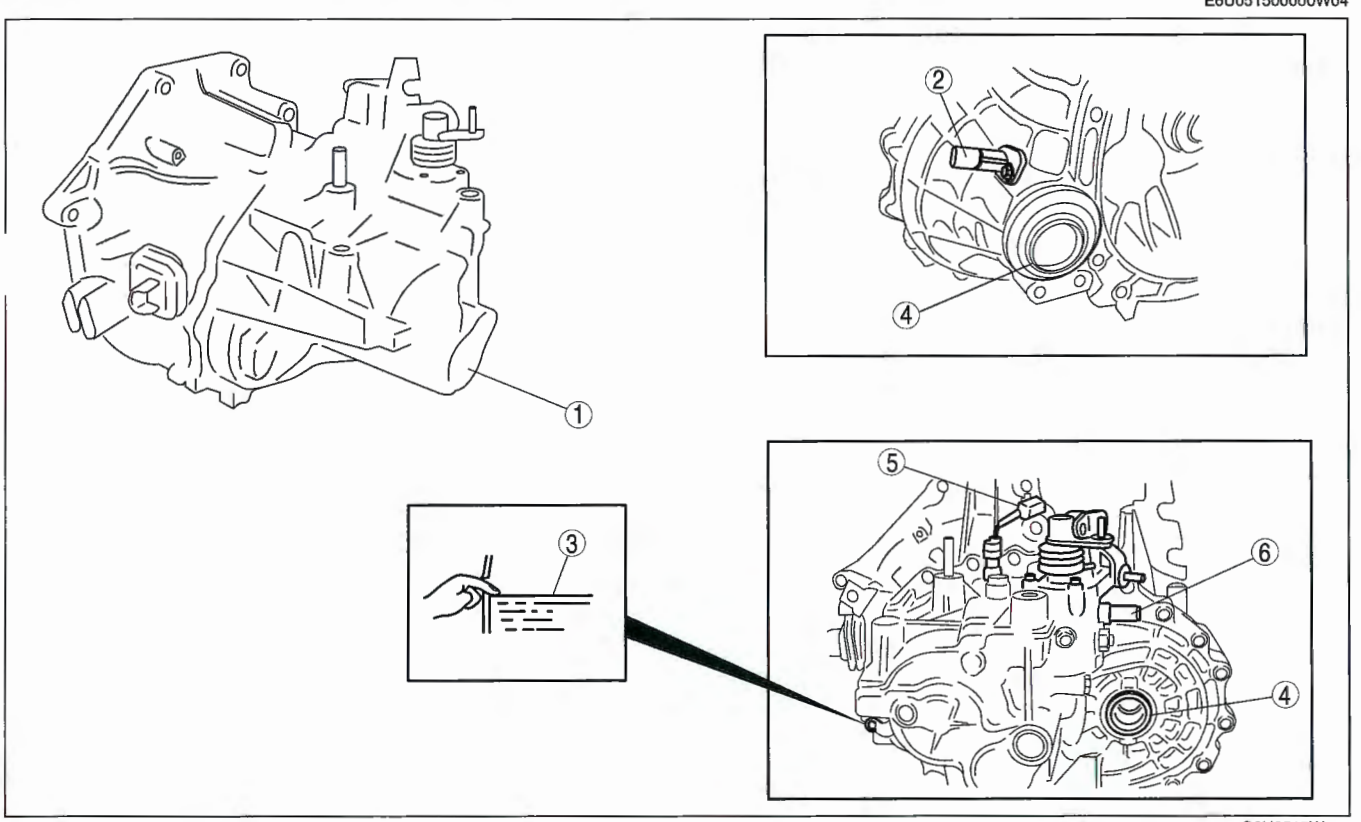
E6U051500000W04



C6U0515W001

1	Manual transaxle (See 05–15B–5 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A65M-R].)
2	Vehicle speed sensor (Without ABS) (See 05–15B–4 VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS) [A65M-R].) (See 05–15B–5 VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [A65M-R].)
3	Transaxle oil (See 05–15B–2 TRANSAXLE OIL INSPECTION [A65M-R].) (See 05–15B–2 TRANSAXLE OIL REPLACEMENT [A65M-R].)
4	Oil seal (differential) (See 05–15B–3 OIL SEAL (DIFFERENTIAL) REPLACEMENT [A65M-R].)
5	Reverse switch (See 05–15B–3 REVERSE SWITCH INSPECTION [A65M-R].) (See 05–15B–4 REVERSE SWITCH REMOVAL/INSTALLATION [A65M-R].)
6	Neutral switch (See 05–15B–4 NEUTRAL SWITCH REMOVAL/INSTALLATION [A65M-R].)

TRANSAXLE OIL INSPECTION [A65M-R]

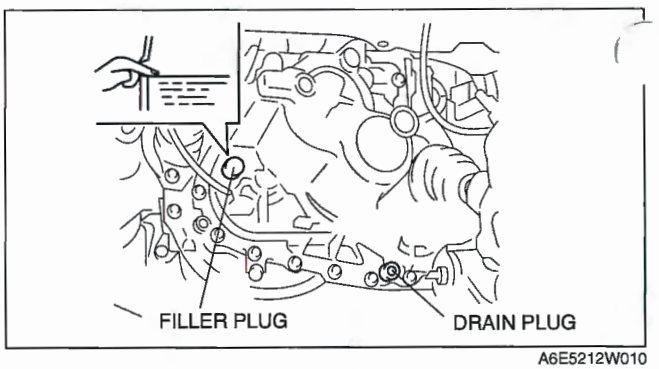
E6U051527001W03

1. Park the vehicle on level ground.
2. Remove the filler plug and gasket.
3. Verify that the oil is near the brim of the plug port.
   - If the oil level is low, add the specified amount and type of oil through the filler plug hole.

Manual transaxle oil [A65M-R]
Specified oil grade: API Service GL-4 or GL-5
Specified oil viscosity: SAE 75W-90

4. Install a new gasket and the filler plug.

Tightening torque
30.0—39.0 N·m
{3.1—3.9 kgf·m, 22.1—28.8 in·lbf}



A6E5212W010

TRANSAXLE OIL REPLACEMENT [A65M-R]

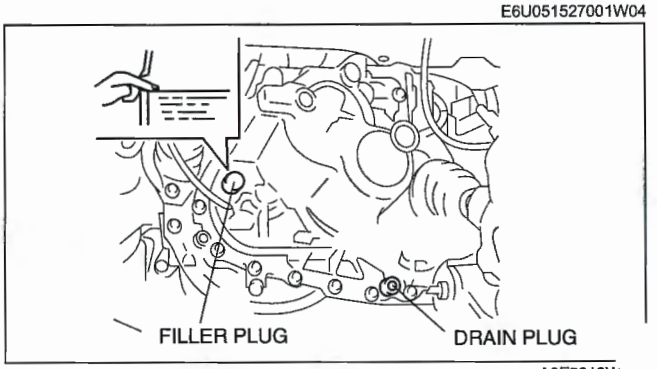
E6U051527001W04

1. Remove the drain plug with the gasket.
2. Drain the oil into a suitable container.
3. Install a new gasket and the drain plug.

Tightening torque
30.0—39.0 N·m
{3.1—3.9 kgf·m, 22.1—28.8 in·lbf}

4. Remove the filler plug with gasket and add the specified amount and type of oil through the filler plug hole until the level reaches the bottom of the filler plug hole.

Manual transaxle oil [A65M-R]
Specified oil grade: API Service GL-4 or GL-5
Specified oil viscosity: SAE 75W-90
Capacity (approximate quantity): 2.3 L {2.4 US qt, 2.0 Imp qt}



A6E5212W

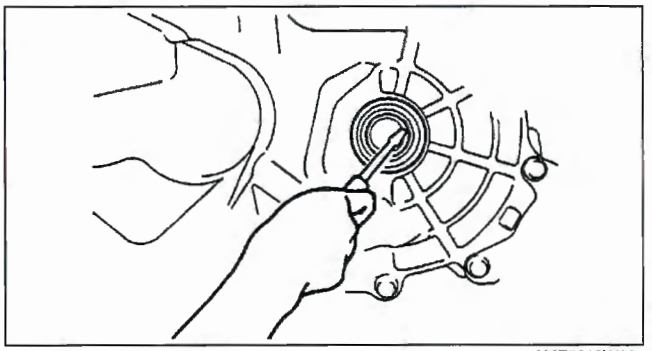
5. Install a new gasket and the filler plug.

Tightening torque
30.0—39.0 N·m
{3.1—3.9 kgf·m, 22.1—28.8 in·lbf}

OIL SEAL (DIFFERENTIAL) REPLACEMENT [A65M-R]

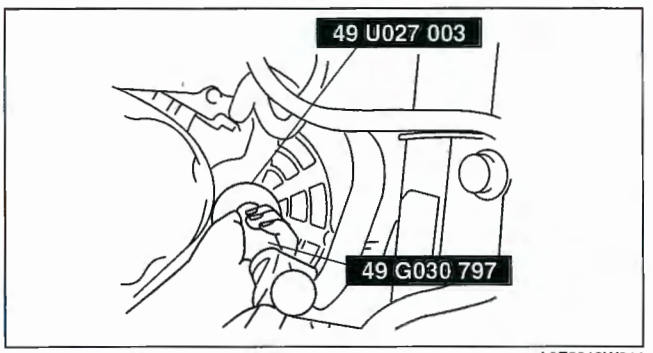
E6U051527238W02

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Drain the oil from the transaxle.
   Remove the front wheels and splash shields.
3. Separate the drive shaft and joint shaft from the transaxle. (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].)
5. Remove the oil seals using a screwdriver.



AME5212W005

6. Using the **SSTs** and a hammer, tap each new oil seal in evenly until the **SSTs** contact the transaxle case.
7. Coat the lip of each oil seal with transaxle oil.
8. Insert the drive shaft and joint shaft into the transaxle. (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].)
9. Install the wheels and splash shields.
10. Add the specified amount and type of oil. (See 05–15B–2 TRANSAXLE OIL REPLACEMENT [A65M-R].)

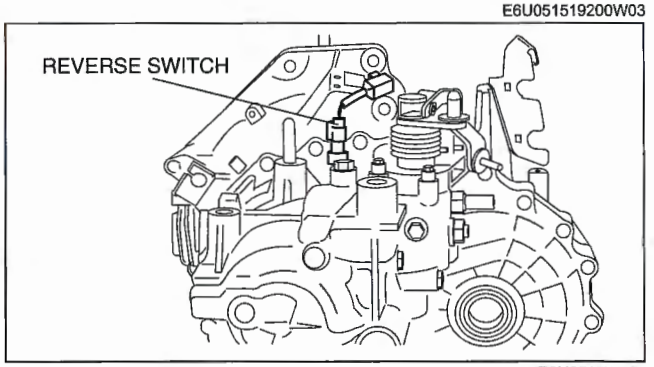


A6E5212W011

REVERSE SWITCH INSPECTION [A65M-R]

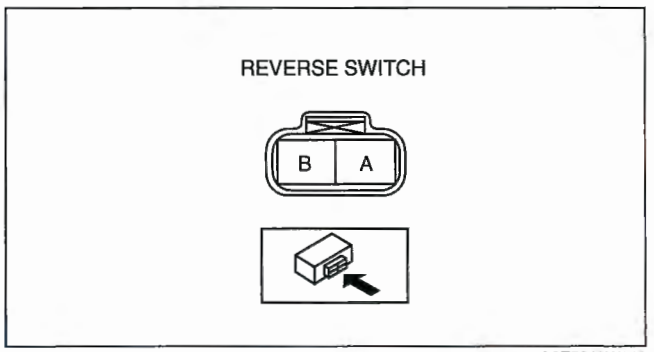
E6U051519200W03

1. Disconnect the reverse switch connector.



B6U0515W002

2. Shift the shift lever to each position, and inspect for continuity between terminals A and B.
   - If not as specified, replace the reverse switch. (See 05–15B–4 REVERSE SWITCH REMOVAL/INSTALLATION [A65M-R].)



A6E5212W013

Specification

O—O : Continuity

Shift position	Connector terminal	
	A	B
Reverse	O	O
Others		

A6E5212W014

3. Connect the reverse switch connector.

REVERSE SWITCH REMOVAL/INSTALLATION [A65M-R]

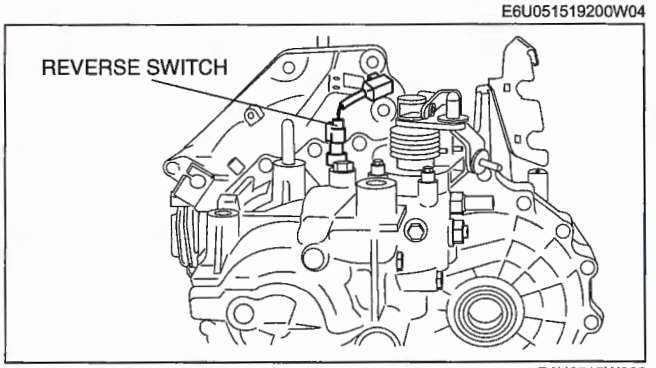
E6U051519200W04

1. Remove the reverse switch.
2. Apply a light coat of silicone sealant to the screw of the reverse switch.

Sealant
Three Bond product: TB1215

3. Install the reverse switch to the transaxle case.

Tightening torque
22.5—33.3 N·m
{2.3—3.4 kgf·m, 16.6—24.6 ft·lbf}



B6U0515W002

NEUTRAL SWITCH REMOVAL/INSTALLATION [A65M-R]

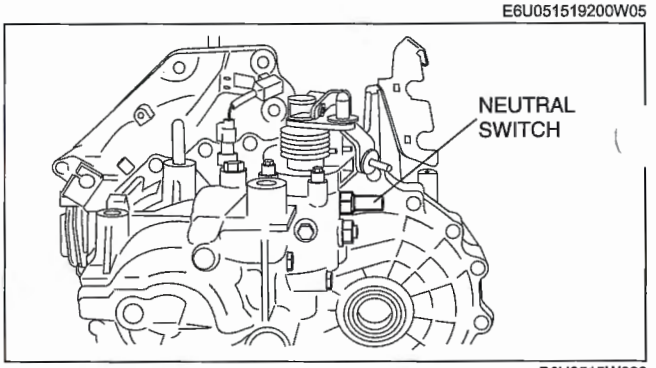
E6U051519200W05

1. Remove the neutral switch.
2. Apply a light coat of silicone sealant to the screw of the neutral switch.

Sealant
Three Bond product: TB1215

3. Install the neutral switch to the transaxle case.

Tightening torque
22.5—33.3 N·m
{2.3—3.4 kgf·m, 16.6—24.6 ft·lbf}



B6U0515W003

VEHICLE SPEED SENSOR REMOVAL/INSTALLATION (WITHOUT ABS) [A65M-R]

E6U051519200W06

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the under cover.
4. Disconnect the vehicle speed sensor connector.
5. Remove the vehicle speed sensor.
6. Apply transaxle oil to a new O-ring and install it on a vehicle speed sensor.
7. Install the vehicle speed sensor.

Tightening torque
7.8—11.0 N·m
{80—112 kgf·cm, 57.6—81.1 in·lbf}

8. Connect the vehicle speed sensor connector.
9. Install the under cover.
10. Install the battery and battery tray.
11. Connect the negative battery cable.

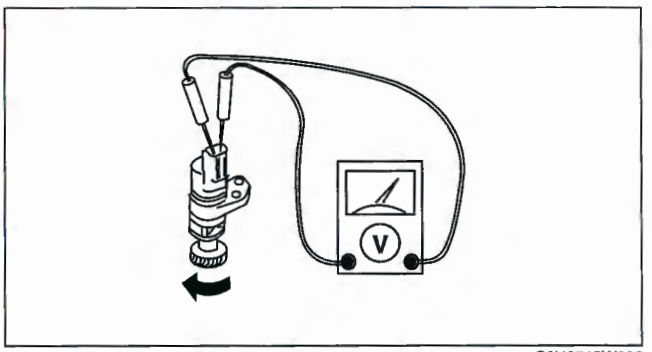
VEHICLE SPEED SENSOR INSPECTION (WITHOUT ABS) [A65M-R]

E6U051519200W07

1. Remove the vehicle speed sensor.
2. Measure voltage (AC range) between terminals of the vehicle speed sensor while the gear is turning.

Meter needle	Action
Moves slightly under **5 V** (AC range)	Repair wiring harness between instrument cluster and vehicle speed sensor.
Does not move	Replace vehicle speed sensor.

3. Install the vehicle speed sensor.



C3U0515W002

MANUAL TRANSAXLE REMOVAL/INSTALLATION [A65M-R]

E6U051500000W05

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
4. Remove the starter. (See 01–19A–2 STARTER REMOVAL/INSTALLATION [L3, AJ].)
5. Remove the front tires and splash shields.
6. Remove the under cover.
7. Remove the steering gear and linkage, and pipe assembly installation bolts from the front crossmember, then suspend the steering gear and linkage with a cable. (See 06–12–13 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [AJ].)

Tightening torque

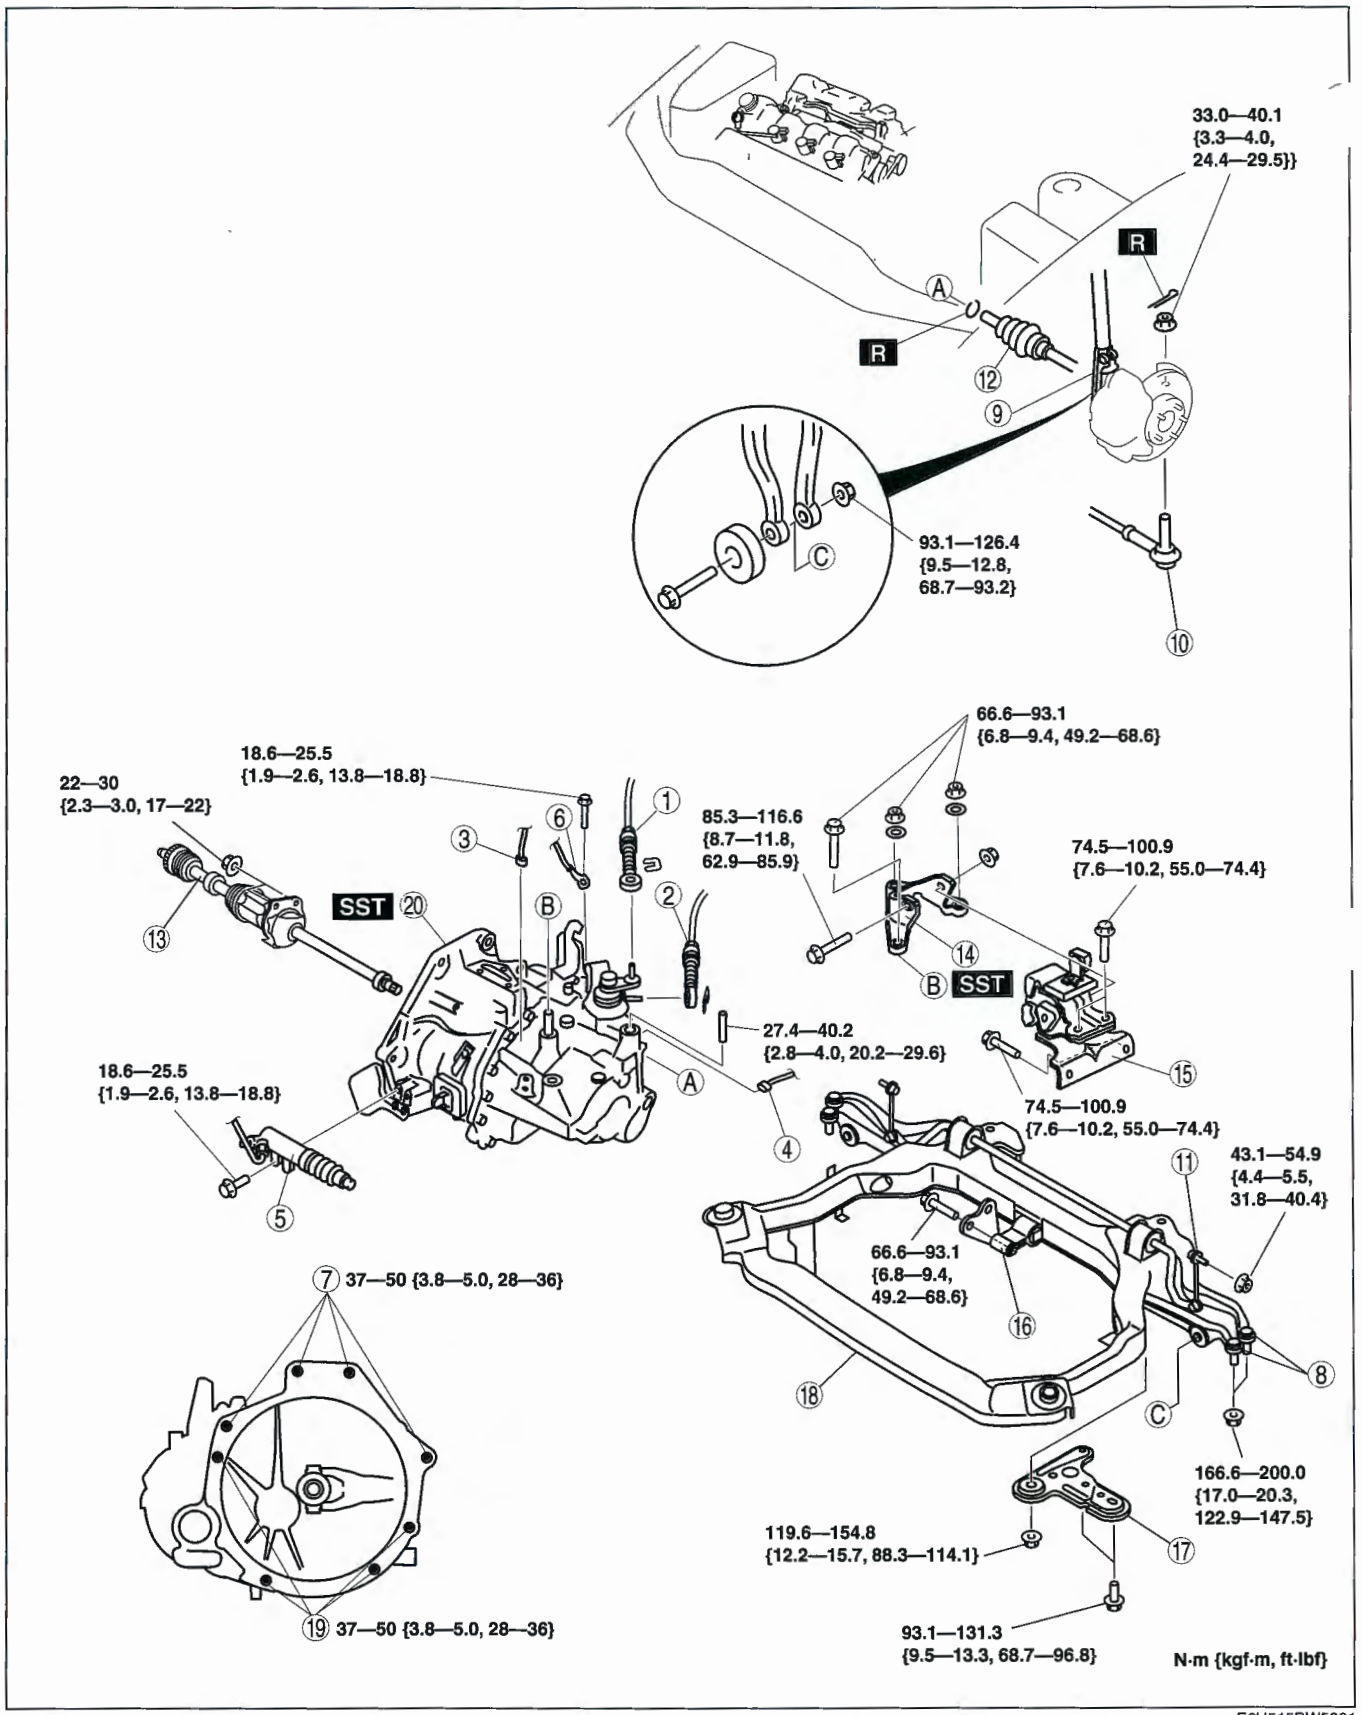
- **Pipe assembly: 7.8—10.8 N·m {79.6—110.0 kgf·cm, 69.1—95.5 in·lbf}**

8. Drain the transaxle oil into a suitable container.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

9. Remove in the order indicated in the figure.
10. Install in the reverse order of removal.
11. Add the specified amount of specified transaxle oil. (See 05–15B–2 TRANSAXLE OIL REPLACEMENT [A65M-R].)
12. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.



E6U515BW50

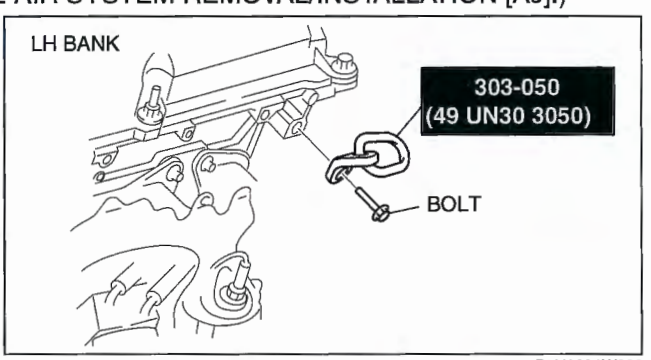
16	No.1 engine mount (See 05–15B–10 No.1 Engine Mount Installation Note.)
17	Crossmember bracket
18	Crossmember (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
19	Transaxle mounting bolt (lower side)
20	Manual transaxle (See 05–15B–9 Manual Transaxle Removal Note.) (See 05–15B–10 Manual Transaxle Installation Note.)

No.4 Engine Mount Bracket Removal Note

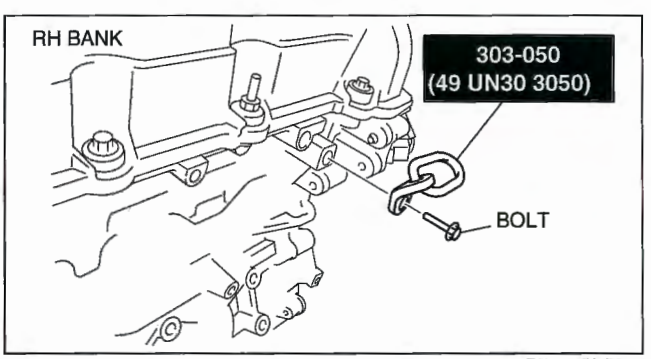
1. Remove the ABS/TCS HU/CM connector. (See 04–13–4 ABS/TCS HU/CM REMOVAL/INSTALLATION.)
2. Remove the dynamic chamber. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Using the bolts **M12×1.25, length 25 mm {0.984 in}** to Install the **SST** as shown (LH bank and RH bank).

   Tightening torque
   100—125 N·m {10.2—12.7 kgf·m, 73.8—92.1 ft·lbf}



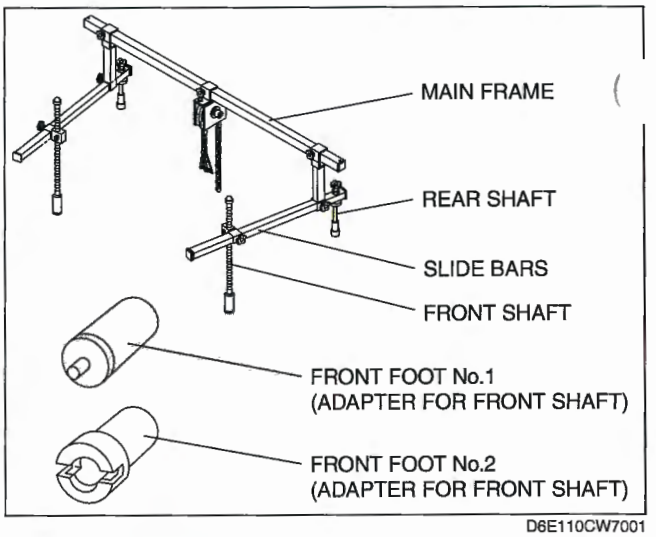
B6U2324W002

4. Install the **SST** using the following procedure.



E6U515BW5502

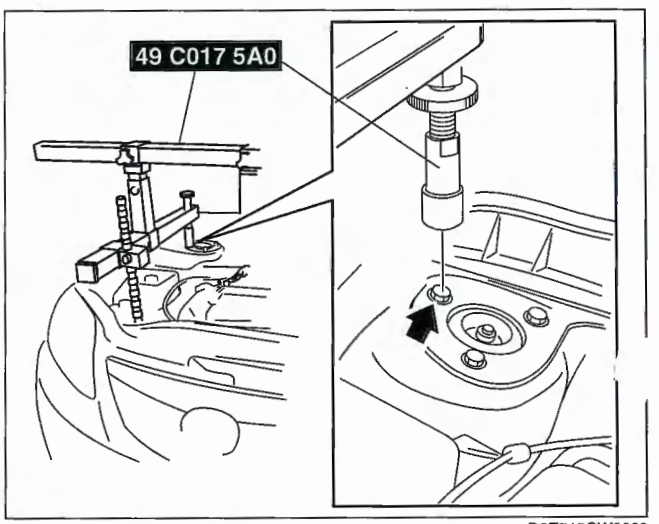
Caution
- **Refer to the SST instruction manual for the basic handing procedure.**



D6E110CW7001

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (Identical position to the right side)

Caution
- **When setting the SST on the right side, make sure it doesn't interfere with the ABS/TCS HU/CM.**

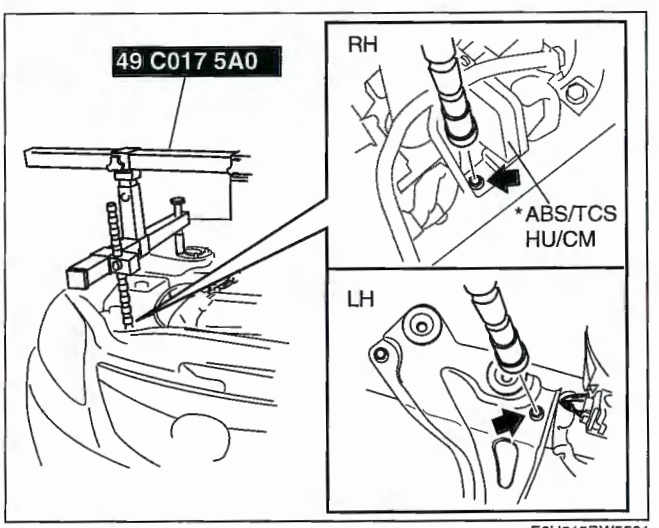


D6E515CW3008

(3) Install the left/right front shaft of the **SST** with front foot No.2 to the bolt as shown in the figure.

* : If equipped

(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.

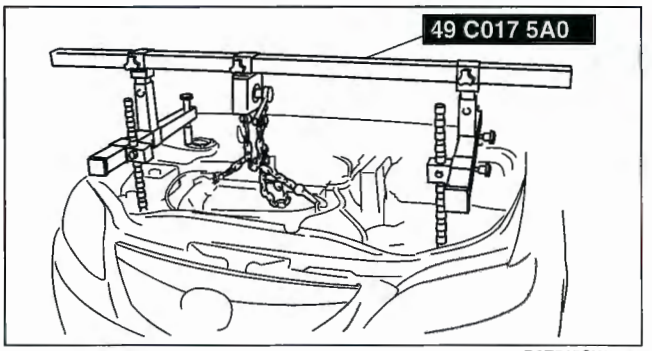


E6U515BW5501

5. Support the engine using the **SST**.

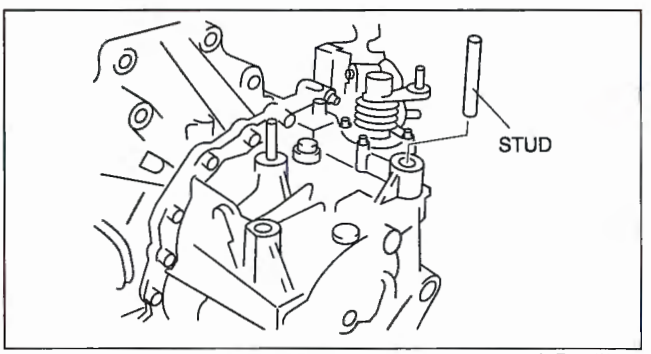
Note
- The **SST** (49 E017 5A0) can be used in place of the **SST** (49 C017 5A0).

6. Remove the No.4 engine mount bracket.



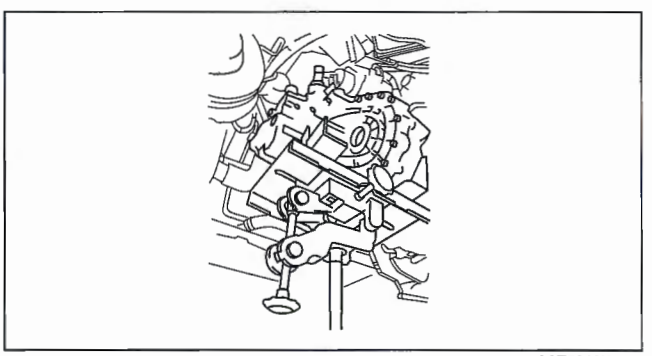
D6E515CW3010

Manual Transaxle Removal Note
1. Remove the stud of the No.4 engine mount.
2. Lean the engine toward the transaxle.



A6E5212W020

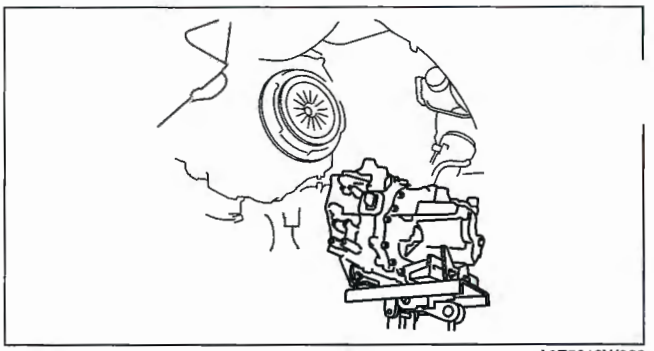
3. Support the transaxle on a jack.
4. Remove the transaxle mounting bolts.
5. Remove the transaxle.



A6E5212W021

Manual Transaxle Installation Note

1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.

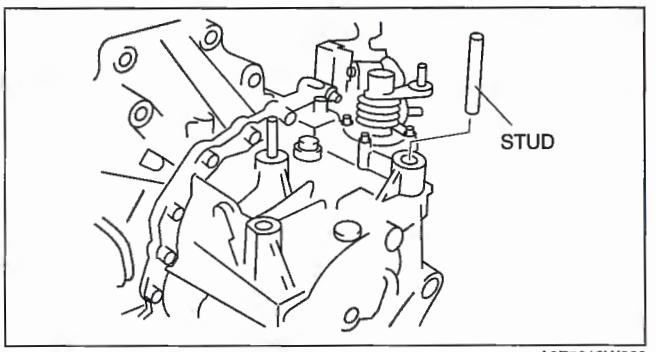


A6E5212W022

3. Install the stud of the No.4 engine mount.

   Tightening torque
   27.4—40.2 N·m
   {2.8—4.0 kgf·m, 20.2—29.6 ft·lbf}

4. Adjust the **SST** (49 C017 5A0) so that the engine is located at the specified position.

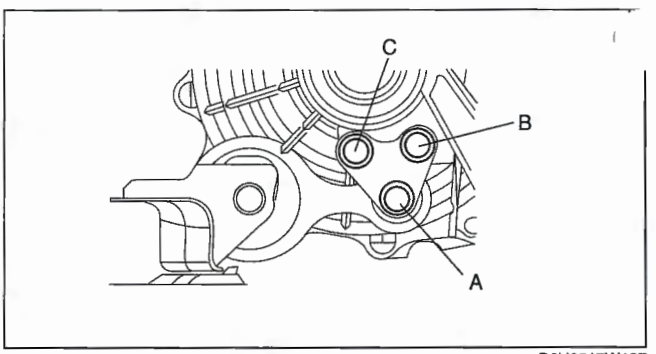


A6E5212W020

No.1 Engine Mount Installation Note

1. Align the hole of the No.1 engine mount rubber with the bolt hole of transaxle.
2. Lightly tighten bolt A, then tighten bolts B and C.
3. Tighten bolt A.

   Tightening torque
   66.6—93.1 N·m
   {6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}



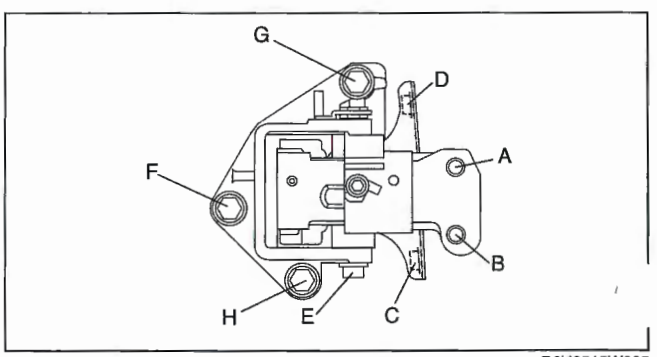
B6U0517W127

No.4 Engine Mount Installation Note

1. Verify that the No.4 engine mount rubber is installed as shown.
2. Lightly tighten bolts A and B.
3. Align the installation hole on the contacted area of the front frame with the bolt C installation hole.
4. Tighten bolt A, then bolt B.
5. Tighten bolt C, then bolt D.

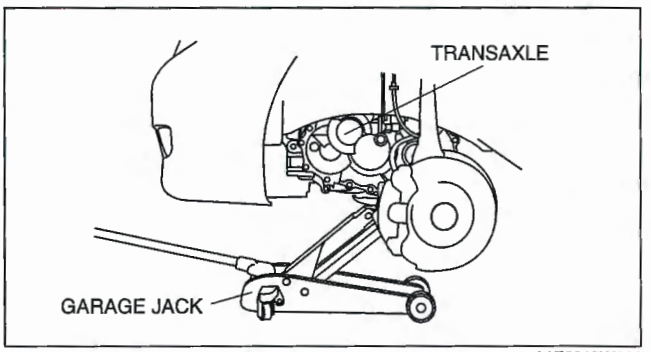
   Tightening torque
   A, B, C, D: 74.5—100.9 N·m
   {7.6—10.2 kgf·m, 55.0—74.4 ft·lbf}

6. Verify that the No.4 engine mount bracket is installed as shown.
7. Lightly tighten bolt E.



B6U0515W005

8. Set the transaxle on a garage jack and lift it.
9. Align the hole of the No.4 engine mount bracket with the stud bolts of transaxle.
   Lightly tighten nut F, G and bolt H.
   . Tighten nuts F, G in order of F→G, then bolt H.

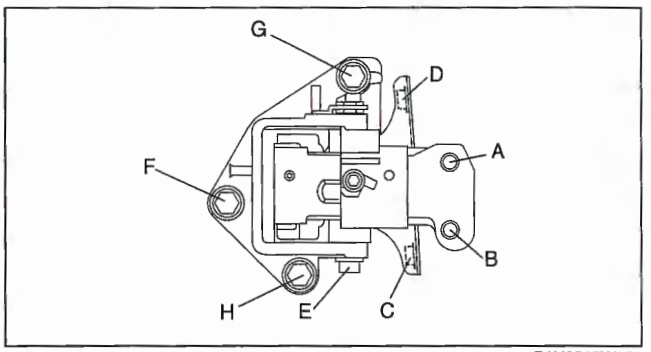


A6E5212W023

12. Tighten bolt E.

Tightening torque
E: 85.3—116.6 N·m
{8.7—11.8 kgf·m, 63.0—85.9 ft·lbf}
F, G, H: 66.6—93.1 N·m
{6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}

13. Remove the **SST** (49 C017 5A0).



B6U0515W005

INSPECTION AFTER TRANSAXLE INSTALLATION [A65M-R]

E6U051500000W06

Note
- Perform the following inspection only when the transaxle has been overhauled.

Perform a road test and inspect the following items:
(1) No abnormal noise in each shift position.
(2) Smooth shift operation when shifting gears.
(3) No gear slipout after shifting gears.
(4) Back-up light switch operates correctly.

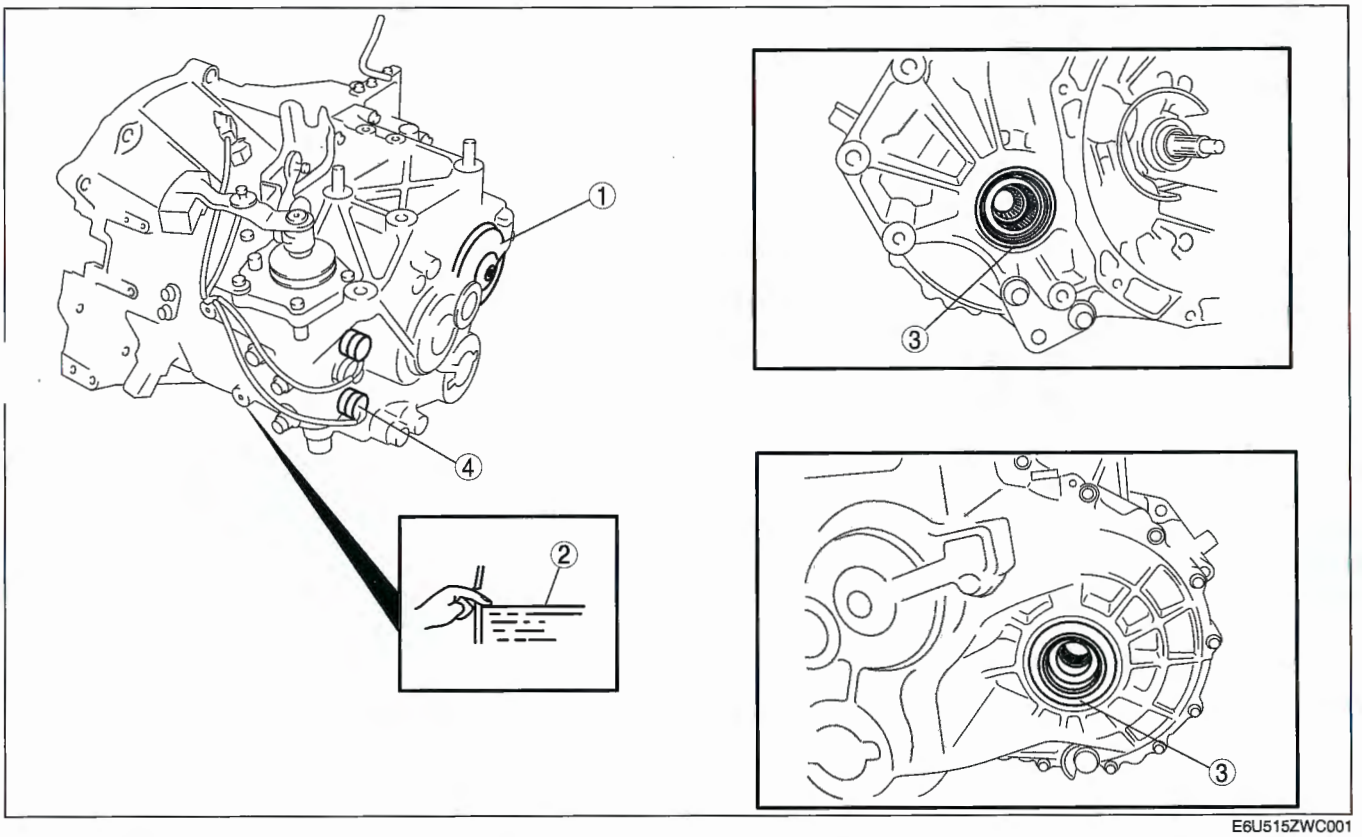
E6U051500000W07



E6U515ZWC001

1	Manual transaxle (See 05–15C–4 MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26MX-R])
2	Transaxle oil (See 05–15C–2 TRANSAXLE OIL INSPECTION [A26MX-R]) (See 05–15C–2 TRANSAXLE OIL REPLACEMENT [A26MX-R])

3	Oil seal (differential) (See 05–15C–2 OIL SEAL (DIFFERENTIAL) REPLACEMENT [A26MX-R])
4	Neutral switch (See 05–15C–3 NEUTRAL SWITCH REMOVAL/INSTALLATION [A26MX-R])

TRANSAXLE OIL INSPECTION [A26MX-R]

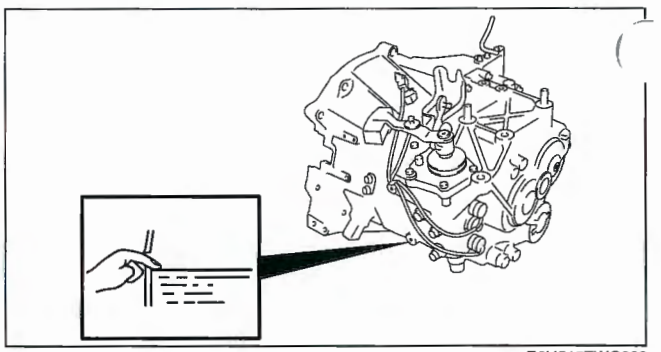
E6U051527001W05

1. Park the vehicle on level ground.
2. Remove the oil level plug and washer.
3. Verify that the oil is near the brim of the plug port.
   - If the oil level is low, add the specified amount and type of oil through the filler plug hole.

   Manual transaxle oil [A26MX-R]
   Specified oil grade: API Service GL-4 or GL-5
   Specified oil viscosity: SAE 75W-90

4. Tighten the oil level plug with a new washer.

   Tightening torque
   27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}



E6U515ZWC003

TRANSAXLE OIL REPLACEMENT [A26MX-R]

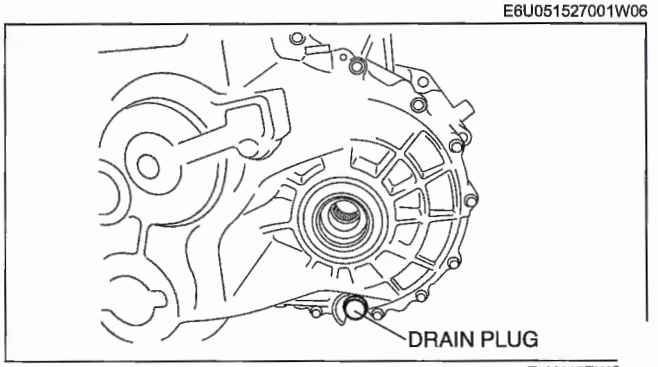
E6U051527001W06

1. Remove the drain plug with the washer.
2. Drain the oil into a suitable container.
3. Install a new washer and the drain plug.

   Tightening torque
   27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}

4. Remove the oil level plug with washer and add the specified amount and type of oil through the oil level plug hole until the level reaches the bottom of the oil level plug hole.

   Manual transaxle oil [A26MX-R]
   Specified oil grade: API Service GL-4 or GL-5
   Specified oil viscosity: SAE 75W-90
   Capacity (approximate quantity): 2.55 L {2.69 US qt, 2.24 Imp qt}



E6U515ZWC

5. Install a new washer and the oil level plug.

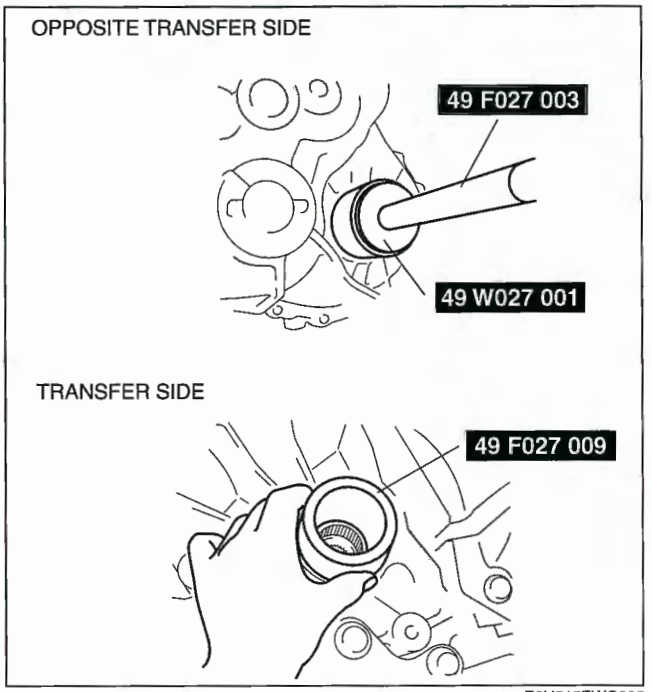
   Tightening torque
   27.5—50.9 N·m {2.8—5.1 kgf·m, 37.5—20.2 ft·lbf}

OIL SEAL (DIFFERENTIAL) REPLACEMENT [A26MX-R]

E6U051527238W03

1. On level ground, jack up the vehicle and support it evenly on safety stands.
2. Drain the oil from the transaxle.
3. Remove the transfer. (See 03–16–3 TRANSFER REMOVAL/INSTALLATION)
4. Separate the drive shaft from the transaxle. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC])
5. Remove the oil seals using a screwdriver.

6. Using the **SSTs** and a hammer, tap each new oil seal in evenly until the **SSTs** contact the transaxle case.
   Coat the lip of each oil seal with transaxle oil.
   Insert the drive shaft into the transaxle. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC])
9. Install the transfer. (See 03–16–3 TRANSFER REMOVAL/INSTALLATION)
10. Add the specified amount and type of oil. (See 05–15C–2 TRANSAXLE OIL REPLACEMENT [A26MX-R].)



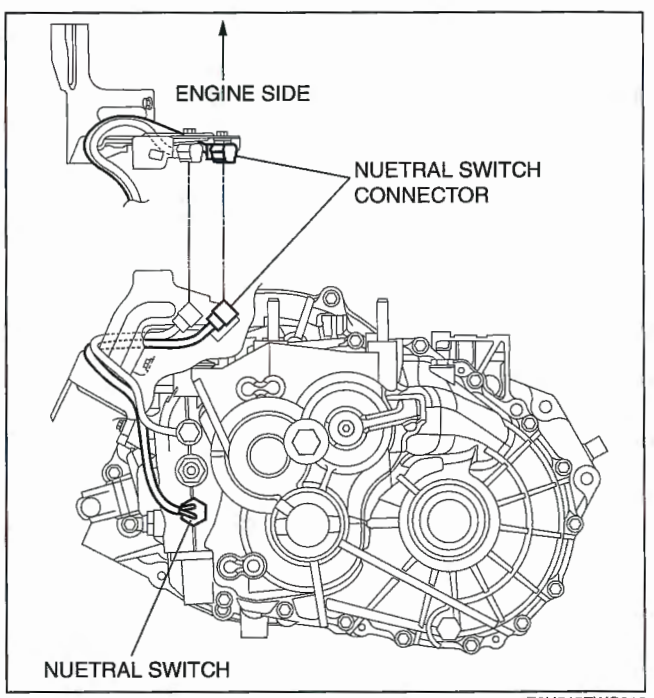
E6U515ZWC005

NEUTRAL SWITCH REMOVAL/INSTALLATION [A26MX-R]

E6U051519200W08

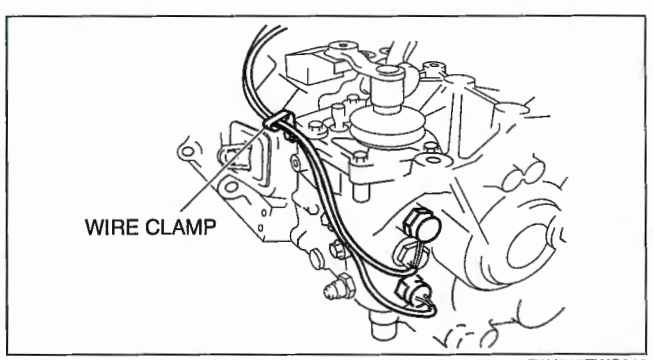
1. Disconnect the negative battery cable.
2. Disconnect the neutral switch connector.
3. Remove the under cover.
4. Remove the neutral switch.
5. Install the neutral switch to the transaxle case.

Tightening torque
28.1—52.3 N·m {2.9—5.3 kgf·m, 20.8—38.5 ft·lbf}



E6U515ZWC016

6. Clamp both the neutral switch and back-up light switch wiring harnesses as shown in the figure.
7. Route the switch wiring harness through the bracket (engine side) as shown in the figure A area.

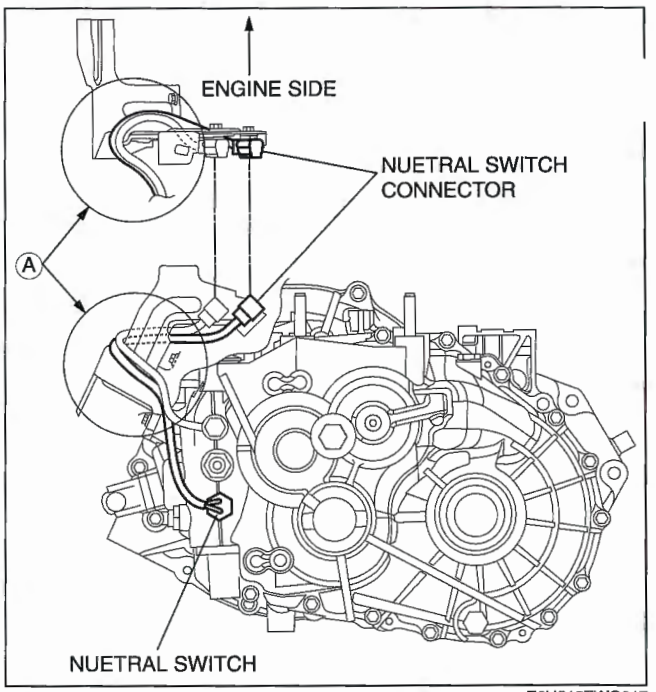


E6U515ZWC018

Caution

- **If the wiring harness is incorrectly routed, the wiring harness and shift lever weight may contact each other causing the wiring harness to be caught while shifting or damaged.**

8. Install the under cover.



E6U515ZWC017

MANUAL TRANSAXLE REMOVAL/INSTALLATION [A26MX-R]

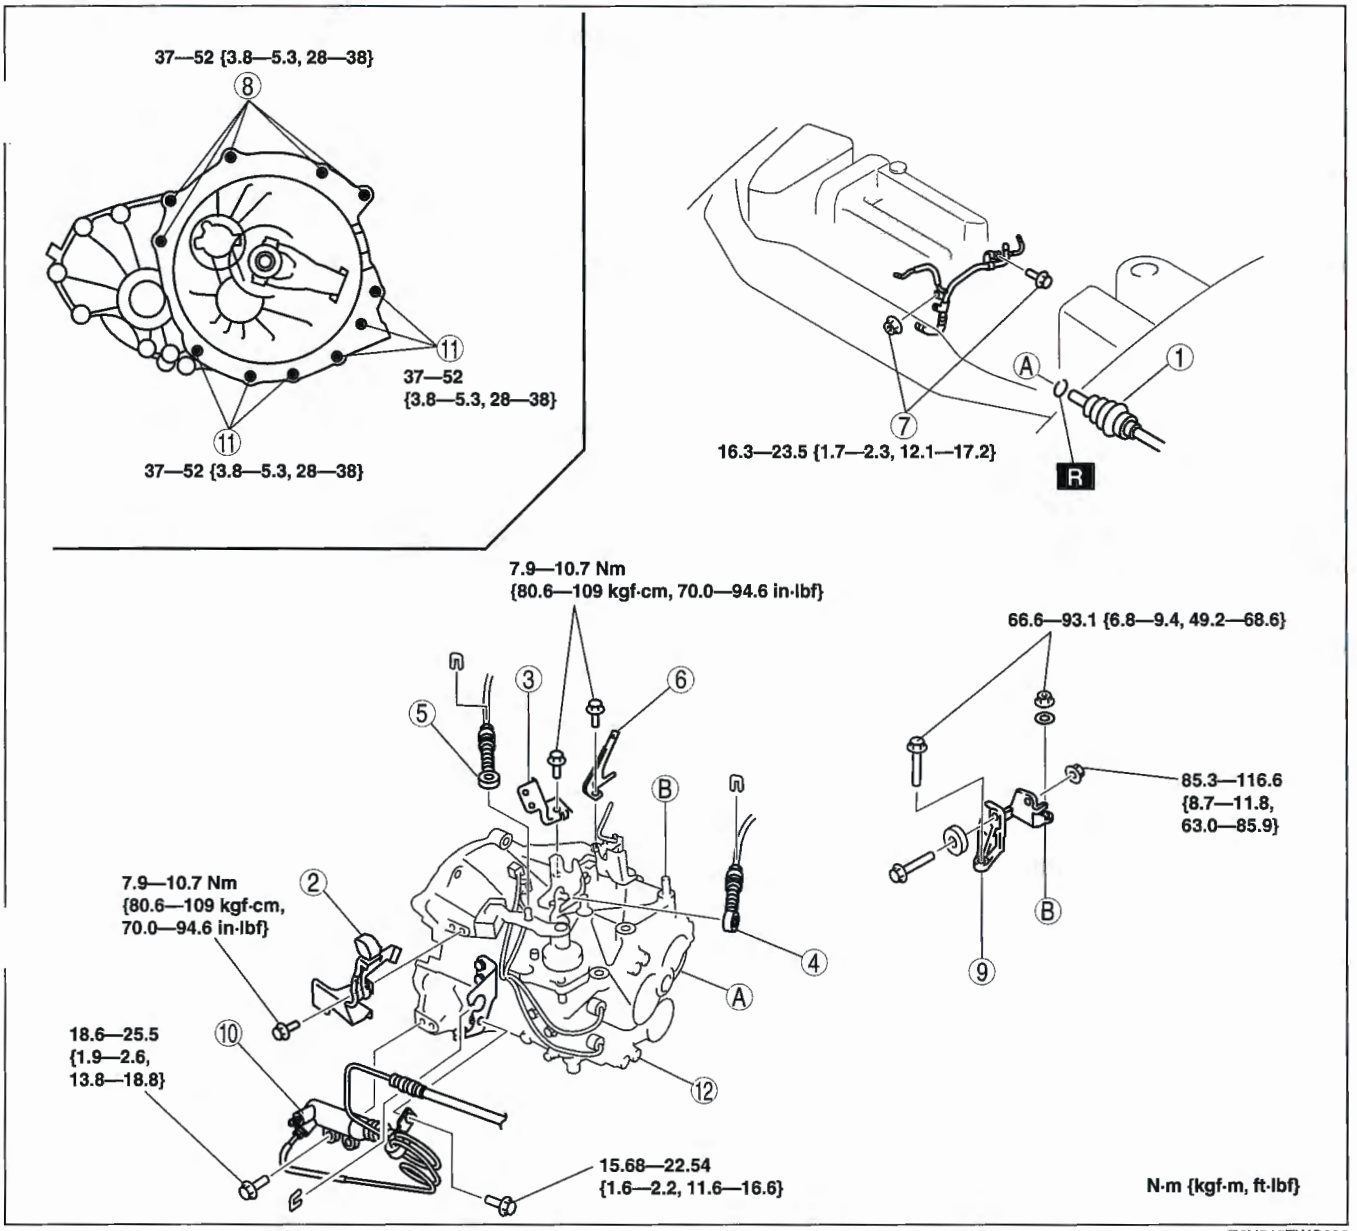
E6U051500000W08

1. Remove the transfer. (See 03–16–3 TRANSFER REMOVAL/INSTALLATION)
2. Disconnect the negative battery cable.
3. Remove the air cleaner. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC])
4. Remove the charge air cooler. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC])
5. Disconnect the reverse switch and neutral switch connector.
6. Remove the starter. (See 01–19B–2 STARTER REMOVAL/INSTALLATION [L3 WITH TC])
7. Drain the transaxle oil into a suitable container.

Warning

- **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

8. Remove in the order indicated in the figure.
9. Install in the reverse order of removal.
10. Add the specified amount of specified transaxle oil. (See 05–15C–2 TRANSAXLE OIL REPLACEMENT [A26MX-R].)
11. Warm up the engine and transaxle, inspect for oil leakage, and inspect the transaxle operation.



E6U515ZWC002

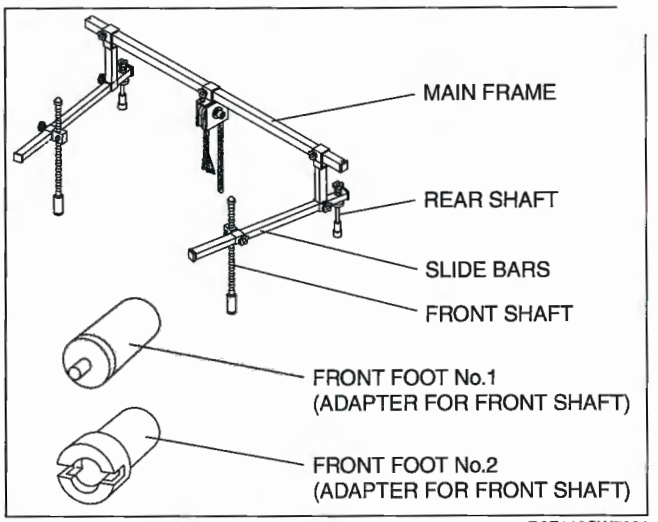
No.4 Engine Mount Bracket Removal Note

1. Install the **SST** using the following procedure.

Caution

- **Refer to the SST instruction manual for the basic handing procedure.**

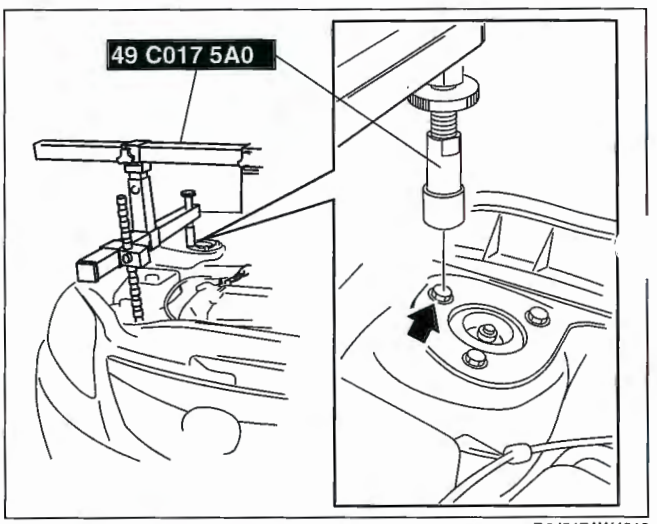


D6E110CW7001

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (Identical position to the right side)

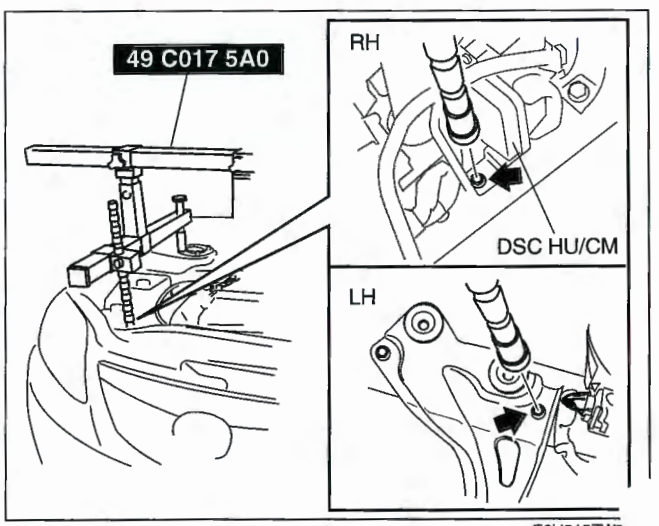
Caution

- **When setting the SST on the right side, make sure it doesn't interfere with the DSC HU/CM.**



D6J517AW4012

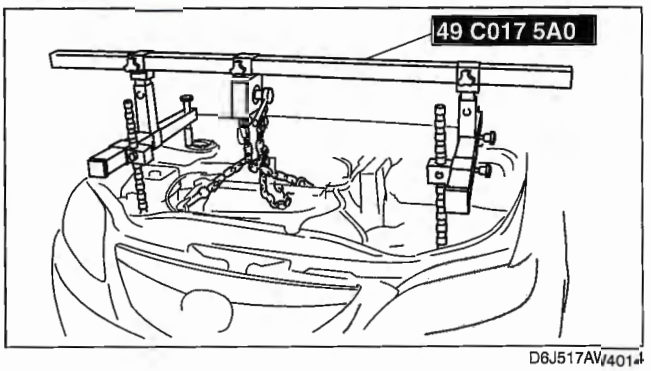
(3) Install the left/right front shaft of the **SST** with front foot No.2 to the bolt as shown in the figure.
(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.



E6U515ZW7

2. Support the engine using the **SST**.

Note
- The SST (49 E017 5A0) can be used in place of the SST (49 C017 5A0).

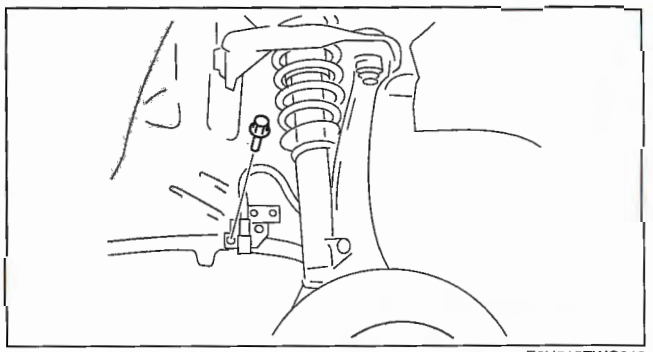


D6J517AW4014

3. Remove the No.4 engine mount bracket.

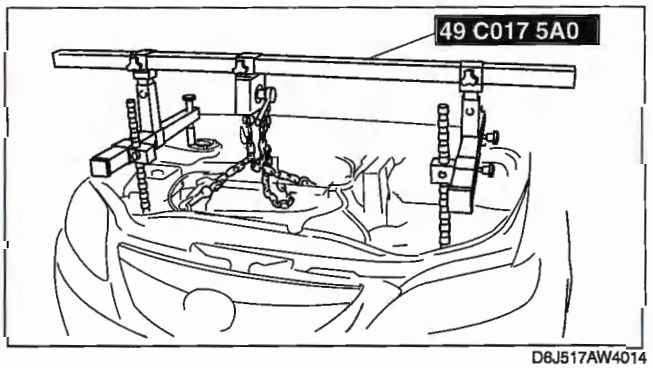
Manual Transaxle Removal Note

1. Loosen the bolt shown in the figure and set the brake pipe out of the way.



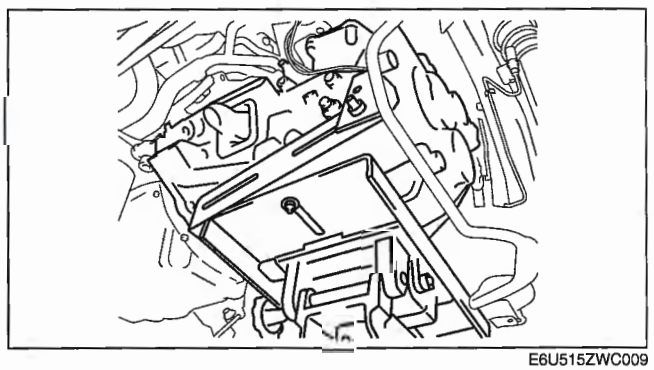
E6U515ZWC013

2. Lean the engine toward the transaxle.



D6J517AW4014

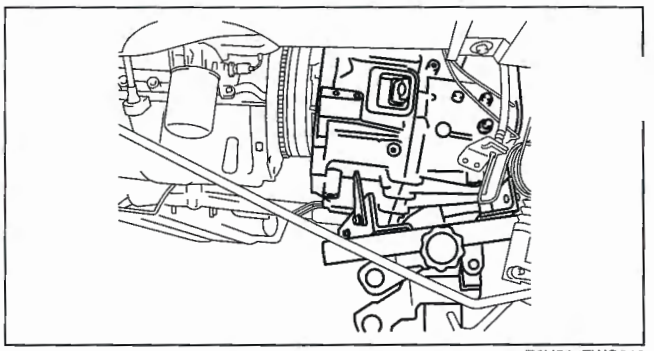
3. Support the transaxle on a jack.
4. Remove the transaxle mounting bolts.
5. Remove the transaxle.



E6U515ZWC009

Manual Transaxle Installation Note

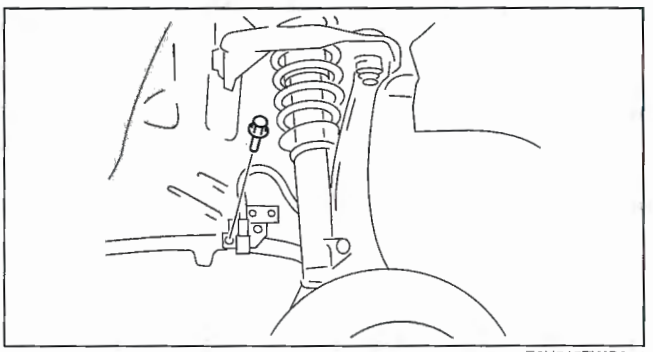
1. Set the transaxle on a jack and lift into place.
2. Install the transaxle mounting bolts.



E6U515ZWC010

3. Tighten the bolt shown in the figure.

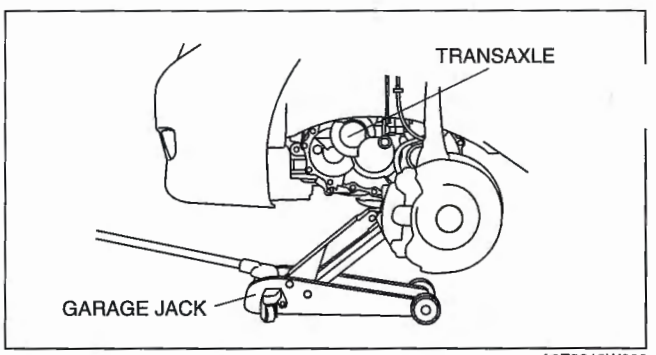
   Tightening torque
   18.5—25.5 N·m {1.89—2.60 kgf·m, 13.7—18.8 ft·lbf}



E6U515ZWC013

No.4 Engine Mount Bracket Installation Note

1. Set the transaxle on a garage jack and lift it.
2. Verify that the engine mount rubber is installed as shown.
3. By aligning the holes with the stud bolts, install the No.4 engine mount bracket to the transaxle.
4. Align the hole of the No.4 engine mount bracket with the No.4 engine mount rubber on vehicle, and temporarily tighten nut D.
5. Lightly tighten nuts B, C and bolt A.
6. Tighten nuts B, C in order of B→C, then bolt A.

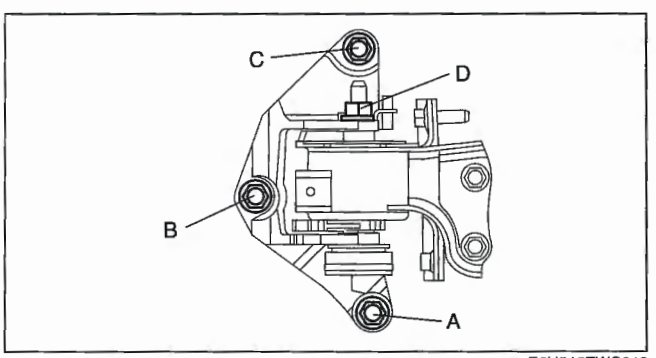


A6E5212W023

7. Tighten nut D.

   Tightening torque
   A, B, C: 66.6—93.1 N·m
   {6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}
   D: 85.3—116.6 N·m
   {8.7—11.8 kgf·m, 62.9—85.9 ft·lbf}

8. Remove the garage jack.
9. Remove the **SST** (49 C017 5A0).



E6U515ZWC012

INSPECTION AFTER TRANSAXLE INSTALLATION [A26MX-R]

E6U051500000W09

Note

- Perform the following inspection only when the transaxle has been overhauled.

1. Perform a road test and inspect the following items:
   (1) No abnormal noise in each shift position.
   (2) Smooth shift operation when shifting gears.
   (3) No gear slipout after shifting gears.
   (4) Back-up light switch operates correctly.

SHIFT MECHANISM REMOVAL/INSTALLATION [G35M-R, A65M-R]

E6U051646010W01

1. Remove the battery and battery tray.
2. Remove the air cleaner component.
   (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
   (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the dashboard completely.
   (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
4. Remove the SAS control module.
   (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
5. Remove the climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].) (See 07–40–30 CLIMATE CONTROL UNIT INSTALLATION [L3, AJ].)
6. Remove the rear heat duct. (See 07–11–14 REAR HEAT DUCT REMOVAL/INSTALLATION [L3, AJ].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. After installation, verify that the shift lever can be shifted smoothly into each position.

MECHANICAL SYSTEM TEST [FS5A-EL]

E6U051700000W12

Mechanical System Test Preparation

1. Apply the parking brake and use wheel chocks at the front and rear of the wheels.
2. Inspect the engine coolant. (See 01–12A–3 COOLING SYSTEM SERVICE WARNINGS [L3, AJ].) (See 01–12A–3 ENGINE COOLANT LEVEL INSPECTION [L3, AJ].)
3. Inspect the engine oil. (See 01–11A–3 ENGINE OIL LEVEL INSPECTION [L3, AJ].)
4. Inspect the ATF levels. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
5. Inspect the idle speed. (See 01–10A–30 Idle Speed Inspection.)
6. Inspect the ignition timing. (See 01–10A–29 Ignition Timing Inspection.)

Line Pressure Test

1. Perform mechanical system test preparation. (See 05–17A–4 Mechanical System Test Preparation.)

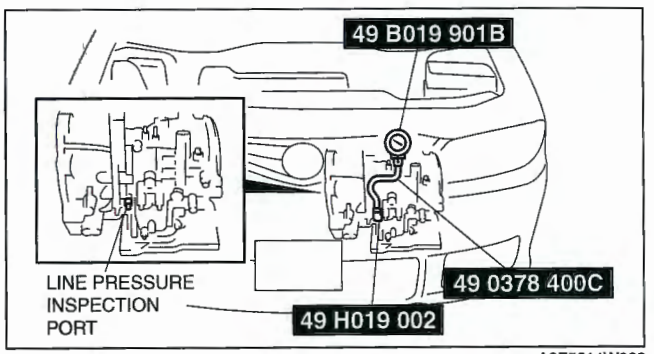
Warning

- **Removing the square-head plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the square-head plug, allow the ATF to cool.**

2. Connect the **SSTs** (49 0378 400C, 49 B019 901B and 49 H019 002) to the line pressure inspection port.
3. Start the engine and shift the selector lever to D range and read the line pressure at idle.

Warning

- **Removing the SST when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the SST, allow the ATF to cool.**



A6E5614W002

4. Turn the engine off and remove the **SST** (49 B019 901B), and replace the gauge part of the **SST** (49 0378 400C).

Caution

- **Do not maintain WOT in any position/range for more than 5 seconds, or transaxle damage will occur.**

5. Start the engine and firmly depress the brake pedal with the left foot, and then depress the accelerator pedal to floor (WOT) with the right.
6. When the engine speed no longer increases, quickly read the line pressure and release the accelerator pedal.
7. Shift the selector lever to N position and let the engine idle for **1 minute** or more to cool the ATF.
8. Read the line pressure at idle and at the engine stall speed for the M (1GR, 2GR) range and R position in the same manner.

Line pressure specification

Position/range	Line pressure (kPa {kgf/cm^2, psi})	
	Idle	Stall
D, M (1GR, 2GR)	330—470 {3.4—4.8, 48—68}	1,200—1,320 {12.2—13.5, 174—191}
R	490—710 {5.0—7.2, 71—102}	1,680—2,010 {17.2—20.4, 244—291}

9. Shift the selector lever to P position and turn off the engine.

Warning

- **Removing the SST when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the SST, allow the ATF to cool.**

10. Remove the **SST**.
11. Install a new square head plug in the inspection port.

Tightening torque

4.8—9.8 N·m {49—99 kgf·cm, 43—85 in·lbf}

Evaluation of line pressure test

Condition	Possible cause
Low pressure in all positions/ranges	• Worn oil pump • Oil leaking from oil pump, control valve body, and/or transaxle case • Pressure regulator valve stuck • Pressure control solenoid malfunction • Solenoid reducing valve stuck
Low pressure in D, M (1GR, 2GR) only	• Oil leaking from forward clutch hydraulic circuit
Low pressure in M (2GR) only	• Oil leaking from 2-4 brake band hydraulic circuit
Low pressure in M (1GR), R only	• Oil leaking from low and reverse brake hydraulic circuit
Low pressure in R only	• Oil leaking from reverse clutch hydraulic circuit
Higher pressure in all positions/ranges	• Pressure control solenoid malfunction and/or open harness • Pressure regulator valve stuck • TCM malfunction

Stall Test

1. Perform mechanical system test preparation. (See 05–17A–4 Mechanical System Test Preparation.)
2. Start the engine and shift the selector lever to R position.

Caution

- **Do not maintain WOT in any position/range for more than 5 seconds, or transaxle damage will occur.**

3. Firmly depress the brake pedal with the left foot, and depress the accelerator pedal to floor (WOT) with the right.
4. When the engine speed no longer increases, quickly read the engine speed and release the accelerator pedal.
5. Shift the selector lever to N position and let the engine idle for **1 minute** or more to cool the ATF.
6. Perform stall tests of D, M (1GR, 2GR) ranges in the same manner.
7. Turn off the engine.

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M (1GR, 2GR)	2,200—2,800
R	

Evaluation of stall test

Condition		Possible cause
Above specification	Insufficient line pressure, torque converter pressure	• Worn oil pump
		• Oil leaking from oil pump, control valve, and/or transaxle case
		• Pressure regulator valve sticking
		• Converter relief valve sticking
		• Pressure control solenoid malfunction
	In D, M (1GR, 2GR) ranges	• Forward clutch slipping
	In M (2GR) range	• 2-4 brake band slipping
	In M (1GR) range and R position	• Low and reverse brake slipping
	In R position	• Low and reverse brake slipping • Reverse clutch slipping • Perform road test to determine whether problem is in low and reverse brake or reverse clutch • Engine braking felt in M (1GR) range: Reverse clutch is defective. • Engine braking not felt in M (1GR) range: Low and reverse brake is defective.
Below specification		• Engine lack of power

Time Lag Test

1. Perform mechanical system test preparation. (See 05–17A–4 Mechanical System Test Preparation.)
2. Start the engine and warm up the engine until the ATF temperature reaches **60—70 °C {141— 158 °F}**. Shift the selector lever from N position to D range.
3. Use a stopwatch to measure the time it takes from shifting until engagement is felt. Take 3 measurements for each test and average the results using the following formula.

Formula

$$\text{Average time lag} = \frac{\text{Time 1} + \text{Time 2} + \text{Time 3}}{3}$$

X3U517WD8

5. Perform the test for the following shifts in the same manner.
   - N position→R position

Average time lag
N position→D range: 0.4—0.7 sec.
N position→R position: 0.4—0.7 sec.

Evaluation of time lag test

Condition		Possible cause
N→D shift	More than specification	• Low line pressure • Forward clutch slipping • Oil leaking from forward clutch fluid circuit • Shift solenoid A not operating properly
	Less than specification	• Forward accumulator not operating properly • Shift solenoid A not operating properly • Excessive line pressure
N→R shift	More than specification	• Low line pressure • Low and reverse brake slipping • Reverse clutch slipping • Shift solenoid B not operating properly
	Less than specification	• Servo apply accumulator not operating properly • Shift solenoid B not operating properly • Excessive line pressure

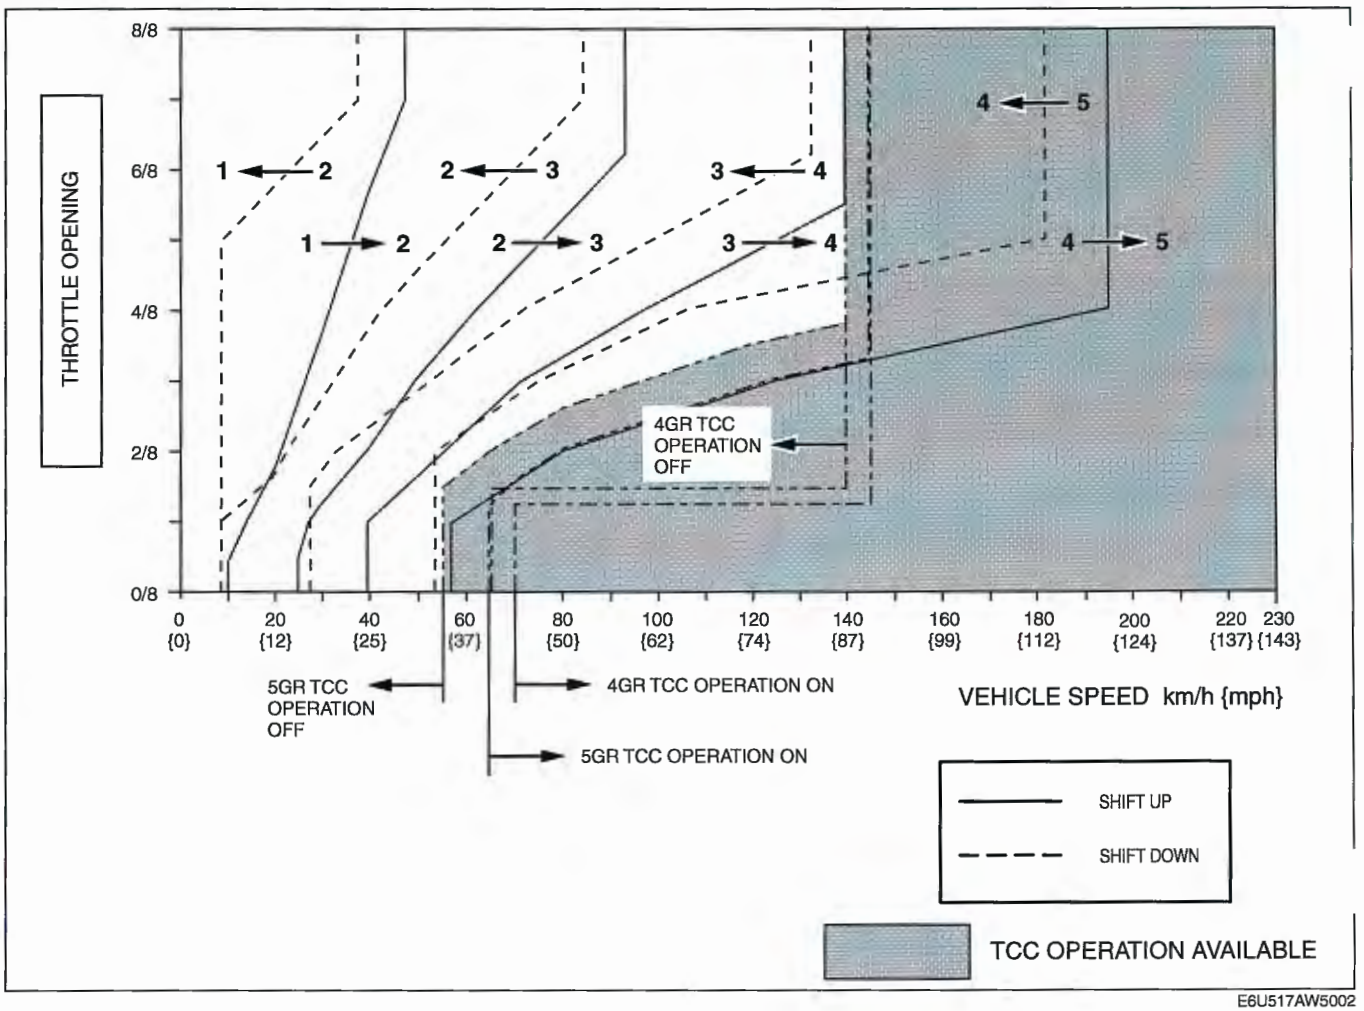
ROAD TEST [FS5A-EL]

E6U051700000W13

Road Test Preparation

1. Inspect the engine coolant. (See 01–12A–3 COOLING SYSTEM SERVICE WARNINGS [L3, AJ].) (See 01–12A–3 ENGINE COOLANT LEVEL INSPECTION [L3, AJ].)
2. Inspect the engine oil level. (See 01–11A–3 ENGINE OIL LEVEL INSPECTION [L3, AJ].)
3. Inspect the ATF level. (See 05–17A–11 Automatic Transaxle Fluid (ATF) Level Inspection.)
4. Inspect the idle speed. (See 01–10A–30 Idle Speed Inspection.)
5. Inspect the ignition timing. (See 01–10A–29 Ignition Timing Inspection.)
6. Bring up the engine and transaxle to normal operating temperature.

Shift Diagram
D range (normal mode)



E6U517AW5002

D Range Test

1. Perform road test preparation. (See 05–17A–7 Road Test Preparation.)
2. Shift the selector lever to D range.
3. Accelerate the vehicle at half and wide open.
4. Verify that 1→2, 2→3, 3→4 and 4→5 upshifts and downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
5. Drive the vehicle in 5GR, 4GR, 3GR, and 2GR and verify that kickdown occurs for 5→4, 4→3, 3→2, 2→1 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
6. Decelerate the vehicle and verify that engine braking effect is felt in 2GR, 3GR, 4GR and 5GR.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
7. Drive the vehicle and verify that TCC operation is obtained. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
D	NORMAL	Wide open throttle	$D_1 \rightarrow D_2$	46—51 {29—31}	5,550—6,200
			$D_2 \rightarrow D_3$	92—99 {58—61}	5,850—6,300
			$D_3 \rightarrow D_4$	137—147 {85—91}	5,850—6,200
			TCC ON (D_4)	142—151 {89—93}	4,400—4,650
			$D_4 \rightarrow D_5$	192—202 {120—125}	5,950—6,200
			TCC ON (D_5)	142—151 {89—93}	3,250—3,450
		Half throttle	$D_1 \rightarrow D_2$	35—48 {22—29}	4,150—5,750
			$D_2 \rightarrow D_3$	55—72 {35—44}	3,450—4,600
			$D_3 \rightarrow D_4$	83—114 {52—70}	3,500—4,800
			TCC ON (D_4)	136—153 {85—94}	4,200—4,700
			$D_4 \rightarrow D_5$	143—177 {89—109}	4,400—5,450
			TCC ON (D_5)	124—146 {77—90}	2,850—3,300
		Closed throttle position	$D_5 \rightarrow D_4$	50—56 {31—34}	1150—1250
			$D_4 \rightarrow D_3$	25—31 {16—19}	800—950
			$D_3 \rightarrow D_2$	5—11 {4—6}	250—450
			$D_2 \rightarrow D_1$	5—11 {4—6}	350—650
			$D_3 \rightarrow D_1$	5—11 {4—6}	250—450
		Kickdown	$D_5 \rightarrow D_4$	177—187 {110—115}	4,050—4,250
			$D_4 \rightarrow D_3$	129—138 {80—85}	3,950—4,200
			$D_3 \rightarrow D_2$	80—88 {50—54}	3,400—3,700
			$D_2 \rightarrow D_1$	35—40 {22—24}	2,250—2,550
	POWER	Wide open throttle	$D_1 \rightarrow D_2$	46—52 {29—32}	5,550—6,200
			$D_2 \rightarrow D_3$	92—99 {58—61}	5,850—6,300
			$D_3 \rightarrow D_4$	137—147 {85—91}	5,850—6,200
		Half throttle	$D_1 \rightarrow D_2$	29—36 {18—22}	3,400—4,350
			$D_2 \rightarrow D_3$	61—80 {38—49}	3,900—5,050
			$D_3 \rightarrow D_4$	89—119 {56—73}	3,800—5,000
		Closed throttle position	$D_4 \rightarrow D_3$	25—31 {16—19}	800—950
			$D_3 \rightarrow D_2$	5—11 {4—6}	250—450
			$D_2 \rightarrow D_1$	5—11 {4—6}	350—650
			$D_3 \rightarrow D_1$	5—11 {4—6}	250—450
		Kickdown	$D_4 \rightarrow D_3$	129—138 {80—85}	3,950—4,200
			$D_3 \rightarrow D_2$	80—88 {50—54}	3,400—3,700
			$D_2 \rightarrow D_1$	35—40 {22—24}	2,250—2,550

M Range Test

1. Perform road test preparation. (See 05–17A–7 Road Test Preparation.)
2. Shift the selector lever to M range.
3. Verify that 1→2, 2→3, 3→4 and 4→5 upshifts and 5→4, 4→3, 3→2, and 2→1 downshifts are obtained by manual shifting of the selector lever forward and back.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
4. Decelerate the vehicle and verify that 5→4, 4→3 3→2, 2→1 and 3→1 downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
5. Decelerate the vehicle and verify that engine braking effect is felt in all gears.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)
6. Drive the vehicle and verify that TCC operation is obtained in 4GR and 5GR. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–17A–33 TCM INSPECTION [FS5A-EL].) (See ATX Workshop Manual.)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed km/h {mph}	Turbine speed (rpm)
M	Manual	Half throttle	TCC ON (M_4)	136—153 {85—94}	4,200—4,700
			TCC ON (M_5)	128—142 {80—88}	2,950—3,200
		All round	M_5→M_4	27—33 {17—20}	650—750
			M_4→M_3	27—33 {17—20}	850—1000
			M_3→M_2	7—13 {5—8}	300—550
			M_2→M_1	7—13 {5—8}	450—800
			M_3→M_1	7—13 {5—8}	300—550

P Position Test

1. Shift into P position on a gentle slope. Release the brake and verify that the vehicle does not roll.
   - If the vehicle rolls, inspect the ATX. (See ATX Workshop Manual.)

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL]

E6U051719001W03

Automatic Transaxle Fluid (ATF) Condition Inspection

1. One way of determining whether the transaxle should be disassembled is by noting:
   - If the ATF is muddy or varnished.
   - If the ATF smells strange or unusual.

ATF Condition

Condition			Possible cause
Clear red		Normal	—
Light red: pink		Contaminated with water	• Broken oil cooler inside of radiator • Poor filler tube installation: Problem could be occurring to parts inside the transaxle by water contamination. It is necessary to overhaul transaxle and detect defected parts. If necessary, exchange transaxle.
Reddish brown	Has burnt smell and metal specks are found	Deteriorated ATF	Defect powertrain components inside of transaxle: Specks cause wide range of problems by plugging up in oil pipe, control valve body and oil cooler in radiator. • When large amount of metal specks are found, overhaul transaxle and detect defected parts. If necessary, exchange transaxle. • Implement flushing operation as there is a possibility to have specks plugging up oil pipe and/or oil cooler inside of radiator.
	Has no burnt smell	Normal	• Discoloration by oxidation

Automatic Transaxle Fluid (ATF) Level Inspection

Caution
- **If there is no ATF adhering to the dipstick after warming up the engine, there is insufficient ATF. Therefore do not drive the vehicle as it could damage the ATX.**
- **If a final inspection of the ATF level is performed without driving the vehicle, or the ATF amount is inspected while the ATF temperature is not at about 60—70 °C {140—158 °F}, the ATX could be damaged because the ATF level inspection would be incorrect.**
- **If too much ATF is added, the ATF temperature will increase and oil could leak from the breather hose.**

Note
- The dipstick of the FS5A-EL type measures the ATF level on the differential side and, under the condition that the ATF temperature on the differential side does not rise even after warming up the engine, ATF adhering to the end of the dipstick is normal.

1. Park the vehicle on level ground.
2. Apply the parking brake and position wheel chocks securely to prevent the vehicle from rolling.
3. Verify visually that there is no ATF leakage from the oil hose or housing.

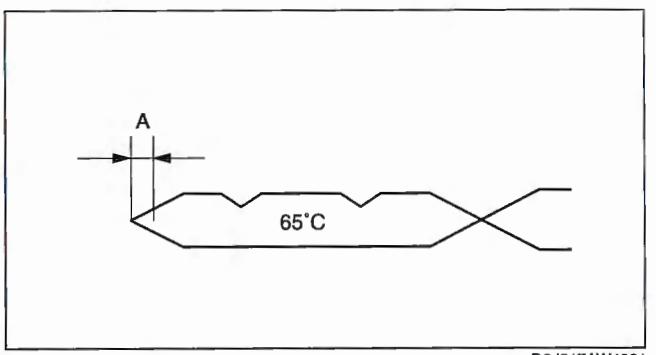
Caution
- **If the oil level decreases dramatically while warming up the engine, do not shift the selector lever as it could damage the ATX.**

4. Start the engine and warm it up in the P position.
5. Verify that the ATF level is in the range while the engine is idling.

ATF adherence range
A: Within 5 mm {0.197 in}

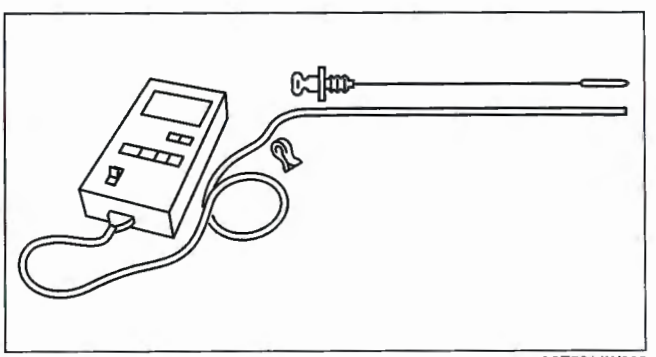
- If necessary, add ATF to the specification.

ATF type
ATF M-V



D6J517AW4001

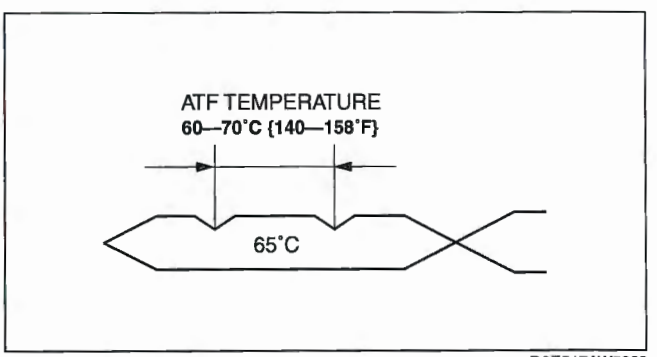
6. Shift the selector lever and pause momentarily in each range (P—M) while depressing the brake pedal.
7. Shift the selector lever to P position.
8. Drive on city roads at a minimum of 5 km.
9. Adjust the length or thermometer probe so that the length is the same as the depth gauge, and hold the probe with a paper holder. Insert into the filler tube and measure the temperature.
10. Warm up the engine until the ATF reaches **60—70 °C {140—158 °F}**.



A6E5614W003

11. Verify that the ATF level is in the range while the engine is idling.
    - If necessary, add ATF to the specification.

ATF type
ATF M-V



D6E517AW5003

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL]

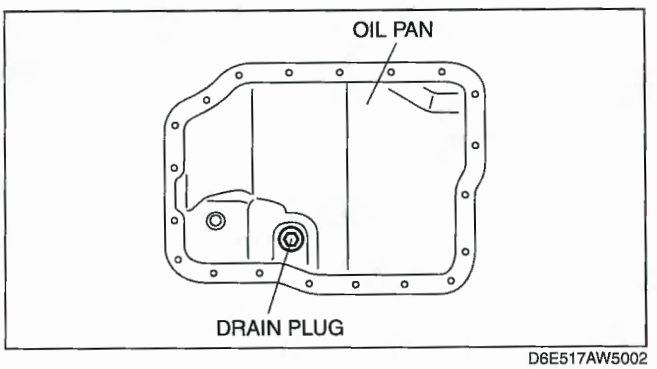
E6U051719001W04

Warning
- **When the transaxle and ATF are hot, they can badly burn you. Turn off the engine and wait until they are cool before changing the ATF.**

1. Remove the oil dipstick.
2. Remove the oil drain plug and washer.
3. Drain the ATF into a container.
4. Install a new washer and drain plug.

Tightening torque
29.4—41.2 N·m {3.0—4.2 kgf·m, 22—30 ft·lbf}

5. Add the specified ATF until ATF level reaches lower notch of dipstick type of ATF through the oil filler tube.



D6E517AW5002

ATF type
ATF M-V

Capacity (approx. quantity)
Draining ATF from drain plug: 3.0 L {3.2 US qt, 2.4 Imp qt}
Overhauling ATX: 5.0 L {5.3 US qt, 4.4 Imp qt}

6. Adjust the ATF amount to within the specified range according to the ATF inspection procedure. (See 05–17A–10 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].)

Note
- The full amount of ATF for the ATX is as follows

Capacity (approx. quantity)
8.14 L {8.6 US qt, 7.2 Imp qt}

TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL]

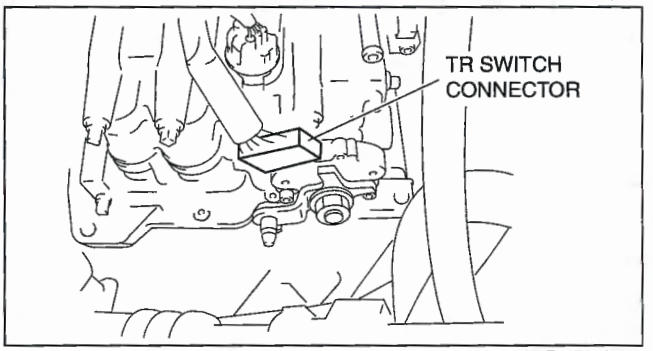
E6U051719200W07

Operating Inspection
1. Verify that the starter operates only when the ignition switch is at the START position with the selector lever in P or N position.
   - If not as specified, adjust the TR switch.
2. Verify that the back-up lights illuminate when shifted to R position with the ignition switch at the ON position.
   - If not as specified, adjust the TR switch.

Continuity Inspection

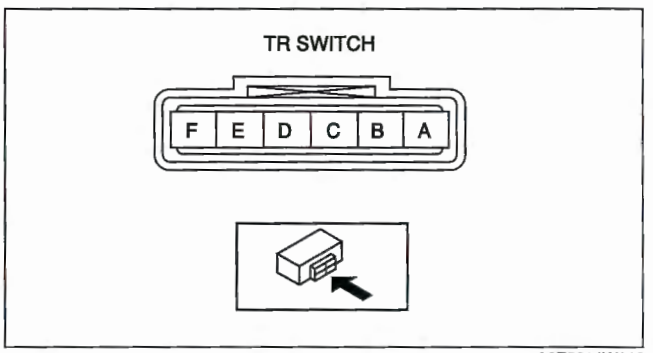
Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
3. Disconnect the TR switch connector.



D6E517AW5004

4. Inspect for continuity at the TR switch.
   - If not as specified, adjust the TR switch and go to Step 4.



A6E5614W010

○—○ : Continuity

Position/Range	Connector terminal			
	A	F	D	E
P	○—○			
R			○—○	
N	○—○			
D				

B3E0517W006

Transaxle range (TR) switch

Terminal	Position/Range	Resistance (ohm)
B—C	P	4,085—4,515
	R	1,425—1,575
	N	713—788
	D	132—390

5. Reinspect for continuity at TR switch.
   - If not as specified, replace the TR switch.
6. Connect the TR switch connector.
7. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
8. Connect the negative battery cable.

TRANSAXLE RANGE (TR) SWITCH REMOVAL/INSTALLATION [FS5A-EL]

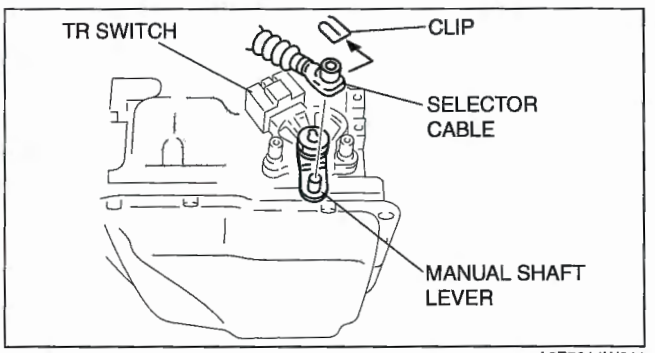
E6U051719200W08

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)

Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

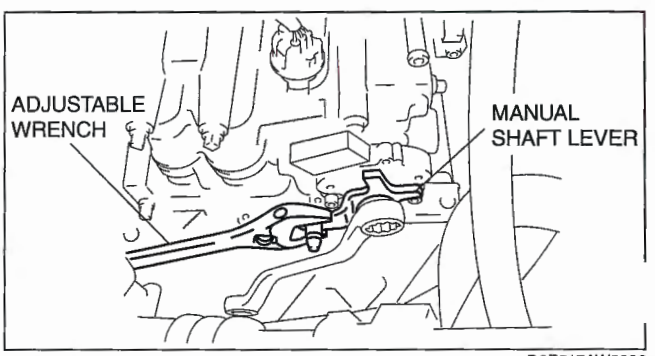
3. Disconnect the TR switch connector.
4. Remove the clip and disconnect the selector cable.

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



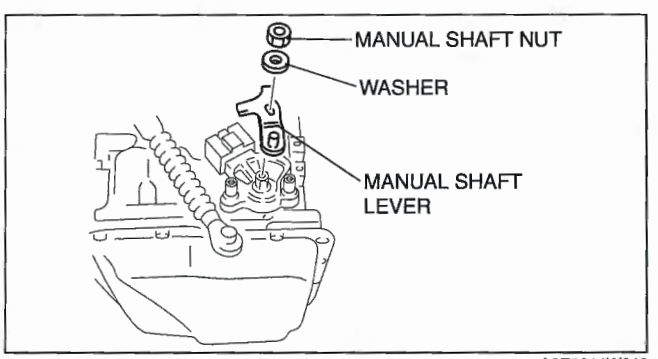
A6E5614W011

5. Set the adjustable wrench as shown to hold the manual shaft lever.
6. Remove the manual shaft nut and washer.



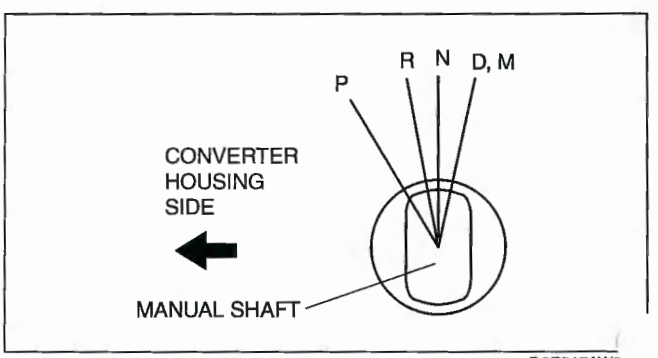
D6E517AW5006

7. Remove the manual shaft lever.
8. Remove the TR switch.



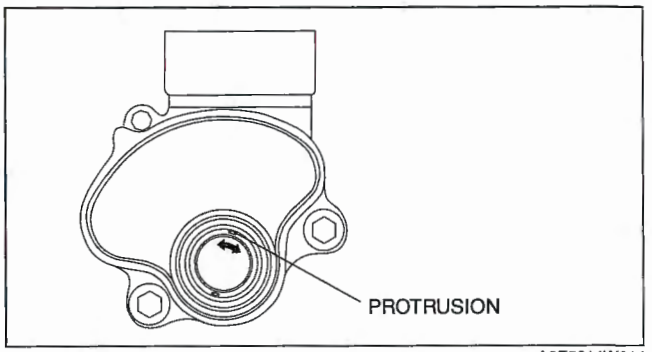
A6E5614W012

9. Rotate the manual shaft to the converter housing side fully, then return 2 notches to set the N position.

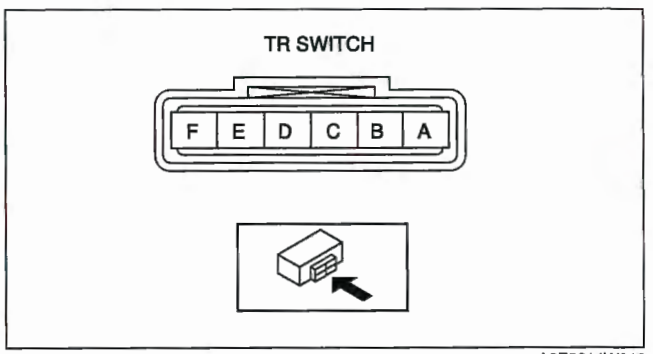


D6E517AW5

10. Turn the protrusion at resistance between the terminals B and C become 750 ohms.

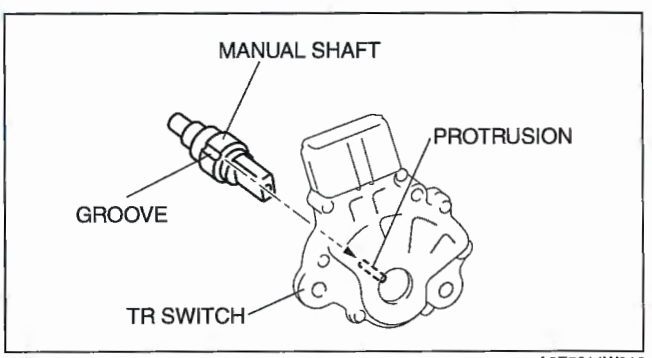


A6E5614W014



A6E5614W010

11. Install the TR switch while aligning the protrusion and groove as shown.
12. Hand-tighten the TR switch mounting bolts.



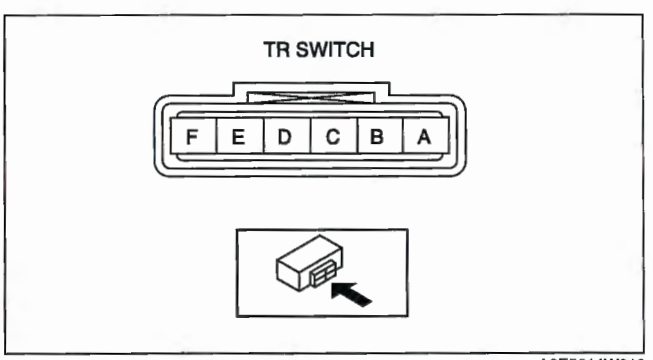
A6E5614W016

13. Inspect the resistance between the terminals B and C.
    - If not as specified, readjust the TR switch. (See 05–17A–17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)

    Resistance
    750 ohms

14. Tighten the TR switch mounting bolts.

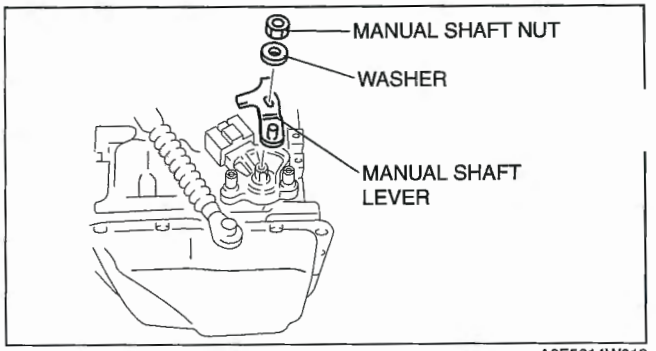
    Tightening torque
    8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



A6E5614W010

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**

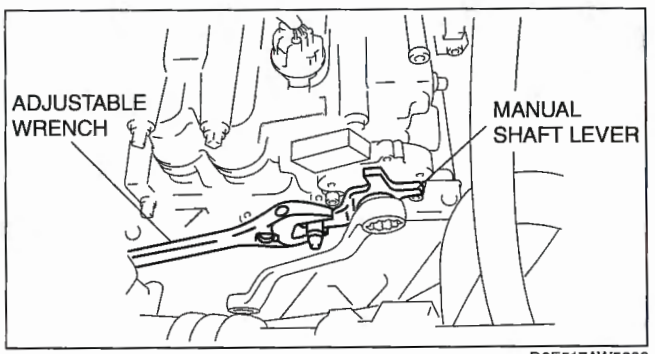
15. Install the manual shaft lever and the washer.



A6E5614W012

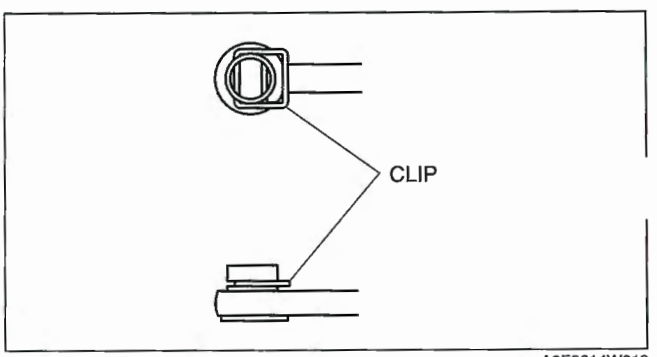
16. Set the adjustable wrench as shown to hold the manual shaft lever, and tighten the manual shaft nut.

    Tightening torque
    32—46 N·m {3.2—4.7 kgf·m, 24—33 ft·lbf}



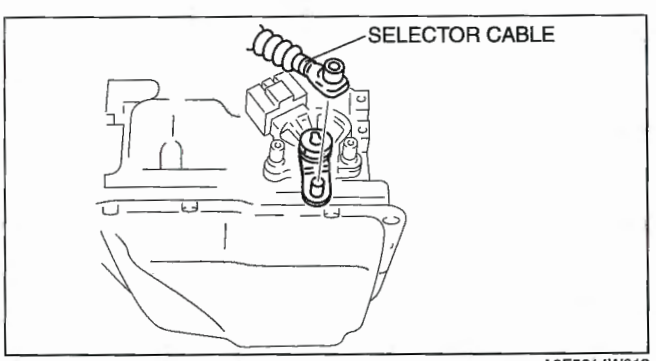
D6E517AW5006

17. Install the clip to the selector cable as shown in the figure.
18. Shift the selector lever to P position.
19. Turn the manual shaft lever to P position.



A6E5614W018

20. Connect the selector cable.
21. Inspect for continuity at the TR switch. (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)
    - If not as specified, readjust the TR switch. (See 05–17A–17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)
22. Connect the TR switch connector.
23. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)



A6E5614W019

24. Connect the negative battery cable.
25. Inspect operation of the TR switch. (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)
    - If not as specified, readjust the TR switch. (See 05–17A–17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].)

TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL]

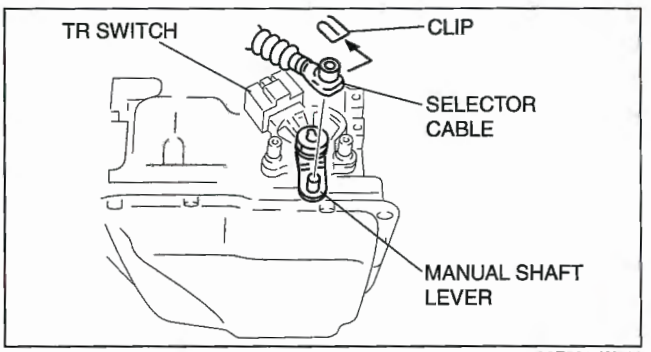
E6U051719200W09

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)

Caution

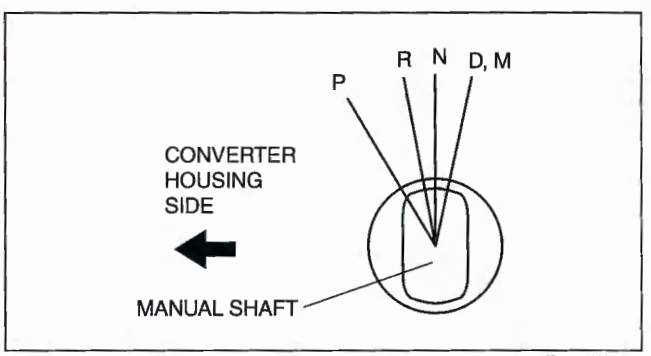
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

3. Remove the clip and disconnect the selector cable.



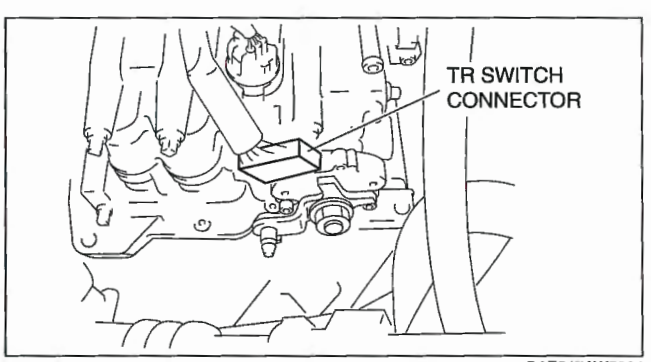
A6E5614W011

4. Rotate the manual shaft to the converter housing side fully, then return 2 notches to set the N position.



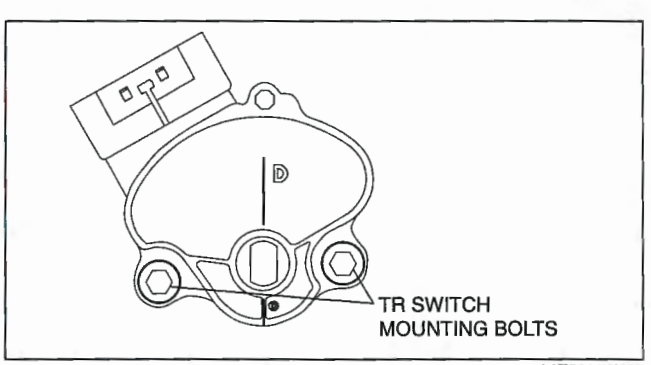
D6E517AW5007

5. Disconnect the TR switch connector.



D6E517AW5004

6. Loosen the TR switch mounting bolts.



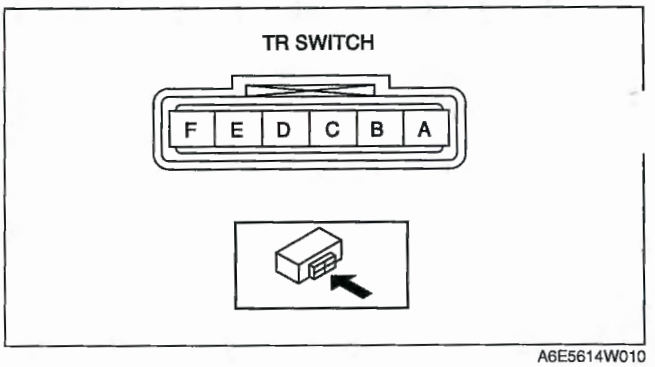
A6E5614W020

7. Measure the resistance between the terminals B and C.
8. Adjust the switch to the point as follow.

Resistance standard value
750 ohms

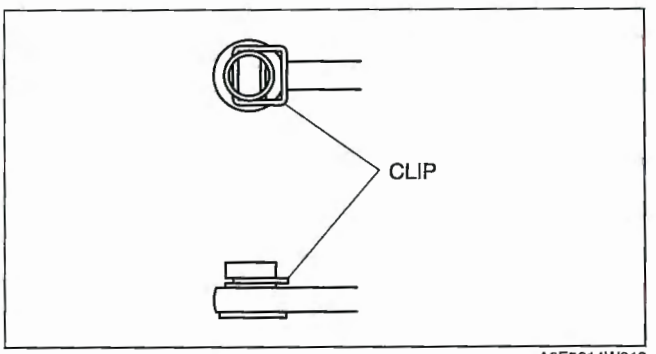
9. Tighten the TR switch mounting bolts.

Tightening torque
8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



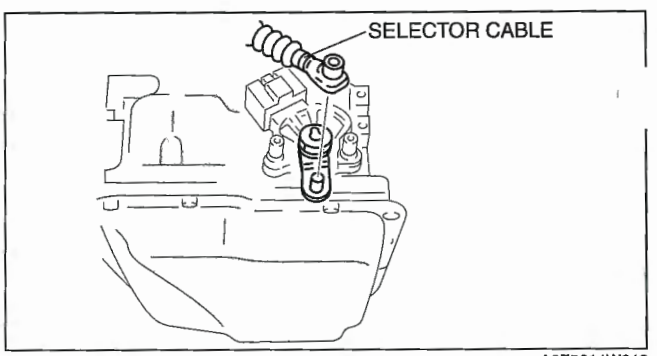
A6E5614W010

10. Move the selector lever to N position.
11. Verify that the TR switch is aligned with N position.
12. Connect the TR switch connector.
13. Install the clip to the selector cable as shown in the figure.



A6E5614W018

14. Connect the selector cable to the manual shaft lever as shown in the figure.
15. Inspect operation of the TR switch. (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].) (See 05–17A–12 TRANSAXLE RANGE (TR) SWITCH INSPECTION [FS5A-EL].)
    - If not as specified, readjust the TR switch.
16. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
17. Connect the negative battery cable.



A6E5614W019

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [FS5A-EL]

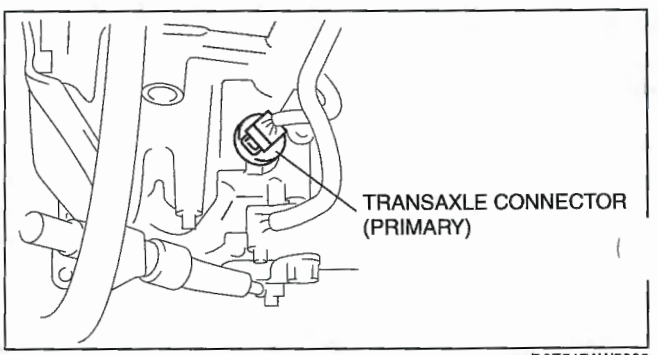
E6U051719200W10

On-Vehicle Inspection

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)

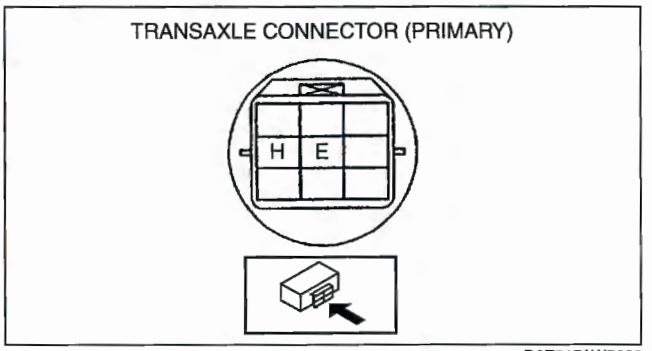
Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

3. Disconnect the transaxle connector (primary).



D6E517AW5008

4. Measure the resistance between the terminals E and H.
   - If it is out of specification, perform the off-vehicle inspection of TFT sensor. (See 05–17A–20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)



D6E517AW5009

Transaxle fluid temperature (TFT) sensor

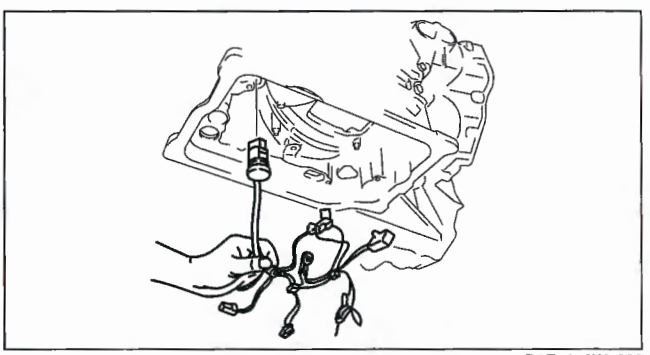
ATF temperature (°C {°F})	Resistance (kilohm)
–20 {–4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

5. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
6. Connect the negative battery cable.

Off-Vehicle Inspection

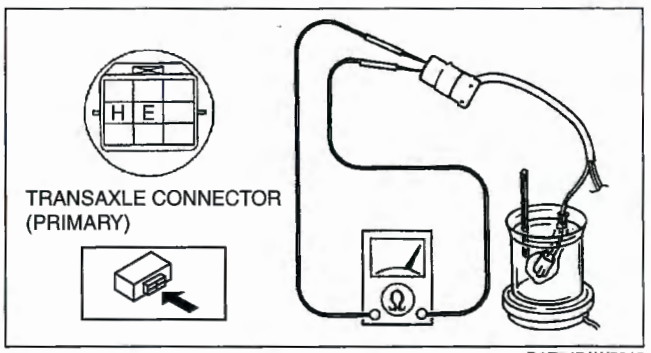
Warning
- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing ATF.**

1. Disconnect the negative battery cable.
2. Remove the coupler component. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
3. Place the TFT sensor and a thermometer in ATF as shown, and heat the ATF gradually.



D6E517AW5036

4. Measure resistance between the terminals of the TFT sensor.
   - If not as specified, replace the TFT sensor. (See 05–17A–20 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL].)



D6E517AW5015

Transaxle fluid temperature (TFT) sensor

ATF temperature (°C {°F})	Resistance (kilohm)
-20 {-4}	236—324
0 {32}	84.3—110
20 {68}	33.5—42.0
40 {104}	14.7—17.9
60 {140}	7.08—8.17
80 {176}	3.61—4.15
100 {212}	1.96—2.24
120 {248}	1.13—1.28
130 {266}	0.87—0.98

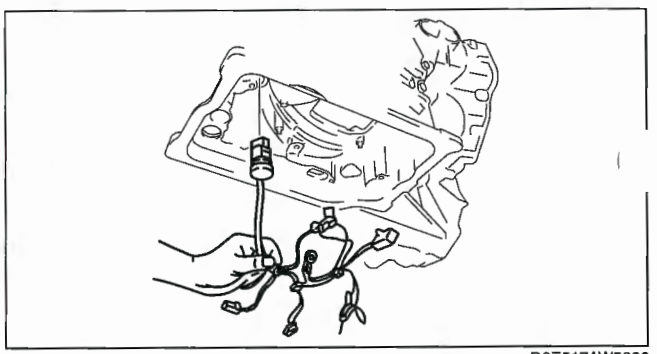
TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [FS5A-EL]

E6U051719200W11

Warning

- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing the ATF.**

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Drain the ATF.
4. Remove the oil pan.
5. Remove the primary control valve body. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
6. Remove the coupler component.
7. Install the coupler component.
8. Install the primary control valve body. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
9. Install the oil pan. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
10. Install the under cover.
11. Connect the negative battery cable.
12. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
13. Perform the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
14. Perform the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)



D6E517AW5036

OIL PRESSURE SWITCH INSPECTION [FS5A-EL]

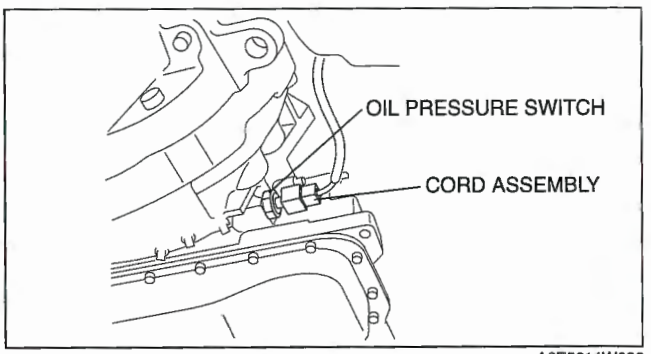
E6U051700000W14

Caution

- **Water or foreign objects entering the connector can cause poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

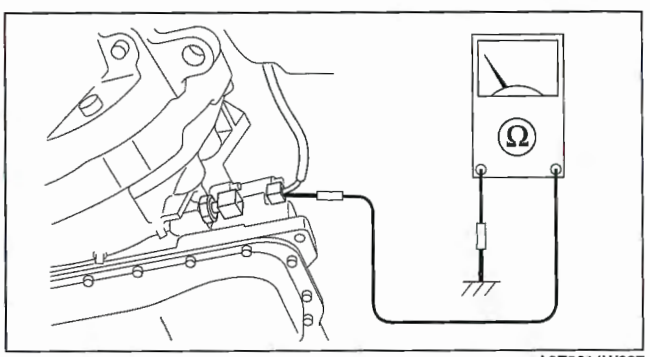
On-vehicle Inspection (harness inspection)

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the cord assembly connector.



A6E5614W026

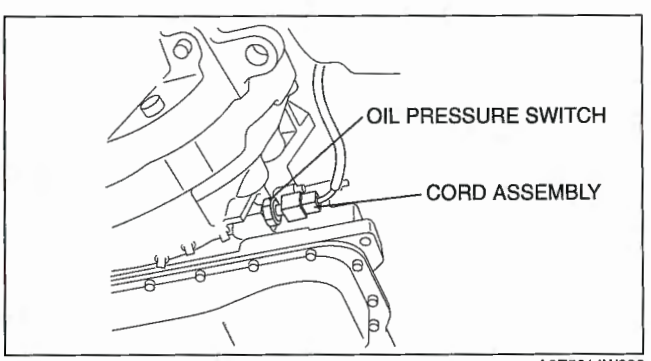
4. Verify that there is no continuity between cord assembly terminal and ground.
   - If as continuity, inspect the cord assembly.
   - If the cord assembly is okay, inspect the oil pressure switch. (See 05–17A–21 On-vehicle Inspection (oil pressure switch inspection).)
5. Connect the cord assembly connector.
6. Install the under cover.
7. Connect the negative battery cable.



A6E5614W027

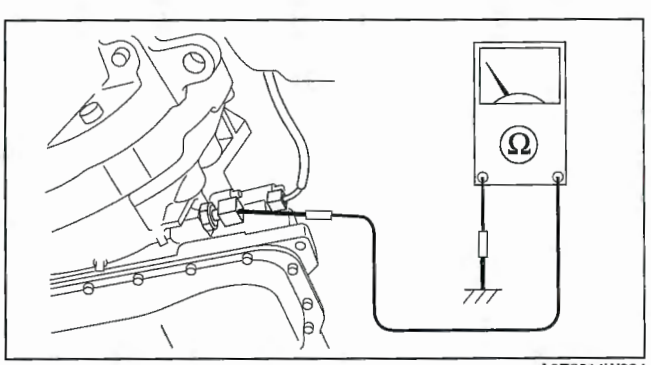
On-vehicle Inspection (oil pressure switch inspection)

1. Remove the under cover.
2. Disconnect the cord assembly connector.
3. Start the engine, with gear position in N or P.
4. Reaffirm that there is no continuity between cord assembly terminal and ground.
5. Firmly depress the brake pedal with the left foot.
6. Shift the selector lever to D range.



A6E5614W026

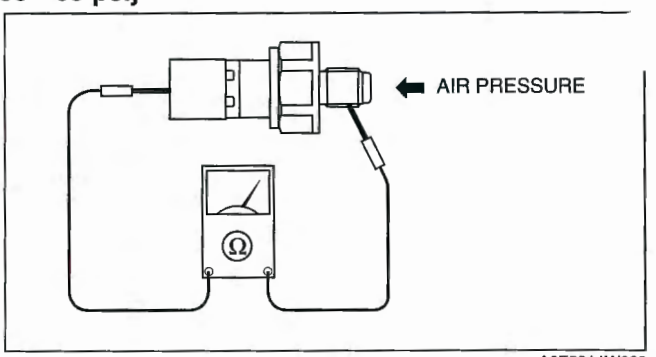
7. Verify that there is continuity between oil pressure switch terminal and ground.
   - If not as specified, replace the oil pressure switch. (See 05–17A–22 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
8. Connect the oil pressure switch connector.
9. Install the under cover.
10. Connect the negative battery cable.



A6E5614W094

Off-vehicle inspection

1. Remove the oil pressure switch.
2. Apply air pressure at **400—440 kPa {4.1—4.4 kgf/cm^2,58—63 psi}**
3. Inspect continuity the between oil pressure switch terminal and screw part.
   - If not as continuity, replace the oil pressure switch. (See 05–17A–22 OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL].)
4. Install the oil pressure switch.



A6E5614W028

OIL PRESSURE SWITCH REMOVAL/INSTALLATION [FS5A-EL]

E6U051700000W15

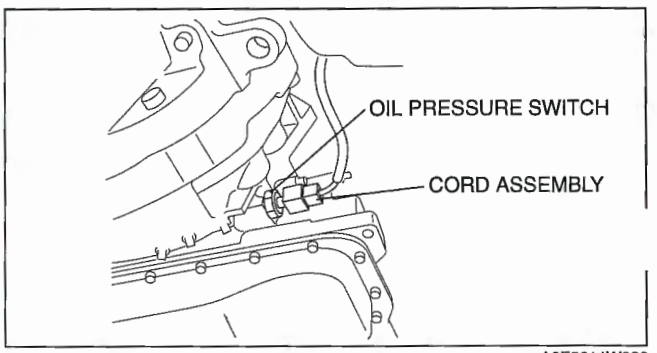
Warning

- **When the transaxle and ATF are hot, they can badly burn. Turn off the engine and wait until they are cool before replacing ATF.**

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the cord assembly connector.
4. Remove the oil pressure switch.
5. Install the oil pressure switch.

Tightening torque
17.1—22.1N·m {1.75—2.25 kgf·m, 13—16 ft·lbf}

6. Connect the oil pressure switch connector.
7. Install the under cover.
8. Connect the negative battery cable.



A6E5614W026

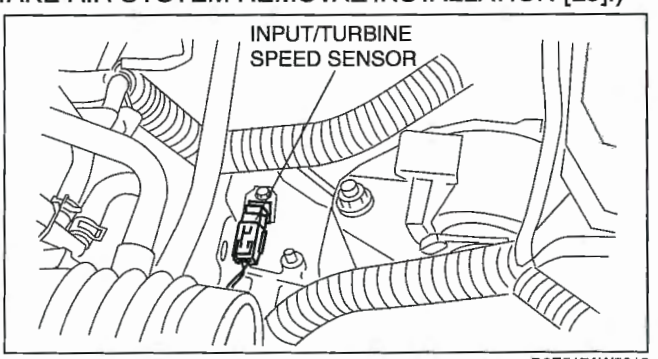
INPUT/TURBINE SPEED SENSOR INSPECTION [FS5A-EL]

E6U051719200W12

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

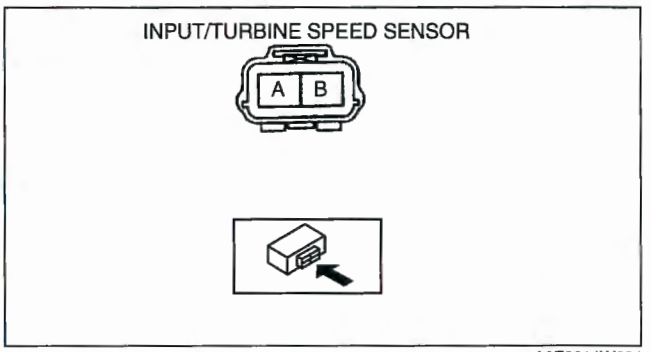
1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
4. Disconnect the input/turbine speed sensor connector.



D6E517AW5012

5. Measure resistance between the terminals of the input/turbine speed sensor.
   - If not as specified, replace the input/turbine speed sensor.

   Input/turbine speed sensor resistance
   250—600 ohms (ATF temperature: –40—160 °C {–40—320 °F})



A6E5614W031

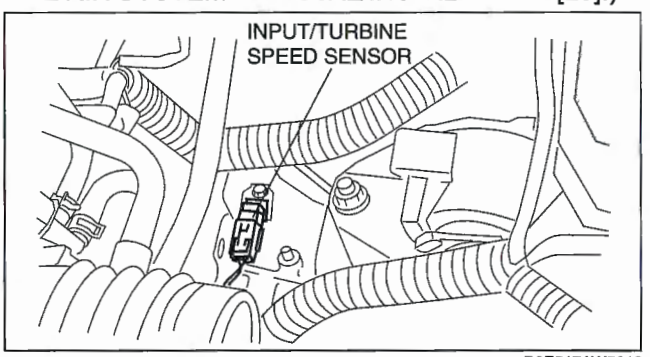
6. Connect the input/turbine speed sensor connector.
7. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
8. Install the battery and battery tray.
9. Connect the negative battery cable.

INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [FS5A-EL]

E6U051719200W13

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
4. Disconnect the input/turbine speed sensor connector.
5. Remove the input/turbine speed sensor.
6. Apply ATF to a new O-ring and install it on a new input/turbine speed sensor.
7. Install the input/turbine speed sensor.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}



D6E517AW5012

   Connect the input/turbine speed sensor connector.
9. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
10. Install the battery and battery tray.
11. Connect the negative battery cable.

INTERMEDIATE SENSOR INSPECTION [FS5A-EL]

E6U051719200W14

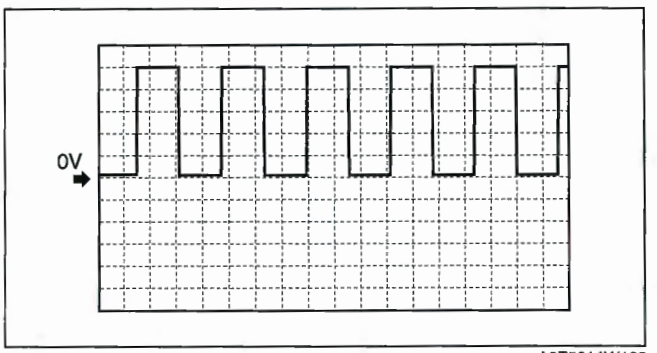
1. Connect the WDS or equivalent, drive the vehicle, and verify the input value of the ISS PID.
   - If the input value is 0 rpm, perform the "Power Supply Voltage Inspection", "Open Circuit Inspection", or "Short Circuit Inspection".
   - If the input value is other than 0 rpm, perform the "Visual Inspection" or "Wave Profile Inspection".

Visual Inspection

1. Remove the intermediate sensor. (See 05–17A–25 INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
2. Make sure that the sensor is free of any metallic shavings or particles.
   - If any are found on the sensor, clean them off.
3. Install the intermediate sensor. (See 05–17A–25 INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL].)

Wave profile Inspection

1. Remove the TCM. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
2. Connect WDS or equivalent to DLC connector.
3. Connect oscilloscope test leads to the following TCM connector terminals.
   - (+) lead: TCM terminal 2L
   - (-) lead: TCM terminal 1P
4. Start the engine.
5. Monitor VSS PID.
6. Inspect wave profile.
   - TCM terminal: 2L (+) - 1P (-)
   - Oscilloscope setting: 1 V/DIV (Y), 2.5 ms/DIV (X), DC range
   - Vehicle condition: drive the vehicle with 32 km/h{20 mph}
     — If wave profile or voltage are out of specifications, carry out the "Open Circuit Inspection" or "Short Circuit Inspection"



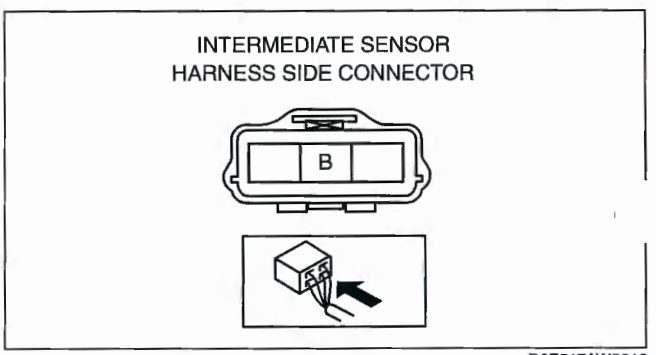
A6E5614W102

Power Supply Voltage Inspection

1. Disconnect the intermediate sensor connector.
2. Turn the ignition switch to ON.
3. Measure voltage at intermediate sensor connector terminal B (wiring harness side).

   Intermediate sensor voltage
   4.5—5.5 V

   - If voltage is okay, go to Open Circuit Inspection and Short Circuit Inspection.
   - If voltage is wrong, repair wiring harness between intermediate sensor and TCM.



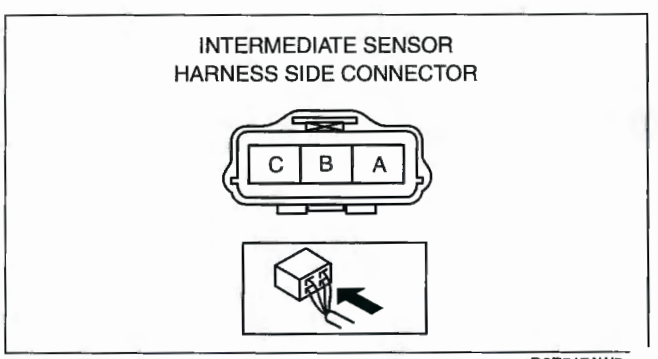
D6E517AW5013

Open Circuit Inspection

1. Inspect the following circuit for open.
   - Power circuit (intermediate sensor connector terminal A to main relay terminal D)
   - Ground circuit (intermediate sensor connector terminal C to GND)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.

Short Circuit Inspection

1. Inspect the following circuit for short.
   - Power circuit (intermediate sensor connector terminal A to main relay terminal D)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.



D6E517AWF

Secondary Gear Inspection

1. Remove the intermediate sensor. (See 05–17A–25 INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL].)
   Shift the selector lever to N position.
   Inspect secondary gear surface via intermediate sensor installation hole while rotating the front tire manually.
   (1) Is secondary gear free of damage and cracks?
   (2) Is secondary gear free of any metallic shavings or particles?
   - If secondary gear is okay, replace the intermediate sensor.
   - If there is a problem, clean or replace the secondary gear.

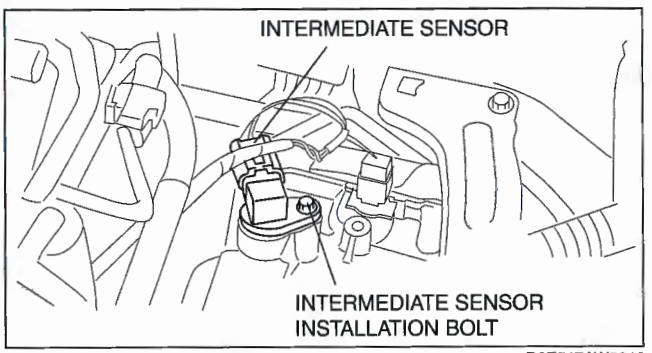
INTERMEDIATE SENSOR REMOVAL/INSTALLATION [FS5A-EL]

E6U051719200W15

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**
- **If foreign materials are stuck to the intermediate sensor, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the intermediate sensor during installation.**

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Disconnect the intermediate sensor connector.
4. Remove the intermediate sensor.
5. Apply ATF to a new O-ring and install it on a new intermediate sensor.

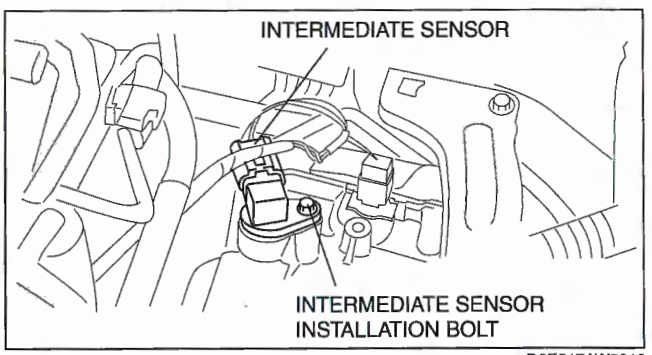


D6E517AW5016

6. Install the intermediate sensor.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Connect the intermediate sensor connector.
8. Install the battery and battery tray.
9. Connect the negative battery cable.



D6E517AW5016

VEHICLE SPEED SENSOR (VSS) INSPECTION [FS5A-EL]

E6U051719200W16

1. Connect the WDS or equivalent, drive the vehicle, and verify the input value of the OSS PID.
   - If the input value is 0 rpm, perform the "Power Supply Voltage Inspection", "Open Circuit Inspection", or "Short Circuit Inspection".
   - If the input value is other than 0 rpm, perform the "Visual Inspection" or "Wave Profile Inspection".

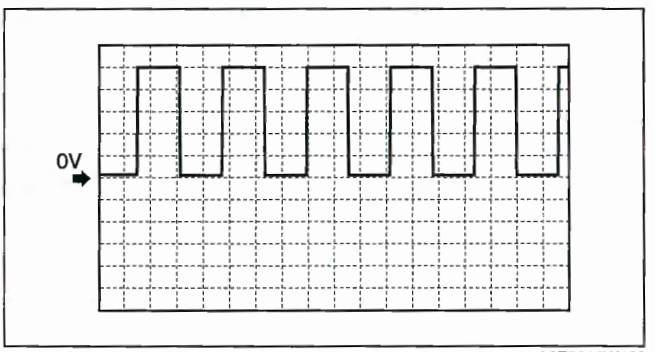
Visual Inspection

1. Remove the VSS. (See 05–17A–27 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL].)
2. Make sure that the sensor is free of any metallic shavings or particles.
   - If any are found on the sensor, clean them off.

   Install the VSS. (See 05–17A–27 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL].)

Wave profile Inspection

1. Remove the TCM. (See 05–17A–38 TCM REMOVAL/INSTALLATION [FS5A-EL].)
2. Connect WDS or equivalent to DLC connector.
3. Connect oscilloscope test leads to the following TCM connector terminals.
   - (+) lead: TCM terminal 2P
   - (-) lead: TCM terminal 1P
4. Start the engine.
5. Monitor VSS PID.
6. Inspect wave profile.
   - TCM terminal: 2P (+) - 1P (-)
   - Oscilloscope setting: 1 V/DIV (Y), 2.5 ms/DIV (X), DC range
   - Vehicle condition: drive the vehicle with 32 km/h{20 mph}
     — If wave profile or voltage are out of specifications, carry out the "Open Circuit Inspection" or "Short Circuit Inspection"



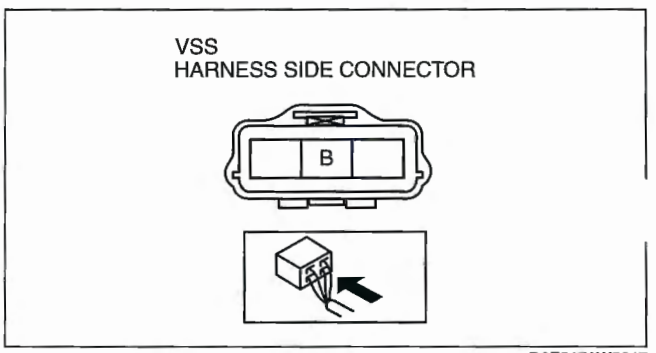
A6E5614W102

Power Supply Voltage Inspection

1. Disconnect the VSS connector.
2. Turn the ignition switch to ON.
3. Measure voltage at VSS connector terminal B (wiring harness side).

   Vehicle speed sensor (VSS) voltage
   4.5—5.5 V

   - If voltage is okay, go to Open Circuit Inspection and Short Circuit Inspection.
   - If voltage is wrong, repair wiring harness between VSS and TCM.



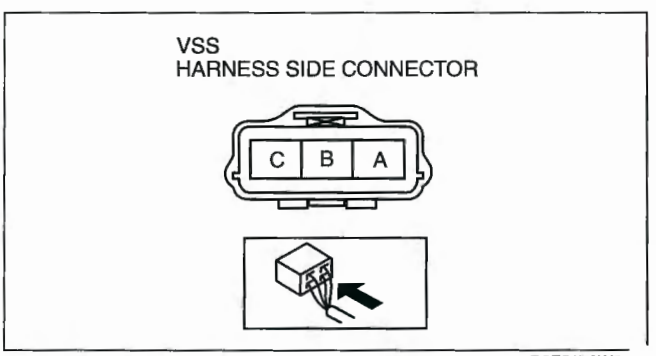
D6E517AW5017

Open Circuit Inspection

1. Inspect the following circuit for open.
   - Power circuit (VSS connector terminal A to main relay terminal D)
   - Ground circuit (VSS connector terminal C to GND)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.

Short Circuit Inspection

1. Inspect the following circuit for short.
   - Power circuit (VSS connector terminal A to main relay terminal D)
   - If an open circuit or short circuit is found, repair the malfunctioning wiring harness.
   - If there are no open or short circuits, perform the sensor rotor inspection.



D6E517AW

Sensor Rotor Inspection

1. Remove the VSS. (See 05–17A–27 VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL].)
   Shift the selector lever to N position.
   Inspect sensor rotor surface via VSS installation hole while rotating the front tire manually.
   (1) Is sensor rotor free of damage and cracks?
   (2) Is sensor rotor free of any metallic shavings or particles?
   - If sensor rotor is okay, replace the VSS.
   - If there is a problem, clean or replace the sensor rotor.

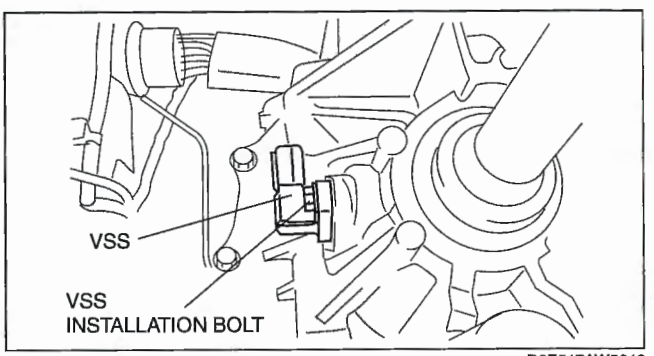
VEHICLE SPEED SENSOR (VSS) REMOVAL/INSTALLATION [FS5A-EL]

E6U051719200W17

Caution

- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**
- **If foreign materials are stuck to the VSS, disturbance by magnetic flux can cause sensor output to be abnormal and thereby negatively affect control. Make sure that foreign materials such as iron filings are not stuck to the VSS during installation.**

1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Disconnect the VSS connector.
4. Remove the VSS.
5. Apply ATF to a new O-ring and install it on a new VSS.

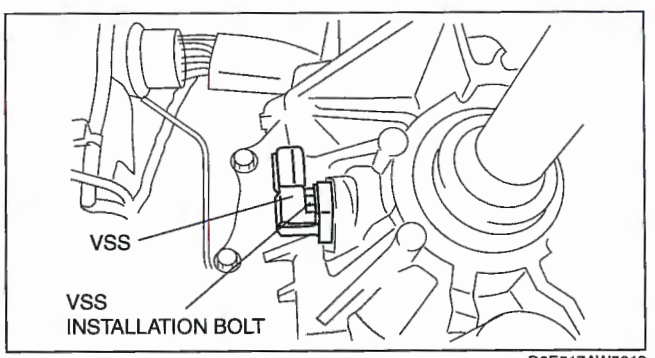


D6E517AW5019

6. Install the VSS.

   Tightening torque
   8—11 N·m {82—112 kgf·cm, 71—97 in·lbf}

7. Connect the VSS connector.
8. Install the under cover.
9. Connect the negative battery cable.



D6E517AW5019

SOLENOID VALVE INSPECTION (PRIMARY CONTROL VALVE BODY) [FS5A-EL]

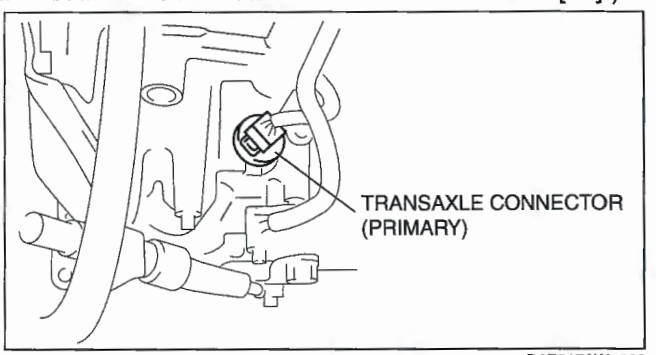
E6U051721101W02

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
3. Disconnect the transaxle connector (primary).

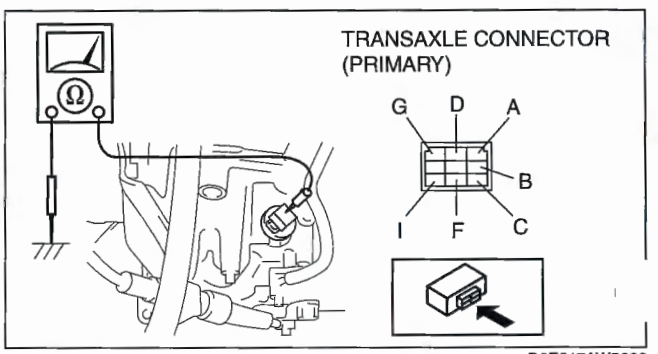
Note
- When inspecting the pressure control solenoid, connect the ground connection to the ground terminal (terminal I) of the pressure control solenoid inside the solenoid valve connector.



D6E517AW5008

4. Measure the resistance between the following terminals.
   - If not as specified, inspect the ground, then perform the operating inspection.

Primary control valve body (ATF temperature: –40—150 °C {–40—302 °F})



D6E517AW5020

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Shift solenoid A	1.0—4.2
C—GND	Shift solenoid B	1.0—4.2
G—GND	Shift solenoid C	1.0—4.2
B—GND	Shift solenoid D	10.9—26.2
F—GND	Shift solenoid E	10.9—26.2
D—I	Pressure control solenoid A	2.4—7.3

5. Connect the transaxle connector (primary).
6. Install the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
7. Connect the negative battery cable.

Operating Inspection

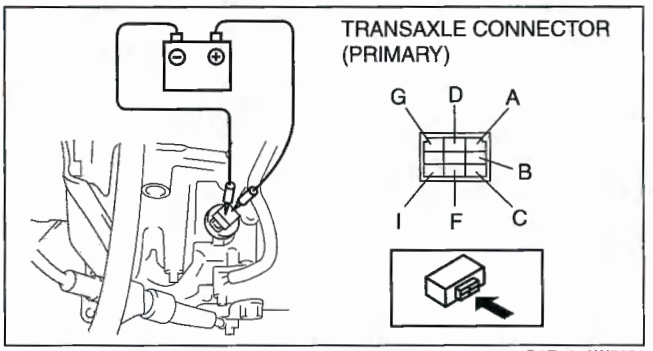
1. Disconnect the transaxle connector (primary).

Caution
- **Do not apply battery position voltage to terminals A, B, C, D, F and G for more than three seconds.**

Note
- Because the operation sound of the valves is small, perform inspection in a quiet place.

2. Apply battery positive voltage to terminals A,B,C, F or G and battery negative voltage to GND, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If the transaxle harness is okay, perform the resistance inspection (off-vehicle inspection).
     — If there is a problem, repair or replace the transaxle harness.

3. Apply battery positive voltage to terminal D and battery negative voltage to terminal I, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If transaxle harness is okay, perform the resistance inspection (off-vehicle inspection)
     — If there is a problem, repair or replace the transaxle harness.



D6E517AW5021

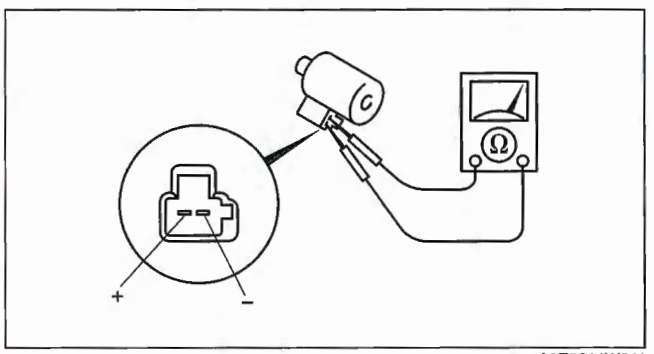
Resistance Inspection (Off-Vehicle Inspection)

1. Disconnect the negative battery cable.
2. Remove the solenoid valve(s). (See 05–17A–30 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
3. Measure the resistance of each solenoid valve individually.
   - If not as specified, replace the solenoid valve.
4. Install the solenoid valve(s). (See 05–17A–30 SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL].)
5. Connect the negative battery cable.

05–17A

Pressure control solenoid A

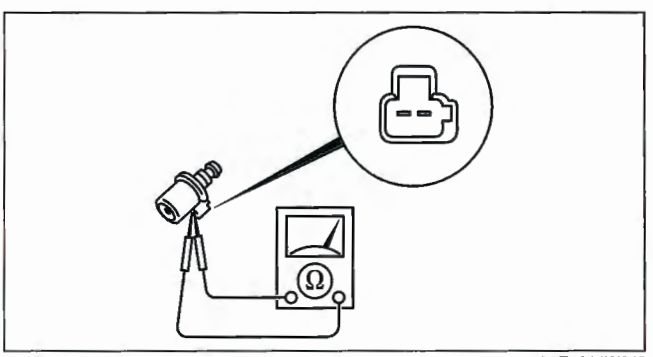
Resistance
2.4—7.3 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W041

Shift solenoid A, B, C

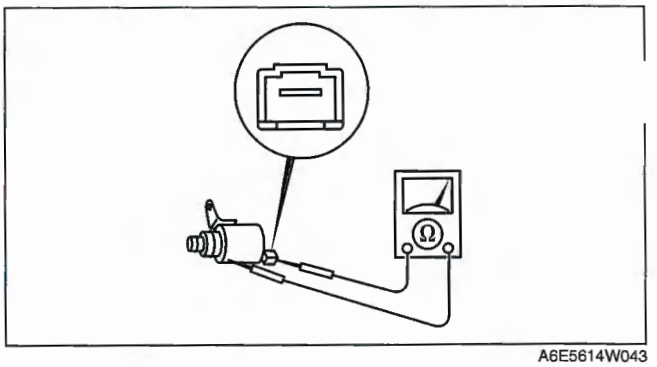
Resistance
1.0—4.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W042

Shift solenoid D, E

Resistance
10.9—26.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})

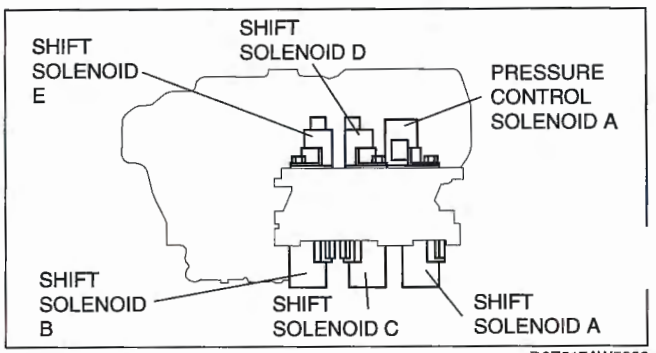


A6E5614W043

SOLENOID VALVE REMOVAL/INSTALLATION (PRIMARY CONTROL VALVE BODY) [FS5A-EL]

E6U051721101W03

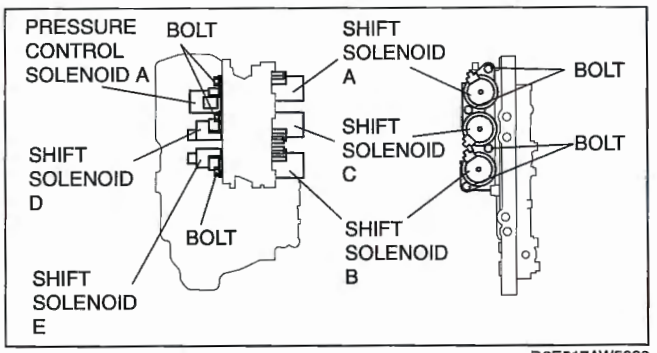
1. Disconnect the negative battery cable.
2. Remove the under cover.
3. Drain the ATF.
4. Remove the oil pan.
5. Remove the primary control valve body. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
6. Remove the solenoid valve(s).
7. Apply ATF to a new O-ring and install it on the solenoid valve.



D6E517AW5022

8. Install the solenoid valve in the primary control valve body.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95.4 in·lbf}



D6E517AW5023

9. Install the primary control valve body. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
10. Install the oil pan. (See 05–17A–46 PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
11. Install the under cover.
12. Connect the negative battery cable.
13. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
14. Perform the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
15. Perform the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)

SOLENOID VALVE INSPECTION (SECONDARY CONTROL VALVE BODY) [FS5A-EL]

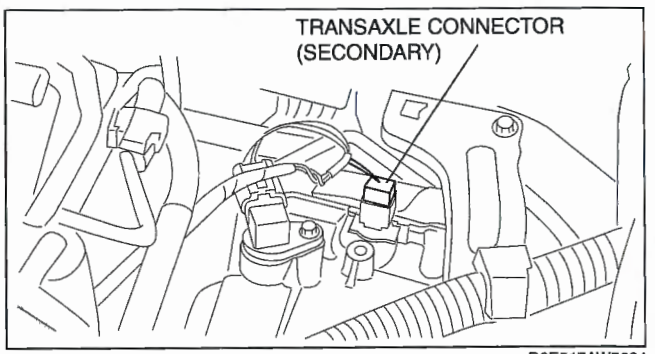
E6U051721101W04

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign objects entering the connector can cause a poor connection or corrosion. Be sure not to drop water or foreign objects on the connector when disconnecting it.**

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Disconnect the transaxle connector (secondary).

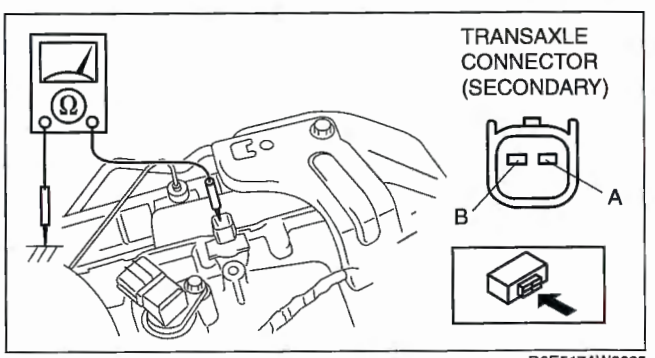
Note
- When inspecting the pressure control solenoid, connect the ground connection to the ground terminal (terminal I) of the pressure control solenoid inside the solenoid valve connector.



D6E517AW5024

4. Measure the resistance between the following terminals.
   - If not as specified, inspect the ground, then perform the operating inspection.

Secondary control valve body (ATF temperature: –40—150 °C {–40—302 °F})



D6E517AW5025

Terminal	Solenoid valve	Resistance (ohm)
A—GND	Pressure control solenoid B	1.0—4.2
B—GND	Shift solenoid F	8.4—21.8

5. Connect the transaxle connector (secondary).
6. Install the battery and battery tray.
7. Connect the negative battery cable.

Operating Inspection

1. Disconnect the transaxle connector (secondary).

Caution
- **Do not apply battery position voltage to terminals A and B for more than three seconds.**

Note
- Because the operation sound of the valves is small, perform inspection in a quiet place.

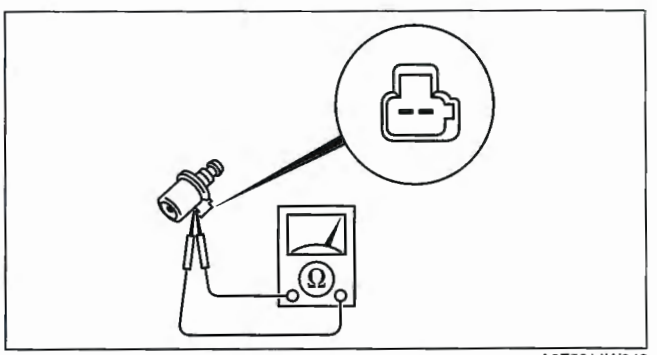
2. Apply battery positive voltage to terminals A and B and battery negative voltage to GND, and verify that operating sound is heard from solenoid.
   - If the "click" is not heard, inspect the transaxle harness.
     — If the transaxle harness is okay, perform the resistance inspection (off-vehicle inspection).
     — If there is a problem, repair or replace the transaxle harness.

Resistance Inspection (Off-Vehicle Inspection)

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the solenoid valve(s). (See 05–17A–32 SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)
4. Measure the resistance of each solenoid valve individually.
   - If not as specified, replace the solenoid valve.
5. Install the solenoid valve(s). (See 05–17A–32 SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY) [FS5A-EL].)
6. Install the battery and battery tray.
7. Connect the negative battery cable.

Pressure control solenoid B

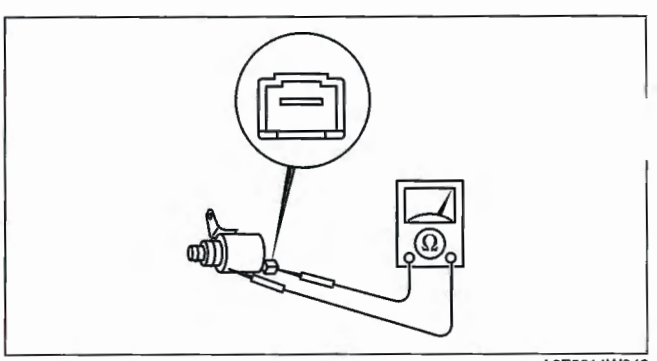
Resistance
1.0—4.2 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W042

Shift solenoid F

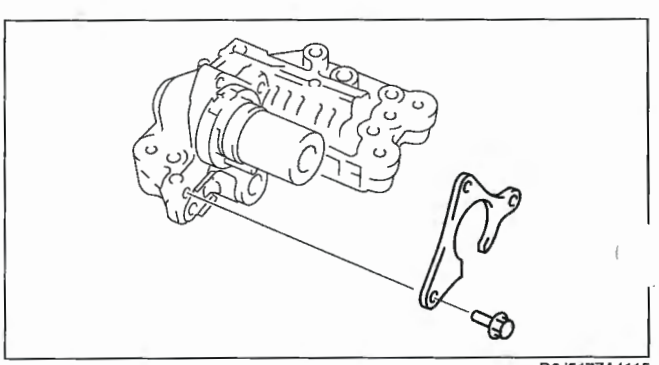
Resistance
8.4—21.8 ohms
(ATF temperature: –40—150 °C {–40—302 °F})



A6E5614W043

SOLENOID VALVE REMOVAL/INSTALLATION (SECONDARY CONTROL VALVE BODY) [FS5A-EL] E6U051721101W05

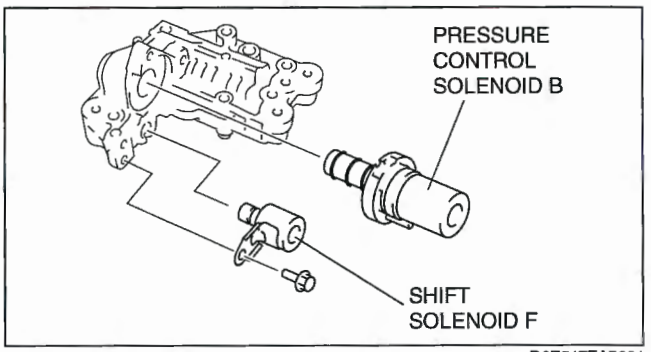
1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the under cover.
4. Drain the ATF.
5. Remove the oil cover.
6. Remove the secondary control valve body. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
7. Remove the bracket.



D6J517ZA4115

8. Remove the solenoid valve(s).
9. Apply ATF to a new O-ring and install it on the solenoid valve.
10. Install the solenoid valve in the secondary control valve body.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95.4 in·lbf}



D6E517ZA5001

11. Install the secondary control valve body. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
12. Install the oil cover. (See 05–17A–48 SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL].)
13. Install the under cover.
14. Connect the negative battery cable.
15. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
16. Perform the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
17. Perform the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)

TCM INSPECTION [FS5A-EL]

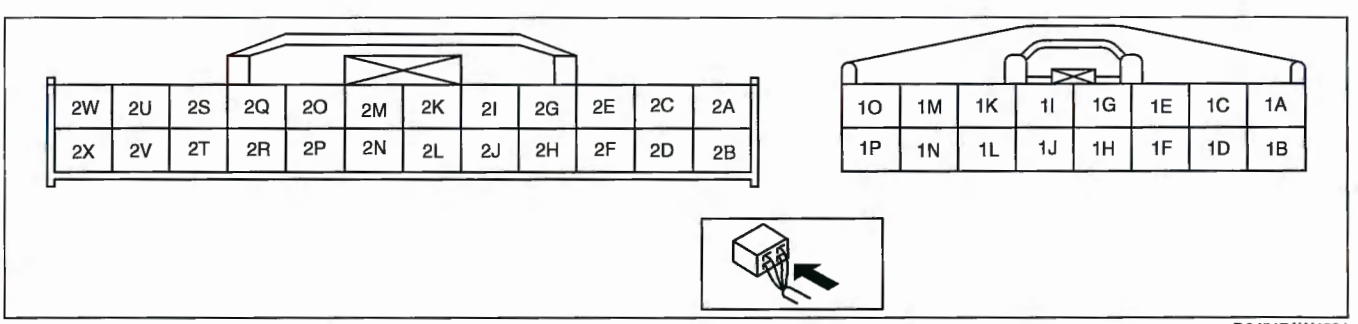
E6U051718901W03

Caution
- **The TCM terminal voltages vary with changes in measuring and vehicle conditions. Always carry out a total inspection of the input and output systems, and the TCM to determine the cause of trouble. Otherwise, a mis-diagnosis could occur.**

1. Measure the voltage at each terminal.
   - If any incorrect voltage is detected, inspect the related system(s), wiring harnesses and connector(s) referring to the Action column in the terminal voltage table.

minal Voltage Table (Reference)

Note
- Use the ground of terminal 1O and 1P of the TCM when measuring terminal voltage, as an error may occur when connecting the negative circuit tester to ground.



D6J517AW4031

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
1A	Shift solenoid A control	Shift solenoid A	• Inspect using the wave profile. (See 05–17A–36 Inspection Using an Oscilloscope (Reference).)		• Inspect shift solenoid A • Inspect related harness

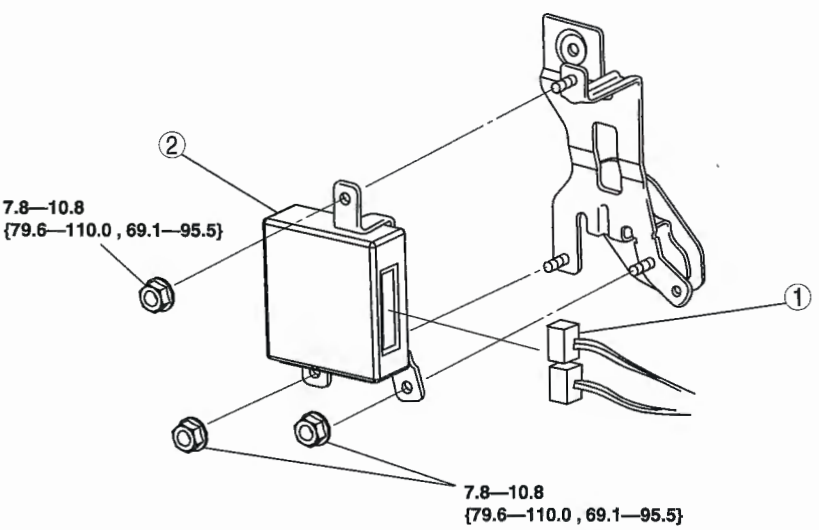
TCM REMOVAL/INSTALLATION [FS5A-EL]

E6U051718901W

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.



N·m {kgf·cm, in·lbf}

B6U0517W114

1	TCM connector	2	TCM

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL]

E6U051700000W11

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
   Remove the air cleaner component. (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)
3. Remove the front tires and splash shield.
5. Remove the under cover.
6. Remove the steering gear and linkage, and pipe assembly installation bolts from the front crossmember, then suspend the steering gear and linkage with a cable. (See 06–12–11 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [L3].)

   Pipe assembly tightening torque
   7.8—10.8 N·m {79.6—110.0 kgf·cm, 69.1—95.5 in·lbf}

7. Drain the ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)

   Warning
   - **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

   Caution
   - **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**

8. Remove in the order shown in the figure.
9. Install in the reverse order of removal.
10. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
11. Carry out the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)

Service item	Test item		
	Line pressure test	Stall test	Time lag test
ATX replacement	×		
ATX overhaul	×	×	×
Torque converter replacement	×	×	
Oil pump replacement	×		
Clutch system replacement	×		×

× : Test to be performed after the service work

12. Carry out the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)

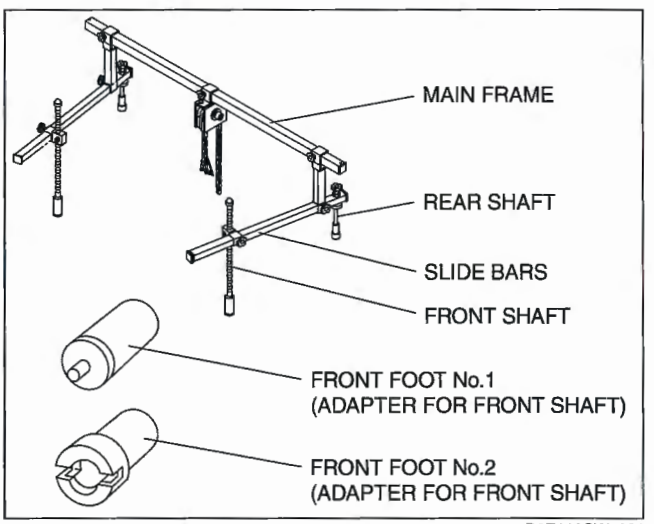
No.4 Engine Mount Bracket Removal Note

1. Install the **SST** using the following procedure.

Caution

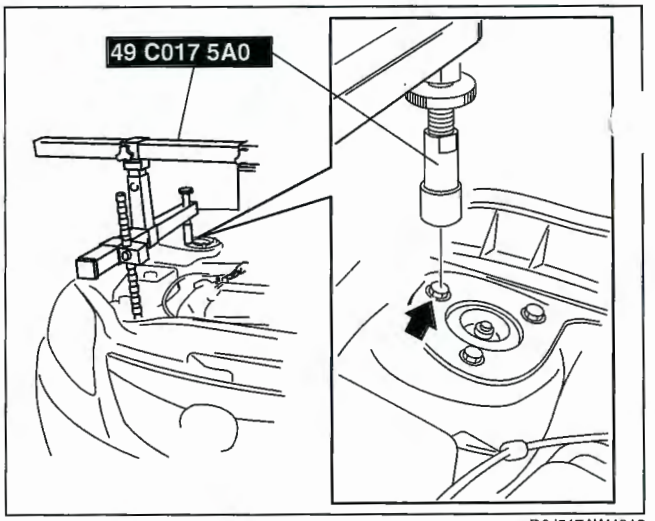
- **Refer to the SST instruction manual for the basic handing procedure.**



D6E110CW7001

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (Identical position to the right side)

Caution
- **When setting the SST on the right side, make sure it doesn't interfere with the ABS/TCS HU/CM.**

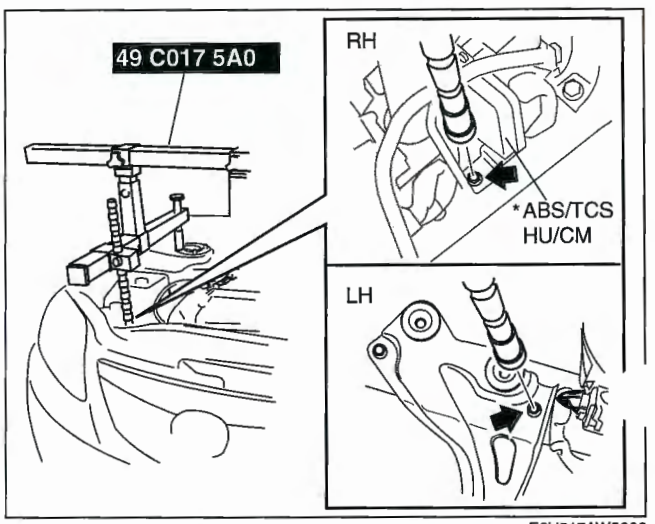


D6J517AW4012

(3) Install the left/right front shaft of the **SST** with front foot No.2 to the bolt as shown in the figure.

* : If epuipped.

(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.

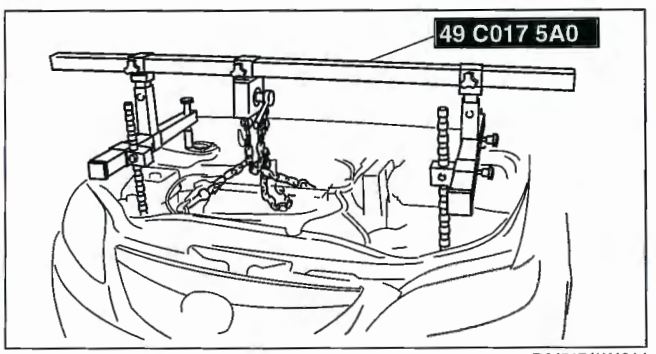


E6U517AW5003

2. Support the engine using the **SST**.

Note
- The SST (49 E017 5A0) can be used in place of the SST (49 C017 5A0).

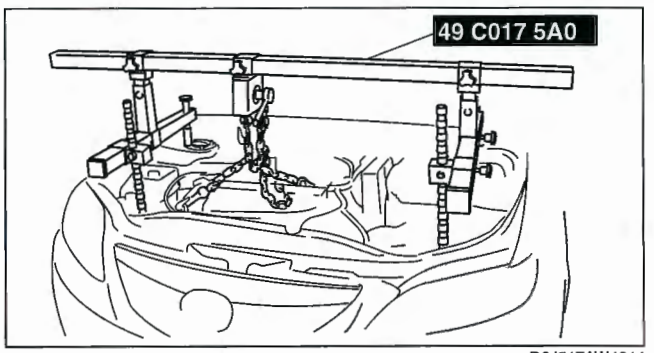
3. Remove the No.4 engine mount.



D6J517AW4014

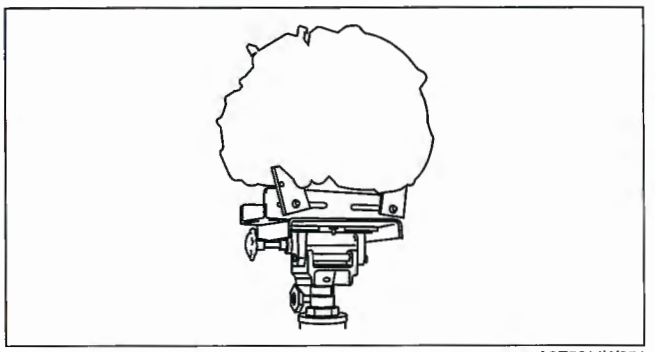
Transaxle Removal Note

1. Lean the engine toward the transaxle.
2. Support the transaxle on a jack.
   Remove the transaxle mounting bolts.



D6J517AW4014

4. Remove the transaxle.



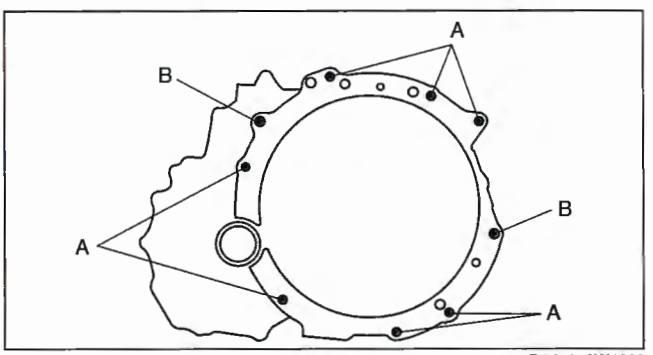
A6E5614W051

Transaxle Installation Note

1. Set the transaxle on a jack and lift it.
2. Install the transaxle mounting bolts.

Bolt length (measured from below the head)
A: 50 mm {1.967 in}
B: 65 mm {2.559 in}

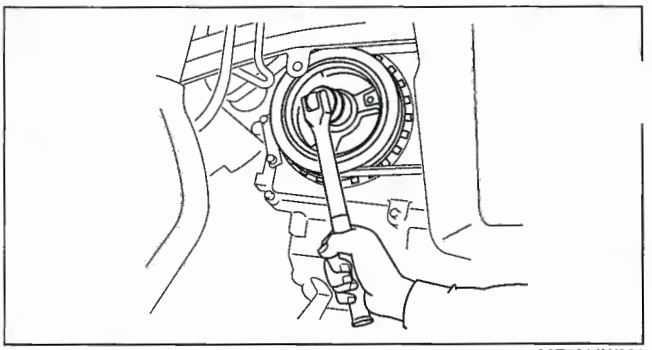
Tightening torque
37.3—52 N·m {3.8—5.3 kgf·m, 28—38 ft·lbf}



D6J517AW4009

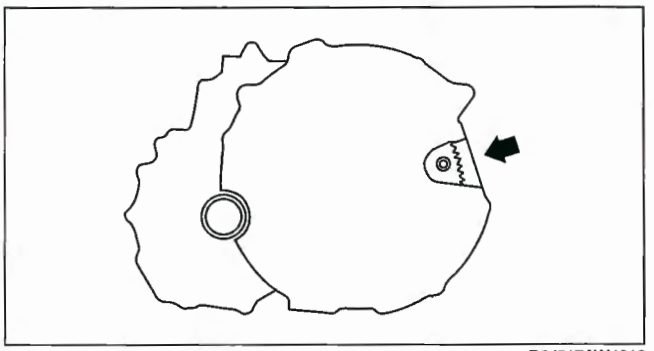
Torque Converter Nuts Removal Note

1. Hold the crankshaft pulley to prevent drive plate from rotating.



A6E5614W091

2. Remove the torque converter nuts from the starter installation hole.



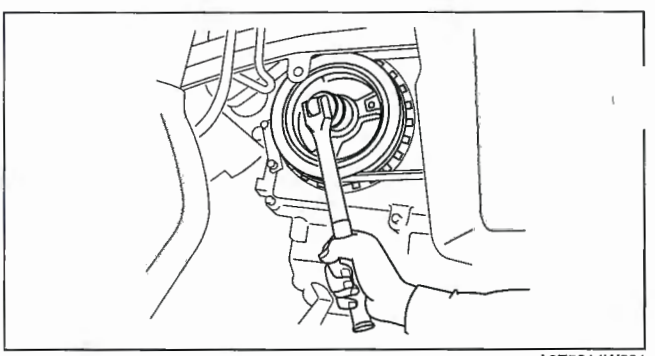
D6J517AW4010

Torque Converter Nuts Installation Note

1. Hold the crankshaft pulley to prevent drive plate from rotating.

Caution

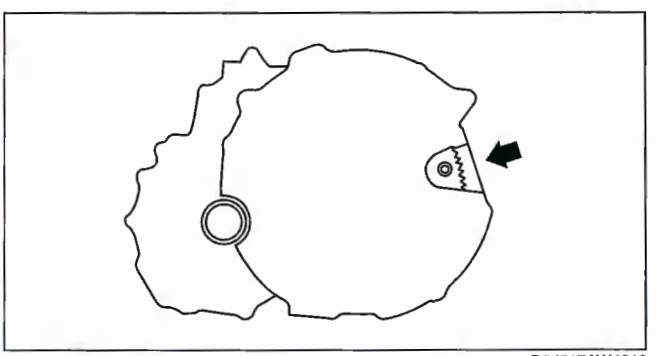
- **Loosely and equally tighten the torque converter nuts, then further tighten them to the specified tightening torque.**



A6E5614W091

2. Tighten the torque converter mounting nuts.

Tightening torque
34.3—60.8 N·m {3.5—6.2 kgf·m, 25—45 ft·lbf}

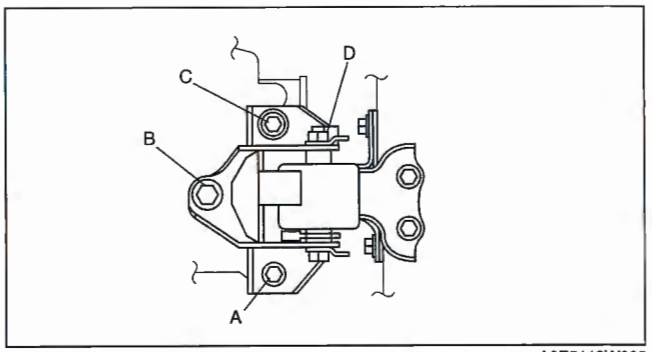


D6J517AW4010

No.1 Engine Mount and No.4 Engine Mount Bracket Installation Note

1. Verify that the engine mount rubbers are installed as shown.
2. By aligning the holes with the stud bolts, install the No.4 engine mount bracket to the transaxle.
   By aligning the holes with the stud bolts, install the No.1 engine mount to the transaxle.
   Align the hole of the No.4 engine mount bracket with the No.4 engine mount rubber on vehicle, and temporarily tighten the bolt D.
5. Tighten the nut B,C in order of B→C, then bolt A.
6. Tighten the bolt D.

Tightening torque
A, B, C: 66.6—93.1 N·m {6.8—9.4 kgf·m, 50—68 ft·lbf}
D: 85.3—116.6 N·m {8.7—11.8 kgf·m, 63—85 ft·lbf}

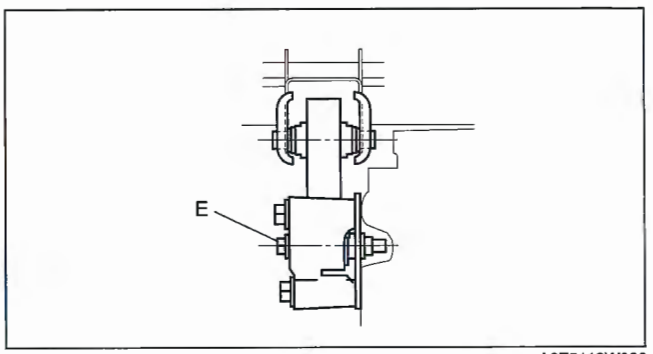


A6E5112W005

7. Tighten the bolt E to the No.1 engine mount.

Tightening torque
E: 85.3—116.6 N·m {8.7—11.8 kgf·m, 63—85 ft·lbf}

8. Remove the **SST** (49 C017 5A0).



A6E5112W006

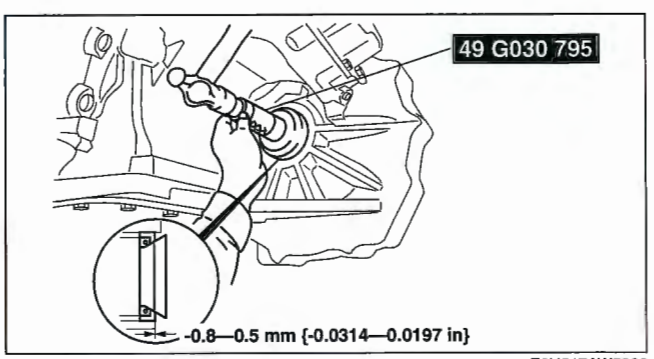
OIL SEAL REPLACEMENT [FS5A-EL]

E6U051719240W01

1. Drain the ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)

Caution
- **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

2. Remove the drive shaft. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC].)
3. Remove the oil seal.
4. Using the **SST** and a hammer, tap a new oil seal in evenly until the **SST** contacts the transaxle case.
5. Coat the lip of the oil seal with transaxle oil.
6. Install the drive shaft. (See 03–13–16 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [L3, L3 WITH TC].)
7. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
8. Carry out the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)



E6U517AW5006

PRIMARY CONTROL VALVE BODY REMOVAL [FS5A-EL]

E6U051721100W02

On-Vehicle Removal

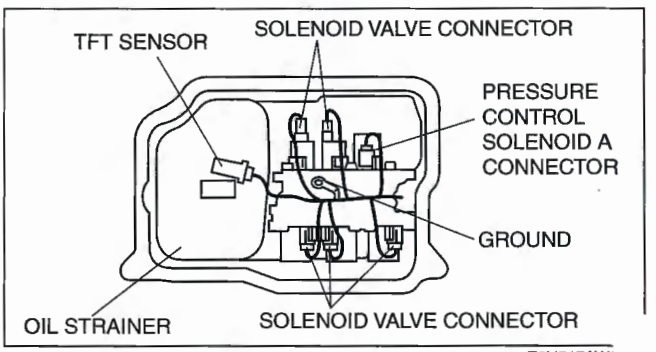
Warning

- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyes whenever using compressed air.**

Caution

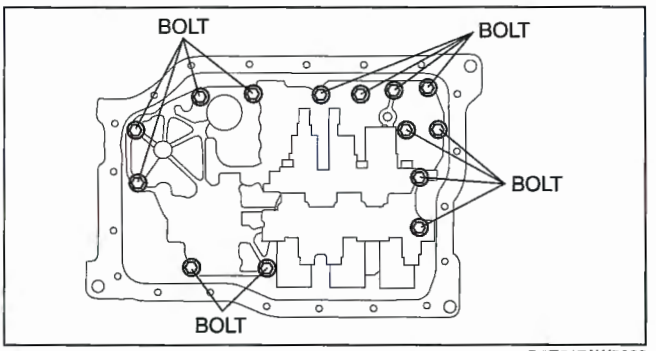
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan. Clean with cleaning fluids.**

1. Disconnect the negative battery cable.
2. Drain the ATF into a separate suitable container. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
3. Remove the under cover.
4. Remove the front tires and splash shield.
5. Remove the crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
6. Remove the oil pan.
7. Disconnect the solenoid connectors and GND.
8. Remove the oil strainer.



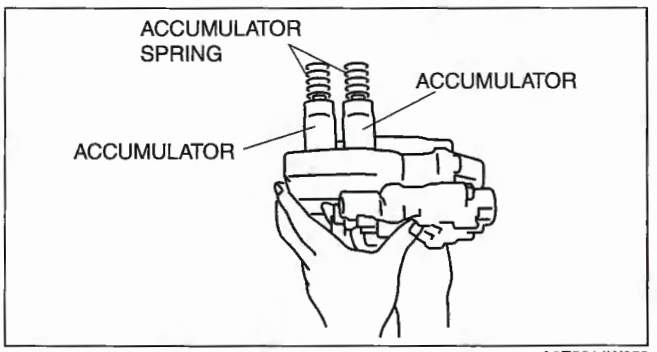
E6U517AW

9. Remove the primary control valve body installation bolts as shown, then remove the primary control valve body component as shown.



D6E517AW5029

10. Remove the accumulators and accumulator springs.



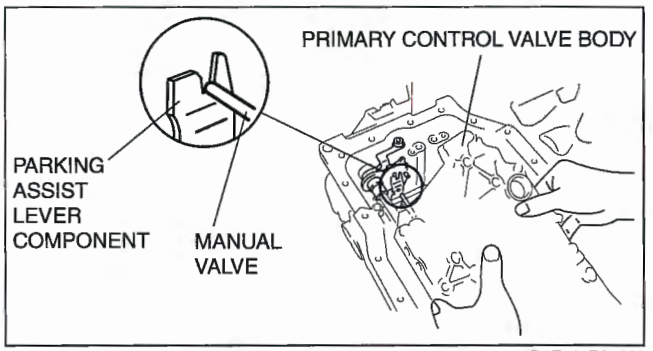
A6E5614W059

PRIMARY CONTROL VALVE BODY INSTALLATION [FS5A-EL]

E6U051721100W03

On-Vehicle Installation

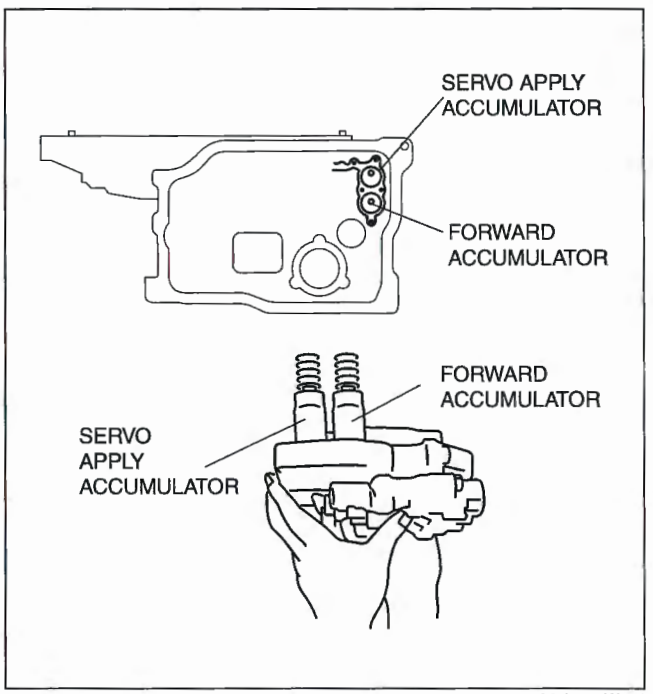
Caution
- **Be sure to align the parking rod and the manual valve.**



D6E517ZA5002

1. Install the accumulator springs and accumulators into the transaxle case.

Spring	Outer diameter (mm {in})	Free Length (mm {in})	No. of coils	Wire diameter (mm {in})
Servo apply accumulator large spring	21.0 {0.827}	67.8 {2.669}	10.3	3.5 {0.138}
Servo apply accumulator small spring	13.0 {0.512}	67.8 {2.669}	17.1	2.2 {0.087}
Forward accumulator large spring	21.0 {0.827}	75.0 {2.953}	10.7	2.3 {0.091}
Forward accumulator small spring	15.6 {0.614}	49.0 {1.929}	7.7	2.4 {0.094}



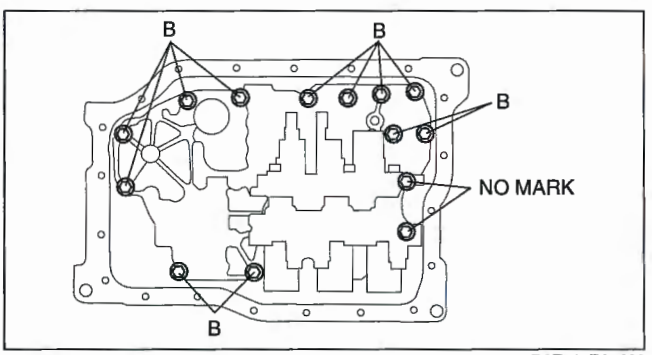
A6E5614W061

2. Install the primary control valve body component.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95 in·lbf}

Bolt length (measured from below the head)
B: 40 mm {1.575 in}
No mark: 70 mm {2.756 in}

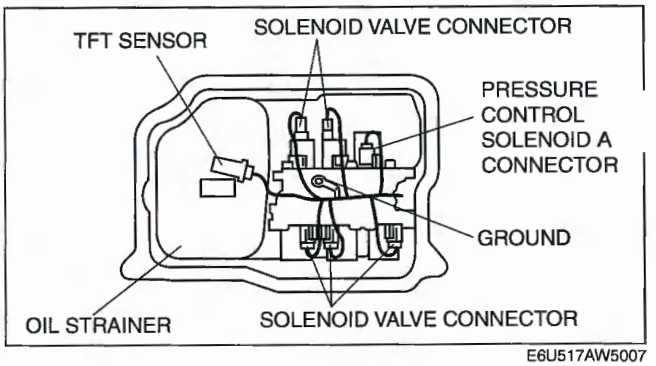
3. Install the oil strainer.



D6E517ZA5003

4. Match the harness colors, then connect the solenoid connectors and GND, and install the TFT sensor.

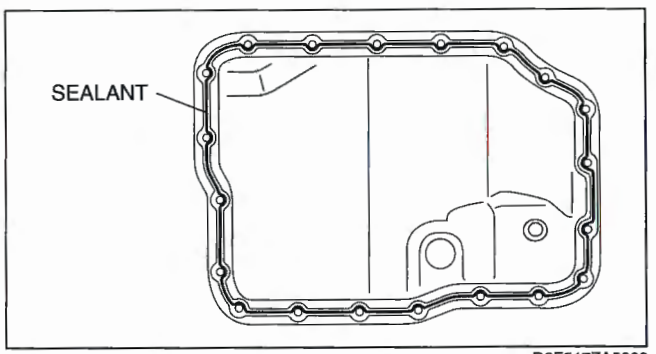
Spring	Color of connector (harness side)
Pressure control solenoid A	Black
Shift solenoid A	White
Shift solenoid B	Blue
Shift solenoid C	Green
Shift solenoid D	White
Shift solenoid E	Black



E6U517AW5007

Tightening torque
7.8—10.8 N·m {80—110 kgf·cm, 70—95 in·lbf}

5. Apply a light coat of silicon sealant to the contact surfaces of the oil pan and transaxle case.
6. Install the oil pan.



D6E517ZA5008

Tightening torque
6—8 N·m {62—81 kgf·cm, 53—70 in·lbf}

7. Install the crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
8. Install the front tires and splash shield.
9. Install the under cover.
10. Connect the negative battery cable.
11. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
12. Carry out the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
13. Carry out the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)

SECONDARY CONTROL VALVE BODY REMOVAL [FS5A-EL]

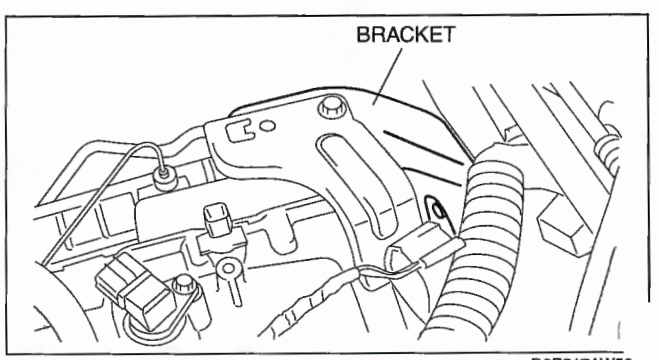
E6U051721100W04

On-Vehicle Removal

Warning
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyes whenever using compressed air.**

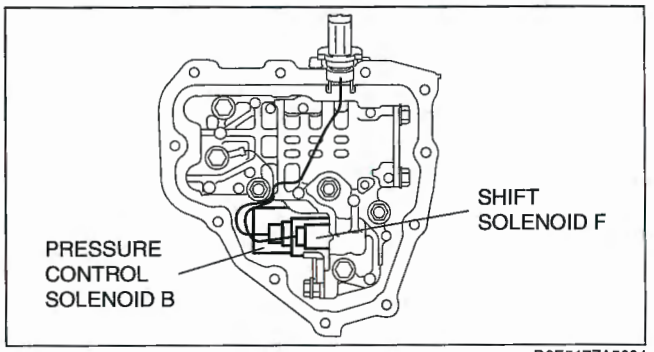
Caution
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the oil pan, trouble may occur in the transaxle case and oil pan. Clean with cleaning fluids.**

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the bracket in the figure.
4. Drain the ATF into a separate suitable container. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
5. Remove the oil cover.



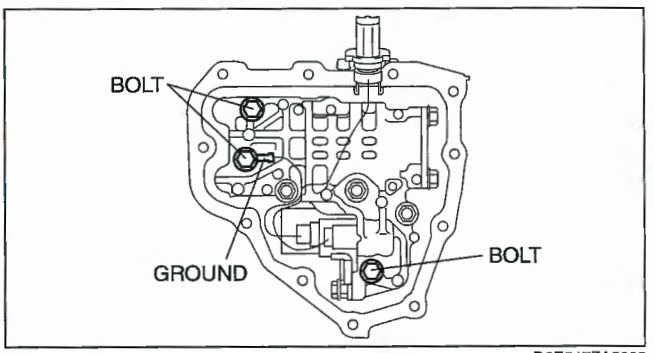
D6E517AW50

6. Disconnect the solenoid connectors.



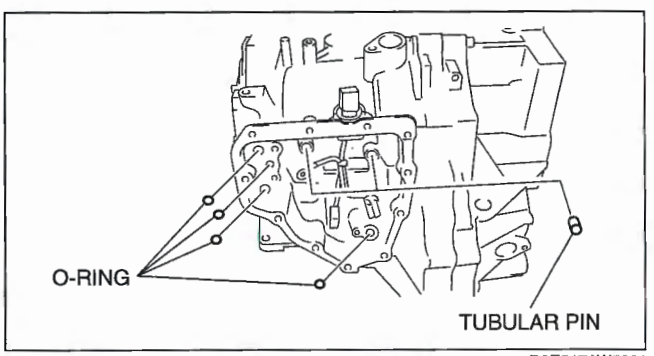
D6E517ZA5004

7. Remove the secondary control valve body installation bolts as shown, then remove the secondary control valve body component and ground as shown.



D6E517ZA5005

8. Remove the tubular pin and O-ring.



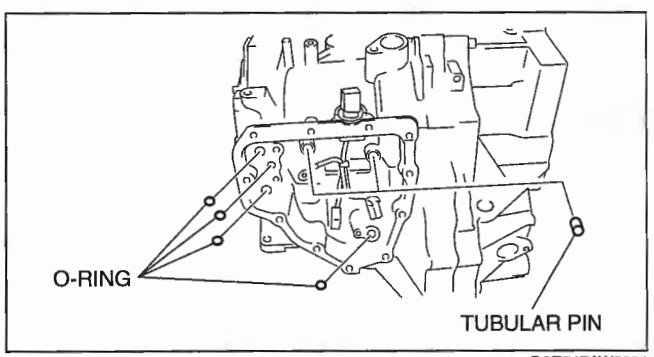
D6E517AW5031

SECONDARY CONTROL VALVE BODY INSTALLATION [FS5A-EL]

E6U051721100W05

On-Vehicle Installation

1. Install the tubular pin and new O-ring to the transaxle case.

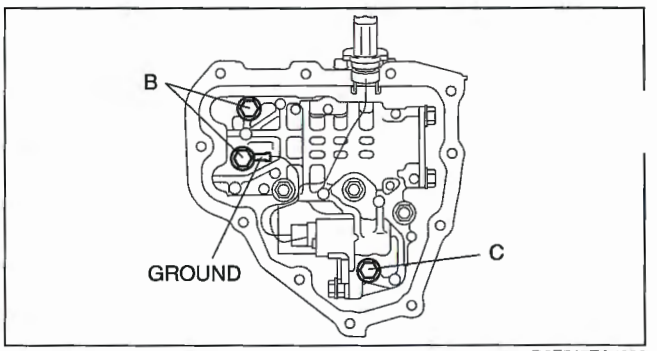


D6E517AW5031

2. Install the secondary control valve body component and ground.

Tightening torque
7.8—10.8 N·m
{80—110 kgf·cm, 70—95 in·lbf}

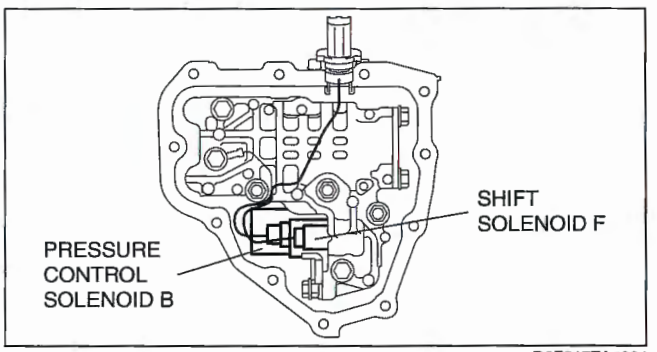
Bolt length (measured from below the head)
B: 40 mm {1.575 in}
C: 50 mm {1.967 in}



D6E517ZA5006

3. Match the harness colors, then connect the solenoid connector.

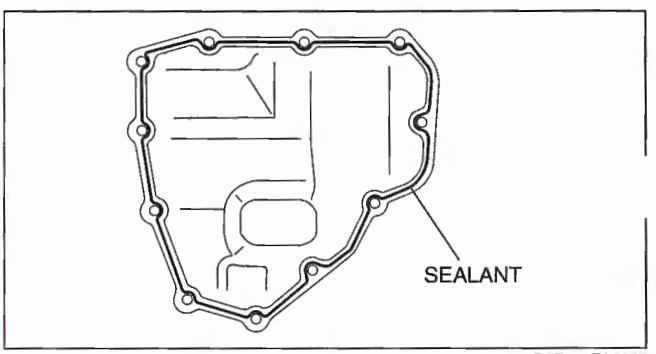
Spring	Color of connector (harness side)
Pressure control solenoid B	White
Shift solenoid F	Black



D6E517ZA5004

4. Apply a light coat of silicon sealant to the contact surfaces of the oil cover and transaxle case.
5. Install the oil cover.

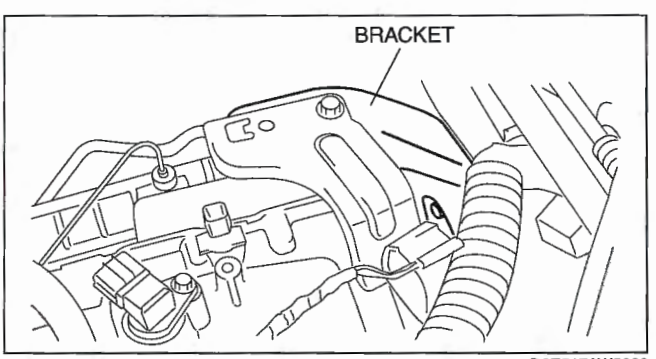
Tightening torque
7.8—10.8 N·m {80—109 kgf·cm, 70—95 in·lbf}



D6E517ZA5007

6. Install the bracket in the figure.

Tightening torque
18—26 N·m {1.9—2.6 kgf·m, 14—19 ft·lbf}



D6E517AW5030

7. Install the battery and battery tray.
8. Connect the negative battery cable.
9. Add ATF. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
10. Carry out the mechanical system test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
11. Carry out the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)

OIL COOLER FLUSHING [FS5A-EL]

E6U051719900W04

Note
- The contaminated cooler line (oil pipes and hoses) and auxiliary cooler must be flushed completely when ATX is overhauled or replaced.

1. Remove the two oil cooler line hoses and apply air pressure of **196 kPa {2.0 kgf/cm^2, 28 psi}** from the return hose (pipe) side.

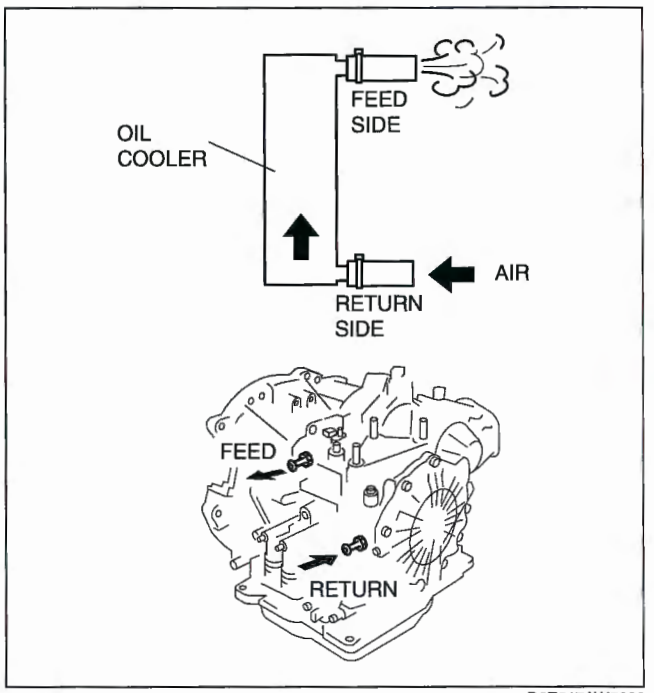
Caution
- **Power flushing should be performed very carefully when removing the accumulated debris from the fluid baffle, otherwise the debris cannot be removed or the problem becomes even worse.**

2. If there is no air blown out the feed side, flush the oil cooler lines using the power-flushing tool. (See 05–17A–51 Power Flushing)

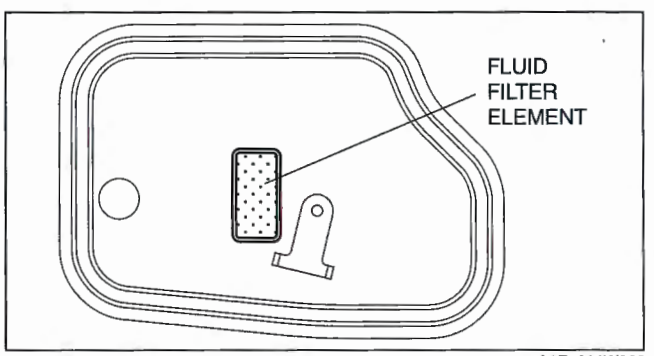
Recommended power-flushing manufacturer

Manufacturer	Part number	Description
Kent Moore	J35944-AMAZ	Flushing kit or equivalent
OTC	60081	Portable torque converter, oil cooler cleaner or equivalent

3. If there is ventilation, carry out the following steps.
   (1) Remove the oil pan and inspect the fluid filter element from the front filter.
   (2) If the element is covered with too much debris or particles and cannot be seen, replace the oil cooler. (See 05–17A–52 OIL COOLER REMOVAL/INSTALLATION [FS5A-EL].) (See 05–17A–54 OIL COOLER DISASSEMBLY/ ASSEMBLY [FS5A-EL].)
   (3) If the element can be seen, flush the oil cooler lines using the power-flushing tool.
   - Performing back and reverse power flushing two times each does not work because debris or particles flow out from the feed pipe side of ATX.



D6E517AW5026



A6E5614W066

Power Flushing
Repair procedure
1. Before power flushing, inspect the hoses/lines and clamps. Power flushing must begin with back flushing followed by forward flushing to quickly dislodge the restriction. If back flushing is not performed before forward flushing, the restriction could further reduce the ATF flow through the internal mesh type baffle of the cooler and flushing will not be effective or possible.

Inspecting oil lines and clamps
1. Be sure to inspect the lines (hoses/pipes) for cuts, crimps (pinched), cracks or any other damage before reusing them.
   - If any problems exist, replace lines and clamps.

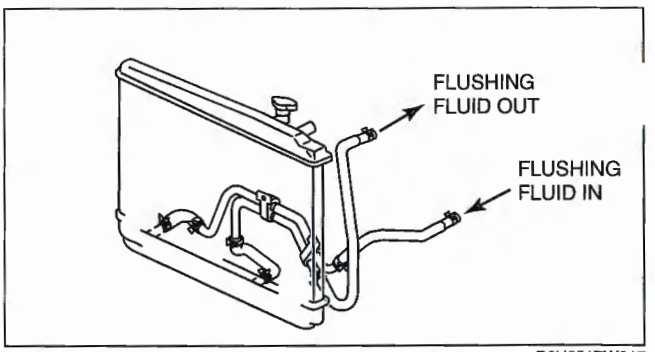
Caution
- **Always use new clamps when replacing hoses.**

Back flushing

1. Using the power flushing equipment manufacturer's instructions, connect equipment so the flushing fluid flows in the opposite direction of normal fluid flow.
2. Flush oil cooler/lines until discharge fluid is clean.

Caution

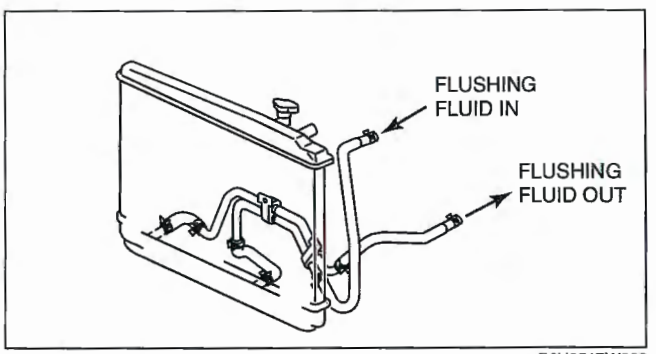
- **If the cooler can not be properly flushed using recommended equipment, send the radiator out for sublet cleaning or replace.**



B6U0517W017

Forward flushing

1. Connect power flushing equipment so the flushing fluid flows in the direction of normal fluid flow.
2. Flush oil cooler/lines until discharge fluid is clean.

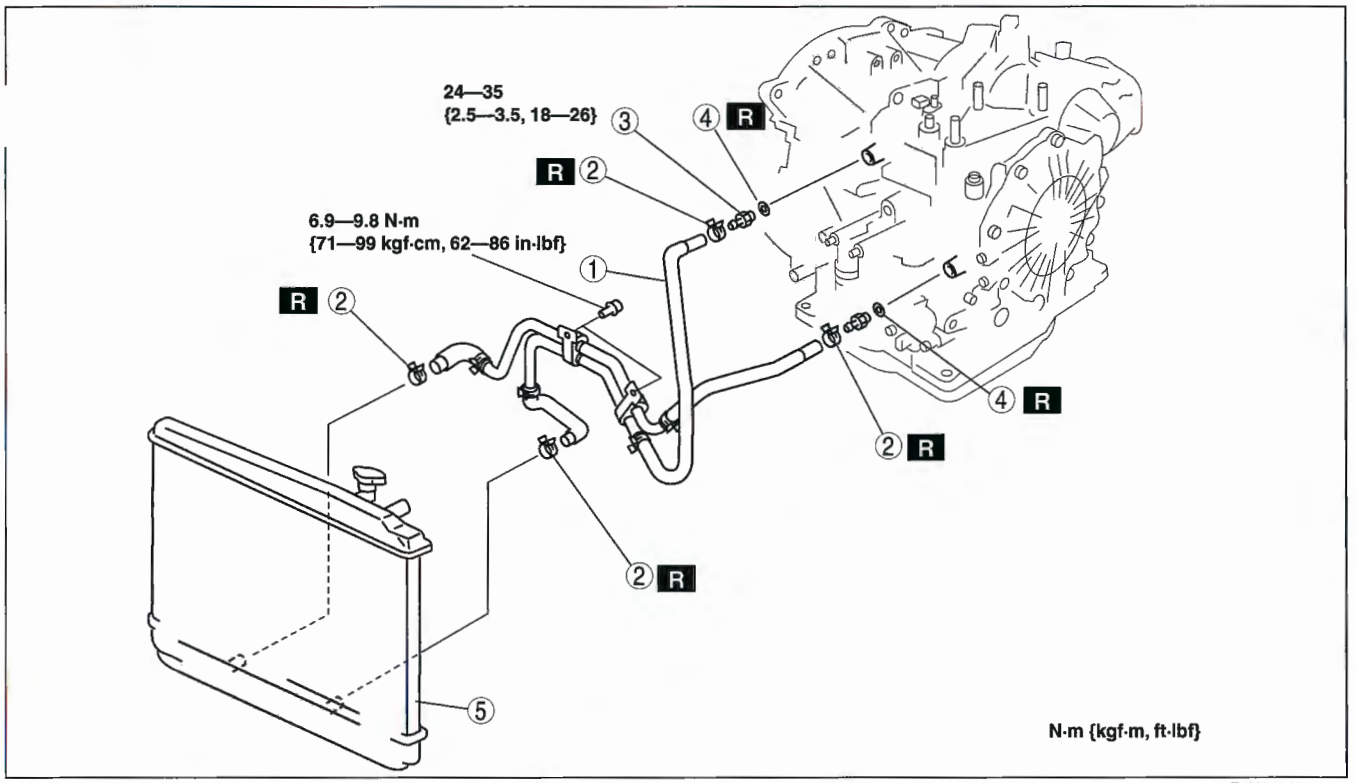


B6U0517W008

OIL COOLER REMOVAL/INSTALLATION [FS5A-EL]

E6U051719900W

1. Disconnect the negative battery cable.
2. Drain the ATF into a container. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
3. Remove the radiator. (See 01–12A–8 RADIATOR REMOVAL/INSTALLATION [L3, AJ].)
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.
6. Add ATF to the specified level. (See 05–17A–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [FS5A-EL].)
7. Connect the negative battery cable.
8. Inspect for oil leakage from the oil pipes and oil hoses.
9. Inspect for coolant from the hoses.
10. Inspect the ATF level and condition. (See 05–17A–10 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [FS5A-EL].)
11. Carry out the line pressure test. (See 05–17A–4 MECHANICAL SYSTEM TEST [FS5A-EL].)
12. Carry out the road test. (See 05–17A–7 ROAD TEST [FS5A-EL].)



E6U517AW5004

1	Oil hose (See 05–17A–53 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)
2	Hose clamp (See 05–17A–53 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)
3	Connector bolt
4	O-ring
5	Radiator (in tank oil cooler) (See 05–17A–53 Radiator (In Tank Oil Cooler) Installation Note.)

Radiator (In Tank Oil Cooler) Installation Note

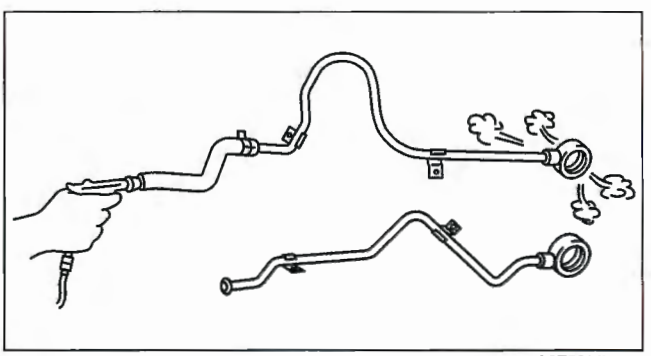
1. The automatic transaxle oil cooler flushing must be performed whenever a transaxle is removed for service because the existing fluid may be contaminated, and to prevent contamination of new fluid.

   Note
   - Flushing must be performed after installation of the overhauled or replaced transaxle.

2. Follow the instructions in the manufacturer's publication for flushing operation.

Oil Pipe, Hose Clamp, Oil Hose Installation Note

1. Apply compressed air to the cooler-side opening, and blow any remaining grime and foreign material from the cooler pipes. Compressed air should be applied for no **less than one minute**.

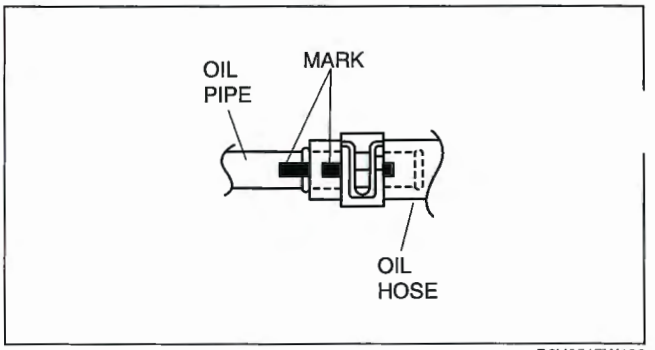


A6E5614W070

2. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown.

Note
- If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose camp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.

3. Install the new hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.

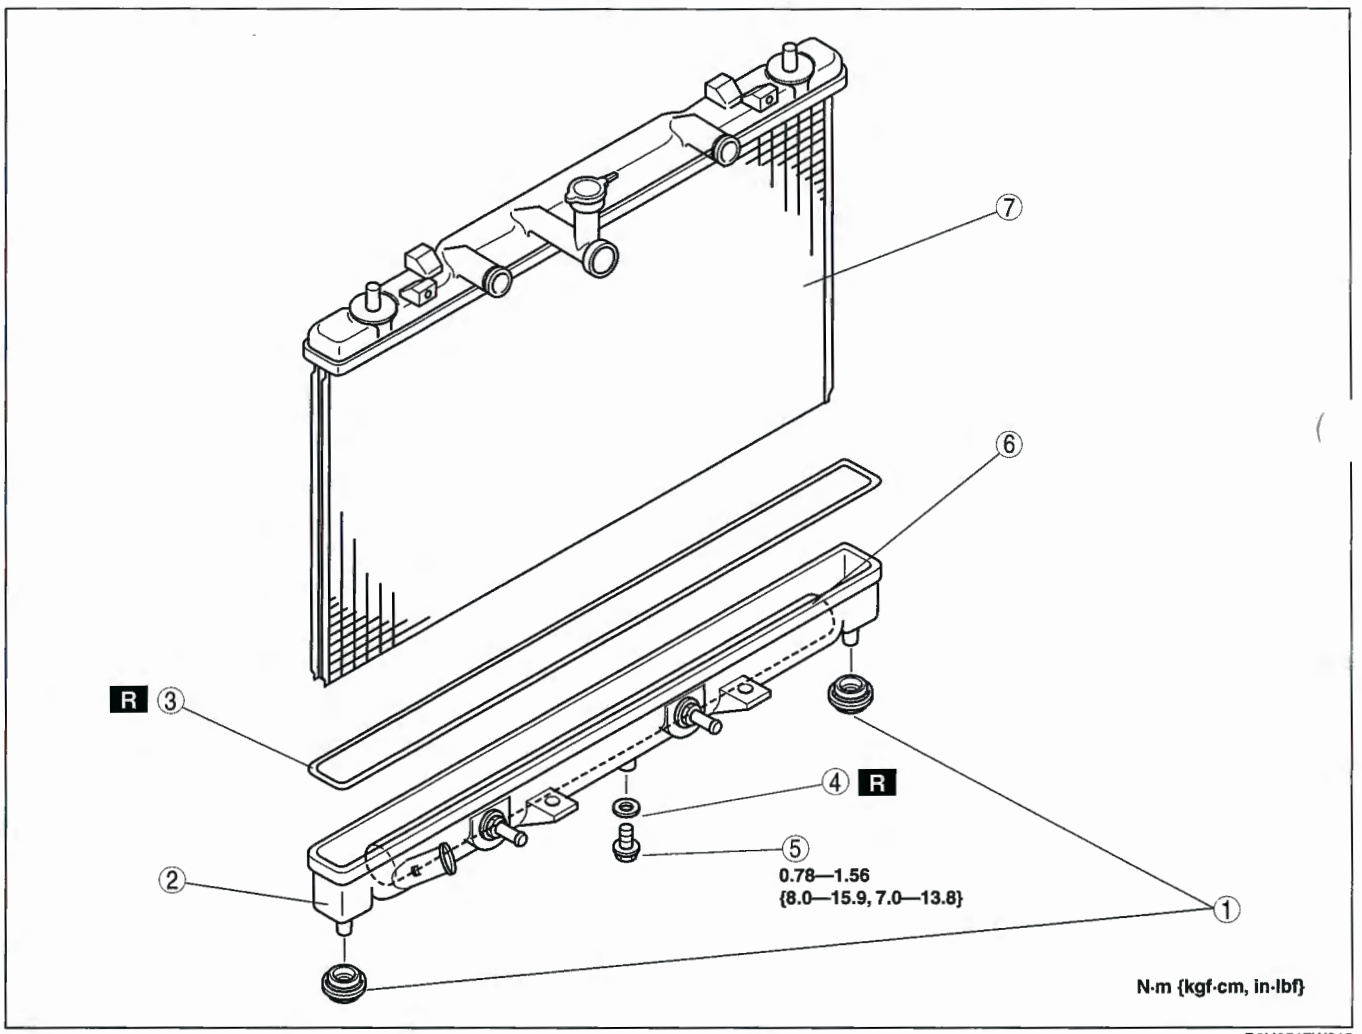


B6U0517W132

OIL COOLER DISASSEMBLY/ASSEMBLY [FS5A-EL]

E6U051719900W06

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



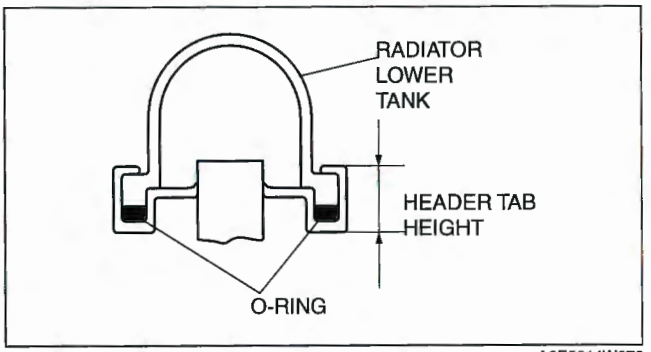
B6U0517W018

1	Mount rubber
2	Radiator outer tank (in tank oil cooler) (See 05–17A–55 Radiator Outer Tank (In Tank Oil Cooler) Removal Note.) (See 05–17A–55 Radiator Outer Tank (In Tank Oil Cooler) Installation Note.)
3	O-ring
4	Washer
5	Drain cock
6	ATF cooler
7	Radiator

Radiator Outer Tank (In Tank Oil Cooler) Removal Note

1. Inspect the height of the header tabs.
2. Insert the end of a medium tip screwdriver between the end of the header tab and the outer tank.

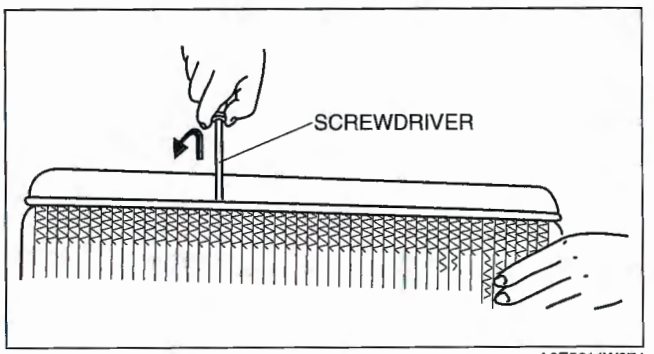
Note
- Do not open more tabs than necessary for tank removal.



A6E5614W073

3. Pivot the screwdriver to pry the tab away from the tank and repeat the procedure for each tab.
4. Remove the radiator outer tank and O-ring (gasket) from the core header when all of the tabs are opened.

Note
- If any header tabs are missing from the core, replace the radiator.



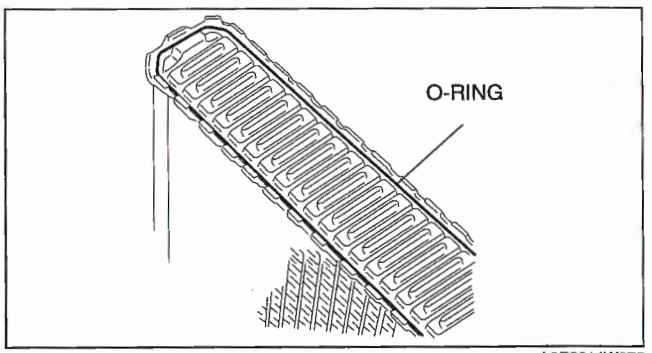
A6E5614W074

5. Inspect the gasket surface of the radiator core header to ensure it is clean and free of foreign material or damage.
6. Inspect the radiator outer tank for warping. If it is warped, replace radiator tank.

Radiator Outer Tank (In Tank Oil Cooler) Installation Note

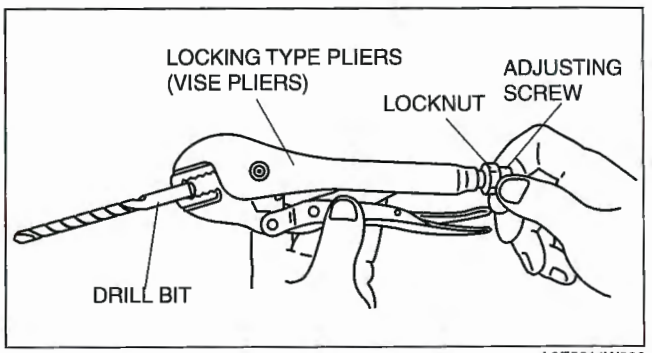
Install a new O-ring and ensure it is not twisted. Position the radiator tank in the original direction to the core using care not to scratch the tank sealing surface with the header tabs.

Note
- Step 3 will set jaw opening to the correct specification.



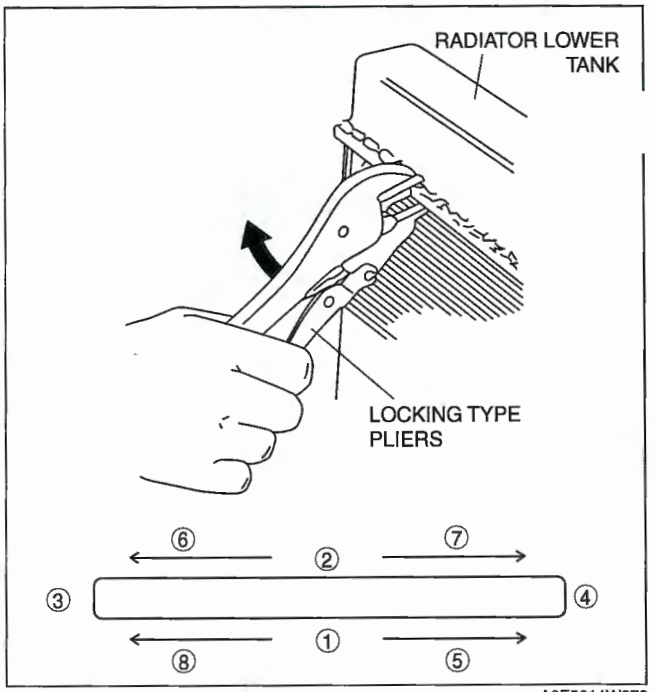
A6E5614W075

3. With the jaws of locking-type pliers (vise grips) closed and locked, turn the adjusting screw to position the jaws against the drill bit with the diameter measured (height) in the removal procedure 1. Tighten the lock nut on the adjusting screw against the handle to lock the adjustment in place.



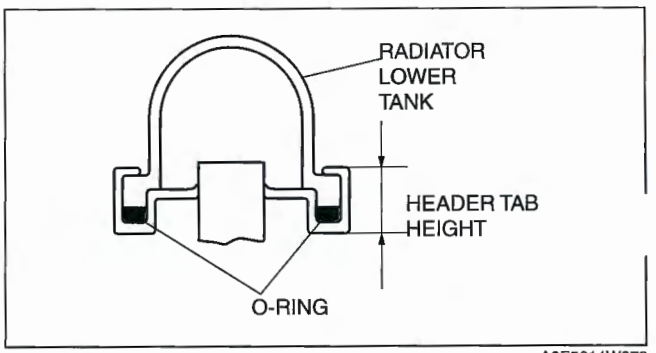
A6E5614W093

4. Squeeze the header tabs down in the order as shown against the lip of the radiator outer tank base with the locking-type pliers while rotating the pliers toward the tank.



A6E5614W076

5. Verify that the height of the header tabs is same as the height before removal.
6. Inspect for leakage from radiator. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].)



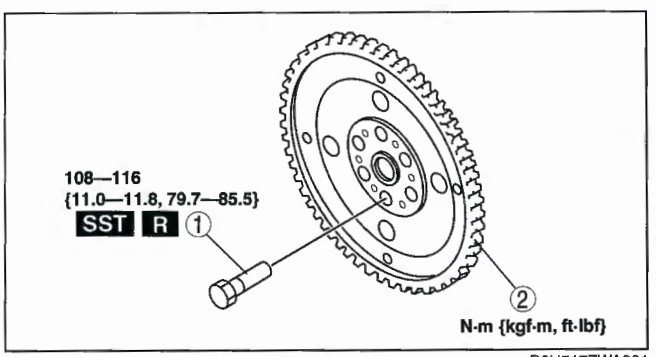
A6E5614W073

DRIVE PLATE REMOVAL/INSTALLATION [FS5A-EL]

E6U051719020W02

1. Remove the transaxle. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [FS5A-EL].)
2. Remove in the order indicated in the figure.
3. Install in the reverse order of removal.

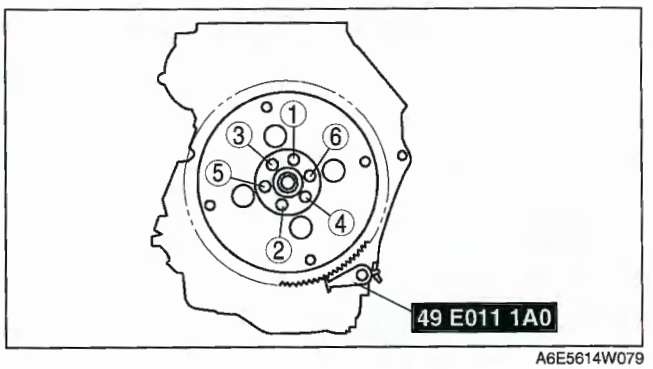
1	Drive plate mounting bolts (See 05–17A–57 Drive Plate Mounting Bolts Removal Note.)
2	Drive plate (See 05–17A–57 Drive Plate Installation Note.)



B6U517ZWA001

Drive Plate Mounting Bolts Removal Note

1. Set the **SST** or equivalent against the drive plate.
2. Remove the bolts and the drive plate.



A6E5614W079

Drive Plate Installation Note

Caution

- **Clean the crankshaft threads before tightening the bolts.The threads may be damaged if the bolts are tightened with any old sealant remaining.**

1. Clean the crankshaft thread holes.
2. Install the drive plate.
3. Install the adapter.
4. Set the **SST** or equivalent against the drive plate.
5. Tighten the new drive plate mounting bolts in two or three steps in the order shown.

Tightening torque
108—116 N·m
{11.0—11.8 kgf·m, 79.7—85.5 ft·lbf}

. Install the transaxle. (See 05–17A–39 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [FS5A-EL].)

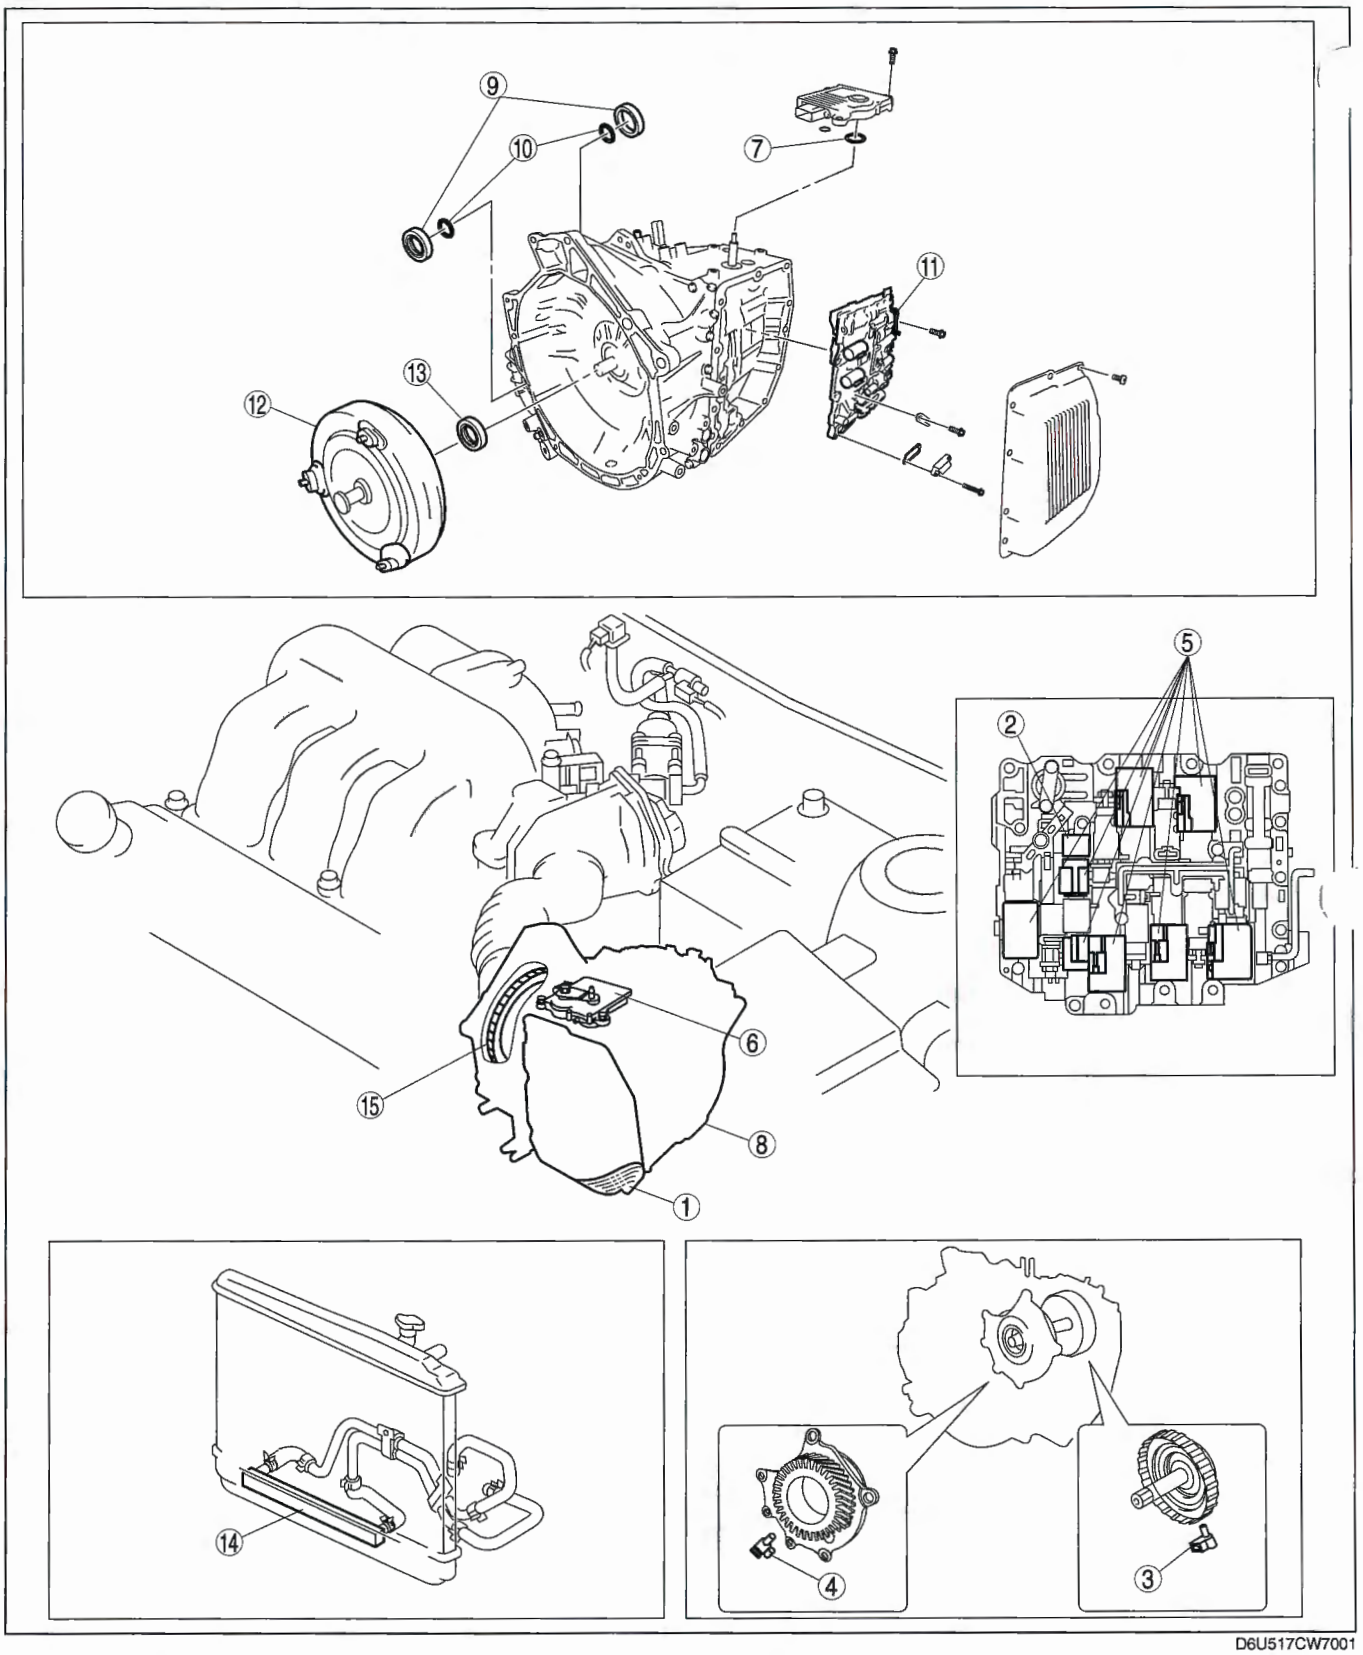
Drive Plate Installation Note 05–17B–55

AUTOMATIC TRANSAXLE LOCATION INDEX [AW6A-EL]

E6U051700000W01



D6U517CW7001

1	Automatic transaxle fluid (ATF) (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].) (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)

2	Transaxle fluid temperature (TFT) sensor (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL].) (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/ INSTALLATION [AW6A-EL].)

3	Input/turbine speed sensor (See 05–17B–16 INPUT/TURBINE SPEED SENSOR INSPECTION [AW6A-EL].) (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
4	Vehicle speed sensor (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL].)
5	Solenoid valve (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL].)
6	TCM (See 05–17B–13 TRANSAXLE RANGE (TR) SWITCH INSPECTION [AW6A-EL].) (See 05–17B–21 TCM INSPECTION [AW6A-EL].) (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
7	Oil seal (manual shaft) (See 05–17B–29 OIL SEAL (MANUAL SHAFT) REPLACEMENT [AW6A-EL].)
8	Automatic transaxle (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
9	Oil seal (differential) (See 05–17B–37 OIL SEAL (DIFFERENTIAL) REPLACEMENT [AW6A-EL].)
10	Differential gear O-ring (See 05–17B–38 DIFFERENTIAL GEAR O-RING REPLACEMENT [AW6A-EL].)
11	Control valve body (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
12	Torque converter (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].)
13	Oil seal (oil pump) (See 05–17B–47 OIL SEAL (OIL PUMP) REPLACEMENT [AW6A-EL].)
14	Oil cooler (See 05–17B–48 OIL COOLER FLUSHING [AW6A-EL].) (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].) (See 05–17B–52 OIL COOLER DISASSEMBLY/ASSEMBLY [AW6A-EL].)
15	Drive plate (See 05–17B–54 DRIVE PLATE REMOVAL/INSTALLATION [AW6A-EL].)

MECHANICAL SYSTEM TEST [AW6A-EL]

E6U051700000W02

chanical System Test Preparation

1. Engage the parking brake and use wheel chocks at the front and rear of the wheels.
2. Inspect the engine coolant level. (See 01–12A–3 COOLING SYSTEM SERVICE WARNINGS [L3, AJ].) (See 01–12A–3 ENGINE COOLANT LEVEL INSPECTION [L3, AJ].)
3. Inspect the engine oil level. (See 01–11A–3 ENGINE OIL LEVEL INSPECTION [L3, AJ].)
4. Inspect the ATF level. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
5. Inspect the idle speed. (See 01–10C–39 Idle Speed Inspection.)
6. Inspect the ignition timing. (See 01–10C–39 Ignition Timing Inspection.)

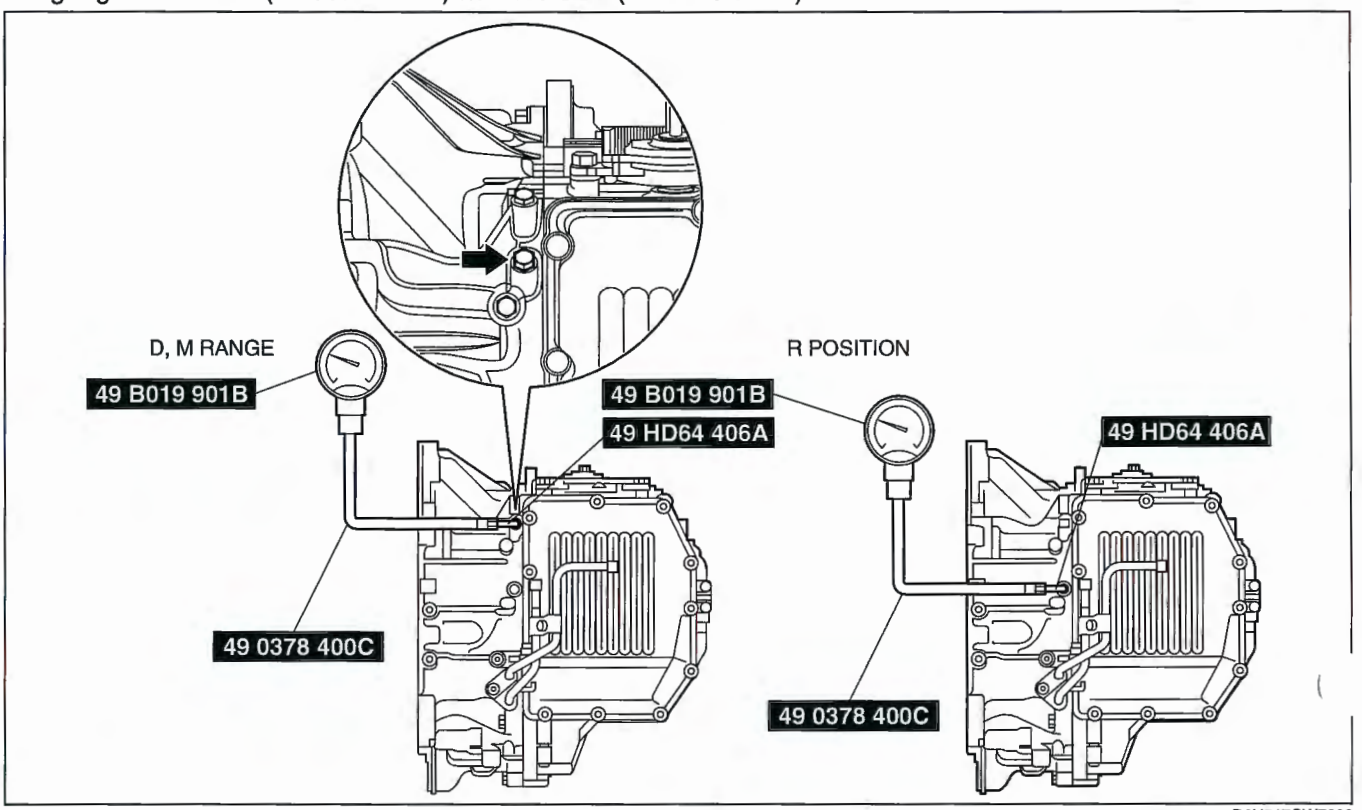
Line Pressure Test

1. Perform mechanical system test preparation. (See 05–17B–3 Mechanical System Test Preparation.)

Warning

- **Removing the test plug when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the test plug, allow the ATF to cool.**

2. Connect the **SSTs** (49 HD64 406A and, 49 0378 400C) to the line pressure inspection port and replace the gauge of the **SST** (49 0378 400C) with the **SST** (49 B019 901B).



D6U517CW7002

3. Start the engine and warm it up until the ATF reaches **60—70 °C {140—158 °F}**.
4. Shift the selector lever to the D range.

Caution

- **Perform the test at least 3 times and calculate the average.**

5. Read the line pressure while the engine is idling for the D range.
6. Read the line pressure while the engine is idling for the R position and M range in the same manner as in Steps 4—5.

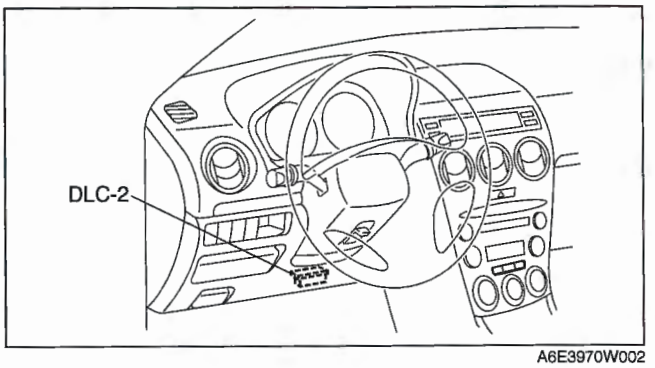
Line pressure

Position/range		Line pressure (kPa {kgf/cm^2, psi})
D, M	Idle	372—432 {3.8—4.4, 54—62}
R	Idle	580—670 {6.0—6.8, 85—97}

7. Stop the engine, then replace the **SST** (49 B019 901B) with the gauge of the **SST** (49 0378 400C).

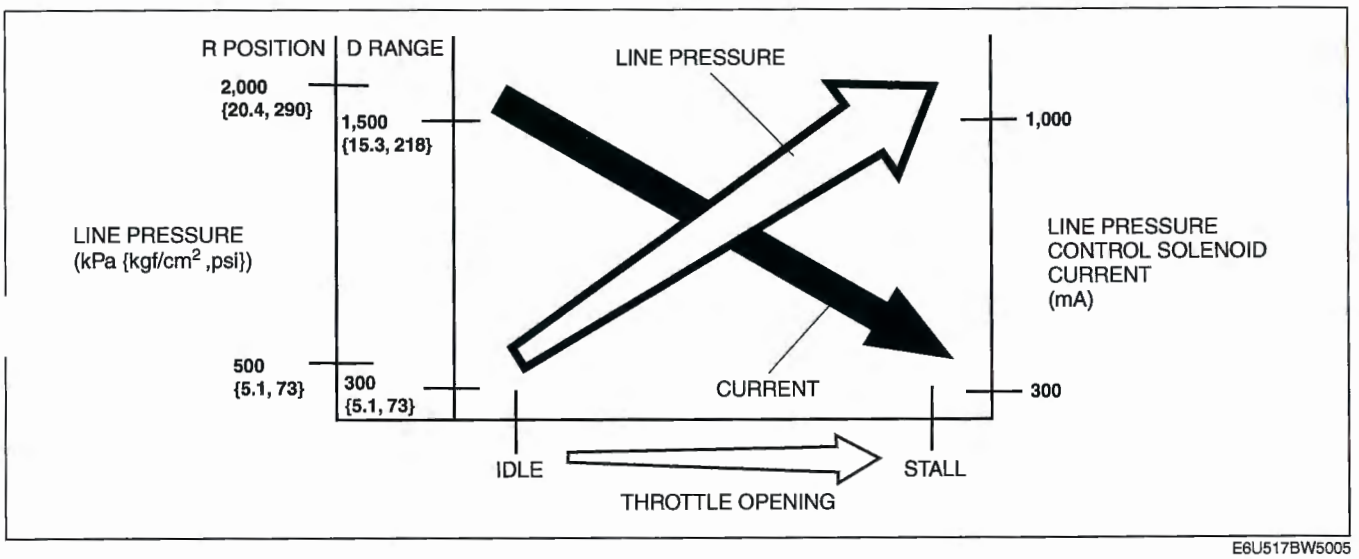
8. Connect the WDS or equivalent to the DLC-2.
9. Measure the LPS PID value.
10. Start the engine.
    — Firmly depress the brake pedal with the left foot. Shift the selector lever to the D range.

Caution
- **If the accelerator pedal is pressed for more than 5 s while the brake pedal is pressed, the transaxle could be damaged. Therefore, perform Steps 11 and 12 within 5 s.**



A6E3970W002

13. Gradually depress the accelerator pedal with the right foot.
14. When the engine speed no longer increases, quickly read the line pressure and release the accelerator pedal.
15. Shift the selector lever to the N position and idle the engine for **1 min or more** to cool the ATF.
16. Verify that the line pressure and LPS PID current values change according to the following graph by changing the shift throttle opening angle when shifting to the D range and R position with the engine running.
    — The line pressure standard other than when the engine is idling cannot be determined because the maximum line pressure for this automatic transaxle is controlled by vehicle conditions.



E6U517BW5005

Warning
- **Removing the SST when the ATF is hot can be dangerous. Hot ATF can come out of the opening and badly burn you. Before removing the SST, allow the ATF to cool.**

17. Remove the **SSTs**.
18. Install a test plug in the inspection port.

Tightening torque
5.9—8.8 N·m {61—89 kgf·cm, 53—77 in·lbf}

Line pressure test evaluation

Condition	Possible cause
Lower than specification in D range and R position	• Line pressure control solenoid malfunction • Primary regulator valve malfunction • Oil pump malfunction • Oil leaking from D range or R position hydraulic circuit
Constant pressure without fluctuation in hydraulic pressure to throttle in D range and R position	• Line pressure control solenoid malfunction • Control valve body internal malfunction
Current to throttle does not change in D range and R position	• TCM internal malfunction • Connector malfunction
Hydraulic pressure in R position is not higher than D range	• Primary regulator valve malfunction

Stall Test

1. Perform mechanical system test preparation. (See 05–17B–3 Mechanical System Test Preparation.)
2. Start the engine.
3. Firmly depress the brake pedal with the left foot.
4. Shift the selector lever to the D range.

Caution

- **If the accelerator pedal is depressed for more than 5 s while the brake pedal is depressed, the transaxle could be damaged. Therefore, perform Steps 5 and 6 within 5 s.**
- **Perform the test at least 3 times and calculate the average.**

5. Gently depress the accelerator pedal with the right foot.
6. When the engine speed no longer increases, quickly read the engine speed and release the accelerator pedal.
7. Shift the selector lever to the N position and idle the engine for **1 min or more** to cool the ATF.
8. Perform a stall test of the M range and R position in the same manner as in Steps 3—7.
9. Turn off the engine.

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M	2,480
R	

Evaluation of stall test

Condition		Possible cause
Above specification	In D, M ranges	• Low line pressure (Line pressure control solenoid malfunction, primary regulator valve malfunction) • Control valve body component malfunction (shift solenoid C hydraulic pressure system) • C1 clutch slipping • One-way clutch malfunction
	In R position	• Low line pressure (Line pressure control solenoid malfunction, primary regulator valve malfunction) • Control valve body component malfunction (shift solenoid E hydraulic pressure system) • C3 clutch malfunction (slipping) • B2 brake malfunction (slipping)
	In all positions/ranges	• Low line pressure (Line pressure control solenoid malfunction, primary regulator valve malfunction) • Oil pump malfunction • Oil strainer clogging
Below specification		• Engine lack of power • Torque converter one-way clutch slipping

Time Lag Test

1. Perform mechanical system test preparation. (See 05–17B–3 Mechanical System Test Preparation.)
2. Start the engine.
   Warm up the engine until the ATF temperature reaches **60—70°C {140—158°F}**.
   Shift the selector lever from the N position to D range.
5. Use a stopwatch to measure the time it takes from shifting until shock is felt. Take three measurements for each test and average from the results using the following formula.

   Formula
   Average time lag = (Time 1 + Time 2 + Time 3) / 3

6. Perform the test for the following shifts in the same manner as in Step 5.
   - N position → R position

   Average time lag
   N position → D range: 1 s or less
   N position → R position: 1.5 s or less

Evaluation of time lag test

Condition		Possible cause
N→D shift	More than specification	• Control valve body malfunction (shift solenoid C hydraulic pressure system) • C1 clutch slipping • One-way clutch malfunction • Oil pump malfunction • Oil strainer clogging
N→R shift	More than specification	• Control valve body malfunction (shift solenoid E hydraulic pressure system) • C3 clutch slipping • B2 brake slipping • Oil pump malfunction • Oil strainer clogging

ROAD TEST [AW6A-EL]

E6U051700000W03

Warning

- **When performing a road test, be aware of other vehicles, people, and other impediments to order to avoid an accident.**

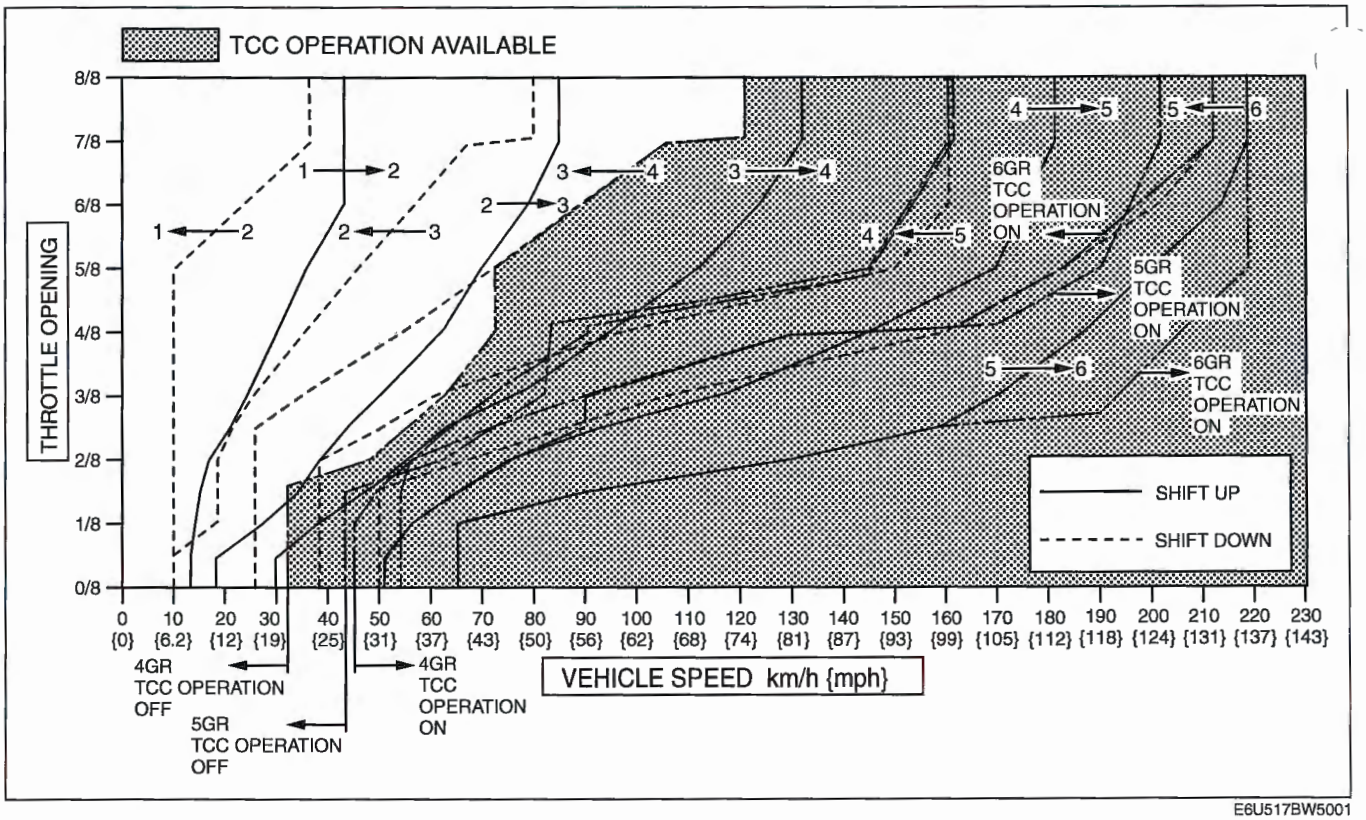
Note

- When the legal speed limit must be exceeded, use a chassis dynamometer instead of performing a road test.

Road Test Preparation

1. Inspect the engine coolant level. (See 01–12A–3 COOLING SYSTEM SERVICE WARNINGS [L3, AJ].) (See 01–12A–3 ENGINE COOLANT LEVEL INSPECTION [L3, AJ].)
2. Inspect the engine oil level. (See 01–11A–3 ENGINE OIL LEVEL INSPECTION [L3, AJ].)
3. Inspect the ATF level. (See 05–17B–12 Automatic Transaxle Fluid (ATF) Level Inspection.)
4. Inspect the idle speed. (See 01–10C–39 Idle Speed Inspection.)
5. Inspect the ignition timing. (See 01–10C–39 Ignition Timing Inspection.)
6. Bring up the engine and transaxle to normal operating temperature.

Shift Diagram
D range (normal mode)



E6U517BW5001

D Range Test

1. Perform road test preparation. (See 05–17B–7 Road Test Preparation.)
2. Shift the selector lever to D range.
3. Accelerate with the depressing amount of accelerator pedal half and then fully depress.
4. Verify that 1→2, 2→3, 3→4, 4→5, and 5→6 upshifts and downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
5. Drive the vehicle in 6GR, 5GR, 4GR, 3GR, and 2GR and verify that kickdown occurs for 6→5, 5→4, 4→3, 3→2, 2→1 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
6. Drive the vehicle and verify that TCC operation is obtained. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
D	NORMAL	Wide open throttle	$D_1 \rightarrow D_2$	42—48 {27—29}	5,150—5,850
			$D_2 \rightarrow D_3$	83—91 {52—56}	5,850—6,350
			$D_3 \rightarrow D_4$	129—139 {80—86}	5,950—6,350
			TCC ON (D_4)	159—169 {99—104}	5,450—5,750
			$D_4 \rightarrow D_5$	177—187 {110—115}	6,050—6,350
			TCC ON (D_5)	197—207 {123—128}	5,000—5,250
			$D_5 \rightarrow D_6$	214—224 {133—138}	5,450—5,650
			TCC ON (D_6)	214—224 {133—138}	4,350—4,500
		Half throttle	$D_1 \rightarrow D_2$	27—34 {17—21}	3,250—4,250
			$D_2 \rightarrow D_3$	52—68 {33—42}	3,650—4,750
			$D_3 \rightarrow D_4$	82—107 {51—66}	3,750—4,900
			TCC ON (D_4)	90—126 {56—78}	3,100—4,300
			$D_4 \rightarrow D_5$	130—154 {81—95}	4,450—5,250
			TCC ON (D_5)	123—157 {77—97}	3,150—3,950
			$D_5 \rightarrow D_6$	177—193 {110—119}	4,500—4,900
			TCC ON (D_6)	200—215 {124—133}	4,050—4,350
		Closed throttle position	$D_6 \rightarrow D_5$	47—53 {30—32}	1,000—1,050
			$D_5 \rightarrow D_4$	35—41 {22—25}	900—1,000
			$D_4 \rightarrow D_3$	24—30 {15—18}	850—1,000
			$D_3 \rightarrow D_2$	7—13 {5—8}	350—550
			$D_3 \rightarrow D_1$	7—13 {5—8}	350—550
		Kickdown	$D_6 \rightarrow D_5$	207—217 {129—134}	4,200—4,350
			$D_5 \rightarrow D_4$	156—166 {97—102}	4,000—4,200
			$D_4 \rightarrow D_3$	116—126 {72—78}	4,000—4,250
			$D_3 \rightarrow D_2$	76—84 {48—52}	3,500—3,850
			$D_2 \rightarrow D_1$	33—39 {21—24}	2,350—2,700

Range	Mode	Throttle condition	Shift	Vehicle speed (km/h {mph})	Turbine speed (rpm)
D	POWER	Wide open throttle	$D_1 \rightarrow D_2$	42—48 {27—29}	5,150—5,850
			$D_2 \rightarrow D_3$	83—91 {52—56}	5,850—6,350
			$D_3 \rightarrow D_4$	129—139 {80—86}	5,950—6,350
			TCC ON (D_4)	159—169 {99—104}	5,450—5,750
			$D_4 \rightarrow D_5$	177—187 {110—115}	6,050—6,350
			TCC ON (D_5)	197—207 {123—128}	5,000—5,250
			TCC ON (D_6)	214—224 {133—138}	4,350—4,500
		Half throttle	$D_1 \rightarrow D_2$	28—36 {18—22}	3,350—4,500
			$D_2 \rightarrow D_3$	53—69 {33—42}	3,700—4,850
			$D_3 \rightarrow D_4$	86—112 {54—69}	3,950—5,150
			TCC ON (D_4)	97—130 {61—80}	3,300—4,400
			$D_4 \rightarrow D_5$	177—187 {110—115}	6,050—6,350
			TCC ON (D_5)	145—170 {90—105}	3,700—4,300
			TCC ON (D_6)	200—215 {124—133}	4,050—4,350
		Closed throttle position	$D_6 \rightarrow D_5$	47—53 {30—32}	1,000—1,050
			$D_5 \rightarrow D_4$	35—41 {22—25}	900—1,000
			$D_4 \rightarrow D_3$	24—30 {15—18}	850—1,000
			$D_3 \rightarrow D_2$	7—13 {5—8}	350—550
			$D_3 \rightarrow D_1$	7—13 {5—8}	350—550
		Kickdown	$D_6 \rightarrow D_5$	207—217 {129—134}	4,200—4,350
			$D_5 \rightarrow D_4$	156—166 {97—102}	4,000—4,200
			$D_4 \rightarrow D_3$	116—126 {72—78}	4,000—4,250
			$D_3 \rightarrow D_2$	76—84 {48—52}	3,500—3,850
			$D_2 \rightarrow D_1$	33—39 {21—24}	2,350—2,700

M Range Test

1. Perform road test preparation. (See 05–17B–7 Road Test Preparation.)
2. Shift the selector lever to M range.
3. Verify that 1→2, 2→3, 3→4, 4→5 and 5→6 upshifts and 6→5, 5→4, 4→3, 3→2, and 2→1 downshifts are obtained by manual shifting of the selector lever forward and back.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
4. Decelerate the vehicle and verify that 6→5, 5→4, 4→3, 3→1 downshifts are obtained. The shift points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
5. Decelerate the vehicle and verify that engine braking effect is felt in 1GR.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
6. Drive the vehicle and verify that TCC operation is obtained in 4GR, 5GR and 6GR. The operation points must be as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)
7. Drive the vehicle in 6GR, 5GR, 4GR and 3GR and verify that kickdown occurs for 6→5, 5→4, 4→3, 3→2 downshifts, and that the shift points are as shown in the table below.
   - If there is any malfunction, inspect the TCM and ATX. (See 05–03B–4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)

Vehicle speed at shift point table

Range	Mode	Throttle condition	Shift	Vehicle speed km/h {mph}	Turbine speed (rpm)
M	Manual	Half throttle	TCC ON (M_4)	97—136 {61—84}	3,300—4,650
			TCC ON (M_5)	138—166 {86—102}	3,500—4,200
			TCC ON (M_6)	200—215 {124—133}	4,050—4,350
		All round	$M_6 \rightarrow M_5$	47—53 {30—32}	1,000—1,050
			$M_5 \rightarrow M_4$	35—41 {22—25}	900—1,000
			$M_4 \rightarrow M_3$	24—30 {15—18}	850—1,000
			$M_3 \rightarrow M_1$	7—13 {5—8}	350—550
		Kickdown	$M_6 \rightarrow M_5$	207—217 {129—134}	4,200—4,350
			$M_5 \rightarrow M_4$	156—166 {97—102}	4,000—4,200
			$M_4 \rightarrow M_3$	65—75 {41—46}	2,250—2,550
			$M_3 \rightarrow M_2$	42—50 {27—31}	1,950—2,250

P Position Test

1. Shift into P position on a gentle slope. Release the brake and verify that the vehicle does not roll.
   - If there is any malfunction, inspect the ATX. (See 05-03B-4 SYMPTOM TROUBLESHOOTING ITEM TABLE [AW6A-EL].)

AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL]

E6U051719001W01

Automatic Transaxle Fluid (ATF) Condition Inspection

1. Inspect the ATF for the following to determine whether the transaxle should be disassembled.
   - The ATF is muddy.
   - The ATF smells strange or unusual.

ATF Condition

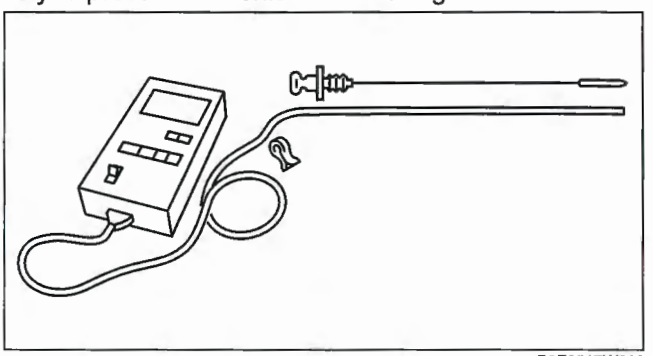
Condition			Possible cause
?ar dark red		Normal	—
Light red (pink)		Contaminated with water	• Damaged oil cooler • Poor filler tube installation: Problem could occur to parts inside the transaxle due to water contamination. If necessary, replace the transaxle.
Reddish brown	Has burnt smell and metal particles are found	Deteriorated ATF	Defective powertrain components inside the transaxle: Particles cause wide range of problems by clogging the oil pipe, control valve body and oil cooler. • A large amount of metal particles are found. If necessary, replace the transaxle. • Flush the system due to possible clogging of the oil pipe or oil cooler.
	Has no burnt smell	Normal	• Discoloration by oxidation

Automatic Transaxle Fluid (ATF) Level Inspection

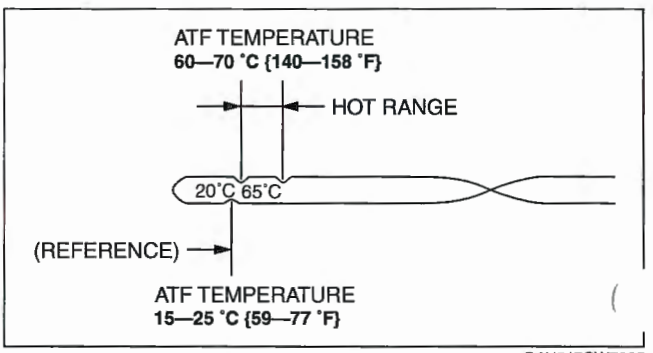
Caution
- **The ATF amount varies according to ATF temperature. Therefore, when checking the ATF level or replacing the ATF, use a thermometer to measure the temperature and adjust the ATF amount to the specified level according to the specified temperature.**

1. Place the vehicle on level ground.
2. Apply the parking brake and position wheel chocks securely to prevent the vehicle from rolling.
3. Adjust the length or thermometer probe so that the length is the same as the depth gauge, and hold the probe with a paper holder. Insert into the filler tube and measure the temperature.
   - If necessary, inspect the ATF before warming up the engine. In this case, use the ATF temperature **(15—25 °C {59—77 °F})**.
4. Warm up the engine until the ATF reaches **60—70 °C {140—158 °F}**.
5. Shift the selector lever and pause momentarily in each range (P—D) while depressing the brake pedal.
6. Shift the selector lever to P position.
7. Verify that the ATF level is in the HOT range **(65 °C {149 °F})** while the engine is idling.
   - If necessary, add ATF to the specification.

ATF
Type: JWS3309



B3E0517W083



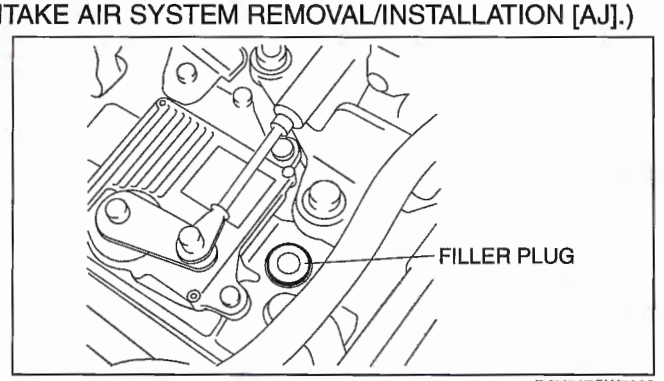
D6U517CW7005

AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL]

E6U051719001W02

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

1. Disconnect the negative battery cable.
2. Remove the oil dipstick.
3. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
4. Remove the oil filler plug and O-ring.
5. Remove the under cover.



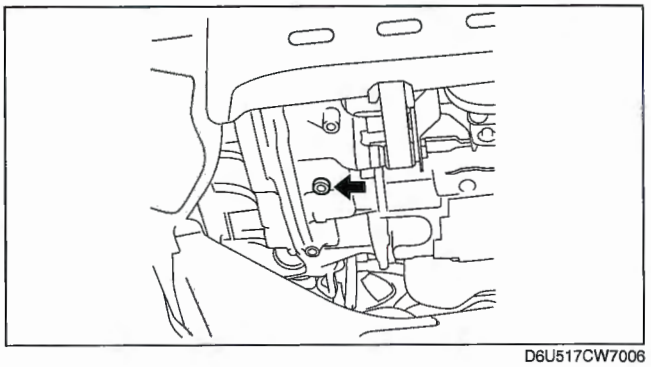
D6U517CW7082

6. Remove the oil drain plug and gasket.
7. Drain the ATF into a container.
8. Install a new gasket and the drain plug.

Tightening torque
23.5—54.9 N·m {2.4—5.5 kgf·m, 17.4—40.4 ft·lbf}

9. Add the specified ATF through the oil filler plug until it reaches the lower notch of dipstick.

ATF
Type: JWS3309
Capacity (Approx. quantity): 7.0 L {7.4 US qt, 6.2 Imp qt}



D6U517CW7006

10. Install a new O-ring and the filler plug.

Tightening torque
23.5—54.9 N·m {2.4—5.5 kgf·m, 17.4—40.4 ft·lbf}

11. Install the under cover.
12. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
13. Connect the negative battery cable.
14. Ensure that the ATF level is in the HOT range (**65 °C {149 °F}**).
    - Add ATF to the specified level as necessary.

TRANSAXLE RANGE (TR) SWITCH INSPECTION [AW6A-EL]

E6U051719200W01

Note
- TR switch function is installed as one part of TCM.

... Inspect the TCM. (See 05–17B–21 TCM INSPECTION [AW6A-EL].)

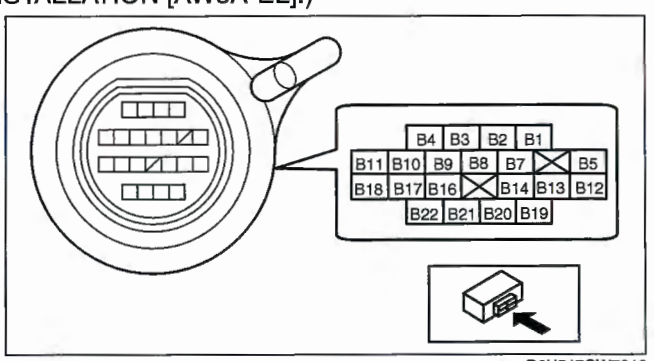
TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL]

E6U051719200W02

On-Vehicle Inspection

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Verify that there is no continuity between coupler component terminals B7 and GND, or B8 and GND.
   - If there is any malfunction, perform an off-vehicle inspection of TFT sensor. (See 05–17B–14 Off-Vehicle Inspection.)
5. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
6. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
7. Connect the negative battery cable.



D6U517CW7016

Off-Vehicle Inspection

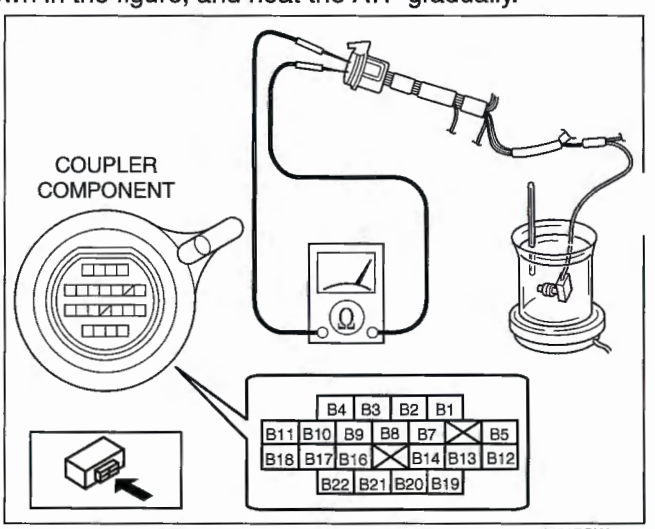
Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Place the heater pipe out of the way.
4. Remove the under cover.
5. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
6. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
7. Disconnect the lower radiator hose and place the lower radiator hose out of the way.
8. Remove the oil hose, oil pipe and O-ring. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
9. Remove the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
10. Remove the control valve body. (See 05–17B–39 On-Vehicle Removal.)
11. Remove the TFT sensor. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
12. Place the TFT sensor and a thermometer in ATF as shown in the figure, and heat the ATF gradually.
13. Measure the resistance between the coupler component terminals B7and B8.
    - If there is any malfunction, replace the TFT sensor. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)



D6U517CW7020

Transaxle fluid temperature (TFT) sensor

ATF temperature (°C {°F})	Resistance (kilohm)
10 {50}	5.62—7.31
25 {77}	3.5
110 {230}	0.22—0.27

14. Install the TFT sensor. (See 05–17B–15 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
15. Install the control valve body. (See 05–17B–43 On-Vehicle Installation.)
16. Apply ATF to a new O-ring and install it on the oil pipe.
17. Install the oil pipe and oil hose. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
18. Connect the lower radiator hose.
19. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
20. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
21. Install the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
22. Install the under cover.
23. Install the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
24. Connect the negative battery cable.

TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR REMOVAL/INSTALLATION [AW6A-EL]

E6U051719200W03

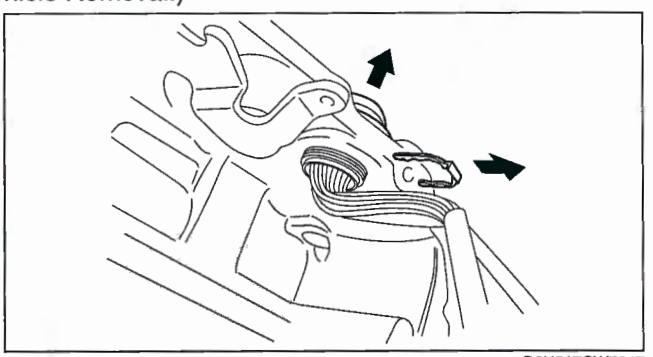
Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Place the heater pipe out of the way.
5. Remove the under cover.
6. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
7. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
8. Disconnect the lower radiator hose and place the lower radiator hose out of the way.
9. Remove the oil hose, oil pipe and O-ring. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
10. Remove the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
11. Remove the control valve body. (See 05–17B–39 On-Vehicle Removal.)
12. Remove the coupler component lock plate.

Caution
- **Do not damage the wiring harness.**
- **Do not pull hard on the wiring harness.**

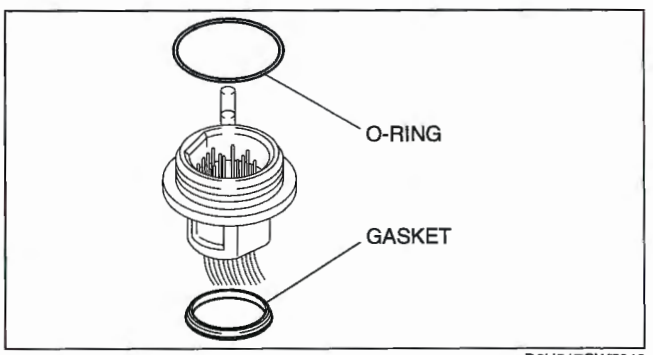
13. Remove the coupler component from the transaxle case.



D6U517CW7017

14. Remove the O-ring and the gasket form the coupler component.
15. Apply ATF to a new gasket and install it on the coupler component.

Caution
- **Do not apply ATF to the O-ring.**

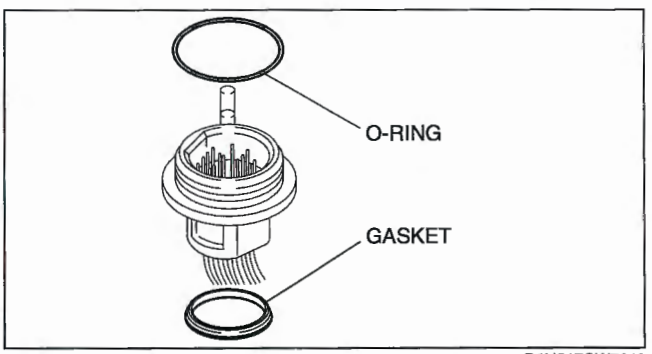


D6U517CW7018

16. Install a new O-ring to the coupler component.

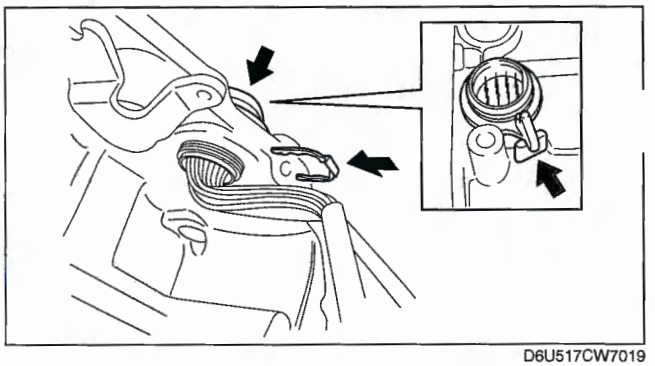
Caution
- **Do not apply too much force to the coupler component.**
- **Do not damage the coupler component.**

17. Install the coupler component to the transaxle case.



D6U517CW7018

18. Install a new coupler component lock plate.
19. Install the control valve body. (See 05–17B–43 On-Vehicle Installation.)
20. Apply ATF to a new O-ring and install it on the oil pipe.
21. Install the oil pipe and oil hose. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
22. Connect the lower radiator hose.
23. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
24. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)



D6U517CW7019

25. Install the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
26. Install the under cover.
27. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
28. Install the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
29. Connect the negative battery cable.
30. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

INPUT/TURBINE SPEED SENSOR INSPECTION [AW6A-EL]

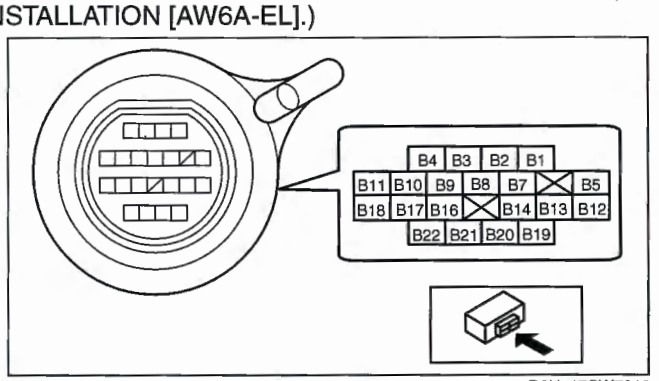
E6U051719200W04

On-Vehicle Inspection

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Verify that there is no continuity between the coupler component terminals B12 and GND or B13 and GND.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, perform an off-vehicle inspection of input/turbine speed sensor. (See 05–17B–17 Off-Vehicle Inspection.)

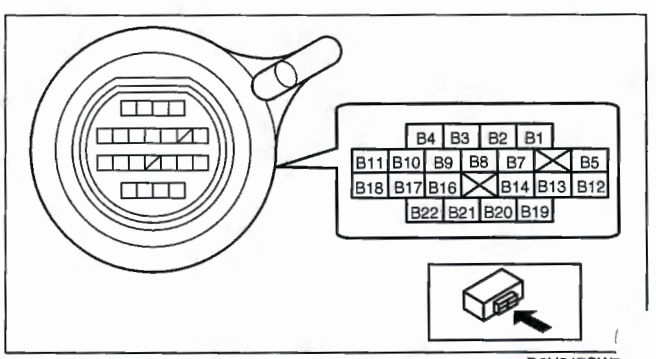


D6U517CW7016

Note

- Inspect with a tester that can indicate **more than 10 megohms** and confirm that the value is **more than 1 megohm**.

5. Verify that there is continuity between coupler component terminals B12 and B13.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, replace the input/turbine speed sensor. (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
6. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
7. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
8. Connect the negative battery cable.



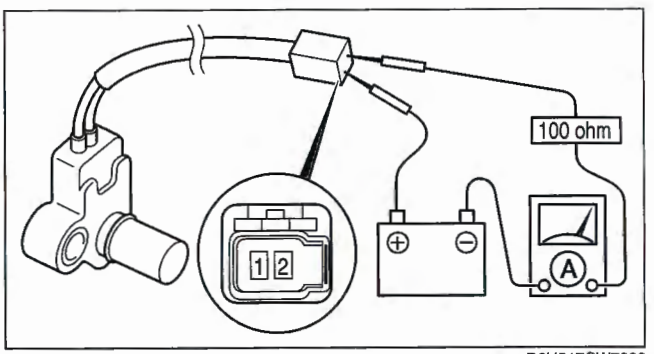
D6U517CW7

Off-Vehicle Inspection

Warning
- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until they are cool before replacing the ATF.**

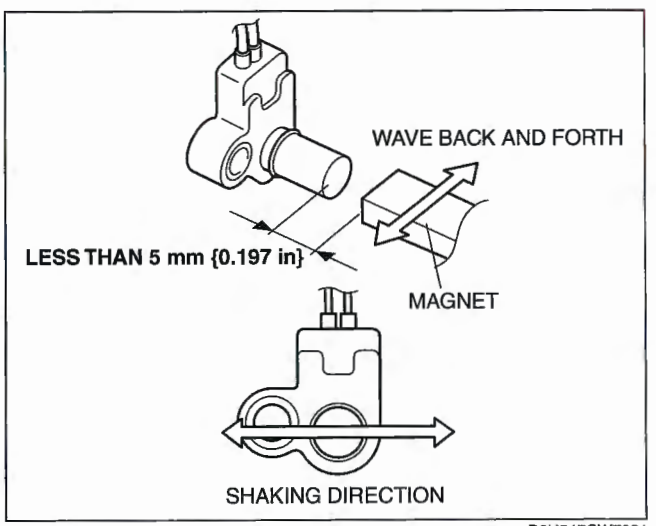
Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Place the heater pipe out of the way.
4. Remove the under cover.
5. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
6. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
7. Disconnect the lower radiator hose and place the lower radiator hose out of the way.
8. Remove the oil hose, oil pipe and O-ring. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
9. Remove the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
10. Remove the control valve body. (See 05–17B–39 On-Vehicle Removal.)
11. Remove the input/turbine speed sensor. (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
12. Connect the input/turbine speed sensor terminal 2 to the battery positive terminal, connect the battery negative terminal to input/turbine speed sensor terminal 1 through an ammeter set to a resistance of **100 ohm**.



D6U517CW7090

13. Measure the current while waving a magnet back and forth over the top of the input/turbine speed sensor (**less than 5 mm {0.197 in}**).
    - If there is any malfunction, replace the input/turbine speed sensor. (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)



D6U517CW7091

Input/turbine speed sensor

Signal	Current (mA)
High	12.0—16.0
Low	4.0—8.0

14. Install the input/turbine speed sensor. (See 05–17B–18 INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL].)
15. Install the control valve body. (See 05–17B–43 On-Vehicle Installation.)
16. Apply ATF to a new O-ring and install it on the oil pipe.
17. Install the oil pipe and oil hose. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
18. Connect the lower radiator hose.
19. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
20. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
21. Install the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
22. Install the under cover.
23. Install the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
24. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

INPUT/TURBINE SPEED SENSOR REMOVAL/INSTALLATION [AW6A-EL]

E6U051719200W05

Warning

- **A hot transaxle and ATF can cause severe burns. Turn off the engine and wait until then are cool before replacing the ATF.**

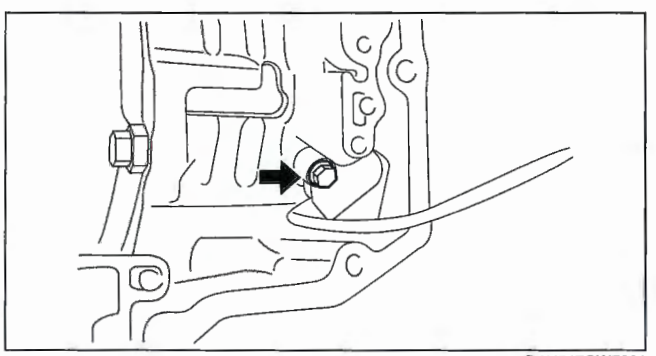
1. Disconnect the negative battery cable.
2. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Place the heater pipe out of the way.
4. Remove the under cover.
5. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
6. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
7. Disconnect the lower radiator hose and place the lower radiator hose out of the way.
8. Remove the oil hose, oil pipe and O-ring. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
9. Remove the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
10. Remove the control valve body. (See 05–17B–39 On-Vehicle Removal.)

Caution

- **Do not damage the input/turbine speed sensor.**

11. Remove the input/turbine speed sensor.
12. Install the input/turbine speed sensor.

Tightening torque
3.9—6.9 N·m {40—70 kgf·cm, 26—60 in·lbf}



D6U517CW7083

13. Install the control valve body. (See 05–17B–43 On-Vehicle Installation.)
14. Apply ATF to a new O-ring and install it on the oil pipe.
15. Install the oil pipe and oil hose. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
16. Connect the lower radiator hose.
17. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
18. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
19. Install the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
20. Install the under cover.
21. Install the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
22. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL]

E6U051719200W06

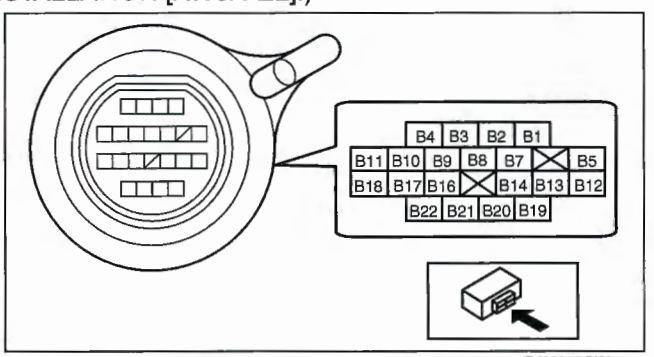
On-Vehicle Inspection

Caution

- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

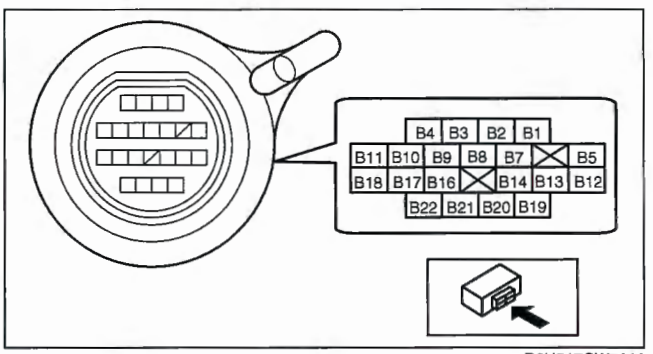
1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Verify that there is no continuity between the coupler component terminals B19 and GND or B20 and GND.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, replace the ATX. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)

   Note
   - Inspect with a tester that can indicate **more than 10 megohms** and confirm that the value is **more than 1 megohm**.



D6U517CW7016

5. Verify that there is continuity between coupler component terminals B19 and B20.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, replace the ATX. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
6. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
7. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
8. Connect the negative battery cable.



D6U517CW7016

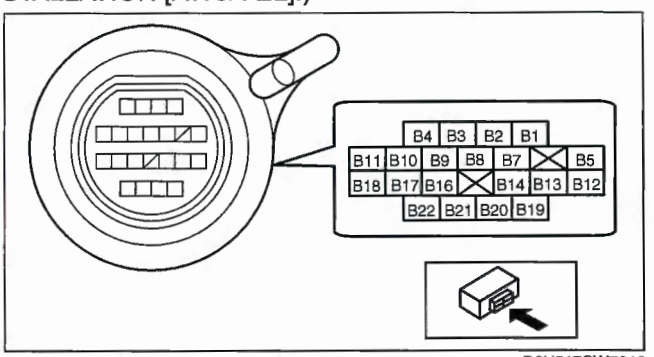
SOLENOID VALVE INSPECTION [AW6A-EL]

E6U051721101W01

Resistance Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Measure the resistance between the following terminals.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)



D6U517CW7016

Solenoid valve resistance (ATF temperature: 20 C {68 F})

Terminal	Solenoid valve	Resistance (ohm)
B5—GND	Shift solenoid A	11—15
B2—GND	Shift solenoid B	11—15
B11—B10	Shift solenoid C	5.0—5.6
B17—B18	Shift solenoid D	5.0—5.6
B14—B22	Shift solenoid E	5.0—5.6
B21—B16	Shift solenoid F	5.0—5.6
B9—B4	TCC control solenoid	5.0—5.6
B3—B1	Line pressure control solenoid	5.0—5.6

5. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
6. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
7. Connect the negative battery cable.

Continuity Inspection (On-Vehicle Inspection)

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**
- **Do not damage the terminals.**

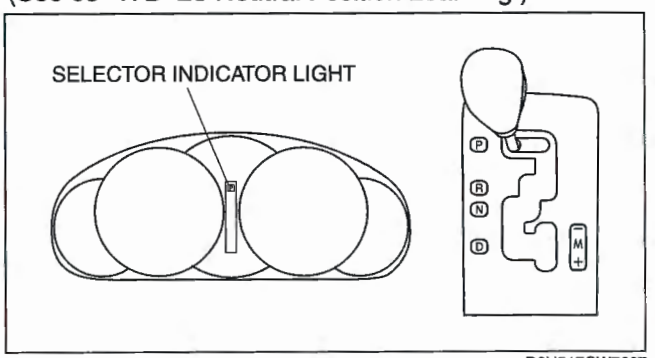
1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Verify that there is no continuity between coupler component terminals B1, B3, B4, B9, B10, B11, B14, B17, B18, B21, B22 and GND.
   - If there is any malfunction, inspect the coupler component.
   - If the coupler component is normal, replace the control valve body. (See 05–17B–39 CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL].)
5. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
6. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
7. Connect the negative battery cable.

TCM INSPECTION [AW6A-EL]

E6U051718901W01

TR Switch Operating Inspection

1. Verify that the starter operates only when the ignition switch is turned to the START position with the selector lever in P or N position.
   - If there is any malfunction, neutral position learning. (See 05–17B–28 Neutral Position Learning.)
2. Verify that the back-up lights illuminate when shifted to R position with the ignition switch at the ON position.
   - If there is any malfunction, neutral position learning. (See 05–17B–28 Neutral Position Learning.)
3. Verify that the positions of the selector lever and the indicator light correspond.
   - If there is any malfunction, perform the neutral position learning. (See 05–17B–28 Neutral Position Learning.)
4. Verify that the TR PID is normal.
   - If there is any malfunction, perform the neutral position learning. (See 05–17B–28 Neutral Position Learning.)



D6U517CW7007

Control Module Inspection

1. Remove the air cleaner component. (See01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
2. Measure the voltage at each TCM short cord connector wiring harness-side) terminal and refer to the terminal voltage table.
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item (s)".

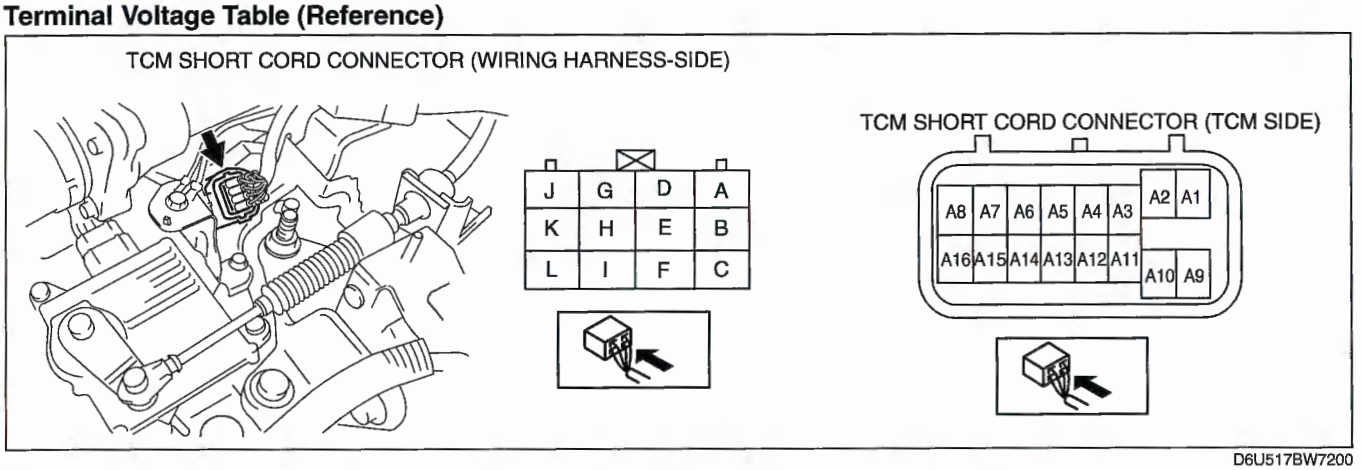
Warning

- **Be careful not to damage the connector waterproofing when measuring the TCM terminal voltage. If damaged, the waterproofing efficiency could be negatively affected.**

Note

- Use the ground of terminal J of the TCM short cord connector wiring harness-side) when measuring terminal voltage, as an error may occur when connecting the negative circuit tester to ground.

Terminal Voltage Table (Reference)



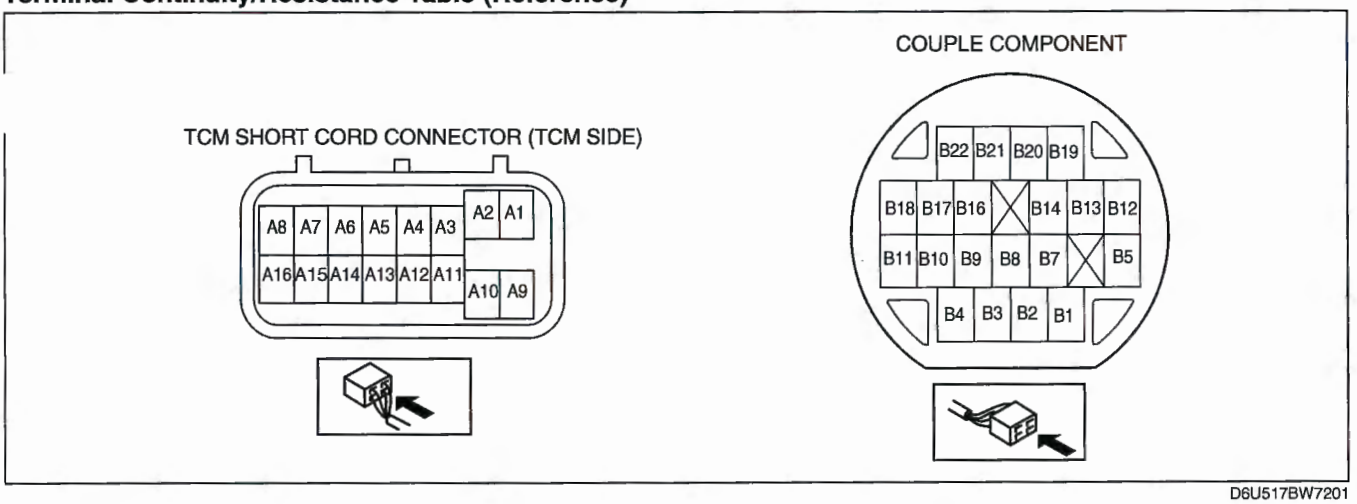
D6U517BW7200

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item (s)
A	Battery back up supply	Battery	Constant	B+	• Inspect for continuity between TCM short cord connector terminal A (wiring harness-side) and A1 wiring harness-side). • Inspect related harness
B	Power supply	Ignition switch	Ignition switch ON	B+	• Inspect for continuity between TCM short cord connector terminal B wiring harness-side) and A11 (wiring harness-side). • Inspect Ignition switch • Inspect related harness
			Ignition switch OFF	Below 1.0	

Terminal	Signal	Connected to	Test condition		Voltage (V)	Inspection item (s)
C	Starter relay	Starter relay	Shift the selector lever to P or N position.	Ignition switch ON	B+	• Inspect for continuity between TCM short cord connector terminal C (wiring harness-sid and A5 (wiring harness-side). • Inspect related harness
				Ignition switch OFF	Below 1.0	
D	Up switch (Selector lever component)	Up switch (Selector lever component)	Shift up (M range)		Below 1.0	• Inspect for continuity between TCM short cord connector terminal D (wiring harness-side) and A3 (wiring harness-side). • Inspect selector lever component (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION) • Inspect related harness
			Other ranges, all positions		B+	
F	CAN_L	PCM	Because this terminal is for serial communication, good/no good judgment by terminal voltage is not possible. Carry out inspection according to DTCs.		—	• Inspect for continuity between TCM short cord connector terminal F (wiring harness-side) and A6 (wiring harness-side). • Inspect related harness
G	M range switch	M range switch	M range		Below 1.0	• Inspect for continuity between TCM short cord connector terminal G (wiring harness-side) and A7 (wiring harness-side). • Inspect Selector lever component (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION) • Inspect related harness
			Other positions, all ranges		B+	
H	CAN_H	PCM	Because this terminal is for serial communication, good/no good judgment by terminal voltage is not possible. Carry out inspection according to DTCs.		—	• Inspect for continuity between TCM short cord connector terminal H (wiring harness-side) and A14 (wiring harness-side). • Inspect related harness
K	Down switch (Selector lever component)	Down switch (Selector lever component)	Shift down (M range)		Below 1.0	• Inspect for continuity between TCM short cord connector terminal K (wiring harness-side) and A14 (wiring harness-side). • Inspect selector lever component (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION) • Inspect related harness
			Other ranges, all positions		B+	
L	Back-up light relay	Back-up light relay	Ignition switch ON	Shift the selector lever to R position.	Below 1.0	• Inspect for continuity between TCM short cord connector terminal L (wiring harness-side) and A13 (wiring harness-side). • Inspect back-up light relay (See 09–21–7 RELAY INSPECTION) • Inspect related harness
				Other	B+	

3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
4. Verify that continuity or resistance at terminal is as indicated in the terminal continuity/ resistance table.
   - If there is any malfunction, inspect the parts under "Inspection item (s)".
     — If the system does not work properly even though the parts or related wiring harnesses do not have any malfunction, replace the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)

Terminal Continuity/Resistance Table (Reference)



D6U517BW7201

Terminal	Signal	Connected to	Test Condition		Continuity/ Resistance	Inspection item (s)
A9	System GND	GND	Constant		Continuity	• Inspect related harness
B1	Line pressure control solenoid control GND	Line pressure control solenoid	• Inspect resistance between couple component terminals B3 and B1 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect line pressure control solenoid (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B2	Shift solenoid B control	Shift solenoid B	ATF temperature: 20°C {68°F}		11—15 (ohms)	• Inspect shift solenoid B (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B3	Line pressure control solenoid control	Line pressure control solenoid	• Inspect resistance between couple component terminals B3 and B1 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect line pressure control solenoid (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B4	TCC control solenoid control GND	TCC control solenoid	• Inspect resistance between couple component terminals B9 and B4 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect TCC control solenoid (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B5	Shift solenoid A control	Shift solenoid A	ATF temperature: 20°C {68°F}		11—15 (ohms)	• Inspect shift solenoid A (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B7	TFT sensor GND	TFT sensor	• Inspect resistance between couple component terminals B7 and B8 (wiring harness-side).	ATF temperature: 10°C {50°F}	5.62—7.31 (kilohms)	• Inspect TFT sensor (See 05–17B–13 TRANSAXLE FLUID TEMPERATURE (TFT) SENSOR INSPECTION [AW6A-EL]) • Inspect related harness
				ATF temperature: 25°C {77°F}	3.5 (kilohms)	
B8	TFT sensor			ATF temperature: 110°C {230°F}	0.22—0.27 (kilohms)	

Terminal	Signal	Connected to	Test Condition		Continuity/ Resistance	Inspection item (s)
B9	TCC control solenoid control	TCC control solenoid	• Inspect resistance between couple component terminals B9 and B4 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect TCC control solenoid (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B10	Shift solenoid C control GND	Shift solenoid C	• Inspect resistance between couple component terminals B11 and B10 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid C (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B11	Shift solenoid C control					
B12	Input/turbine speed sensor (–)	Input/turbine speed sensor	• Inspect for continuity between couple component terminals B12 and B13 (wiring harness-side).		Continuity	• Inspect input/turbine speed sensor (See 05–17B–16 INPUT/TURBINE SPEED SENSOR INSPECTION [AW6A-EL]) • Inspect related harness
B13	Input/turbine speed sensor (+)					
B14	Shift solenoid E control	Shift solenoid E	• Inspect resistance between couple component terminals B14and B22 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid E (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B16	Shift solenoid F control GND	Shift solenoid F	• Inspect resistance between couple component terminals B21and B16 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid F (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B17	Shift solenoid D control	Shift solenoid D	• Inspect resistance between couple component terminals B17and B18 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid D (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B18	Shift solenoid D control GND					
B19	Vehicle speed (–)	VSS	• Inspect for continuity between couple component terminals B19 and B20 (wiring harness-side).		Continuity	• Inspect VSS (See 05–17B–19 VEHICLE SPEED SENSOR (VSS) INSPECTION [AW6A-EL]) • Inspect related harness
B20	Vehicle speed (+)	VSS				
B21	Shift solenoid F control	Shift solenoid F	• Inspect resistance between couple component terminals B21and B16 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid F (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness
B22	Shift solenoid E control GND	Shift solenoid E	• Inspect resistance between couple component terminals B14and B22 (wiring harness-side).	ATF temperature: 20°C {68°F}	5.0—5.6 (ohms)	• Inspect shift solenoid E (See 05–17B–20 SOLENOID VALVE INSPECTION [AW6A-EL]) • Inspect related harness

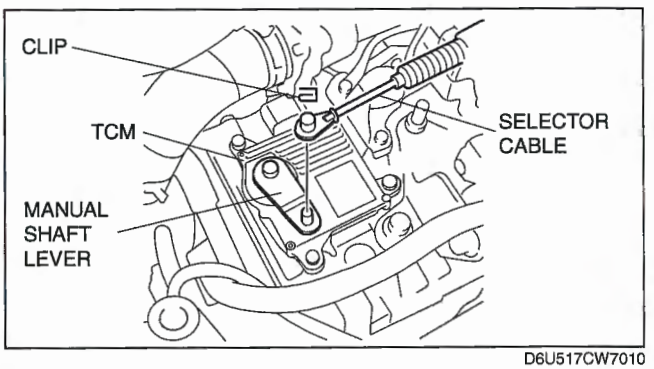
TCM REMOVAL/INSTALLATION [AW6A-EL]

E6U051718901W02

Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**

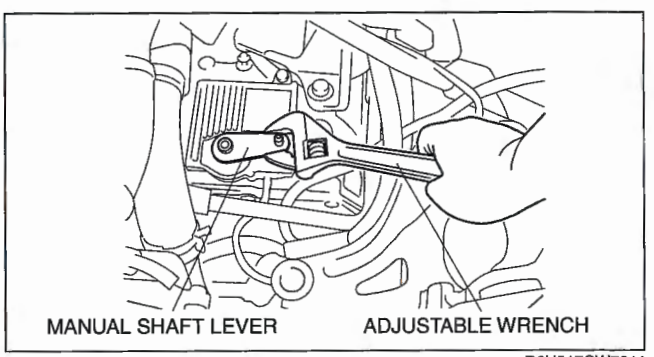
1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Disconnect the TCM connector.
4. Remove the clip and disconnect the selector cable.

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



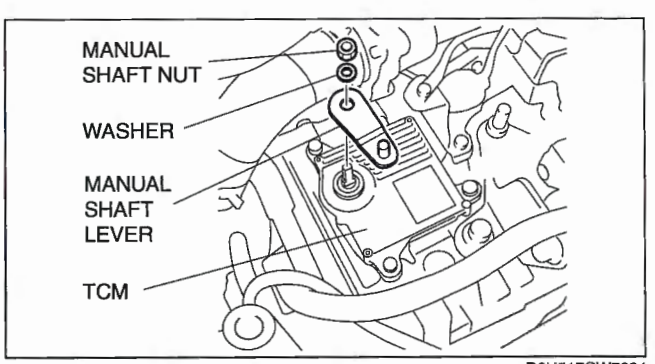
D6U517CW7010

5. Set the adjustable wrench as shown in the figure to hold the manual shaft lever.



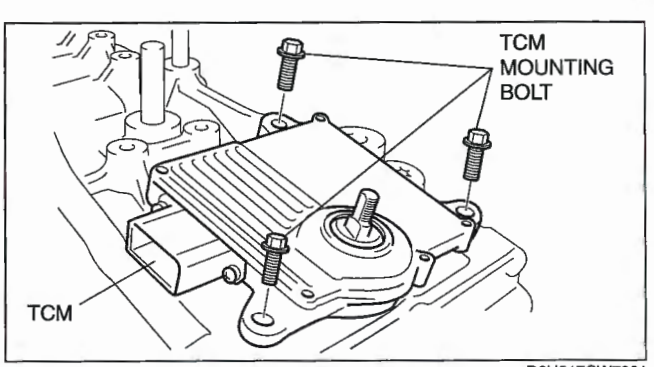
D6U517CW7011

6. Remove the manual shaft nut and washer.



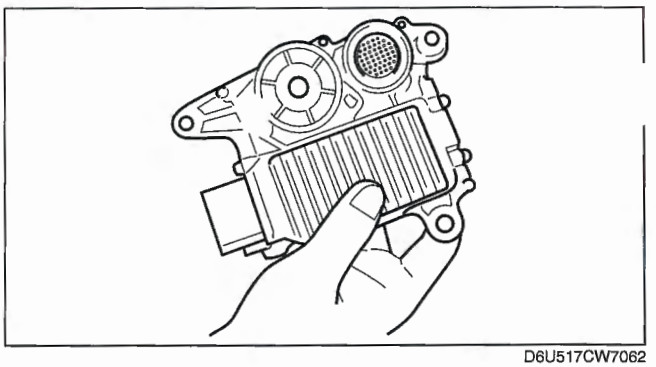
D6U517CW7084

7. Remove the TCM.



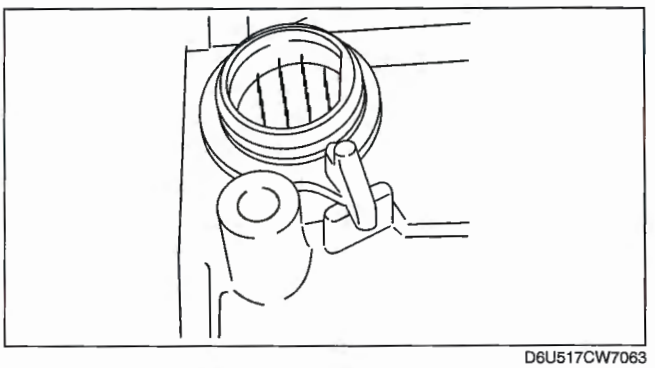
D6U517CW7061

Caution
- **Do not touch the terminals.**



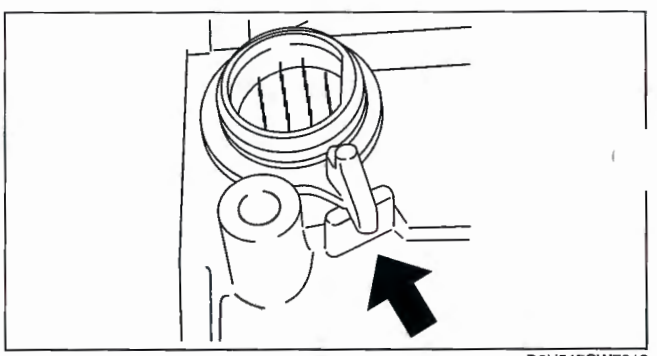
D6U517CW7062

8. Inspect the condition of the connector pin of the coupler component (foreign material, bent pins, broken pins) and O-ring after the TCM is removed.



D6U517CW7063

9. Align the transaxle case and coupler component connector.

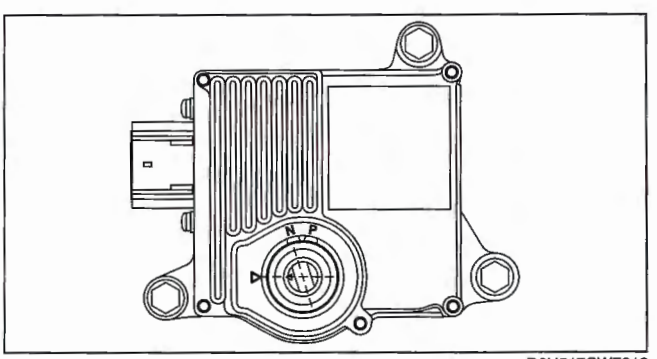


D6U517CW7012

10. Be sure to match the position of the TCM marking.

Caution
- **Do not turn more than 60° from the marking.**

11. Install the TCM.

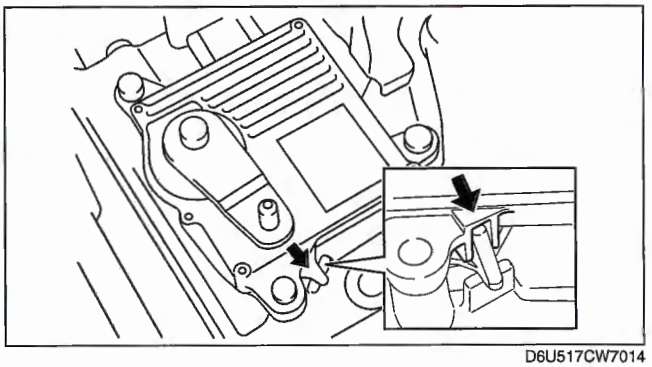


D6U517CW7013

12. Verify the correct positioning of the TCM and coupler component.
13. Tighten the TCM mounting bolts.

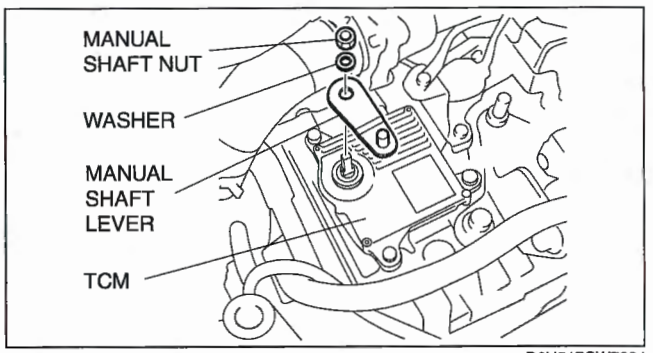
Tightening torque
19.6—29.4 N·m {2.0—2.9 kgf·m, 14.5—21.6 ft·lbf}

Caution
- **Do not use an impact wrench. Hold the manual shaft lever when removing the manual shaft nut, or the transaxle may be damaged.**



D6U517CW7014

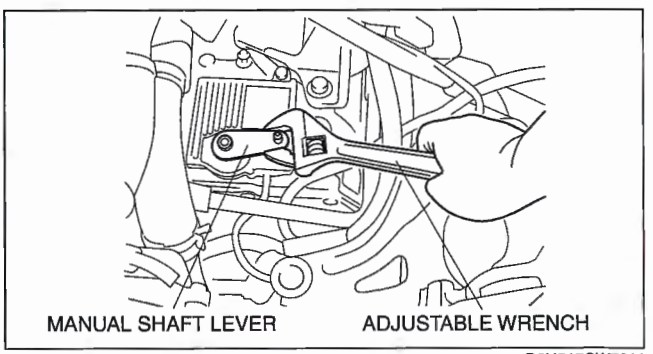
14. Install the manual shaft lever and the washer.



D6U517CW7084

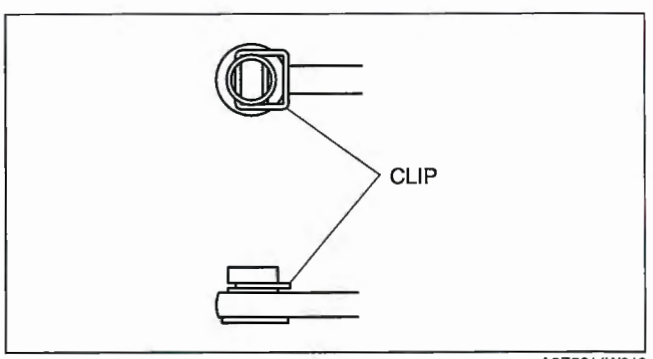
15. Set the adjustable wrench as shown in the figure to hold the manual shaft lever, and tighten the manual shaft nut.

Tightening torque
9.8—14.7 N·m {100—142 kgf·cm, 87—123 in·lbf}



D6U517CW7011

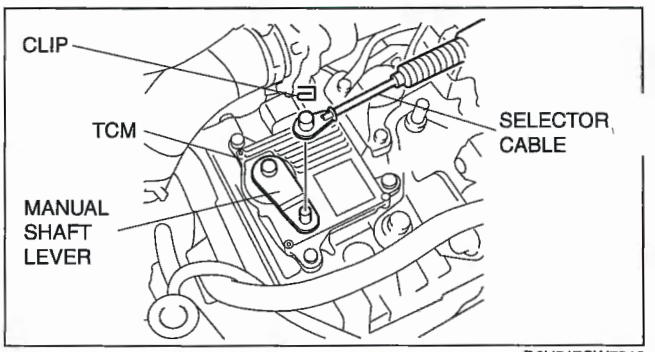
16. Install the clip to the selector cable as shown in the figure.
17. Shift the selector lever to P position.
18. Turn the manual shaft lever to P position.



A6E5614W018

19. Connect the selector cable and install the clip.
20. Connect the TCM connector.
21. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
22. Connect the negative battery cable.

Warning
- **If you replace the ATX or TCM, be sure to initialize the learned values and perform neutral position learning.**



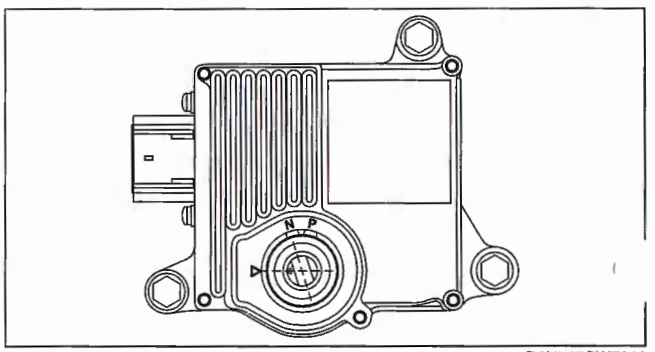
D6U517CW7010

23. Perform the neutral position learning. (See 05–17B–28 Neutral Position Learning.)

Neutral Position Learning
1. Engage the parking brake and use wheel chocks at the front and rear of the wheels.
2. Turn the ignition switch to the ON position. (Engine off)

Caution
- **Inspect that the vehicle does not move before operation.**

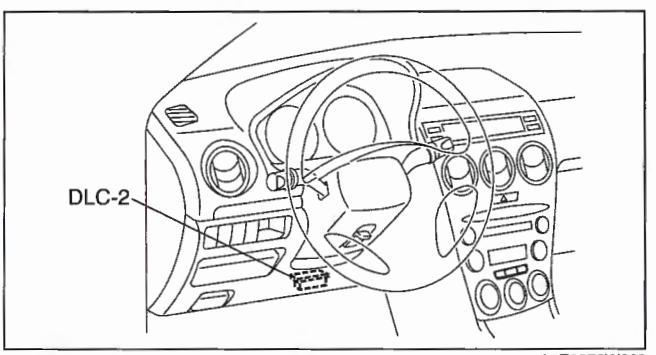
3. Shift the selector lever to the N position.
4. Be sure to match the position of the TCM marking.



D6U517CW7013

5. Connect the WDS or equivalent to the DLC-2.
6. Set up the WDS or equivalent (including the vehicle recognition).

Caution
- **The command cannot be input, unless the ignition switch is ON, the selector lever is in N position, the engine is stopped, and the vehicle speed is 0 km/h. {0 mph}**



A6E3970W002

7. Select "Neutral Position Learning" and perform procedure according to directions on the WDS or equivalent screen.
   - If input NG is indicated, inspect again that the N position mark is correct.
     — If it is incorrect, adjust the manual shaft.
   - If input OK is indicated, turn the ignition switch off and the shift the selector lever to P position. Turn the ignition switch to the ON position **after 5 s**.
8. Shift the selector lever from P position to D range, then verify that the positions of the selector lever and the indicator are aligned.
   - If there is any malfunction, inspect the DTC. (See 05–02B–5 DTC TABLE [AW6A-EL].)

OIL SEAL (MANUAL SHAFT) REPLACEMENT [AW6A-EL]

E6U051700000W04

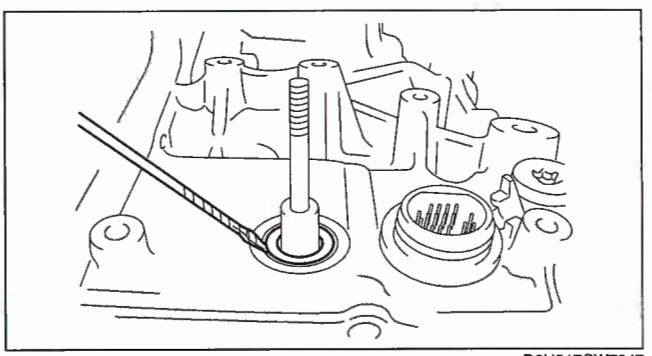
Caution
- **Water or foreign material entering the connector can cause a poor connection or corrosion. Be sure not to allow water or foreign material on the connector when disconnecting.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)

Caution
- **Do not damage the transaxle case.**
- **Do not damage the manual shaft.**

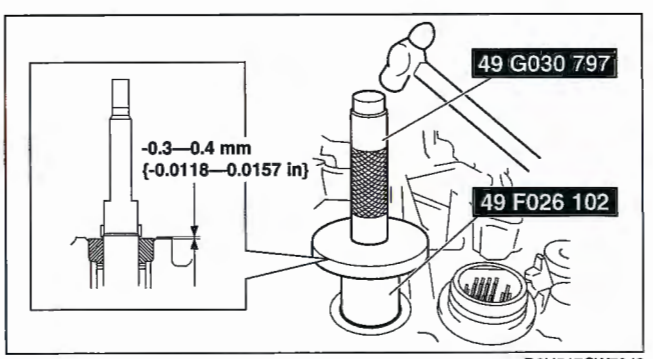
4. Remove and discard the oil seal using a tape-wrapped flathead screwdriver.

Caution
- **Do not damage the oil seal.**



D6U517CW7047

5. Using the **SST** and a hammer, tap a new oil seal so that the specified oil seal position is obtained.
6. Install the TCM. (See 05–17B–25 TCM REMOVAL/INSTALLATION [AW6A-EL].)
   Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
8. Connect the negative battery cable.



D6U517CW7048

AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL]

E6U051700000W05

1. Disconnect the negative battery cable.
2. Remove the battery and battery tray.
3. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
4. Remove the starter. (See 01–19A–2 STARTER REMOVAL/INSTALLATION [L3, AJ].)
5. Separate the heater pipe.
6. Remove the front tires and splash shield.
7. Remove the under cover.
8. Remove the steering gear and linkage, and pipe assembly installation bolts from the front crossmember, and then suspend the steering gear and linkage with a cable. (See 06–12–13 STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [AJ].)

   Pipe assembly tightening torque
   7.8—10.8 N·m {79.6—110.0 kgf·cm, 69.1—95.5 in·lbf}

9. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)

   Warning
   - **Improperly jacking a transaxle is dangerous. It can slip off the jack and may cause serious injury.**

   Caution
   - **To prevent the torque converter and transaxle from separating, remove the transaxle without tilting it toward the torque converter.**

10. Remove in the order shown in the figure.
11. Install in the reverse order of removal.
12. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
13. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

Service item	Test item		
	Line pressure test	Stall test	Time lag test
ATX replacement	X		
Torque converter replacement	X	X	
Control valve body component	X		

X : Test to be performed after the service work

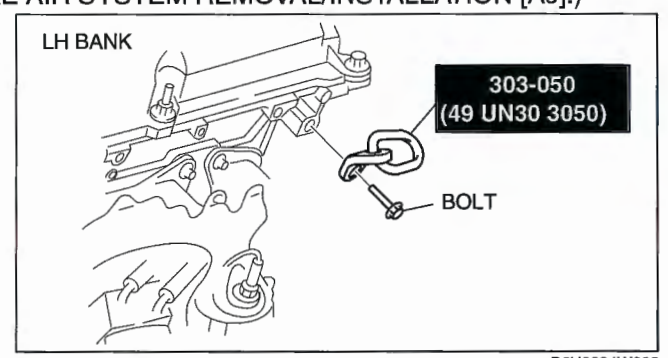
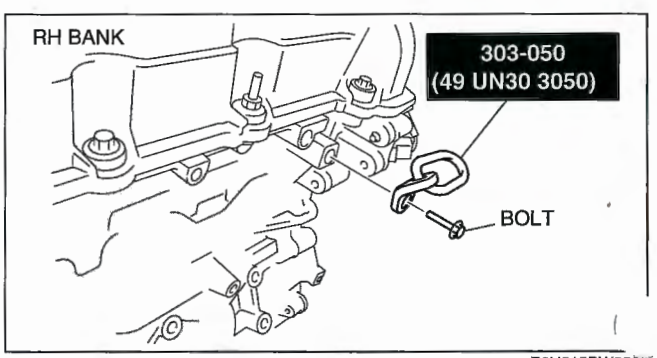
No.4 Engine Mount Bracket Removal Note

1. Remove the ABS/TCS HU/CM connector. (See 04–13–4 ABS/TCS HU/CM REMOVAL/INSTALLATION.)
2. Remove the dynamic chamber. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Using the bolts **M12×1.25, length 25 mm {0.984 in}** to Install the **SST** as shown (LH bank and RH bank).



B6U2324W002

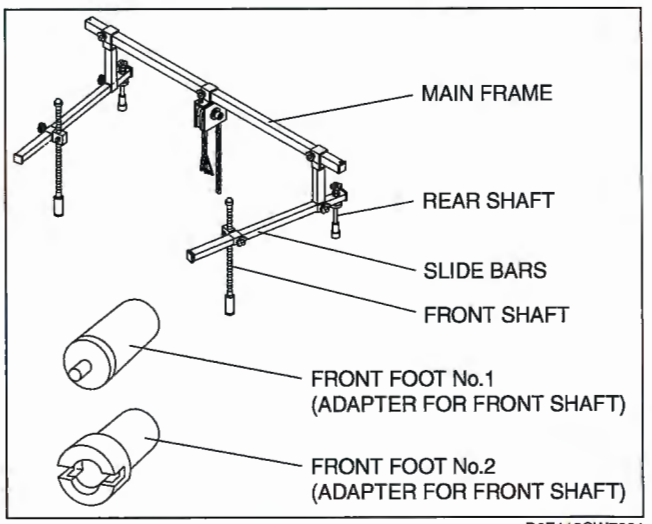
Tightening torque
100—125 N·m {10.2—12.7 kgf·m, 73.8—92.1 ft·lbf}



E6U515BW5502

4. Install the **SST** using the following procedure.

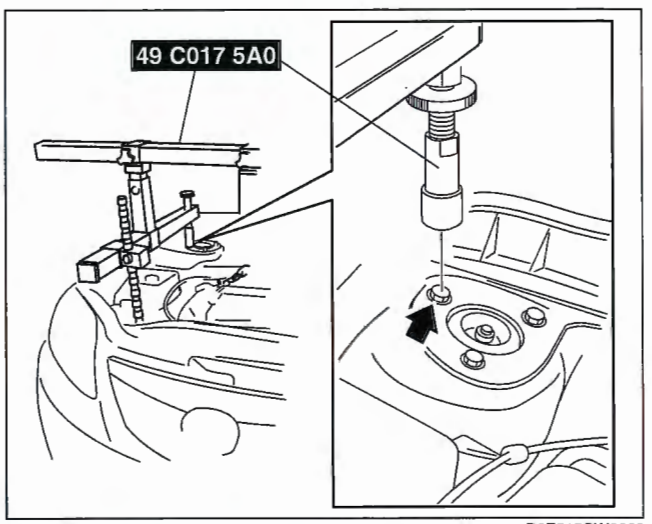
Caution
- **Refer to the SST instruction manual for the basic handing procedure.**



D6E110CW7001

(1) Install the right rear shaft of the **SST** to the bolt of the right shock absorber as shown in the figure.
(2) Install the left rear shaft of the **SST** to the bolt of the left shock absorber. (Identical position to the right side)

Caution
- **When setting the SST on the right side, make sure it doesn't interfere with the ABS/TCS HU/CM.**

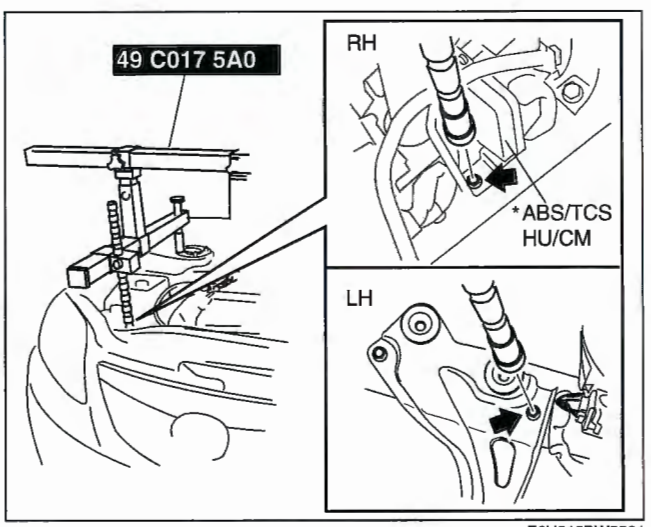


D6E515CW3008

(3) Install the left/right front shaft of the **SST** with front foot No.2 to the bolt as shown in the figure.

* : If equipped

(4) Adjust the positions of the **SST** side bars so that they are the same height (left and right) and horizontal.
(5) Make sure each joint is securely tightened.

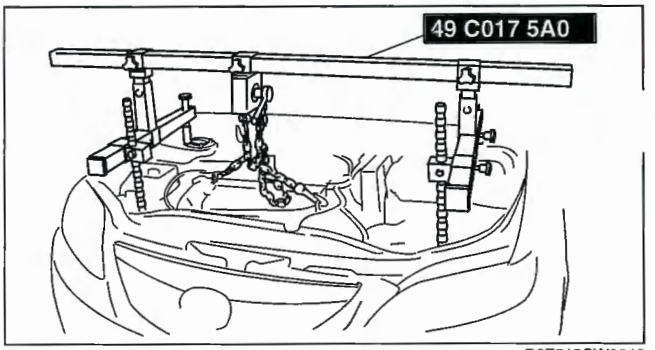


E6U515BW5501

5. Support the engine using the **SST**.

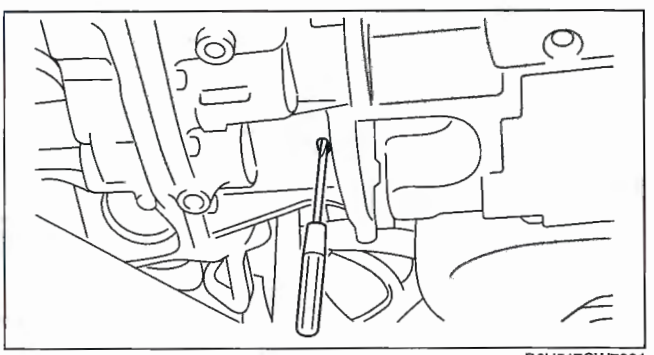
Note
- The **SST** (49 E017 5A0) can be used in place of the **SST** (49 C017 5A0).

6. Remove the No.4 engine mount bracket.



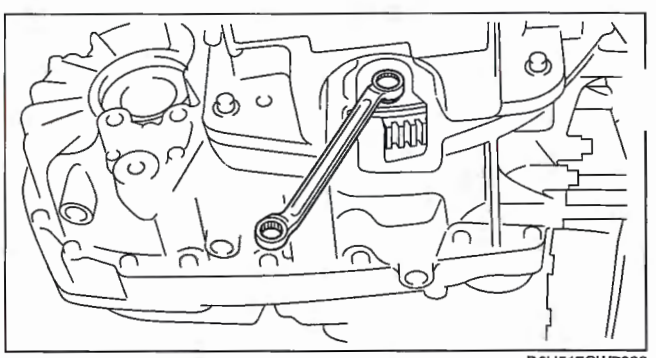
D6E515CW3010

Torque Converter Nuts Removal Note
1. Align the holes by turning the torque converter.
2. Insert a flathead screwdriver through the converter housing service hole, and lock the drive plate.



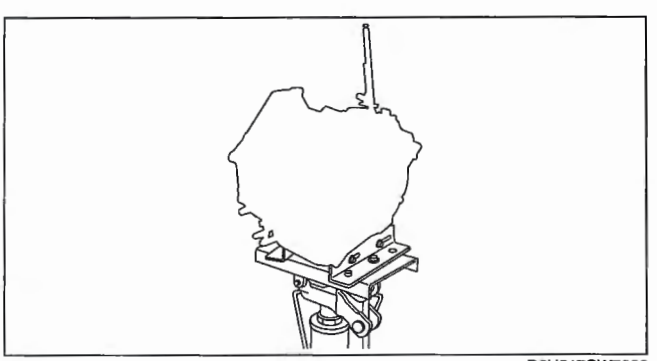
D6U517CW7031

3. Remove the torque converter nuts.



D6U517CW7032

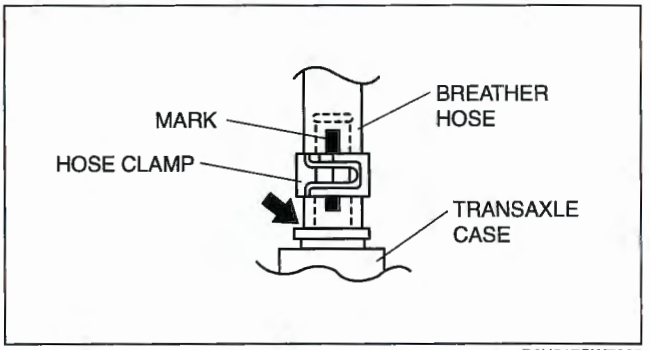
Transaxle Removal Note
1. Support the transaxle on a jack.
2. Remove the transaxle mounting bolts.
3. Remove the transaxle.



D6U517CW7033

Breather Hose Installation Note

1. Make sure the breather hose is inserted till the position as shown in the figure.
2. Install the hose clamp with in the marked area.

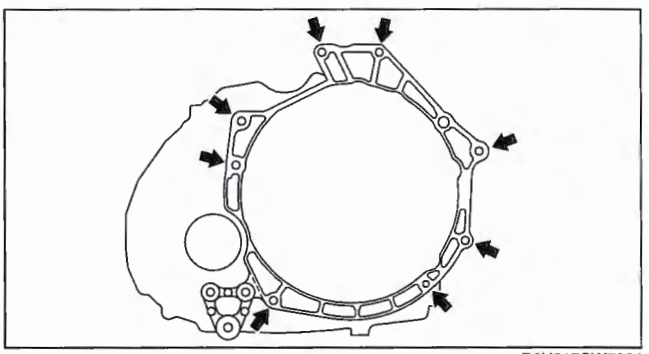


D6U517CW7095

Transaxle Installation Note

1. Set the transaxle on a jack and lift it.
2. Install the transaxle mounting bolts.

Tightening torque
37—52 N·m {3.8—5.3 kgf·m, 28—38 ft·lbf}

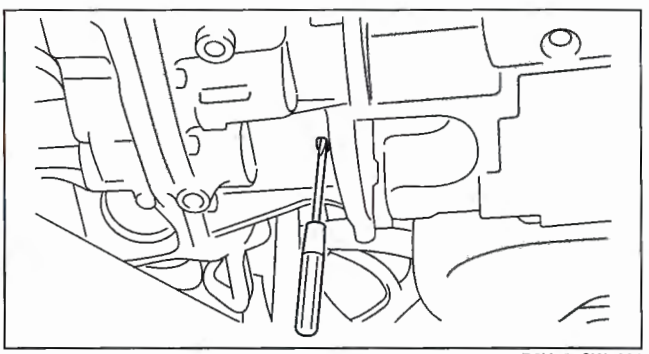


D6U517CW7034

rque Converter Nuts Installation Note

1. Align the holes by turning the torque converter.
2. Insert a screwdriver through the converter housing service hole, and lock the drive plate.

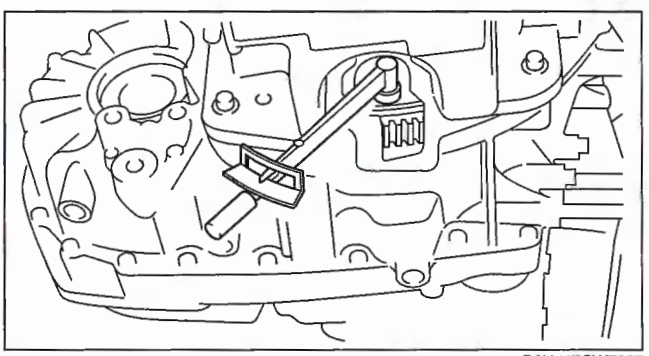
Caution
- **Loosely and equally tighten the torque converter nuts, then further tighten them to the specified tightening torque.**



D6U517CW7031

3. Tighten the torque converter mounting nuts.

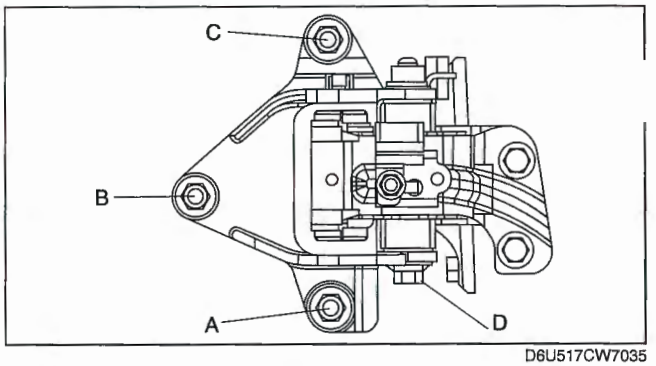
Tightening torque
34—44 N·m {3.5—4.4 kgf·m, 25—32 ft·lbf}



D6U517CW7037

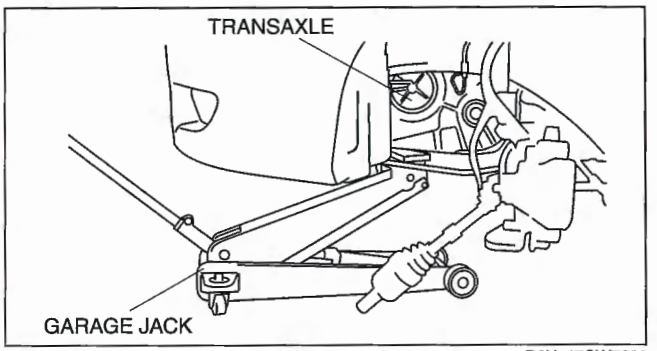
No.4 Engine Mount Bracket Installation Note

1. Verify that the No.4 engine mount bracket is installed as shown in the figure.
2. Temporarily tighten bolt D.



D6U517CW7035

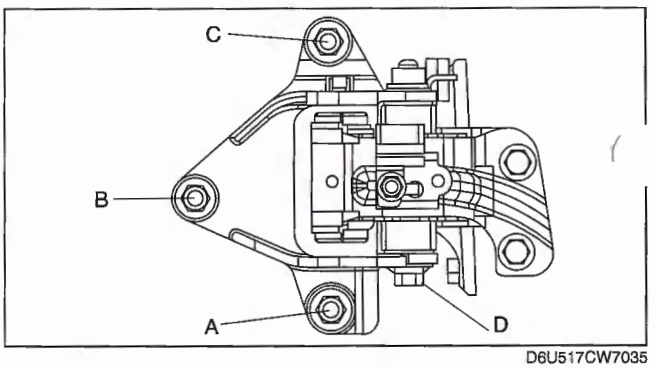
3. Set the transaxle on a garage jack and lift it upward.
4. Align the hole of the No.4 engine mount bracket with the stud bolts of transaxle.



D6U517CW7036

5. Temporarily tighten bolt A and nuts B, C.
6. Tighten nuts B and C in the order of B→C, and then bolt A.
7. Tighten bolt D.

Tightening torque
A, B, C: 66.6—93.1 N·m {6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}
D: 85.3—116.6 N·m {8.7—11.8 kgf·m, 62.9—85.9 ft·lbf}

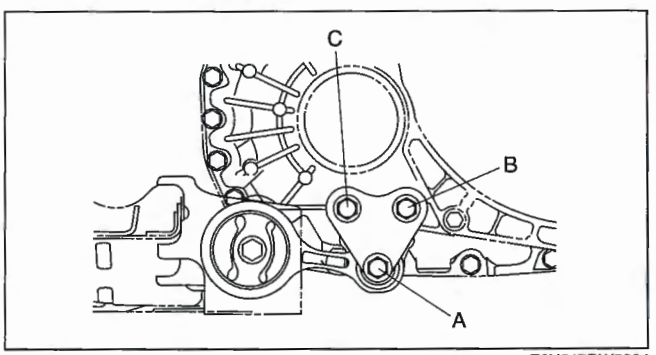


D6U517CW7035

No.1 Engine Mount Installation Note

1. Align the hole of the No.1 engine mount rubber with the bolt hole of the transaxle.
2. Temporarily tighten bolt A, then tighten bolts B, C.
3. Tighten bolt A.

Tightening torque
66.6—93.1 N·m {6.8—9.4 kgf·m, 49.2—68.6 ft·lbf}



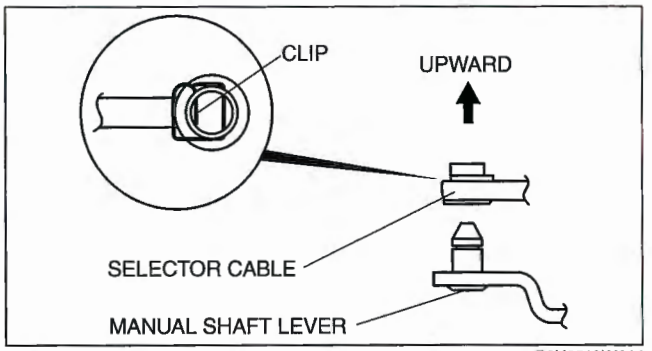
E6U517BW5004

Selector Cable Installation Note

1. Install the selector lever to the manual shaft lever so that no load acts on the selector cable.

   Note
   - Install the selector lever to the manual shaft lever with the clip side of the selector cable end facing up.

2. Confirm that the tip of the manual shaft lever projects out of the end of the selector cable.



B6U0518W014

OIL SEAL (DIFFERENTIAL) REPLACEMENT [AW6A-EL]

E6U051727238W01

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the under cover.
4. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)

   Caution
   - **The oil seal is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the oil seal.**

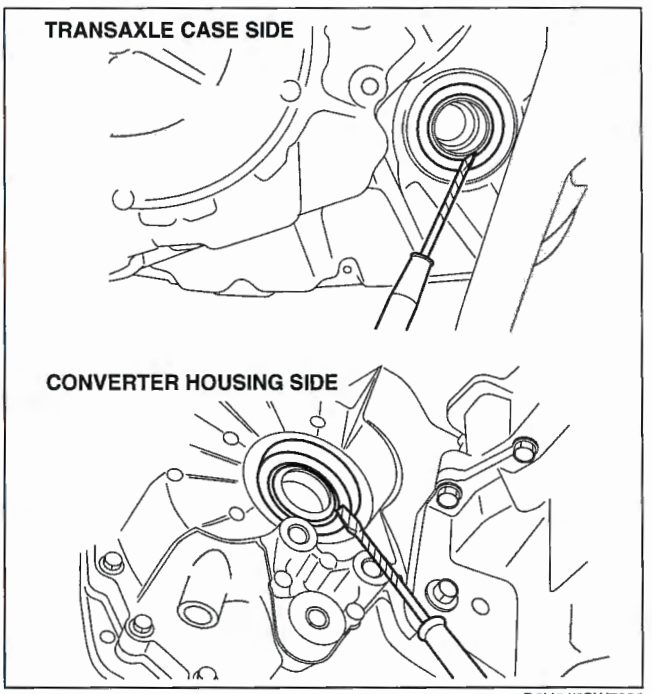
5. Remove the drive shaft and joint shaft (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].)

   Caution
   - **Do not damage the transaxle case.**
   - **Do not damage the differential case.**

Remove the oil seal lip using a razor.

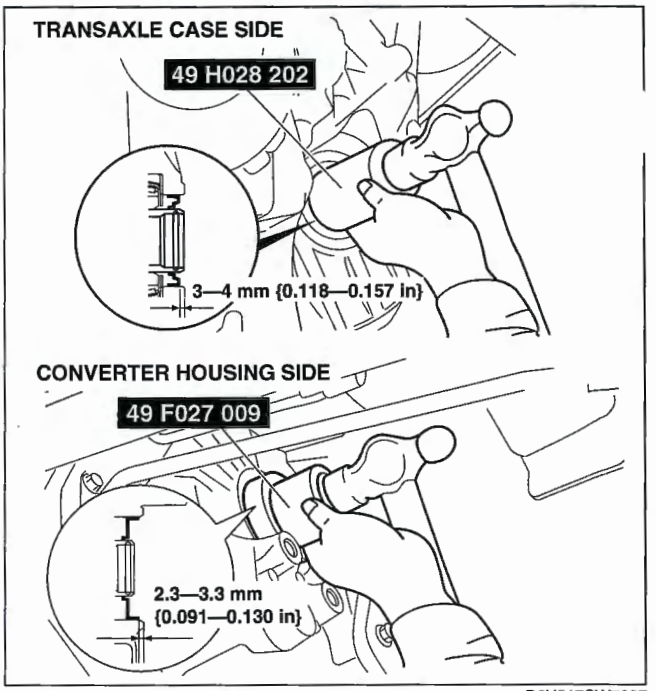
. Remove and discard the oil seal using a tape-wrapped flathead screwdriver.

   Caution
   - **Do not damage the oil seal.**



D6U517CW7096

8. Using the **SST** and a hammer, tap a new oil seal so that the specified oil seal position is obtained.
9. Install the drive shaft and joint shaft. (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].)
10. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
11. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
12. Connect the negative cable.
13. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)



D6U517CW7097

DIFFERENTIAL GEAR O-RING REPLACEMENT [AW6A-EL]

E6U051727238W02

Caution
- **The O-ring is easily damaged by the sharp edges of the drive shaft splines. Do not let the splines contact the O-ring.**

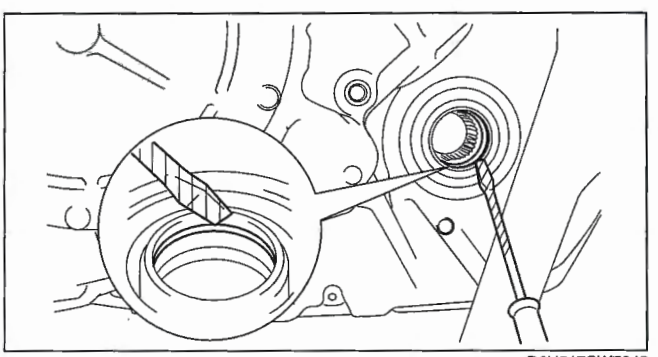
1. Remove the drive shaft and joint shaft. (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].)

Caution
- **Do not damage the differential case.**

2. Remove and discard the O-ring using a tape-wrapped flathead screwdriver.

Caution
- **Do not damage the O-ring.**
- **Do not damage the differential case.**

3. Apply ATF to a new O-ring and install it to the differential case.
4. Install the drive shaft and joint shaft. (See 03–13–5 JOINT SHAFT REMOVAL/INSTALLATION [AJ].) (See 03–13–19 FRONT DRIVE SHAFT REMOVAL/INSTALLATION [AJ].)



D6U517CW7049

CONTROL VALVE BODY REMOVAL/INSTALLATION [AW6A-EL]

E6U051721100W01

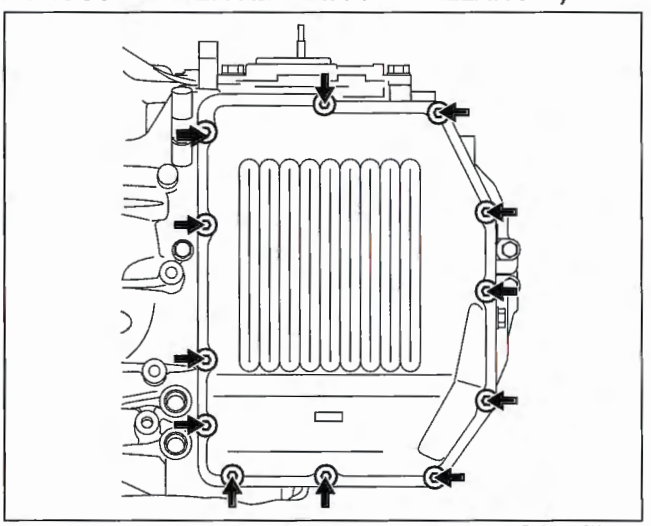
On-Vehicle Removal

Warning
- **Using compressed air can cause dirt and other particles to fly out, causing injury to the eyes. Wear protective eyeglasses whenever using compressed air.**

Caution
- **Clean the transaxle exterior throughout with a steam cleaner or cleaning solvents before removal.**
- **If any old sealant gets into the transaxle during installation of the control valve body cover, trouble may occur in the transaxle case and control valve body cover. Clean with cleaning fluid.**

1. Disconnect the negative battery cable.
2. Remove the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Place the heater pipe out of the way.
4. Remove the under cover.
5. Drain the ATF. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
6. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
7. Disconnect the lower radiator hose and place the lower radiator hose out of the way.
8. Remove the oil hose, oil pipe and O-ring. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
9. Remove the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
10. Remove the control valve body cover installation bolt.

Caution
- **Do not damage the fitting surface of the transaxle case and the control valve body cover.**
- **Do not deform the control valve body cover.**

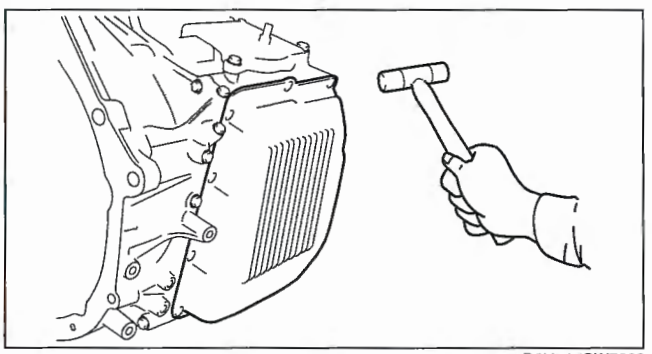


D6U517CW7065

11. Using a plastic hammer, tap the control valve body cover to remove it.

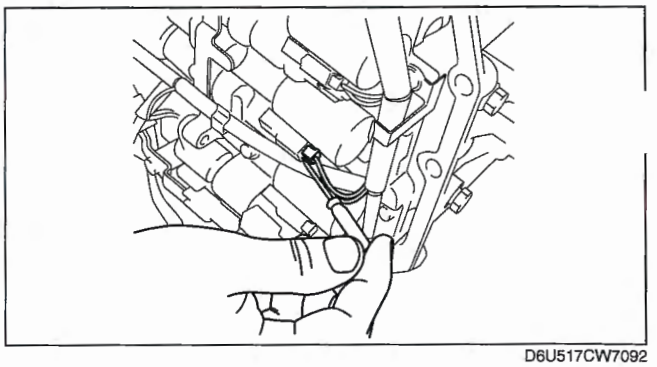
Caution
- **Be careful not to damage the solenoid valves and connectors.**
- **Do not pull the wiring harnesses when removing the connector.**

Note
- Disconnect the solenoid connector according to the following procedure:



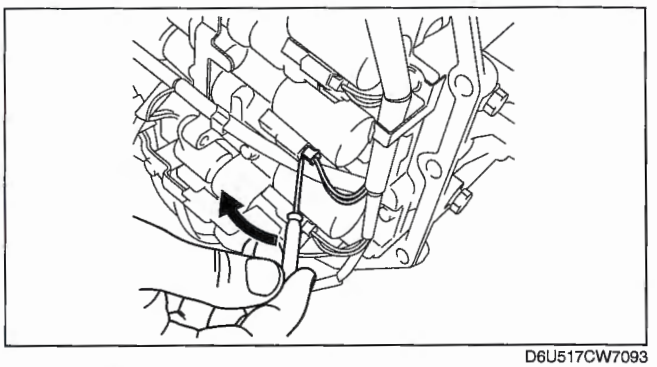
D6U517CW7066

1. Insert a precision screwdriver from the backside into the connector as shown in the figure.



D6U517CW7092

2. Pry the screwdriver in the direction of the arrow and disconnect the connector.

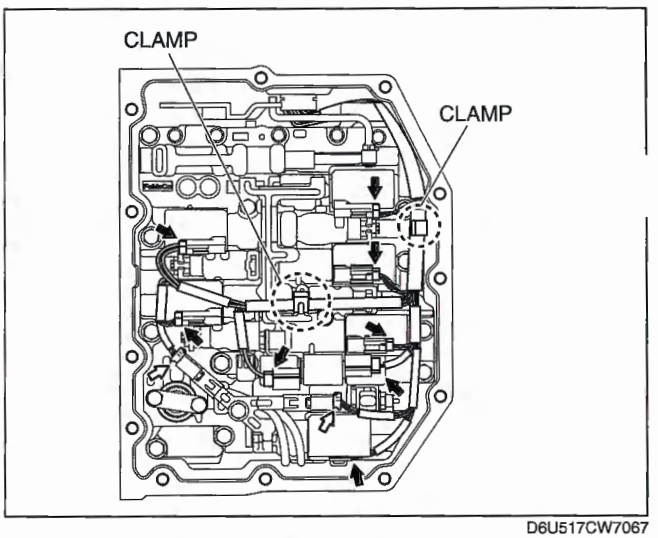


D6U517CW7093

Caution

- **Do not damage the solenoid valves and connectors with the screwdriver.**
- **When disconnecting connectors, grasp the connectors, not the harnesses. Otherwise, the harnesses may be pulled out of the connector causing poor contact.**

12. Disconnect the solenoid connectors, VSS connector and the input/turbine speed sensor connector.
13. Disconnect the coupler component from the clamp.

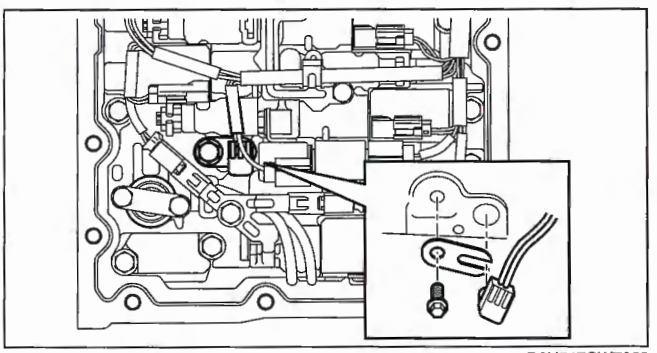


D6U517CW7067

14. Remove the lock plate, and pull out the TFT sensor from the control valve body.
15. Remove the O-ring from the TFT sensor.

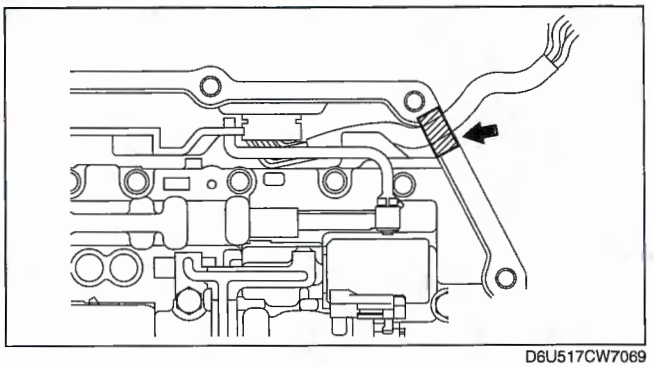
Note

- Be sure to secure the coupler component with tape so that it will not interfere with the control valve body component.

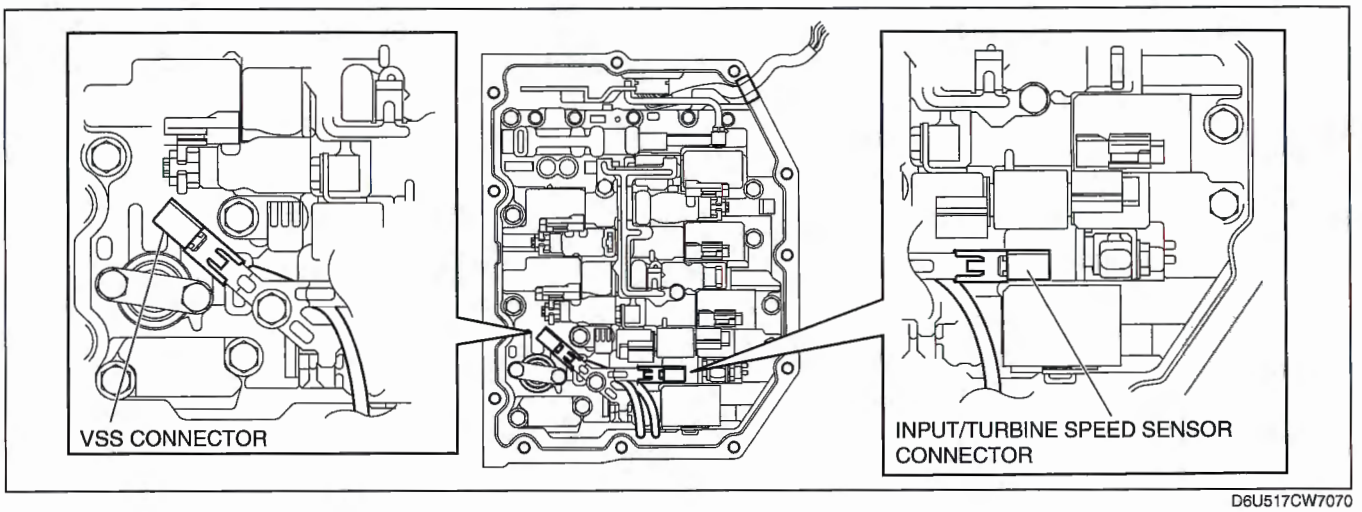


D6U517CW7068

16. Fix the coupler component with tape to the transaxle case as shown in the figure.
17. Remove the VSS connector and input/turbine speed sensor connector from the solenoid clamp.



D6U517CW7069

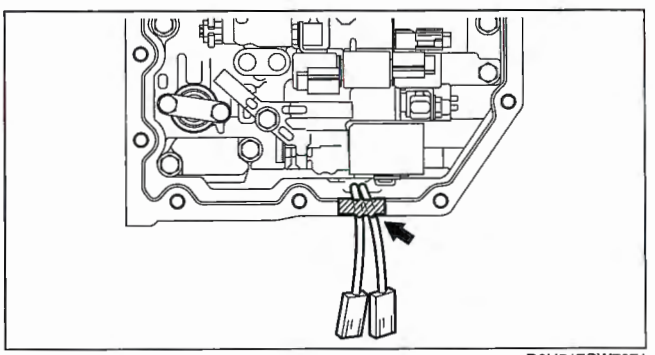


D6U517CW7070

Note

- Be sure to secure the VSS and input/turbine speed sensor with tape so that they will not interfere with the control valve body component.

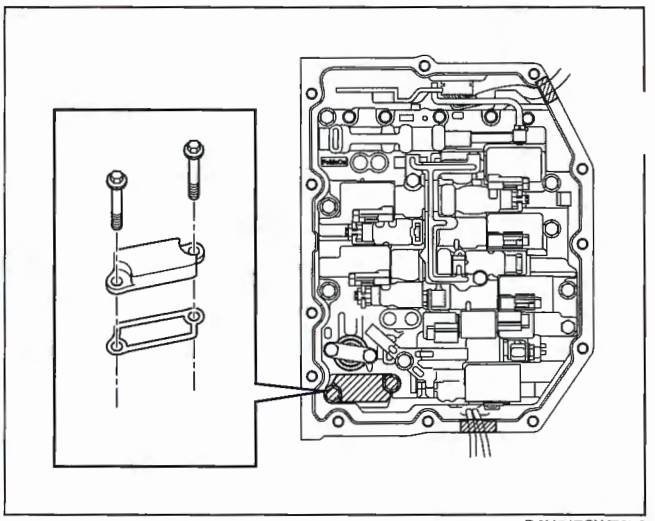
18. Fix the VSS wiring harness and input/turbine speed sensor wiring harness with tape to the transaxle case as shown in the figure.



D6U517CW7071

19. Remove the suction cover and the gasket.

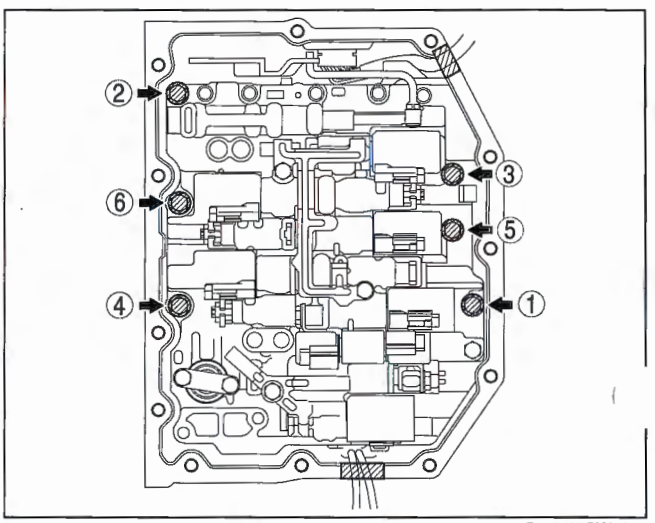
Caution
- **Evenly loosen the bolts a little at a time in the order shown in the figure.**



D6U517CW7072

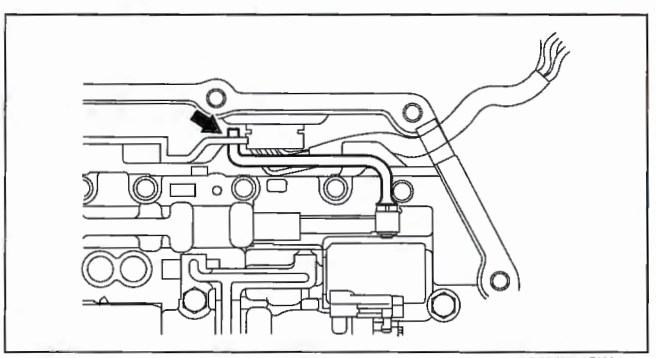
20. Remove the control valve body installation bolts.

Caution
- **Do not drop the control valve body component.**



D6U517CW7073

21. Disconnect the manual valve link and remove the control valve body component.

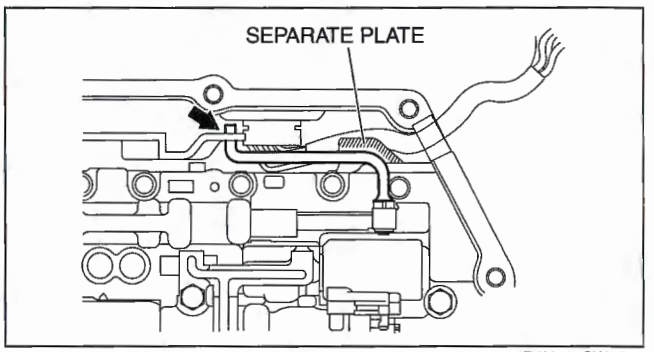


D6U517CW7074

On-Vehicle Installation

Caution
- **When installing the control valve body component, do not put the coupler component in the open space of the separate plate in the control valve body component.**
- **Do not pinch the coupler component between the separate plate and the control valve body component.**

1. Connect the manual valve link and install the control valve body component.

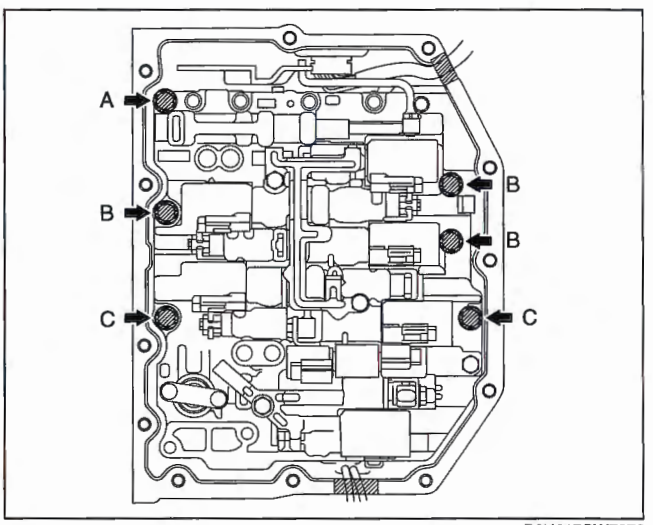


D6U517CW7075

2. Temporarily install the control valve body component with the bolts.

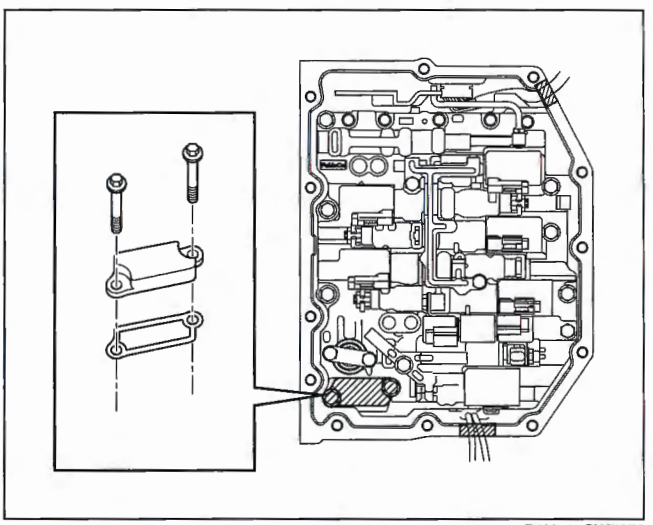
Bolt length (measured from below the head)
A: 31 mm {1.220 in}
B: 17 mm {0.669 in}
C: 21 mm {0.827 in}

Note
- Aligning the bolt holes, temporarily tighten the bolt by hand.



D6U517CW7076

3. Temporarily install the suction cover and a new gasket with the bolts.

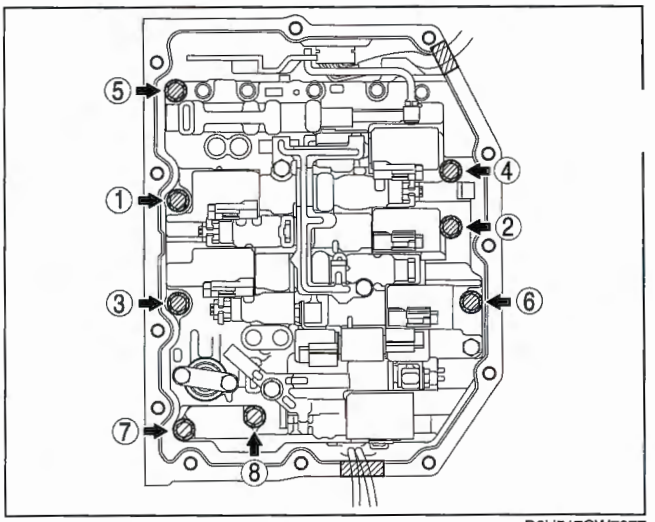


D6U517CW7072

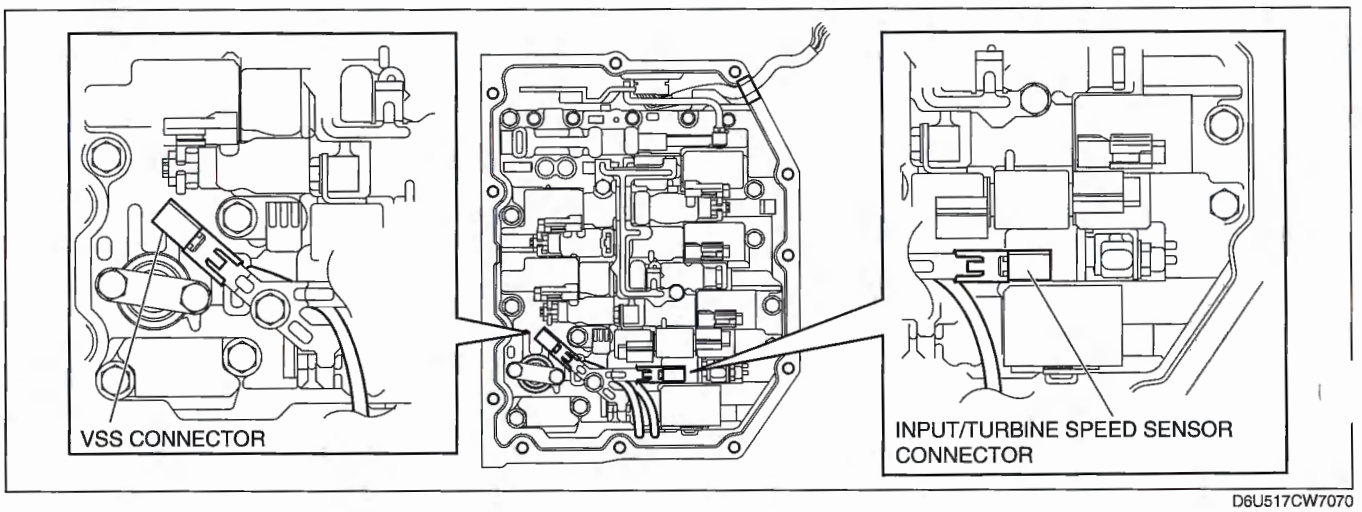
4. Tighten the bolts in the order shown in the figure.

   Tightening torque
   8—12 N·m {82—122 kgf·cm, 72—105 in·lbf}

5. Install the connector of the VSS and input/turbine speed sensor to the solenoid clamp.



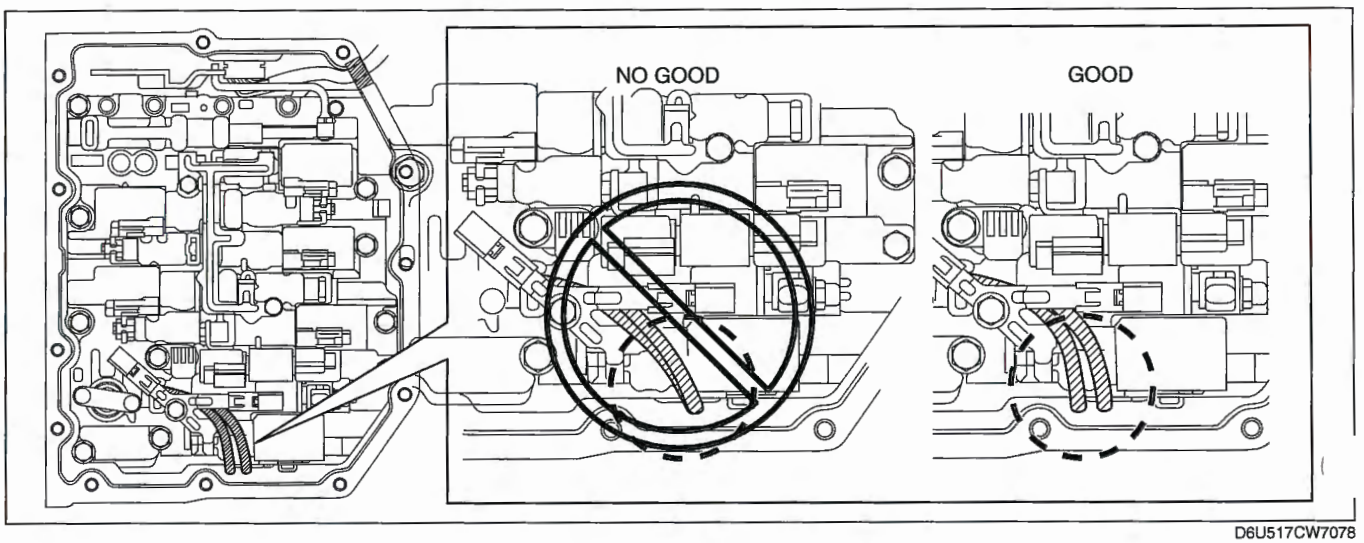
D6U517CW7077



D6U517CW7070

Caution

- **If the control valve body cover is installed with the wiring harnesses overlapped, the wiring harnesses may be pinched between the cover and valve body causing the wiring harnesses to be damaged. Therefore, verify that the wiring harnesses are not overlapped when installing the control valve body cover.**

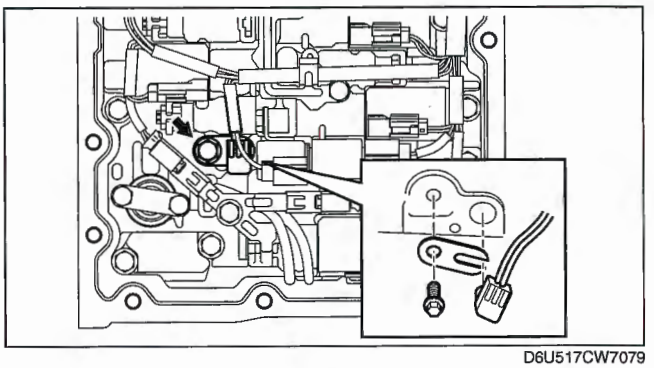


D6U517CW7078

6. Apply ATF to a new O-ring and install it on the TFT sensor.

7. Install the TFT sensor with the lock plate and a bolt to the control valve body component as shown in the figure.

   Tightening torque
   8—12 N·m {82—122 kgf·cm, 72—105 in·lbf}

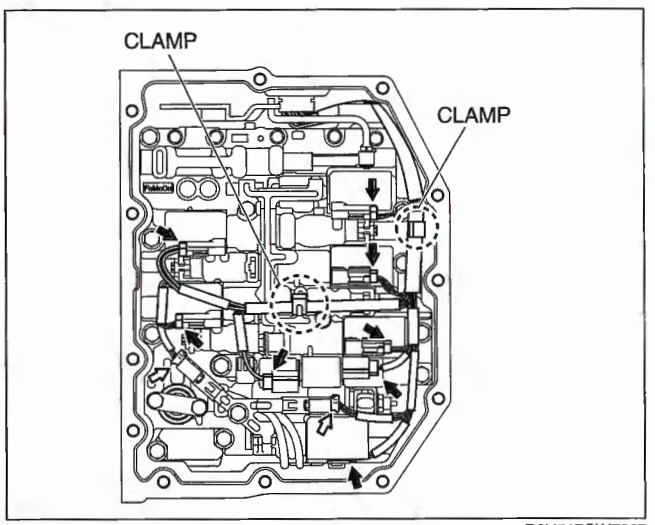


D6U517CW7079

8. Connect the solenoid connectors, VSS connector and the input/turbine speed sensor connector.

9. Connect the coupler component to the clamps.

   Note
   - Completely remove sealant and oil with white gasoline or similar.

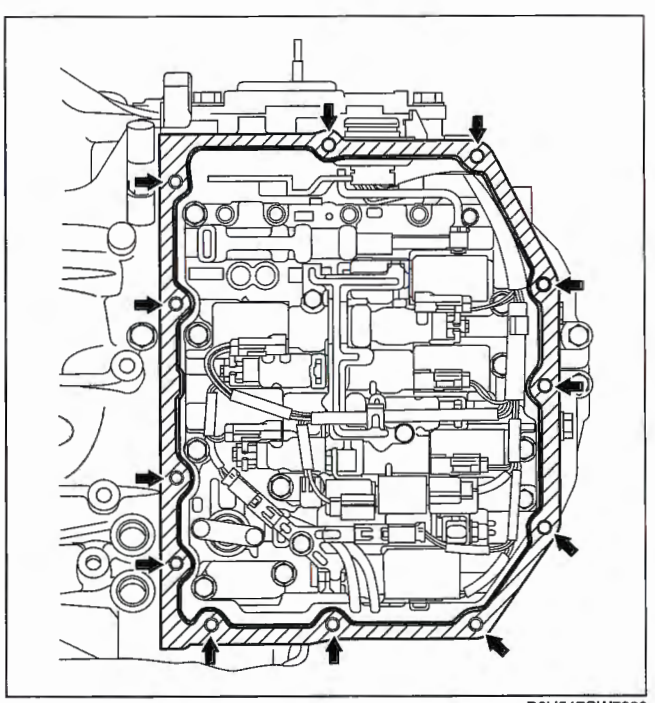


D6U517CW7067

Clean sealant and oil off the contact surface of the transaxle case with the control valve body cover and the bolt holes.

   Note
   - Completely remove oil with white gasoline or similar.

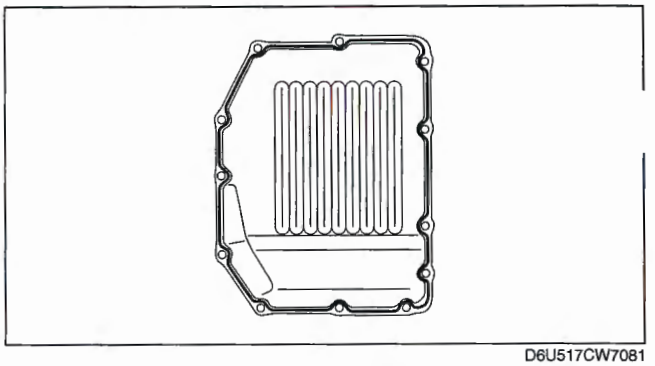
11. Clean oil off the contact surface of the new control valve body cover with the transaxle case.



D6U517CW7080

12. Apply sealant to the new control valve body cover as shown in the figure.

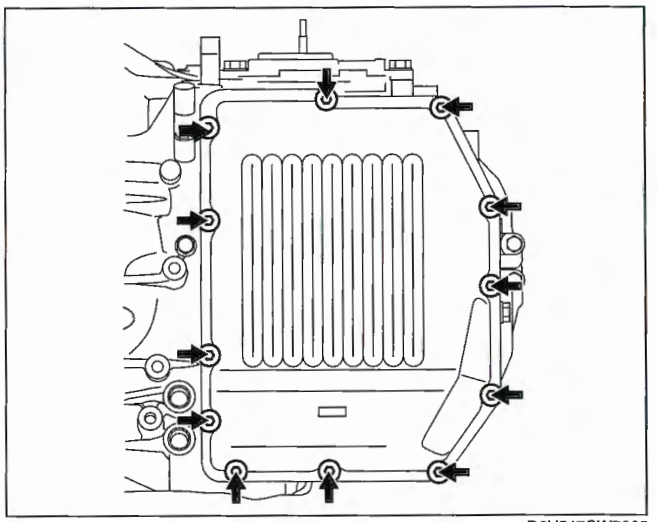
Caution
- **Be careful that the coupler component will not become caught between the control valve body cover and transaxle case.**



D6U517CW7081

13. Install the new control valve body cover with new seal bolts.

Tightening torque
9.8—15.7 N·m {100—160 kgf·cm, 87—138 in·lbf}



D6U517CW7065

14. Apply ATF to a new O-ring and install it on the oil pipe.
15. Install the oil pipe and oil hose. (See 05–17B–49 OIL COOLER REMOVAL/INSTALLATION [AW6A-EL].)
16. Connect the lower radiator hose.
17. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
18. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
19. Install the front crossmember. (See 02–13–20 FRONT CROSSMEMBER REMOVAL/INSTALLATION.)
20. Install the under cover.
21. Install the air cleaner component and air cleaner bracket. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
22. Connect the negative battery cable.
23. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

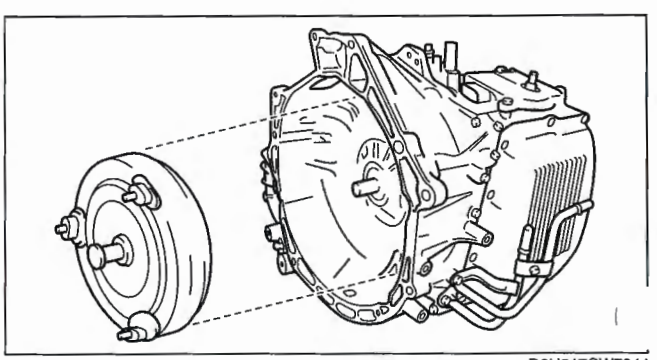
TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL]

E6U051719100W01

1. Remove the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)

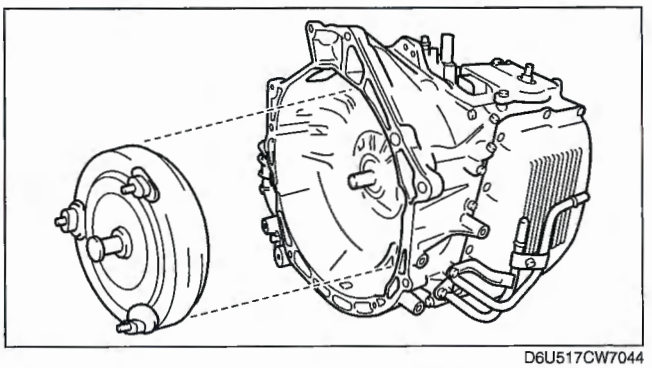
Caution
- **The oil seal is easily damaged by the sharp edges of the torque converter splines. Do not let the splines contact the oil seal.**
- **Do not drop the torque converter.**
- **Do not pinch fingers.**

2. Remove the torque converter, and immediately turn it so that the hole faces upward. This will help to keep any remaining fluid from spilling.
3. Drain any ATF remaining in the torque converter.
4. Using a flathead screwdriver, position the drive gear on the oil pump component in the center.



D6U517CW7044

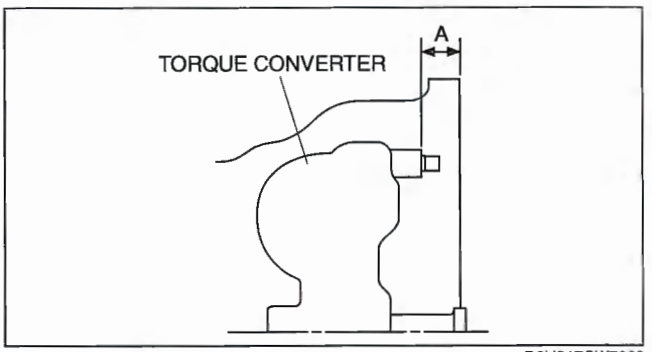
5. Install the torque converter to the transaxle.



D6U517CW7044

6. To ensure that the torque converter is installed accurately, measure distance A between the end of the torque converter and the end of the converter housing.

Distance A
18 mm {0.709 in}



D6U517CW7060

7. Install the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
8. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)

OIL SEAL (OIL PUMP) REPLACEMENT [AW6A-EL]

E6U051719100W02

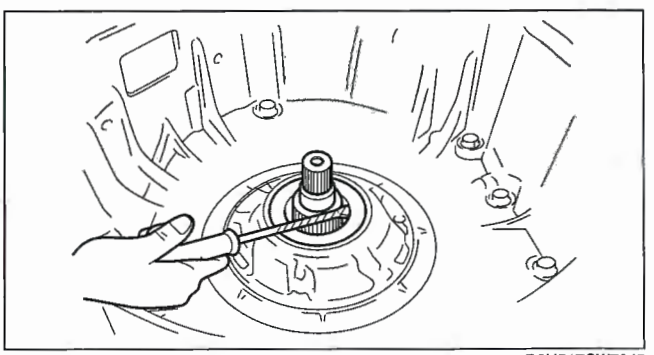
1. Remove the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)

Caution
- **The oil seal is easily damaged by the sharp edges of the torque converter splines. Do not let the splines contact the oil seal.**
- **Do not drop the torque converter.**
- **Do not pinch fingers.**

2. Remove the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/INSTALLATION [AW6A-EL].)

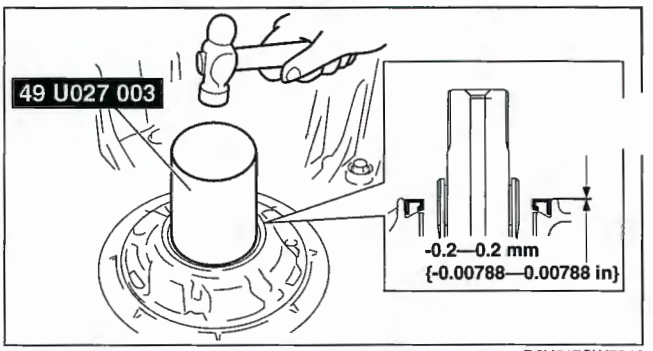
Caution
- **Do not to damage the bushing on the oil pump body.**

3. Using a tape-wrapped flathead screwdriver, remove the oil seal from the oil pump body.



D6U517CW7045

4. Using the **SST** and a hammer, install the oil seal to the oil pump body.
5. Coat the lip of the oil seal with grease.
6. Install the torque converter. (See 05–17B–46 TORQUE CONVERTER REMOVAL/ INSTALLATION [AW6A-EL].)
7. Install the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)
8. Perform the mechanical system test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)



D6U517CW7046

OIL COOLER FLUSHING [AW6A-EL]

E6U051719900W01

Caution
- **Power flushing should be performed very carefully when removing the accumulated debris from the fluid baffle, otherwise the debris may not be removed or the problem may become even worse.**

Note
- The contaminated cooler line (oil pipes and hoses) and auxiliary cooler (if equipped) must be flushed completely when the ATX is overhauled or replaced.
- Performing back and reverse power flushing two times each does not work because debris or particles flow out from the feed pipe side of the ATX.

Recommended power-flushing manufacturer

Manufacturer	Part number	Description
Kent Moore	J35944-AMAZ	Flushing kit or equivalent
OTC	60081	Portable torque converter, oil cooler cleaner or equivalent

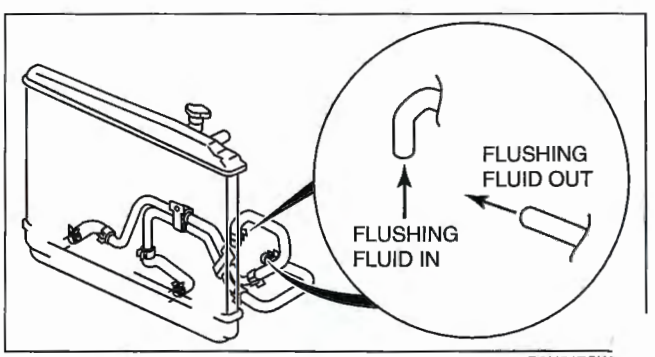
Power Flushing
Repair procedure
1. Before power flushing, inspect the hoses/lines and clamps. Power flushing must begin with back flushing followed by forward flushing to quickly dislodge the restriction. If back flushing is not performed before forward flushing, the restriction could further reduce the ATF flow through the internal mesh type baffle of the cooler and flushing will not be effective or possible.

Inspecting oil lines & clamps
1. Be sure to inspect the lines (hoses/pipes) for cuts, crimps (pinched), cracks or any other damage before reusing them. If any problem exists, replace.

Caution
- **Always use new clamps when replacing hoses.**

Back flushing
1. Following the power flushing equipment manufacturer's instructions, connect the equipment so the flushing fluid flows in the opposite direction of normal fluid flow.
2. Flush oil cooler/lines until discharge fluid is clean.

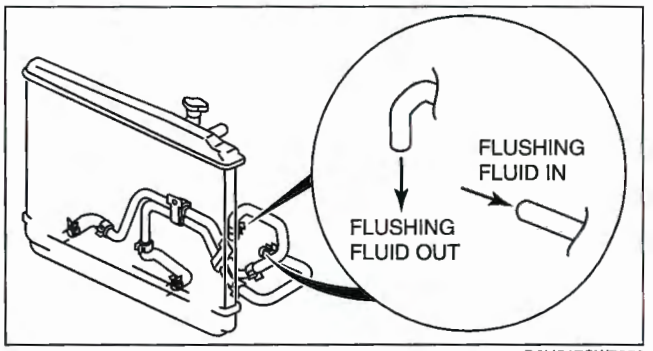
Caution
- **If the cooler can not be properly flushed using recommended equipment, send the radiator out for subcontractor cleaning or replace.**



D6U517CW

Forward flushing

1. Connect power flushing equipment so the flushing fluid flows in the direction of normal fluid flow.
2. Flush oil cooler/lines until discharge fluid is clean.



D6U517CW7052

OIL COOLER REMOVAL/INSTALLATION [AW6A-EL]

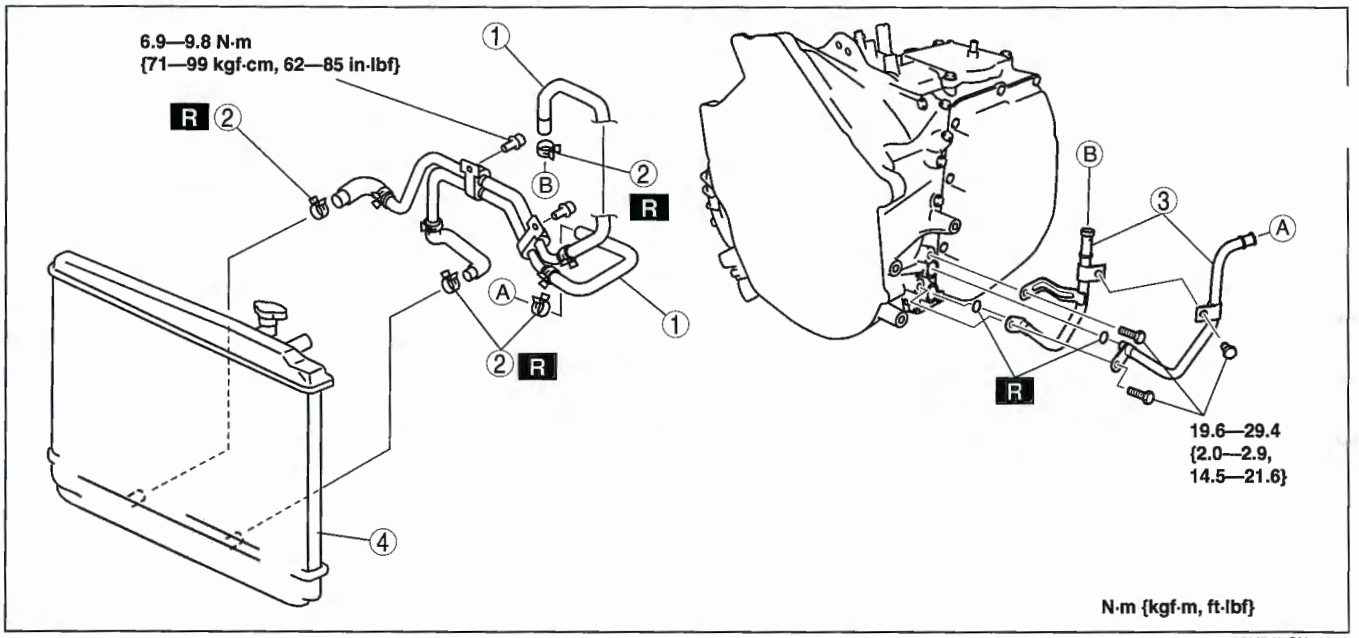
E6U051719900W02

1. Disconnect the negative battery cable.
2. Remove the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove the under cover.
4. Drain the ATF into a container. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
5. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
6. Remove the following parts.
   (1) Hood (See 09–10–3 HOOD REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
   (2) Front bumper (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front bumper reinforcement (See 09–10–13 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
   (5) Shroud panel (See 09–10–17 SHROUD PANEL REMOVAL/INSTALLATION.)
   (6) Cooler pipe stay (See 07–11–17 CONDENSER REMOVAL/INSTALLATION [L3, AJ].)
   (7) Cooling fan (See 01–12A–12 COOLING FAN REMOVAL/INSTALLATION [L3, AJ].)
   (8) Engine coolant reserve hose

   Remove in the order indicated in the table.

. Install in the reverse order of removal.

9. Add the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
10. Add ATF to the specified level. (See 05–17B–12 AUTOMATIC TRANSAXLE FLUID (ATF) REPLACEMENT [AW6A-EL].)
11. Install the under cover.
12. Install the air cleaner component. (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
13. Connect the negative battery cable.
14. Inspect for oil leakage from the oil pipes and oil hoses.
15. Inspect for coolant from the hoses.
16. Inspect for engine coolant leakage. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].)
17. Inspect the ATF level and condition. (See 05–17B–11 AUTOMATIC TRANSAXLE FLUID (ATF) INSPECTION [AW6A-EL].)
18. Perform the line pressure test. (See 05–17B–3 MECHANICAL SYSTEM TEST [AW6A-EL].)



D6U517CW7053

1	Oil hose (See 05–17B–51 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)
2	Hose clamp (See 05–17B–51 Oil Pipe, Hose Clamp, Oil Hose Installation Note.)

3	Oil pipe
4	Radiator (in tank oil cooler) (See 01–12A–8 RADIATOR REMOVAL/ INSTALLATION [L3, AJ].) (See 05–17B–50 Radiator (In Tank Oil Cooler) Installation Note.)

Radiator (In Tank Oil Cooler) Installation Note

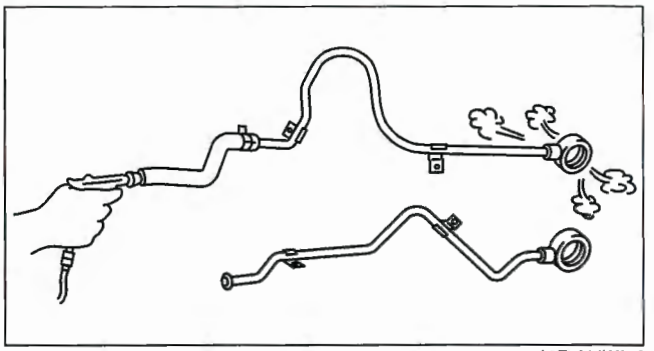
1. The automatic transaxle oil cooler flushing must be performed whenever a transaxle is removed for service because the existing fluid may be contaminated, and to prevent contamination of new fluid.

   Note
   - Flushing must be performed after installation of an overhauled or replaced transaxle.

2. Follow the instructions in the manufacturer's publication for flushing operation.

Oil Pipe, Hose Clamp, Oil Hose Installation Note

1. Apply compressed air to the cooler-side opening, and blow any remaining grime and foreign material from the cooler pipes. Compressed air should be applied for no **less than 1 min**.

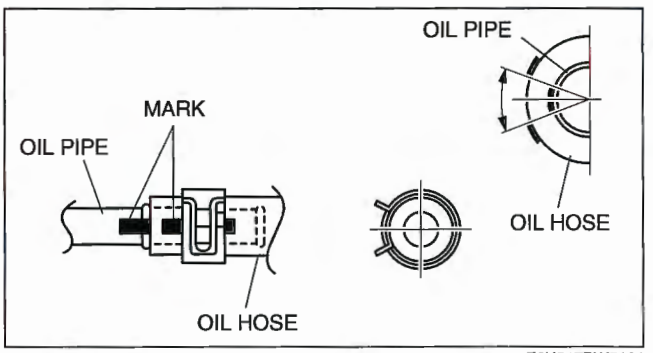


A6E5614W070

2. Align the marks, and slide the oil hose onto the oil pipe until it is fully seated as shown in the figure.

   Note
   - If reusing the hose, install the new hose clamp exactly on the mark left by the previous hose camp. Then apply force to the hose clamp in the direction of the arrow in order to fit the clamp in place.

3. Install the new hose clamp onto the hose.
4. Verify that the hose clamp does not interfere with any other components.

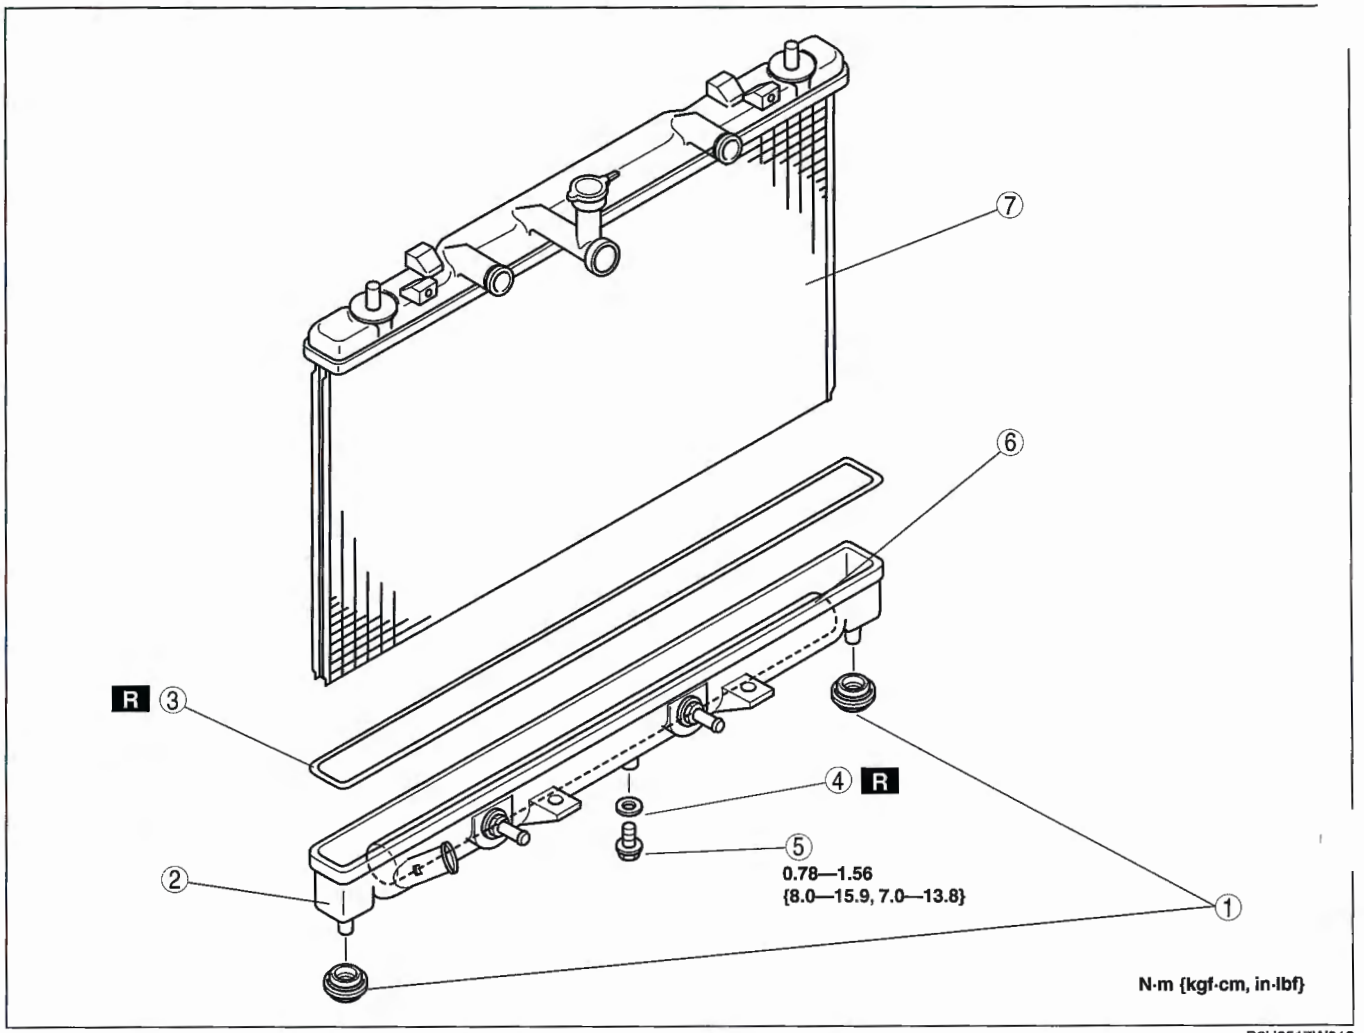


E6U517BW5101

OIL COOLER DISASSEMBLY/ASSEMBLY [AW6A-EL]

E6U051719900W03

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



B6U0517W018

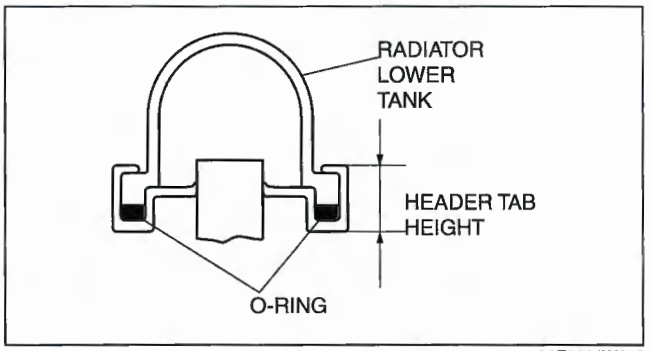
1	Mount rubber
2	Radiator outer tank (in tank oil cooler) (See 05–17B–53 Radiator Outer Tank (In Tank Oil Cooler) Removal Note.) (See 05–17B–53 Radiator Outer Tank (In Tank Oil Cooler) Installation Note.)
3	O-ring
4	Washer

5	Drain cock
6	ATF cooler
7	Radiator

Radiator Outer Tank (In Tank Oil Cooler) Removal Note

1. Inspect the height of the header tabs.
2. Insert the end of a medium tip screwdriver between the end of the header tab and the outer tank.

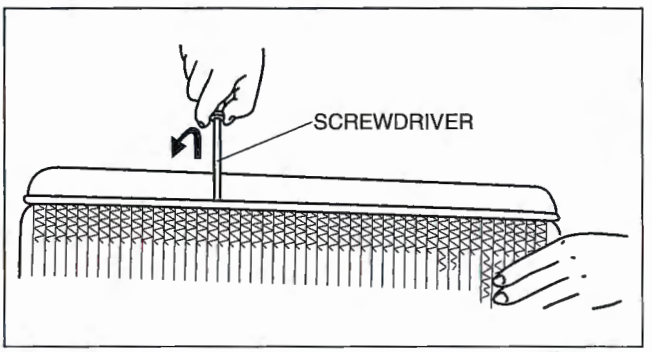
Note
- Do not open more tabs than necessary for tank removal.



A6E5614W073

3. Pivot the screwdriver to pry the tab away from the tank and repeat the procedure for each tab.
4. Remove the radiator outer tank and O-ring (gasket) from the core header when all of the tabs are opened.

Note
- If any header tabs are missing from the core, replace the radiator.



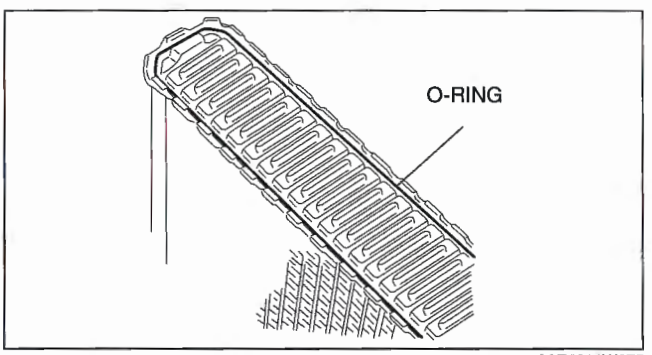
A6E5614W074

5. Inspect the gasket surface of the radiator core header to ensure it is clean and free of foreign material or damage.
6. Inspect the radiator outer tank for warping. If it is warped, replace radiator tank.

Radiator Outer Tank (In Tank Oil Cooler) Installation Note

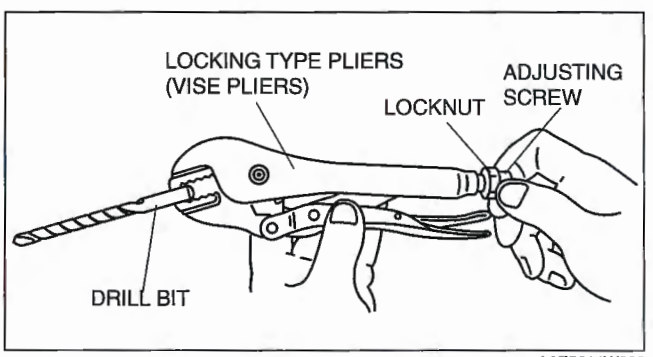
1. Install a new O-ring and ensure it is not twisted. Position the radiator tank in the original direction to the core using care not to scratch the tank sealing surface with the header tabs.

Note
- Step 3 will set jaw opening to the correct specification.



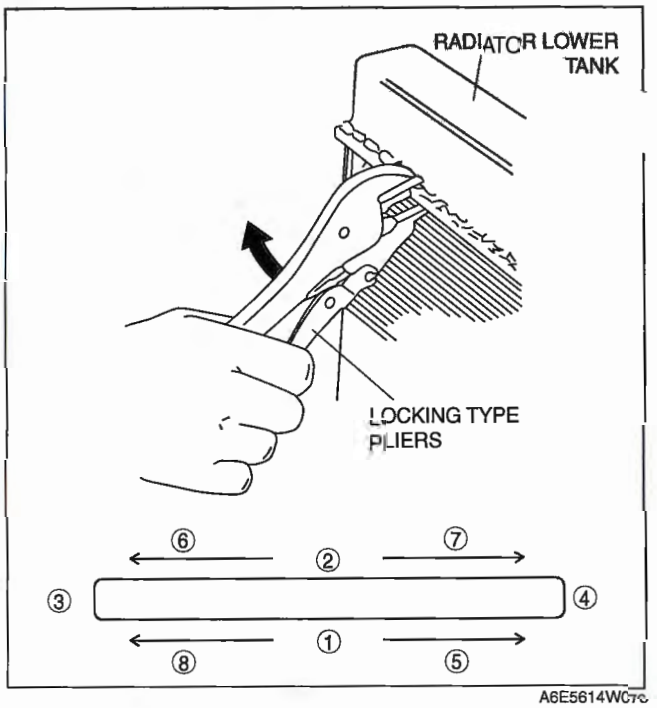
A6E5614W075

3. With the jaws of locking-type pliers (vise grips) closed and locked, turn the adjusting screw to position the jaws against the drill bit with the diameter measured (height) in the removal procedure 1. Tighten the lock nut on the adjusting screw against the handle to lock the adjustment in place.



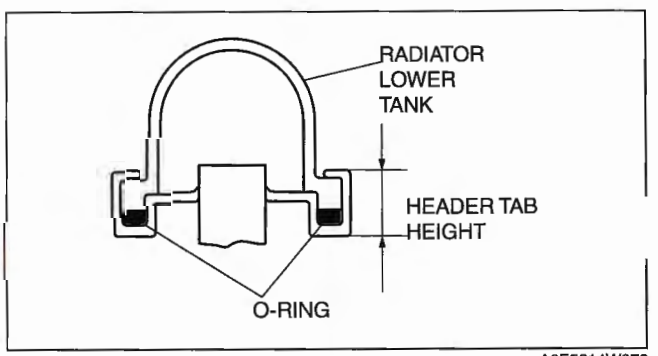
A6E5614W093

4. Squeeze the header tabs down in the order as shown against the lip of the radiator outer tank base with the locking-type pliers while rotating the pliers toward the tank.



A6E5614WC7C

5. Verify that the height of the header tabs is same as the height before removal.
6. Inspect for leakage from radiator. (See 01–12A–7 ENGINE COOLANT LEAKAGE INSPECTION [L3, AJ].)



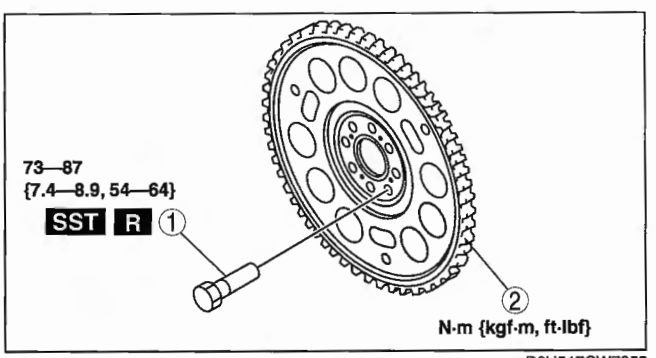
A6E5614W073

DRIVE PLATE REMOVAL/INSTALLATION [AW6A-EL]

E6U051719020W01

1. Remove the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/INSTALLATION [AW6A-EL].)
2. Remove in the order indicated in the figure.
3. Install in the reverse order of removal.

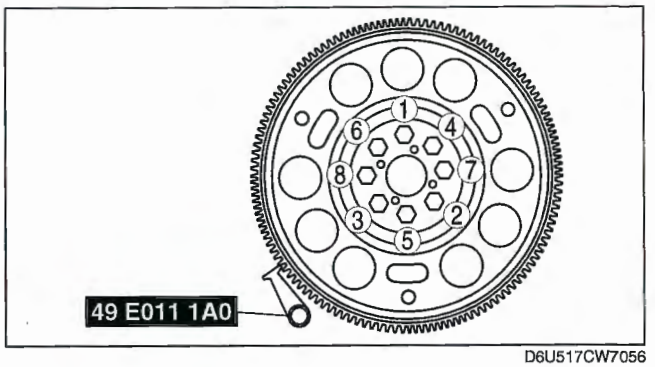
1	Drive plate mounting bolts (See 05–17B–55 Drive Plate Mounting Bolts Removal Note.)
2	Drive plate (See 05–17B–55 Drive Plate Installation Note.)



D6U517CW7055

Drive Plate Mounting Bolts Removal Note

1. Set the **SST** or equivalent against the drive plate.
2. Remove the bolts and the drive plate.



D6U517CW7056

Drive Plate Installation Note

Caution

- **Clean the crankshaft threads before tightening the bolts.The threads may be damaged if the bolts are tightened with any old sealant remaining.**

1. Clean the crankshaft thread holes.
2. Install the drive plate.
3. Set the **SST** or equivalent against the drive plate.
4. Tighten the new drive plate mounting bolts in two or three steps in the order shown.

   Tightening torque
   73—87 N·m {7.4—8.9 kgf·m, 54—64 ft·lbf}

5. Install the transaxle. (See 05–17B–30 AUTOMATIC TRANSAXLE REMOVAL/ INSTALLATION [AW6A-EL].)

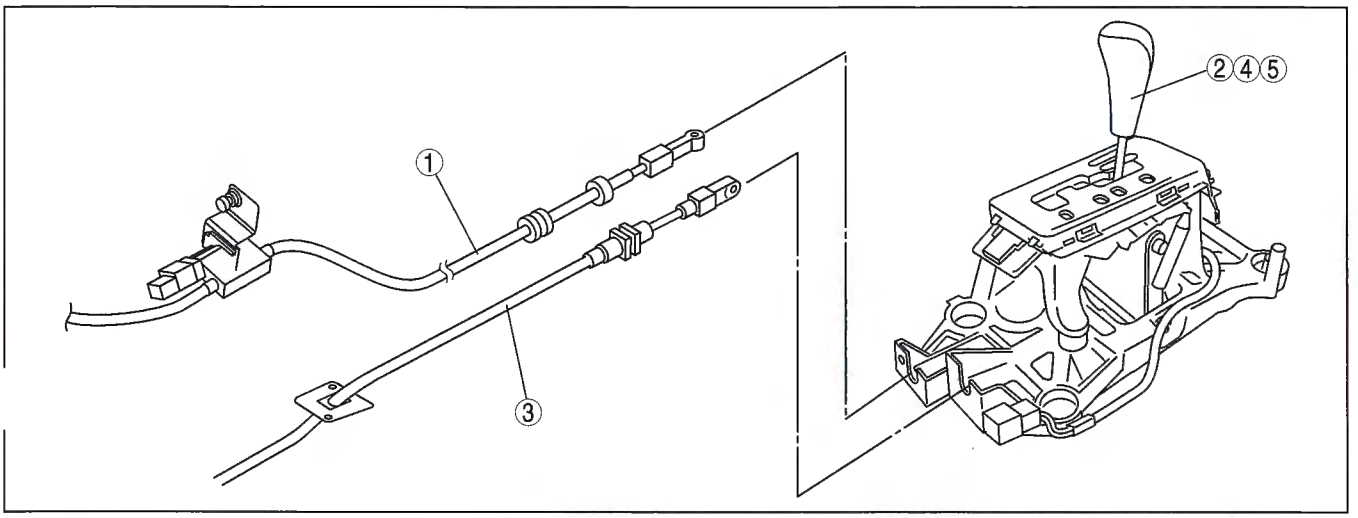
E6U051800000W01



D6U518ZW7001

1	Interlock cable (See 05–18–2 INTERLOCK CABLE INSPECTION.) (See 05–18–3 INTERLOCK CABLE ADJUSTMENT.)
2	Selector lever (See 05–18–6 SELECTOR LEVER INSPECTION.) (See 05–18–6 SELECTOR LEVER COMPONENT INSPECTION.) (See 05–18–7 SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION.) (See 05–18–16 SELECTOR LEVER DISASSEMBLY/ASSEMBLY.)
3	Selector cable (See 05–18–7 SELECTOR CABLE ADJUSTMENT.)
4	Shift-lock (See 05–18–1 SHIFT-LOCK INSPECTION.)
5	Key interlock (See 05–18–1 KEY INTERLOCK INSPECTION.)

SHIFT-LOCK INSPECTION

E6U051830000W01

1. Turn the ignition switch to the ON position.
2. Verify that the selector lever is in the P position.
3. Verify that the selector lever cannot be shifted from the P position without depressing the brake pedal.
4. Depress the brake pedal and verify that the selector lever cannot be shifted from the P position.
   - If there is any malfunction, inspect the interlock cable. (See 05–18–2 INTERLOCK CABLE INSPECTION.)

KEY INTERLOCK INSPECTION

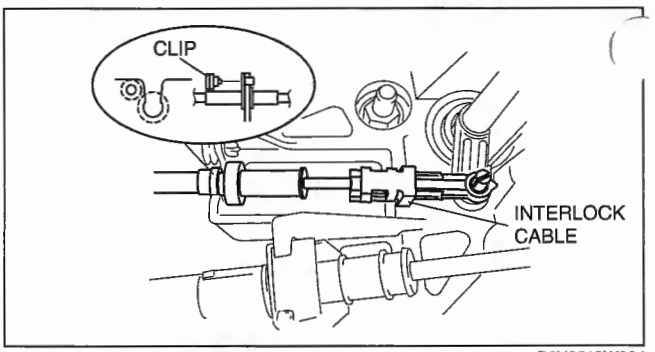
E6U051809000W01

1. Verify that the ignition key cannot be pulled out except in the P position.
   - If there is any malfunction, inspect the interlock cable. (See 05–18–2 INTERLOCK CABLE INSPECTION.)

INTERLOCK CABLE INSPECTION

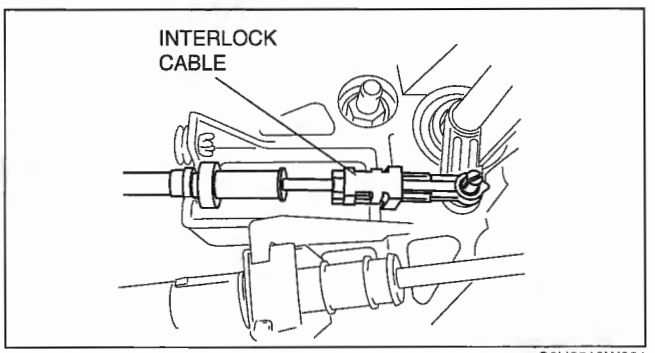
E6U051809000W02

1. Turn the ignition switch to the ON position. (Engine off)
2. Remove the clip of the selector lever base plate, then remove the interlock cable from the U-groove.



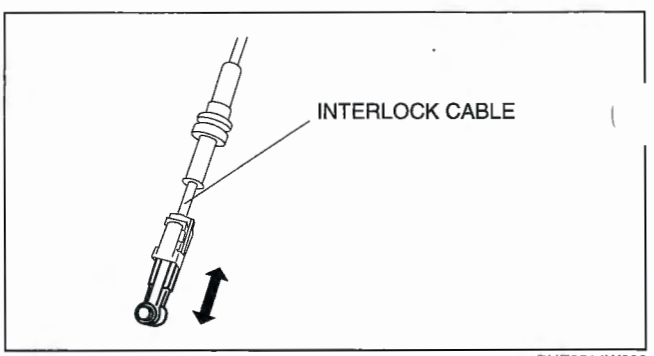
B6U0518W004

3. Remove the interlock cable from the selector lever.



C6U0518W001

4. Verify that the interlock cable moves freely with the brake pedal depressed.
   - If there is any malfunction, inspect the interlock cable for abnormal winding. If any abnormal winding found, correct it.
   - If the malfunction persists after correcting the interlock cable winding, replace it.

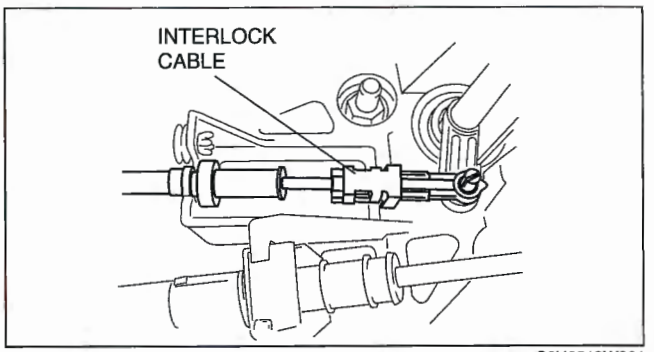


BHE0514W009

INTERLOCK CABLE ADJUSTMENT

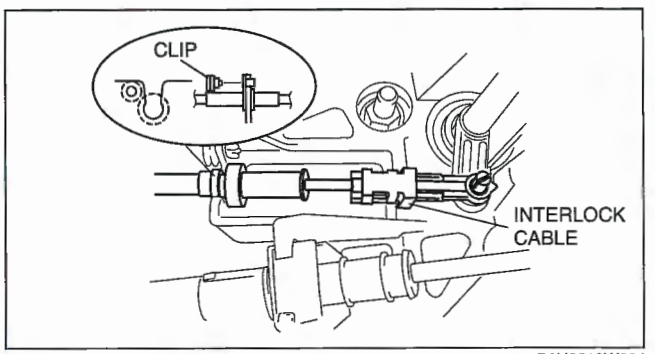
E6U051809000W03

1. Turn the ignition switch to the ON position. (Engine off)
2. Pull up the lock piece of the interlock cable to release the lock.



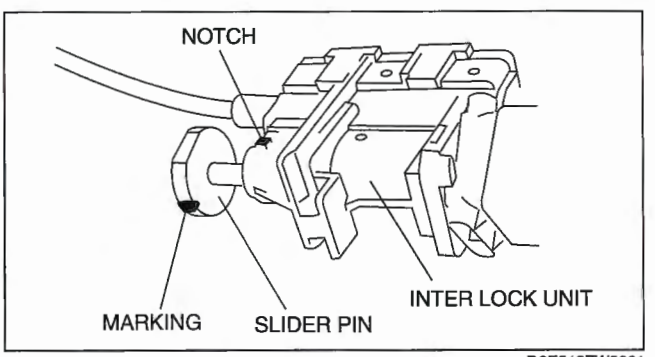
C6U0518W001

3. Remove the clip of the selector lever base plate, then remove the interlock cable from the U-groove.
4. Remove the interlock cable from the selector lever.
5. Remove the lock unit from the bracket.



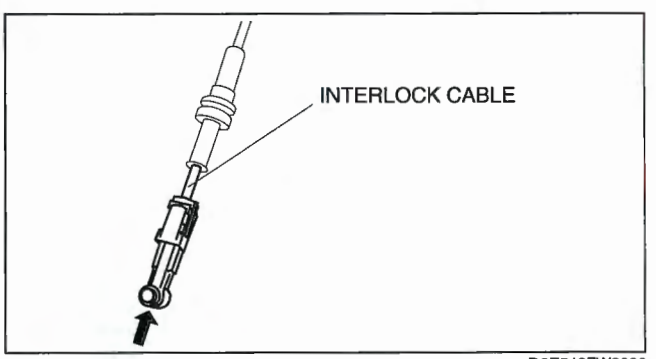
B6U0518W004

6. Verify that the marking on the slider pin is positioned as shown in the figure.



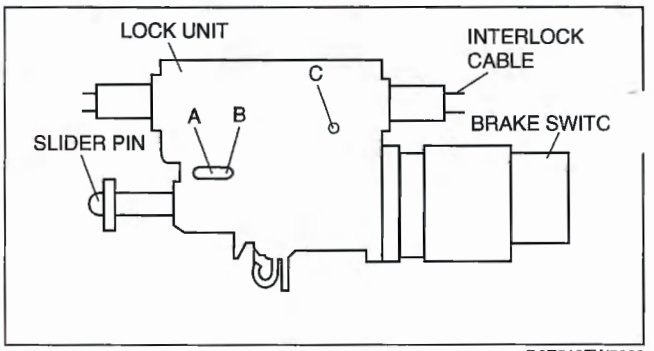
D6E518ZW5001

7. Push the interlock cable.



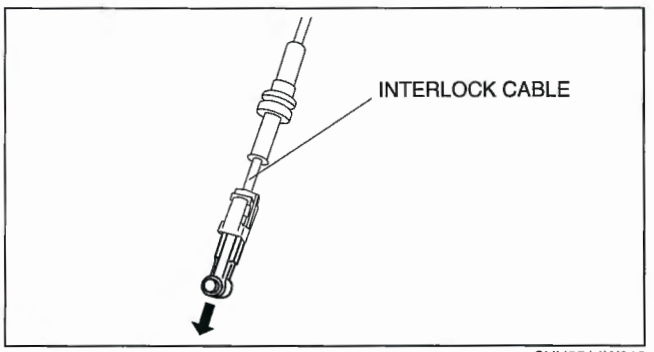
D6E518ZW2006

8. Insert the a 1.5mm {0.059 in} round bar or similar into hole A with the slider pin fully pushed in.



D6E518ZW5003

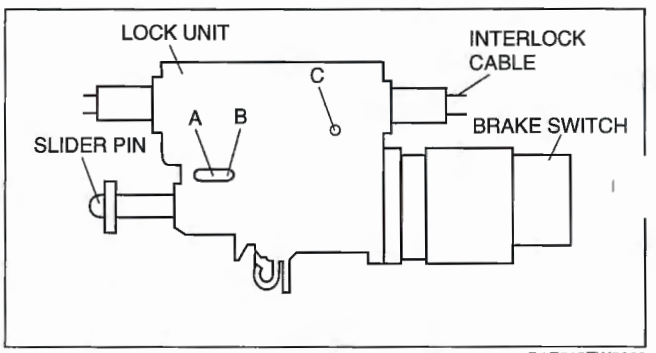
9. Fully pull the end of the interlock cable.



CHU0514W010

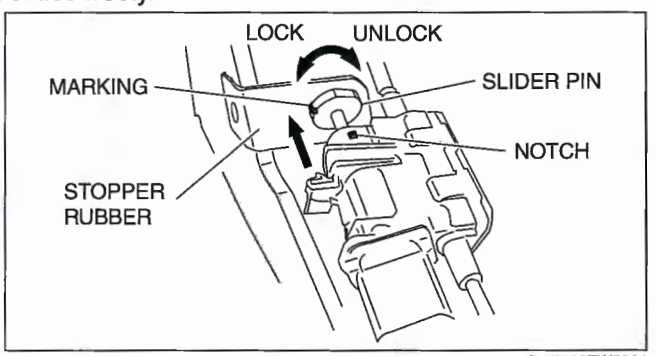
10. Push the a 1.5mm {0.059 in} round bar or similar into hole B and hole C of the lock unit until it passes through.
11. Disconnect the brake switch connector.
12. Remove the brake switch. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)
13. Install a new brake switch. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)

Caution
- **Do not connect the brake switch connector until the interlock cable adjustment is completed.**



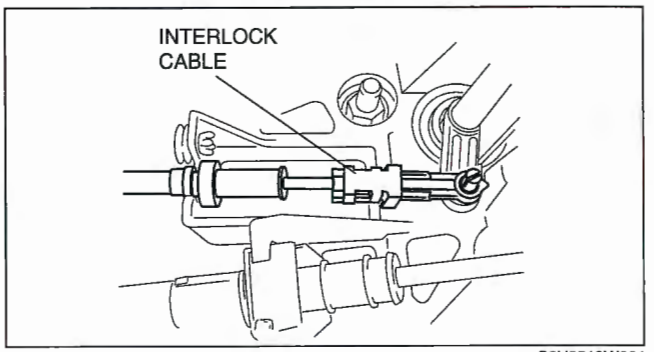
D6E518ZW5003

14. Install the lock unit to the bracket. (See 05–18–12 Interlock Cable Installation Note.)
15. Rotate the slider pin to release the lock and verify that it slides freely.
16. Verify that the slider pin contacts the brake pedal stopper rubber and rotate the slider pin to lock.



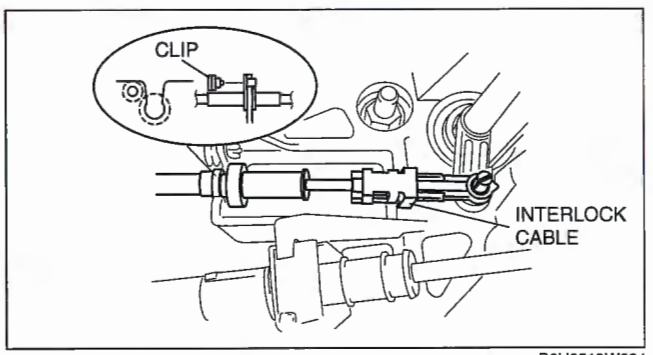
D6E518ZW5004

17. Install the interlock cable end to the interlock link on the selector lever.



C6U0518W001

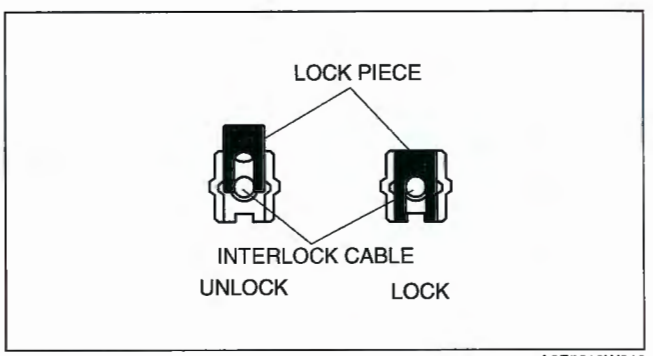
18. Fit the interlock cable in the U-groove in the selector lever base plate and install the clip.



B6U0518W004

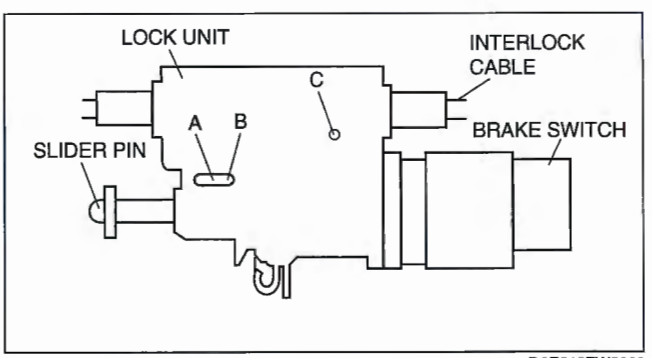
19. Press the interlock cable lock piece in until it is locked.

Caution
- **Applying a load to the interlock cable while pressing the lock piece in can affect the lock unit operation.**



A6E5616W012

20. Remove the a 1.5mm {0.059 in} round bar or similar from the lock unit holes A, B, and C.
21. Connect the brake switch connector with the brake pedal released.



D6E518ZW5003

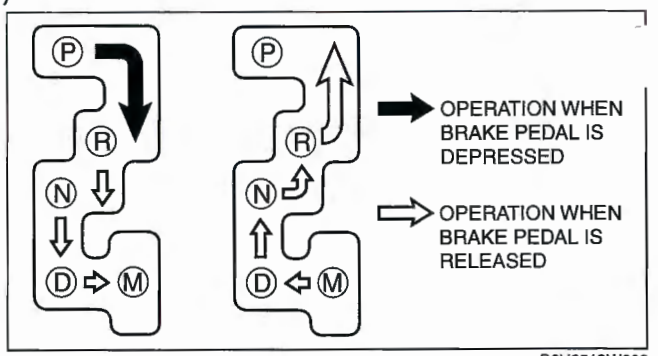
Caution
- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch connector is connected after the brake switch has been properly installed. If the brake switch is not properly installed or the connector is connected before installation, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake switch is properly installed before connecting the connector.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**

Inspect shift lock operation. (See 05–18–1 SHIFT-LOCK INSPECTION.)

SELECTOR LEVER INSPECTION

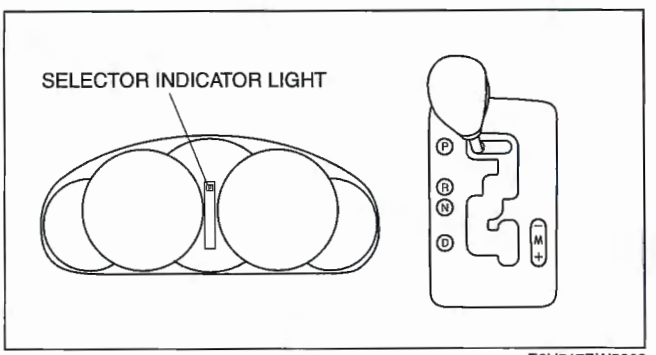
E6U051846102W01

1. Turn the ignition switch to the ON position. (engine OFF)
2. With the brake pedal depressed, verify that there is a "click" at each range when shifted.
3. Verify that the selector lever can be shifted.
4. Verify that there is a "click" at each position when shifted from P position to M range.



B6U0518W008

5. Verify that the positions of the selector lever and the indicator are aligned.
   - If there is any malfunction, adjust the TR switch. (See 05–17A–17 TRANSAXLE RANGE (TR) SWITCH ADJUSTMENT [FS5A-EL].) (See 05–17B–28 Neutral Position Learning.)
6. Verify that the vehicle operates in each selected range.

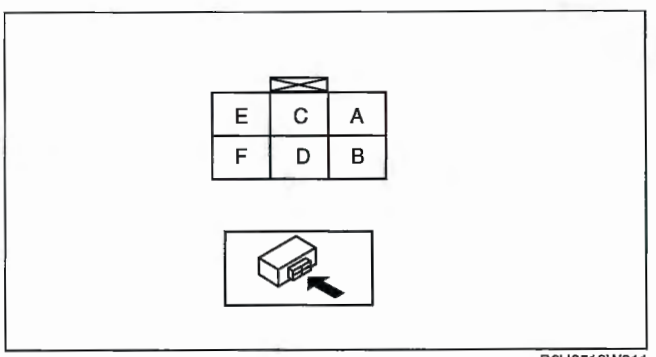


E6U517BW5003

SELECTOR LEVER COMPONENT INSPECTION

E6U051846102W02

1. Disconnect the negative battery cable.
2. Remove the center console.
3. Remove the dashboard completely. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
4. Disconnect the selector lever component connector.
5. Inspect for continuity at the selector lever component.
   - If there is any malfunction, adjust the selector cable. (See 05–18–7 SELECTOR CABLE ADJUSTMENT.)



B6U0518W011

○—○ : Continuity

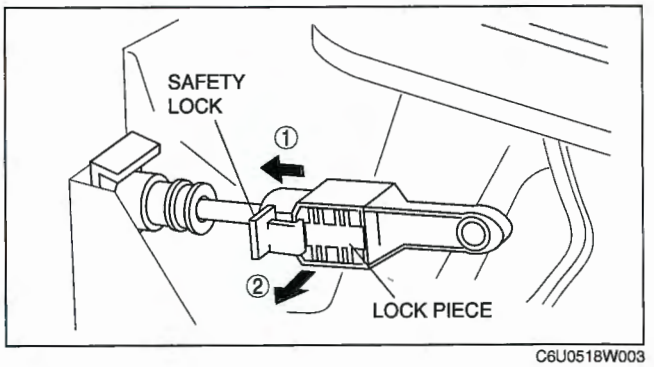
Selector lever position/range		Connector terminal					
		A	B	C	D	E	F
M range	- M		○		○		
	center M			○	○		
	+ M	○			○		
Other							

D6U518ZW7002

SELECTOR CABLE ADJUSTMENT

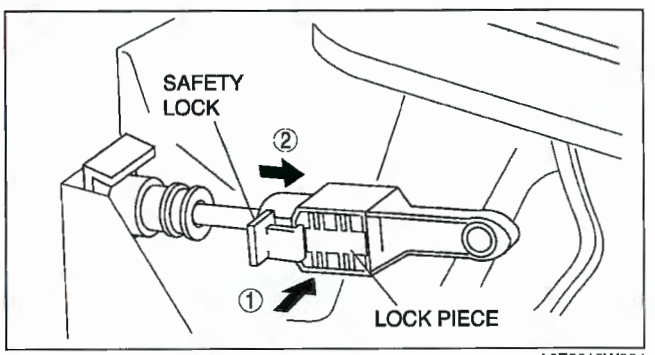
E6U051846102W03

1. Remove the center console.
2. Shift the selector lever to P position.
   Unlock the lock piece of the selector cable (selector lever side) in the order shown in the figure.
4. Verify that the manual shaft is in P position.



C6U0518W003

5. Lock the lock piece of the selector cable (selector lever side) in the order shown in the figure.
6. Install the center console.
7. Shift the selector lever from P position to M range, and make sure that there are no other components in that area to interfere with the lever.



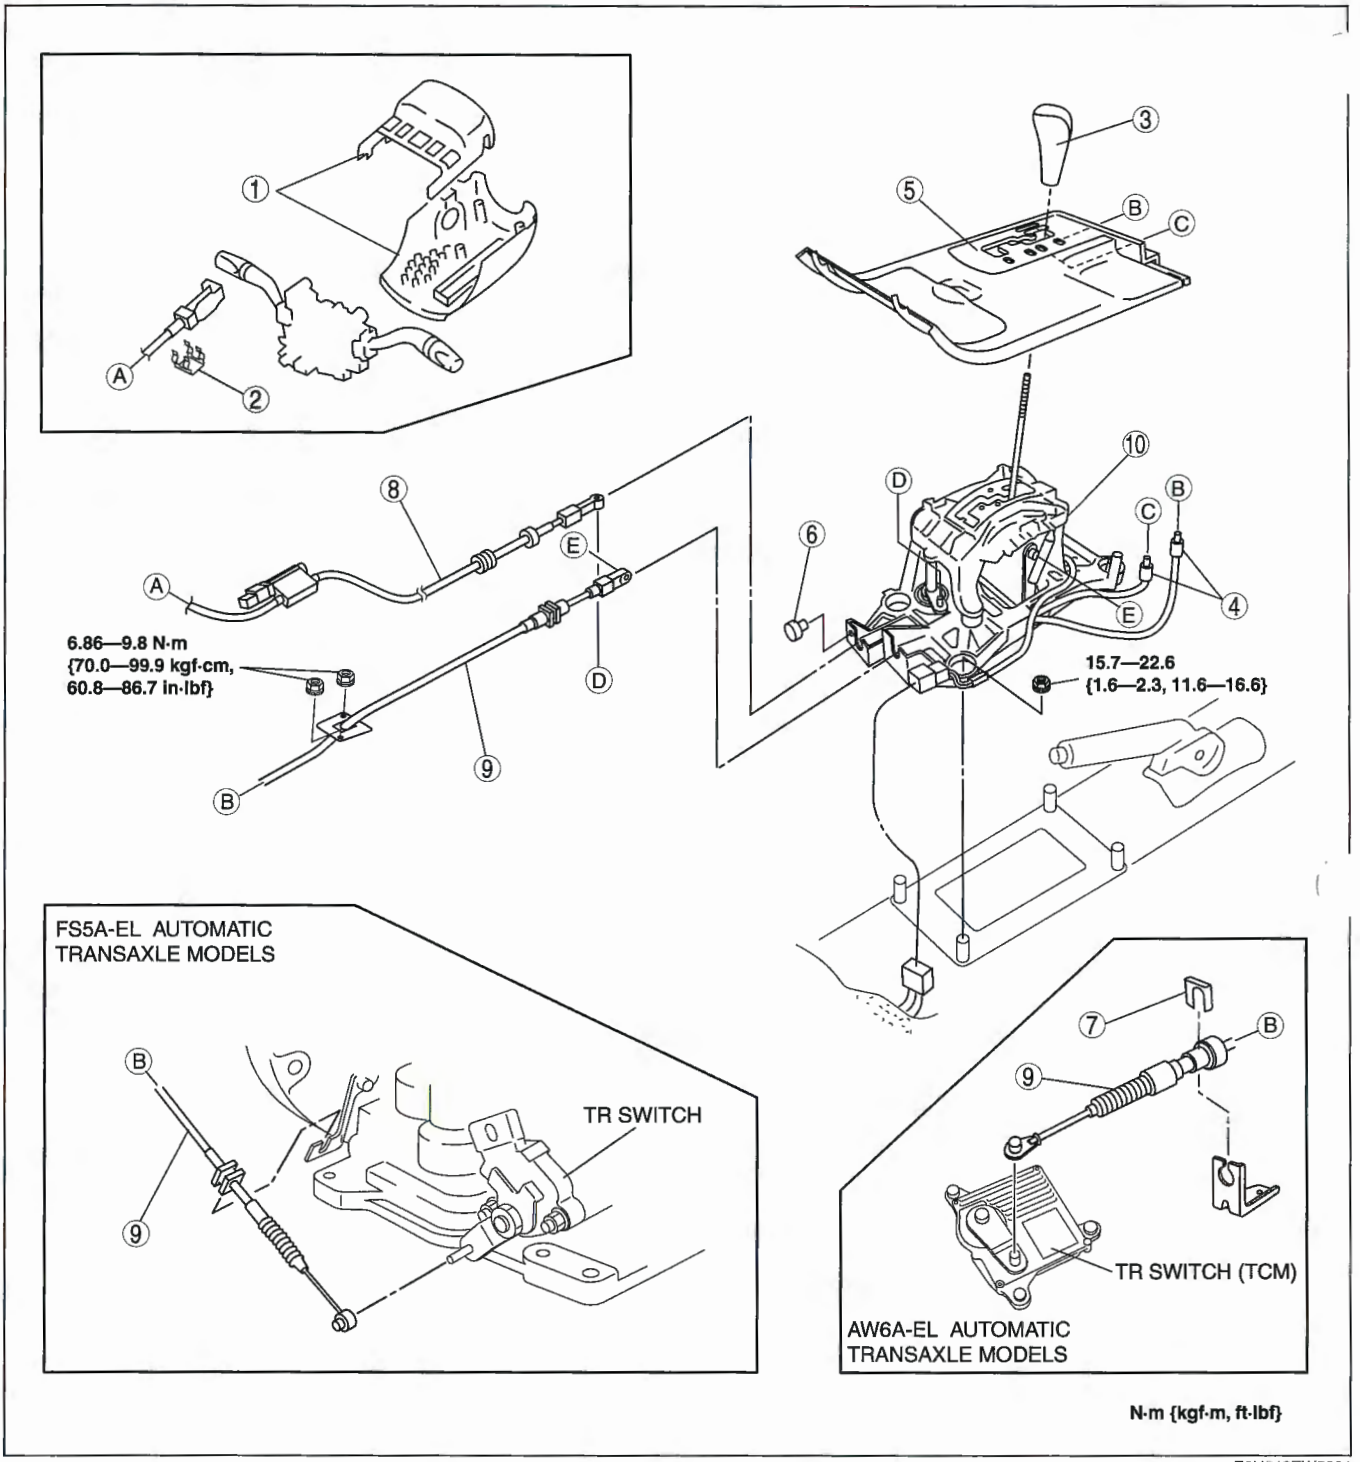
A6E5616W004

SELECTOR LEVER COMPONENT REMOVAL/INSTALLATION

E6U051846102W04

1. Disconnect the negative battery cable.
   Remove the following parts.
   (1) Battery and battery tray
   (2) Air cleaner component (See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].) (See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
   (3) Center console
   (4) Dashboard completely (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
   (5) SAS control module (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
   (6) Climate control unit (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].) (See 07–40–30 CLIMATE CONTROL UNIT INSTALLATION [L3, AJ].)
   (7) Rear heat duct (See 07–11–14 REAR HEAT DUCT REMOVAL/INSTALLATION [L3, AJ].)

3. Remove in the order shown in the figure.
4. Install in the reverse order of removal.



E6U518ZW5001

1	Column cover
2	Clip
3	Selector lever knob
4	Selector illumination light
5	Boot panel, indicator panel

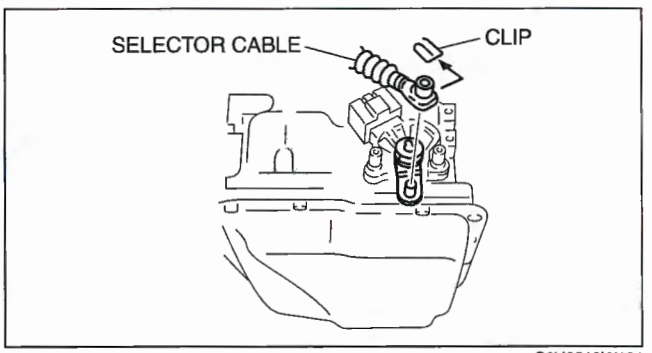
10	Selector lever component

Selector Cable Removal Note

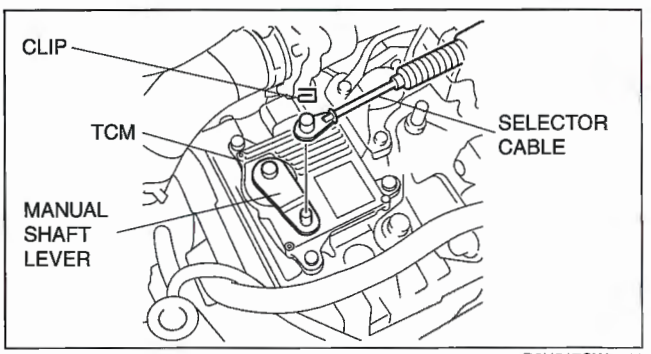
1. Remove the clip.
2. Remove the selector cable.

FS5A-EL automatic transaxle models



C6U0518W101

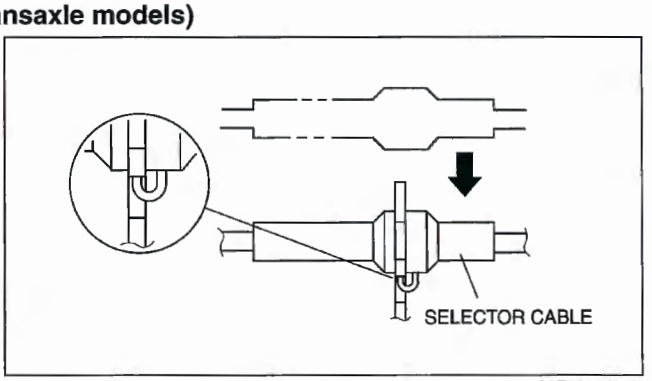
AW6A-EL automatic transaxle models



D6U517CW7010

Selector Cable Installation Note (FS5A-EL automatic transaxle models)

Install the selector cable to the selector lever securely.



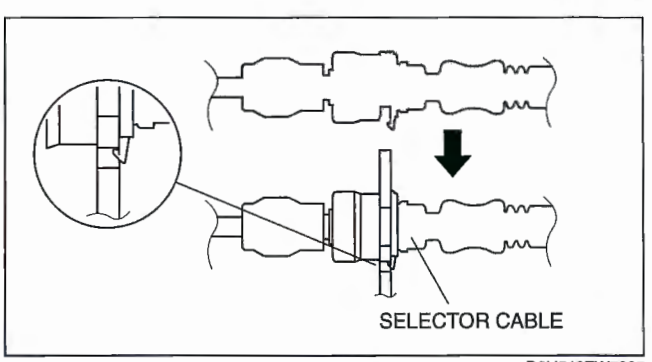
A6E5616W020

2. Install the selector cable to the bracket securely.

Note

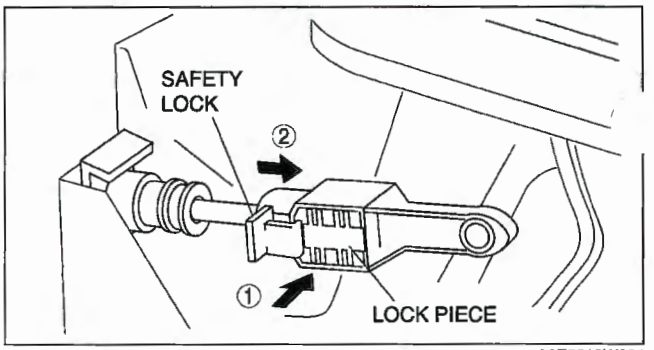
- Steps 3 and 4 are for the selector cable replacement only.

3. Verify that the selector lever is in the P position.



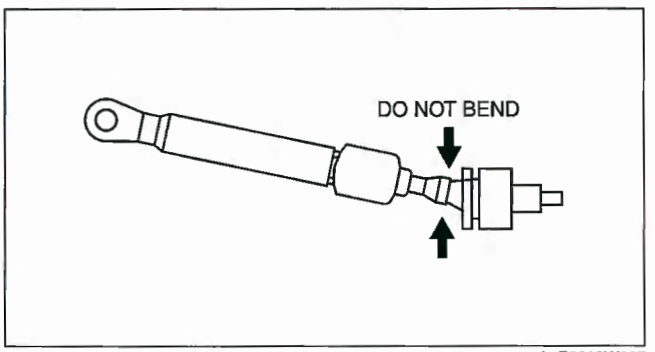
D6U518ZW7005

4. Lock the lock piece of the selector cable (selector lever side) in the order shown in the figure.
5. Verify that the manual shaft is in the P position.



A6E5616W004

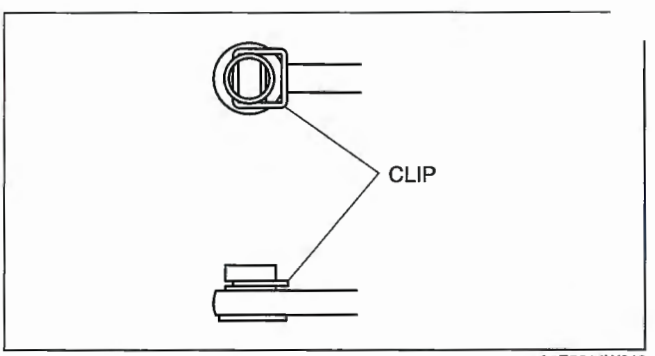
Caution
- **Bending the selector cable in the manner shown in the figure will damage the cable and it may become loose when shifted. When installing the selector cable, hold it straight.**



A6E5616W007

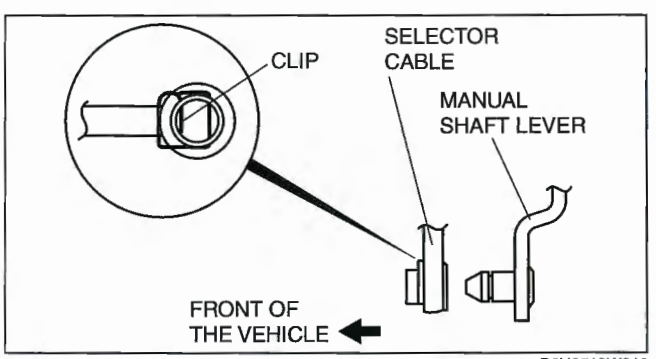
6. Install the clip as shown in the figure.

Note
- Install the selector lever to the manual shaft lever with the clip side of the selector cable end facing the front of the vehicle.



A6E5614W018

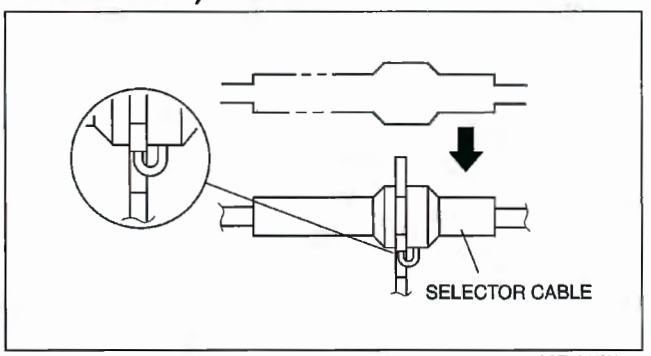
7. Install the selector lever to the manual shaft lever so that no load acts on the selector cable.
8. Confirm that the tip of the manual shaft lever projects out of the end of the selector cable.
9. Securely install the selector cable to the selector cable bracket.



B6U0518W013

Selector Cable Installation Note (AW6A-EL automatic transaxle models)

1. Install the selector cable to the selector lever securely.

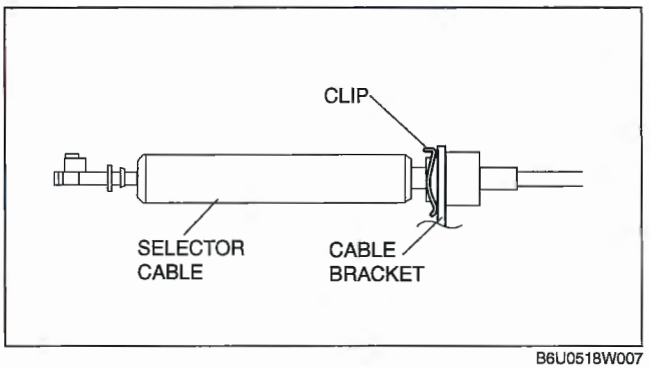


A6E5616W020

2. Install the selector cable and clip to the bracket as shown in the figure.

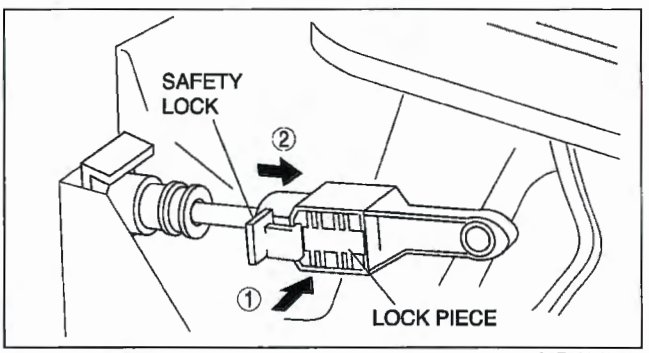
Note
- Steps 3 and 4 are for the selector cable replacement only.

3. Verify that the selector lever is in the P position.



B6U0518W007

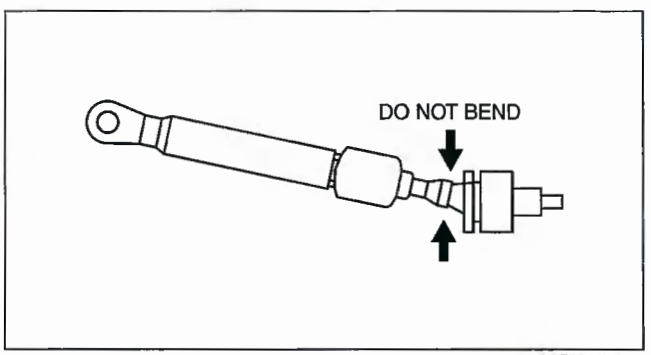
4. Lock the lock piece of the selector cable (selector lever side) in the order shown in the figure.



A6E5616W004

5. Verify that the manual shaft is in the P position.

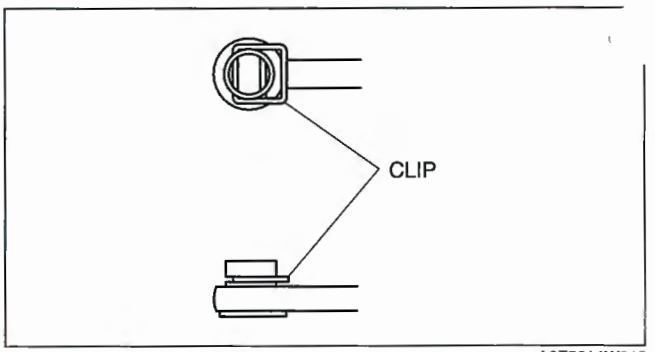
Caution
- **Bending the selector cable in the manner shown in the figure will damage the cable and it may become loose when shifted. When installing the selector cable, hold it straight.**



A6E5616W007

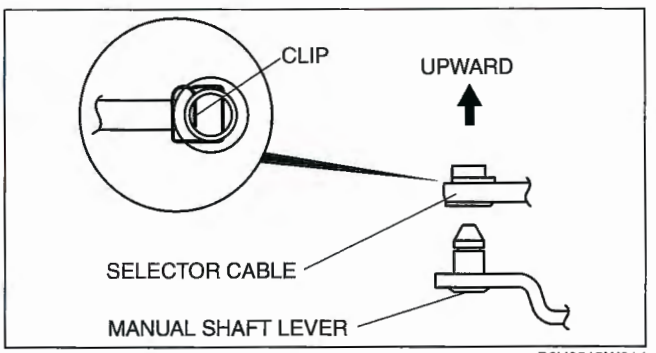
6. Install the clip as shown in the figure.

Note
- Install the selector lever to the manual shaft lever with the clip side of the selector cable end facing up.



A6E5614W018

7. Install the selector lever to the manual shaft lever so that no load acts on the selector cable.
8. Confirm that the tip of the manual shaft lever projects out of the end of the selector cable.
9. Securely install the selector cable to the selector cable bracket.

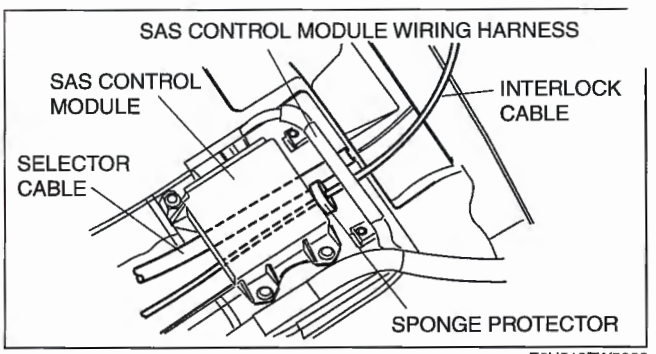


B6U0518W014

Interlock Cable Installation Note

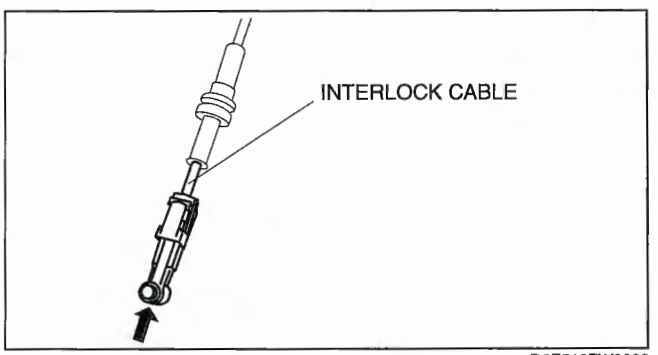
1. Install the interlock cable as shown in the figure.

Caution
- **Position the sponge protector so that it is not crushed or squeezed by the SAS control module.**
- **If the interlock and selector cables cross over each other, position the interlock cable to pass over the selector cable.**



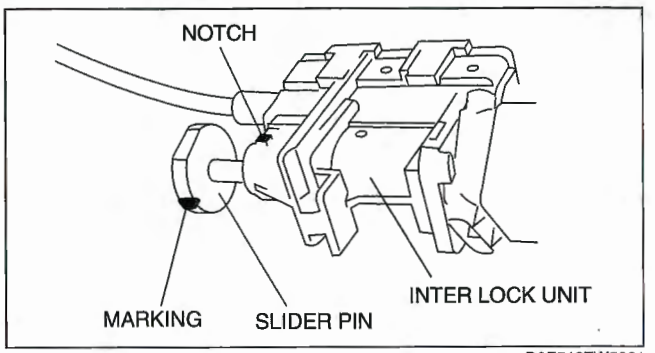
E6U518ZW5002

2. Push the interlock cable.



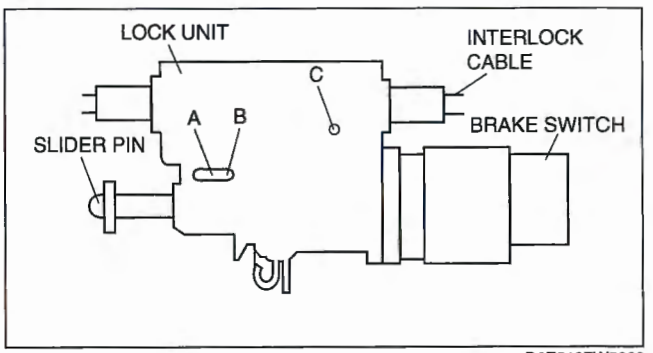
D6E518ZW2006

3. Verify that the marking on the slider pin is positioned as shown in the figure.



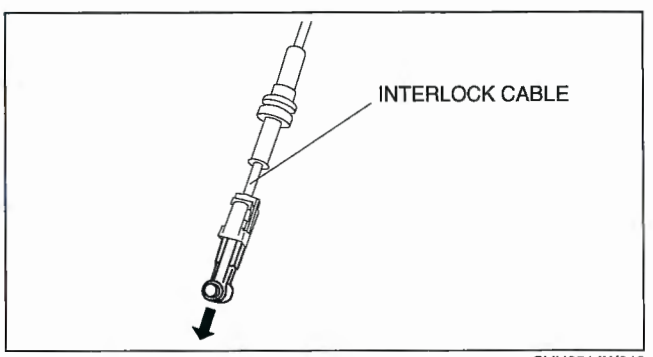
D6E518ZW5001

4. Push the a 1.5mm {0.059 in} round bar or similar into hole A by fully pushing the slider pin in.



D6E518ZW5003

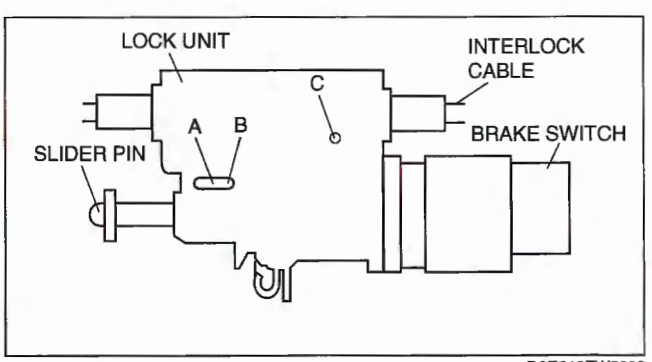
5. Fully pull the end of the interlock cable.



CHU0514W010

6. Push the a 1.5mm {0.059 in} round bar or similar into hole B and hole C of the lock unit until it passes through.
7. Disconnect the brake switch connector.
8. Remove the brake switch. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)
9. Install a new brake switch. (See 04–11–8 BRAKE PEDAL REMOVAL/INSTALLATION.)

Caution
- **Do not connect the brake switch connector until the interlock cable is installed.**

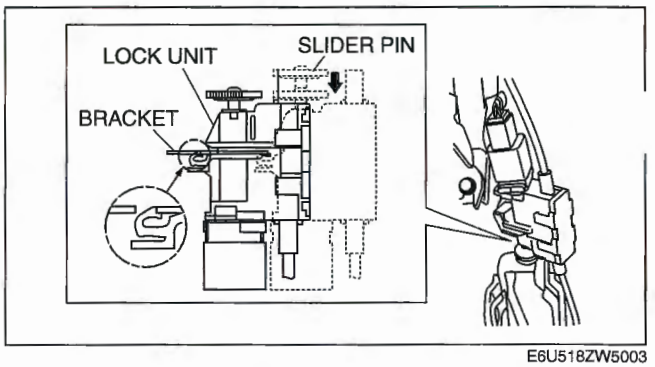


D6E518ZW5003

10. With the slider pin pressed, slide the lock unit to fix the lock unit hook into the bracket hole securely as shown in the figure.

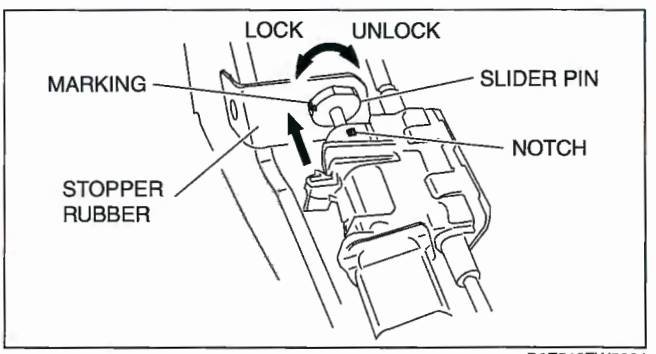
Caution
- **Allowing the interlock cable to be bent or twisted during installation can affect the lock unit operation.**

11. Rotate the slider pin to release the lock and verify that it slides freely.



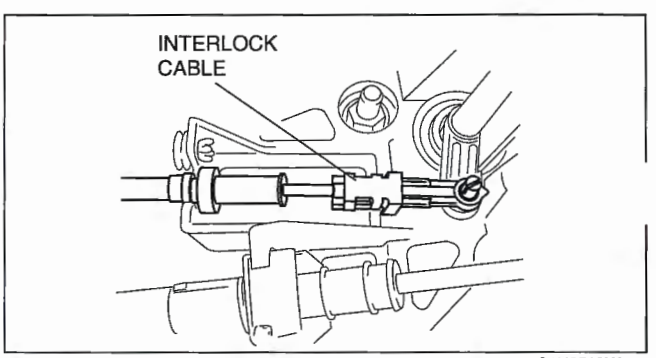
E6U518ZW5003

12. Pull the slider pin outward until it contacts the brake pedal stopper rubber and rotate the slider pin to lock.
13. Verify that the selector lever in the P position.



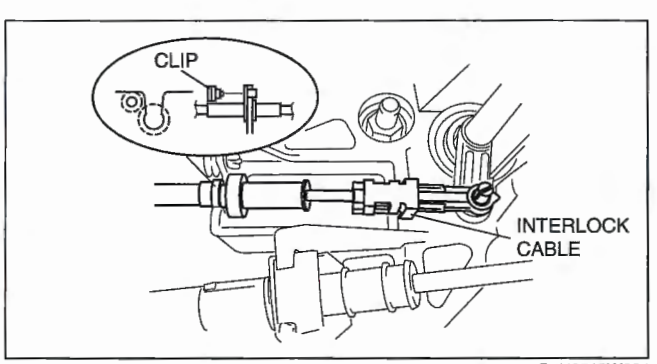
D6E518ZW5004

14. Install the interlock cable end to the cam pin on the selector lever.



C6U0518W001

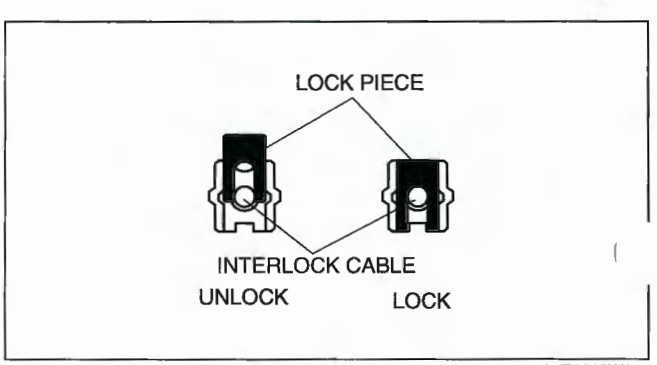
15. Fit the interlock cable in the U–groove in the selector lever base plate and install the clip.



B6U0518W004

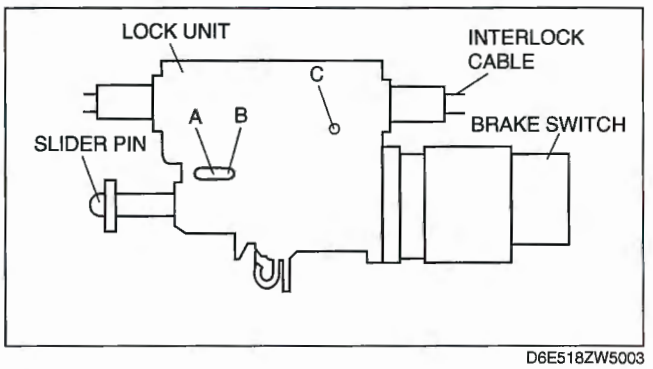
16. Press the interlock cable lock piece in until it is locked.

Caution
- **Applying a load to the interlock cable while pressing the lock piece in can affect the lock unit operation.**



A6E5616W012

17. Remove the a 1.5mm {0.059 in} round bar or similar from the lock unit holes A, B, and C.
18. Connect the brake switch connector with the brake pedal released.

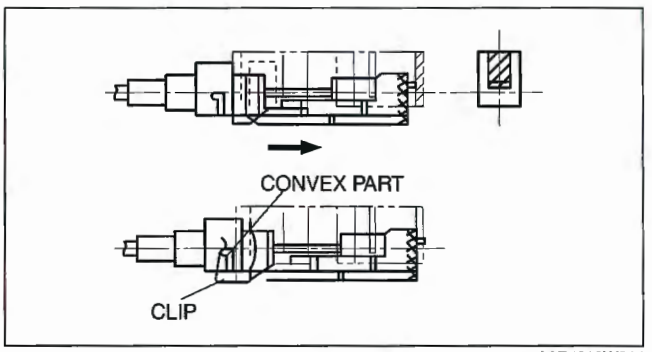


D6E518ZW5003

Caution

- **The clearance between the brake switch and the brake pedal is automatically adjusted to the correct amount when the brake switch connector is connected after the brake switch has been properly installed. If the brake switch is not properly installed or the connector is connected before installation, the clearance may be incorrect, causing a brake light malfunction. Therefore, always verify that the brake switch is properly installed before connecting the connector.**
- **Once the brake switch clearance has automatically been adjusted, it cannot be adjusted again. Therefore, replace the switch with a new one when replacing the power brake unit or the pedal, or performing any procedure that changes the pedal stroke.**

19. Turn the ignition switch to ON position.
20. Install the interlock cable to the steering lock.
21. Slide the outer casing to the steering lock and insert the clip over the convex part of the outer casing.

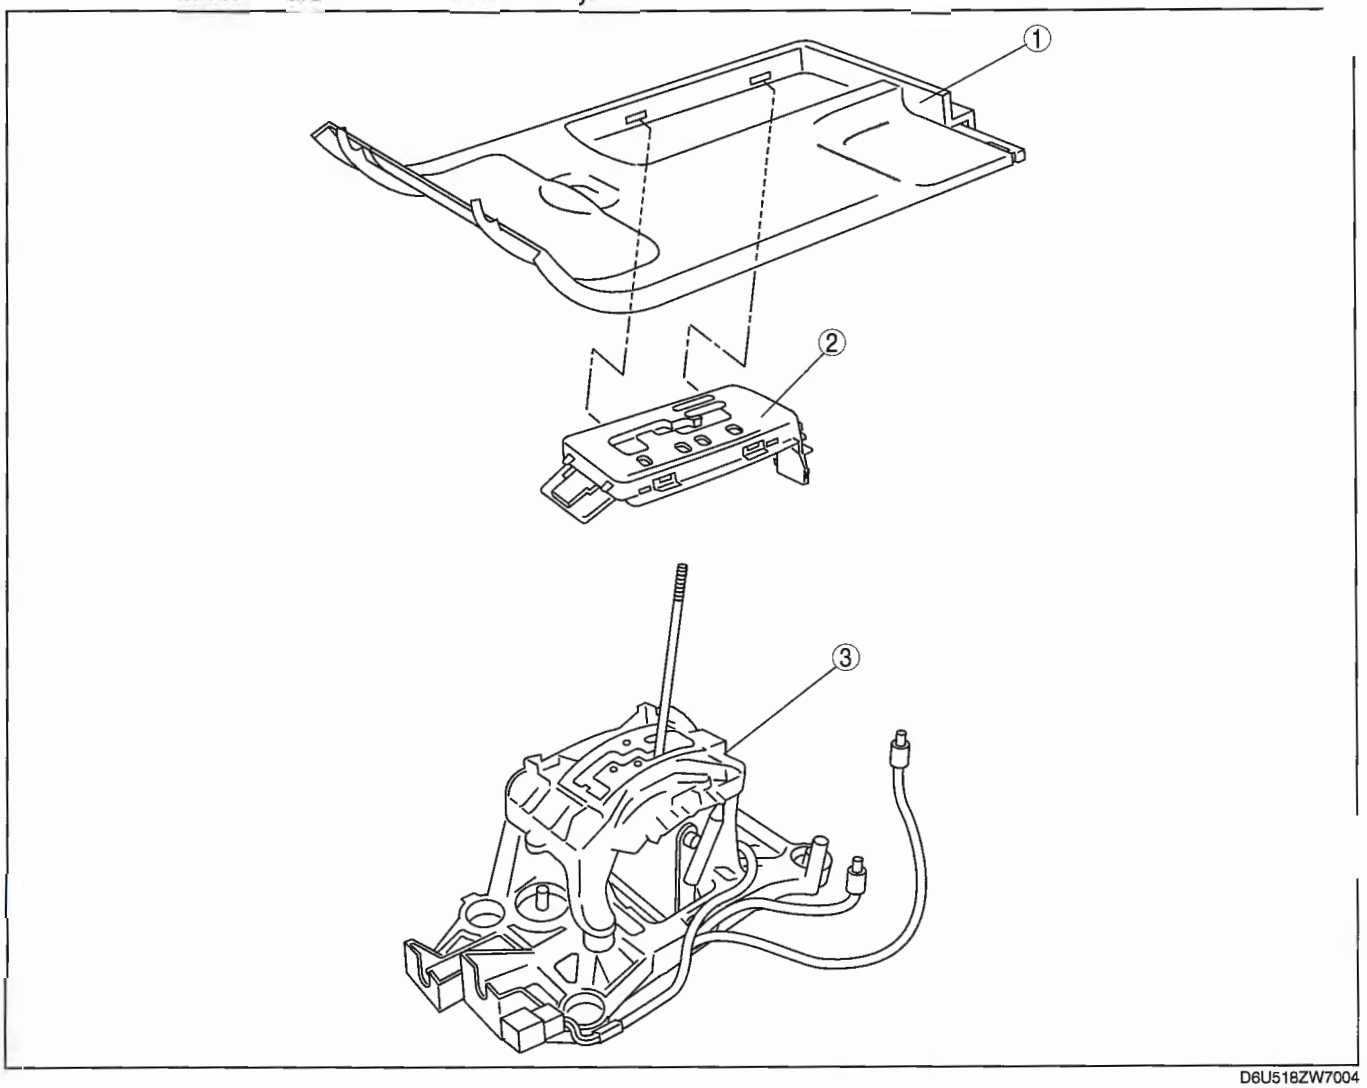


A6E5616W014

SELECTOR LEVER DISASSEMBLY/ASSEMBLY

E6U051846102W05

1. Disassemble in the order shown in the figure.
2. Assemble in the reverse order of disassembly.



D6U518ZW7004

CLUTCH

Item	Specification
Specified fluid	SAE J1703, FMVSS 116 DOT-3
Clutch pedal height (Reference Value)	210—216 mm {8.27—8.50 in}
Clutch pedal free play	1.0—3.0 mm {0.04—0.11 in}
Clutch pedal push rod free play	0.1—0.5 mm {0.004—0.020 in} (Reference value)
Clutch pedal disengagement stroke	Minimum: 20 mm {0.79 in} (Reference value)
Clutch pedal stroke	140 mm {5.51 in} (Reference value)
Clutch cover diaphragm spring fingers maximum depth [G35M-R, A65M-R]	0.6 mm {0.024 in} max.
Maximum clearance of flatness of the pressure plate [G35M-R, A65M-R]	0.3 mm {0.012 in} max.
Clutch cover diaphragm spring fingers maximum misalignment [G35M-R, A65M-R]	0.6 mm {0.024 in} max.
Clutch cover diaphragm spring fingers maximum depth [A26MX-R]	0.6 mm {0.024 in}
Maximum clearance of flatness of the pressure plate [A26MX-R]	0.3 mm {0.012 in}
Clutch cover diaphragm spring fingers maximum misalignment [A26MX-R]	1.0 mm {0.039 in}
Minimum clutch disc thickness	0.3 mm {0.012 in}
Maximum clutch disc runout	0.7 mm {0.028 in}
Flywheel runout limit [G35M-R]	0.1 mm {0.004 in}
Flywheel runout limit [A65M-R]	0.05 mm {0.002 in}
Dual-mass flywheel maximum runout	1.5 mm {0.059 in}

MANUAL TRANSAXLE

Item	Specification
Manual transaxle oil [G35M-R]	Specified oil grade: API Service GL-4 or GL-5 Specified oil viscosity (All-season): SAE 75W-90 Specified oil viscosity (Above 10 °C {50 °F}): SAE 80W-90 Capacity (approximate quantity): 2.87 L {3.03 US qt, 2.53 Imp qt}
Manual transaxle oil [A65M-R]	Specified oil grade: API Service GL-4 or GL-5 Specified oil viscosity: SAE 75W-90 Capacity (approximate quantity): 2.3 L {2.4 US qt, 2.0 Imp qt}
Manual transaxle oil [A26MX-R]	Specified oil grade: API Service GL-4 or GL-5 Specified oil viscosity: SAE 75W-90 Capacity (approximate quantity): 2.55 L {2.69 US qt, 2.24 Imp qt}

AUTOMATIC TRANSAXLE [FS5A-EL]

Item	Specification
Average time lag	N position→D range: 0.4—0.7 sec. N position→R position: 0.4—0.7 sec.
ATF type	ATF M-V
Capacity (approx. quantity)	8.14 L {8.6 US qt, 7.2 Imp qt}
Input/turbine speed sensor resistance	250—600 ohms (ATF temperature: –40—160 °C {–40—320 °F})
Intermediate sensor voltage	4.5—5.5 V
Vehicle speed sensor (VSS) voltage	4.5—5.5 V

Line pressure specification

Position/range	Line pressure (kPa {kgf/cm^2, psi})	
	Idle	Stall
D, M (1GR, 2GR)	330—470 {3.4—4.8, 48—68}	1,200—1,320 {12.2—13.5, 174—191}
R	490—710 {5.0—7.2, 71—102}	1,680—2,010 {17.2—20.4, 244—291}

Engine stall speed

Position/range	Engine stall speed (rpm)
D, M (1GR, 2GR)	2,200—2,800

Wheel and Tire Installation 06–10–1
Power Steering Components Removal/Installation..... 06–10–1
Connector Disconnection..... 06–10–1
Suspension Arm Removal/Installation..... 06–10–1

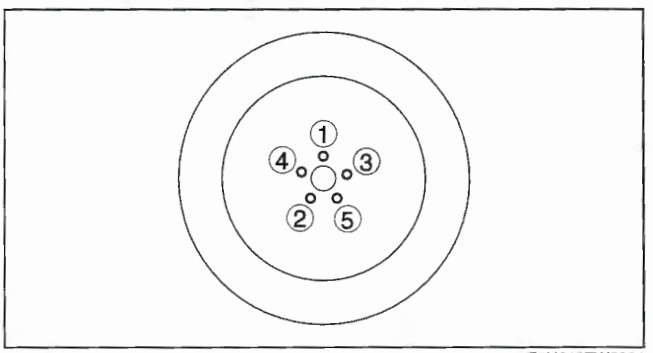
GENERAL PROCEDURES (STEERING)

Wheel and Tire Installation

1. When installing the wheels and tires, tighten the wheel nuts in a criss-cross pattern to the following tightening torque.

Tightening torque
88—118 N·m {9.0—12.0 kgf·m, 65.0—87.0 ft·lbf}

E6U061000000W01



E5U610ZW5001

Power Steering Components Removal/Installation

1. If any power steering fluid line has been disconnected anytime during the procedure, add ATF M-III, M-V or equivalent (e.g. Dexron®III), bleed the fluid lines, and inspect for leakage after the procedure has been completed.

Connector Disconnection

1. Disconnect the negative battery cable before performing any work that requires handling of connectors. (See 01–17A–1 BATTERY REMOVAL/INSTALLATION [L3, AJ].) (See 01–17B–2 BATTERY REMOVAL/INSTALLATION [L3 WITH TC].)

Suspension Arm Removal/Installation

1. Tighten any part of the suspension that uses rubber bushings only after vehicle has been lowered to the ground and unloaded.

Note
- Unloaded: Fuel tank is full. Engine coolant and engine oil are at specified level. Spare tire, jack, and tools are in designated position.

AIR BLEEDING

E6U061200000W02

Caution

- **Do not turn the steering wheel during the fluid level inspection, otherwise the fluid level changes and cannot be inspected correctly.**

1. Inspect the fluid level. (See06–12–4 POWER STEERING FLUID INSPECTION.)
2. Jack up the front of the vehicle and support it on safety stands.
3. Turn the steering wheel fully to the left and right several times with the engine not running.
4. Reinspect the fluid level.
   - If it has dropped, add fluid.
5. Repeat Steps 3 and 4 until the fluid level stabilizes.
   Lower the vehicle.
7. Start the engine and let it idle.
8. Turn the steering wheel fully to the left and right several times.
9. Verify that the fluid is not foamy and that the fluid level has not dropped.
   - If the fluid level has dropped, add fluid as necessary and repeat Steps 8 and 9.

POWER STEERING FLUID INSPECTION

E6U061232040W01

Fluid Level Inspection

1. Inspect the power steering fluid level.
   - Add fluid to the specified level as necessary.

Power steering fluid type
ATF M-III, M-V or equivalent (e.g. Dexron®III)

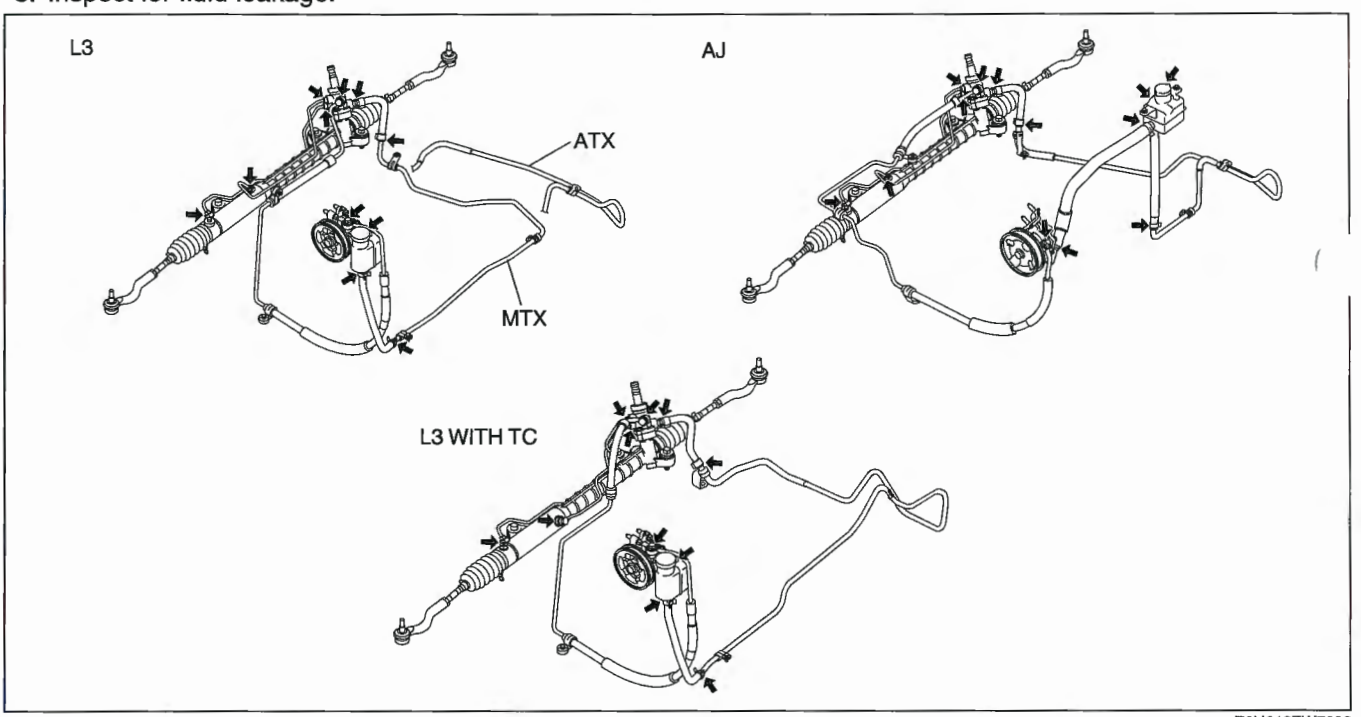
Power steering fluid capacity (approx. quantity)
L3 MTX: 0.77 L {0.81 US qt, 0.68 Imp qt}
L3 ATX: 0.84 L {0.89 US qt, 0.74 Imp qt}
AJ: 1.02 L {1.08 US qt, 0.90 Imp qt}
L3 WITH TC: 0.89 L {0.94 US qt, 0.78 Imp qt}

Fluid Leakage Inspection

1. Start the engine and let it idle.
2. Turn the steering wheel fully to the left and right to apply fluid pressure.

Caution
- **If the steering wheel is kept in the fully turned position for more than 5 seconds, the fluid temperature will rise excessively and adversely affect the oil pump.**

3. Inspect for fluid leakage.



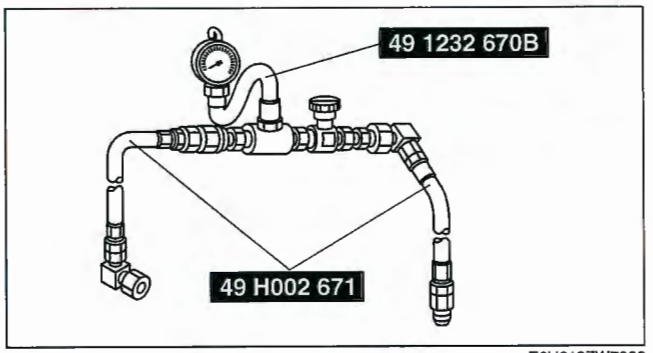
E6U612ZW7002

- If fluid leakage is found, replace related pipe or hose.

Note
- The points where fluid leakage may occur are indicated in the figure.

Fluid Pressure Inspection

1. Assemble the **SSTs** as shown in the figure.

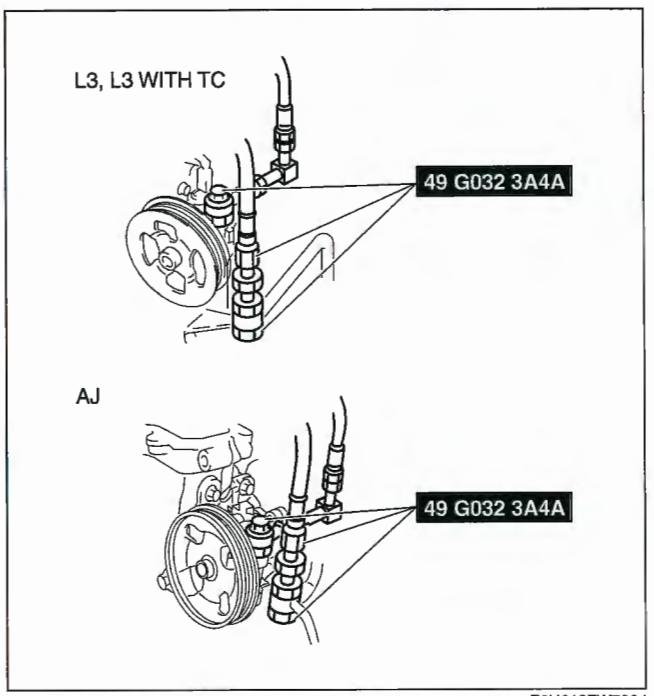


E6U612ZW7003

2. Disconnect the pressure pipe from the oil pump, and connect the **SSTs**.

   Tightening torque
   29.4—44.1 N·m {3.0—4.4 kgf·m, 22—32 ft·lbf}

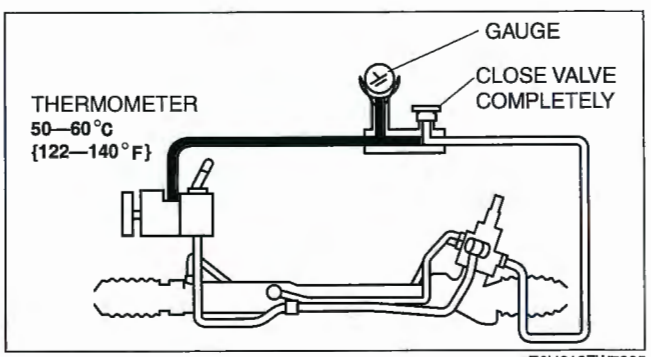
3. Bleed the air from the system. (See 06–12–3 AIR BLEEDING.)
4. Open the gauge valve fully.
5. Start the engine and turn the steering wheel fully left and right to raise the fluid temperature to **50—60 °C {122—140 °F}**.



E6U612ZW7004

6. Close the gauge valve completely.
7. Increase the engine speed to **1,000—1,500 rpm** and measure the fluid pressure generated by the oil pump.
   - If the pressure is not within the specification, repair or replace the oil pump component.

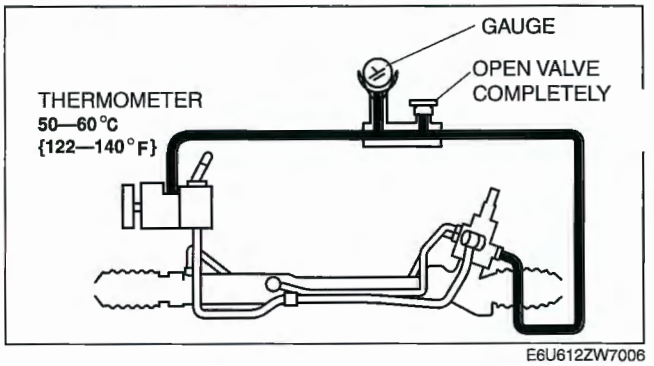
Caution
- **If the valve is left closed for more than 5 seconds, the fluid temperature will rise excessively and adversely affect the oil pump.**



E6U612ZW7005

Oil pump fluid pressure
L3: 10.80—11.29 MPa {110.2—115.2 kgf/cm^2, 1567—1637 psi}
AJ: 11.31—11.80 MPa {115.4—120.3 kgf/cm^2, 1640—1711 psi}
L3 WITH TC: 11.30—11.70 MPa {116.0—119.0 kgf/cm^2, 1639—1696 psi}

8. Open the gauge valve fully and increase the engine speed to **1,000—1,500 rpm**.
9. Turn the steering wheel fully to the left and right, then measure the fluid pressure generated at the gear housing.
   - If the pressure is not within the specification, repair or replace the steering gear component.



E6U612ZW7006

Caution
- **If the steering wheel is kept in the fully turned position for more than 5 seconds, the fluid temperature will rise excessively and adversely affect the oil pump.**

Gear housing fluid pressure
L3: 10.80—11.29 MPa {110.2—115.2 kgf/cm^2, 1567—1637 psi}
AJ: 11.31—11.80 MPa {115.4—120.3 kgf/cm^2, 1640—1711 psi}
L3 WITH TC: 11.30—11.70 MPa {116.0—119.0 kgf/cm^2, 1639—1696 psi}

10. Remove the **SSTs**. Install and tighten the pressure pipe to the specified torque.

Tightening torque
29.4—44.1 N·m {3.0—4.4 kgf·m, 22—32 ft·lbf}

11. Bleed the air from the system.

STEERING WHEEL AND COLUMN INSPECTION

E6U061232010W01

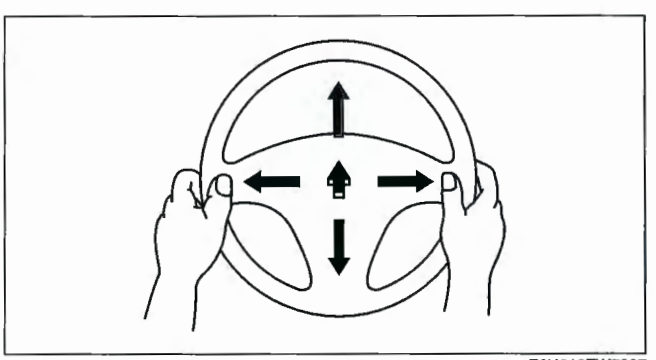
Steering Wheel Play Inspection

1. With the wheels in the straight-ahead position, gently turn the steering wheel to the left and right and verify that the play is within the specification.
   - If the play exceeds the specification, either the steering joints are worn or the backlash of the steering ge is excessive. Correct as necessary.

Steering wheel play
0—30 mm {0—1.18 in}

Steering Wheel Looseness Inspection

1. Move the steering wheel as shown in the figure to inspect for column bearing wear, steering shaft joint play, steering wheel looseness, and column looseness.
   - Repair or replace as necessary.



E6U612ZW7007

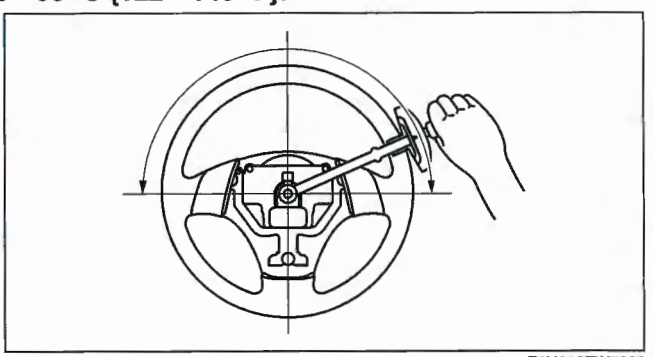
Steering Wheel Effort Inspection

1. Inspect the following points:
   - Tire size and tire pressure
   - Fluid level
   - Drive belt deflection
2. With the vehicle on a hard, level surface, put the wheels in the straight-ahead position.
3. Remove the air bag module.

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read AIR BAG SYSTEM WARNINGS before handling the air bag module. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)**

4. Start the engine and warm the power steering fluid to **50—60 °C {122—140 °F}**.
5. Measure the steering wheel effort using a torque wrench.
   - If not within the specification, verify the following:
     — No air in steering system
     — No fluid leakage at hose or connectors
     — Function of oil pump and steering gear



E6U612ZW7008

Steering wheel effort (reference value)
7.8 N·m {80 kgf·cm, 58 in·lbf} max.

Note

- To determine whether the steering effort is satisfactory or not, perform the inspection on another vehicle of the same model and under the same conditions, and compare the results.
- The steering wheel effort varies with conditions as shown below.
  — Road conditions, such as dry or wet, and asphalt or concrete.
  — Tire conditions, such as brand, wear, and tire pressure.

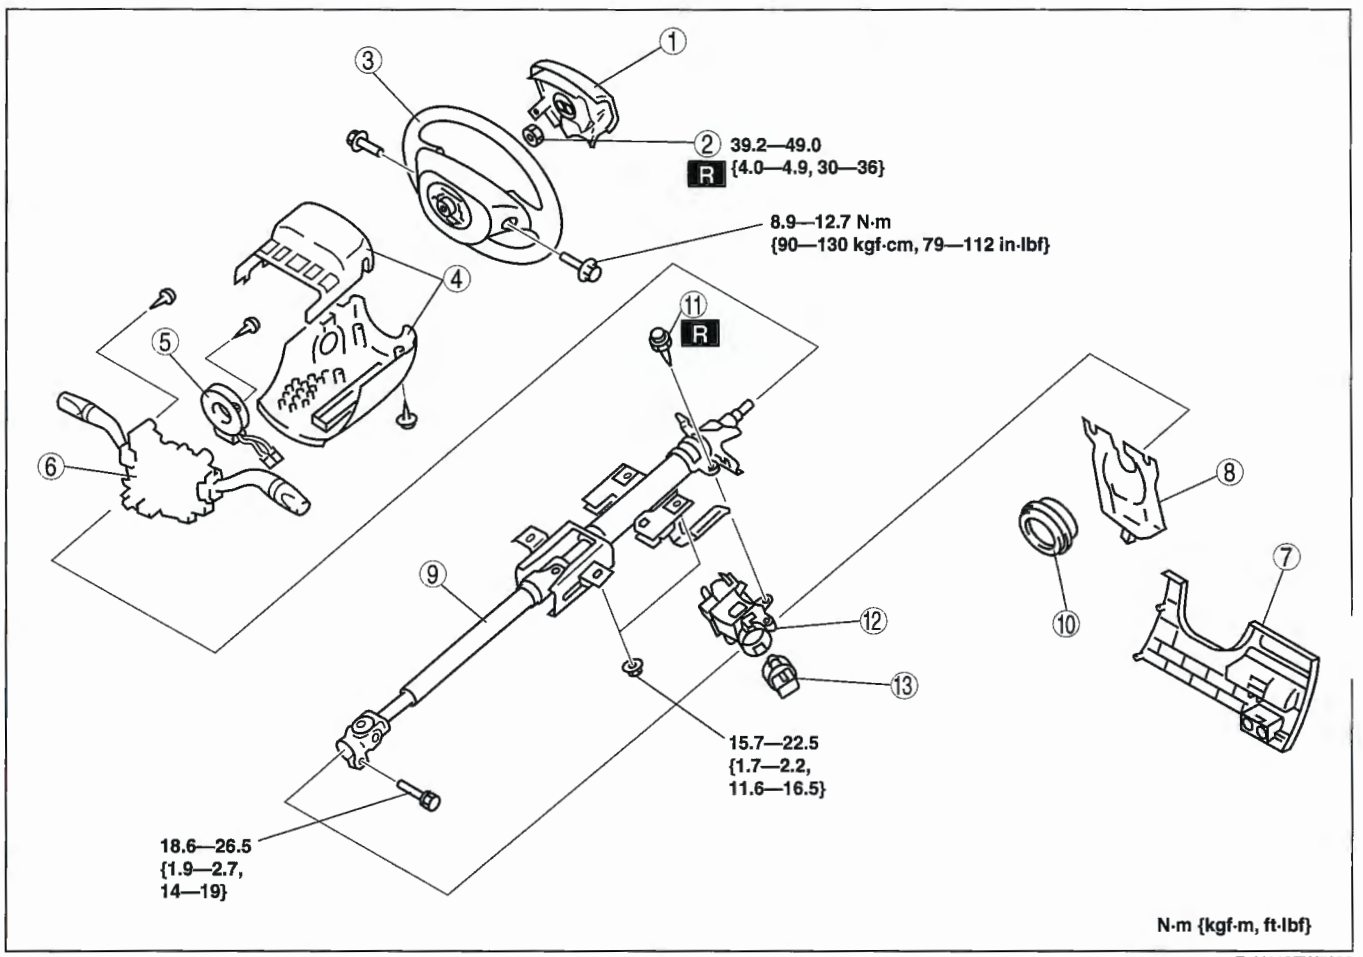
STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION

E6U061232010W02

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read AIR BAG SYSTEM WARNINGS before handling the air bag module. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)**

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.
3. If the steering lock component of a vehicle equipped with the advanced keyless system is replaced, perform the following procedure after installation.
   - Without immobilizer system
     — Steering lock unit programming (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)
   - With immobilizer system
     — Immobilizer system resetting (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM].)



E6U612ZW7009

1	Air bag module (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION)
2	Locknut
3	Steering wheel (See 06–12–9 Steering Wheel Removal Note) (See 06–12–9 Steering Wheel Installation Note)
4	Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
5	Clock spring (See 08–10–15 CLOCK SPRING REMOVAL/INSTALLATION)
6	Combination switch (See 09–18–19 COMBINATION SWITCH REMOVAL/INSTALLATION.)

7	Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
8	Joint cover
9	Steering shaft (See 06–12–9 Steering Shaft Installation Note)
10	Dust cover
11	Steering lock mounting bolts (See 06–12–9 Steering Lock Mounting Bolts Removal Note) (See 06–12–9 Steering Lock Mounting Bolts Installation Note)
12	Steering lock component
13	Ignition switch (See 09–21–3 IGNITION SWITCH REMOVAL/INSTALLATION.)

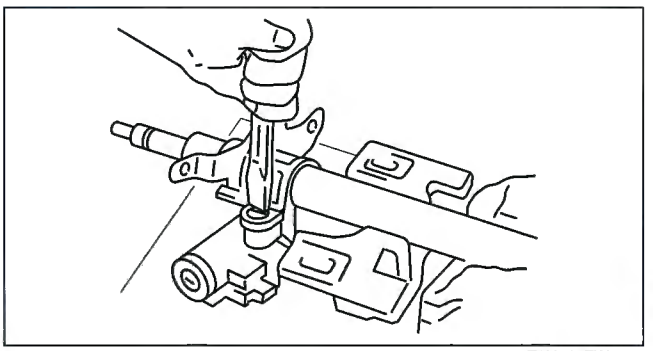
Steering Wheel Removal Note

Caution
- **Do not try to remove the steering wheel by hitting the shaft with a hammer. The column will collapse.**

1. Set the vehicle in the straight-ahead position.
2. Remove the steering wheel using a suitable puller.

Steering Lock Mounting Bolts Removal Note

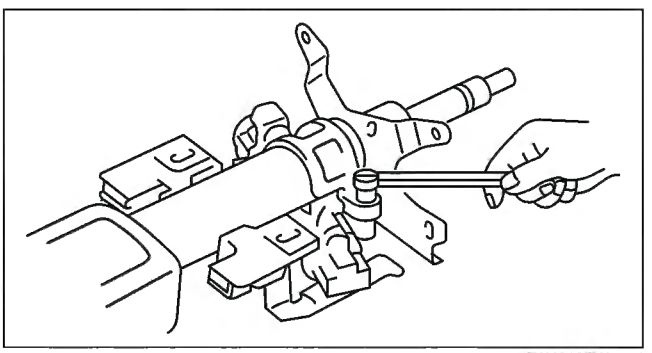
1. Make a groove in the heads of the steering lock mounting bolts using a chisel and a hammer.
2. Remove the bolts using a screwdriver.
3. Disassemble the steering lock component.



E6U612ZW7012

Steering Lock Mounting Bolts Installation Note

1. Assemble the steering lock component to the steering shaft.
2. Verify that the lock operates correctly.
3. Install new steering lock mounting bolts.
4. Tighten the bolts until the heads break off.

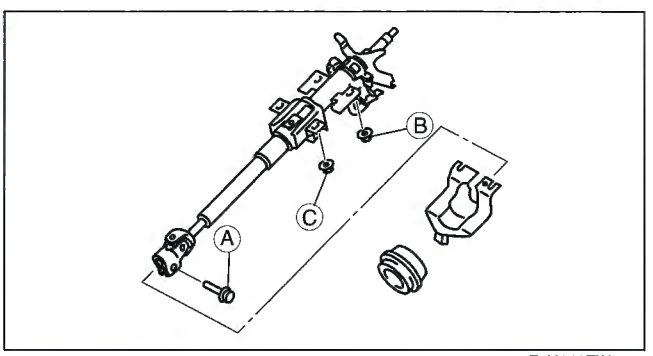


E6U612ZW7011

Steering Shaft Installation Note

Caution
- **Do not apply a shock in the axial direction of the shaft.**

1. Lock the tilt lever.
2. Tighten bolt A.
3. Tighten nut B.
4. Tighten nut C.



E6U612ZW7010

Steering Wheel Installation Note

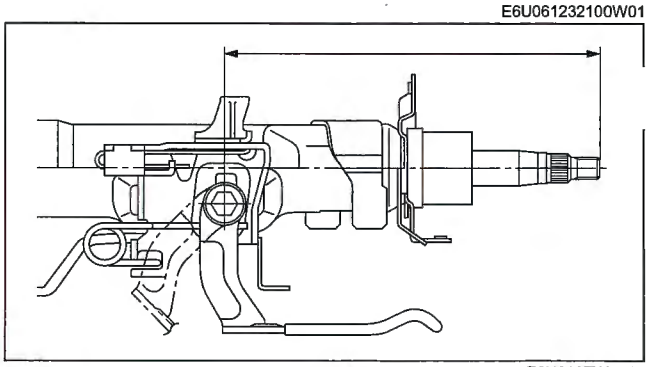
1. Make sure the wheels in the straight-ahead position, and install the steering wheel.

STEERING SHAFT INSPECTION

1. Inspect the following.
   (1) Column bearing for damage
   (2) Steering shaft length
      - Replace the steering shaft component as necessary.

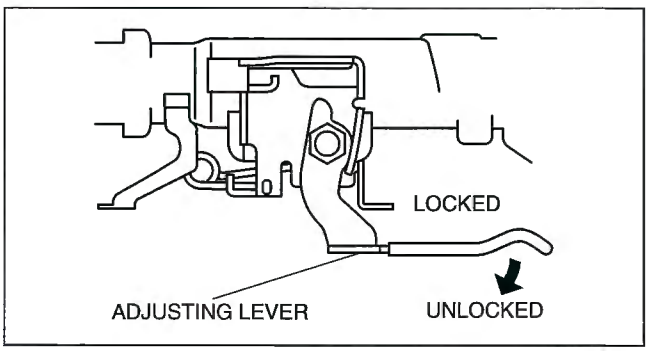
   Steering shaft length
   211.6 mm {8.3 in}

E6U061232100W01



E6U612ZW7013

2. Inspect the tilt and telescope operation.
   (1) Verify that the adjusting lever moves smoothly from unlock position to lock position.
   (2) Verify that the steering shaft is fixed firmly when the adjusting lever is locked.
      - Replace the steering shaft component as necessary.



B6U0612W008

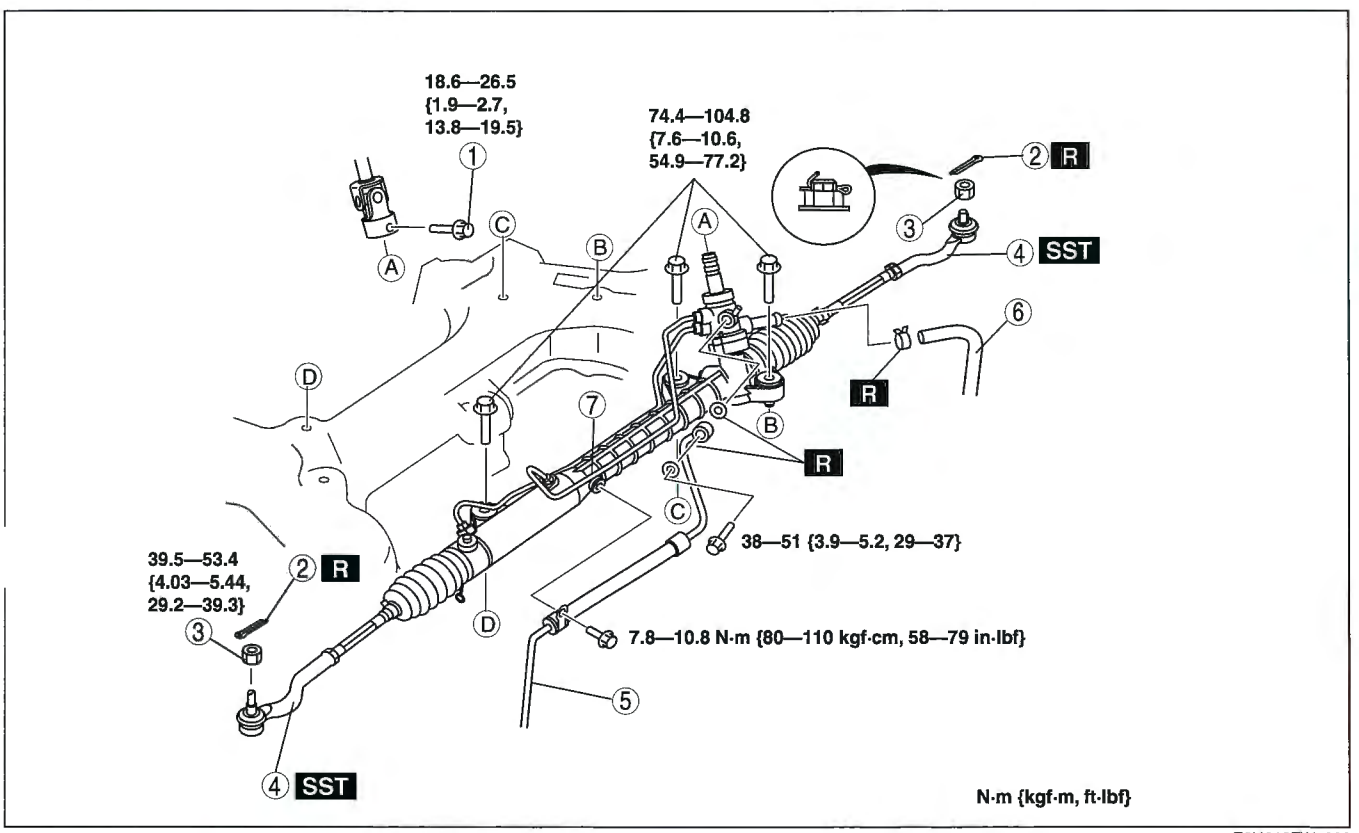
STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [L3]

E6U061232960W01

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

1. Remove the ABS wheel-speed sensor. (See 04–13–8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/ INSTALLATION.)
2. Remove in the order indicated in the table.
3. Install in the reverse order of removal.
4. After installation, inspect the front wheel alignment. (See 02–11–2 FRONT WHEEL ALIGNMENT.)



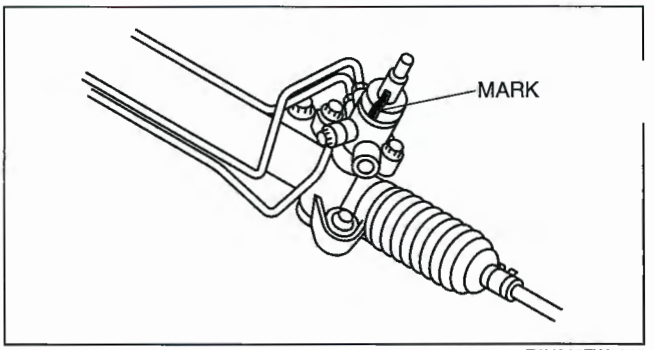
E6U612ZW5003

1	Bolt (intermediate shaft) (See 06–12–12 Bolt (Intermediate Shaft) Removal Note.) (See 06–12–13 Bolt (Intermediate Shaft) Installation Note.)
2	Cotter pin
3	Nuts (tie-rod end ball joint)
4	Tie-rod end ball joint (See 06–12–12 Tie-rod End Ball Joint Removal Note.)

5	Pressure pipe
6	Return hose
7	Steering gear and linkage (See 06–12–12 Steering Gear and Linkage Removal Note.) (See 06–12–13 Steering Gear and Linkage Installation Note.)

Bolt (Intermediate Shaft) Removal Note

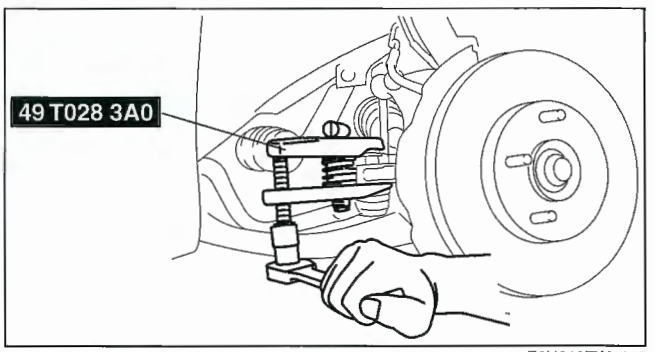
1. Mark the pinion shaft and gear housing for proper installation.



E6U612ZW7015

Tie-rod End Ball Joint Removal Note

1. Remove the tie-rod nut.
2. Separate the tie-rod end from the steering knuckle using the **SSTs**.



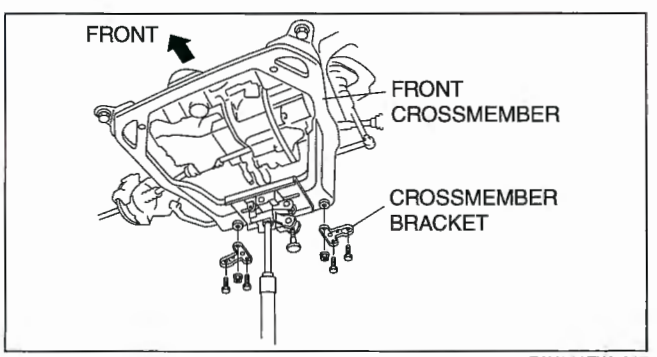
E6U612ZW7016

Steering Gear and Linkage Removal Note

Caution

- **Excessively loosening the crossmember nuts may possibly cause the crossmember to fall off. The crossmember nuts must remain threaded on the studs when loosening.**

1. Support the crossmember using a jack before removing the crossmember bracket.
2. Loosen the jack and lower the crossmember.
3. Remove the steering gear and linkage by pulling it from the left side.



E6U612ZW7017

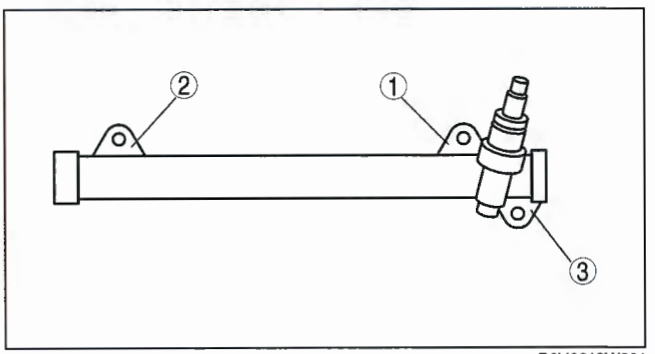
Steering Gear and Linkage Installation Note

1. Tighten bolts loosely.
2. Tighten the mounting bracket bolts to the specified torque in the order shown.

   Tightening torque
   74.4—104.8 N·m {7.6—10.6 kgf·m, 55—77 ft·lbf}

3. Tighten the crossmember bracket installation nuts and bolts.

   Tightening torque
   Nut: 119.6—154.8 N·m {12.2—15.7 kgf·m, 89—114 ft·lbf}
   Bolt: 93.1—116.6 N·m {9.50—11.88 kgf·m, 68.67—85.99 ft·lbf}



B6U0612W001

Bolt (Intermediate Shaft) Installation Note

1. Align the marks and install the intermediate shaft and bolt.

STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [AJ]

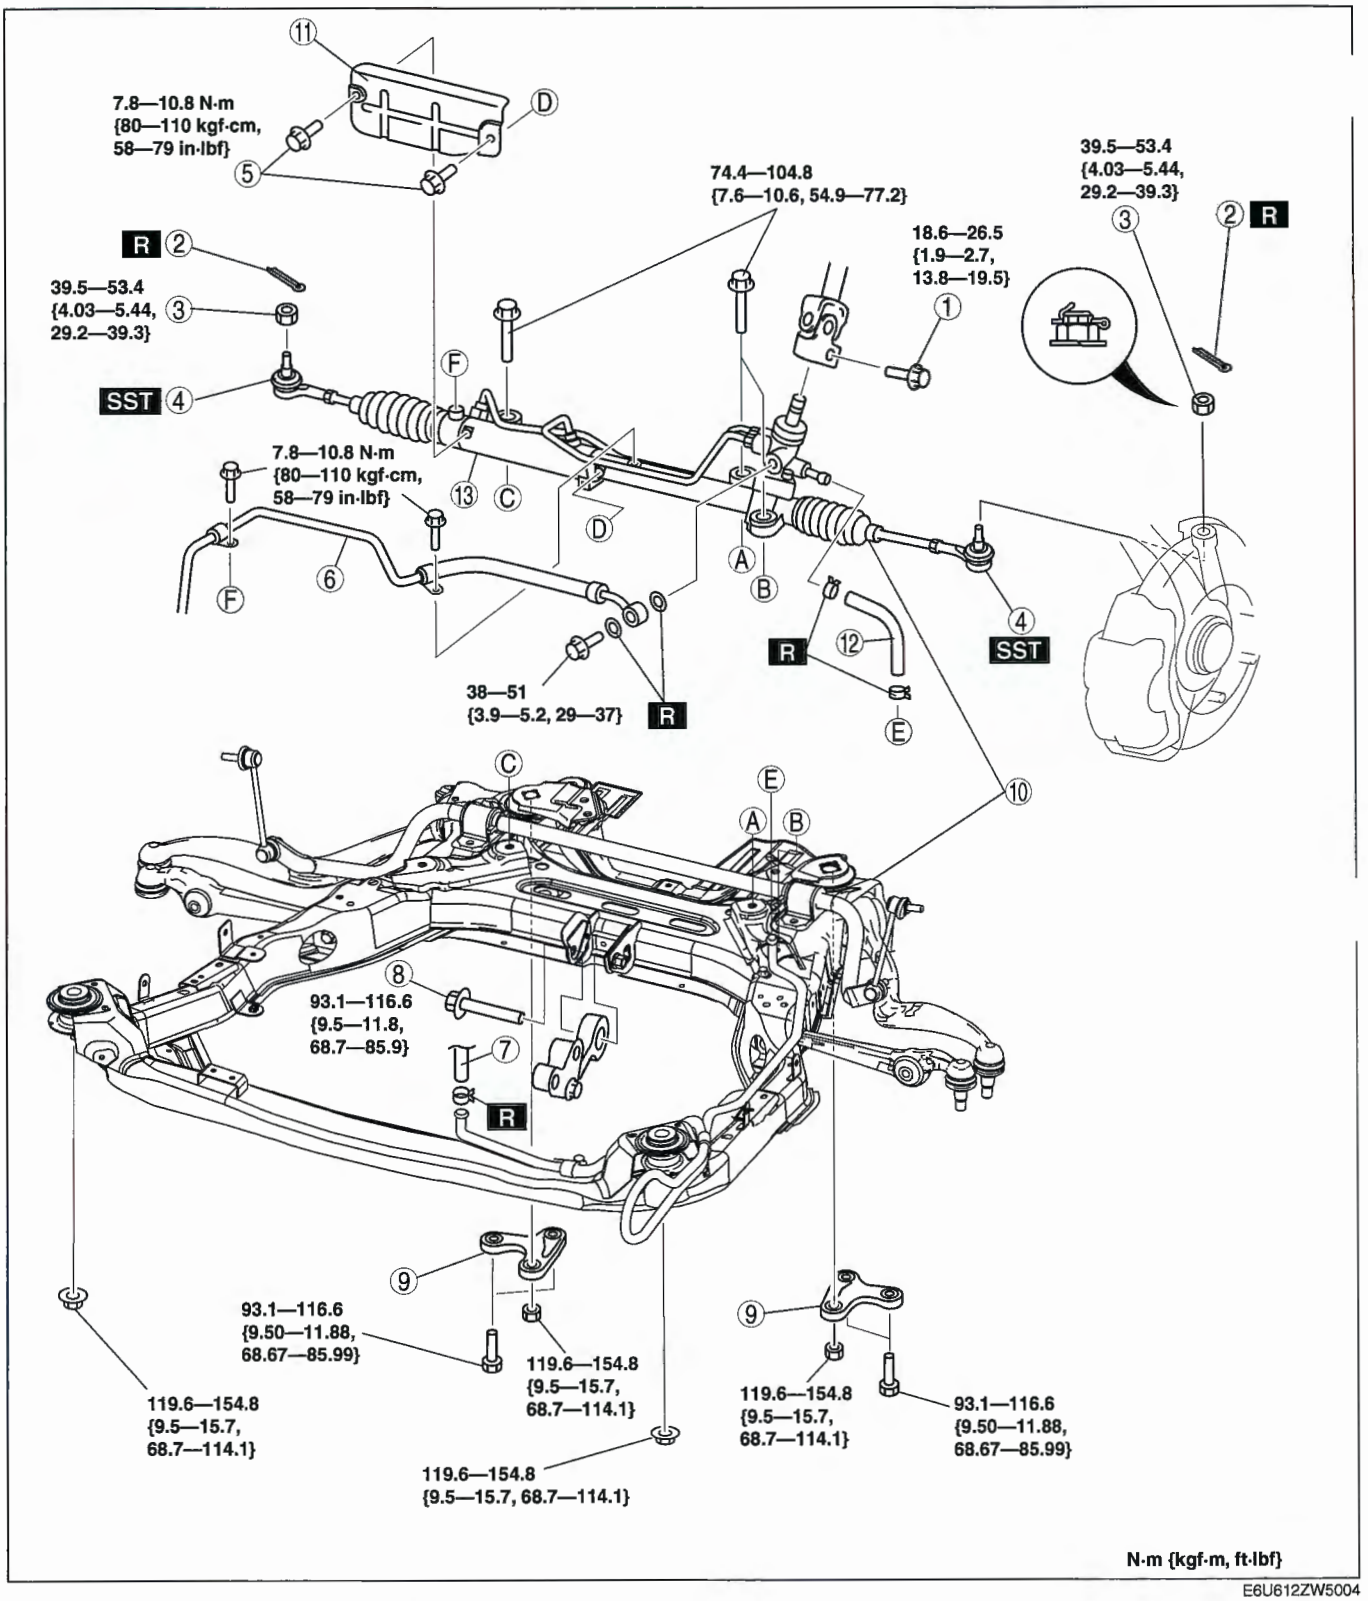
E6U061232960W02

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

1. Remove the joint cover.
2. Remove the ABS wheel-speed sensor. (See 04–13–8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
   Remove the under cover and splash shield.
4. Separate the stabilizer control link (shock absorber side). (See02–13–18 FRONT STABILIZER REMOVAL/INSTALLATION.)
5. Separate the front lower arm (front and rear) ball joint.02–13–10 FRONT LOWER ARM (FRONT) REMOVAL/INSTALLATION.)
6. Remove the shock absorber bolt (lower side). (See02–13–3 FRONT SHOCK ABSORBER AND SPRING REMOVAL/INSTALLATION.)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.

9. After installation, inspect the front wheel alignment. (See 02–11–2 FRONT WHEEL ALIGNMENT.)



E6U612ZW5004

1	Bolt (intermediate shaft) (See 06–12–12 Bolt (Intermediate Shaft) Removal Note.) (See 06–12–13 Bolt (Intermediate Shaft) Installation Note.)
2	Cotter pin
3	Nuts (tie-rod end ball joint)
4	Tie-rod end ball joint (See 06–12–12 Tie-rod End Ball Joint Removal Note.)
5	Insulator bolts
6	Pressure pipe
7	Return hose
8	No.1 engine mount center bolt

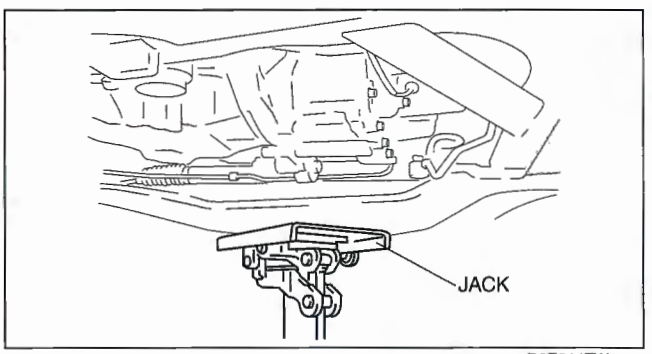
9	Crossmember bracket (See 06–12–15 Crossmember Bracket Removal Note.)
10	Crossmember component, steering gear and linkage (See 06–12–15 Crossmember Component, Steering Gear and Linkage Removal Note.) (See 06–12–15 Crossmember Component, Steering Gear and Linkage Installation Note.)
11	Insulator (See 06–12–15 Insulator Installation Note.)
12	Return hose
13	Steering gear and linkage (See 06–12–13 Steering Gear and Linkage Installation Note.)

Crossmember Bracket Removal Note

Warning

- **Removing the crossmember is dangerous. The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component before removing the crossmember bracket.**

1. Support the crossmember component with a jack and remove the nuts.
2. Remove the crossmember bracket.



D6E614ZW3014

Crossmember Component, Steering Gear and Linkage Removal Note

Warning

- **Removing the crossmember is dangerous. The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component before removing the crossmember bracket.**

1. Remove the crossmember component, steering gear and linkage.

Insulator Installation Note

1. Install the insulator. (Do not install the bolts.)

Crossmember Component, Steering Gear and Linkage Installation Note

Warning

- **Installing the crossmember is dangerous. The crossmember component could fall and cause serious injury or death. Verify that the jack securely supports the crossmember component before installing the crossmember components, steering gear and linkage.**

1. Install the crossmember component, steering gear and linkage.

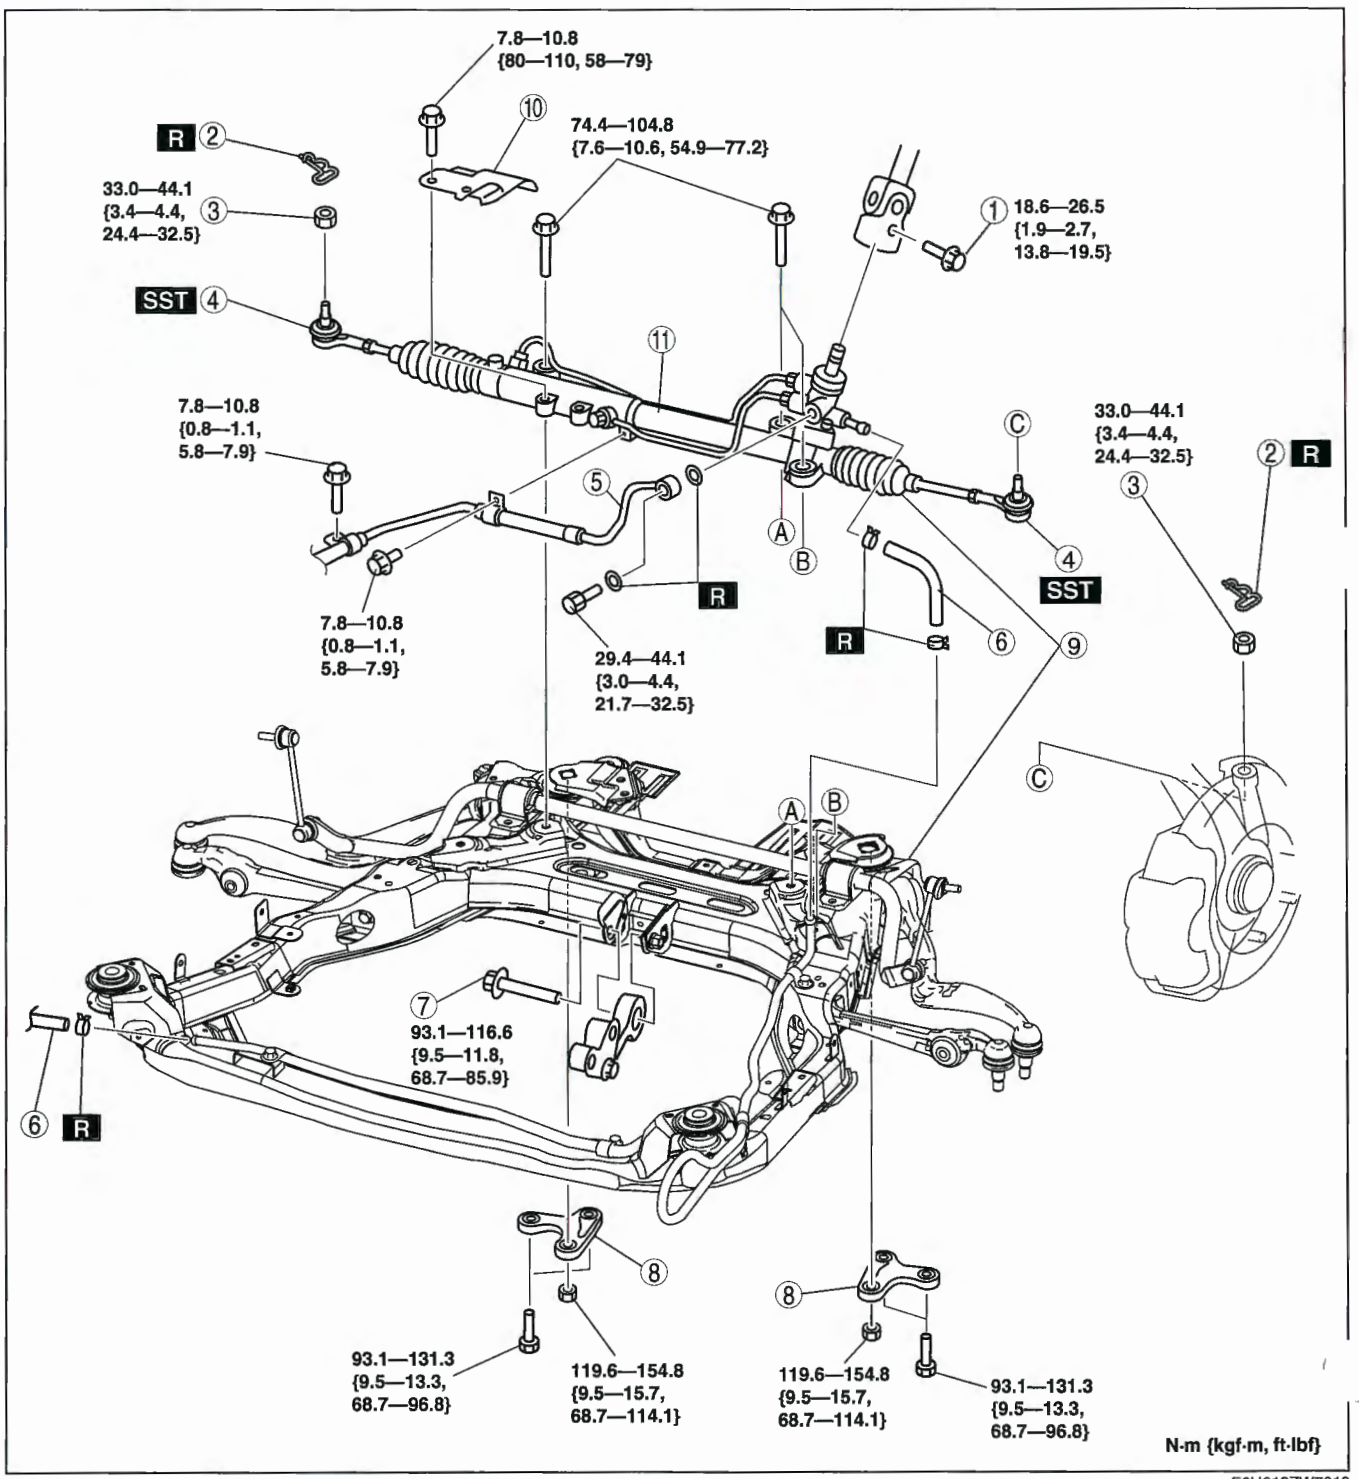
STEERING GEAR AND LINKAGE REMOVAL/INSTALLATION [L3 WITH TC]

E6U061232960W06

Caution

- **Performing the following procedures without first removing the ABS wheel-speed sensor may possibly cause an open circuit in the harness if it is pulled by mistake. Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while servicing the vehicle.**

1. Remove the joint cover.
2. Remove the ABS wheel-speed sensor. (See 04–13–8 FRONT ABS WHEEL-SPEED SENSOR REMOVAL/INSTALLATION.)
3. Remove the under cover and splash shield.
4. Separate the stabilizer control link (shock absorber side). (See02–13–18 FRONT STABILIZER REMOVAL/INSTALLATION.)
5. Separate the front lower arm (front and rear) ball joint. (See 02–13–10 FRONT LOWER ARM (FRONT) REMOVAL/INSTALLATION.)
6. Remove the shock absorber bolt (lower side). (See02–13–3 FRONT SHOCK ABSORBER AND SPRING REMOVAL/INSTALLATION.)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.
9. After installation, inspect the front wheel alignment. (See 02–11–2 FRONT WHEEL ALIGNMENT.)



E6U612ZW7018

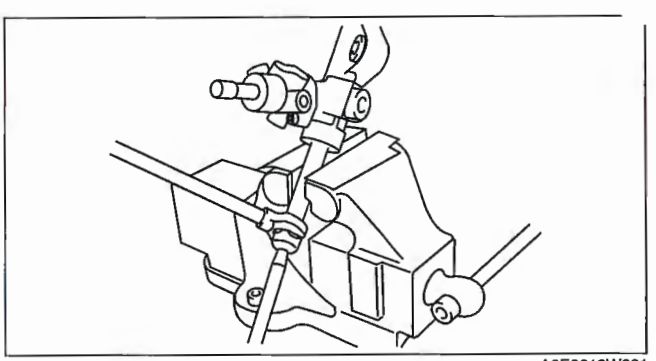
18	Control valve component
19	Seal ring
20	Pinion shaft
21	Valve housing component
22	Upper bearing (See 06–12–20 Upper Bearing, Oil Seal Disassembly Note)
23	Oil seal (See 06–12–20 Upper Bearing, Oil Seal Disassembly Note)
24	Return pipe
25	Valve Housing
26	Holder (See 06–12–20 Holder Disassembly Note)
27	O-ring
28	U-gasket
29	Backup ring
30	Steering rack
31	Seal ring
32	O-ring
33	Oil seal (See 06–12–20 Oil Seal, Inner Guide Disassembly Note)
34	Inner guide (See 06–12–20 Oil Seal, Inner Guide Disassembly Note)
35	Gear housing
36	Mounting rubber (See 06–12–20 Mounting Rubber Disassembly Note)

Tie Rod Disassembly Note

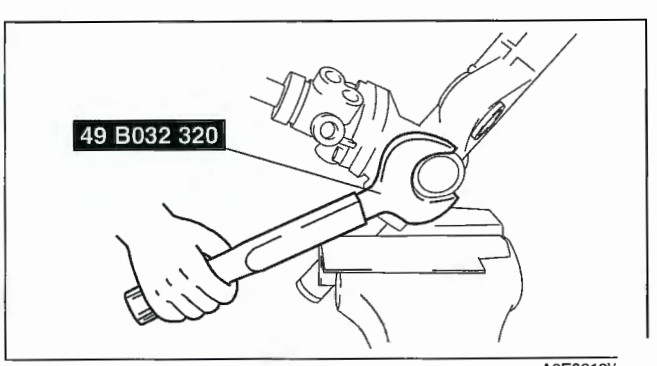
1. Unclamp the washer.
2. Remove the tie rod.



A6E0612W031

Locknut (Adjusting Cover) Disassembly Note

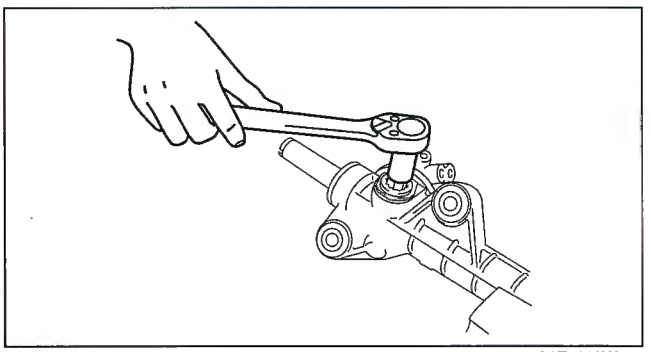
1. Remove the locknut using the **SST**.



A6E0612V

Adjusting Cover Disassembly Note

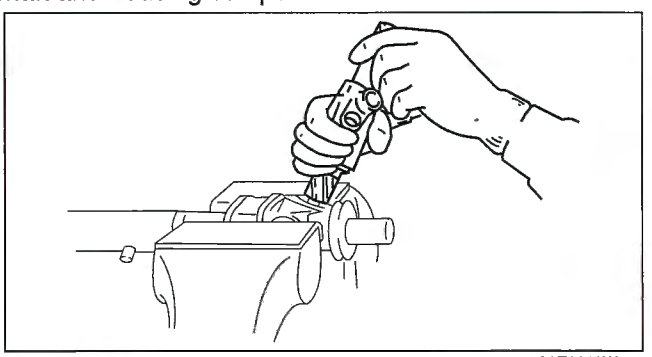
1. Remove the adjusting cover.



A6E0612W033

Pinion Shaft and Housing Component Disassembly Note

1. Hold the pinion shaft as shown, and pull out the pinion shaft and housing component.



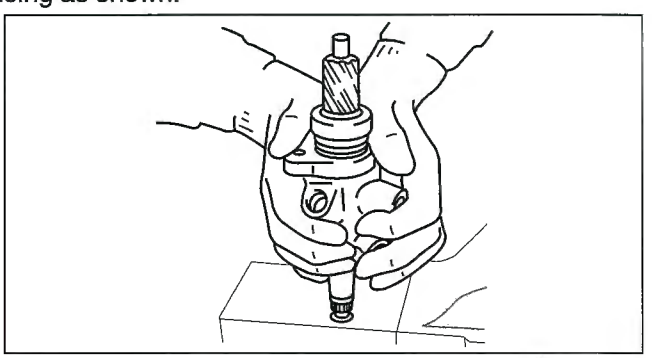
A6E0612W038

Pinion Shaft Component Disassembly Note

Note

- If the pinion shaft does not come out easily, remove it using a press.

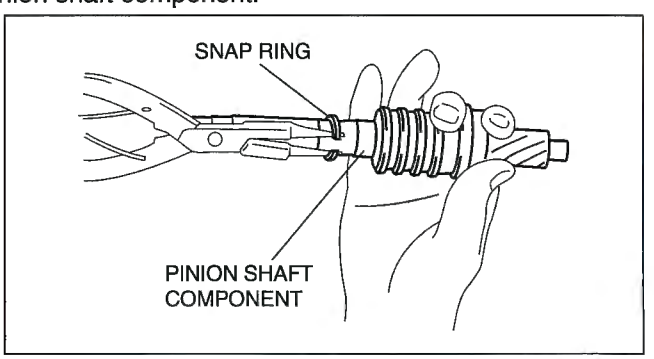
1. Push out the pinion shaft component from the valve housing as shown.



A6E0612W034

Snap Ring Disassembly Note

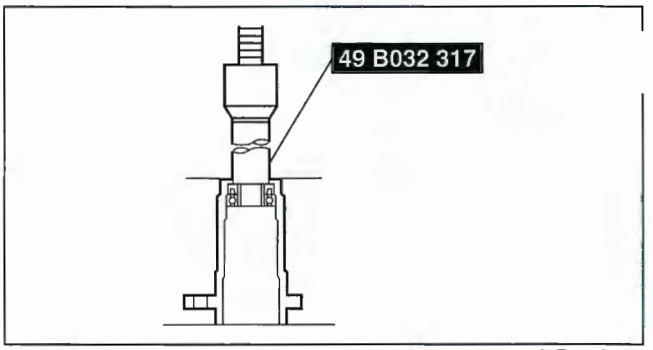
1. Carefully remove the snap ring without damaging the pinion shaft component.



D6E614ZW3015

Upper Bearing, Oil Seal Disassembly Note

1. Set the **SST** as shown.
2. Using a press, remove the oil seal and upper bearing without applying pressure to the edge of the valve housing.



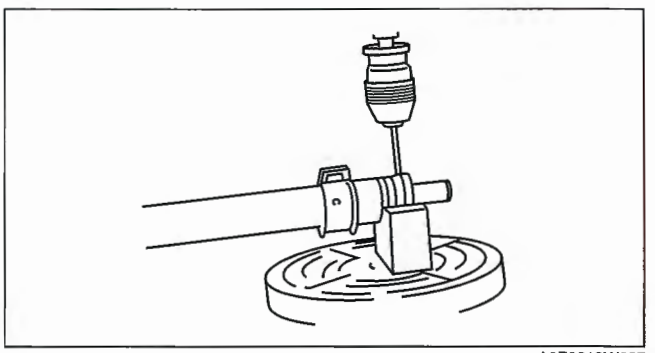
A6E0612W035

Holder Disassembly Note

1. Cut away the staked area by using a drill.

   Caution
   - **Carefully pull out the holder without damaging the U gasket.**

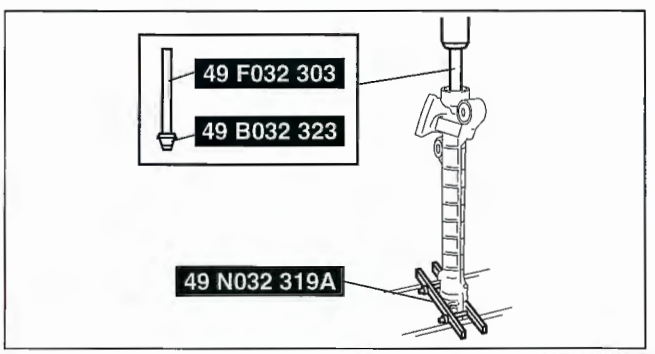
2. Disassemble the holder.



A6E0612W037

Oil Seal, Inner Guide Disassembly Note

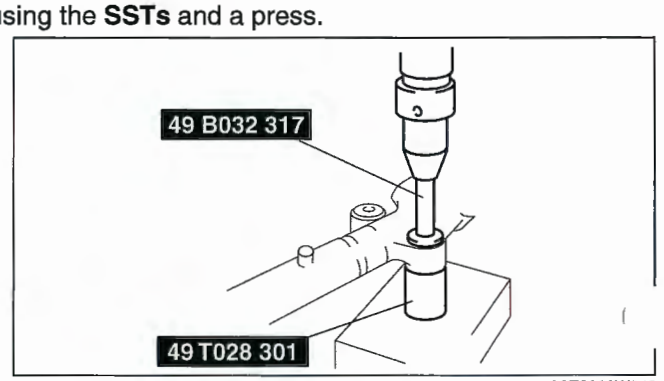
1. Set the **SSTs** into the valve side.
2. Install the **SST** to the gear housing.
3. Press out the oil seal and inner guide.



A6E0612W086

Mounting Rubber Disassembly Note

- Press the mounting rubber out from the gear housing using the **SSTs** and a press.



A6E0612W040

STEERING GEAR AND LINKAGE INSPECTION

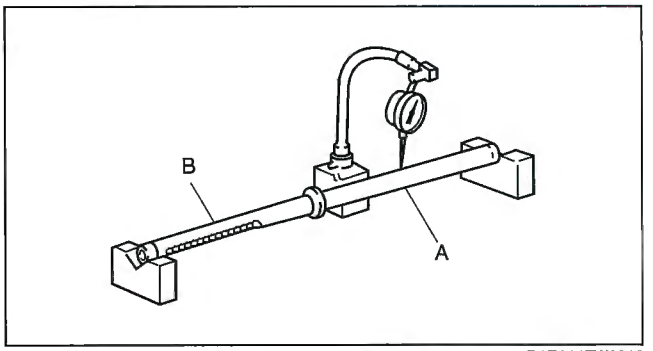
E6U061232960W08

Rack Inspection

1. Inspect the rack for cracking, damage, and tooth wear. Replace it as necessary.
   Measure the runout of the rack.

   Steering rack runout
   Large diameter portion (near point A): 0.15 mm {0.006 in} max.
   Small diameter portion (near point B): 0.20 mm {0.008 in} max.

3. If not within the specification, replace the rack.



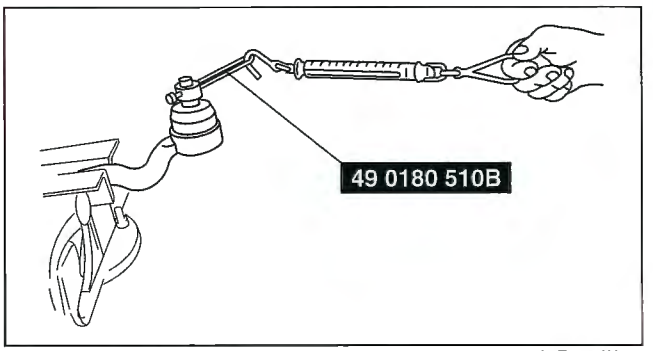
D6E614ZW3016

Tie-rod End Inspection

1. Inspect the tie-rod end for damage and boot cracks. Replace it as necessary.
2. Inspect the ball joint for looseness. Replace the tie-rod end as necessary.
3. Rotate the ball joint five times.
4. Measure the rotation torque of the ball joint using the **SST** and a pull scale.

   Tie-rod end rotational torque
   0.6—2.0 N·m {6.2—20.3 kgf·cm, 5.4—17.7 in·lbf}
   [Pull scale reading 6.0—20.0 N {0.62—2.03 kgf, 1.4—4.4 lbf}]

5. If not within the specification, replace the tie-rod end.



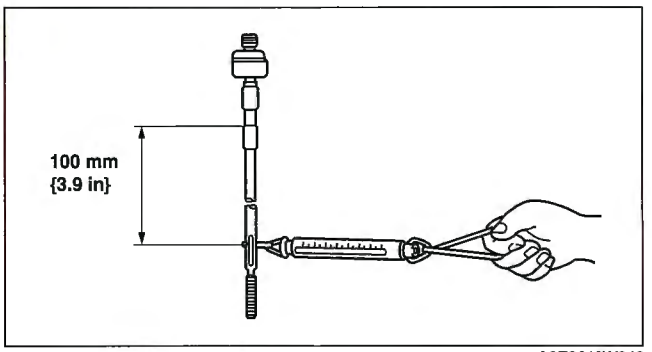
A6E6316W100

Tie rod Inspection

1. Inspect the tie rod for bending and damage. Replace it as necessary.
2. Inspect the ball joint for looseness. Replace the tie rod as necessary.
3. Swing the tie rod five times.
4. Measure the swinging torque using a pull scale.

   Tie rod swing torque
   0.4—4.0 N·m {4.1—40.7 kgf·cm, 3.6—35.4 in·lbf}
   [Pull scale reading 4.0—40.0 N {0.41—4.07 kgf, 0.9—8.9 lbf}]

5. If not within the specification, replace the tie-rod.



A6E0612W043

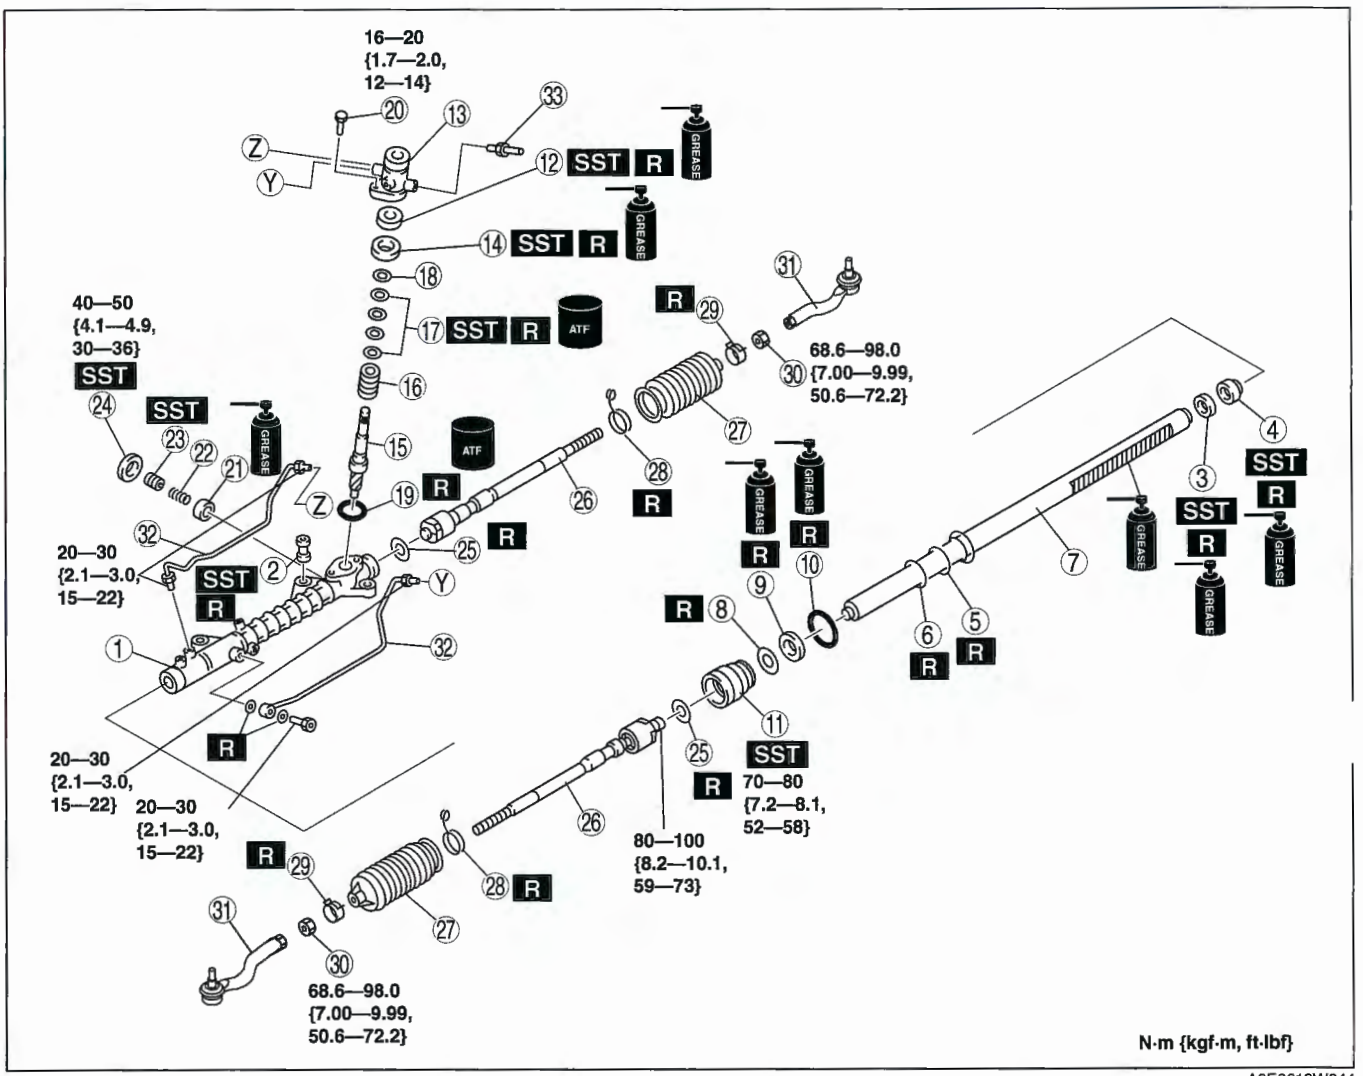
STEERING GEAR AND LINKAGE ASSEMBLY

E6U061232960W09

Caution

- **Place copper plates, rag, or similar material in a vise, when secure the mounting bracket portion the steering gear.**

1. Assemble in the order indicated in the table.



A6E0612W044

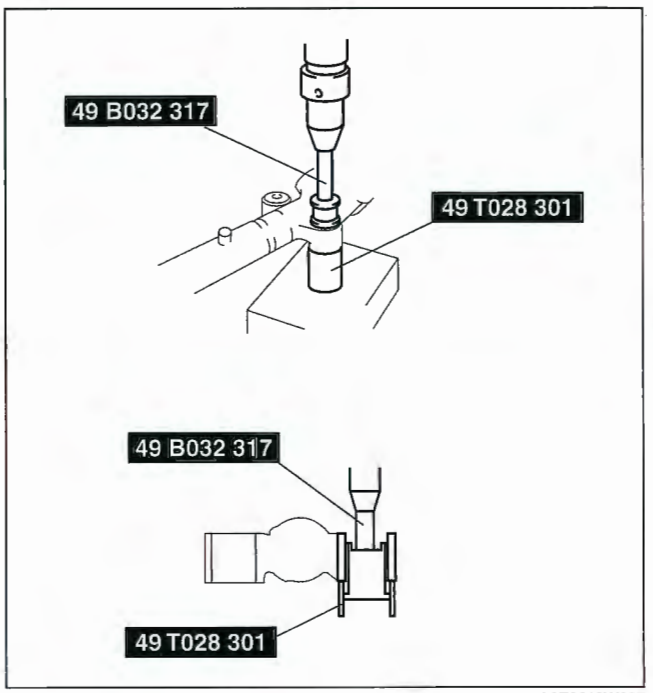
1	Gear housing
2	Mounting rubber (See 06–12–23 Mounting Rubber Assembly Note)
3	Oil seal (See 06–12–23 Oil Seal, Inner Guide Assembly Note)
4	Inner guide (See 06–12–23 Oil Seal, Inner Guide Assembly Note)
5	O-ring
6	Seal ring
7	Steering rack
8	Backup ring
9	U-gasket
10	O-ring
11	Holder (See 06–12–24 Holder Assembly Note)

12	Oil seal (See 06–12–25 Oil Seal Assembly Note)
13	Valve housing
14	Upper bearing (See 06–12–25 Upper Bearing Assembly Note)
15	Pinion shaft
16	Control valve
17	Seal ring (See 06–12–25 Seal Ring Assembly Note)
18	Snap ring
19	O-ring
20	Bolt
21	Support yoke
22	Yoke spring
23	Adjusting cover (See 06–12–26 Adjusting Cover Assembly Note)
24	Locknut (adjusting cover)

25	Washer
26	Tie rod
27	Boot
28	Boot band
29	Boot clamp
30	Locknut
31	Tie-rod end
32	Oil pipe
33	Return pipe

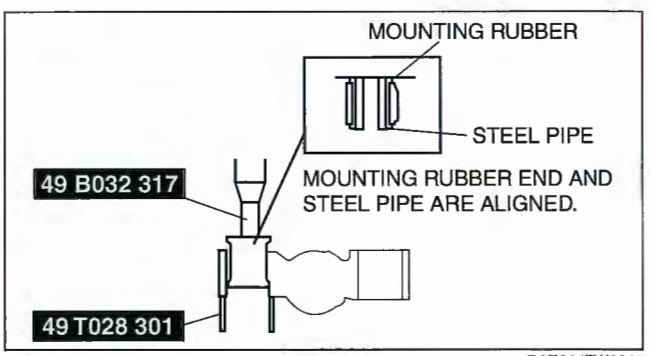
Mounting Rubber Assembly Note

1. Apply soapy water to the rubber part of the mounting rubber.
2. Press the mounting rubber until the mounting rubber end comes out completely from the gear housing using the **SSTs** and a press.



A6E0612W087

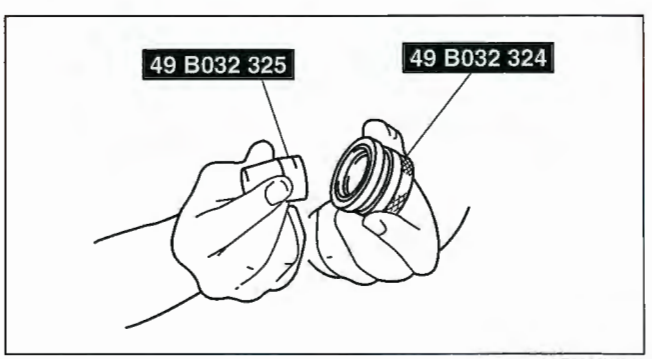
3. Reverse the gear housing, then press the mounting rubber until the mounting rubber end comes out completely from the other side. At this time, mounting rubber end and steel pipe are aligned.



D6E614ZW3017

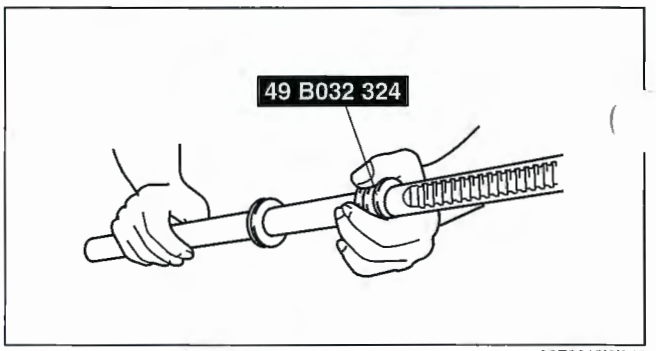
Oil Seal, Inner Guide Assembly Note

1. Install a new O-ring and a new seal ring to the rack's piston.
2. After installing the seal ring, seat it properly at the piston circumference.
3. Apply grease to a new oil seal and inner guide.
4. Install the oil seal to the **SSTs**.



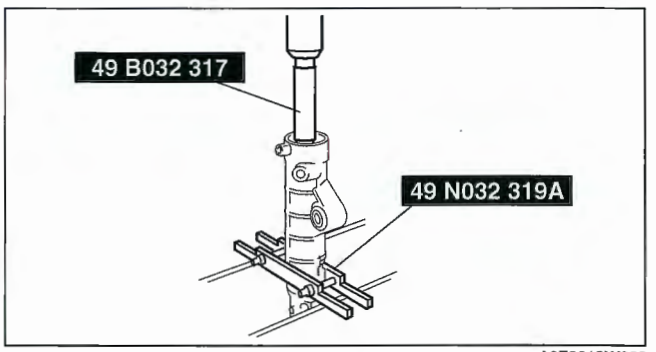
A6E0612W048

5. Using the **SST**, place the oil seal and inner guide at the edge of the steering rack's pinion, and remove the **SST**.



A6E0612W049

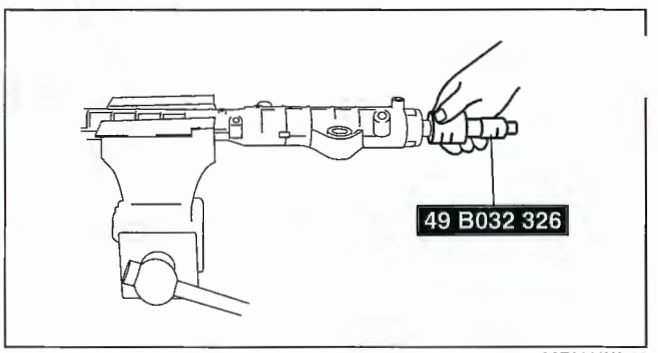
6. After installing the steering rack to the gear housing, press the oil seal and inner guide using the **SSTs** until the force required suddenly increases.



A6E0612W039

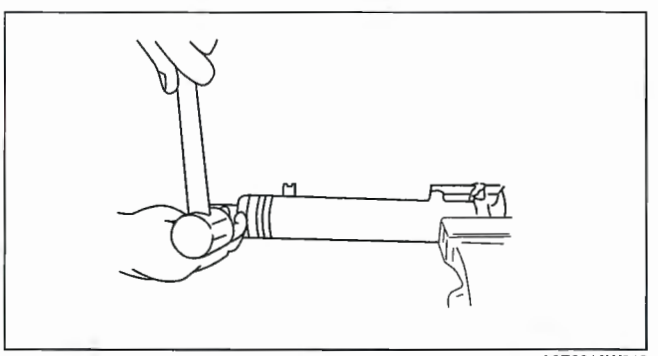
Holder Assembly Note

1. Apply grease to the U-gasket and O-ring.
2. Assemble the U-gasket, backup ring and O-ring into the holder.
3. Assemble the **SST** to the steering rack.



A6E0612W090

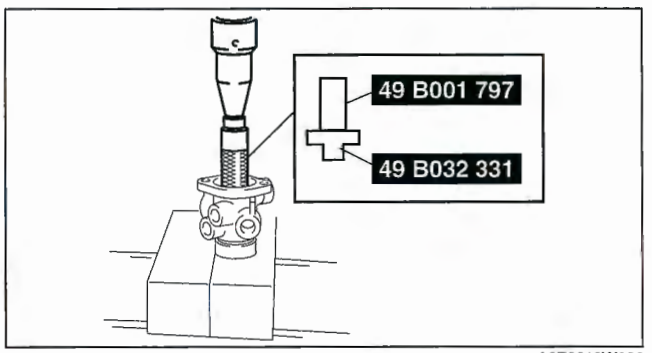
4. Stake the holder to the cylinder using a punch.



A6E6316W012

Oil Seal Assembly Note

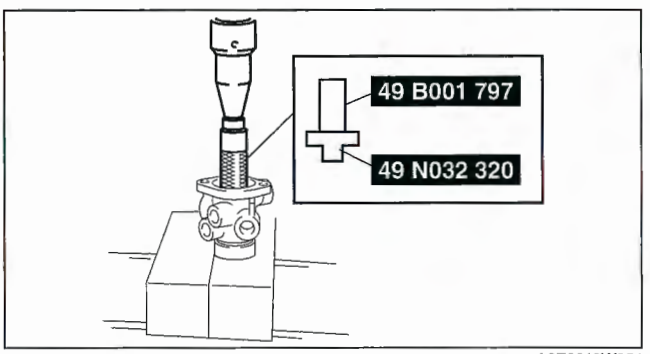
1. Apply grease to a new oil seal.
2. Press in the new oil seal using the **SSTs**.



A6E0612W036

Upper Bearing Assembly Note

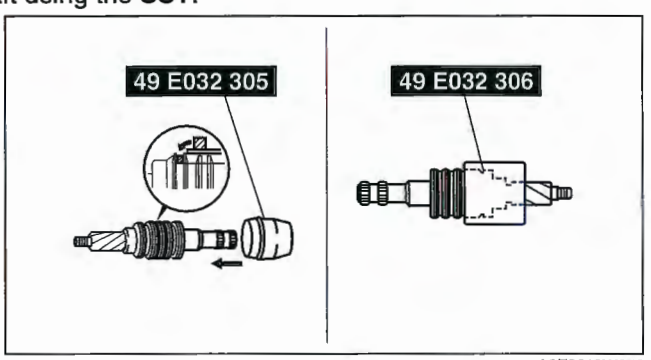
1. Apply grease to a new upper bearing.
2. Press in the upper bearing using the **SSTs**.



A6E0612W051

al Ring Assembly Note

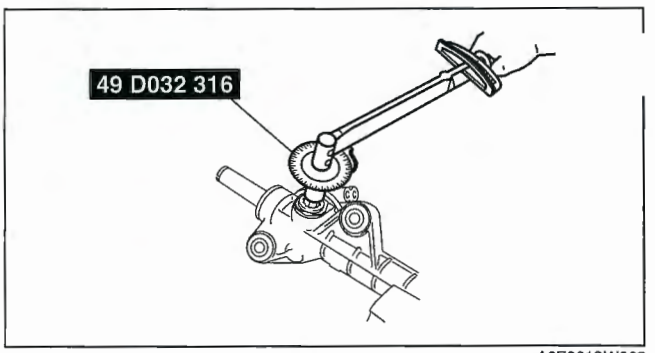
1. Install a new seal ring to the valve part of the pinion shaft using the **SST**.
2. After installing it, seat it properly using the **SST**.
3. Install the snap ring.



A6E0612W052

Adjusting Cover Assembly Note

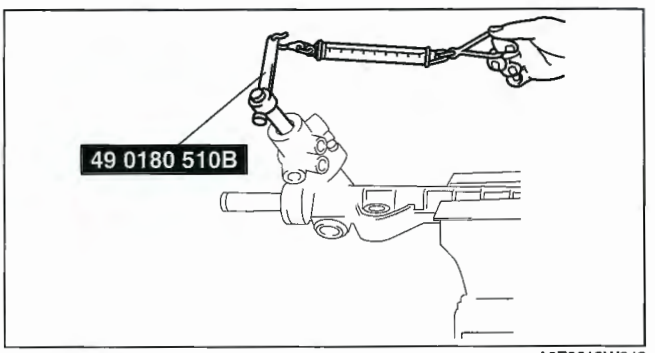
1. Set the rack to the center position.
2. Tighten the adjusting cover to **4.9 N·m {50 kgf·cm, 36 in·lbf}** three times, then return it **25°** using the **SST**.
3. Apply sealant to the threads of the locknut.
4. Attach the locknut.



A6E0612W062

5. Measure the pinion torque using the **SST** and a pull scale.

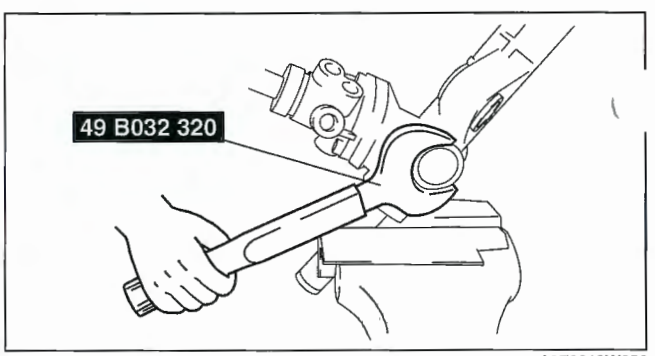
   Pinion shaft rotation torque
   Center of rack ±90°: 0.7—1.1 N·m {7.2—11.2 kgf·cm, 6.2—9.7 in·lbf}
   [Pull scale reading 7—11 N {0.8—1.1 kgf, 1.6—2.4 lbf}]
   Except center of rack ±90°: Less than 1.6 N·m {16.3 kgf·cm, 11.8 in·lbf}
   [Pull scale reading Less than 16.7 N {1.7 kgf, 3.8 lbf}]



A6E0612W042

6. If not as specified, repeat steps 2 through 5.
7. Install the locknut using the **SST** (49 B032 320).

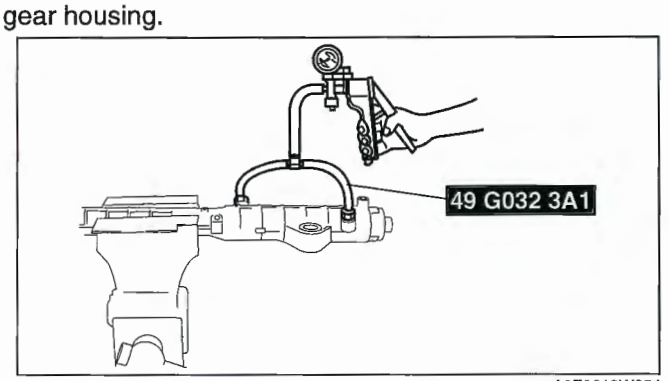
   Tightening torque
   40—49 N·m {4.1—4.9 kgf·m, 30—36 ft·lbf}



A6E0612W056

Hermetic sealing inspection

1. Connect the **SSTs** to the power cylinder section of the gear housing.
2. Apply **53.3 kPa {400 mmHg, 15.7 inHg}** vacuum with a vacuum pump and verify that it is held for at least **30 s**.
3. If the vacuum is not held, replace the oil seal.

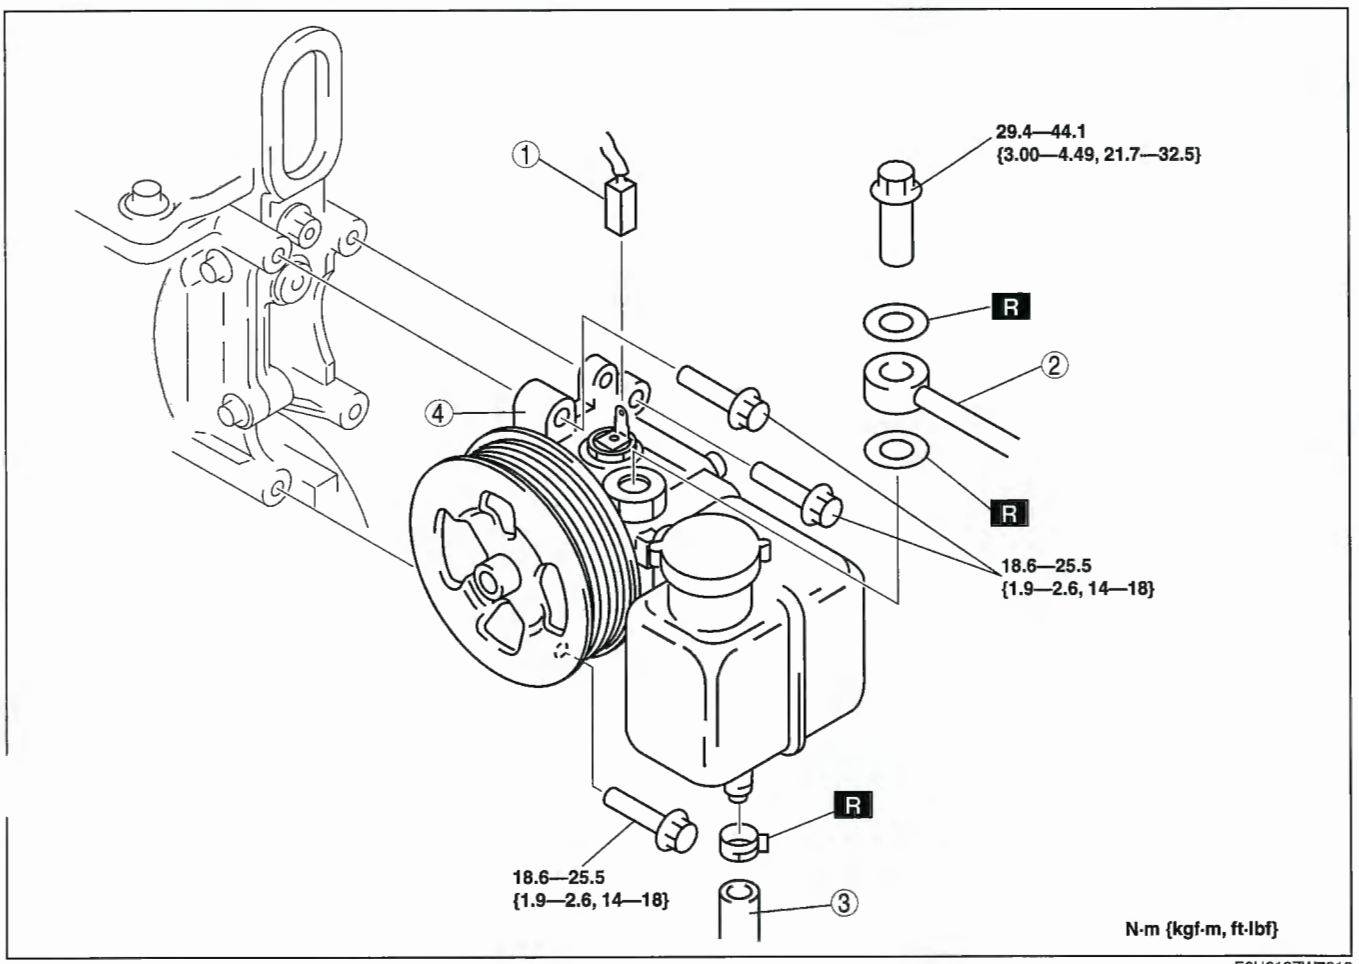


A6E0612W054

POWER STEERING OIL PUMP REMOVAL/INSTALLATION [L3, L3 WITH TC]

E6U061232650W01

1. Remove the drive belt. (See 01–10A–3 DRIVE BELT REPLACEMENT [L3].) (See 01–10B–3 DRIVE BELT REPLACEMENT [L3 WITH TC].)
   Remove in the order indicated in the table.
2. Install in the reverse order of removal.



E6U612ZW7019

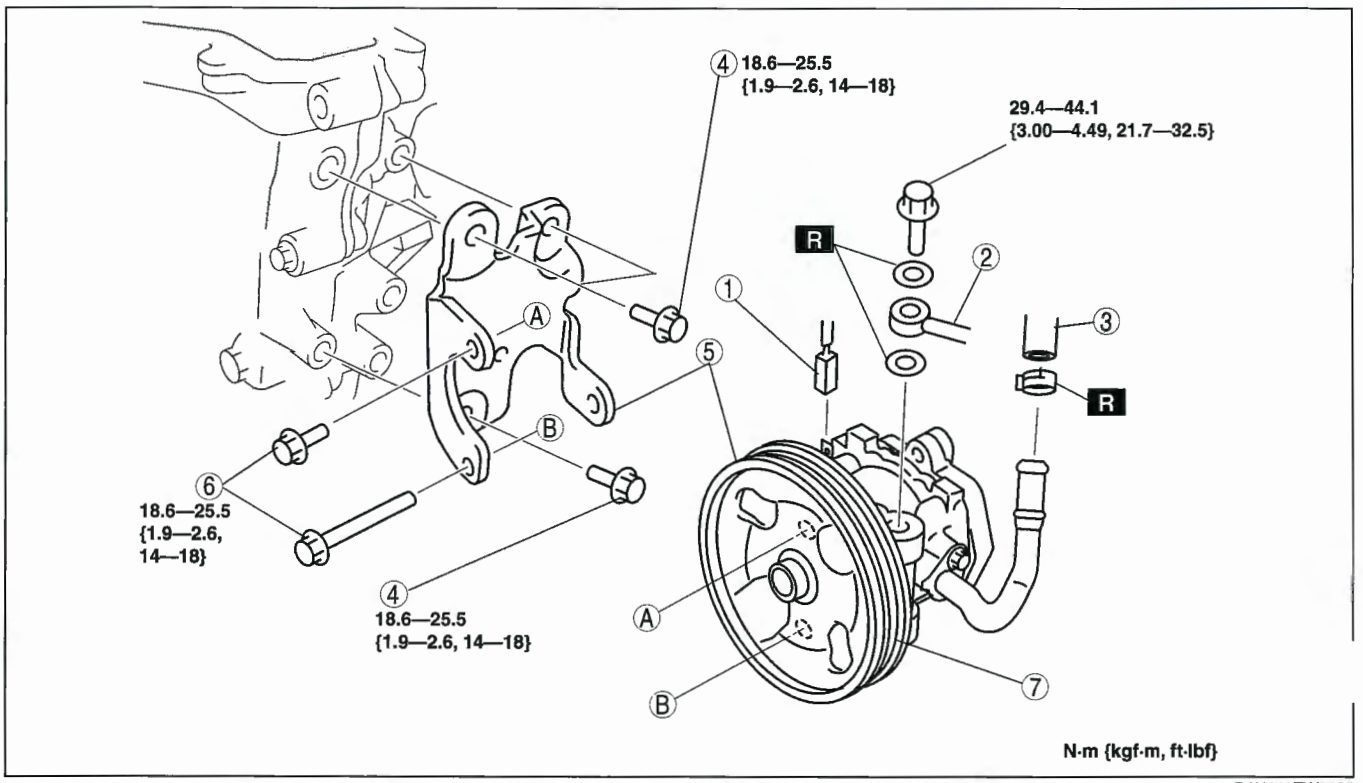
1	Pressure switch connector
2	Pressure pipe

3	Return hose
4	Power steering oil pump

POWER STEERING OIL PUMP REMOVAL/INSTALLATION [AJ]

E6U061232650W02

1. Remove the splash shield (right side).
2. Remove the under cover.
3. Remove the front drive belt. (See 01–10C–4 DRIVE BELT REPLACEMENT [AJ].)
4. Remove the oil level gauge pipe.
5. Remove the A/C compressor installation bolts.
6. Remove the exhaust manifold (LH). (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
7. Remove in the order indicated in the table.
8. Install in the reverse order of removal.



D6U612ZW7006

1	Pressure switch connector
2	Pressure pipe
3	Return hose
4	Bolts

5	Power steering oil pump bracket, Power steering oil pump
6	Bolts
7	Power steering oil pump

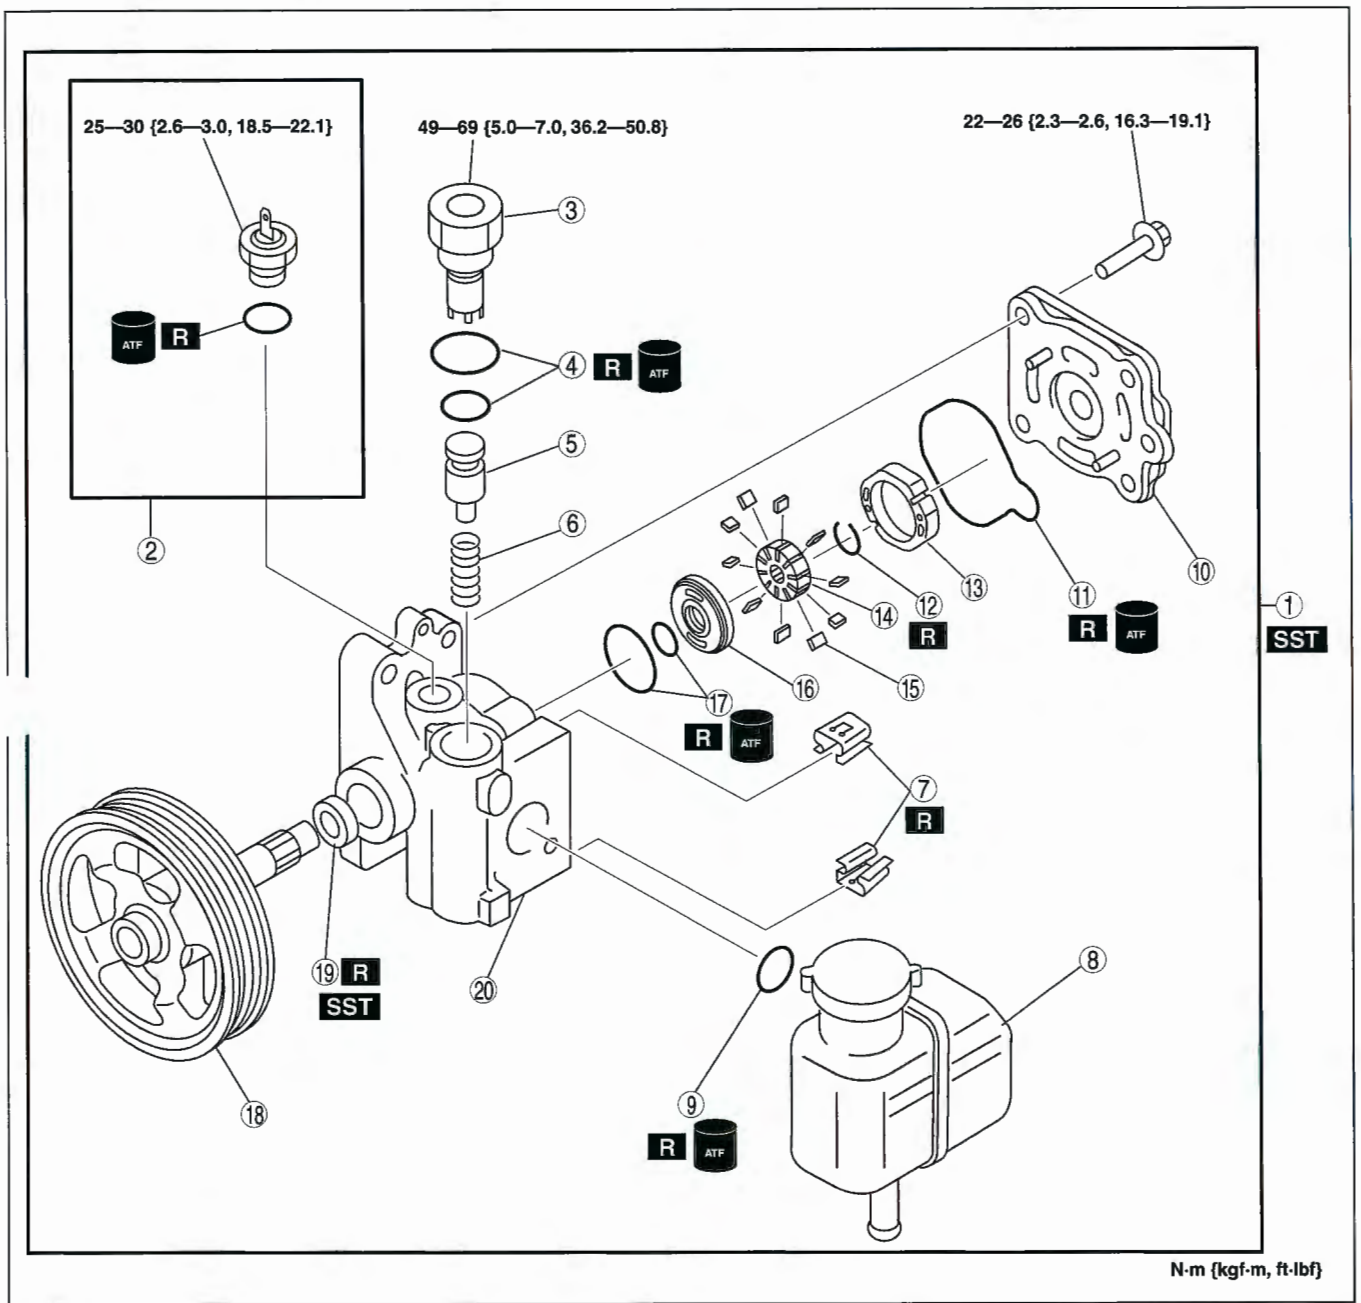
POWER STEERING OIL PUMP DISASSEMBLY/ASSEMBLY [L3, L3 WITH TC]

E6U061232650W03

Note

- The following procedure is for replacement of the O-ring and oil seal only. Replace the pump component if other repairs are necessary.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



B6U0612W006

1	Power steering oil pump component (See 06–12–30 Power Steering Oil Pump Component Disassembly Note.)
2	Pressure switch component
3	Connector
4	O-rings
5	Control valve
6	Spring

7	Clip (See 06–12–30 Clip Disassembly Note.) (See 06–12–31 Clip Assembly Note.)
8	Fluid reservoir
9	O-ring
10	Rear pump body (See 06–12–31 Rear Pump Body Assembly Note.)
11	Gasket
12	Clip

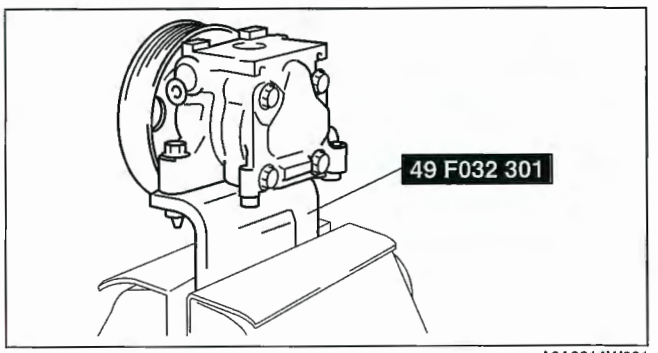
13	Cam ring (See 06–12–31 Cam Ring Assembly Note.)
14	Rotor
15	Vane (See 06–12–31 Vane Assembly Note.)
16	Side plate
17	O-ring
18	Shaft component
19	Oil seal (See 06–12–31 Oil Seal Assembly Note.)
20	Front pump body

Power Steering Oil Pump Component Disassembly Note

1. Secure the power pressure oil pump using the **SST**.

Caution

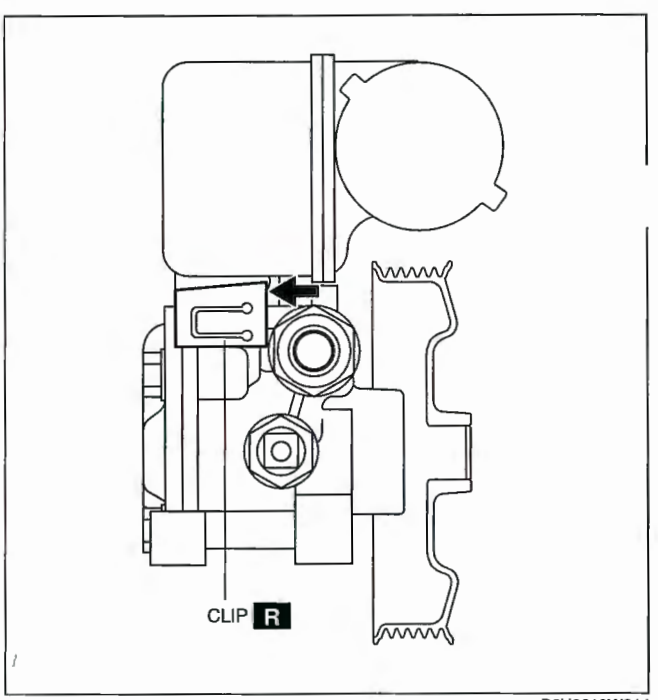
- **Use the SST to prevent damage to the pump when securing it in a vise.**



A6A6614W001

Clip Disassembly Note

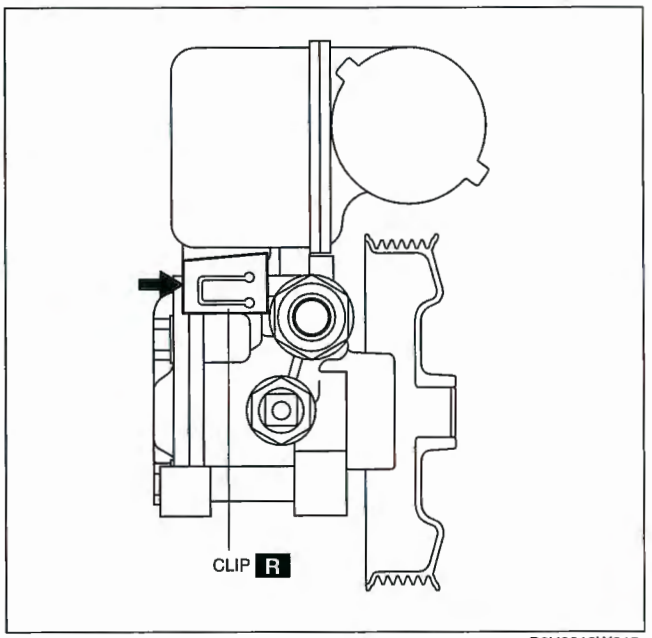
1. Lift up the clip tab using a screwdriver (–).
2. Remove the clip pushing with a screwdriver (–) and a hammer as shown in the figure.



B6U0612W014

Clip Assembly Note

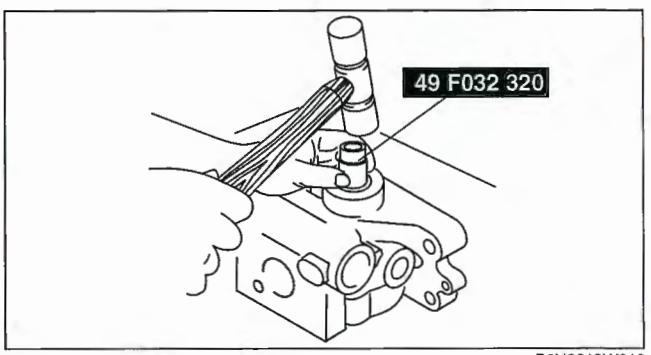
1. Push the clip slowly in the direction shown in the figure.
   Confirm that the clip tab is caught correctly.



B6U0612W015

Oil Seal Assembly Note

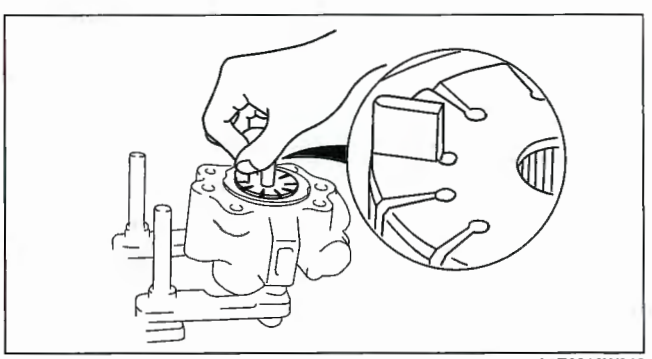
1. Install the oil seal in the front pump body using the **SST** and plastic hammer.



B6U0612W016

Vane Assembly Note

1. Place the vanes in the rotor with the rounded edges contacting the cam.



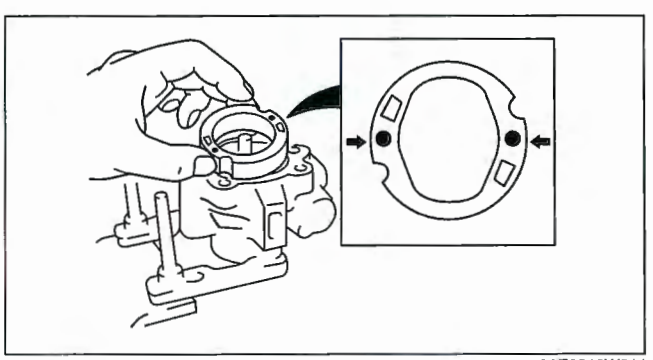
A6E6316W013

Cam Ring Assembly Note

1. Install the cam ring in the front pump body with the mark facing upward.

Rear Pump Body Assembly Note

1. After installing the rear body, manually turn the shaft to verify that it rotates smoothly.



A6E6316W014

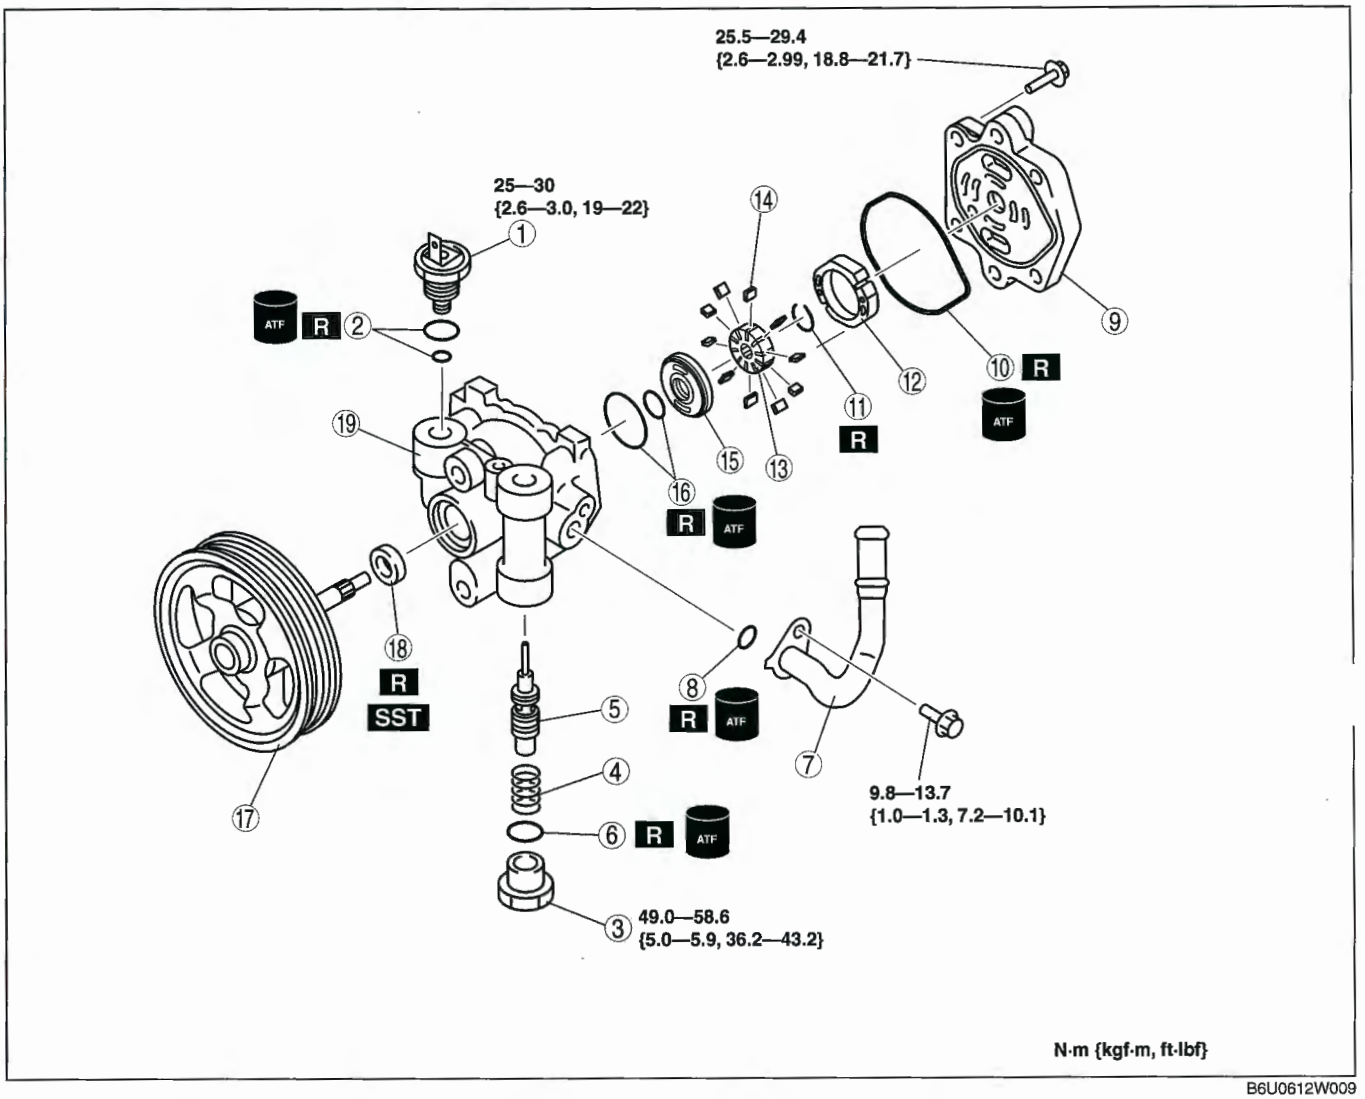
POWER STEERING OIL PUMP DISASSEMBLY/ASSEMBLY [AJ]

E6U061232650W04

Note

- The following procedure is for replacement of the O-ring and oil seal only. Replace the pump component other repairs are necessary.

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



B6U0612W009

1	Pressure switch component
2	O-rings
3	Connector
4	Spring
5	Control valve
6	O-ring
7	Suction pipe
8	O-ring
9	Rear pump body (See 06–12–31 Rear Pump Body Assembly Note.)
10	Gasket

11	Clip
12	Cam ring (See 06–12–31 Cam Ring Assembly Note.)
13	Rotor
14	Vane (See 06–12–31 Vane Assembly Note.)
15	Side plate
16	O-rings
17	Shaft component
18	Oil seal (See 06–12–31 Oil Seal Assembly Note.)
19	Front pump body

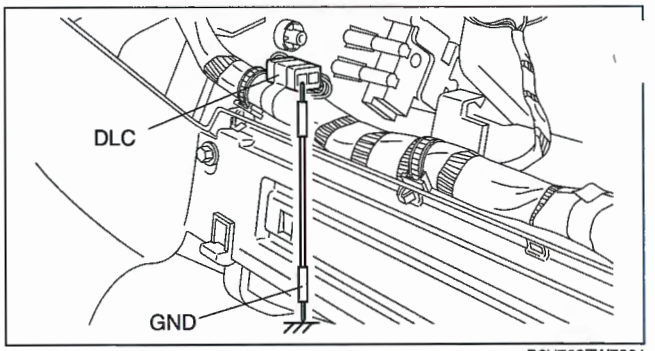
07–02

DIAGNOSTIC TROUBLE CODE NUMBER INSPECTION [L3, AJ]

E6U070200000W01

1. Remove the glove compartment.
2. Short the DLC to the GND terminal using a jumper wire.
3. Shine a **60 W** incandescent light from a height of **approx. 100 mm {3.9 in}** onto the solar radiation sensor.

Note
- If incandescent light is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates a diagnostic trouble code "02".



D6U702ZW7001

4. Turn the ignition switch to ON position.
5. Read DTCs from the flashing of the rear defroster indicator light on the climate control unit. Carry out DTC inspection. (Present and past failure indication modes)
   - When the system is normal, the rear defroster indicator light does not flash.
   - If any of the diagnostic trouble codes are indicated, carry out troubleshooting according to the code.
6. After completion of repairs, erase all diagnostic trouble code(s) from memory. (See 07–02–4 Erasing Past Failure Memory.)
7. Remove the jumper wire.

Present Failure Indication Mode

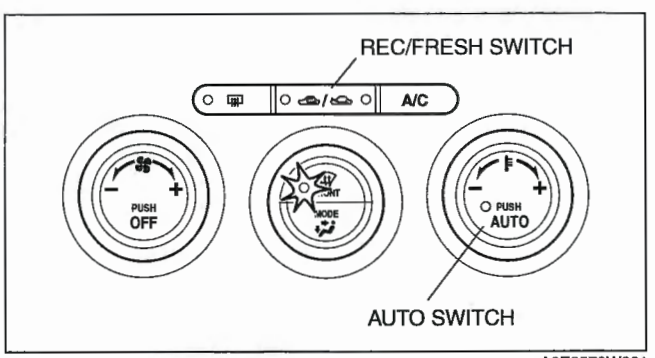
- The on-board diagnostic function displays the present failure indication mode directly after start up. In present failure indication mode, present failures in the control system circuits (open, short circuits) are detected, and the flashing of the rear defroster indicator light on the climate control unit indicates the DTCs.
  — If a diagnostic trouble code is indicated, refer to the diagnostic trouble code table below and inspect the appropriate system.

Past Failure Indication Mode

- While in present failure indication mode, press the A/C switch to change to the past failure indication mode. In past failure indication mode, past failures (intermittent problems) in the input sensor circuits (open, short circuits) are stored, and the flashing of the rear defroster indicator light on the climate control unit indicates the DTCs.
  — If a diagnostic trouble code is indicated, refer to the following diagnostic trouble code table and inspect the appropriate system. (Disconnections and short circuits are stored in the same system even if either occurs only once.)
  — If the A/C switch is pressed again while in past failure indication mode, the on-board diagnostic function will return to present failure indication mode.

Erasing Past Failure Memory

- When DTCs are displayed in the past failure indication mode, they remain in the memory after the failed systems are corrected. Consequently, the next time the past failure indication mode is used, the same past failure DTCs will be indicated by the flashing of the rear defroster indicator light on the climate control unit. Therefore, erase the past failure memory after correcting all failed systems. To erase the past failure memory, press the AUTO switch and REC/FRESH switch on the climate control unit at the same time while in past failure indication mode. If erased, the rear defroster indicator light flashes once.



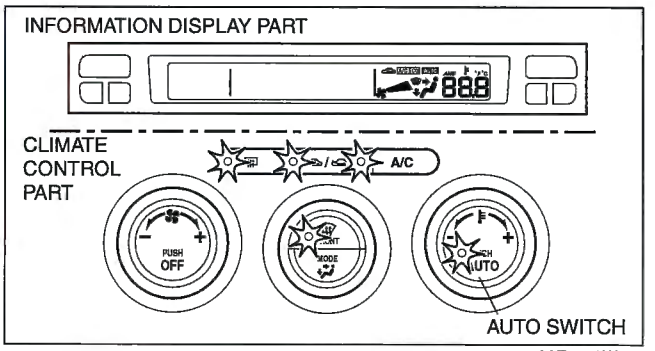
A6E8570W001

DTC Table

No.	Indicator pattern	Diagnosed circuit
2		Solar radiation sensor (present)
03		Solar radiation sensor (past)
06		Passenger compartment temperature sensor (present)
07		Passenger compartment temperature sensor (past)
10		Evaporator temperature sensor (present)
11		Evaporator temperature sensor (past)
12		Ambient temperature sensor (present)
13		Ambient temperature sensor (past)
14		Water temperature sensor (present)
15		Water temperature sensor (past)
21		Airflow mode actuator [potentiometer] (present)
22		Airflow mode actuator [potentiometer] (past)
59		Airflow mode actuator [motor lock] (past)

Output Device Operation Check Mode
Inspection

1. Warm up the engine.
2. Turn the ignition switch to LOCK position.
3. Start up the on-board diagnostic function (present failure indication mode).
4. Press the AUTO switch.
5. Verify that all the indicator lights of the climate control unit and center panel (climate control part) illuminate for **4 s**.

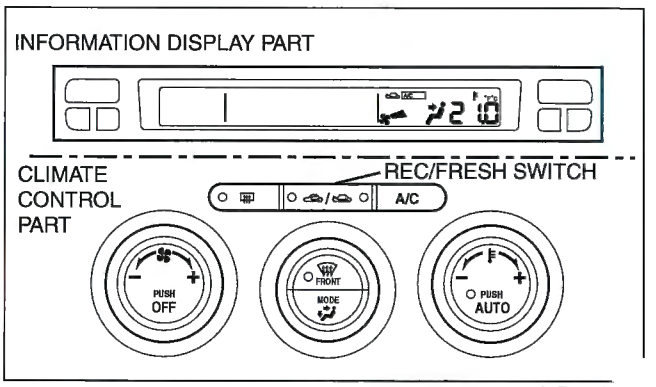


A6E8570W002

6. Verify the operation of each output device when changing steps by pressing the REC/FRESH switch, and referring to the output device operation check chart.
   - If not as specified, inspect the malfunctioning system.

   Note
   - If the AUTO switch is pressed again, the on-board diagnostic function will return to present failure indication mode.

7. Turn the ignition switch to LOCK position to end the on-board diagnostic function.



A6E8570V

Output device operation check table

Step	Operating device	Operating conditions	Monitor*	Other device conditions
	Blower motor speed		1	• Air mix actuator operation — 50% • Airflow mode actuator operation — VENT • Air intake actuator operation — FRESH • A/C compressor operation — ON
2	Air mix actuator operation		20.0 20.5 21.0 20.5	• Blower motor speed — 2nd • Airflow mode actuator operation — VENT • Air intake actuator operation — FRESH • A/C compressor operation — ON
3	Airflow mode actuator operation		3	• Blower motor speed — 2nd • Air mix actuator operation — 50% • Air intake actuator operation — FRESH • A/C compressor operation — ON
4	Air intake actuator operation		4	• Blower motor speed — 2nd • Air mix actuator operation — 0% • Airflow mode actuator operation — VENT
	A/C compressor operation

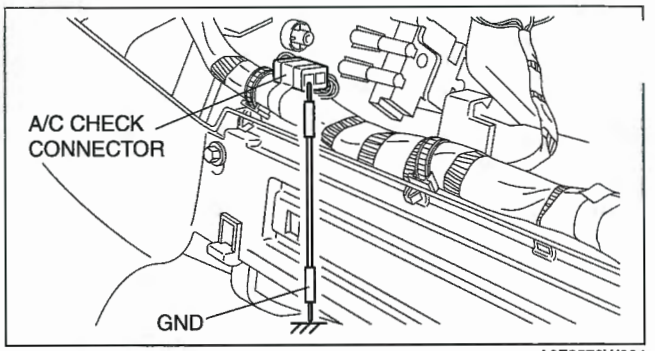
DIAGNOSTIC TROUBLE CODE NUMBER INSPECTION [L3 WITH TC]

E6U070200000W19

1. Remove the glove compartment.
2. Short the A/C check connector to the GND terminal using a jumper wire.
3. Shine a **60 W** incandescent light from a height of **approx. 100 mm {3.9 in}** onto the solar radiation sensor.

Note
- If incandescent light is not shone on the solar radiation sensor, the climate control unit determines a malfunction and indicates a diagnostic trouble code "02".



A6E8570W004

4. Turn the ignition switch to ON position.
5. Read DTCs from the flashing of the defroster indicator light on the climate control unit. Carry out DTC inspection. (Present and past failure indication modes)
   - When the system is normal, the defroster indicator light does not flash.
   - If any of the diagnostic trouble codes are indicated, carry out troubleshooting according to the code.
6. After completion of repairs, erase all diagnostic trouble code(s) from memory. (See 07–02–8 Erasing Past Failure Memory.)
7. Remove the jumper wire.

Present Failure Indication Mode

- The on-board diagnostic function displays the present failure indication mode directly after start up. In present failure indication mode, present failures in the control system circuits (open, short circuits) are detected, and the flashing of the defroster indicator light on the climate control unit indicates the DTCs.
  — If a diagnostic trouble code is indicated, refer to the diagnostic trouble code table below and inspect the appropriate system.

Past Failure Indication Mode

- While in present failure indication mode, press the A/C switch to change to the past failure indication mode. ' past failure indication mode, past failures (intermittent problems) in the input sensor circuits (open, short circuits) are stored, and the flashing of the defroster indicator light on the climate control unit indicates the DTCs.
  — If a diagnostic trouble code is indicated, refer to the following DTC table and inspect the appropriate system. (Disconnections and short circuits are stored in the same system even if either occurs only once.)
  — If the A/C switch is pressed again while in past failure indication mode, the on-board diagnostic function will return to present failure indication mode.

Erasing Past Failure Memory

- When DTCs are displayed in the past failure indication mode, they remain in the memory after the failed systems are corrected. Consequently, the next time the past failure indication mode is used, the same past failure DTCs will be indicated by the flashing of the defroster indicator light on the climate control unit. Therefore, erase the past failure memory after correcting all failed systems. To erase the past failure memory, press the AUTO switch and REC/FRESH switch on the climate control unit at the same time while in past failure indication mode. If erased, the defroster indicator light flashes once.

DTC 02 [L3, AJ]

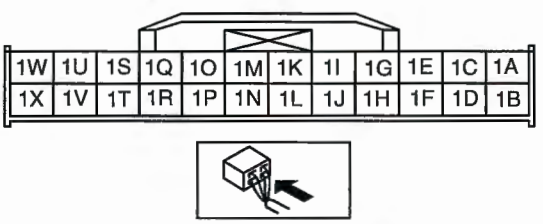
E6U070200000W02

DTC 02	Solar radiation sensor system inspection
POSSIBLE CAUSE	• Solar radiation sensor malfunction • Climate control unit malfunction • Open or short circuit between solar radiation sensor and climate control unit

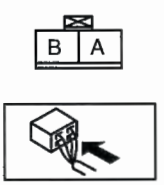
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect solar radiation sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace solar radiation sensor. (See 07–40–21 SOLAR RADIATION SENSOR REMOVAL/INSTALLATION.)
2	• Disconnect climate control unit connector (24-pin) and solar radiation sensor connector. • Is there continuity between the following climate control unit terminals and solar radiation sensor terminal? — 1S—B — 1I—A	Yes	Go to the next step.
		No	Repair wiring harness.
3	• Is there a short circuit to ground between climate control unit terminal 1S and solar radiation sensor terminal B?	Yes	Repair wiring harness.
		No	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



SOLAR RADIATION SENSOR CONNECTOR



DTC 02 [L3 WITH TC]

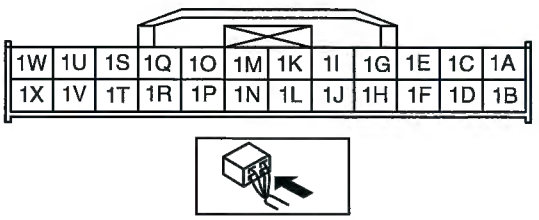
E6U070200000W22

DTC 02	Solar radiation sensor system inspection
POSSIBLE CAUSE	• Solar radiation sensor malfunction • Climate control unit malfunction • Open or short circuit between solar radiation sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect solar radiation sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace solar radiation sensor.
2	• Disconnect climate control unit connector (24-pin) and solar radiation sensor connector. • Is there continuity between following terminals of climate control unit connector (24-pin) and terminal solar radiation sensor connector? — 1S—B — 1B—A	Yes	Go to the next step.
		No	Repair wiring harness.
3	• Is there short circuit to ground between terminal 1S of climate control unit connector (24-pin) and terminal B of solar radiation sensor connector?	Yes	Repair wiring harness.
		No	Replace climate control unit.

CLIMATE CONTROL UNIT CONNECTOR



SOLAR RADIATION SENSOR CONNECTOR

DTC 03

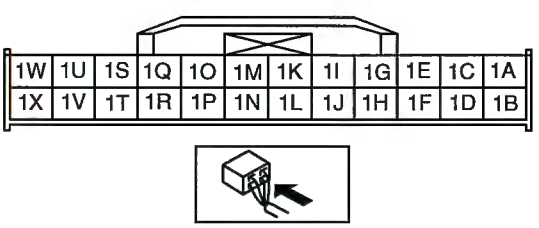
E6U070200000W03

DTC 03	Solar radiation sensor system inspection
POSSIBLE CAUSE	• Solar radiation sensor malfunction • Climate control unit malfunction • Short circuit between solar radiation sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect solar radiation sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace solar radiation sensor. (See 07–40–21 SOLAR RADIATION SENSOR REMOVAL/INSTALLATION.)
2	• Is there a short circuit to ground between climate control unit terminal 1S and solar radiation sensor terminal B?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR



SOLAR RADIATION SENSOR CONNECTOR

DTC 06 [L3, AJ]

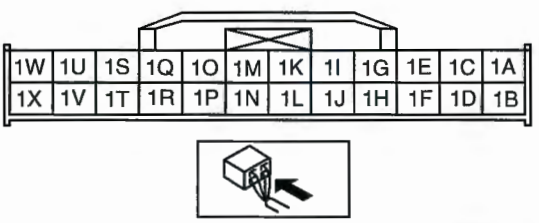
E6U070200000W04

DTC 06	Passenger compartment temperature sensor system inspection
POSSIBLE CAUSE	• Passenger compartment temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between passenger compartment temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between climate control unit terminals 1I and 1M as indicated below? — **76 ohms—124 kilohms**	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Go to the next step.
2	• Inspect passenger compartment temperature sensor. • Is it okay?	Yes	Repair wiring harness.
		No	Replace passenger compartment temperature sensor. (See 07–40–23 PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



DTC 06 [L3 WITH TC]

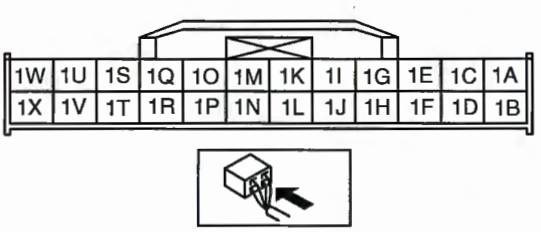
E6U070200000W20

DTC 06	Passenger compartment temperature sensor system inspection
POSSIBLE CAUSE	• Passenger compartment temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between passenger compartment temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between terminals 1I and 1M of climate control unit connector (24-pin) as indicated below? — **137 ohms—220 kilohms**	Yes	Replace climate control unit.
		No	Go to the next step.
2	• Inspect passenger compartment temperature sensor. • Is it normal?	Yes	Repair wiring harness.
		No	Replace passenger compartment temperature sensor.

CLIMATE CONTROL UNIT CONNECTOR



DTC 07 [L3, AJ]

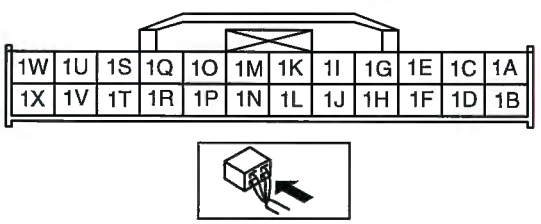
E6U070200000W05

DTC 07	Passenger compartment temperature sensor system inspection
POSSIBLE CAUSE	• Passenger compartment temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between passenger compartment temperature sensor and climate control unit

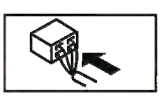
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect passenger compartment temperature sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace passenger compartment temperature sensor. (See 07–40–23 PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ].)
2	• Disconnect climate control unit connector (24-pin) and passenger compartment temperature sensor connector. • Is there an open circuit between the following climate control unit terminals and passenger compartment temperature sensor terminals? — 1I—A — 1M—B	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground between climate control unit terminal 1M and passenger compartment temperature sensor terminal B?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn the ignition switch to ON position. • Measure voltage at climate control unit terminal 1M. • Is voltage **approx. 5V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



PASSENGER COMPARTMENT TEMPERATURE SENSOR CONNECTOR



07–02

DTC 07 [L3 WITH TC]

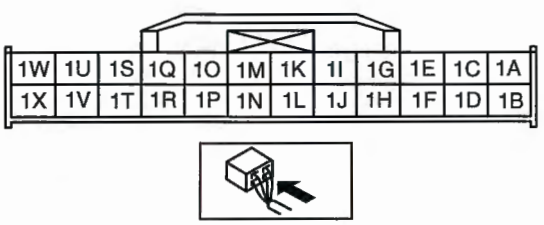
E6U070200000W21

DTC 07	Passenger compartment temperature sensor system inspection
POSSIBLE CAUSE	• Passenger compartment temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between passenger compartment temperature sensor and climate control unit

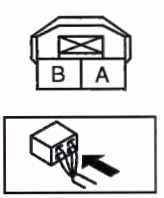
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect passenger compartment temperature sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace passenger compartment temperature sensor.
2	• Disconnect climate control unit connector (24-pin) and passenger compartment temperature sensor connector. • Is there open circuit between the following terminals of climate control unit connector (24-pin) and passenger compartment temperature sensor connector? — 1I—A — 1M—B	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1M of climate control unit connector (24-pin) and B of passenger compartment temperature sensor connector?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn the ignition switch to ON position. • Measure voltage at terminal the following terminal 1M of climate control unit connector (24-pin). • Is voltage **approx. 5V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit.

CLIMATE CONTROL UNIT CONNECTOR



PASSENGER COMPARTMENT TEMPERATURE SENSOR CONNECTOR



DTC 10 [L3, AJ]

E6U070200000W06

DTC 10	Evaporator temperature sensor system inspection
POSSIBLE CAUSE	• Evaporator temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between evaporator temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between climate control unit terminals 1I and 1Q as indicated below? — **62 ohms—91 kilohms**	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Go to the next step.
2	• Inspect evaporator temperature sensor. • Is it okay?	Yes	Repair wiring harness.
		No	Replace evaporator temperature sensor. (See 07–40–24 EVAPORATOR TEMPERATURE SENSOR REMOVAL/ INSTALLATION.)

STEP	INSPECTION	ACTION
	CLIMATE CONTROL UNIT CONNECTOR 	

DTC 10 [L3 WITH TC]

E6U070200000W23

DTC 10	Evaporator temperature sensor system inspection
POSSIBLE CAUSE	• Evaporator temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between evaporator temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between terminals 1I and 1Q of climate control unit connector (24-pin) as indicated below? — **128 ohms—179 kilohms**	Yes	Replace climate control unit.
		No	Go to the next step.
2	• Inspect evaporator temperature sensor. • Is it normal?	Yes	Repair wiring harness.
		No	Replace evaporator temperature sensor.
	CLIMATE CONTROL UNIT CONNECTOR 		

DTC 11 [L3, AJ]

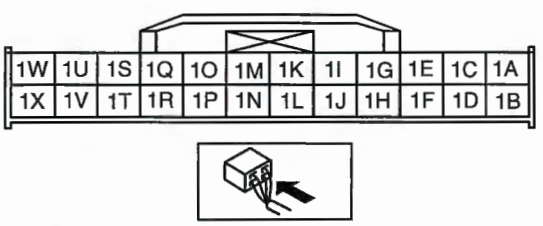
E6U070200000W07

DTC 11	Evaporator temperature sensor system inspection
POSSIBLE CAUSE	• Evaporator temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between evaporator temperature sensor and climate control unit

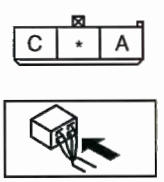
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect evaporator temperature sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace evaporator temperature sensor. (See 07–40–24 EVAPORATOR TEMPERATURE SENSOR REMOVAL/ INSTALLATION.)
2	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there open circuit between following climate control unit terminals and evaporator temperature sensor terminals? — 1Q—C — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between climate control unit terminal 1Q and evaporator temperature sensor terminal C?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn ignition switch to ON position. • Measure voltage at climate control unit terminal 1Q. • Is voltage **approx. 5 V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



DTC 11 [L3 WITH TC]

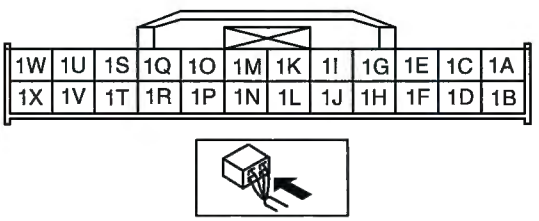
E6U070200000W24

DTC 11	Evaporator temperature sensor system inspection
POSSIBLE CAUSE	• Evaporator temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between evaporator temperature sensor and climate control unit

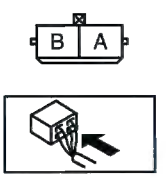
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect evaporator temperature sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace evaporator temperature sensor.
2	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there open circuit between following terminals of climate control unit connector (24-pin) and evaporator temperature sensor connector? — 1Q—B — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1Q of climate control unit connector (24-pin) and terminal B of evaporator temperature sensor connector?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn the ignition switch to ON position. • Measure voltage at terminal 1Q of climate control unit connector (24-pin). • Is voltage **approx. 5 V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit.

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



07–02

DTC 12 [L3, AJ]

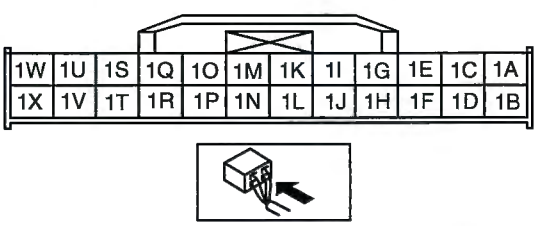
E6U070200000W08

DTC 12	Ambient temperature sensor system inspection
POSSIBLE CAUSE	• Ambient temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between ambient temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between climate control unit terminals 1I and 1K as indicated below? — **75 ohms—89 kilohms**	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Go to the next step.
2	• Inspect ambient temperature sensor. • Is it okay?	Yes	Repair wiring harness.
		No	Replace ambient temperature sensor. (See 07–40–21 AMBIENT TEMPERATURE SENSOR REMOVAL/ INSTALLATION.)

CLIMATE CONTROL UNIT CONNECTOR



DTC 12 [L3 WITH TC]

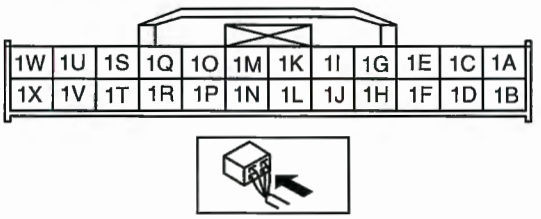
E6U070200000W25

DTC 12	Ambient temperature sensor system inspection
POSSIBLE CAUSE	• Ambient temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between ambient temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between terminals 1I and 1K of climate control unit connector (24-pin) as indicated below? **— 122 ohms—182 kilohms**	Yes	Replace climate control unit.
		No	Go to the next step.
2	• Inspect ambient temperature sensor. • Is it normal?	Yes	Repair wiring harness.
		No	Replace ambient temperature sensor.

CLIMATE CONTROL UNIT CONNECTOR



DTC 13 [L3, AJ]

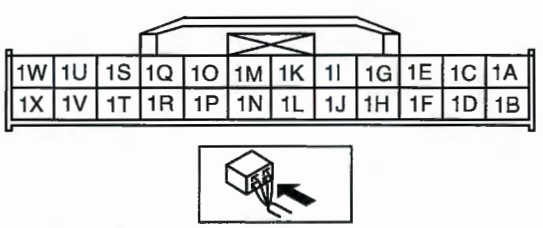
E6U070200000W09

DTC 13	Ambient temperature sensor system inspection
POSSIBLE CAUSE	• Ambient temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between ambient temperature sensor and climate control unit

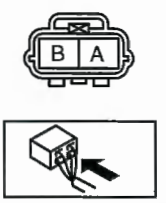
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect ambient temperature sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace ambient temperature sensor. (See 07–40–21 AMBIENT TEMPERATURE SENSOR REMOVAL/ INSTALLATION.)
2	• Disconnect climate control unit connector (24-pin) and ambient temperature sensor connector. • Is there an open circuit between the following climate control unit terminals and ambient temperature sensor terminals? — 1K—B — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground between climate control unit terminal 1K and ambient temperature sensor terminal B?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn ignition switch to ON position. • Measure voltage at climate control unit terminal 1K. • Is voltage **approx. 5 V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



AMBIENT TEMPERATURE SENSOR CONNECTOR



DTC 13 [L3 WITH TC]

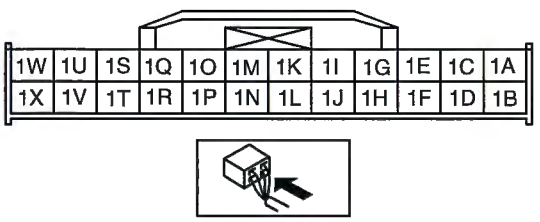
E6U070200000W26

DTC 13	Ambient temperature sensor system inspection
POSSIBLE CAUSE	• Ambient temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between ambient temperature sensor and climate control unit

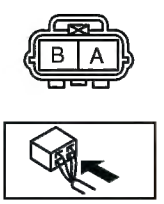
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect ambient temperature sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace ambient temperature sensor.
2	• Disconnect climate control unit connector (24-pin) and ambient temperature sensor connector. • Is there open circuit between following terminals of climate control unit connector (24-pin) and ambient temperature sensor connector? — 1K—B — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1K of climate control unit connector (24-pin) and terminal B of ambient temperature sensor connector?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn the ignition switch to ON position. • Measure voltage at terminal 1K of climate control unit connector (24-pin). • Is voltage **approx. 5 V**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit.

CLIMATE CONTROL UNIT CONNECTOR



AMBIENT TEMPERATURE SENSOR CONNECTOR



07–02

DTC 14 [L3, AJ]

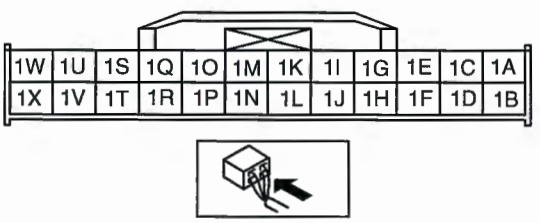
E6U070200000W10

DTC 14	Water temperature sensor system inspection
POSSIBLE CAUSE	• Water temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between water temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between climate control unit terminals 1I and 1O as indicated below? • **64 ohms—207 kilohms**	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Go to the next step.
2	• Inspect water temperature sensor. • Is it okay?	Yes	Repair wiring harness.
		No	Replace water temperature sensor. (See 07–40–25 WATER TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ].)

CLIMATE CONTROL UNIT CONNECTOR



DTC 14 [L3 WITH TC]

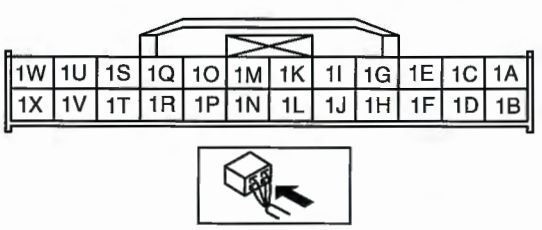
E6U070200000W27

DTC 14	A/C water temperature sensor system inspection
POSSIBLE CAUSE	• A/C water temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between A/C water temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is resistance between terminals 1I and 1O of climate control unit connector (24-pin) as indicated below? — **112 ohms—110 kilohms**	Yes	Replace climate control unit.
		No	Go to the next step.
2	• Inspect A/C water temperature sensor. • Is it normal?	Yes	Repair wiring harness.
		No	Replace A/C water temperature sensor.

CLIMATE CONTROL UNIT CONNECTOR



DTC 15 [L3, AJ]

E6U070200000W11

DTC 15	Water temperature sensor system inspection
POSSIBLE CAUSE	• Water temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between water temperature sensor and climate control unit

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Is water temperature sensor normal?	Yes	Go to the next step.
		No	Replace water temperature sensor. (See 07–40–25 WATER TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ].)
2	• Disconnect climate control unit connector (24-pin) and water temperature sensor connector. • Is there an open circuit between the following climate control unit terminals and water temperature sensor terminals? — 1O—B — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground between climate control unit terminal 1O and water temperature sensor terminal B?	Yes	Repair wiring harness.
		No	Connect climate control unit connector, then go to the next step.
4	• Turn the ignition switch to ON position. • Is voltage at climate control unit terminal 1O **5 V or above**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)

DTC 15 [L3 WITH TC]

E6U070200000W28

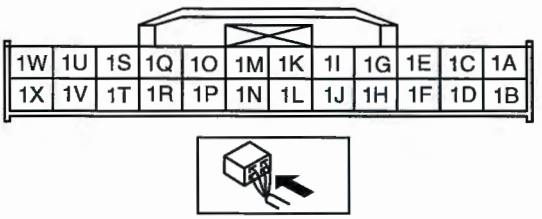
DTC 15	A/C water temperature sensor system inspection
POSSIBLE CAUSE	• A/C water temperature sensor malfunction • Climate control unit malfunction • Open or short circuit between A/C water temperature sensor and climate control unit

Diagnostic Procedure

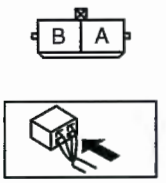
STEP	INSPECTION		ACTION
1	• Is A/C water temperature sensor normal?	Yes	Go to the next step.
		No	Replace A/C water temperature sensor.
2	• Disconnect climate control unit connector (24-pin) and A/C water temperature sensor connector. • Is there open circuit between following terminals of climate control unit connector (24-pin) and A/C water temperature sensor connector? — 1O—A — 1I—B	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1O of climate control unit connector (24-pin) and terminal A of A/C water temperature sensor connector?	Yes	Repair wiring harness.
		No	Connect climate control unit connector and go to the next step.

STEP	INSPECTION		ACTION
4	• Turn the ignition switch to ON position. • Is voltage at terminal 1O of climate control unit connector (24-pin) **5 V or more**?	Yes	This system is normal at present. (Erase the past failure from memory.)
		No	Replace climate control unit.

CLIMATE CONTROL UNIT CONNECTOR



A/C WATER TEMPERATURE SENSOR CONNECTOR



DTC 18 [L3 WITH TC]

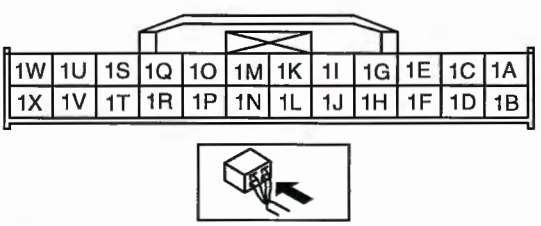
E6U070200000W29

DTC 18	Air mix actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Air mix actuator malfunction • Climate control unit malfunction • Open circuit between air mix actuator and climate control unit • Short circuit between air mix actuator (terminal C) and climate control unit (terminal 1U: 24-pin)

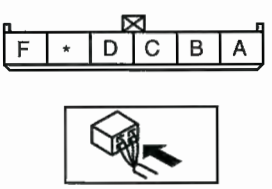
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect air mix actuator. • Is it normal?	Yes	Go to the next step.
		No	Replace air mix actuator.
2	• Disconnect airflow mode actuator connector. • Is resistance between terminals 1U and 1I of climate control unit connector (24-pin) more than **387 ohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Short circuit)
3	• Disconnect climate control unit connector (24-pin). • Is resistance between terminals 1B and 1I of climate control unit connector (24-pin) less than **4.8 kilohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Open circuit)
4	• Is resistance between terminals 1B and 1U of climate control unit connector (24-pin) less than **4.2 kilohms**?	Yes	Replace climate control unit.
		No	Repair wiring harness. (Open circuit)

CLIMATE CONTROL UNIT CONNECTOR



AIR MIX ACTUATOR CONNECTOR



DTC 19 [L3 WITH TC]

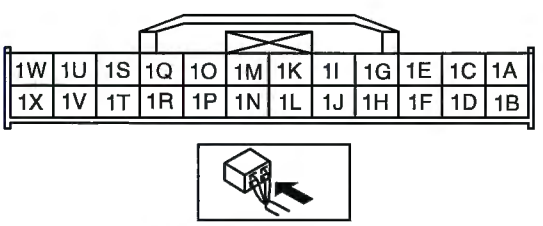
E6U070200000W30

DTC 19	Air mix actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Air mix actuator malfunction • Climate control unit malfunction • Open circuit between air mix actuator and climate control unit • Short circuit between air mix actuator (terminal C) and climate control unit (terminal 1U: 24-pin)

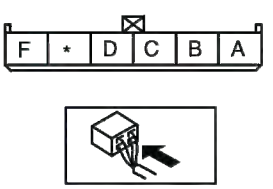
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect air mix actuator. • Is it normal?	Yes	Go to the next step.
		No	Replace air mix actuator.
2	• Disconnect climate control unit connector (24-pin) and air mix actuator connector. • Is there open circuit between following terminals of climate control unit connector (24-pin) and air mix actuator connector? — 1B—A — 1U—C — 1I—B	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1U of climate control unit connector (24-pin) and terminal C of air mix actuator connector?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR



AIR MIX ACTUATOR CONNECTOR



07–02

DTC 21 [L3, AJ]

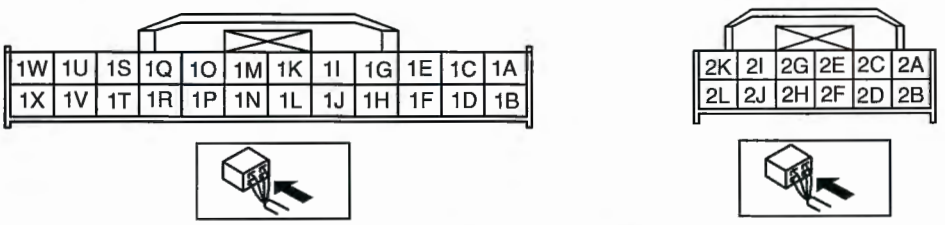
E6U070200000W12

DTC 21	Airflow mode actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Airflow mode actuator malfunction • Climate control unit malfunction • Open circuit between airflow mode actuator and climate control unit • Short circuit between airflow mode actuator (terminal B) and climate control unit (terminal 1U: 24-pin)

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect airflow mode actuator. • Is it okay?	Yes	Go to the next step.
		No	Replace airflow mode actuator. (See 07–40–10 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [L3, AJ].)
2	• Is resistance between climate control unit terminals 1U and 1I more than **4.6 kilohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Short circuit)
3	• Disconnect climate control unit connectors (24-pin, 12-pin). • Is resistance between climate control unit terminals 2C and 1I less than **28.7 kilohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Open circuit)
4	• Is resistance between climate control unit terminals 2C and 1U less than **25.1 kilohms**?	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Repair wiring harness. (Open circuit)

CLIMATE CONTROL UNIT CONNECTOR



DTC 21 [L3 WITH TC]

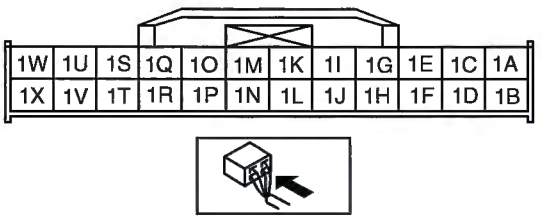
E6U070200000W31

DTC 21	Airflow mode actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Airflow mode actuator malfunction • Climate control unit malfunction • Open circuit between airflow mode actuator and climate control unit • Short circuit between airflow mode actuator (terminal C) and climate control unit (terminal 1W: 24-pin)

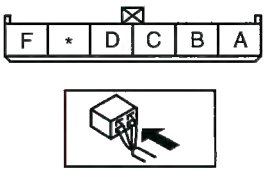
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect airflow mode actuator. • Is it normal?	Yes	Go to the next step.
		No	Replace airflow mode actuator.
2	• Disconnect air mix actuator connector. • Is resistance between terminals 1W and 1I of climate control unit connector (24-pin) more than **387 ohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Short circuit)
3	• Disconnect climate control unit connector (24-pin). • Is resistance between terminals 1B and 1I of climate control unit connector (24-pin) less than **4.8 kilohms**?	Yes	Go to the next step.
		No	Repair wiring harness. (Open circuit)
4	• Is resistance between terminals 1B and 1W of climate control unit connector (24-pin) less than **4.2 kilohms**?	Yes	Replace climate control unit.
		No	Repair wiring harness. (Open circuit)

CLIMATE CONTROL UNIT CONNECTOR



AIRFLOW MODE ACTUATOR CONNECTOR



07–02

DTC 22 [L3, AJ]

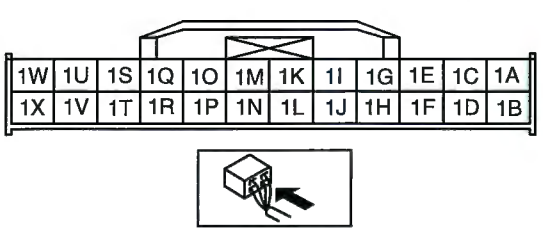
E6U070200000W13

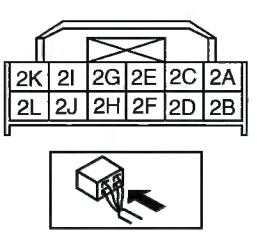
DTC 22	Airflow mode actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Airflow mode actuator malfunction • Climate control unit malfunction • Open circuit between airflow mode actuator and climate control unit • Short circuit between airflow mode actuator (terminal B) and climate control unit (terminal 1U: 24-pin)

Diagnostic Procedure

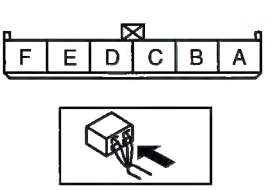
STEP	INSPECTION		ACTION
1	• Inspect airflow mode actuator. • Is it okay?	Yes	Go to the next step.
		No	Replace airflow mode actuator. (See 07–40–10 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [L3, AJ].)
2	• Disconnect climate control unit connector (24-pin). • Is there an open circuit between the following climate control unit terminals and airflow mode actuator terminals? — 2C—A — 1U—B — 1I—C	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there a short circuit to ground between climate control unit terminal 1U and airflow mode actuator terminal B?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR





AIRFLOW MODE ACTUATOR CONNECTOR



DTC 22 [L3 WITH TC]

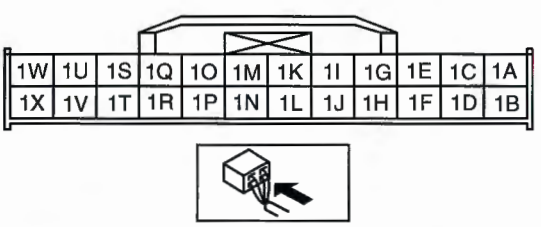
E6U070200000W32

DTC 22	Airflow mode actuator (potentiometer) system inspection
POSSIBLE CAUSE	• Airflow mode actuator malfunction • Climate control unit malfunction • Open circuit between airflow mode actuator and climate control unit • Short circuit between airflow mode actuator (terminal C) and climate control unit (terminal 1W: 24-pin)

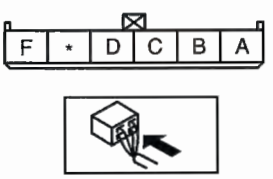
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Inspect airflow mode actuator. • Is it normal?	Yes	Go to the next step.
		No	Replace airflow mode actuator.
2	• Disconnect climate control unit connector (24-pin) and air mix actuator connector. • Is there open circuit between following terminals of climate control unit connector (24-pin) and airflow mode actuator connector? — 1B—B — 1W—C — 1I—A	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1W of climate control unit connector (24-pin) and terminal C of airflow mode actuator connector?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR



AIRFLOW MODE ACTUATOR CONNECTOR



DTC 58 [L3 WITH TC]

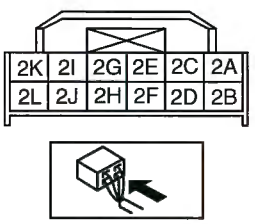
E6U070200000W33

DTC 58	Air mix actuator (motor lock) system inspection
POSSIBLE CAUSE	• Air mix actuator malfunction • A/C unit (air mix link and/or air mix crank) malfunction • Climate control unit malfunction • Open or short circuit between air mix actuator and climate control unit

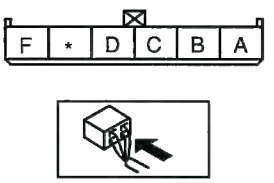
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect air mix actuator connector. • Connect battery positive voltage to terminal D (or terminal F) and ground to terminal F (or terminal D) of air mix actuator connector. • Does air mix actuator operate?	Yes	Connect air mix actuator connector, then go to Step 3.
		No	Go to the next step.
2	• Remove air mix actuator. • Operate air mix link by hand. • Does air mix link operate smoothly?	Yes	Replace air mix actuator.
		No	Replace air mix link and/or air mix crank.
3	• Disconnect climate control unit connect (12-pin). • Connect battery positive voltage to terminal 2D (or terminal 2C) and ground to terminal 2C (or terminal 2D) of climate control unit connector (24-pin). • Does air mix actuator operate?	Yes	Replace climate control unit.
		No	Repair wiring harness.

CLIMATE CONTROL UNIT CONNECTOR



AIR MIX ACTUATOR CONNECTOR



07–02

DTC 59

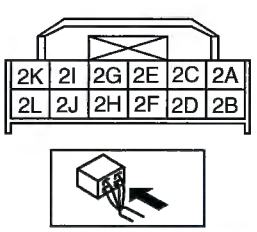
E6U070200000W14

DTC 59	Airflow mode actuator (motor lock) system inspection
POSSIBLE CAUSE	• Airflow mode actuator malfunction • A/C unit (airflow mode links or airflow mode cranks or both) malfunction • Climate control unit malfunction • Open or short circuit between airflow mode actuator and climate control unit

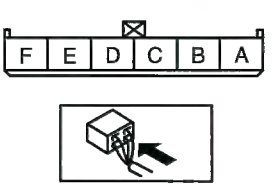
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect airflow mode actuator connector. • Connect battery positive voltage to airflow mode actuator terminal E (or terminal F) and ground to terminal F (or terminal E). • Does airflow mode actuator operate?	Yes	Connect airflow mode actuator connector, then go to Step 3.
		No	Go to the next step.
2	• Remove airflow mode actuator. • Operate airflow mode main link by hand. • Does airflow mode main link operate smoothly?	Yes	Replace airflow mode actuator. (See 07–40–10 AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [L3, AJ].)
		No	Replace airflow mode links or airflow mode cranks or both.
3	• Disconnect climate control unit connector (12-pin). • Connect battery positive voltage to climate control unit terminal 2G (or terminal 2E) and ground to terminal 2E (or terminal 2G). • Does airflow mode actuator operate?	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Repair wiring harness.

CLIMATE CONTROL UNIT CONNECTOR



AIRFLOW MODE ACTUATOR CONNECTOR



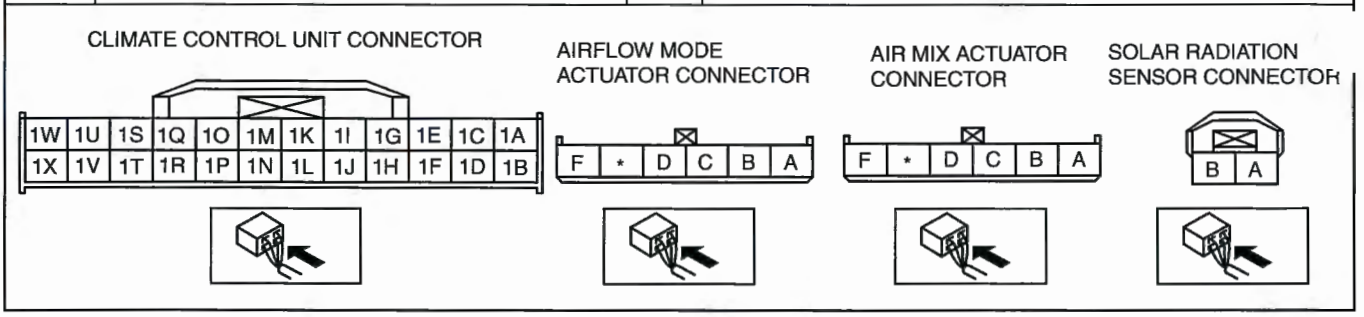
DTC 02, 18, 21 (WHEN TWO OR MORE DTCS ARE INDICATED AT THE SAME TIME) [L3 WITH TC]

E6U070200000W34

DTC 02, 18, 21	Climate control unit (+5 V power supply) inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Short circuit between climate control unit and solar radiation sensor • Short circuit between climate control unit and air mix actuator • Short circuit between climate control unit and airflow mode actuator • Open circuit between climate control unit and solar radiation sensor • Open circuit between climate control unit and air mix actuator • Open circuit between climate control unit and airflow mode actuator

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and airflow mode actuator connector. • Is there continuity between terminal 1B of climate control unit connector (24-pin) and terminal B of airflow mode actuator connector?	Yes	Go to the next step.
		No	Repair wiring harness.
2	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal B of airflow mode actuator connector?	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal A of air mix actuator connector?	Yes	Repair wiring harness.
		No	Go to the next step.
4	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal A of solar radiation sensor connector?	Yes	Repair wiring harness.
		No	Replace climate control unit.



DTC 06, 10, 12, 14, 21 (WHEN TWO OR MORE DTCS ARE INDICATED AT THE SAME TIME)

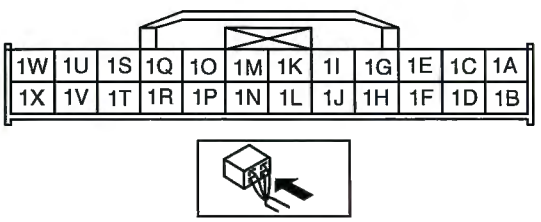
E6U070200000W15

DTC 06, 10, 12, 14, 21	Climate control unit (+5V power supply or sensor ground system) or sensor ground system inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Open circuit between climate control unit and each temperature sensor • Open circuit between climate control unit and airflow mode actuator

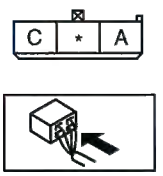
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there continuity between climate control unit terminal 1I and evaporator temperature sensor terminal A?	Yes	Replace climate control unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].)
		No	Repair wiring harness.

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



07–02

DTC 06, 10, 12, 14, 18, 21 (WHEN TWO OR MORE DTCS ARE INDICATED AT THE SAME TIME) [L3 WITH TC]

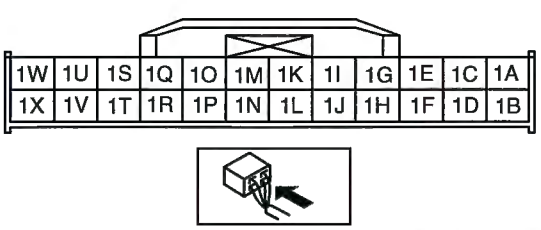
E6U070200000W35

DTC 06, 10, 12, 18, 21	Climate control unit (+5V power supply or sensor ground system) or sensor ground system inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Open circuit between climate control unit and each temperature sensor • Open circuit between climate control unit and air mix actuator • Open circuit between climate control unit and airflow mode actuator

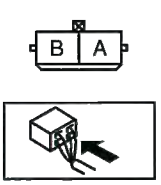
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there continuity between terminal 1I of climate control unit connector (24-pin) and terminal A of evaporator temperature sensor connector?	Yes	Replace climate control unit.
		No	Repair wiring harness.

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



DTC 07, 11, 13, 15, 22 (WHEN TWO OR MORE DTCS ARE INDICATED AT THE SAME TIME)

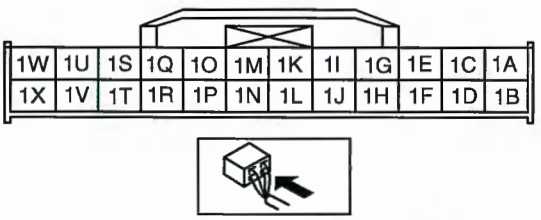
E6U070200000W16

DTC 07, 11, 13, 15, 22	Climate control unit (+5V power supply or sensor ground system) or sensor ground system inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Open circuit between climate control unit each temperature sensor • Open circuit between climate control unit and airflow mode actuator

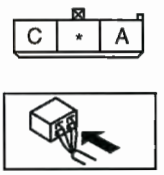
Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there an open circuit between climate control unit terminal 1I and evaporator temperature sensor terminal A?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR



DTC 07, 11, 12, 15, 19, 22 (WHEN TWO OR MORE DTCS ARE INDICATED AT THE SAME TIME) [L3 WITH TC]

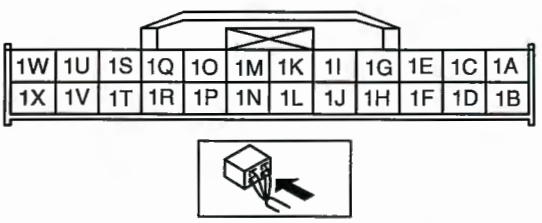
E6U070200000W36

DTC 07, 11, 13, 15, 19, 22	Climate control unit (+5V power supply or sensor ground system) or sensor ground system inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Open circuit between climate control unit each temperature sensor • Open circuit between climate control unit and air mix actuator • Open circuit between climate control unit and airflow mode actuator

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and evaporator temperature sensor connector. • Is there open circuit between terminal 1I of climate control unit connector (24-pin) and terminal A of evaporator temperature sensor connector?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

CLIMATE CONTROL UNIT CONNECTOR



EVAPORATOR TEMPERATURE SENSOR CONNECTOR

DTC 19, 22 (WHEN TWO OR MORE DTCS INDICATED AT THE SAME TIME) [L3 WITH TC]

E6U070200000W37

DTC 19, 22	Climate control unit (+5V power supply) inspection
POSSIBLE CAUSE	• Climate control unit malfunction • Short circuit between climate control unit and solar radiation sensor • Short circuit between climate control unit and air mix actuator • Short circuit between climate control unit and airflow mode actuator • Open circuit between climate control unit and solar radiation sensor • Open circuit between climate control unit and air mix actuator • Open circuit between climate control unit and airflow mode actuator

Diagnostic Procedure

STEP	INSPECTION		ACTION
1	• Disconnect climate control unit connector (24-pin) and airflow mode actuator connector. • Is there open circuit between terminal 1B of climate control unit connector (24-pin) or terminal B of airflow mode actuator connector?	Yes	Repair wiring harness.
		No	Go to the next step.
2	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal B of airflow mode actuator connector?	Yes	Repair wiring harness.
		No	Go to the next step.
3	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal A of air mix actuator connector?	Yes	Repair wiring harness.
		No	Go to the next step.
4	• Is there short circuit to ground between terminal 1B of climate control unit connector (24-pin) and terminal A of solar radiation sensor connector?	Yes	Repair wiring harness.
		No	This system is normal at present. (Erase the past failure from memory.)

FOREWORD

E6U070300000W01

- The areas for inspection (steps) are given according to various circuit malfunctions. Use the following chart to verify the symptoms of the trouble in order to diagnose the appropriate area.

TROUBLESHOOTING INDEX [L3, AJ]

E6U070300000W02

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents.	• Problem with vents or ducts or both. • Airflow mode does not change.
2	Amount of air blown from vents does not change. (Full-auto air conditioner)	• Malfunction in blower system.
3	Amount of air blown from vents does not change. (Manual air conditioner)	• Malfunction in blower system.
4	Air intake mode does not change.	• Air intake mode does not change when switching REC/FRESH mode.
5	No temperature control with climate control unit.	• Malfunction in A/C unit or climate control unit air mix system or both.
6	Windshield fogged.	• A/C compressor does not operate when airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH when airflow mode is in DEFROSTER or HEAT/DEF modes.
7	Air from vents not cold enough.	• Magnetic clutch operates but A/C system malfunctions.
8	No cool air.	• Magnetic clutch does not operate.
9	Noise while operating A/C system.	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.

07–03

TROUBLESHOOTING INDEX [L3 WITH TC]

E6U070300000W14

No.	TROUBLESHOOTING ITEM	DESCRIPTION
1	Insufficient air (or no air) blown from vents.	• Problem with each vent and/or duct. • Airflow mode does not change.
2	Amount of air blown from vents does not change.	• Malfunction in blower system.
3	Air intake mode does not change.	• Air intake mode does not change when switching REC/FRESH mode.
4	No temperature control with climate control unit.	• Malfunction in A/C unit and/or climate control unit air mix system.
5	Windshield fogged.	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
6	Air from vents not cold enough.	• Magnetic clutch operates but A/C system malfunctions.
7	No cool air.	• Magnetic clutch does not operate.
8	Noise while operating A/C system.	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [L3, AJ]

E6U070300000W03

1	Insufficient air (or no air) blown from vents.
DESCRIPTION	• Problem with each vent or duct or both. • Airflow mode does not change.
POSSIBLE CAUSE	• Malfunction in airflow mode actuator • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect airflow mode actuator. (See 07–40–11 AIRFLOW MODE ACTUATOR INSPECTION [L3, AJ].) • Is it okay?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part in accordance with further inspection result. (See 07–40–11 AIRFLOW MODE ACTUATOR INSPECTION [L3, AJ].)
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES** • Does air blow out when in VENT mode?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
4	**VERIFY THAT DUCT IN DASHBOARD IS INSTALLED** • Is duct in dashboard properly installed?	Yes	Inspect duct for clogging, deformity and air leakage, then go to Step 8.
		No	Install duct securely in the proper position, then go to Step 9.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE** • Does air blow out when in HEAT mode?	Yes	Go to the next step.
		No	Inspect vent for clogging, then go to Step 9.
6	**INSPECT DEFROSTER MODE** • Does air blow out when in DEFROSTER mode?	Yes	Operation is okay. Recheck malfunction symptoms.
		No	Go to the next step.
7	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
8	**VERIFY THAT DEFROSTER DUCT IS INSTALLED** • Is defroster duct properly installed?	Yes	Inspect duct for clogging, deformity, and air leakage, then go to the next step.
		No	Install duct securely in proper position, then go to the next step.
9	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.1 INSUFFICIENT AIR (OR NO AIR) BLOWN FROM VENTS [L3 WITH TC]

E6U070300000W15

1	Insufficient air (or no air) blown from vents.
ESCRIPTION	• Problem with each vent and/or duct. • Airflow mode does not change.
POSSIBLE CAUSE	• Malfunction in airflow mode actuator • Malfunction in VENT mode system • Malfunction in HEAT mode system • Malfunction in DEFROSTER mode system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIRFLOW MODE ACTUATOR** • Inspect airflow mode actuator. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part in accordance with further inspection result.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN VENT MODE OR OTHER MODES** • Does air blow out when in VENT mode?	Yes	Go to Step 5.
		No	Go to the next step.
3	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
4	**VERIFY THAT DUCT IN DASHBOARD IS INSTALLED** • Is duct in dashboard properly installed?	Yes	Inspect duct for clogging, deformity and air leakage, then go to Step 9.
		No	Install duct securely in the proper position, then go to Step 9.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN HEAT MODE OR DEFROSTER MODE** • Does air blow out when in HEAT mode?	Yes	Go to the next step.
		No	Inspect vent for clogging, then go to Step 9.
6	**INSPECT DEFROSTER MODE** • Does air blow out when in DEFROSTER mode?	Yes	Operation is okay. Recheck malfunction symptoms.
		No	Go to the next step.
7	**INSPECT VENT** • Is vent clogged?	Yes	Remove obstruction, then go to Step 9.
		No	Go to the next step.
8	**VERIFY THAT DEFROSTER DUCT IS INSTALLED** • Is defroster duct properly installed?	Yes	Inspect duct for clogging, deformity, and air leakage, then go to the next step.
		No	Install duct securely in proper position, then go to the next step.
9	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [L3, AJ]

E6U070300000W04

Full-auto Air Conditioner

2	Amount of air blown from vents does not change.
DESCRIPTION	• Malfunction in blower system.
POSSIBLE CAUSE	• Malfunction in blower unit • Malfunction in blower motor • Malfunction in PWM unit system • Malfunction in climate control unit

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BLOWER 40 A FUSE** • Inspect BLOWER 40 A fuse. • Is it okay?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 15. If fuse burns out immediately, go to the next step.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Turn ignition switch to ON position. • Turn the fan switch to ON position. • Recirculate air inside vehicle. • Does blower unit fan rotate smoothly?	Yes	Go to the next step.
		No	Go to Step 4.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Is intake vent of blower unit clogged?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstructions in passage between blower unit to A/C unit, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR PWM UNIT SYSTEM** • Turn ignition switch to ON position. • Turn the fan switch to OFF position. • Test voltage at the following terminal of blower motor: — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Test voltage at the following terminals of blower relay: — Terminal A (IG2 signal) — Terminal C (B+ signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower relay and BLOWER 40 A fuse, then go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Test voltage at the following terminal of blower relay: — Terminal E (GND signal) • Is voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower relay and ground, then go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER MOTOR) OR BLOWER RELAY** • Test voltage at the following terminal of blower relay: — Terminal D (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between blower relay and blower motor, then go to Step 15.
		No	Replace blower relay, then go to Step 15.

STEP	INSPECTION		ACTION
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER MOTOR OR ELSEWHERE** • Test voltage at the following terminal of blower motor: — Terminal A (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect blower motor, then go to Step 15.
9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND PWM UNIT) OR ELSEWHERE** • Test voltage at the following terminal of PWM unit: — Terminal 2C and 1A (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower motor and PWM unit, then go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN PWM UNIT AND GROUND) OR ELSEWHERE** • Test voltage at the following terminal of PWM unit: — Terminal 1B (blower motor operation signal) • Is voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between PWM unit and ground, then go to Step 15.
11	**INSPECT BLOWER UNIT** • Inspect fan in blower unit. — Is fan free of interference with blower unit case? — Is fan free of foreign material and obstruction? • Is fan okay?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace fan and blower unit case, then go to Step 15.
2*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN PWM UNIT OR ELSEWHERE** • Turn the fan switch to 1st position from off. • Test voltage at the following terminal of PWM unit: — Terminal 2A (blower motor control signal) • Does voltage change from **12 V to 9 V**?	Yes	Replace PWM unit, then go to Step 15.
		No	Go to the next step.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN PWM UNIT AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Turn ignition switch to LOCK position. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between PWM unit and climate control unit: — Terminal 2A—1C (blower motor control signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair wiring harness between PWM unit and climate control unit, then go to Step 15.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND BETWEEN PWM UNIT AND CLIMATE CONTROL UNIT)** • Inspect for continuity between the following PWM unit terminal and ground. — Terminal 2A (blower motor control signal) • Is there continuity?	Yes	Repair wiring harness between PWM unit and ground, then go to the next step.
		No	Replace climate control unit, then go to the next step.
15	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.2 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [L3 WITH TC]

E6U070300000W16

2	Amount of air blown from vents does not change.
DESCRIPTION	• Malfunction in blower system.
POSSIBLE CAUSE	• Malfunction in blower unit • Malfunction in blower motor • Malfunction in power MOS FET system • Malfunction in climate control unit

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BLOWER 40 A FUSE** • Inspect BLOWER 40 A fuse. • Is it normal?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 15. If fuse burns out immediately, go to the next step.
2	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Turn ignition switch to ON position. • Turn the fan switch to ON position. • Recirculate air inside vehicle. • Does blower unit fan rotate smoothly?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT BLOWER UNIT INTAKE VENT** • Is intake vent of blower unit clogged?	Yes	Remove obstruction, then go to Step 15.
		No	Inspect if there are any obstruction in passage between blower unit to A/C unit, then go to Step 15.
4*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER RELAY SYSTEM OR POWER MOS FET SYSTEM** • Turn ignition switch to ON position. • Turn the fan switch to OFF position. • Test voltage at the following terminal of blower motor. — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 8.
		No	Go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN FUSE BLOCK AND BLOWER RELAY) OR ELSEWHERE** • Test voltage at the following terminal of blower relay. — Terminal A (IG2 signal) — Terminal C (B+ signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower relay and BLOWER 40 A fuse, then go to Step 15.
6*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND GROUND) OR ELSEWHERE** • Test voltage at the following terminal of blower relay. — Terminal E (GND signal) • Is voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower relay and ground, then go to Step 15.
7*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER RELAY AND BLOWER MOTOR) OR BLOWER RELAY** • Test voltage at the following terminal of blower relay. — Terminal D (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between blower relay and blower motor, then go to Step 15.
		No	Replace blower relay, then go to Step 15.

STEP	INSPECTION		ACTION
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN BLOWER MOTOR OR ELSEWHERE** • Test voltage at the following terminal of blower motor. — Terminal B (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Inspect blower motor, then go to Step 15.
9*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN BLOWER MOTOR AND POWER MOS FET) OR ELSEWHERE** • Test voltage at the following terminal of power MOS FET. — Terminal E (blower motor operation signal) • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between blower motor and power MOS FET, then go to Step 15.
10*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND GROUND) OR ELSEWHERE** • Test voltage at the following terminal of power MOS FET. — Terminal A (blower motor operation signal) • Is voltage **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between power MOS FET and ground, then go to Step 15.
11	**INSPECT BLOWER UNIT** • Inspect fan in blower unit. — Is fan free of interference with blower unit case? — Is fan free of foreign material and obstruction? • Is fan normal?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace fan and blower unit case, then go to Step 15.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN POWER MOS FET OR ELSEWHERE** • Turn the fan switch to 1st position from off. • Disconnect power MOS FET connector. • Test voltage at the following terminal of power MOS FET. — Terminal B (blower motor control signal) • Is voltage **approx. 10 V**?	Yes	Replace power MOS FET, then go to Step 15.
		No	Go to the next step.
13*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (LACK OF CONTINUITY BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Turn ignition switch to LOCK position. • Disconnect climate control unit connector. • Inspect for continuity at the following terminals between power MOS FET and climate control unit. — Terminal B—1A (24-pin, blower motor control signal) — Terminal E—1C (24-pin, blower motor feedback signal) • Is there continuity?	Yes	Go to the next step.
		No	Repair wiring harness between power MOS FET and climate control unit, then go to Step 15.
14*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR WIRING HARNESS (SHORT TO GROUND BETWEEN POWER MOS FET AND CLIMATE CONTROL UNIT)** • Inspect for continuity at the following terminal between power MOS FET and ground. — Terminal A (blower motor control signal)—ground • Is there continuity?	Yes	Repair wiring harness between power MOS FET and ground, then go to the next step.
		No	Replace climate control unit, then go to the next step.
15	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Is air discharged from vent?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.3 AMOUNT OF AIR BLOWN FROM VENTS DOES NOT CHANGE [L3, AJ]

E6U070300000W05

Manual Air Conditioner

3	Amount of air blown from vents does not change.
DESCRIPTION	• Malfunction in blower system.
POSSIBLE CAUSE	• Blower relay, blower motor, resistor, fan switch malfunction • Blower unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BLOWER SYSTEM** • Inspect the following systems and electrical parts: — Blower relay — Blower motor — Resistor — Fan switch — Related wiring harnesses • Are they okay?	Yes	Go to the next step.
		No	Repair or replace malfunctioning part, then go to Step 5.
2	**CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT OR ELSEWHERE** • Turn ignition switch to ON position. • Turn fan switch on. • Recirculate air inside vehicle. • Does fan in blower unit rotate smoothly?	Yes	Go to Step 4.
		No	Go to the next step.
3	**INSPECT BLOWER UNIT** • Inspect fan in blower unit. — Is fan free of interference from blower unit case? — Is fan free of foreign material and obstructions? • Is fan okay?	Yes	Go to the next step.
		No	Remove obstruction, repair or replace fan and blower unit case, then go to Step 5.
4	**INSPECT BLOWER UNIT INTAKE VENT** • Is blower unit intake vent clogged?	Yes	Remove obstruction, then go to the next step.
		No	Inspect if there are any obstructions in passage between blower unit and A/C unit, then go to the next step.
5	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does air blow out?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.3 AIR INTAKE MODE DOES NOT CHANGE [L3 WITH TC]

E6U070300000W17

3	**Air intake mode does not change.**
DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	• Malfunction in air intake actuator • Malfunction in air intake door

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR, WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn ignition switch to ON position. • Test voltages at the following terminals of climate control unit. — Terminal 2K (12-pin, FRESH motor drive signal) — Terminal 2I (12-pin, RECIRCULATE motor drive signal) (See 07–40–39 CLIMATE CONTROL UNIT INSPECTION [L3 WITH TC].) • Are voltages okay?	Yes	Go to the next step.
		No	Go to Step 3.
2*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR)** • Test voltages at the following terminals of air intake actuator. — Terminal D (FRESH motor drive signal) — Terminal F (RECIRCULATE motor drive signal) • Are voltages as shown below? — Terminal D: **approx. 0.5 V** during RECIRCULATE and **approx. 10 V** during FRESH — Terminal F: **approx. 10 V** during RECIRCULATE and **approx. 0.5 V** during FRESH	Yes	Replace air intake actuator, then go to Step 8.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect air intake actuator connector. • Test voltages at the following terminals of climate control unit. — Terminal 2K (12-pin, FRESH motor drive signal) — Terminal 2I (12-pin, RECIRCULATE motor drive signal) (See 07–40–39 CLIMATE CONTROL UNIT INSPECTION [L3 WITH TC].) • Are voltages okay?	Yes	Inspect air intake actuator, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Disconnect climate control unit connector. • Test voltages at the following terminals of climate control unit. — Terminal 2K (12-pin, FRESH motor drive signal) — Terminal 2I (12-pin, RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn ignition switch to LOCK position. • Inspect for continuity at the following terminals between climate control unit and ground. — Terminal 2K (12-pin, FRESH motor drive signal) — Terminal 2I (12-pin, RECIRCULATE motor drive signal) • Is there continuity?	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
		No	Go to the next step.
6	**INSPECT AIR INTAKE LINK** • Inspect air intake links. — Is there grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged, replace air intake actuator, then go to Step 8.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect blower unit air intake door. — Is door free of obstructions, cracks, and damage? — Are doors securely and properly installed? • Are above items okay?	Yes	Replace climate control unit, then go to the next step.
		No	Remove obstruction, or install doors in proper position. If any doors are cracked or damaged, replace them, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.4 AIR INTAKE MODE DOES NOT CHANGE [L3, AJ]

E6U070300000W06

4	**Air intake mode does not change.**
DESCRIPTION	• Air intake mode does not change when switching REC/FRESH mode.
POSSIBLE CAUSE	• Malfunction in air intake actuator • Malfunction in air intake door

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.
- When checking intake motor drive signal, test it within **20 s** after switching REC/FRESH mode. For that signal turns off after **20 s**.

Diagnostic procedure

STEP	INSPECTION		ACTION
1*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR, WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn ignition switch to ON position. • Test voltages at the following terminals of climate control unit: — Terminal 2K (FRESH motor drive signal) — Terminal 2I (RECIRCULATE motor drive signal) (See 07–40–33 Full-auto Air Conditioner) • Are voltages okay?	Yes	Go to the next step.
		No	Go to Step 3.
2*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN AIR INTAKE ACTUATOR OR WIRING HARNESS (BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR)** • Test voltages at the following terminals of air intake actuator: — Terminal H (FRESH motor drive signal) — Terminal G (RECIRCULATE motor drive signal) • Are voltages as shown below? — Terminal H: **approx. 0.5 V** during RECIRCULATE and **approx. 10 V** during FRESH — Terminal G: **approx. 10 V** during RECIRCULATE and **approx. 0.5 V** during FRESH	Yes	Replace air intake actuator, then go to Step 8.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
3	**INSPECT TO SEE WHETHER MALFUNCTION IS IN AIR INTAKE ACTUATOR OR ELSEWHERE** • Disconnect air intake actuator connector. • Test voltages at the following terminals of climate control unit: — Terminal 2K (FRESH motor drive signal) — Terminal 2I (RECIRCULATE motor drive signal) (See 07–40–33 Full-auto Air Conditioner) • Are voltages okay?	Yes	Inspect air intake actuator, then go to Step 8.
		No	Go to the next step.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO B+ BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Disconnect climate control unit connector. • Test voltages at the following terminals of climate control unit: — Terminal 2K (FRESH motor drive signal) — Terminal 2I (RECIRCULATE motor drive signal) • Are voltages **approx. 0 V**?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
5	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (SHORT TO GROUND BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR) OR ELSEWHERE** • Turn ignition switch to LOCK position. • Inspect for continuity at the following terminals between climate control unit and ground: — Terminal 2K (FRESH motor drive signal) — Terminal 2I (RECIRCULATE motor drive signal) • Is there continuity?	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 8.
		No	Go to the next step.

STEP	INSPECTION		ACTION
6	**INSPECT AIR INTAKE LINK** • Inspect air intake links. — Is there grease on link? — Are links securely and properly installed? — Are links free of obstructions and hindrances? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease to links. If any links are damaged, replace air intake actuator, then go to Step 8.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR AIR INTAKE DOOR** • Inspect blower unit air intake door. — Is door free of obstructions, cracks, and damage? — Are doors securely and properly installed? • Are above items okay?	Yes	Replace climate control unit, then go to the next step.
		No	Remove obstruction, or install doors in proper positions. If any doors are cracked or damaged, replace them, then go to the next step.
8	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does air intake mode change smoothly?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.4 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [L3 WITH TC]

E6U070300000W18

4	No temperature control with climate control unit.
DESCRIPTION	• Malfunction in A/C unit and/or climate control unit air mix system.
POSSIBLE CAUSE	• A/C unit air mix link, air mix crank, air mix rod, air mix wire, wire clamp malfunction • Climate control unit rack-and-pinion, air mix wire malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm engine up, then go to Step 8.
2	**INSPECT A/C UNIT AIR MIX SYSTEM** • Inspect A/C unit air mix links, air mix cranks, air mix rods, air mix actuator or wire clamp. — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease or install links, cranks, and rods securely in their proper positions, repair or replace air mix actuator or wire clamp, then go to Step 8.
3	**VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY (IF AVAILABLE)** • Is air mix wire securely installed in the correct position in relation to A/C unit air mix links?	Yes	Go to the next step.
		No	Adjust air mix wire or install securely in correct position, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect climate control unit. (See 07–40–39 CLIMATE CONTROL UNIT INSPECTION [L3 WITH TC].) • Is climate control unit normal?	Yes	Go to the next step.
		No	Repair or replace climate control unit, then go to Step 8.
5	**INSPECT A/C UNIT** • Is there any foreign material or obstruction in A/C unit air mix doors?	Yes	Remove obstruction, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/C UNIT AIR MIX DOORS** • Is A/C unit air mix door securely and properly installed?	Yes	Inspect air mix door for cracks or damage, then go to the next step.
		No	Install air mix door securely in proper position, then go to the next step.
7	**INSPECT HEATER LINES** • Inspect heater lines. — Is heater piping free of damage and cracks? — Are heater piping connections free of engine coolant leakage? — Are heater piping connections securely tightened? — Are heater piping installation points on A/C unit free of engine coolant leakage? • Are above items okay?	Yes	Operation is okay. Recheck malfunction symptoms.
		No	If heater piping connections is loosed, tighten connections with specified torque. Repair or replace heater piping, then go to the next step.
8	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does unit operate in every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.5 NO TEMPERATURE CONTROL WITH CLIMATE CONTROL UNIT [L3, AJ]

E6U070300000W07

5	No temperature control with climate control unit.
DESCRIPTION	• Malfunction in A/C unit or climate control unit air mix system or both.
POSSIBLE CAUSE	• A/C unit air mix link, air mix crank, air mix rod, air mix wire, wire clamp malfunction • Climate control unit rack-and-pinion, air mix wire malfunction • A/C unit air mix door malfunction • Heater piping malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COOLANT TEMPERATURE** • Is coolant sufficiently warmed up?	Yes	Go to the next step.
		No	Warm engine up, then go to Step 8.
2	**INSPECT A/C UNIT AIR MIX SYSTEM** • Inspect A/C unit air mix links, air mix cranks, air mix rods, air mix actuator or wire clamp. — Is there grease on links and cranks? — Are links, cranks, and rods securely installed in their proper positions? — Is wire clamp free of deformation? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease or install links, cranks, and rods securely in their proper positions, repair or replace air mix actuator or wire clamp, then go to Step 8.
3	**VERIFY THAT AIR MIX WIRE FROM A/C UNIT IS POSITIONED SECURELY AND CORRECTLY (IF AVAILABLE)** • Is air mix wire securely installed in the correct position in relation to A/C unit air mix links?	Yes	Go to the next step.
		No	Adjust air mix wire or install securely in correct position, then go to Step 8.
4	**INSPECT CLIMATE CONTROL UNIT** • Inspect climate control unit. (See 07–40–33 CLIMATE CONTROL UNIT INSPECTION [L3, AJ].) • Is climate control unit okay?	Yes	Go to the next step.
		No	Repair or replace climate control unit, then go to Step 8.
5	**INSPECT A/C UNIT** • Is there any foreign material or obstruction in A/C unit air mix doors?	Yes	Remove obstruction, then go to Step 8.
		No	Go to the next step.
6	**INSPECT A/C UNIT AIR MIX DOORS** • Is A/C unit air mix door securely and properly installed?	Yes	Inspect air mix door for cracks or damage, then go to the next step.
		No	Install air mix door securely in proper position, then go to the next step.
7	**INSPECT HEATER LINES** • Inspect heater lines. — Is heater piping free of damage and cracks? — Are heater piping connections free of engine coolant leakage? — Are heater piping connections securely tightened? — Are heater piping installation points on A/C unit free of engine coolant leakage? • Are above items okay?	Yes	Operation is okay. Recheck malfunction symptoms.
		No	If heater piping connections are loose, tighten connections with specified torque. Repair or replace heater piping, then go to the next step.
8	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does unit operate in every temperature setting?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.5 WINDSHIELD FOGGED [L3 WITH TC]

E6U070300000W19

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

5	Windshield fogged.
DESCRIPTION	• A/C compressor does not operate while airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH while airflow mode is in DEFROSTER or HEAT/DEF modes.
POSSIBLE CAUSE	• Climate control unit (B+ signal) system malfunction • Air intake actuator malfunction • Climate control unit (RECIRCULATE, FRESH signal) system malfunction • Malfunction in blower unit air intake doors

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both A/C and fan switch in climate control unit are on, does cool air blow out from front vent?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.7.
2	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is climate control unit power supply fuse for B+ signal okay?	Yes	Go to the next step.
		No	Inspect for a short to ground on blown fuse circuit. • Repair or replace as necessary. Install appropriate amperage fuse.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. — Is there grease on link? — Is link securely and properly positioned? — Is link free of obstructions? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease or install link properly and securely, remove obstruction, then go to Step 14.
*4	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect climate control unit connector (12-pin). • Turn the ignition switch to ON position. • Test voltage at climate control unit connector terminal 2F (B+ signal). • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and climate control unit, then go to Step 14.
*5	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE** • Test voltage at climate control unit connector terminal 2L (Ground). • Is voltage **approx. 0V**?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and ground, then go to Step 14.
6	**VERIFY WHETHER MALFUNCTION IS IN BLOWER UNIT AIR INTAKE DOOR OR ELSEWHERE** • Turn the ignition switch to LOCK position. • Connect climate control unit connector (12-pin). • Remove air intake actuator. • Turn the ignition switch to ON position. • Set fan switch to 4th position. • Does air intake mode (RECIRCULATE, FRESH) change smoothly when air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
7	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. (See 07–40–7 AIR INTAKE ACTUATOR INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Go to the next step.
		No	Replace air intake actuator, go to Step 14.

STEP	INSPECTION		ACTION
8	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Test voltage at climate control unit connector (12-pin) terminals 2K and 2I. • Is it normal?	Yes	Go to the next step.
		No	Replace climate control unit, then go to Step 14.
*9	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Turn the ignition switch to LOCK position. • Is there continuity between following climate control unit connector (12-pin) terminal and air intake actuator connector terminal? — Terminal D —Terminal 2K (FRESH signal) — Terminal F —Terminal 2I (RECIRCULATE signal)	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.
*10	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between following climate control unit connector (12-pin) terminal and ground? — Terminal 2K (FRESH signal) — Terminal 2I (RECIRCULATE signal)	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
*11	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Turn the ignition switch to ON position • Test voltage at following climate control unit connector (12-pin) terminal. — Terminal 2K (FRESH signal) — Terminal 2I (RECIRCULATE signal) • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.
		No	Replace climate control unit, then go to Step 14.
12	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign material or obstruction in blower unit air intake door?	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is blower unit air intake door securely and properly positioned?	Yes	Inspect air intake door for cracks or damage, then go to the next step.
		No	Install air intake door securely in proper position, then go to the next step.
14	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.6 WINDSHIELD FOGGED [L3, AJ]

E6U070300000W08

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.
- When checking intake motor drive signal, test it within **20 s** after switching REC/FRESH mode. For that signal turns off after **20 s**.

6	**Windshield fogged.**
DESCRIPTION	• A/C compressor does not operate when airflow mode is in DEFROSTER or HEAT/DEF modes. • Air intake mode does not change to FRESH when airflow mode is in DEFROSTER or HEAT/DEF modes.
POSSIBLE CAUSE	• Climate control unit (B+ signal) system malfunction • Air intake actuator malfunction • Climate control unit (RECIRCULATE, FRESH signal) system malfunction • Malfunction in blower unit air intake doors

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**COOL AIR BLOW OUT INSPECTION** • When both A/C and fan switch in climate control unit are on, does cool air blow out from front vent?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting index No.8.
2	**INSPECT CLIMATE CONTROL UNIT POWER SUPPLY FUSE FOR B+ SIGNAL** • Is climate control unit power supply fuse for B+ signal okay?	Yes	Go to the next step.
		No	Inspect for a short to ground on blown fuse circuit. • Repair or replace as necessary. Install appropriate amperage fuse.
3	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. — Is there grease on link? — Is link securely and properly positioned? — Is link free of obstructions? • Are above items okay?	Yes	Go to the next step.
		No	Apply grease or install link properly and securely, remove obstruction, then go to Step 14.
*4	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND CLIMATE CONTROL UNIT FOR CONTINUITY** • Disconnect climate control unit connector (12-pin). • Turn ignition switch to ON position. • Test voltage at climate control unit terminal 2F (B+ signal). • Is voltage **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and climate control unit, then go to Step 14.
*5	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND GROUND FOR VOLTAGE** • Test voltage at climate control unit terminal 2L (Ground). • Is voltage **approx. 0V**?	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and ground, then go to Step 14.
6	**VERIFY WHETHER MALFUNCTION IS IN BLOWER UNIT AIR INTAKE DOOR OR ELSEWHERE** • Turn ignition switch to LOCK position. • Connect climate control unit connector (12-pin). • Remove air intake actuator. • Turn ignition switch to ON position. • Set fan switch to 4th position. • Does air intake mode (RECIRCULATE, FRESH) change smoothly when air intake link is operated by hand?	Yes	Go to the next step.
		No	Go to Step 12.
7	**INSPECT AIR INTAKE ACTUATOR** • Inspect air intake actuator. (See 07–40–7 AIR INTAKE ACTUATOR INSPECTION [L3, AJ].) • Is it okay?	Yes	Go to the next step.
		No	Replace air intake actuator, then go to Step 14.
8	**INSPECT AIR INTAKE SELECTOR SWITCH AND DEFROSTER SWITCH IN CLIMATE CONTROL UNIT** • Test voltage at climate control unit terminals 2K and 2I. • Is it okay?	Yes	Go to the next step.
		No	Replace climate control unit, then go to Step 14.
*9	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR CONTINUITY** • Turn ignition switch to LOCK position. • Is there continuity between the following climate control unit terminals and air intake actuator terminals? — Terminal 2K—Terminal H (FRESH signal) — Terminal 2I—Terminal G (RECIRCULATE signal)	Yes	Go to the next step.
		No	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.

STEP	INSPECTION		ACTION
*10	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO GROUND** • Is there continuity between the following climate control unit terminals and ground? — Terminal 2K (FRESH signal) — Terminal 2I (RECIRCULATE signal)	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.
		No	Go to the next step.
*11	**INSPECT WIRING HARNESS BETWEEN CLIMATE CONTROL UNIT AND AIR INTAKE ACTUATOR FOR SHORT TO B+** • Turn ignition switch to ON position • Test voltage at the following climate control unit terminals: — Terminal 2K (FRESH signal) — Terminal 2I (RECIRCULATE signal) • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between climate control unit and air intake actuator, then go to Step 14.
		No	Replace climate control unit, then go to Step 14.
12	**INSPECT BLOWER UNIT AIR INTAKE DOOR** • Is there any foreign material or obstruction in blower unit air intake door?	Yes	Remove obstruction, then go to Step 14.
		No	Go to the next step.
13	**VERIFY THAT BLOWER UNIT AIR INTAKE DOOR IS POSITIONED SECURELY AND PROPERLY** • Is blower unit air intake door securely and properly positioned?	Yes	Inspect air intake door for cracks or damage, then go to the next step.
		No	Install air intake door securely in proper position, then go to the next step.
14	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does malfunction disappear?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.6 AIR FROM VENTS NOT COLD ENOUGH [L3 WITH TC]

E6U070300000V

6	**Air from vents not cold enough.**
DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions.
POSSIBLE CAUSE	• Drive belt malfunction • Malfunction in blower unit or condenser • Malfunction in receiver/drier or expansion valve (valve closes too much) • Malfunction in refrigerant lines • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01–10A–3 DRIVE BELT INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 20.
2	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See 07–10–4 REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC].) • Is operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
3	**CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT INTAKE AND CONDENSER OR ELSEWHERE** • Are refrigerant high-pressure and low-pressure values both high?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT BLOWER UNIT INTAKE** • Is blower unit intake clogged?	Yes	Remove obstruction, then go to Step 20. (If air does not reach evaporator within A/C unit, heat exchange does not occur and refrigerant pressure becomes high. Therefore, removal of obstruction is necessary.)
		No	Go to the next step.

STEP	INSPECTION		ACTION
5	**INSPECT CONDENSER** • Inspect condenser. (See 07–11–18 CONDENSER INSPECTION.) • Is it normal?	Yes	Adjust refrigerant to specified amount, then go to Step 20. (Excessive amount of refrigerant.)
		No	Replace condenser, or repair and clean condenser fins, then go to Step 20.
6	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, RECEIVER/DRIER AND REFRIGERANT LINES OR ELSEWHERE** • Are refrigerant high-pressure and low-pressure values low?	Yes	Go to the next step.
		No	Go to Step 14.
7	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/ DRIER OR ELSEWHERE** • Immediately after A/C compressor operates, does refrigerant high-pressure value momentarily rise to correct value, then fall and stay below it? (Is there negative pressure on low-pressure side?)	Yes	Go to the next step.
		No	Go to Step 10.
8	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR RECEIVER/ DRIER** • Turn A/C switch off and let air conditioner stop for **10 min**. • Start engine. • Turn both A/C switch and fan switch on. • Does malfunction occur after A/C compressor turns on?	Yes	Go to the next step.
		No	Replace condenser and vacuum refrigerant line **more than 30 min** by vacuum pump, add refrigerant to specified level, then go to Step 20. (Since water has intermixed in receiver/ drier and it is saturated, replacement is necessary.)
9	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is expansion valve heat-sensing tube within A/C unit securely installed in proper position?	Yes	Replace expansion valve, then go to Step 20. (Since valve closes too much, replacement is necessary.)
		No	Install heat-sensing tube securely in proper position, then go to Step 20.
10	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/ drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) are damaged or cracked, replace them. Then go to Step 20. If there is no damage, go to Step 13.
11	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Adjust refrigerant to specified amount, then go to Step 20.
		No	If piping is damaged or cracked, replace it. Then go to Step 20. If there is no damage, go to the next step.
12	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR LOOSE** • Are piping connections for evaporator in A/C unit loose?	Yes	Tighten connections with specified torque, adjust both compressor oil and refrigerant to specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace O-ring on piping, adjust refrigerant to specified amount, then go to Step 20.

STEP	INSPECTION		ACTION
13	**INSPECT PIPING CONNECTIONS FOR LOOSE** • Are piping connections loose?	Yes	Tighten connections with specified torque, adjust both compressor oil and refrigerant to specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace O-ring on piping, adjust refrigerant to specified amount, then go to Step 20.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, AIR MIX ACTUATOR AND COMPRESSOR OIL OR ELSEWHERE** • Does refrigerant high-pressure value hardly increase?	Yes	Go to the next step. (Pressure hardly increases.)
		No	Go to Step 17.
15	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT AND A/C COMPRESSOR OR ELSEWHERE** • When engine is racing, does high-pressure value increase?	Yes	Return to Step 3.
		No	Go to the next step.
16	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT OR A/C COMPRESSOR** • After compressor oil is replenished each **10 ml {10 cc, 0.34 fl oz}**, does high-pressure value increase?	Yes	Troubleshooting completed. (Explain to customer that cause was insufficient compressor oil.)
		No	Replace A/C compressor, then go to Step 20. (Cause is defective A/C compressor.)
17	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Is only refrigerant low-pressure value high?	Yes	Go to Step 19.
		No	Go to the next step.
18	**VERIFY THAT AIR MIX IS INSTALLED SECURELY AND PROPERLY** • Are A/C unit air mix links, air mix cranks, and air mix rods securely and properly installed?	Yes	Set fan switch to 4th position. Turn A/C switch on. Set FRESH mode. Set temperature control to MAX COLD. Set VENT mode. (1)Start and run the engine at **1,500 rpm** for **10 min.** (2)Run the engine at idle for **1 min.** (3)Within **12 s**, idle → **4,000 rpm** → idle. Perform cycle **5 times.** (4) Run the engine at idle for **30 s.** (5)Drain the compressor oil completely from the A/C compressor and verify the amount. • If there is **approx. 90 ml {90 cc, 3.0 fl oz}** of compressor oil, go to Step 20. • If there is **more than 90 ml {90 cc, 3.0 fl oz}** of compressor oil, remove surplus oil and fill A/C compressor with **90 ml {90 cc, 3.0 fl oz}** of compressor oil. Repeat Steps (1) to (5). (Cause is excessive amount of compressor oil.)
		No	Repair or install links, cranks and rods securely in proper position, then go to Step 20.
19	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is expansion valve heat-sensing tube within A/C unit securely installed in proper position?	Yes	Replace expansion valve, then go to the next step. (Since valve opens too much, replacement is necessary.)
		No	Install heat-sensing tube securely in proper position, then go to the next step.
20	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does cool air blow out? (Are results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.7 AIR FROM VENTS COLD ENOUGH [L3, AJ]

E6U070300000W09

7	Air from vents not cold enough.
DESCRIPTION	• Magnetic clutch operates but A/C system malfunctions.
POSSIBLE CAUSE	• Drive belt malfunction • Malfunction in blower unit or condenser • Malfunction in receiver/drier or expansion valve (valve closes too much) • Malfunction in refrigerant lines (Steps 10, 11) • A/C compressor system malfunction, insufficient compressor oil • Over filling of compressor oil, malfunction in expansion valve or A/C unit air mix link system

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01–10A–3 DRIVE BELT INSPECTION [L3]) (See 01–10C–3 DRIVE BELT INSPECTION [AJ]) • Is it okay?	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 20.
2	**INSPECT REFRIGERANT SYSTEM PERFORMANCE** • Perform refrigerant system performance test. (See 07–10–3 REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ]) • Is operation normal?	Yes	Operation is normal. (Recheck malfunction symptoms.)
		No	Go to the next step.
3	**CHECK TO SEE WHETHER MALFUNCTION IS IN BLOWER UNIT INTAKE AND CONDENSER OR ELSEWHERE** • Are refrigerant high-pressure and low-pressure values both high?	Yes	Go to the next step.
		No	Go to Step 6.
4	**INSPECT BLOWER UNIT INTAKE** • Is blower unit intake clogged?	Yes	Remove obstruction, then go to Step 20. (If air does not reach evaporator within A/C unit, heat exchange does not occur and refrigerant pressure becomes high. Therefore, removal of obstruction is necessary.)
		No	Go to the next step.
5	**INSPECT CONDENSER** • Inspect condenser. (See 07–11–18 CONDENSER INSPECTION.) • Is it okay?	Yes	Adjust refrigerant to specified amount, then go to Step 20. (Excessive amount of refrigerant.)
		No	Replace condenser, or repair and clean condenser fins, then go to Step 20.
6	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, RECEIVER/DRIER AND REFRIGERANT LINES OR ELSEWHERE** • Are refrigerant high-pressure and low-pressure values low?	Yes	Go to the next step.
		No	Go to Step 14.
7	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE AND RECEIVER/DRIER OR ELSEWHERE** • Immediately after A/C compressor operates, does refrigerant high-pressure value momentarily rise to correct value, then fall and stay below it? (Is there negative pressure on low-pressure side?)	Yes	Go to the next step.
		No	Go to Step 10.
8	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR RECEIVER/DRIER** • Turn A/C switch off and let air conditioner stop for **10 min.** • Start engine. • Turn both A/C switch and fan switch on. • Does malfunction occur after A/C compressor turns on?	Yes	Go to the next step.
		No	Replace condenser and bleed refrigerant line for **30 min or more** using a vacuum pump, add refrigerant to specified level, then go to Step 20. (Since water has intermixed in receiver/drier and it is saturated, replacement is necessary.)

STEP	INSPECTION		ACTION
9	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is expansion valve heat-sensing tube within A/C unit securely installed in proper position?	Yes	Replace expansion valve, then go to Step 20. (Since valve closes too much, replacement is necessary.)
		No	Install heat-sensing tube securely in proper position, then go to Step 20.
10	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/ drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage? — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) are damaged or cracked, replace them. Then go to Step 20. If there is no damage, go to Step 13.
11	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Adjust refrigerant to specified amount, then go to Step 20.
		No	If piping is damaged or cracked, replace it. Then go to Step 20. If there is no damage, go to the next step.
12	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR LOOSE** • Are piping connections for evaporator in A/C unit loose?	Yes	Tighten connections with specified torque, adjust both compressor oil and refrigerant to specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace O-ring on piping, adjust refrigerant to specified amount, then go to Step 20.
13	**INSPECT PIPING CONNECTIONS FOR LOOSENESS** • Are piping connections loose?	Yes	Tighten connections with specified torque, adjust both compressor oil and refrigerant to specified amount, then go to Step 20.
		No	If the vane makes a noise, add **10 ml {10 cc, 0.34 fl oz}** of compressor oil to the A/C compressor. Verify that the noise is no longer heard. Replace O-ring on piping, adjust refrigerant to specified amount, then go to Step 20.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE, AIR MIX ACTUATOR AND COMPRESSOR OIL OR ELSEWHERE** • Does refrigerant high-pressure value increase only a little?	Yes	Go to the next step. (Pressure increases only a little.)
		No	Go to Step 17.
15	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT AND A/C COMPRESSOR OR ELSEWHERE** • When engine is racing, does high-pressure value increase?	Yes	Return to Step 3.
		No	Go to the next step.
16	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL AMOUNT OR A/C COMPRESSOR** • After compressor oil is replenished each **10 ml {10 cc, 0.34 fl oz}**, does high-pressure value increase?	Yes	Troubleshooting completed. (Explain to customer that cause was insufficient compressor oil.)
		No	Replace A/C compressor, then go to Step 20. (Cause is defective A/C compressor.)
17	**CHECK TO SEE WHETHER MALFUNCTION IS IN EXPANSION VALVE OR ELSEWHERE** • Is only refrigerant low-pressure value high?	Yes	Go to Step 19.
		No	Go to the next step.

STEP	INSPECTION		ACTION
18	**VERIFY THAT AIR MIX IS INSTALLED SECURELY AND PROPERLY** • Are A/C unit air mix links, air mix cranks, and air mix rods securely and properly installed?	Yes	Set fan switch to the maximum position. Turn A/C switch on. Set FRESH mode. Set temperature control to MAX COLD. Set VENT mode. (1)Start and run the engine at **1,500 rpm** for **10 min.** (2)Run the engine at idle for **1 min.** (3)Within **12 s**, idle → **4,000 rpm** → idle. Perform cycle **5 times.** (4) Run the engine at idle for **30 s.** (5)Drain the compressor oil completely from the A/C compressor and verify the amount. • If there is **approx. 20 ml {20 cc, 0.7 fl oz}** of compressor oil, go to Step 20. • If there is **20 ml {20 cc, 0.7 fl oz} or more** of compressor oil, remove surplus oil and fill A/C compressor with **20 ml {20 cc, 0.7 fl oz}** of compressor oil. Repeat Steps (1) to (5). (Cause is excessive amount of compressor oil.)
		No	Repair or install links, cranks and rods securely in proper position, then go to Step 20.
19	**VERIFY THAT EXPANSION VALVE HEAT-SENSING TUBE WITHIN A/C UNIT IS POSITIONED SECURELY AND CORRECTLY** • Is expansion valve heat-sensing tube within A/C unit securely installed in proper position?	Yes	Replace expansion valve, then go to the next step. (Since valve opens too much, replacement is necessary.)
		No	Install heat-sensing tube securely in proper position, then go to the next step.
20	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Does cool air blow out? (Are results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.7 NO COOL AIR [L3 WITH TC]

E6U070300000W21

7	No cool air
DESCRIPTION	• Magnetic clutch does not operate.
POSSIBLE CAUSE	• Malfunction in PCM A/C cut control system • Malfunction in climate control unit • Malfunction in refrigerant pressure switch • Malfunction in PCM (A/C signal) • Malfunction in PCM (IG1 signal) • Malfunction in A/C compressor • Malfunction in A/C relay • Malfunction in evaporator temperature sensor

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
2	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of troubleshooting index No.6.
		No	Go to the next step.
3	**INSPECT FOR DTC IN PCM** • Inspect for DTCs related to the PCM on-board diagnostic system. • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR ELSEWHERE** • Does cool air blow out when terminal 1P of climate control unit connector (24-pin, A/C signal) is grounded?	Yes	Replace climate control unit, then go to Step 17.
		No	Release short, then go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C SIGNAL CIRCUIT (BETWEEN REFRIGERANT PRESSURE SWITCH AND PCM) OR ELSEWHERE** • Test voltage at following terminal of refrigerant pressure switch. — Terminal B (A/C signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 7.
		No	Go to the next step.
6*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (BETWEEN REFRIGERANT PRESSURE SWITCH AND PCM) OR PCM** • Test voltage at A/C signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between PCM and refrigerant pressure switch, then go to Step 17.
		No	Inspect PCM, then go to Step 17.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT PRESSURE SWITCH, REFRIGERANT AMOUNT, OR ELSEWHERE** • Does cool air blow out when terminals A and B of refrigerant pressure switch connector are shorted?	Yes	Go to Step 9.
		No	Go to the next step.
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN REFRIGERANT PRESSURE SWITCH AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Test voltage at following terminal of climate control unit. — Terminal 1P (24-pin, A/C signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 10.
		No	Repair wiring harness between refrigerant pressure switch and climate control unit, then go to Step 17.

STEP	INSPECTION		ACTION
9	**INSPECT TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT PRESSURE SWITCH OR REFRIGERANT AMOUNT** • Inspect refrigerant pressure switch. • Is it normal?	Yes	If refrigerant amount is empty, replace condenser, vacuum refrigerant line **more than 30 min** by vacuum pump, and add refrigerant to specified level, then go to Step 17.
		No	Replace refrigerant pressure switch, then go to Step 17.
10	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when terminal E of A/C relay connector (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 12.
11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)** • Test voltage at the A/C relay control signal terminal of PCM. • Is voltage **approx. 12 V**?	Yes	Inspect PCM, then go to Step 17.
		No	Repair wiring harness between A/C relay and PCM, then go to Step 17.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Test voltage at the following terminal of magnetic clutch thermal protector. — Terminal A (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect magnetic clutch, then go to Step 17.
		No	Go to the next step.
13	**INSPECT FUSE** • Are A/C relay power supply fuses okay?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 17. If fuse burns out immediately, go to the next step.
14	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY** • Test voltages at following terminals of A/C relay. — Terminal A (A/C relay control signal) — Terminal C (A/C control signal) • Are voltages **approx. 12 V**?	Yes	Go to the next step.
		No	Repair wiring harness between fuse block and A/C relay, then go to Step 17.
15	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH) AND EVAPORATOR TEMPERATURE SENSOR** • Test voltage at the following terminal of A/C relay. — Terminal D (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is normal, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to Step 17.
		No	Replace A/C relay, then go to Step 17.
16	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect evaporator temperature sensor. • Is it normal?	Yes	Go to the next step.
		No	Replace evaporator temperature sensor, then go to the next step.
17	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air blow out? (Are the results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.8 NO COOL AIR [L3, AJ]

E6U070300000W10

8	No cool air
DESCRIPTION	• Magnetic clutch does not operate.
POSSIBLE CAUSE	• Malfunction in PCM A/C cut control system • Malfunction in climate control unit • Malfunction in refrigerant pressure switch • Malfunction in PCM (A/C signal) • Malfunction in PCM (IG1 signal) • Malfunction in A/C compresso) • Malfunction in A/C relay • Malfunction in evaporator temperature sensor

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, check to make sure connectors, terminals and wiring harnesses are connected correctly and undamaged.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT AIR BLOW OUT** • Does air blow out?	Yes	Go to the next step.
		No	Go to Step 1 of troubleshooting indexes No.1 and 2.
2	**INSPECT A/C COMPRESSOR OPERATION** • Start engine. • Turn A/C switch and fan switch on. • Does A/C compressor operate?	Yes	Go to Step 1 of troubleshooting index No.7.
		No	Go to the next step.
3	**INSPECT FOR PCM DTC** • Inspect for DTCs related to the PCM on-board diagnostic system. • Are any DTCs displayed?	Yes	Go to appropriate inspection procedure.
		No	Go to the next step.
4	**INSPECT TO SEE WHETHER MALFUNCTION IS IN CLIMATE CONTROL UNIT OR ELSEWHERE** • Does cool air blow out when terminal 1P of climate control unit (A/C signal) is grounded?	Yes	Replace climate control unit, then go to Step 17.
		No	Release short, then go to the next step.
5*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C SIGNAL CIRCUIT (BETWEEN REFRIGERANT PRESSURE SWITCH AND PCM) OR ELSEWHERE** • Test voltage at the following terminal of refrigerant pressure switch: — Terminal B (A/C signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 7.
		No	Go to the next step.
6*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN WIRING HARNESS (BETWEEN REFRIGERANT PRESSURE SWITCH AND PCM) OR PCM** • Test voltage at PCM A/C signal terminal. — Terminal AV (L3) — Terminal AN (AJ) • Is voltage **approx. 12 V**?	Yes	Repair wiring harness between PCM and refrigerant pressure switch, then go to Step 17.
		No	Inspect PCM, then go to Step 17.
7	**INSPECT TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT PRESSURE SWITCH, REFRIGERANT AMOUNT, OR ELSEWHERE** • Does cool air blow out when terminals A and C of refrigerant pressure switch connector are shorted?	Yes	Go to Step 9.
		No	Go to the next step.
8*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN REFRIGERANT PRESSURE SWITCH AND CLIMATE CONTROL UNIT) OR ELSEWHERE** • Test voltage at the following terminal of climate control unit. — Terminal 1P (A/C signal) • Is voltage **approx. 12 V**?	Yes	Go to Step 10.
		No	Repair wiring harness between refrigerant pressure switch and climate control unit, then go to Step 17.

STEP	INSPECTION		ACTION
9	**INSPECT TO SEE WHETHER MALFUNCTION IS IN REFRIGERANT PRESSURE SWITCH OR REFRIGERANT AMOUNT** • Inspect refrigerant pressure switch. • Is it okay?	Yes	If there is no refrigerant, replace condenser, bleed the refrigerant line for **30 min or more** using a vacuum pump, and add refrigerant to specified level, then go to Step 17.
		No	Replace refrigerant pressure switch, then go to Step 17.
10	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN A/C CONTROL SIGNAL CIRCUIT (BETWEEN A/C RELAY AND PCM) OR ELSEWHERE** • Does cool air blow out when A/C relay terminal E (A/C control signal) is grounded?	Yes	Release short, then go to the next step.
		No	Go to Step 12.

11*	**INSPECT TO SEE WHETHER MALFUNCTION (LACK OF CONTINUITY) IS IN PCM OR WIRING HARNESS (BETWEEN A/C RELAY AND PCM)**
	• Test voltage at the PCM A/C relay control signal terminal.
	  • Terminal I (L3)
	  • Terminal AW (AJ)
	• Is voltage **approx. 12 V**?
		Yes	Inspect PCM, then go to Step 17.

		No	Repair wiring harness between A/C relay and PCM, then go to Step 17.
12*	**INSPECT TO SEE WHETHER MALFUNCTION IS IN MAGNETIC CLUTCH OR ELSEWHERE** • Test voltage at the following terminal of magnetic clutch thermal protector: — Terminal A (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect magnetic clutch, then go to Step 17.
		No	Go to the next step.
13	**INSPECT FUSE** • Are A/C relay power supply fuses okay?	Yes	Go to the next step.
		No	Replace fuse, then go to Step 17. If fuse burns out immediately, go to the next step.

14	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND A/C RELAY FOR LACK OF CONTINUITY**
	• Test voltages at the following terminals of A/C relay.
	  — Terminal A (A/C relay control signal)
	  — Terminal C (A/C control signal)
	• Are voltages **approx. 12 V**?
		Yes	Go to the next step.

		No	Repair wiring harness between fuse block and A/C relay, then go to Step 17.
15	**INSPECT TO SEE WHETHER MALFUNCTION IS IN A/C RELAY OR WIRING HARNESS (BETWEEN A/C RELAY AND MAGNETIC CLUTCH) AND EVAPORATOR TEMPERATURE SENSOR** • Test voltage at the following terminal of A/C relay: — Terminal D (magnetic clutch operation signal) • Is voltage **approx. 12 V**?	Yes	Inspect wiring harness between A/C relay and magnetic clutch. • If above wiring harness is OK, go to the next step. • If above wiring harness malfunctions, repair wiring harness, then go to Step 17.
		No	Replace A/C relay, then go to Step 17.
16	**INSPECT EVAPORATOR TEMPERATURE SENSOR** • Inspect evaporator temperature sensor. • Is it okay?	Yes	Go to the next step.
		No	Replace evaporator temperature sensor, then go to the next step.
17	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Does cool air blow out? (Are the results of refrigerant system performance test okay?)	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.8 NOISE WHILE OPERATING A/C SYSTEM [L3 WITH TC]

E6U070300000W22

8	Noise while operating A/C system.
DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor vane noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK A/C COMPRESSOR VANE NOISE** • Is there a jingling, popping, beeping, or buzzing sound (A/C compressor vane noise)?	Yes	Go to Step 5.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 14.
		No	Go to the next step.
3	**INSPECT A/C COMPRESSOR INTERFERENCE NOISE** • Is there a rattling or vibrating sound (interference noise)?	Yes	Go to Step 18.
		No	Go to the next step.
4	**INSPECT MAGNETIC CLUTCH OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 19. (See 07–40–19 MAGNETIC CLUTCH ADJUSTMENT [L3 WITH TC].)
		No	Condition is normal. (Recheck malfunction symptoms.)
5	**INSPECT A/C COMPRESSOR NOISE TIME** • Is noise heard continuously for **more than 3 s** after A/C compressor comes on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
6	**INSPECT IDLE SPEED** • Inspect idle speed. (See 01–10A–30 Idle Speed Inspection.) • Is it normal?	Yes	Go to the next step.
		No	Follow the repair instruction described in section F, then go to Step 19.
7	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. • Is it normal?	Yes	Go to Step 10.
		No	Go to the next step.
8	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
9	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	Adjust refrigerant amount to specified level, then go to Step 19.
		No	If piping is damaged or cracked, replace then go to Step 19. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 19.
10	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE** • Add **20 ml {20 cc, 0.8 fl oz}** of compressor oil. • Is noise heard when racing engine?	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.

STEP	INSPECTION		ACTION
11	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 19.
12	**CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 19.
		No	Go to the next step.
13	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 19. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
14	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 19. (A/C compressor discharge valve left open)
		No	Go to the next step.
15	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01–10A–3 DRIVE BELT INSPECTION [L3].) • Is it normal?	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 19.
16	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign material imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 19.
		No	Go to the next step.
17	**INSPECT MAGNETIC CLUTCH** • Inspect magnetic clutch. (See 07–40–20 MAGNETIC CLUTCH INSPECTION [L3 WITH TC].) • Is it normal?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 19.
		No	Replace magnetic clutch, then go to Step 19.
18	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
19	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

NO.9 NOISE WHILE OPERATING A/C SYSTEM [L3, AJ]

E6U070300000W11

9	Noise while operating A/C system.
DESCRIPTION	• Noise from magnetic clutch, A/C compressor, hose or refrigerant line.
POSSIBLE CAUSE	• Magnetic clutch operation noise • A/C compressor slippage noise • Hose or refrigerant line interference noise

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT A/C COMPRESSOR SLIPPAGE NOISE** • Is there a squeaking or whirling sound (A/C compressor slippage noise)?	Yes	Go to Step 13.
		No	Go to the next step.
2	**INSPECT A/C COMPRESSOR INTERFERENCE NOISE** • Is there a rattling or vibrating sound (interference noise)?	Yes	Go to Step 17.
		No	Go to the next step.
3	**INSPECT MAGNETIC CLUTCH OPERATION NOISE** • Is there a clicking sound (magnetic clutch operation noise)?	Yes	Adjust clearance between pressure plate of magnetic clutch and A/C compressor pulley, then go to Step 18. (See 07–40–19 MAGNETIC CLUTCH ADJUSTMENT [L3, AJ].)
		No	Condition is normal. (Recheck malfunction symptoms.)
4	**INSPECT A/C COMPRESSOR NOISE TIME** • Is noise heard continuously for **3 s or more** after A/C compressor comes on?	Yes	Go to the next step.
		No	Condition is normal. (Noise occurs for **2—3 s** immediately after A/C compressor turns on.)
5	**INSPECT IDLE SPEED** • Inspect idle speed. (See 01–10A–30 Idle Speed Inspection.) (See 01–10C–39 Idle Speed Inspection.) • Is it okay?	Yes	Go to the next step.
		No	Follow the repair instruction described in section F, then go to Step 18.
6	**INSPECT REFRIGERANT AMOUNT** • Inspect refrigerant amount. • Is it okay?	Yes	Go to Step 9.
		No	Go to the next step.
7	**INSPECT REFRIGERANT LINES** • Inspect refrigerant lines. — Is piping free of damage and cracks? — Are piping connections free of oil grime? (Visual inspection) — Are piping connections free of gas leakage? — Are piping installation points on condenser free of gas leakage? — Are piping installation points on receiver/ drier free of gas leakage? — Are piping installation points on A/C compressor free of gas leakage? — Are piping installation points on A/C unit free of gas leakage — Perform gas leak inspection using gas leak tester. • Are above items okay?	Yes	Go to the next step.
		No	If piping or A/C component(s) is damaged or cracked, replace then go to Step 18. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 18.
8	**INSPECT EVAPORATOR PIPING CONNECTIONS IN A/C UNIT FOR GAS LEAKAGE** • Are piping connections for evaporator in A/C unit free of gas leakage?	Yes	Adjust refrigerant amount to specified level, then go to Step 18.
		No	If piping is damaged or cracked, replace then go to Step 18. If there is gas leakage, repair or replace connection and replace condenser*, then go to Step 18.
9	**CHECK TO SEE WHETHER MALFUNCTION IS IN COMPRESSOR OIL OR ELSEWHERE** • Add **20 ml {20 cc, 0.8 fl oz}** of compressor oil. • Is noise heard when racing engine?	Yes	Go to the next step.
		No	Troubleshooting completed. Explain repair to customer.
10	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Drain compressor oil. • Is it contaminated with metal particles?	Yes	Go to the next step.
		No	Replace A/C compressor, then go to Step 18.

STEP	INSPECTION		ACTION
11	**CHECK TO SEE WHETHER MALFUNCTION IS SOMEWHERE IN A/C SYSTEM OR ELSEWHERE** • Is compressor oil whitish and mixed with water?	Yes	Replace entire A/C system (excluding heater), then go to Step 18.
		No	Go to the next step.
12	**INSPECT A/C COMPRESSOR OIL** • Is compressor oil darker than normal and contaminated with aluminum chips?	Yes	Replace A/C compressor and condenser, then go to Step 18. (Since A/C compressor may be worn and receiver/drier may be clogged, replacement of receiver/drier is necessary.)
		No	Condition is normal. Recheck malfunction symptoms.
13	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR ELSEWHERE** • Is noise heard immediately after A/C compressor is stopped?	Yes	Replace A/C compressor, then go to Step 18. (A/C compressor discharge valve left open)
		No	Go to the next step.
14	**INSPECT DRIVE BELT** • Inspect drive belt. (See 01–10A–3 DRIVE BELT INSPECTION [L3].) (See 01–10C–3 DRIVE BELT INSPECTION [AJ].) • Is it okay?	Yes	Go to the next step.
		No	Adjust or replace drive belt, then go to Step 18.
15	**INSPECT DRIVE BELT CONDITION** • Is drive belt worn? • Does it have foreign material imbedded in it, or have oil on it?	Yes	Remove obstruction, remove oil, or replace drive belt, then go to Step 18.
		No	Go to the next step.
16	**INSPECT MAGNETIC CLUTCH** • Inspect magnetic clutch. (See 07–40–20 MAGNETIC CLUTCH INSPECTION [L3, AJ].) • Is it okay?	Yes	Replace A/C compressor (excluding pressure plate, A/C compressor pulley, and stator), then go to Step 18.
		No	Replace magnetic clutch, then go to Step 18.
17	**CHECK TO SEE WHETHER MALFUNCTION IS IN A/C COMPRESSOR OR REFRIGERANT LINES** • Is noise emitted from A/C compressor?	Yes	Visually inspect A/C compressor, replace appropriate parts if necessary, then go to the next step.
		No	If noise is due to refrigerant lines, repair detached or missing clips, tighten loose bolts, then go to the next step.
18	**VERIFY THAT MALFUNCTION SYMPTOM OCCURS AFTER REPAIR** • Has A/C compressor noise stopped?	Yes	Troubleshooting completed. Explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

* : If there is gas leakage, air enters into the A/C system. The desiccant within the receiver/drier absorbs the moisture from the air and becomes saturated. If the A/C system is used in this condition, the inside of the A/C compressor will begin to rust due to this moisture, which may cause lock up or noise to occur. Therefore, replacement of the receiver/drier is necessary.

REFRIGERANT SYSTEM SERVICE WARNINGS

E6U071000000W01

Using/Handling Unapproved Refrigerant

- **Using a flammable refrigerant, such as OZ-12, in this vehicle is dangerous. In an accident, the refrigerant may catch fire, resulting in serious injury or death. When servicing this vehicle, use only R-134a.**
- **Checking for system leakage on a vehicle that has been serviced with flammable refrigerant, such as OZ-12, is dangerous. Conventional leak detectors use an electronically generated arc which can ignite the refrigerant, causing serious injury or death. If a flammable refrigerant may have been used to service the system, or if you suspect a flammable refrigerant has been used, contact the local fire marshal or EPA office for information on handling the refrigerant.**

Handling Refrigerant

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, use service equipment certified to meet the requirements of SAE J2210 (R-134a recycling equipment) when draining R-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**
- **Do not pressure test or leak test R-134a service equipment and/or vehicle air conditioning system with compressed air. Some mixtures of air and R-134a have been shown to be combustible at elevated pressures. These mixtures, if ignited, may cause injury or property damage. Additional health and safety information may be obtained from refrigerant manufacturers.**
- **Do not allow the refrigerant to leak near fire or any kind of heat. A poisonous gas may be generated if the refrigerant gas contacts fire or heat such as from cigarettes and heaters. When carrying out any operation that can cause refrigerant leakage, extinguish or remove the above-mentioned heat sources and maintain adequate ventilation.**
- **Handling liquid refrigerant is dangerous. A drop of it on the skin can result in localized frostbite. When handling the refrigerant, wear gloves and safety goggles. If refrigerant splashes into the eyes, immediately wash them with clean water and consult a doctor.**

Storing Refrigerant

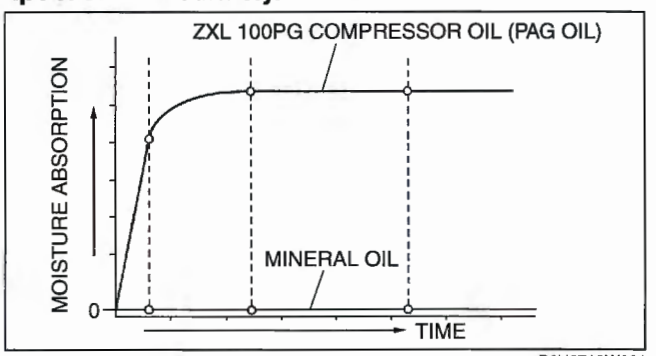
- **The refrigerant container is highly pressurized. If it is subjected to high heat, it could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Store the refrigerant at temperatures below 40°C {104°F}.**

REFRIGERANT SYSTEM SERVICE CAUTIONS [L3, AJ]

E6U071000000W02

Handling Compressor Oil

- **Use only ZXL 100PG compressor oil for this vehicle. Using PAG oil other than ZXL 100PG compressor oil can damage the A/C compressor.**
- **Do not spill ZXL 100PG compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.**
- **ZXL 100PG compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.**



B6U0710W001

REFRIGERANT SYSTEM SERVICE CAUTIONS [L3 WITH TC]

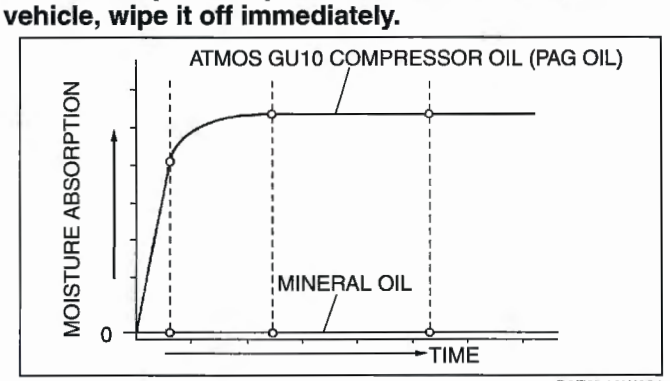
E6U071000000W05

Handling Insufficient Refrigerant Level

- **If an insufficient refrigerant level is detected at troubleshooting, do not charge (add) the refrigerant. Because an accurate amount of refrigerant cannot be determined from the pressure indicated on the manifold gauge, never charge the refrigerant. If there is too much or too little refrigerant from the refilling, there may be secondary problems such as damage to the refrigerant cycle parts, or a decrease of cooling performance. Therefore, if it is determined that the refrigerant level is insufficient, completely remove refrigerant from the refrigerant cycle and refill with refrigerant to the specified amount.**

Handling Compressor Oil

- **Use only ATMOS GU10 compressor oil for this vehicle. Using a PAG oil other than ATMOS GU10 compressor oil can damage the A/C compressor.**
- **Do not spill ATMOS GU10 compressor oil on the vehicle. A drop of compressor oil on the vehicle surface can eat away at the paint. If oil gets on the vehicle, wipe it off immediately.**
- **ATMOS GU10 compressor oil (PAG oil) has a higher moisture absorption efficiency than the previously used mineral oil. If moisture mixes with the compressor oil, the refrigerant system could be damaged. Therefore, install caps immediately after using the compressor oil or removing refrigerant system parts to prevent moisture absorption.**
- **If the refrigerant gas is completely discharged from the system for reasons such as a malfunction during A/C operation, repair or replace the malfunctioning part, charge the refrigerant to the specified amount and always add 60 ml {60 cc, 2.03 fl oz} of compressor. If the compressor oil is not adequately replenished, the A/C compressor may quickly deteriorate, abnormal noise may develop, cooling performance may be affected or, in the worst case, the A/C compressor may seize.**



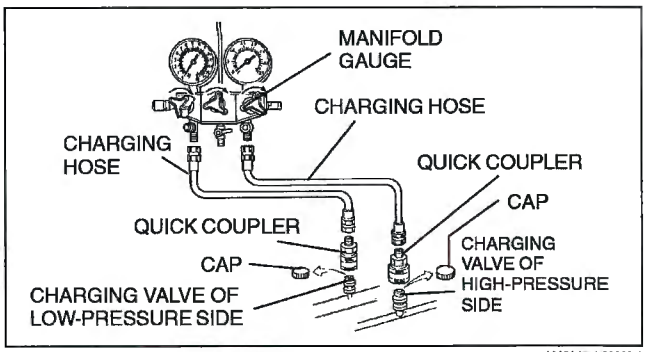
B3E0710W001

REFRIGERANT SYSTEM GENERAL PROCEDURES

E6U071000000W03

Manifold Gauge Set Installation

1. Fully close the valves of the manifold gauge. Connect the charging hoses to the high and low-pressure side joints of the manifold gauge.
3. Connect the quick couplers to the ends of the charging hoses.
4. Connect the quick couplers to the charging valves.

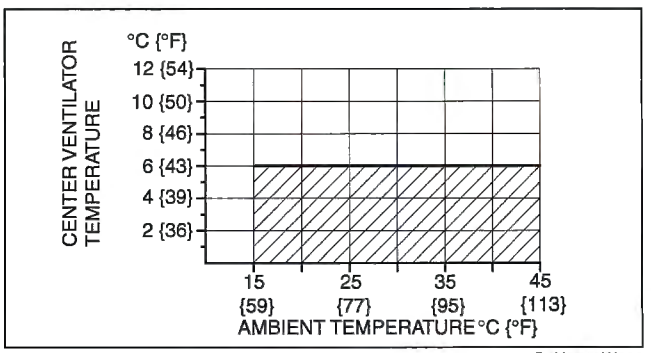


W6U710WA1

REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ]

E6U071000000W04

1. Perform refrigerant pressure check. (See 07–10–4 REFRIGERANT PRESSURE CHECK [L3, AJ].)
   - If not as specified, troubleshoot refrigerant system. (See 07–03–5 TROUBLESHOOTING INDEX [L3, AJ].)
   - If they are correct, go to next step.
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.
3. Open the hood.
4. Warm up the engine and run it at a constant **1,500 rpm.**
5. Set the fan switch to 4th speed.
6. Turn the A/C switch on.
7. Set the RECIRCULATE mode.
8. Set the temperature control to MAX COLD.
9. Set the VENT mode.
10. Close all the doors and all the windows.
11. Wait until the center ventilator temperature stabilizes. The output temperature is stable when the A/C compressor is repeatedly turned on and off based on the A/C compressor control of evaporator temperature sensor.
12. Measure the center ventilator temperature.
13. Measure the ambient temperature.
14. Verify that the intersection of the center ventilator temperature and the ambient temperature is in the shaded zone.
    - If not as specified, troubleshoot the refrigerant system. (See 07–03–5 TROUBLESHOOTING INDEX [L3, AJ].)



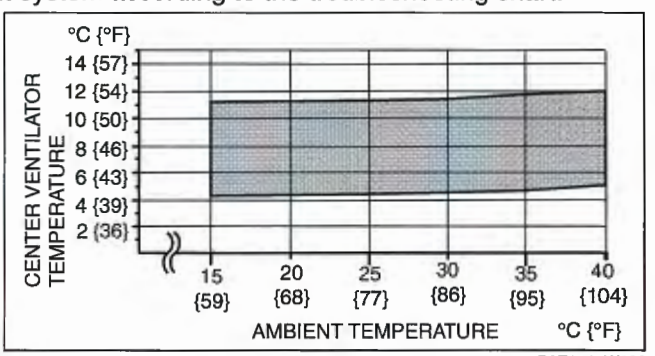
B6U0710W003

07–10

REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC]

E6U071000000W06

1. Inspect the refrigerant pressure. (See 07–10–5 REFRIGERANT PRESSURE CHECK [L3 WITH TC].)
2. Place a dry-bulb thermometer in the driver-side center ventilator outlet.
3. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
4. Set the fan speed to MAX HI.
5. Turn the A/C switch on.
6. Set to RECIRCULATE mode.
7. Set the temperature control to MAX COLD.
8. Set to VENT mode.
9. Close all the doors and windows.
10. Wait until the air conditioner output temperature stabilizes.
    Stabilized condition
    - The A/C compressor repeatedly turns on and off at regular intervals.
11. After the blower air is stabilized, read the dry-bulb thermometer.
12. Verify the ambient temperature.
13. Verify that the temperature reading is in the shaded zone.
    - If the there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.

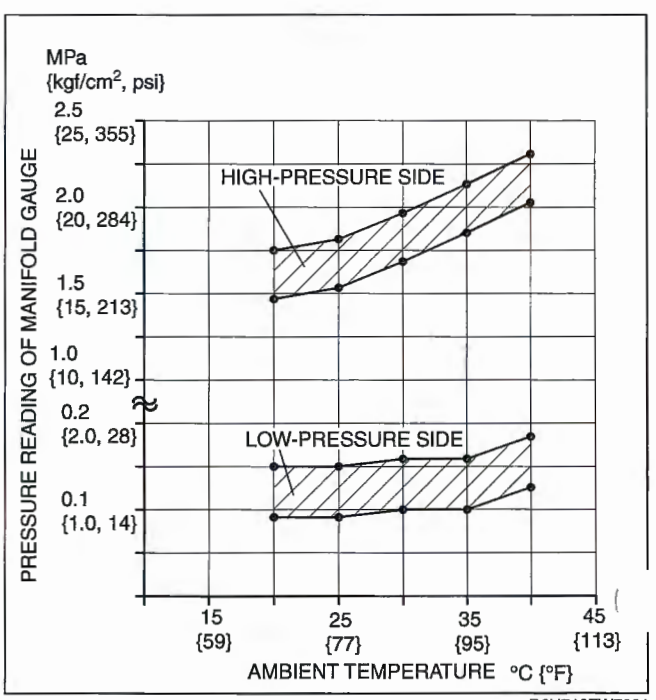


B3E0710W006

REFRIGERANT PRESSURE CHECK [L3, AJ]

E6U071078834

1. Install the manifold gauge set.
2. Warm up the engine and run it at a constant **1,500 rpm**.
3. Set the fan switch to 4th speed.
4. Turn the A/C switch on.
5. Set the RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set the VENT mode.
8. Close all the doors and all the windows.
9. Measure the ambient temperature and the high and low-pressure side reading of the manifold gauge.
10. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.
    - If not as specified, troubleshoot the refrigerant system. (See 07–03–5 TROUBLESHOOTING INDEX [L3, AJ].)

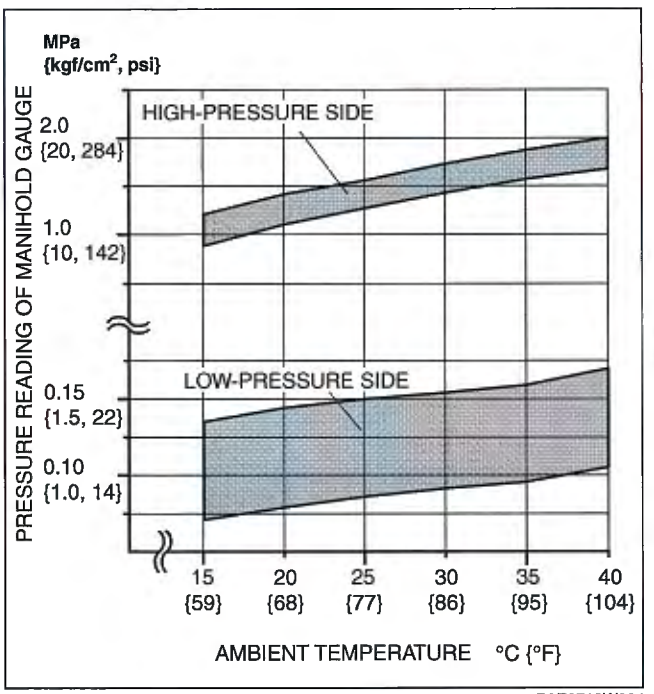


D6U710ZW7001

REFRIGERANT PRESSURE CHECK [L3 WITH TC]

E6U071078834W04

1. Connect the manifold gauge. (See 07–10–3 REFRIGERANT SYSTEM GENERAL PROCEDURES.)
2. Start the engine and after it is warmed up, run it at a constant **1,500 rpm**.
   Set the fan speed MAX HI.
3. Turn the A/C switch on.
5. Set to RECIRCULATE mode.
6. Set the temperature control to MAX COLD.
7. Set to VENT mode.
8. Close all the doors and all the windows.
9. Measure the ambient temperature and high- and low- pressure side reading of the manifold gauge.
10. Verify that the intersection of the pressure reading of the manifold gauge and ambient temperature is in the shaded zone.
    - If there is any malfunction, inspect the refrigerant system according to the troubleshooting chart.



B3E0710W004

07–10

REFRIGERANT RECOVERY

E6U071078834W02

Warning

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, use service equipment certified to meet the requirements of SAE J2210 (R-134a recycling equipment) when draining R-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**

1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

REFRIGERANT CHARGING [L3, AJ]

E6U071078834W03

Warning

- **Avoid breathing air conditioning refrigerant or lubricant vapor. Exposure may irritate eyes, nose and throat. Also, due to environmental concerns, use service equipment certified to meet the requirements of SAE J2210 (R-134a recycling equipment) when draining R-134a from the air conditioning system. If accidental system discharge occurs, ventilate work area before resuming service.**

Caution

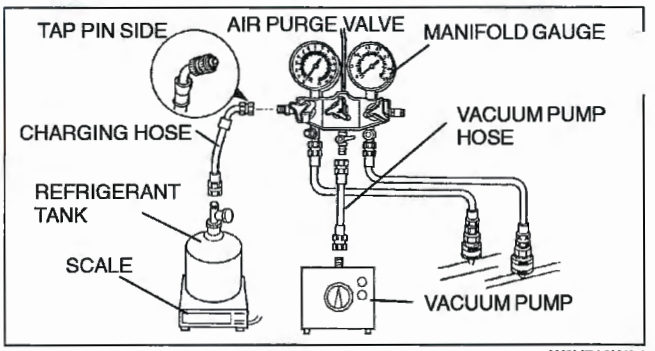
- **Do not exceed the specification when charging the system with refrigerant. Doing so will decrease the efficiency of the air conditioner or damage the refrigeration cycle parts.**

Charging Recycled R-134a Refrigerant

1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging New R-134a Refrigerant

1. Install the manifold gauge set.
2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.
3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

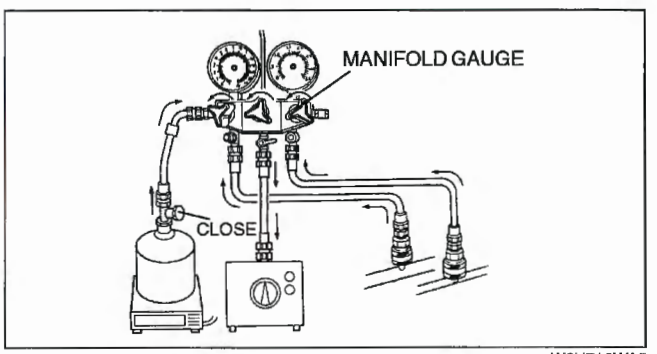


W6U710WA4

7. Open all the valves of the manifold gauge.

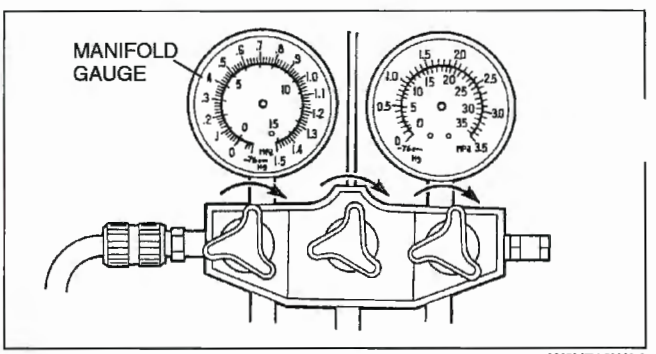
Caution

- **Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will back flow into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.**



W6U710WA5

8. Start the vacuum pump and let it operate for **15 min**.
9. Verify that high and low-pressure side readings of the manifold gauge are at **–101 kPa {–760 mmHg, –29.9 inHg}**. Close each valve of the manifold gauge.
10. Stop the vacuum pump and wait for **5 min**.
11. Inspect the high and low-pressure side readings of the manifold gauge.
    - If the reading has changed, inspect for leakage and then repeat from Step 7.
    - If the reading has not changed, go to next step.
12. Open the valve of the refrigerant tank.
13. Weigh the refrigerant tank to charge the suitable amount of refrigerant.



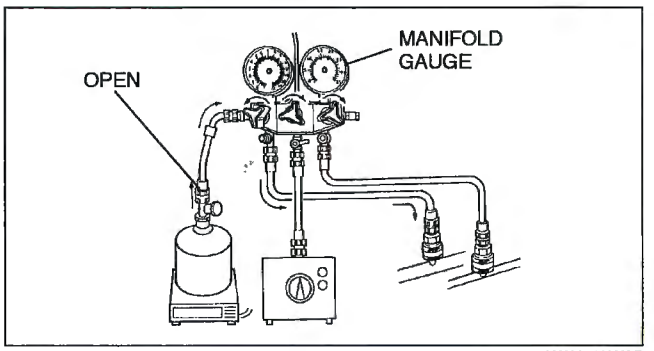
W6U710WAA

Regular amount of refrigerant (approx. quantity)
475 g {16.8 oz}

Warning

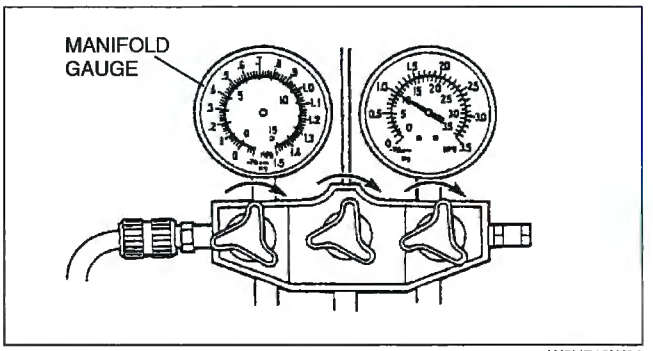
- **If the refrigerant system is charged with a large amount of refrigerant when checking for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when checking for gas leakage.**
- **If charging the system with refrigerant by service cans or refrigerant tank, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans or refrigerant tank will increase and they could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

14. Open the low-pressure side valve of the manifold gauge.



W6U710WAB

15. When the high-pressure side reading increases to **98 kPa {1.0 kgf/cm^2, 14 psi}**, close the low-pressure side valve of the manifold gauge.
16. Inspect for leakage from the cooler pipe/hose connections using a gas leak tester.
    - If there is no leakage, go to Step 18.
    - If leakage is found at a loose joint, tighten the joint, go to next step.
17. Inspect for leakage again.
    - If there is no leakage after tightening the joint, go to next step.
    - If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from Step 7.

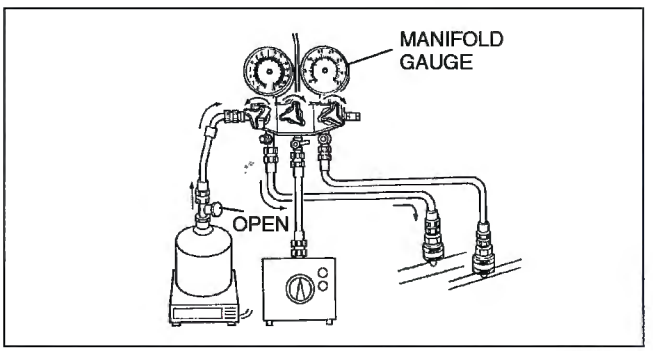


W6U710WA8

Warning

- **If charging the system with refrigerant by service cans or refrigerant tank, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans or refrigerant tank will increase and they could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

18. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **250 g {8.83 oz}** from the amount in Step 13.

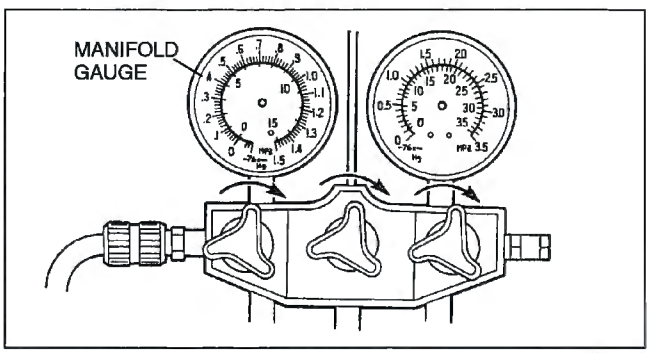


W6U710WA9

19. Close the low-pressure side valve of the manifold gauge.

Warning

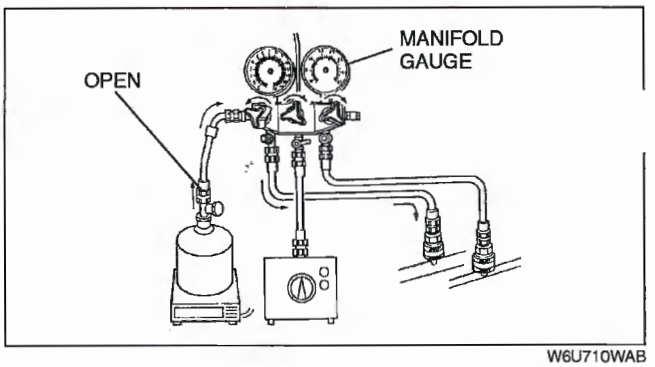
- **If charging the system with refrigerant by service cans or refrigerant tank, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans or refrigerant tank will increase and they could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**



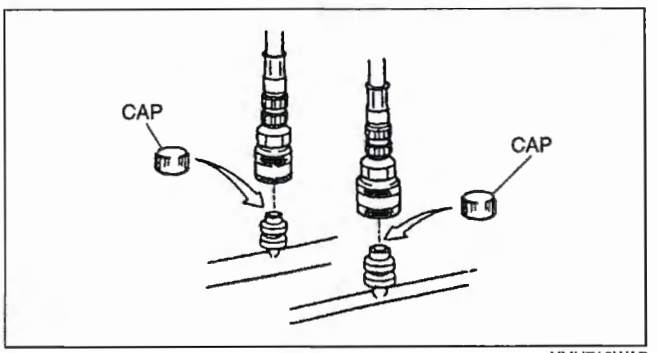
W6U710WAA

20. Start the engine and actuate the A/C compressor.

21. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased **475 g {16.8 oz}** from the amount in Step 13.
22. Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
23. Stop the engine and A/C compressor.
24. Inspect for leakage using a gas leak tester.
    - If there is no leakage, go to Step 26.
    - If leakage is found at a loose joint, tighten the joint, then go to next step.
25. Inspect for leakage again.
    - If there is still leakage after tightening the joint, go to next step.
    - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from Step 7.
26. Remove the manifold gauge set.
27. Install the caps to the charging valves.



W6U710WAB



YMU710WA7

REFRIGERANT CHARGING [L3 WITH TC]

E6U071078834W0E

Caution
- **Do not exceed the specification when charging the system with refrigerant. Doing so will decrease the efficiency of the air conditioner or damage the refrigeration cycle parts.**

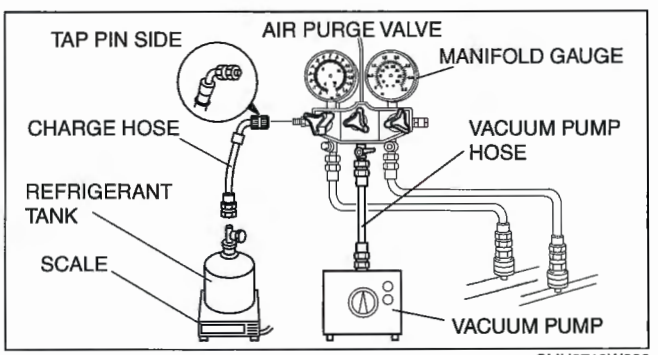
Charging Recycled R-134a Refrigerant

1. Connect an R-134a recovery/recycling/recharging device to the vehicle and follow the device manufacturer's instructions.

Charging Preparation

1. Install the manifold gauge set.
2. Connect the tap pin side of the charging hose to the air purge valve of the manifold gauge.
3. Connect the vacuum pump hose to the center joint of the manifold gauge.
4. Connect the vacuum pump hose to the vacuum pump.
5. Connect the charging hose to the refrigerant tank.
6. Place the refrigerant tank on the scale.

Regular amount of refrigerant (approx. quantity)
470 g {16.6 oz}



CMU0710W002

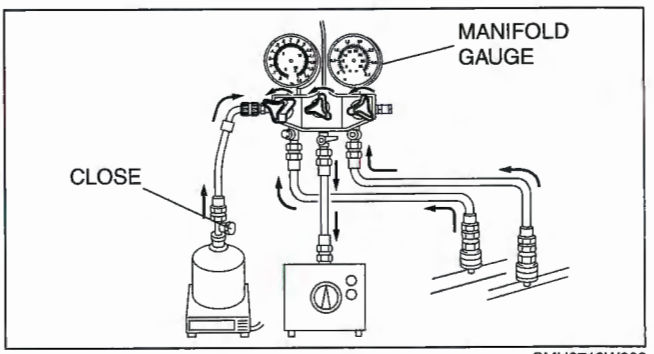
Evacuation

1. Open all the valves of the manifold gauge.

Caution

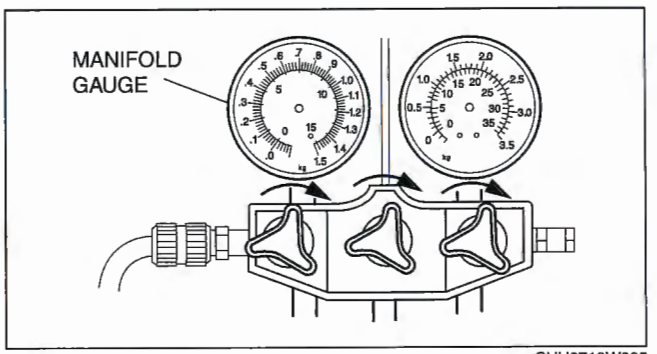
- **Close the manifold gauge valve immediately after stopping the vacuum pump. If the valve is left open, the vacuum pump oil will flow back into the refrigeration cycle and cause a decrease in the efficiency of the air conditioner.**

2. Start the vacuum pump and let it operate for **15 min**.



CMU0710W003

3. Verify that high- and low-pressure side readings of the manifold gauge are at **–101 kPa {–760 mmHg, –29.9 inHg}**. Close each valve of the manifold gauge.



CHU0710W005

07–10

Airtightness Check

1. Stop the vacuum pump and wait for **5 min**.
2. Check the high- and low-pressure side readings of the manifold gauge.
   - If the reading has changed, inspect for leakage and go to Evacuation. (See 07–10–9 Evacuation.)
   - If the reading has not changed, go to Charging New R-134a Refrigerant. (See 07–10–9 Charging New R-134a Refrigerant.)

Charging New R-134a Refrigerant

1. Open the valve of the refrigerant tank.
2. Weigh the refrigerant tank to charge the suitable amount of refrigerant.

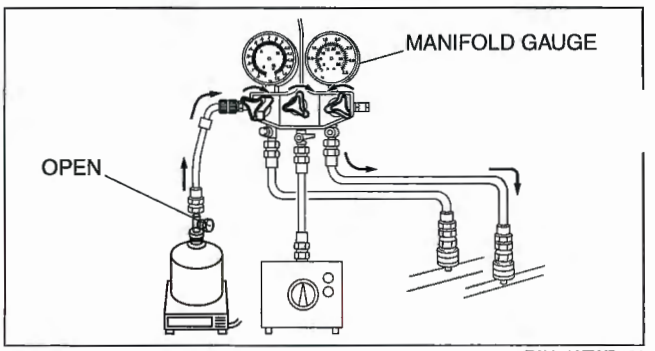
Warning

- **If the refrigerant system is charged with a large amount of refrigerant when inspecting for gas leakage, and if any leakage should occur, the refrigerant will be released into the atmosphere. In order to prevent the accidental release of refrigerant which can destroy the ozone layer in the stratosphere, follow the proper procedures and charge with only a small amount of refrigerant when inspecting for gas leakage.**
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**

Caution

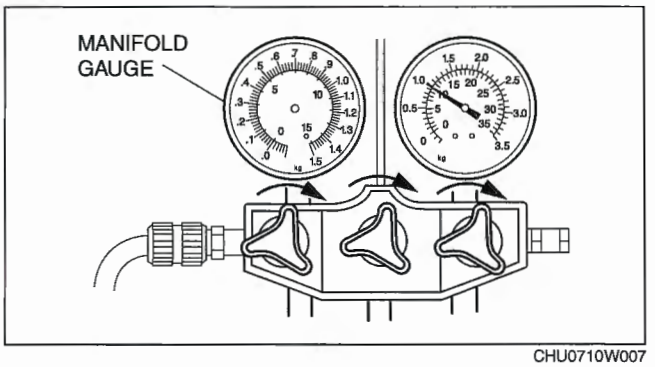
- **Always being charging of refrigerant from the high-pressure side. If changing is begun from the low-pressure side, the vanes of the A/C compressor will not be released and abnormal noise may result.**

3. Open the high-pressure side valve of the manifold gauge.



E6U710ZWB101

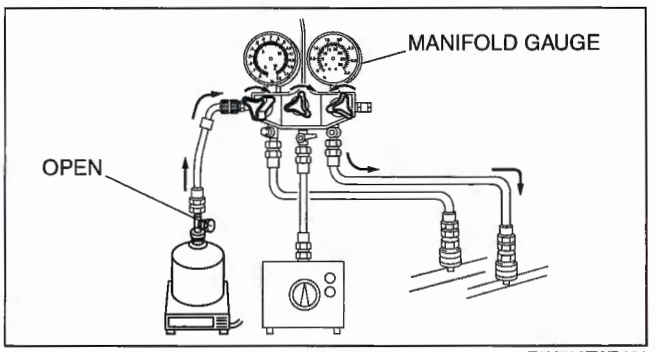
4. When the low-pressure side reading increases to **0.098 MPa {1.0 kgf/cm^2, 14 psi}**, close the high-pressure side valve of the manifold gauge.
5. Inspect for leakage from the cooler pipe/hose connections using a gas leak tester.
   - If there is no leakage, go to Step 7.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
6. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still a leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.



CHU0710W007

Warning
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously inju you. Therefore, do not open the high-pressure side valve while the engine is running.**

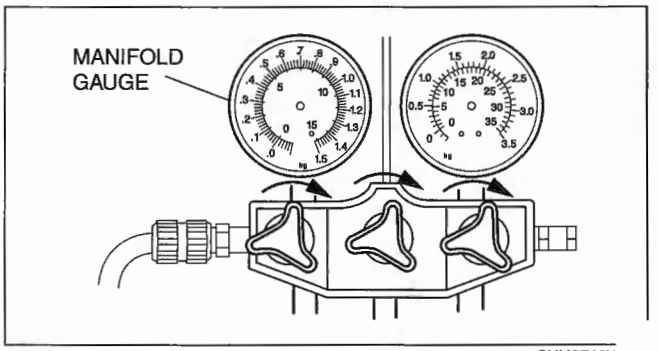
7. Open the high-pressure side valve of the manifold gauge and charge with refrigerant until the weight of refrigerant tank has decreased **250 g {8.83 oz}** from the amount in Step 2.



E6U710ZWB101

8. Close the low-pressure side valve of the manifold gauge.

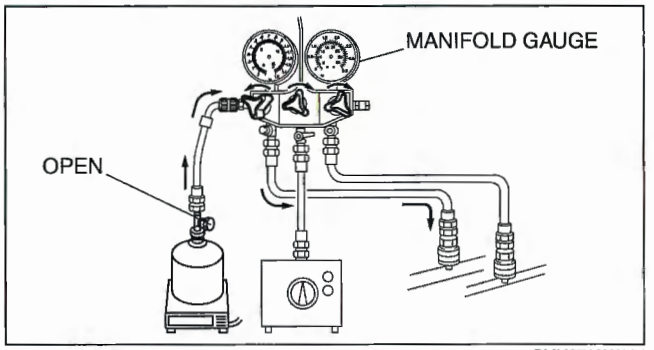
Warning
- **If charging the system with refrigerant using service cans, running the engine with the high-pressure side valve open is dangerous. Pressure within the service cans will increase and the cans could explode, scattering metal fragments and liquid refrigerant that can seriously injure you. Therefore, do not open the high-pressure side valve while the engine is running.**



CHU0710V

9. Start the engine and actuate the A/C compressor.

10. Open the low-pressure side valve of the manifold gauge and charge with refrigerant until the weight of the refrigerant tank has decreased regular amount from the amount in Step 2.
    Close the low-pressure side valve of the manifold gauge and the valve of the refrigerant tank.
12. Stop the engine and A/C compressor.



CMU0710W004

Leak Test

1. Inspect for leakage using the a gas leak tester.
   - If there is no leakage, go to Step 3.
   - If leakage is found at a loose joint, tighten the joint, then go to the next step.
2. Inspect for leakage again.
   - If there is no leakage after tightening the joint, go to the next step.
   - If there is still leakage at the same joint, discharge the refrigerant and then repair the joint. Repeat the charging procedure from evacuation.
3. Disconnect the manifold gauge from the charging valves.
4. Install the caps to the charging valves.

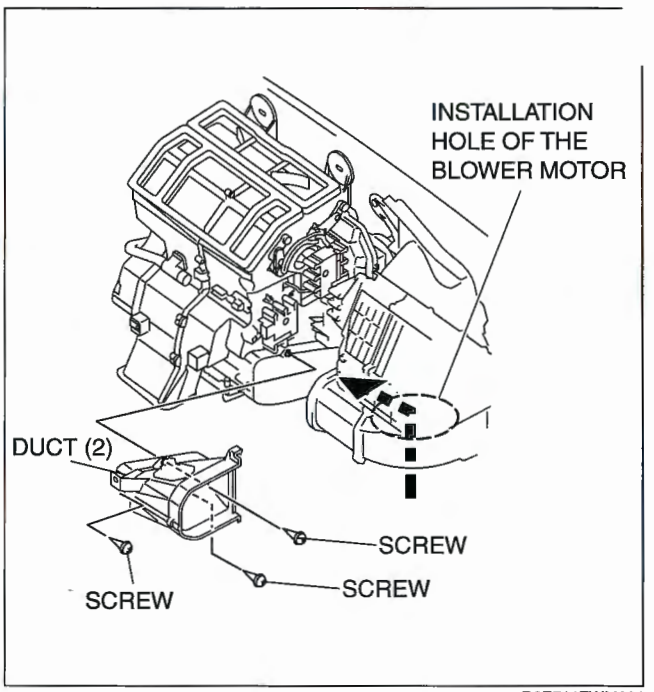
BLOWER UNIT REMOVAL/INSTALLATION [L3 WITH TC]

E6U071161140W01

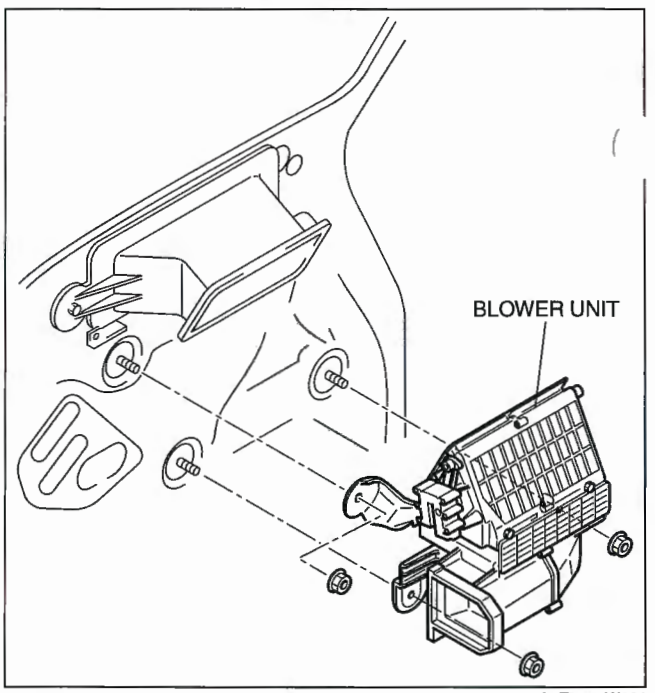
1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Glove compartment (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (2) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (3) Meter hood (See 09–17–6 METER HOOD REMOVAL/INSTALLATION.)
   (4) Instrument cluster (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (5) Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   (6) Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   (7) Steering shaft (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (8) A-pillar trim (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (9) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (10)Front side trim (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (11)Side panel (See 09–17–6 SIDE PANEL REMOVAL/INSTALLATION.)
   Remove the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
   Remove the blower motor. (See 07–40–14 BLOWER MOTOR REMOVAL/INSTALLATION.)
5. Remove the power MOS FET. (See 07–40–16 POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the blower unit nuts.

7. Remove the screw securing the duct (2) to the A/C unit, by inserting a phillips screwdriver into the hole made after removing the blower motor.
8. Remove the screw securing the duct (2) to the A/C unit.
9. Remove the duct (2).



D6E711ZWM001

10. Remove the blower unit.
11. Temporary install the blower unit.
12. Install in the duct (2).
13. Install the two outer screws, securing the duct (2) to the A/C unit.



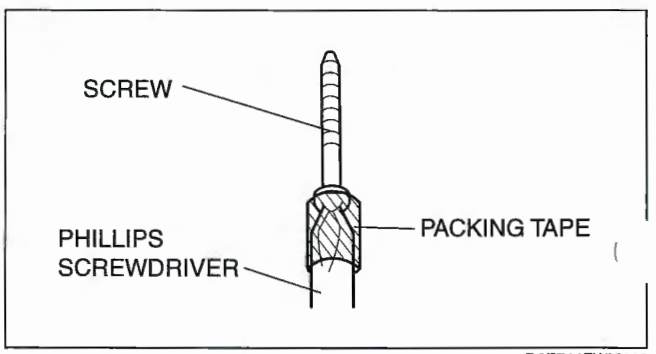
A6E8516W001

14. Install the screw on the end of the phillips screwdriver with the packing tape.

Caution

- **If the packing tape remains in the duct (2), it may become a source of noise. Wind up the packing tape to prevent pinching when tightening the screw.**

15. Install the duct (2) to the A/C unit by inserting a phillips screwdriver, with the screw, into the hole made after removing the blower motor.



D6E711ZWM010

16. Pull out the phillips screwdriver together with the packing tape.
17. Install the blower unit nuts.
18. Install the power MOS FET. (See 07–40–16 POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [L3 WITH TC].)
    Install the blower motor. (See 07–40–14 BLOWER MOTOR REMOVAL/INSTALLATION.)
20. Install the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
21. Connect the negative battery cable.

BLOWER UNIT DISASSEMBLY/ASSEMBLY [L3 WITH TC]

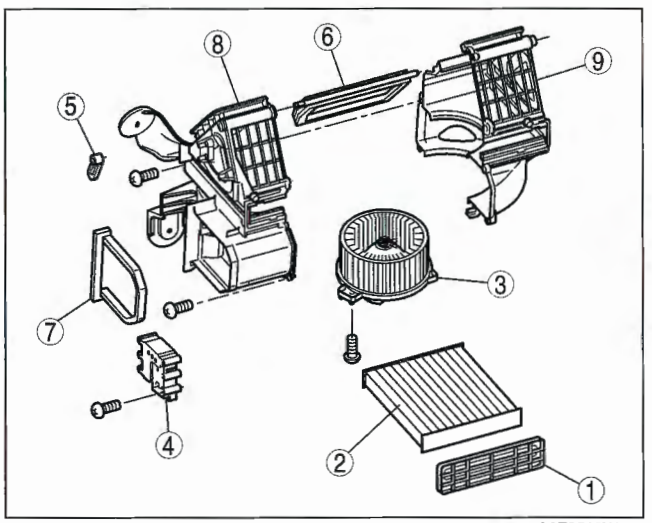
E6U071161140W02

1. Disassemble in the order indicated in the table.

Caution
- **Apply only the specified grease to the link. Otherwise abnormal noise or improper operation may result.**

1	Air filter cover
2	Air filter
3	Blower motor
4	Air intake actuator
5	Air intake crank
6	Air intake door
7	Polyurethane protector
8	Blower case (1)
9	Blower case (2)

2. Assemble in the reverse order of disassembly.



A6E8516W002

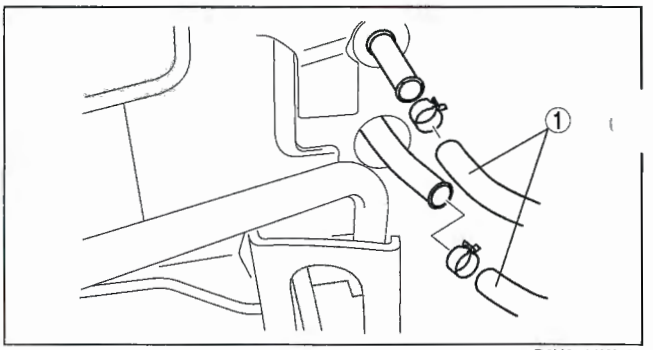
A/C UNIT REMOVAL/INSTALLATION [L3, AJ]

E6U071161130W01

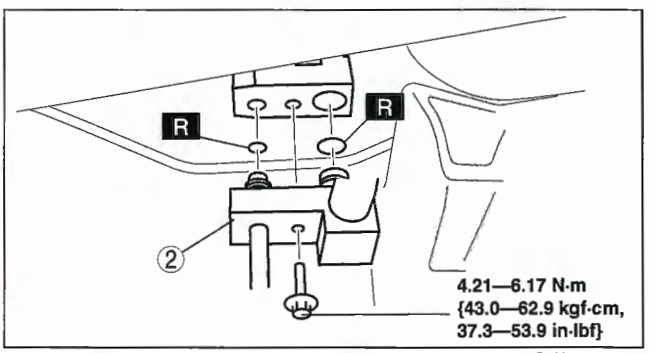
1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT CHARGING [L3, AJ].)
3. Drain the engine coolant. (See 01–12A–5 ENGINE COOLANT REPLACEMENT [L3, AJ].)
4. Remove the dynamic chamber.
5. Remove the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

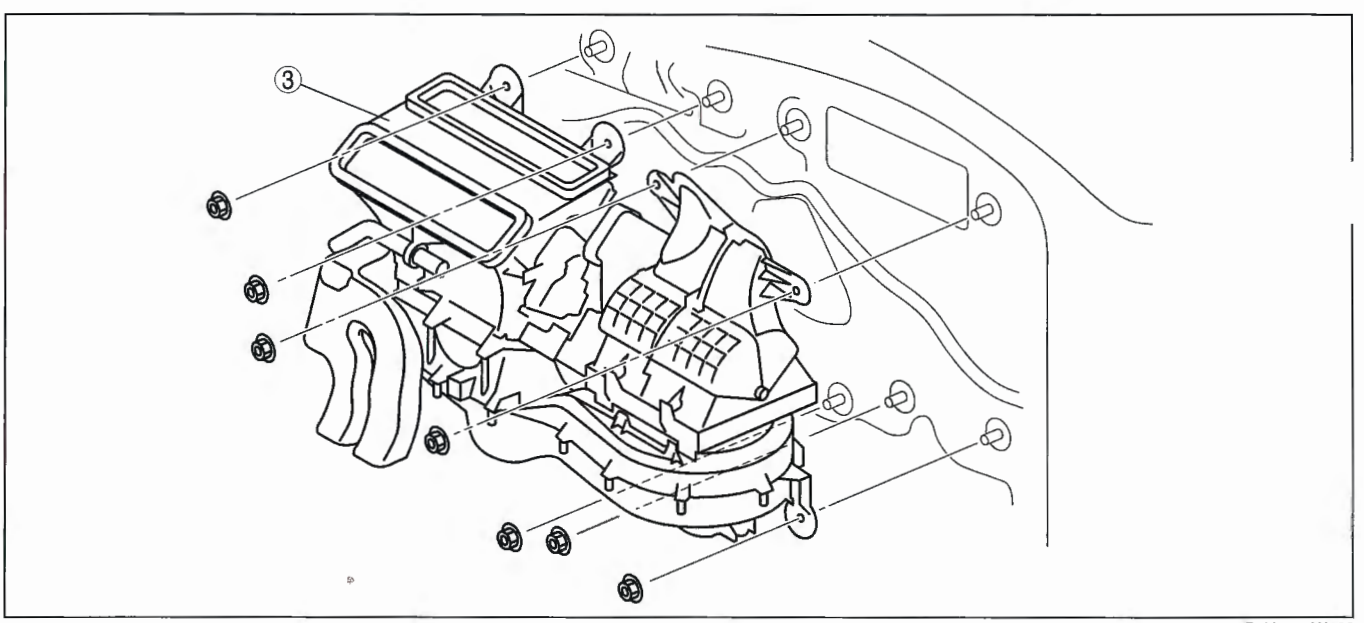
6. Remove in the order indicated in the table. Do not allow compressor oil to spill.



B6U0711W005



C6U0711W101



B6U0711W003

1	Heater hose
2	Cooler pipe No.2 (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)
3	A/C unit (See 07–11–6 A/C Unit Installation Note.)

7. Install in the reverse order of removal.
8. Perform the refrigerant system performance test. (See 07–10–3 REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ].)

A/C Unit Installation Note

1. When installing a new A/C unit or evaporator, add a supplemental amount of ZXL100PG compressor oil into t refrigerant cycle.

Supplemental amount (approx. quantity)
50 ml {50 cc, 1.6 fl oz}

A/C UNIT REMOVAL/INSTALLATION [L3 WITH TC]

E6U071161130W05

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)
3. Drain the engine coolant. (See 01–12B–4 ENGINE COOLANT REPLACEMENT [L3 WITH TC].)
4. Remove the following parts:
   (1) Glove compartment (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (2) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (3) Meter hood (See 09–17–6 METER HOOD REMOVAL/INSTALLATION.)
   (4) Instrument cluster (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (5) Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   (6) Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   (7) Steering shaft (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (8) A-pillar trim (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (9) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (10)Front side trim (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (11)Side panel (See 09–17–6 SIDE PANEL REMOVAL/INSTALLATION.)
5. Remove the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
6. Remove in the order indicated in the table. Do not allow compressor oil to spill.

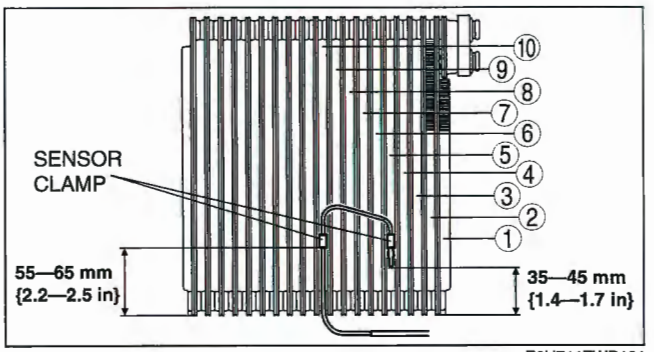
31	Adhesive polyurethane (3)

Evaporator Temperature Sensor Assembly Note

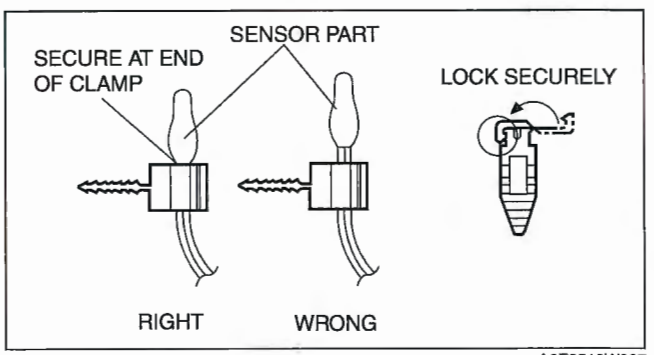
1. Assemble the evaporator temperature sensor as shown in the figure.



E6U711ZWB101

Sensor Clamp Assembly Note

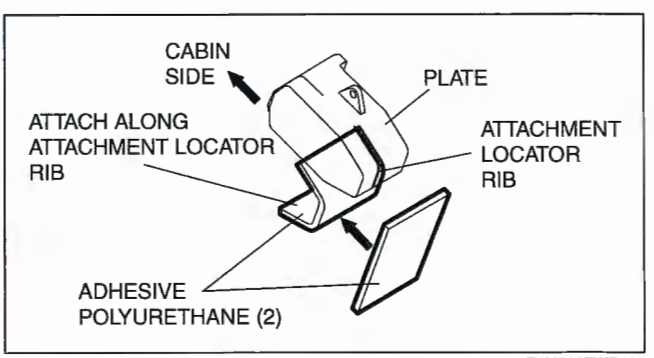
1. Attach the sensor clamp as shown in the figure.



A6E8516W007

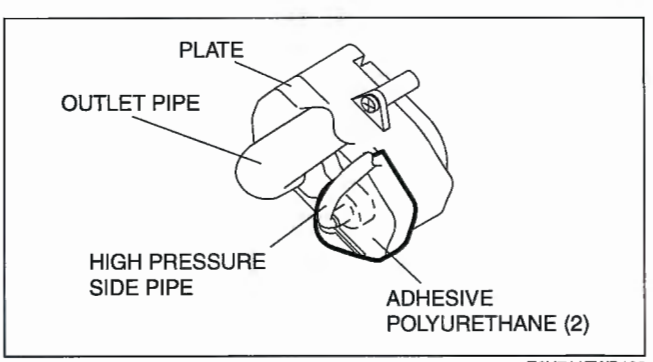
Adhesive polyurethane (2) Assembly Note

1. Attach the adhesive polyurethane (2) as shown in the figure.



E6U711ZWB102

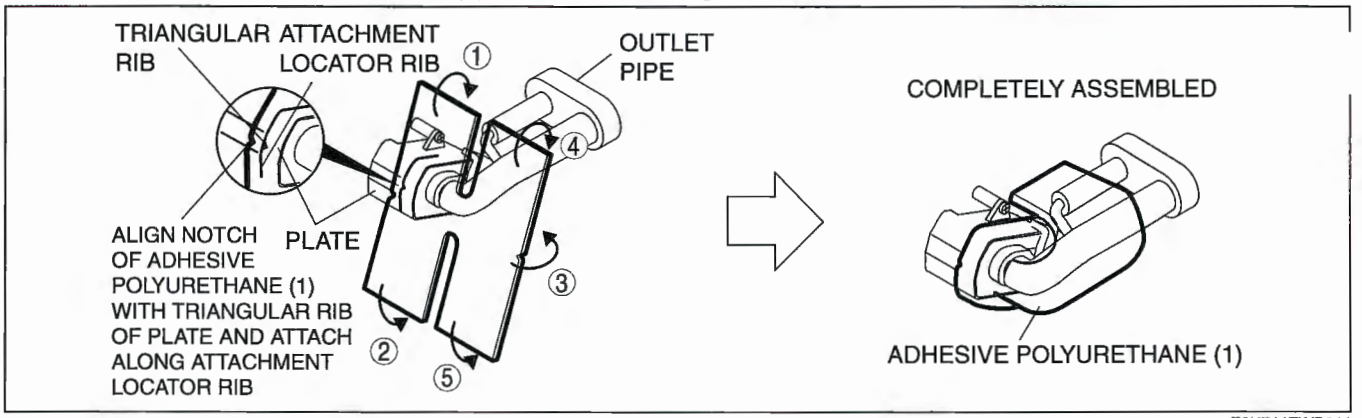
2. After assembling the outlet pipe as shown in the figure, attach the adhesive polyurethane (2) so that it adheres around the high-pressure side of the outlet pipe.



E6U711ZWB103

Adhesive polyurethane (1) Assembly Note

1. Attach the adhesive polyurethane (2) as shown in the figure.



E6U711ZWB011

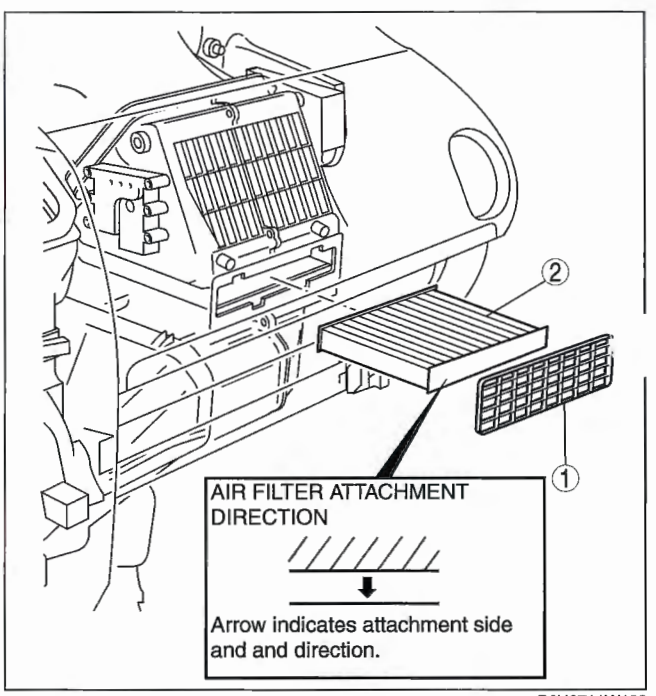
AIR FILTER REMOVAL/INSTALLATION

E6U071161130W03

1. Remove the glove compartment.
2. Remove in the order indicated in the table.

1	Air filter cover
2	Air filter

3. Install in the reverse order of removal.



B6U0711W128

AIR FILTER INSPECTION

E6U071161130W04

1. Inspect for damage, excessive dirt, or foul smell.
   - If the air filter is damaged, excessively dirty, or foul smelling, replace it.

Note

- The air filter cannot be reused by cleaning it with water or compressed air.

EXPANSION VALVE REMOVAL/INSTALLATION [L3 WITH TC]

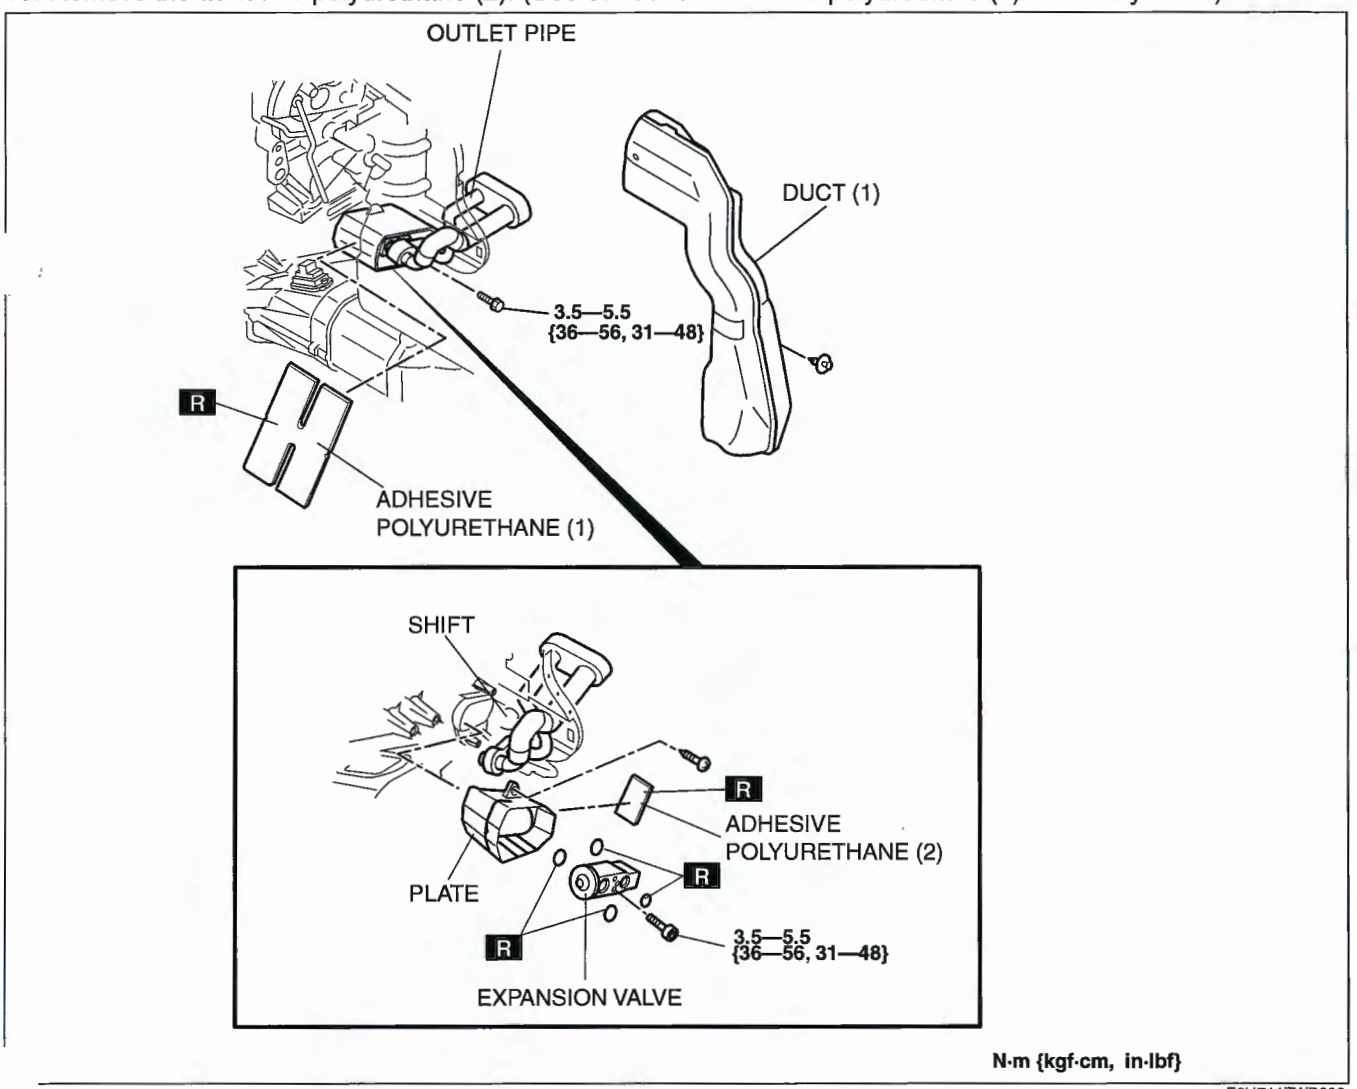
E6U071161130W07

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

3. Disconnect the cooler hose (Lo) and cooler pipe No.3. (See 07–11–20 REFRIGERANT LINES REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the passenger-side air bag module. (See 08–10–7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
5. Remove the duct (1).
6. Remove the air mix actuator. (See 07–40–8 AIR MIX ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC].)
7. Remove the adhesive polyurethane (1). (See 07–11–12 Adhesive polyurethane (1) Assembly Note.)
8. Remove the screws and cover.
9. Remove the one bolt and shift the outlet pipe. Do not allow compressor oil to spill.
10. Remove the two bolts.
11. Remove the expansion valve. Do not allow compressor oil to spill.
12. Remove the screws and plate.
13. Remove the adhesive polyurethane (2). (See 07–11–11 Adhesive polyurethane (2) Assembly Note.)



E6U711ZWB006

14. Install in the reverse order of removal.
15. Perform the refrigerant system performance test. (See 07–10–4 REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC].)

EVAPORATOR INSPECTION

E6U071161810W01

1. Remove the evaporator from the A/C unit.
2. Inspect for cracks, damage, and oil leakage.
   - If any problems are found, replace the evaporator.
3. Inspect for bent fins.
   - If any are bent, use a flathead screwdriver to straighten them.

HEATER CORE INSPECTION

E6U071161910W01

1. Remove the heater core from the A/C unit.
2. Inspect for cracks, damage, and coolant leakage.
   - If any problems are found, replace the heater core.
3. Inspect for bent fins.
   - If any are bent, use a flathead screwdriver to straighten them.
4. Verify that the heater core inlet and outlet pipes are not distorted or damaged.
   - Repair with pliers if necessary.

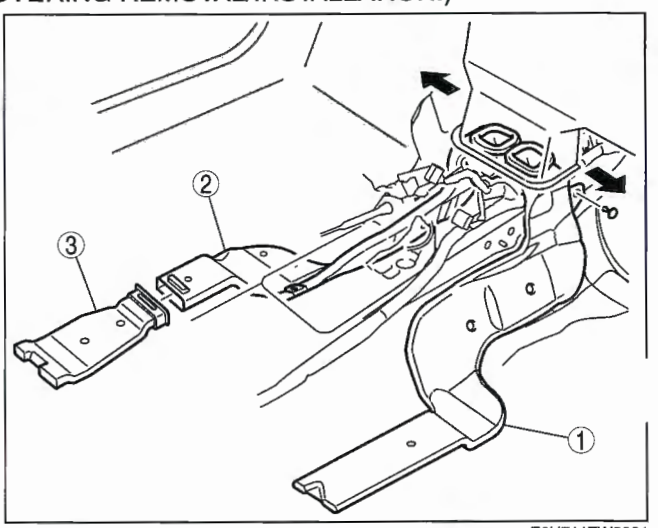
REAR HEAT DUCT REMOVAL/INSTALLATION [L3, AJ]

E6U071161273W01

1. Turn over the floor covering. (See 09–17–27 FLOOR COVERING REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Rear heat duct No.2
2	Rear heat duct No.3
3	Rear heat duct No.4

3. Install in the reverse order of removal.



E6U711ZW5001

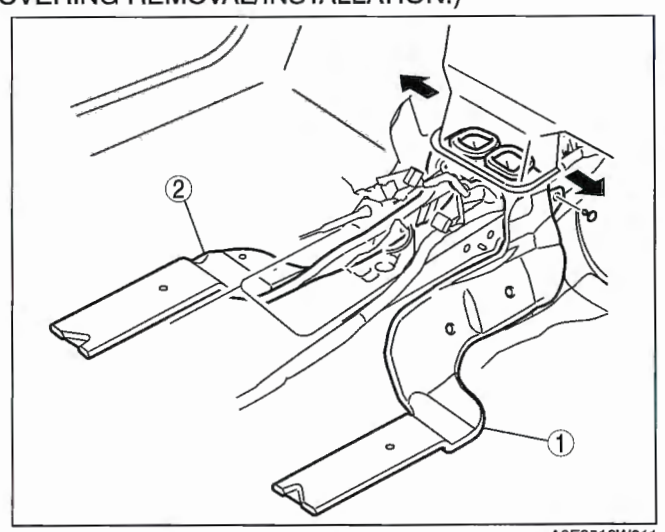
REAR HEAT DUCT REMOVAL/INSTALLATION [L3 WITH TC]

E6U071161273W02

1. Turn over the floor covering. (See 09–17–27 FLOOR COVERING REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Rear heat duct (Right)
2	Rear heat duct (Left)

3. Install in the reverse order of removal.



A6E8516W011

A/C COMPRESSOR REMOVAL/INSTALLATION [L3, AJ]

E6U071161450W01

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT CHARGING [L3, AJ].)
   Remove the right side splash shield and mudguard.
3. Remove the WU-TWC. (AJ only) (See 01–15C–2 EXHAUST SYSTEM REMOVAL/INSTALLATION [AJ].)
5. Loosen the drive belt and remove it.

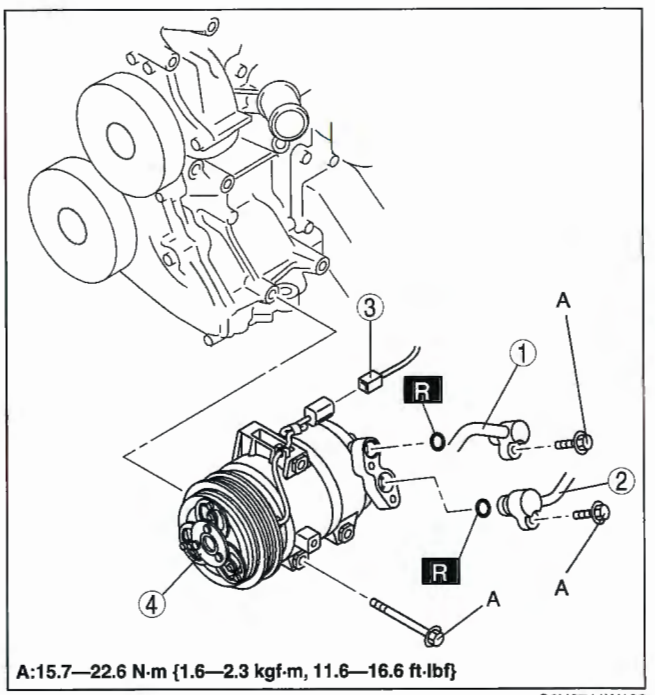
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

6. Remove in the order indicated in the table. Do not allow compressor oil to spill.

1	Cooler hose (HI) (See 07–11–20 Refrigerant Lines Installation Note.)
2	Cooler pipe No.1 (See 07–11–20 Refrigerant Lines Installation Note.)
3	Magnetic clutch connector
4	A/C compressor (See 07–11–15 A/C Compressor Installation Note.)

7. Install in the reverse order of removal.
8. Adjust the drive belt.
9. Perform the refrigerant system performance test.
   (See 07–10–3 REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ].)



A:15.7—22.6 N·m {1.6—2.3 kgf·m, 11.6—16.6 ft·lbf}

C6U0711W102

07–11

A/C Compressor Installation Note

Caution

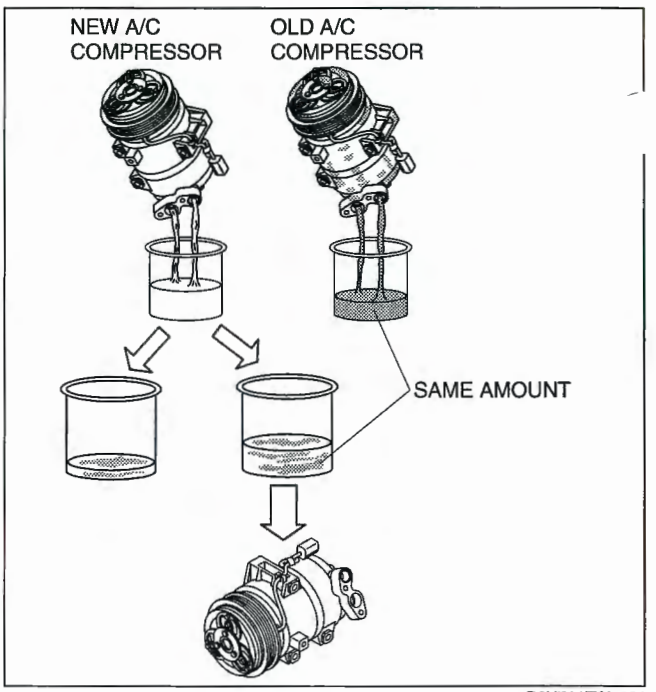
- **Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.**

1. Rotate new A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a clean measuring device. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a separate, clean measuring device.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.

4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type
- **ZXL 100PG**

A/C compressor oil sealed volume (approx. quantity)
- **150 ml {150 cc, 5.07 fl oz}**



D6U711ZW7001

A/C COMPRESSOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U071161450W02

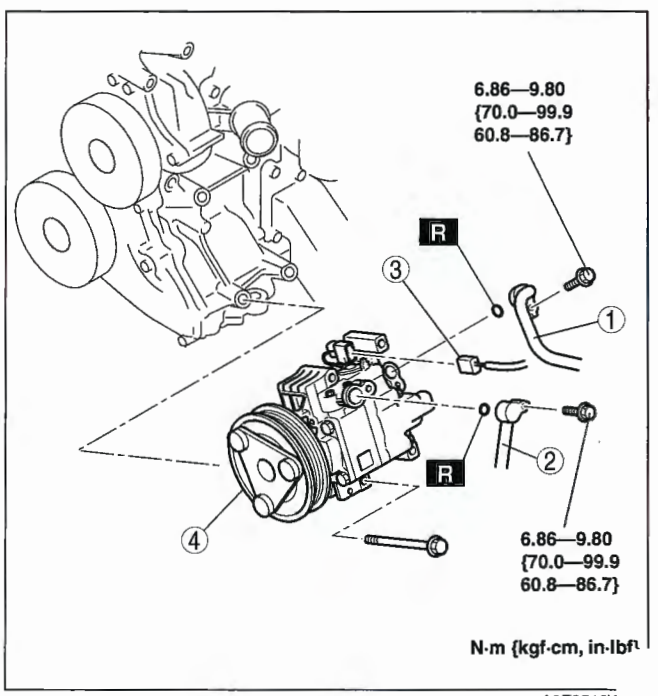
1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)
3. Remove the right side splash shield and mudguard.
4. Loosen the drive belt and remove it.

Caution
- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

5. Remove in the order indicated in the table. Do not allow compressor oil to spill.

1	Cooler hose (HI) (See 07–11–22 Refrigerant Lines Installation Note.)
2	Cooler pipe No.4 (See 07–11–22 Refrigerant Lines Installation Note.)
3	Magnetic clutch connector
4	A/C compressor (See 07–11–17 A/C Compressor Installation Note.)

6. Install in the reverse order of removal.
7. Adjust the drive belt.
8. Perform the refrigerant system performance test. (See 07–10–4 REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC].)



A6E8516W

A/C Compressor Installation Note

Caution

- **Due to the high moisture-absorption characteristics of the compressor oil, it may absorb moisture if left over a long period of time thereby negatively affecting A/C operation. Drain the compressor oil and refill within 10 min. of each other.**

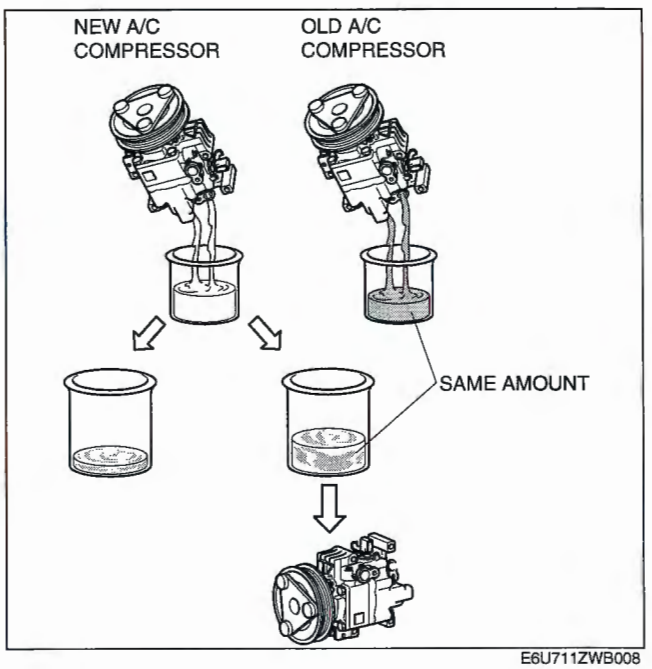
1. Rotate new A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a clean measuring device. Use this refrigerant oil to refill new compressor. Do not allow refrigerant oil to become contaminated.
2. Rotate old A/C compressor shaft six to eight revolutions while collecting refrigerant oil in a separate, clean measuring device.
3. Compare those oil amounts. The amount of the oil drained from the new A/C compressor should be greater than the old one.
4. Pour the same amount oil of drained from the old A/C compressor back into the new A/C compressor.

A/C compressor oil type

- **ATMOS GU10**

A/C compressor oil sealed volume (approx. quantity)

- **150 ml {150 cc, 5.07 fl oz}**



E6U711ZWB008

CONDENSER REMOVAL/INSTALLATION [L3, AJ]

E6U071161480W01

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT CHARGING [L3, AJ].)
3. Remove the shroud panel. (See 09–10–17 SHROUD PANEL REMOVAL/INSTALLATION.)

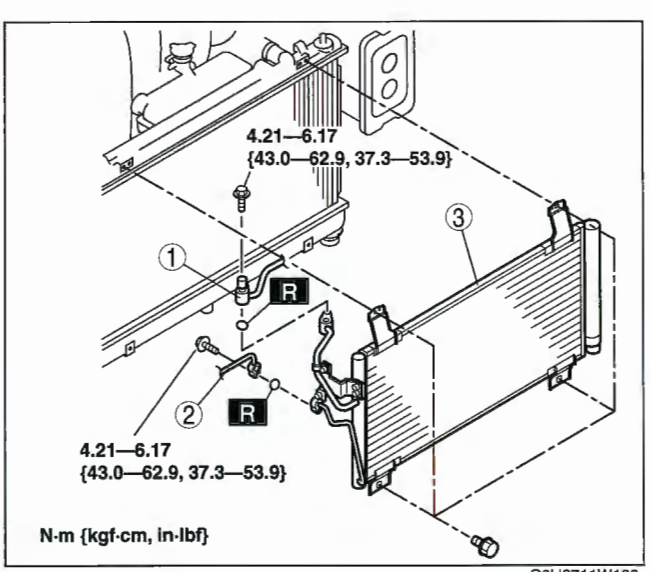
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

4. Remove in the order indicated in the table. Do not allow compressor oil to spill.

1	Cooler hose (HI) (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)
2	Cooler pipe No.1 (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)
3	Condenser (See 07–11–18 Condenser Installation Note.)

5. Install in the reverse order of removal.
6. Perform the refrigerant system performance test. (See 07–10–3 REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ].)



C6U0711W103

Condenser Installation Note

1. When installing a new condenser, add a supplemental amount of ZXL 100PG compressor oil inlet the refrigerant cycle.

Supplemental amount (approx. quantity)
50 ml {50 cc, 1.6 fl oz}

CONDENSER REMOVAL/INSTALLATION [L3 WITH TC]

E6U071161480W03

1. Disconnect the negative battery cable.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)
3. Remove the shroud panel. (See 09–10–17 SHROUD PANEL REMOVAL/INSTALLATION.)

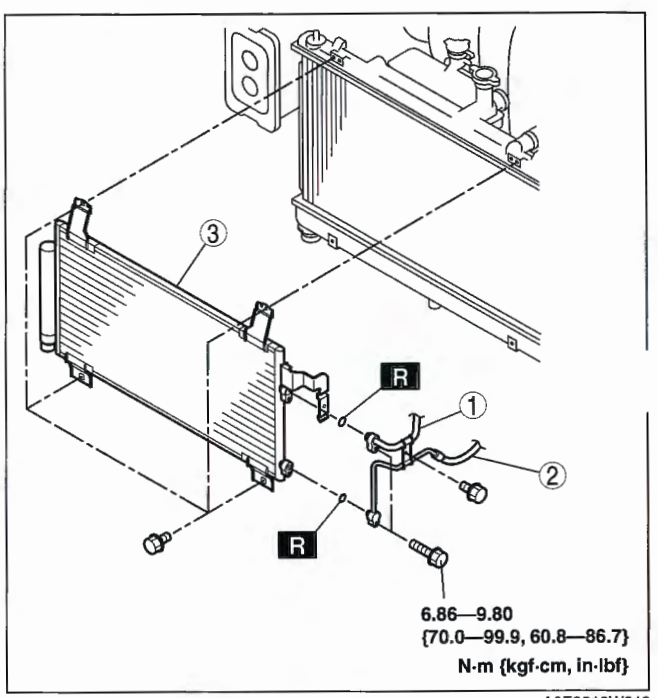
Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

4. Remove in the order indicated in the table. Do not allow compressor oil to spill.

1	Cooler pipe No.1 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
2	Cooler pipe No.2 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
3	Condenser (See 07–11–18 Condenser Installation Note.)

5. Install in the reverse order of removal.
6. Perform the refrigerant system performance test. (See 07–10–4 REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC].)



A6E8516W013

Condenser Installation Note

1. When installing a new condenser, add a supplemental amount of ATMOS GU10 compressor oil inlet the refrigerant cycle.

Supplemental amount (approx. quantity)
20 ml {20 cc, 0.7 fl oz}

CONDENSER INSPECTION

E6U071161480W02

1. Inspect for cracks, damage, and oil leakage.
   - If any are found, replace the condenser.
2. Inspect for fins clogged by dust.
   - If any are clogged, remove the dust from the fins.
3. Inspect for bent fins.
   - If any are bent, use a flathead screwdriver to straighten them.

REFRIGERANT LINES REMOVAL/INSTALLATION [L3, AJ]

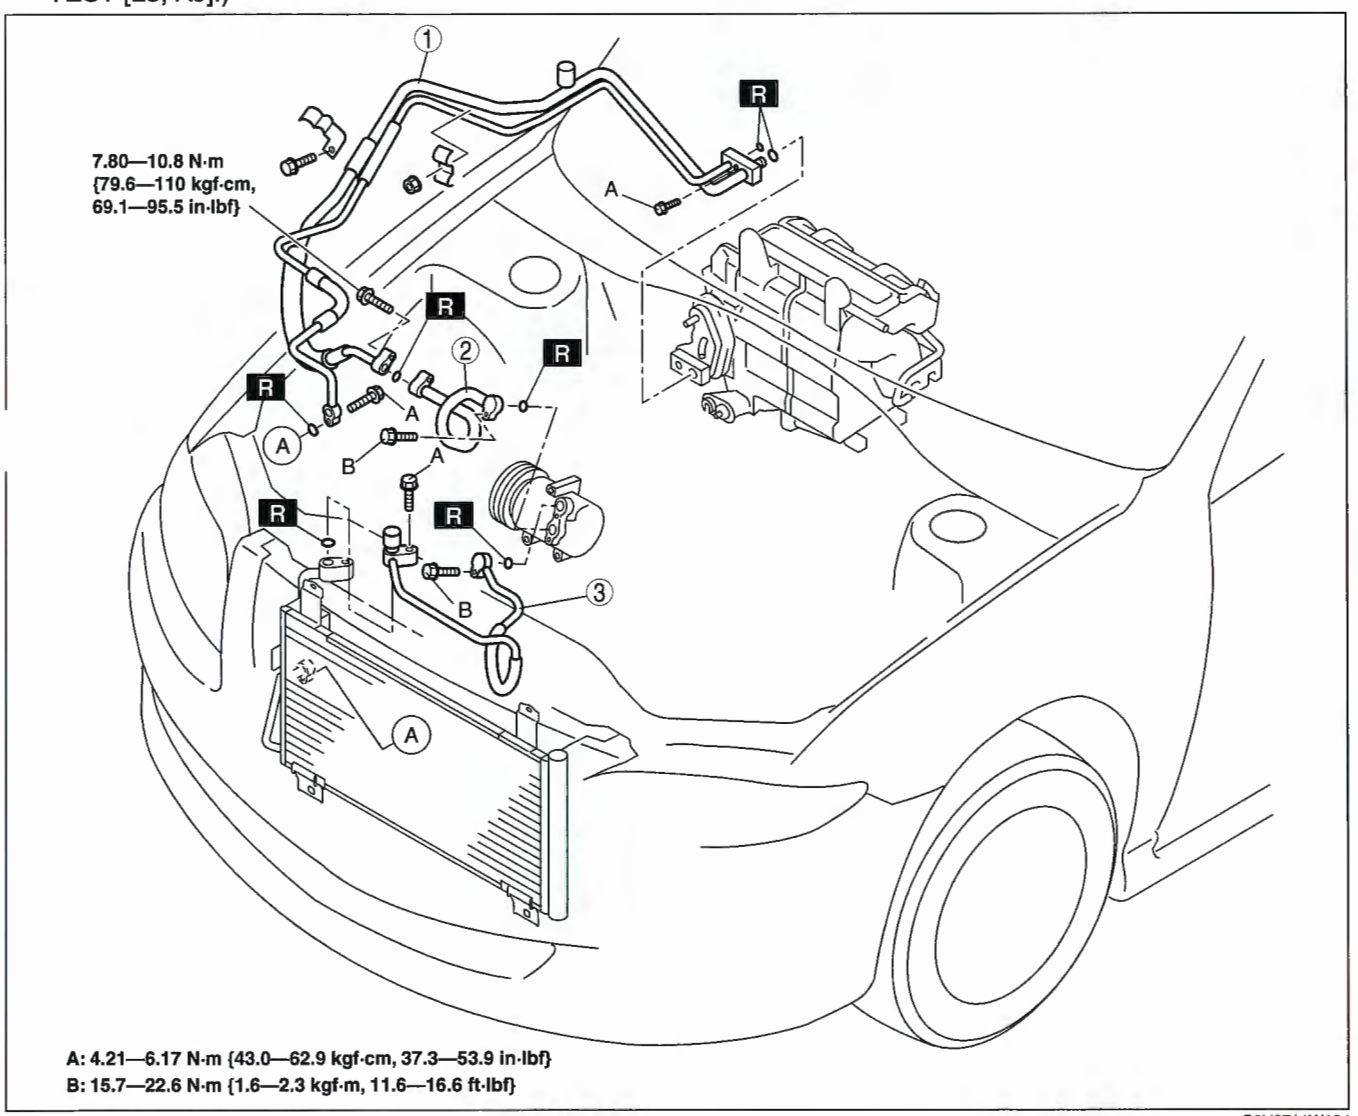
E6U071161460W01

1. Remove the battery.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT CHARGING [L3, AJ].)
   Remove the reservoir. (AJ)
3. Remove the washer tank. (AJ) (See 09–19–6 WASHER TANK REMOVAL/INSTALLATION [SPORT SEDAN].)
   (See 09–19–6 WASHER TANK REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
5. Remove the under cover.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

6. Remove in the order indicated in the table. Do not allow compressor oil to spill.
7. Install in the reverse order of removal.
8. Perform the refrigerant system performance test. (See 07–10–3 REFRIGERANT SYSTEM PERFORMANCE TEST [L3, AJ].)

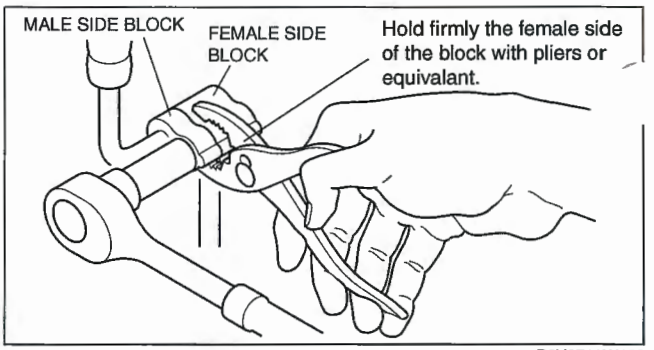


C6U0711W104

1	Cooler pipe No.2 (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)
2	Cooler pipe No.1 (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)
3	Cooler hose (HI) (See 07–11–20 Refrigerant Lines Removal Note.) (See 07–11–20 Refrigerant Lines Installation Note.)

Refrigerant Lines Removal Note

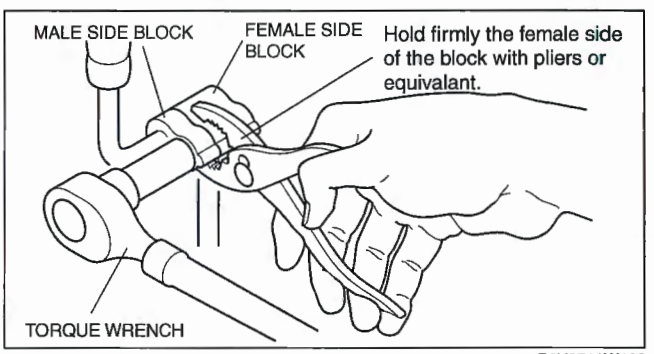
1. Disconnect the block joint type pipes by grasping female side of the block with pliers or similar tool and holding firmly, then remove the connection bolt or nut.



B6U0711W129

Refrigerant Lines Installation Note

1. Tighten the bolt of joint by hand.
2. Tighten the joint to the specified torque.
3. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt with a torque wrench.



B6U0711W130

REFRIGERANT LINES REMOVAL/INSTALLATION [L3 WITH TC]

E6U07116146

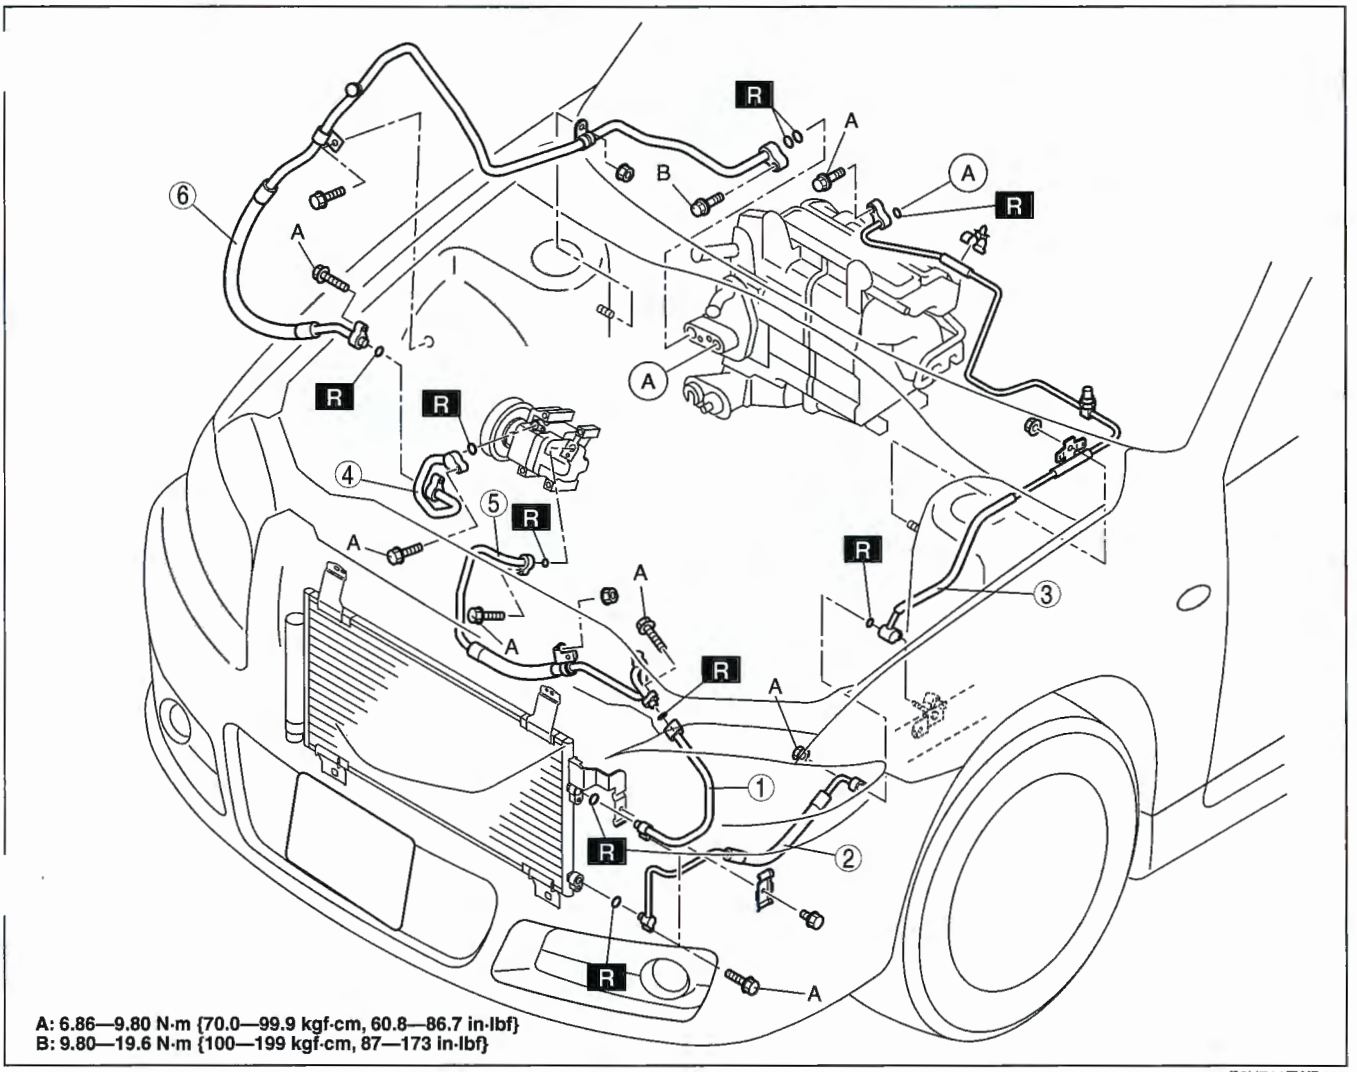
1. Remove the battery.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)
3. Remove the air cleaner cover, air cleaner element and air cleaner case. (See 01–13B–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove the shroud panel. (See 09–10–17 SHROUD PANEL REMOVAL/INSTALLATION.)
5. Remove the right splash shield.
6. Remove the right mud guard.
7. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
8. Remove the washer tank. (See 09–19–7 WASHER TANK REMOVAL/INSTALLATION [L3 WITH TC].)
9. Remove the front combination light (RH). (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
10. Remove in the order indicated in the table. Do not allow compressor oil to spill.

Caution

- **If moisture or foreign material enters the refrigeration cycle, cooling ability will be lowered and abnormal noise will occur. Always immediately plug all open fittings after removing any refrigeration cycle parts to keep moisture or foreign material out of the cycle.**

11. Install in the reverse order of removal.

12. Perform the refrigerant system performance test. (See 07–10–4 REFRIGERANT SYSTEM PERFORMANCE TEST [L3 WITH TC].)



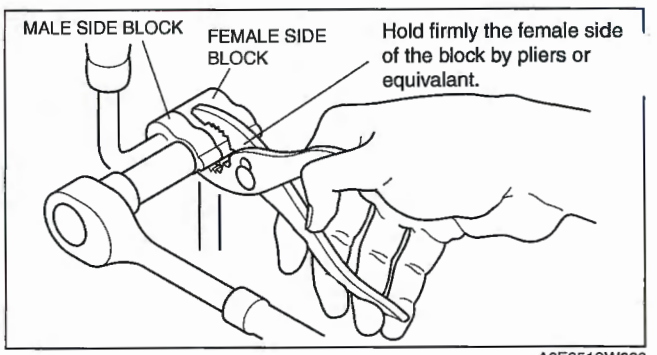
E6U711ZWB007

1	Cooler pipe No.1 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
2	Cooler pipe No.2 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
3	Cooler pipe No.3 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)

4	Cooler pipe No.4 (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
5	Cooler hose (HI) (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)
6	Cooler hose (LO) (See 07–11–22 Refrigerant Lines Removal Note.) (See 07–11–22 Refrigerant Lines Installation Note.)

Refrigerant Lines Removal Note
Block joint type

1. Disconnect the block joint type pipes by grasping female side of the block with pliers or similar tool and holding firmly, then remove the connection bolt or nut.



A6E8516W023

Refrigerant Lines Installation Note

1. When installing a new cooler pipe No.4 or cooler hose (LO), add a supplemental amount of ATMOS GU10 compressor oil into the refrigeration cycle.

   Supplemental amount (approx. quantity)
   5 ml {5 cc, 0.2 fl oz}: Cooler pipe No.4
   10 ml {10 cc, 0.3 fl oz}: Cooler hose (LO)

2. Apply compressor oil to the O-rings and connect the joints.
3. Tighten the joints.

Nut or block joint type

1. Tighten the nut or bolt of joint by hand.
2. Tighten the joint to the specified torque. If it is a nut joint, tighten the nut with a spanner and torque wrench.
3. Connect the block joint type pipes by grasping the female side of the block with pliers or similar tool and holding firmly, then tighten the connection bolt or nut with a torque wrench.

13	Climate control unit (See 07–40–31 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [L3 WITH TC].) (See 07–40–32 CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY [L3 WITH TC].) (See 07–40–39 CLIMATE CONTROL UNIT INSPECTION [L3 WITH TC].)

14	A/C relay (See 09–21–7 RELAY INSPECTION.)
15	Blower relay (See 09–21–7 RELAY INSPECTION.)
16	PCM (See 01–40B–6 PCM INSPECTION [L3 WITH TC].)
17	Rear window defroster relay (See 09–21–7 RELAY INSPECTION.)
18	TNS relay (See 09–21–7 RELAY INSPECTION.)

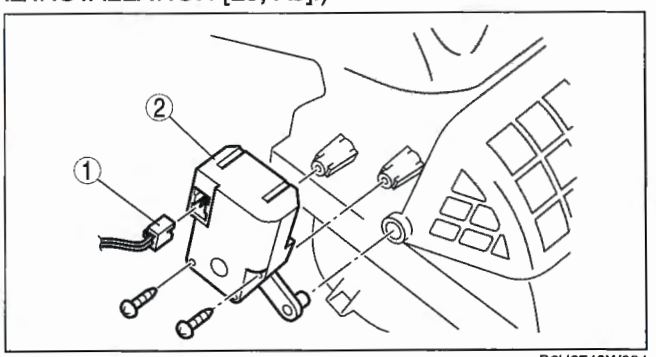
AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [L3, AJ]

E6U074061060W01

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Remove the duct (1). (See 07–11–5 A/C UNIT REMOVAL/INSTALLATION [L3, AJ].)
4. Remove in the order indicated in the table.

1	Air intake actuator connector
2	Air intake actuator

5. Install in the reverse order of removal.



B6U0740W034

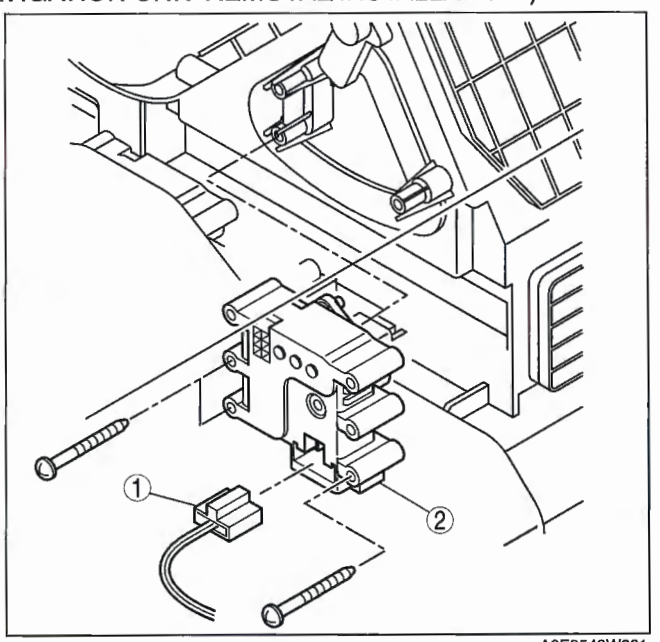
AIR INTAKE ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U074061060W03

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove the car navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Air intake actuator connector
2	Air intake actuator

5. Install in the reverse order of removal.



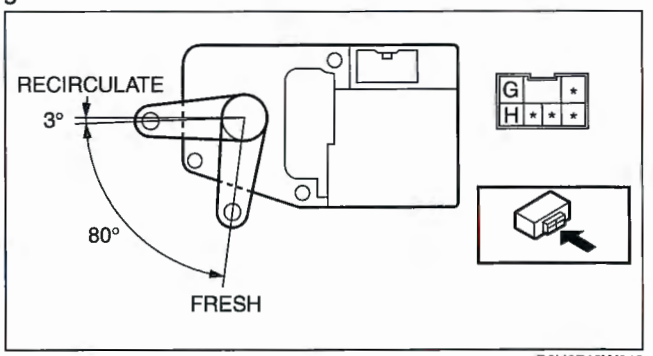
A6E8540W001

AIR INTAKE ACTUATOR INSPECTION [L3, AJ]

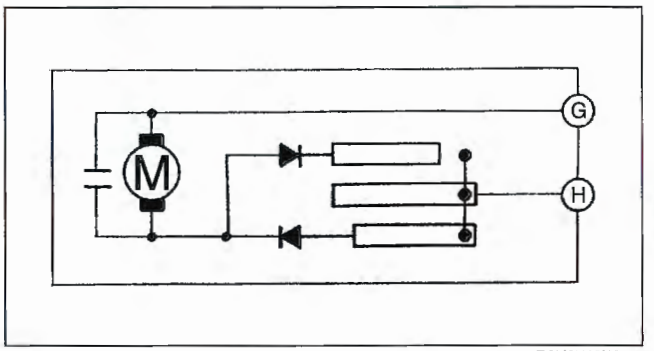
E6U074061060W02

1. Connect battery positive voltage to terminal G or H and ground to terminal H or G of the air intake actuator.
2. Verify that the air intake actuator operates as shown below.
   - If not as specified, replace the air intake actuator.

Connection		Movement
B+	GND	
G	H	RECIRCULATE ← FRESH
H	G	FRESH ← RECIRCULATE



B6U0740W018



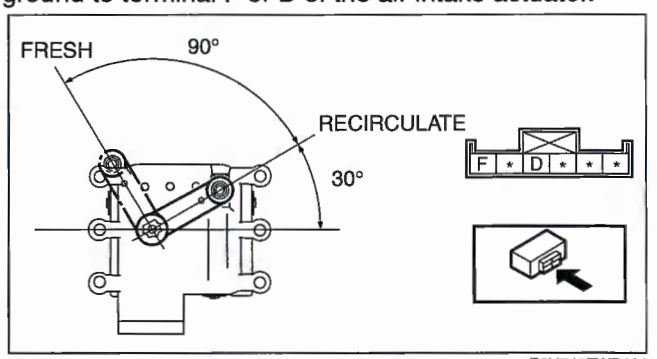
B6U0740W019

AIR INTAKE ACTUATOR INSPECTION [L3 WITH TC]

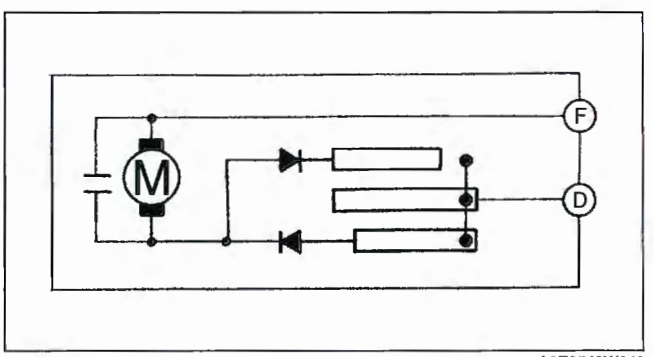
E6U074061060W04

1. Connect battery positive voltage to terminal D or F and ground to terminal F or D of the air intake actuator.
2. Verify that the air intake actuator operates as shown below.
   - If there is any malfunction, replace the air intake actuator.

Connection		Movement
B+	GND	
D	F	RECIRCULATE → FRESH
F	D	FRESH → RECIRCULATE



E6U740ZWB101



A6E8540W043

07–40

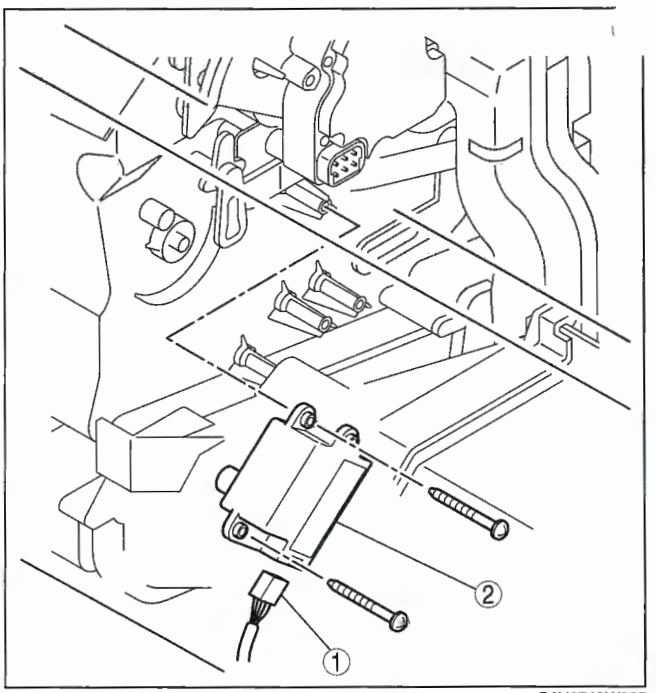
AIR MIX ACTUATOR REMOVAL/INSTALLATION [L3, AJ]

E6U074061415W01

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Remove in the order indicated in the table.

1	Air mix actuator connector
2	Air mix actuator

4. Install in the reverse order of removal.



B6U0740W035

AIR MIX ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC]

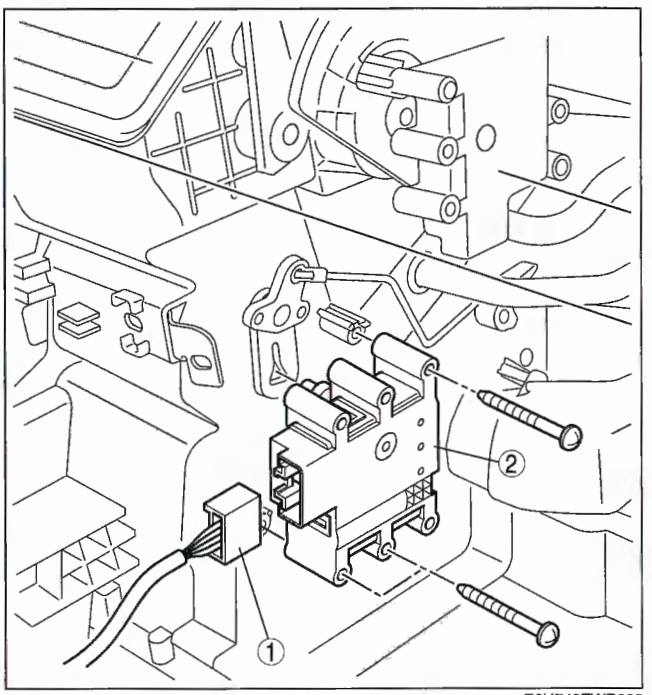
E6U074061415W03

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Glove compartment (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (2) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (3) Meter hood (See 09–17–6 METER HOOD REMOVAL/INSTALLATION.)
   (4) Instrument cluster (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (5) Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   (6) Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   (7) Steering shaft (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (8) A-pillar trim (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (9) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (10)Front side trim (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (11)Side panel (See 09–17–6 SIDE PANEL REMOVAL/INSTALLATION.)
3. Remove the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)
4. Remove the A/C unit installation nuts. (See 07–11–7 A/C UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
5. Remove the blower unit. (See 07–11–3 BLOWER UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
6. Remove the duct (2).

7. Remove in the order indicated in the table.

1	Air mix actuator connector
2	Air mix actuator

8. Install in the reverse order of removal.



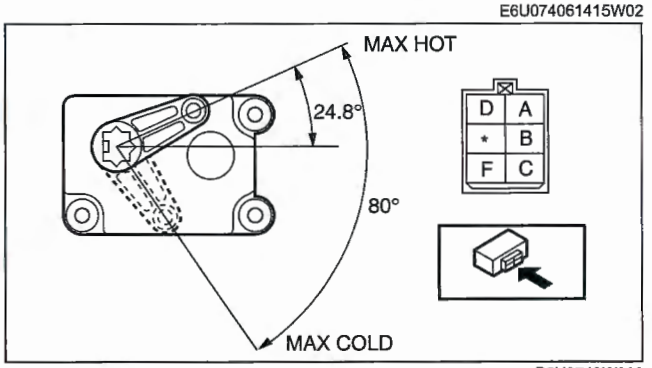
E6U740ZWB002

AIR MIX ACTUATOR INSPECTION [L3, AJ]

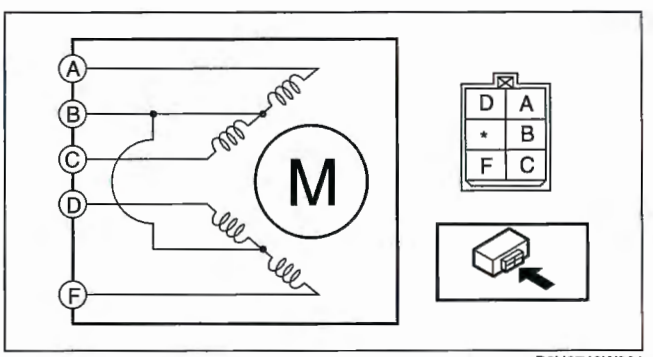
1. Verify that the resistance between the terminals of the air mix actuator is as shown in the table.
   - If not as specified, replace the air mix actuator.

Terminal	Resistance (ohm)
B—A	100
B—C	100
B—D	100
B—F	100

E6U074061415W02



B6U0740W020



B6U0740W021

Reset Methods

- After replacing the air mix actuator, make sure to complete the following reset procedure.

Automatic reset

1. Disconnect the negative battery cable, and then reconnect it. (AUTO switch indicator light flashes.)

Controlled reset

Switch to on-board diagnostic mode. (See 07–02–4 DIAGNOSTIC TROUBLE CODE NUMBER INSPECTION [L3, AJ].)

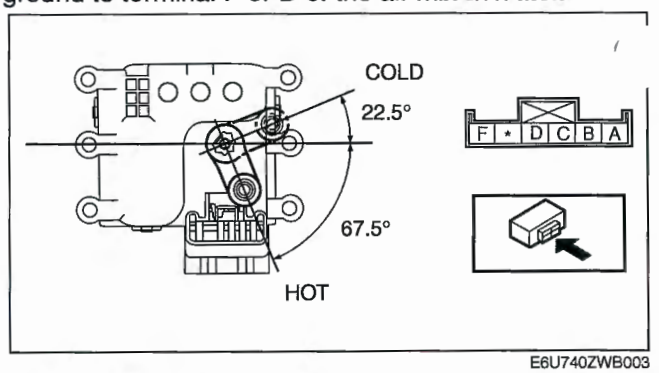
2. While in present failure indication mode, press the DEFROSTER switch for **3 s** or more. (AUTO switch indicator light flashes.)

AIR MIX ACTUATOR INSPECTION [L3 WITH TC]

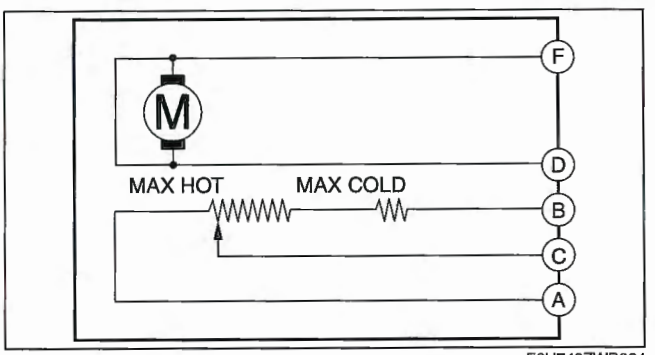
E6U074061415W04

1. Connect battery positive voltage to terminal D or F and ground to terminal F or D of the air mix actuator.
2. Verify that the air mix actuator operates as shown below.
   - If there is any malfunction, replace the air mix actuator.

Connection		Movement
B+	GND	
D	F	HOT → COLD
F	D	COLD → HOT

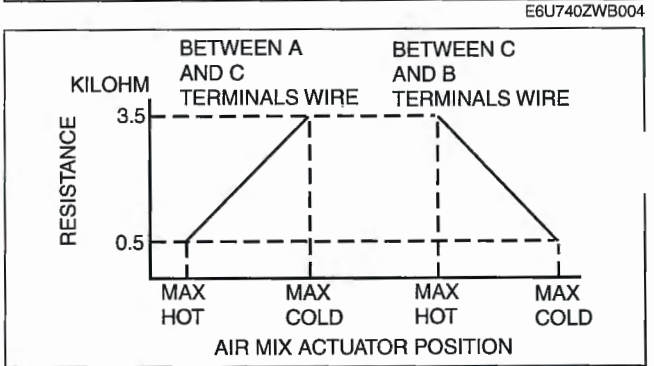


E6U740ZWB003



E6U740ZWB004

3. Verify that the resistance between the terminals of the air mix actuator are as shown in the graph.
   - If there is any malfunction, replace the air mix actuator.



E6U740ZWB102

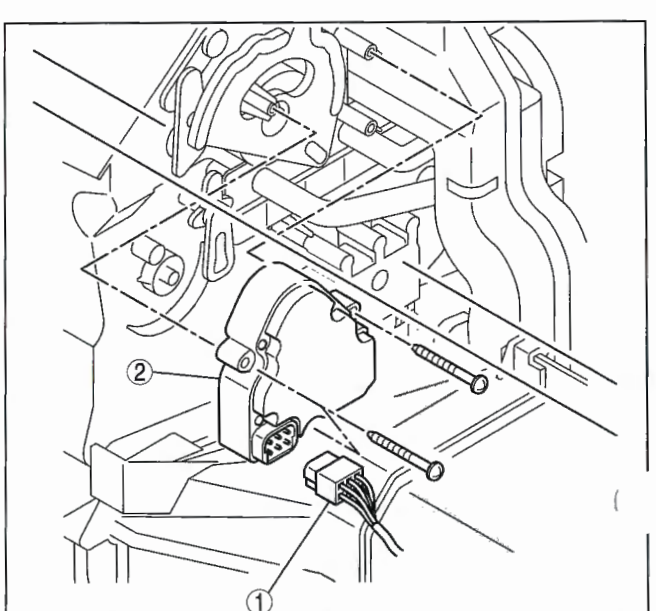
AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [L3, AJ]

E6U074061070W01

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Remove in the order indicated in the table.

1	Airflow mode actuator connector
2	Airflow mode actuator

4. Install in the reverse order of removal.



B6U0740W036

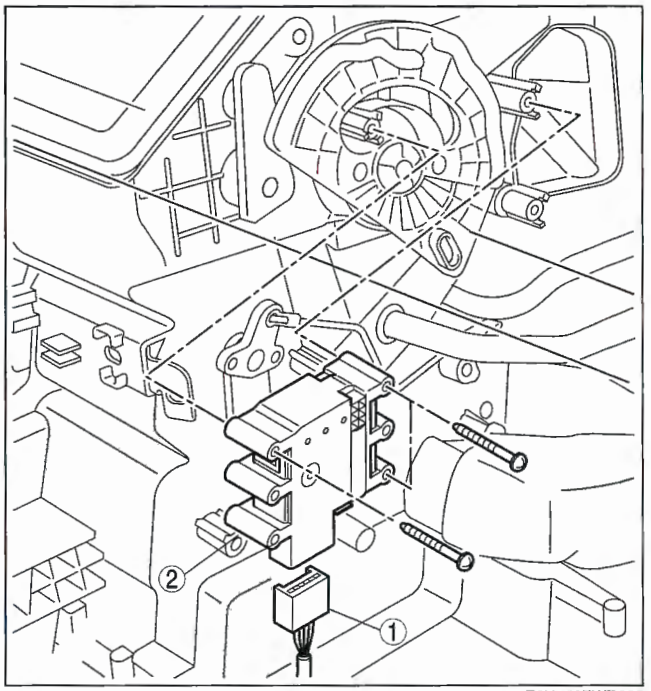
AIRFLOW MODE ACTUATOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U074061070W03

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   Remove the car navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Airflow mode actuator connector
2	Airflow mode actuator

5. Install in the reverse order of removal.



E6U740ZWB005

AIRFLOW MODE ACTUATOR INSPECTION [L3, AJ]

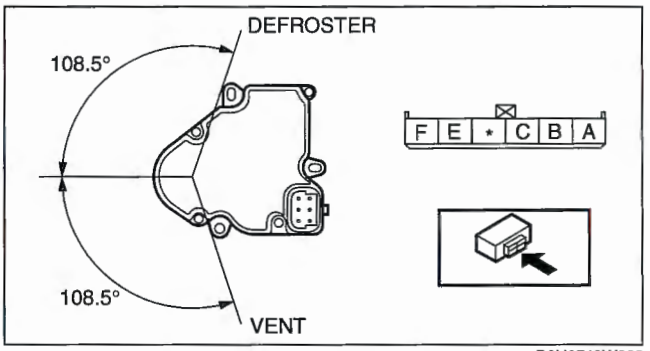
E6U074061070W02

Full-auto Air Conditioner

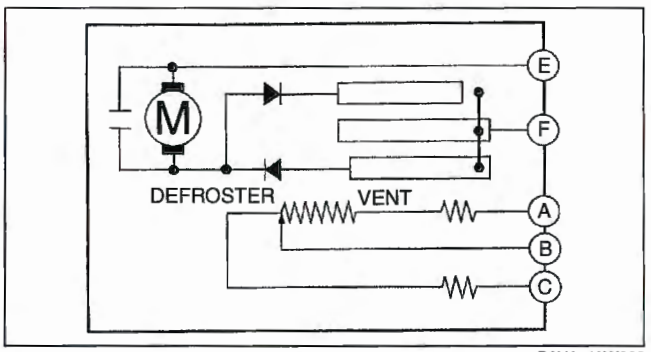
Connect battery positive voltage to terminal E or F and ground to terminal F or E of the airflow mode actuator.

3. Verify that the airflow mode actuator operates as shown below.
   - If not as specified, replace the airflow mode actuator.

Connection		Movement
B+	GND	
E	F	VENT → DEFROSTER
F	E	DEFROSTER → VENT

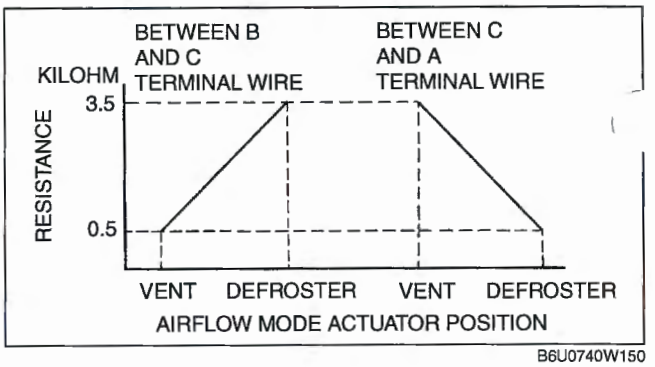


B6U0740W022



B6U0740W023

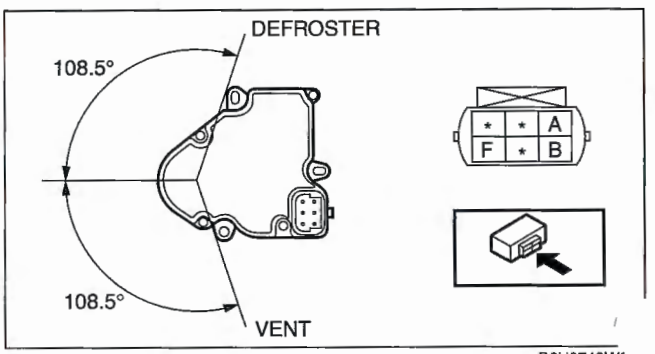
3. Verify that the resistance between the terminals of the airflow mode actuator is as shown in the graph.
   - If not as specified, replace the airflow mode actuator.



B6U0740W150

Manual Air Conditioner
Operating inspection

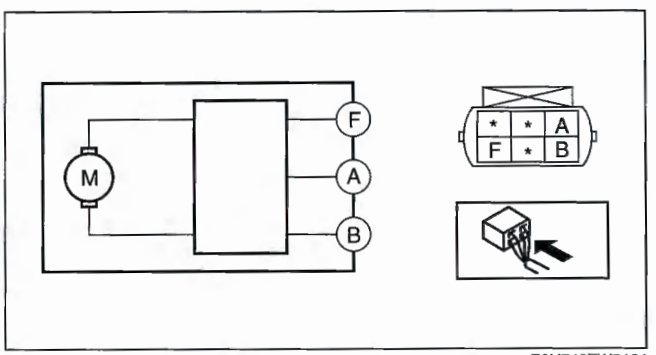
1. Turn the fan switch to OFF.
2. Turn the mode dial to VENT.
3. Turn the ignition switch to ON position. (engine ON)
4. Turn the fan switch 4th position.
5. Turn the mode dial from VENT to DEFROSTER.
6. Verify that the airflow mode actuator moves smoothly.
   - If not as specified, inspect the airflow mode main link and sub link for clogging and deformity.
   - If the actuator cannot move at all, go to voltage inspection.



B6U0740W0

Voltage inspection

1. Turn the ignition switch to ON position. (engine OFF)
2. Verify that the voltage between the terminals of airflow mode actuator (harness-side) is as shown in the table.
   - If not as specified, perform the harness inspection and mode switch inspection. (See 07–40–38 Manual Air Conditioner.)
   - If as specified, replace the airflow mode actuator.



E6U740ZW5101

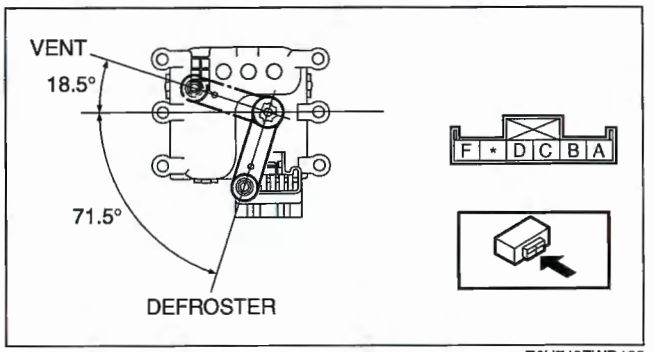
Mode dial position	Terminal	Voltage (V)
-	B—GND	0
-	B—F	B+
VENT	A—F	0
BI-LEVEL		3
HEAT		6
HEAT/DEF		9
DEFROSTER		12

AIRFLOW MODE ACTUATOR INSPECTION [L3 WITH TC]

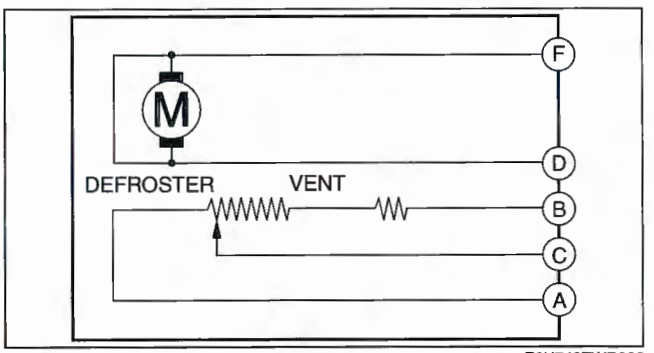
E6U074061070W04

1. Connect battery positive voltage to terminal D or F and ground to terminal F or D of the airflow mode actuator.
2. Verify that the airflow mode actuator operates as shown below.
   - If there is any malfunction, replace the airflow mode actuator.

Connection		Movement
B+	GND	
D	F	DEFROSTER → VENT
F	D	VENT → DEFROSTER

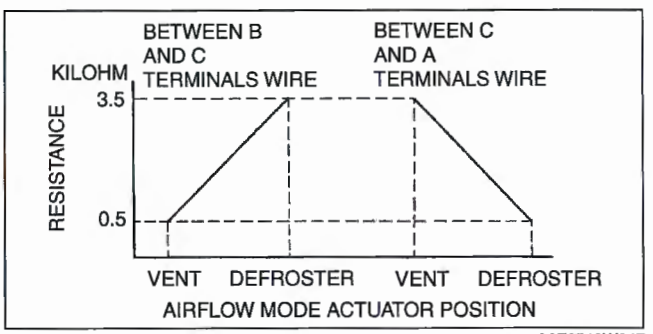


E6U740ZWB103



E6U740ZWB006

3. Verify that the resistance between the terminals of the airflow mode actuator is as shown in the graph.
   - If there is any malfunction, replace the airflow mode actuator.



A6E8540W047

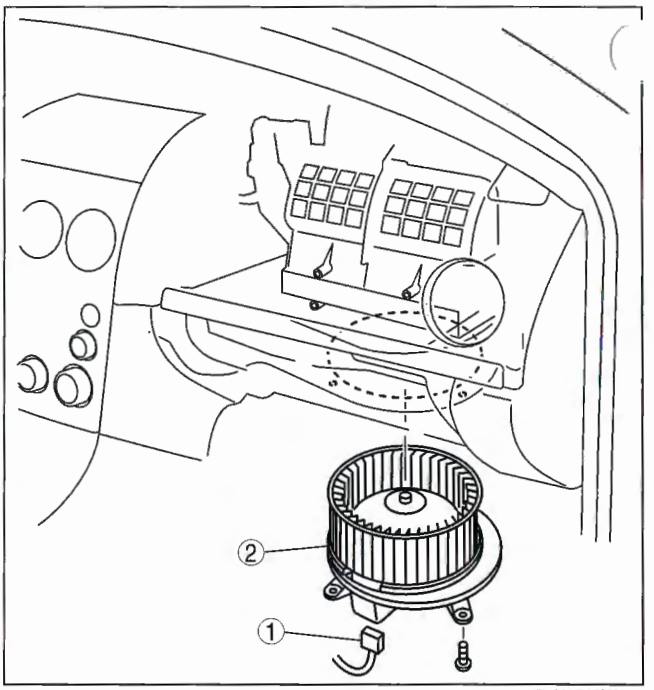
BLOWER MOTOR REMOVAL/INSTALLATION

E6U074061020W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Blower motor connector
2	Blower motor

3. Install in the reverse order of removal.

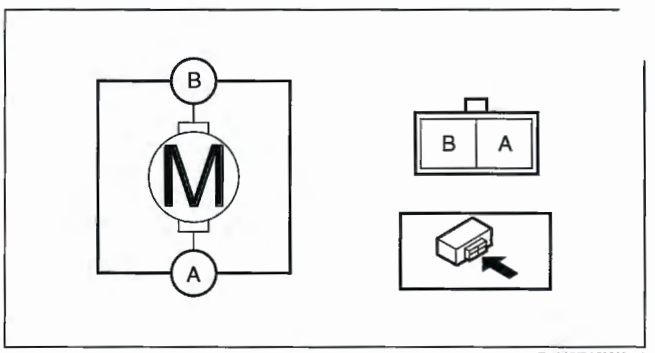


B6U0740W038

BLOWER MOTOR INSPECTION

E6U074061020W02

1. Connect battery positive voltage to terminal B and ground to terminal A of the blower motor and verify its operation.
   - If not as specified, replace the blower motor.



B6U0740W031

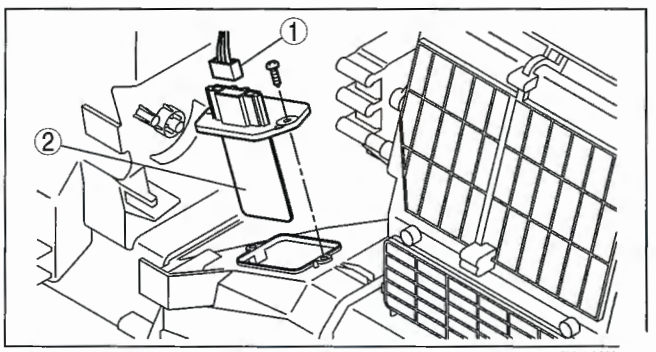
RESISTOR REMOVAL/INSTALLATION

E6U074061015W01

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Remove in the order indicated in the table.

1	Resistor connector
2	Resistor

4. Install in the reverse order of removal.



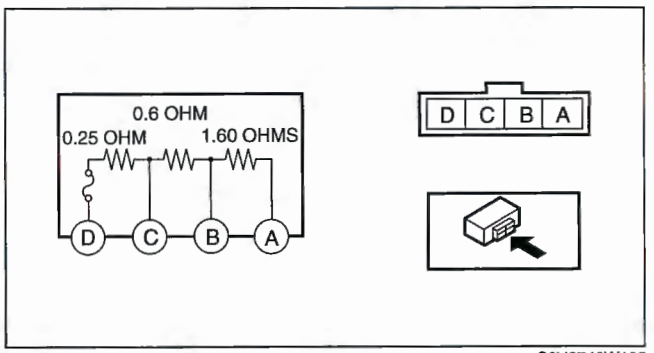
A6E8540W

RESISTOR INSPECTION

E6U074061015W02

1. Verify that the resistance between the terminals of the resistor is as shown in the table.
   - If not as specified, replace the resistor.

Terminal	Resistance (ohm)
A—D	0.25
A—B	0.85
A—C	2.70



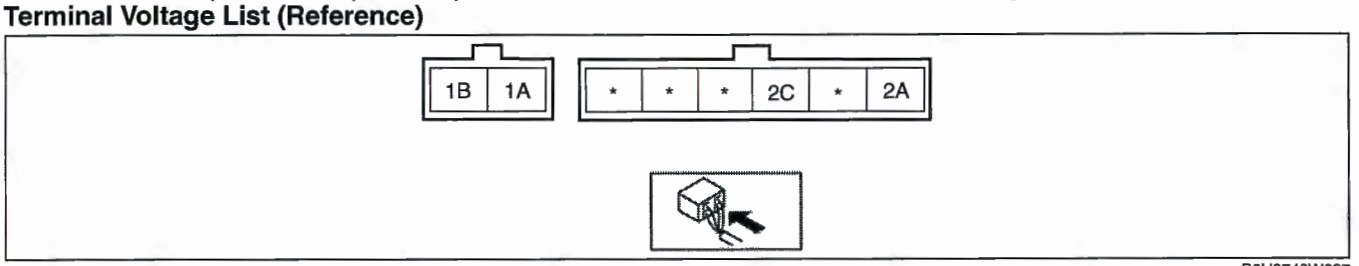
C6U0740W105

PWM UNIT INSPECTION [L3, AJ]

E6U074000116W01

1. Connect the PWM unit connector.
2. Turn the ignition switch to ON position.
3. Measure the voltage at each PWM unit terminal and refer to the terminal voltage list.
   - If not as specified, inspect the parts listed under "Action" and the related wiring harness.

Terminal Voltage List (Reference)



B6U0740W027

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
1A	IG2	Blower relay	Ignition switch at ON position	B+	• Inspect for continuity or short circuit (PWM unit—blower relay: 1A—C) • Inspect blower relay
			Ignition switch at LOCK position	Below 1.0	
1B	GND	Ground	Under any condition	Below 1.0	• Inspect for continuity (PWM unit—ground: 1B—GND)
2A	Blower fan speed	Climate control unit	Fan speed: 1—7	Pulse*	• Inspect for continuity or short circuit (PWM unit—climate control unit: 2A—1C) • Inspect climate control unit
2B	—	—	—	—	—
2C	Motor operation	Blower motor	Fan off	B+	• Inspect for continuity or short circuit (PWM unit—blower motor: 2C—A) • Inspect blower motor
			Fan speed 1	8—10	
			Fan speed 2	6—8	
			Fan speed 3	5—6	
			Fan speed 4	3—5	
			Fan speed 5	1—3	
			Fan speed 6	0.7—1	
			Fan speed 7	0.7—1	
2D	—	—	—	—	—
2E	—	—	—	—	—
2F	—	—	—	—	—

*: Refer to climate control unit terminal 1C (Figure 1). (See 07–40–33 CLIMATE CONTROL UNIT INSPECTION [L3, AJ] .)

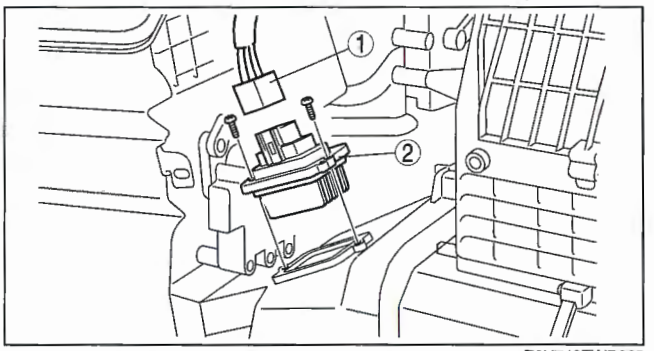
POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) REMOVAL/INSTALLATION [L3 WITH TC]

E6U074000116W02

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove the car navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Power MOS FET connector
2	Power MOS FET

5. Install in the reverse order of removal.



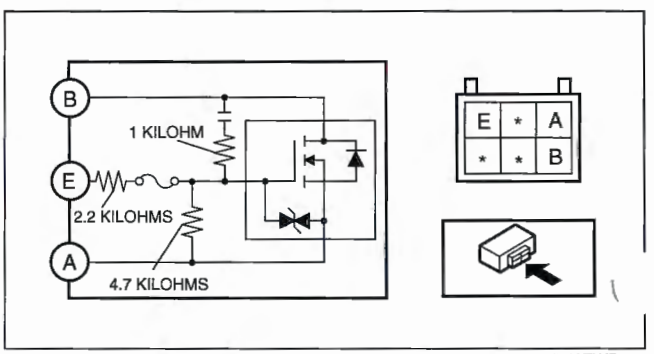
E6U740ZWB008

POWER METAL OXIDE SEMICONDUCTOR FIELD EFFECT TRANSISTOR (POWER MOS FET) INSPECTION [L3 WITH TC]

E6U074000116W03

1. Verify that the resistance between the terminals of the power MOS FET is as shown in the table.
   - If there is any malfunction, replace the power MOS FET.

Tester lead		Resistance (kilohm)
+	–	
A	B	∞
A	E	6.9
B	A	Continuity
B	E	Continuity
E	A	6.9
E	B	∞



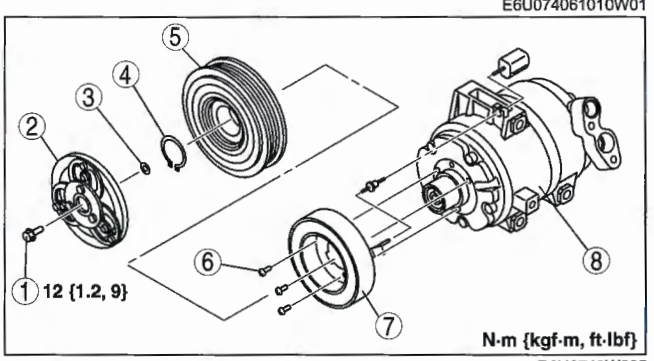
E6U740ZWB104

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [L3, AJ]

E6U074061010W01

1. Disassemble in the order indicated in the table.

1	Bolt (See 07–40–17 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim
4	Snap ring (See 07–40–17 Snap Ring Installation Note.)
5	A/C compressor pulley
6	Screw
7	Stator
8	A/C compressor body

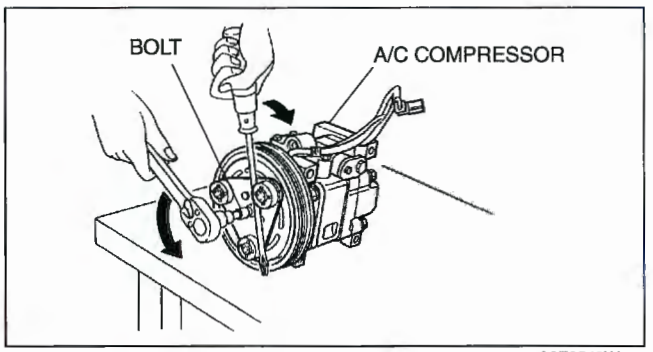


B6U0740W025

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07–40–19 MAGNETIC CLUTCH ADJUSTMENT [L3, AJ].)

Bolt Removal/Installation Note

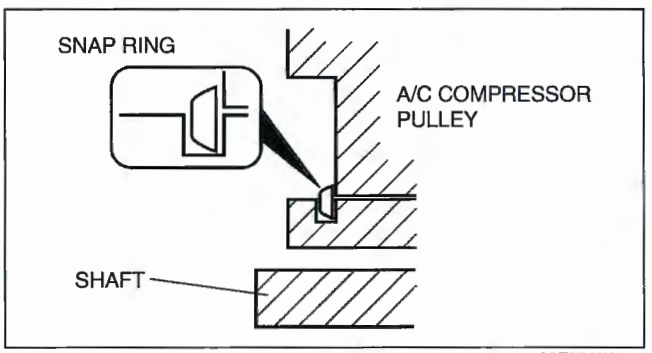
1. When removing or installing the bolt, hold the pressure plate in place as shown in the figure. When installing a new A/C compressor body, replace the bolt.



A6E8540W048

Snap Ring Installation Note

1. When installing a new pressure plate, A/C compressor pulley, stator, or A/C compressor body, replace the snap ring.



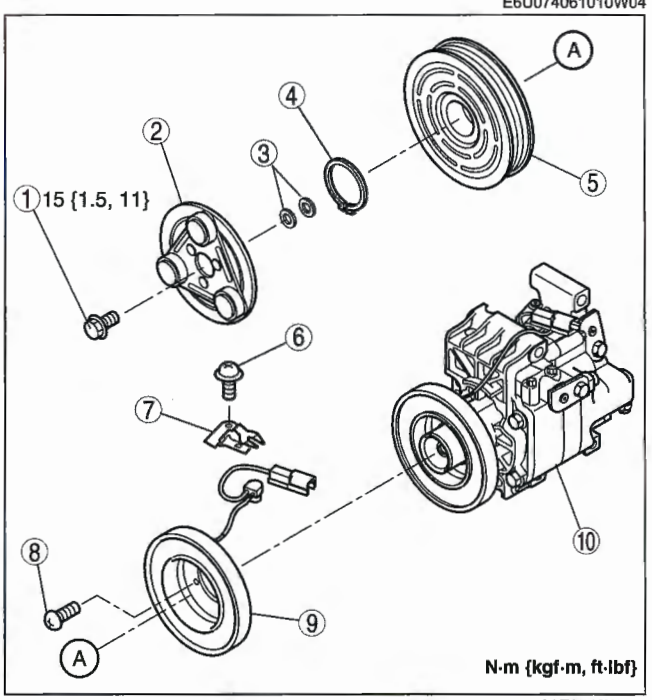
A6E8540W050

MAGNETIC CLUTCH DISASSEMBLY/ASSEMBLY [L3 WITH TC]

E6U074061010W04

1. Disassemble in the order indicated in the table.

1	Bolt (See 07–40–18 Bolt Removal/Installation Note.)
2	Pressure plate
3	Shim
4	Snap ring (See 07–40–18 Snap Ring Installation Note.)
5	A/C compressor pulley
6	Screw (See 07–40–18 Screw Installation Note.)
7	Clamp (See 07–40–18 Clamp Installation Note.)
8	Screw (See 07–40–18 Screw Installation Note.)
9	Stator and thermal protector (See 07–40–18 Stator and Thermal Protector Removal Note.) (See 07–40–18 Stator and Thermal Protector Installation Note.)
10	A/C compressor body

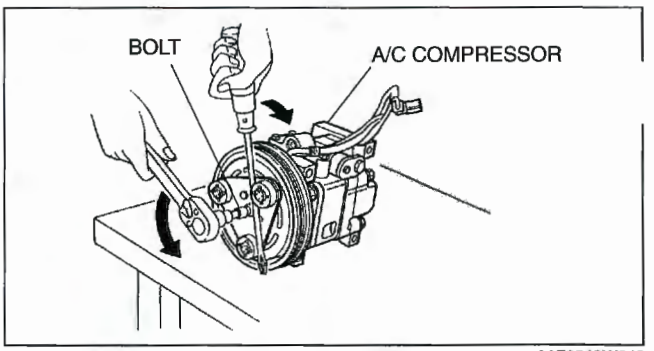


A6E8540W014

2. Assemble in the reverse order of disassembly.
3. Adjust the magnetic clutch clearance. (See 07–40–19 MAGNETIC CLUTCH ADJUSTMENT [L3 WITH TC].)

Bolt Removal/Installation Note

1. When removing or installing the bolt, hold the pressure plate in place as shown in the figure.
2. When installing a new A/C compressor body, replace the bolt.



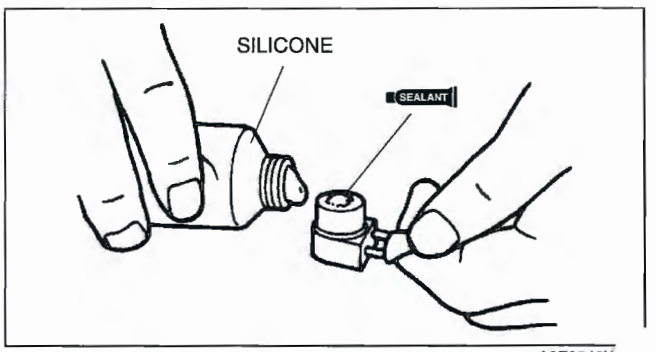
A6E8540W048

Stator and Thermal Protector Removal Note

1. After removing the stator and thermal protector, completely remove the silicone adhering to the A/C compressor side.

Stator and Thermal Protector Installation Note

1. Apply **approx. 1 g {0.04 oz}** of silicone (Shin-Etsu Silicone KE-347W or similar) to the contact surface of the thermal protector, then thoroughly install it onto the A/C compressor, leaving no gaps.



A6E8540V

Screw Installation Note

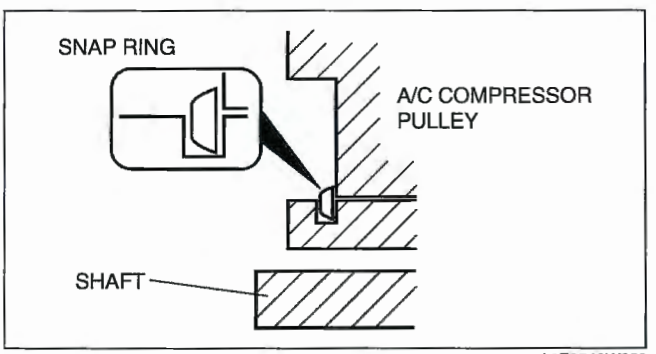
1. When installing a new stator and thermal protector, replace the screw.

Clamp Installation Note

1. When installing a new stator and thermal protector, replace the clamp.

Snap Ring Installation Note

1. When installing a new pressure plate, A/C compressor pulley, stator, or A/C compressor body, replace the snap ring.

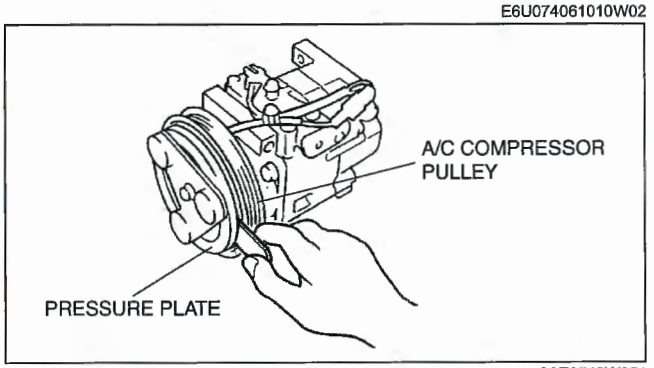


A6E8540W050

MAGNETIC CLUTCH ADJUSTMENT [L3, AJ]

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.

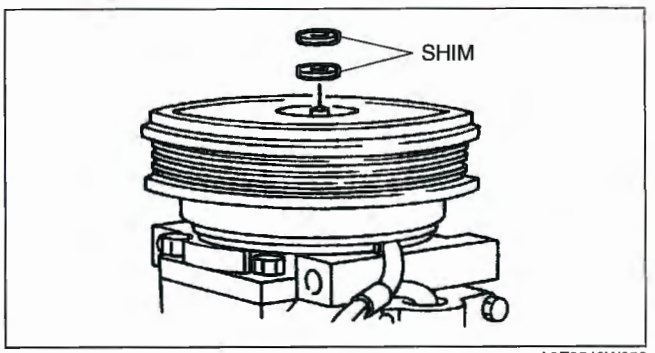
E6U074061010W02



A6E8540W051

2. Verify that the clearance is within the specification.
   - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims.

   Magnetic clutch clearance
   0.3—0.6 mm {0.012—0.023 in}



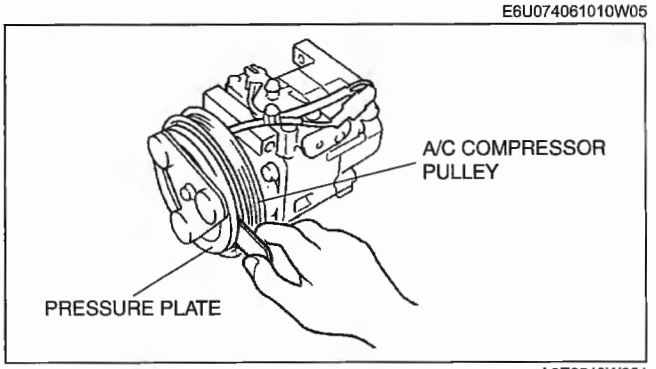
A6E8540W052

07–40

MAGNETIC CLUTCH ADJUSTMENT [L3 WITH TC]

1. Measure the clearance around the entire circumference between the pressure plate and A/C compressor pulley using a thickness gauge.

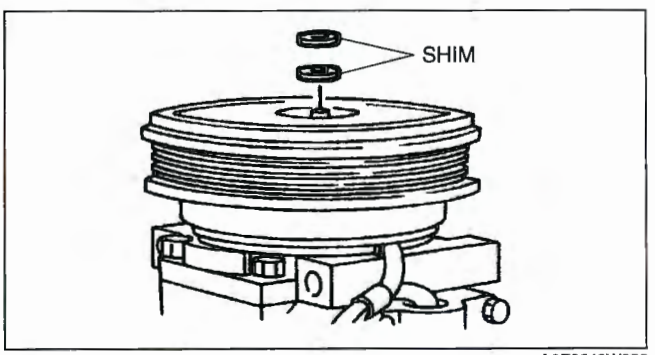
E6U074061010W05



A6E8540W051

2. Verify that the clearance is within the specification.
   - If not within the specification, remove the pressure plate and adjust the clearance by changing the shim (**0.2 mm {0.008 in}, 0.5 mm {0.02 in}**) or the number of shims.

   Magnetic clutch clearance
   0.3—0.5 mm {0.012—0.019 in}

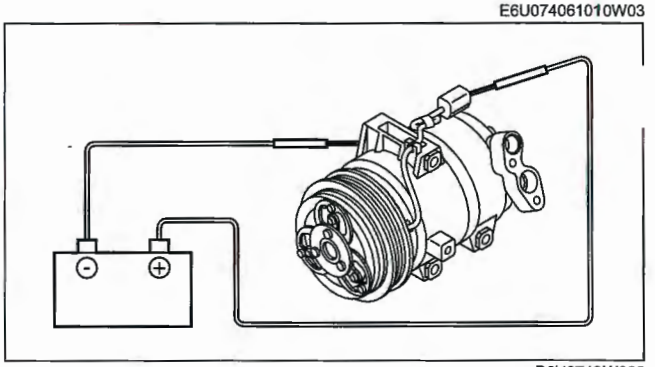


A6E8540W052

MAGNETIC CLUTCH INSPECTION [L3, AJ]

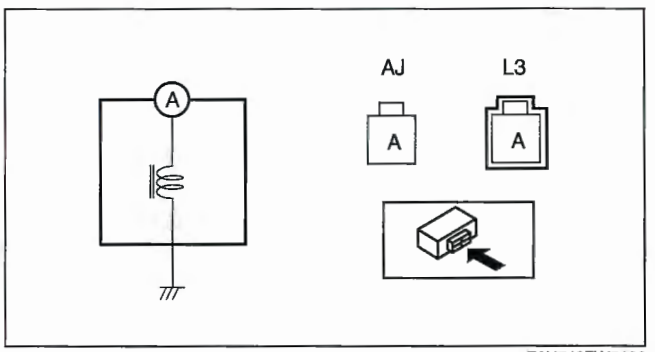
1. Connect battery positive voltage to terminal A of magnetic clutch and ground to A/C compressor body.

E6U074061010W03



B6U0740W028

2. Verify that the magnetic clutch operates.
   - If not as specified, replace the stator.

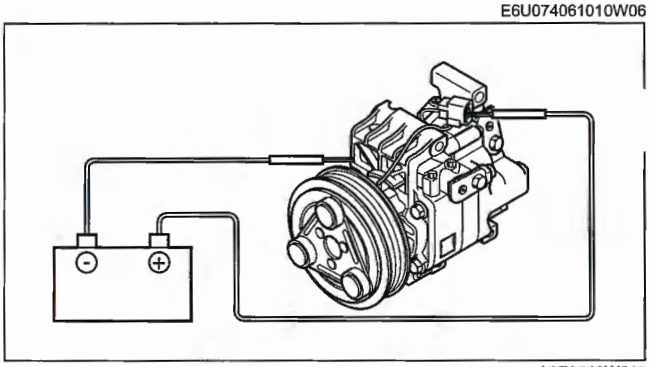


E6U740ZW5102

MAGNETIC CLUTCH INSPECTION [L3 WITH TC]

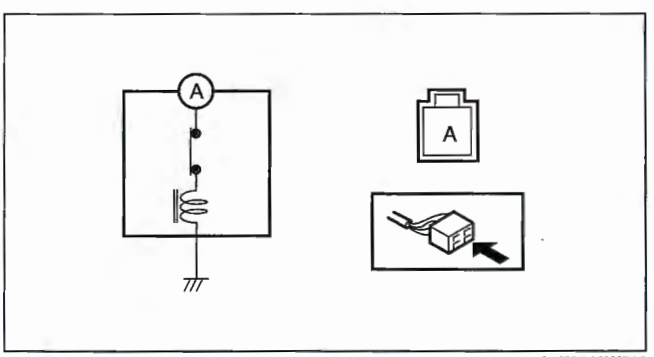
1. Connect battery positive voltage to terminal A of magnetic clutch and ground to A/C compressor body.

E6U074061010W06



A6E8540W015

2. Verify that the magnetic clutch operates.
   - If there is any malfunction, replace the stator and thermal protector.

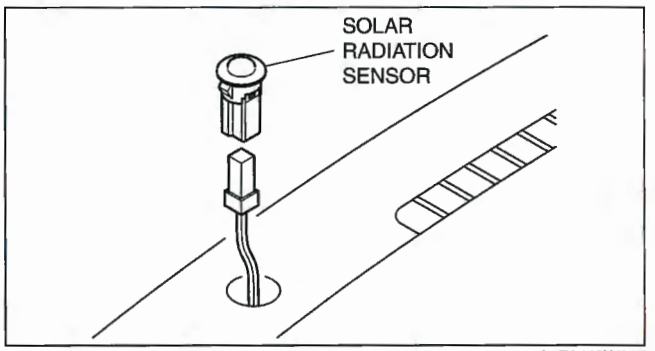


A6E8540W016

SOLAR RADIATION SENSOR REMOVAL/INSTALLATION

E6U074061751W01

1. Disconnect the negative battery cable.
2. Remove the solar radiation sensor from the dashboard using a tape-wrapped flathead screwdriver.
3. Install in the reverse order of removal.

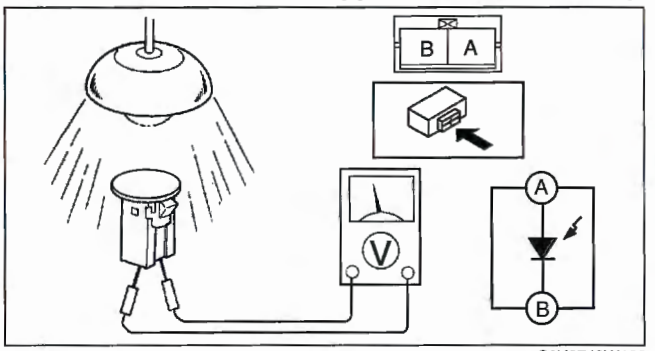


A6E8540W017

SOLAR RADIATION SENSOR INSPECTION

E6U074061751W02

1. Shine an incandescent light (**60 W**) on the solar radiation sensor from a distance of **approx. 100 mm {3.94 in}**.
2. Connect positive (+) lead to terminal A and negative (–) lead to terminal B of the solar radiation sensor.
   - If the output voltage is not **over 0.02V and not less 0.45 V**, replace the solar radiation sensor.



C6U0740W106

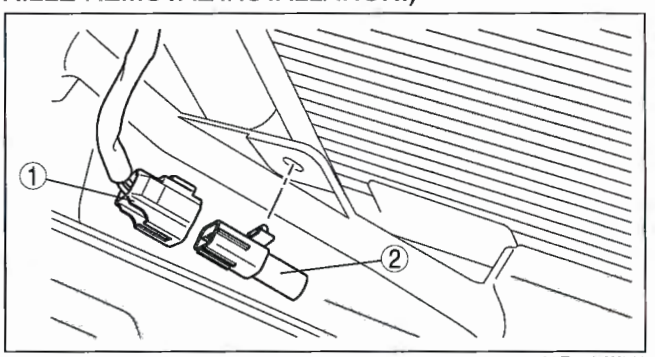
AMBIENT TEMPERATURE SENSOR REMOVAL/INSTALLATION

E6U074061764W01

Disconnect the negative battery cable.
2. Remove the radiator grille. (See 09–16–3 RADIATOR GRILLE REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Ambient temperature sensor connector
2	Ambient temperature sensor

4. Install in the reverse order of removal.

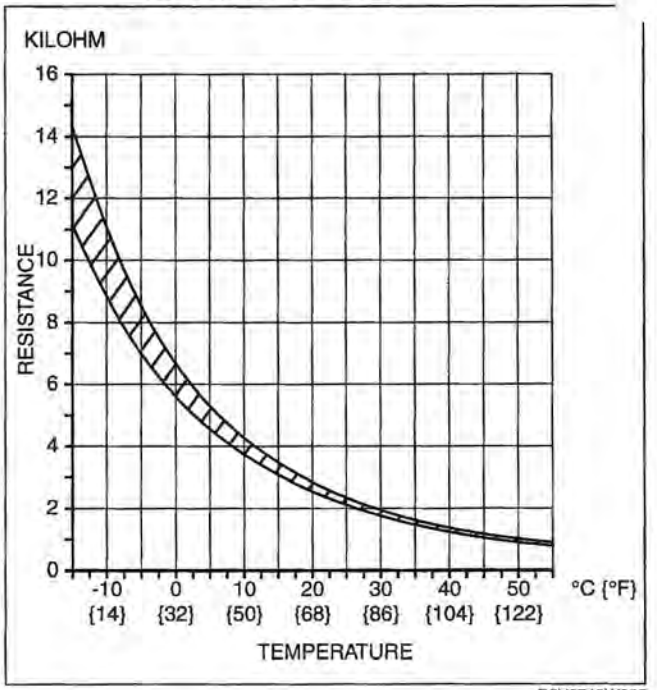


A6E8540W018

AMBIENT TEMPERATURE SENSOR INSPECTION [L3, AJ]

E6U074061764W02

1. Measure the temperature around the ambient temperature sensor.
2. Measure the resistance between terminals of the ambient temperature sensor.
   - If the resistance is not as shown in the graph, replace the ambient temperature sensor.

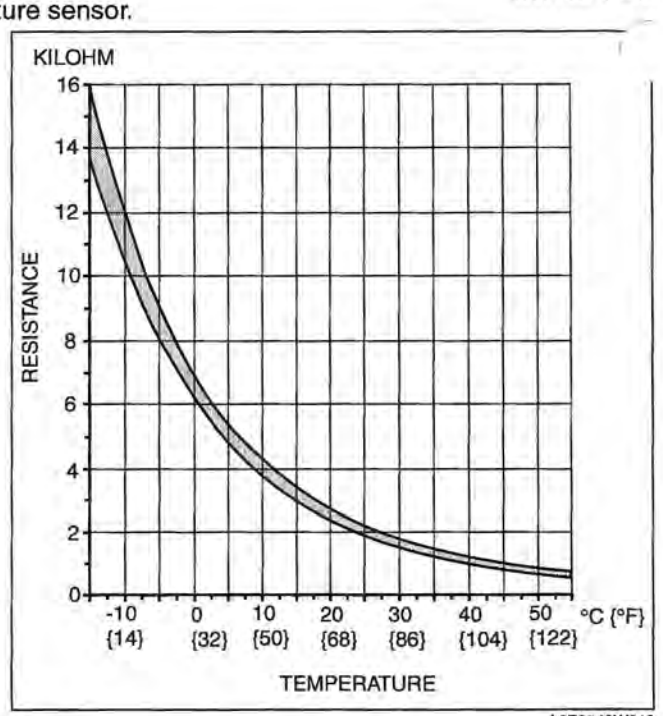


B6U0740W005

AMBIENT TEMPERATURE SENSOR INSPECTION [L3 WITH TC]

E6U074061764W03

1. Measure the temperature around the ambient temperature sensor.
2. Measure the resistance between terminals of the ambient temperature sensor.
   - If the resistance is not as shown in the graph, replace the ambient temperature sensor.



A6E8540W019

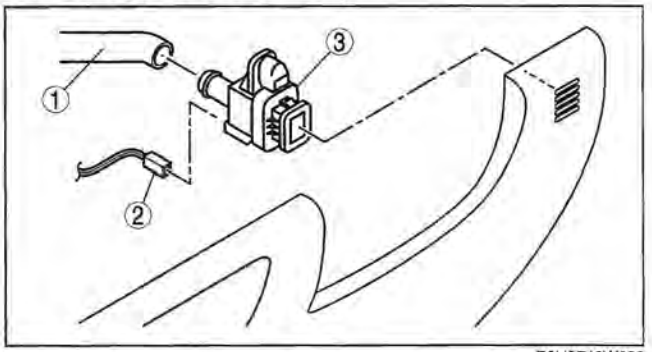
PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ]

E6U074061758W01

1. Disconnect the negative battery cable.
2. Remove the lower panel. (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Air hose
2	Passenger compartment temperature sensor connector
3	Passenger compartment temperature sensor

4. Install in the reverse order of removal.



B6U0740W029

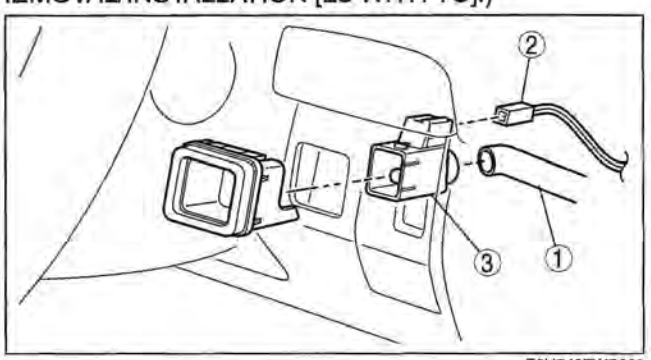
PASSENGER COMPARTMENT TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U074061758W03

1. Disconnect the negative battery cable.
2. Remove the lower panel. (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
3. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove in the order indicated in the table.

1	Air hose
2	Passenger compartment temperature sensor connector
3	Passenger compartment temperature sensor

5. Install in the reverse order of removal.



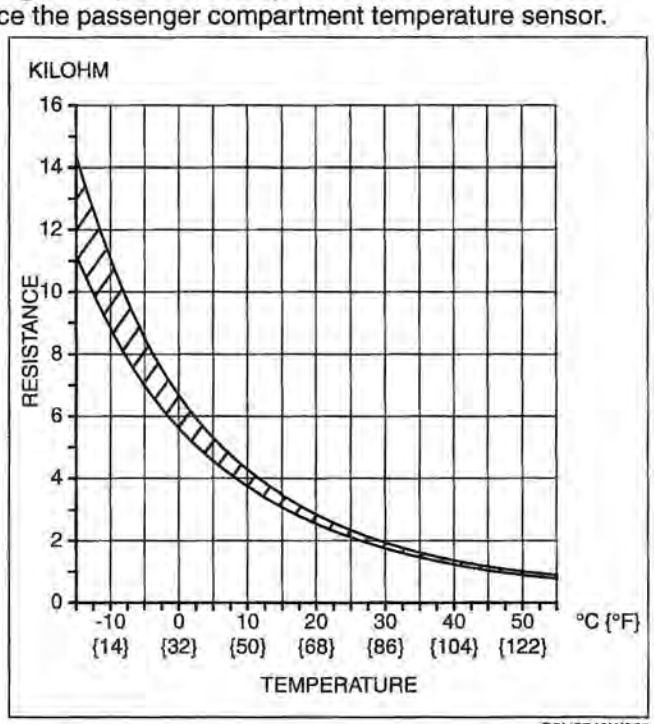
E6U740ZWB009

07–40

PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [L3, AJ]

E6U074061758W02

1. Measure the temperature around the passenger compartment temperature sensor.
2. Measure the resistance between terminals of the passenger compartment temperature sensor.
   - If the resistance is not as shown in the graph, replace the passenger compartment temperature sensor.

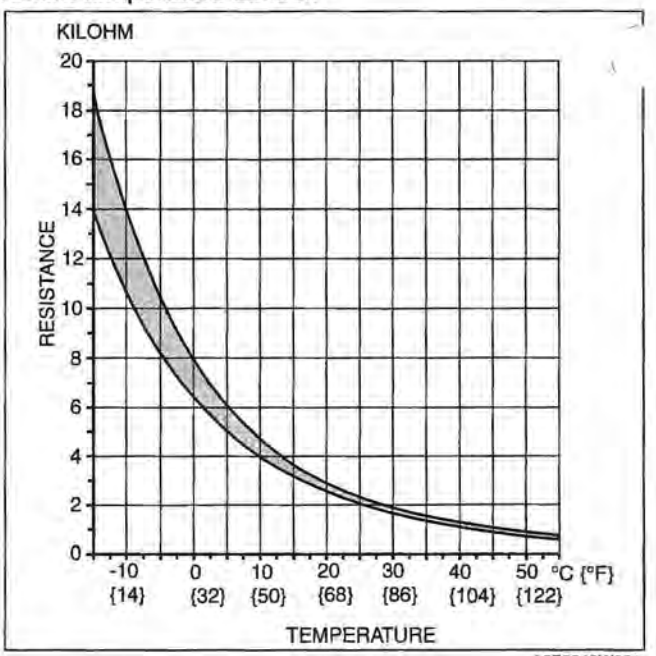


B6U0740W005

PASSENGER COMPARTMENT TEMPERATURE SENSOR INSPECTION [L3 WITH TC]

E6U074061758W04

1. Measure the temperature around the passenger compartment temperature sensor.
2. Measure the resistance between terminals of the passenger compartment temperature sensor.
   - If the resistance is not as shown in the graph, replace the passenger compartment temperature sensor.



A6E8540W021

EVAPORATOR TEMPERATURE SENSOR REMOVAL/INSTALLATION

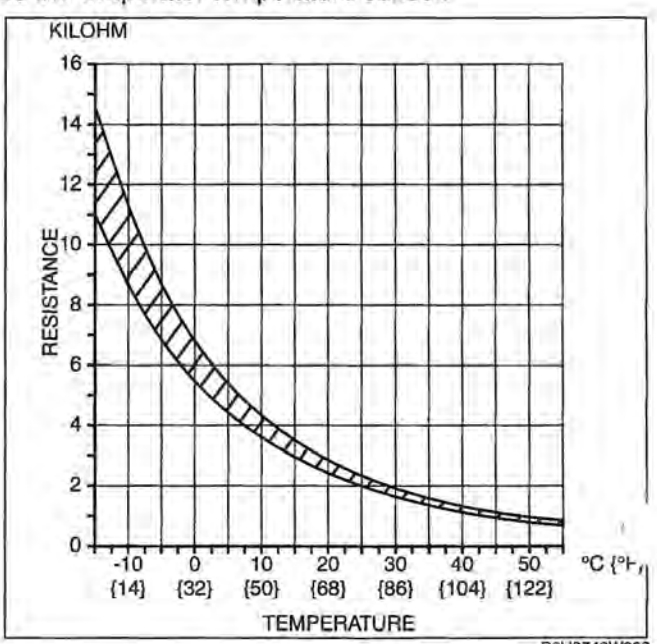
E6U074061022W01

1. Remove the evaporator temperature sensor from the A/C unit. (See 07–11–8 A/C UNIT DISASSEMBLY/ ASSEMBLY [L3, AJ].) (See 07–11–10 A/C UNIT DISASSEMBLY/ASSEMBLY [L3 WITH TC].)

EVAPORATOR TEMPERATURE SENSOR INSPECTION [L3, AJ]

E6U074061022W02

1. Turn the AUTO switch on. (Full-auto air conditioner)
2. Set the temperature control to MAX COLD.
3. Push the A/C switch.
4. Set the RECIRCULATE mode.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Remove the glove compartment.
8. Disconnect the evaporator temperature sensor.
9. Measure the temperature at the blower inlet.
10. Measure the resistance between terminals of the evaporator temperature sensor.
    - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.

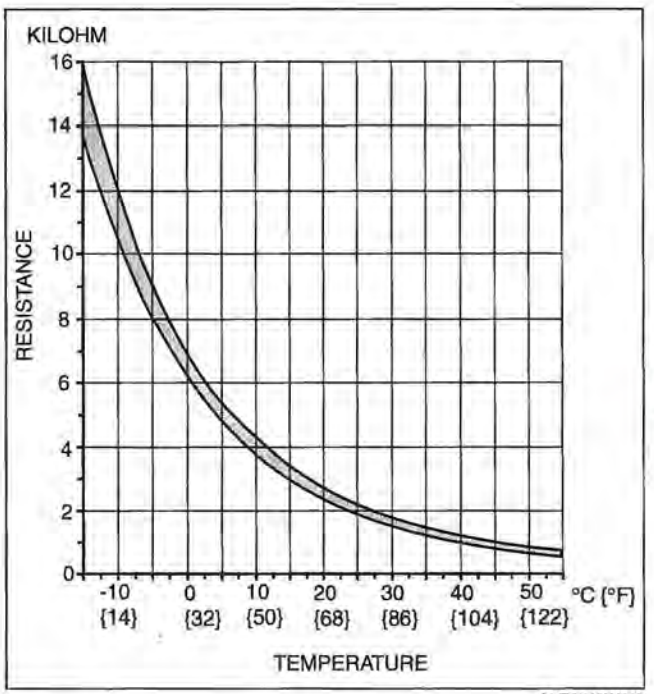


B6U0740W006

EVAPORATOR TEMPERATURE SENSOR INSPECTION [L3 WITH TC]

E6U074061022W03

1. Turn the AUTO switch on.
2. Set the temperature control at MAX COLD (Turn the left).
   Turn the A/C switch.
3. Set the RECIRCULATE mode.
5. Close all doors and windows.
6. Wait for **5 min**.
7. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
8. Disconnect the evaporator temperature sensor.
9. Measure the temperature at the blower inlet.
10. Measure the resistance between terminals of the evaporator temperature sensor.
    - If the resistance is not as shown in the graph, replace the evaporator temperature sensor.



A6E8540W019

WATER TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3, AJ]

E6U074061752W01

1. Remove the water temperature sensor from the A/C unit. (See 07–11–8 A/C UNIT DISASSEMBLY/ASSEMBLY [L3, AJ].)

A/C WATER TEMPERATURE SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

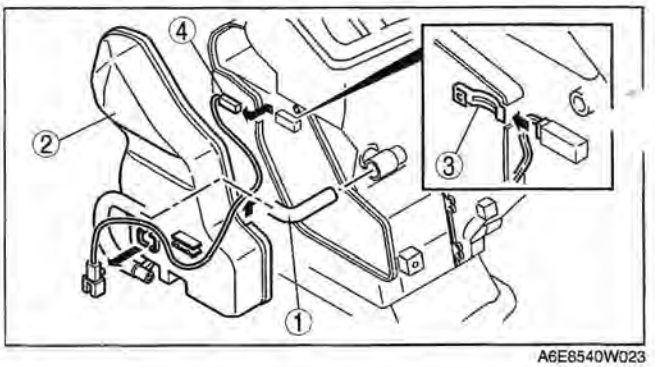
E6U074061752W03

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Glove compartment (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (2) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (3) Meter hood (See 09–17–6 METER HOOD REMOVAL/INSTALLATION.)
   (4) Instrument cluster (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (5) Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   (6) Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   (7) Steering shaft (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (8) A-pillar trim (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (9) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (10)Front side trim (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (11)Side panel (See 09–17–6 SIDE PANEL REMOVAL/INSTALLATION.)
3. Remove the dashboard. (See 09–17–4 DASHBOARD REMOVAL/INSTALLATION.)

4. Remove in the order indicated in the table.

1	Air hose
2	Duct (3)
3	Plate spring
4	A/C water temperature sensor

5. Install in the reverse order of removal.

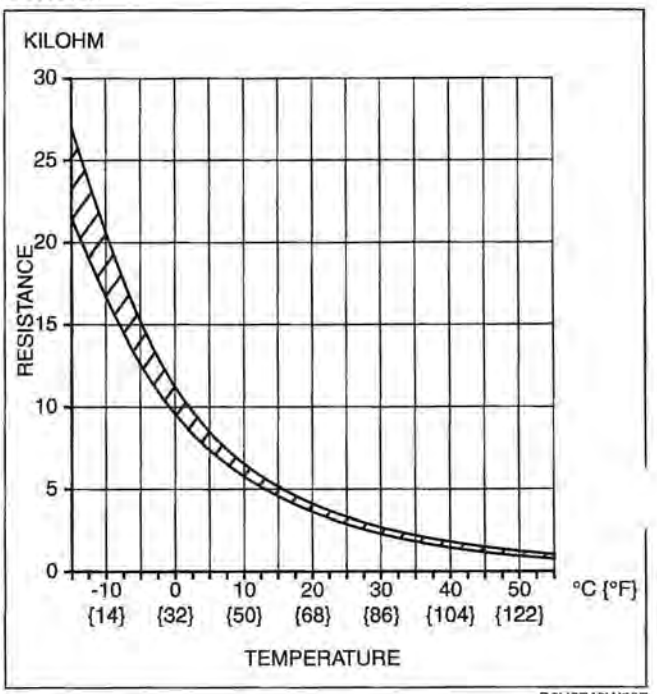


A6E6540W023

WATER TEMPERATURE SENSOR INSPECTION [L3, AJ]

E6U074061752W02

1. Measure the temperature around the water temperature sensor.
2. Measure the resistance between terminals of the water temperature sensor.
   - If the resistance is not as shown in the graph, replace the water temperature sensor.

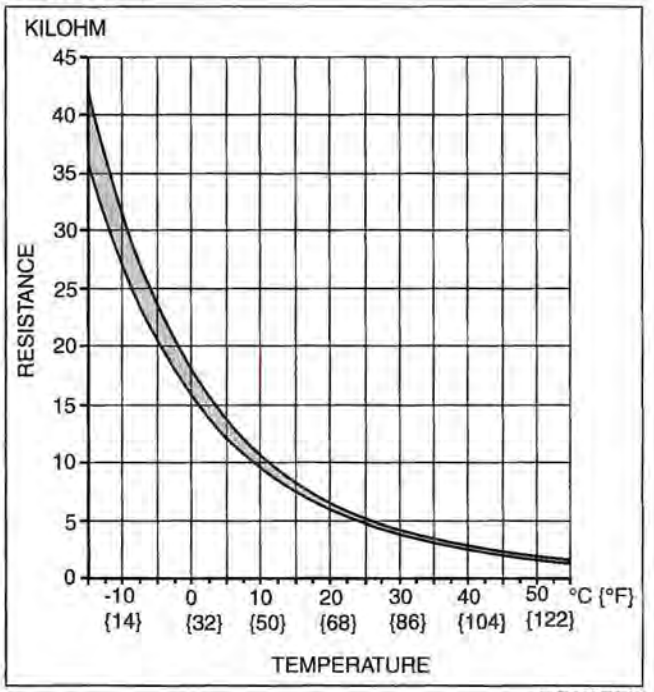


B6U0740W007

A/C WATER TEMPERATURE SENSOR INSPECTION [L3 WITH TC]

E6U074061752W04

1. Measure the temperature around the A/C water temperature sensor.
2. Measure the resistance between terminals of the A/C water temperature sensor.
   - If the resistance is not as shown in the graph, replace the A/C water temperature sensor.



A6E8540W024

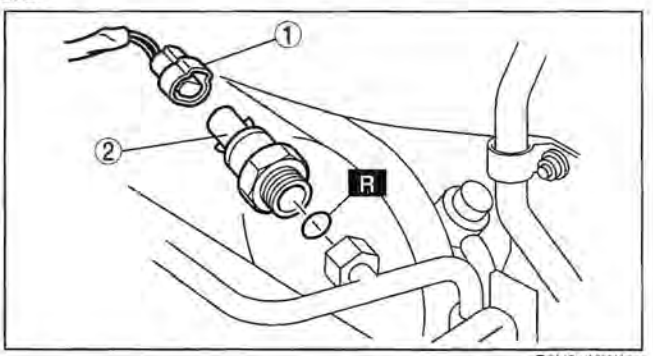
07–40

REFRIGERANT PRESSURE SWITCH REMOVAL/INSTALLATION [L3, AJ]

E6U074061503W01

1. Remove the battery.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT CHARGING [L3, AJ].)
3. Remove the front combination light (RH). (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/ INSTALLATION.)
4. Loosen the refrigerant pressure switch using two spanners.
5. Remove in the order indicated in the table.

1	Refrigerant pressure switch connector
2	Refrigerant pressure switch (See 07–40–27 Refrigerant Pressure Switch Installation Note.)



B6U0740W037

6. Install in the reverse order of removal.

Refrigerant Pressure Switch Installation Note

1. Apply compressor oil to O-ring and connect the joint.

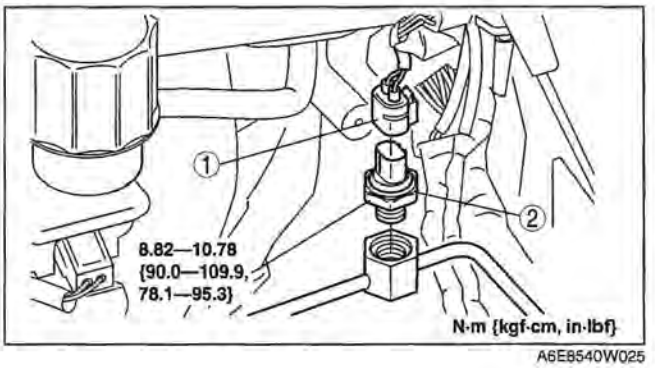
REFRIGERANT PRESSURE SWITCH REMOVAL/INSTALLATION [L3 WITH TC]

E6U074061503W03

1. Remove the battery.
2. Discharge the refrigerant from the system. (See 07–10–5 REFRIGERANT RECOVERY.) (See 07–10–8 REFRIGERANT CHARGING [L3 WITH TC].)
3. Loosen the refrigerant pressure switch using two spanners.
4. Remove in the order indicated in the table.

1	Refrigerant pressure switch connector
2	Refrigerant pressure switch (See 07–40–28 Refrigerant Pressure Switch Installation Note.)

5. Install in the reverse order of removal.



A6E8540W025

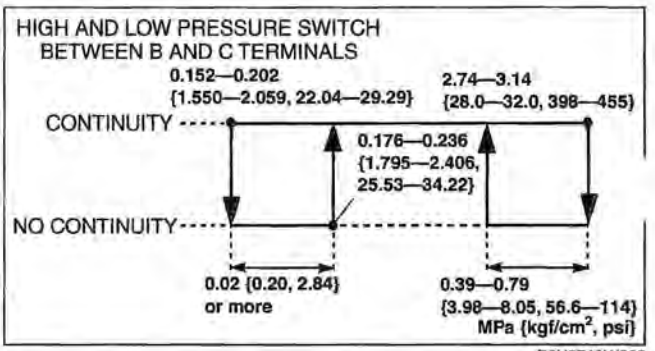
Refrigerant Pressure Switch Installation Note

1. Apply compressor oil to O-ring and connect the joint.

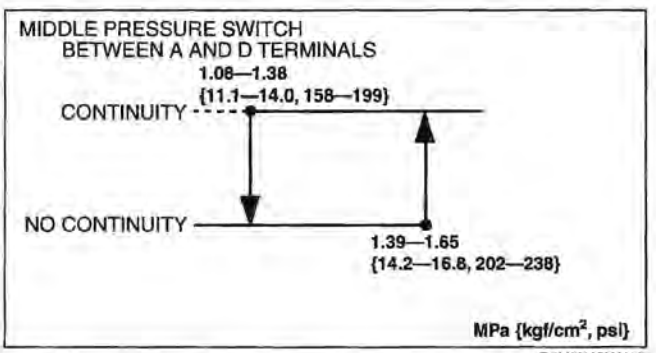
REFRIGERANT PRESSURE SWITCH INSPECTION [L3, AJ]

E6U074061503W02

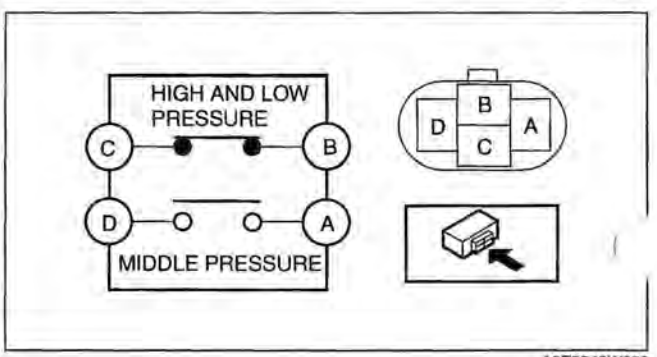
1. Install the manifold gauge set.
2. Disconnect the refrigerant pressure switch connector.
3. Verify the high-pressure side reading of the manifold gauge and continuity between the terminals of the refrigerant pressure switch.
   - If not as specified, replace the refrigerant pressure switch.



B6U0740W008



C6U0740W107

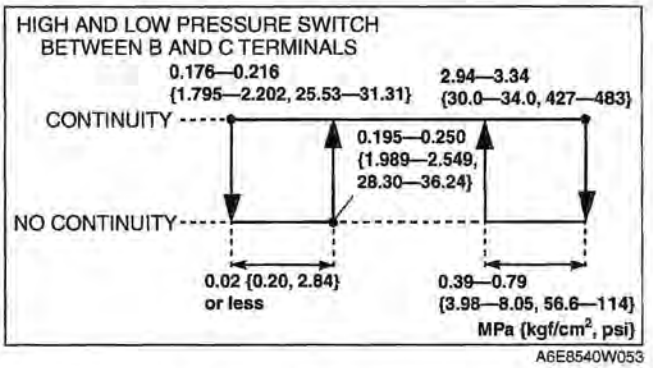


A6E8540W026

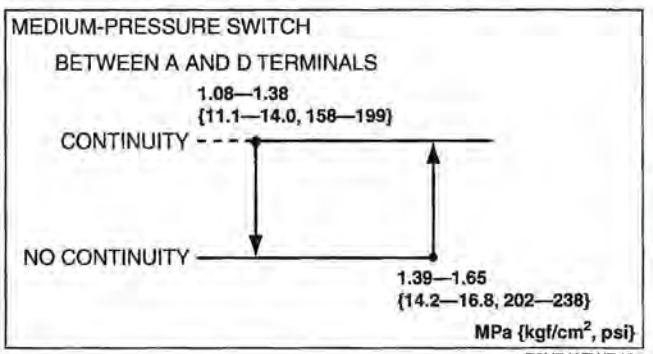
REFRIGERANT PRESSURE SWITCH INSPECTION [L3 WITH TC]

E6U074061503W04

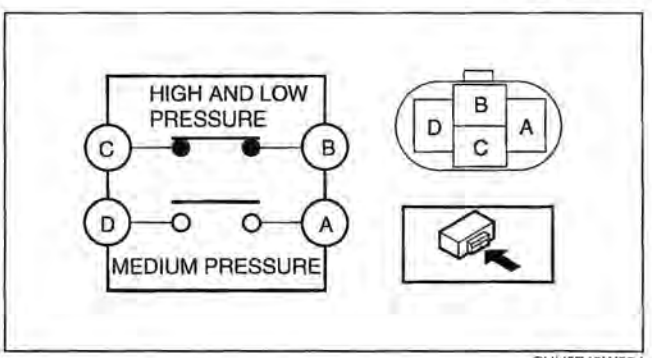
1. Install the manifold gauge.
2. Disconnect the refrigerant pressure switch connector. Verify the high-pressure side reading of the manifold gauge and continuity between the terminals of the refrigerant pressure switch.
   - If the continuity is not normal, replace the refrigerant pressure switch.



A6E8540W053



E6U740ZWB105

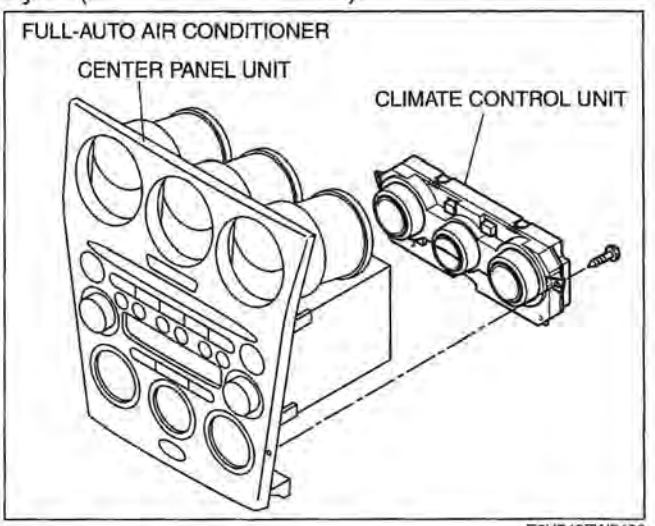


CHU0740W024

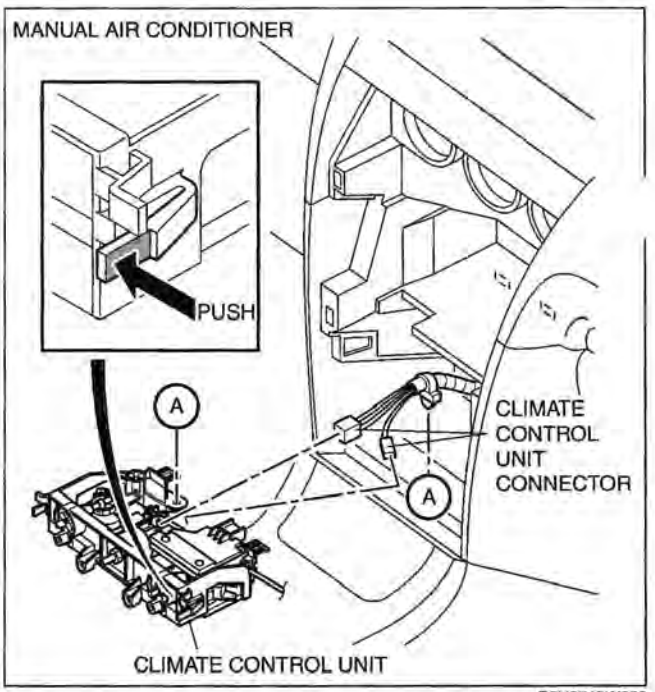
CLIMATE CONTROL UNIT REMOVAL [L3, AJ]

E6U074061190W01

1. Disconnect the negative battery cable.
2. Disconnect the air mix wire from wire clamp and link. (Manual air conditioner)
3. Remove the center panel unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
4. Remove the screws and climate control unit. (Full-auto air conditioner)
5. Release the hook and pull the climate control unit toward you. (Manual air conditioner)
6. Disconnect the climate control unit connectors and remove the climate control unit. (Manual air conditioner)



E6U740ZW5400

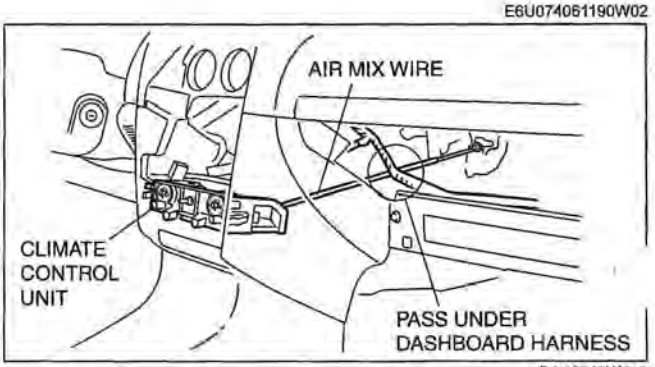


B6U0740W030

CLIMATE CONTROL UNIT INSTALLATION [L3, AJ]

1. Pass air mix wire through the following routes then connect to A/C unit. (Manual air conditioner)
2. Connect the climate control unit connectors. (Manual air conditioner)
3. Install the climate control unit to the center panel. (Full-auto air conditioner)
4. Install the center panel.
5. Adjust the climate control unit wire. (Manual air conditioner) (See 07–40–32 CLIMATE CONTROL UNIT WIRE ADJUSTMENT.)
6. Connect the negative battery cable.

E6U074061190W02

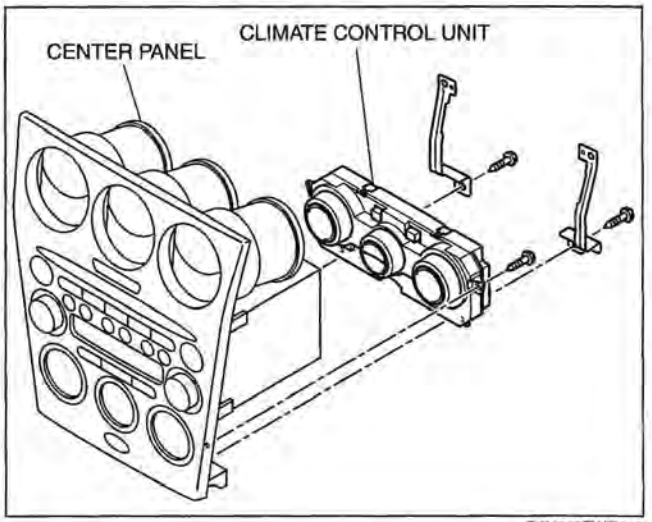


B6U0740W010

CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [L3 WITH TC]

E6U074061190W06

1. Disconnect the negative battery cable.
2. Remove the center panel. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
   Remove the screws and climate control unit.
   .. Install in the reverse order of removal.



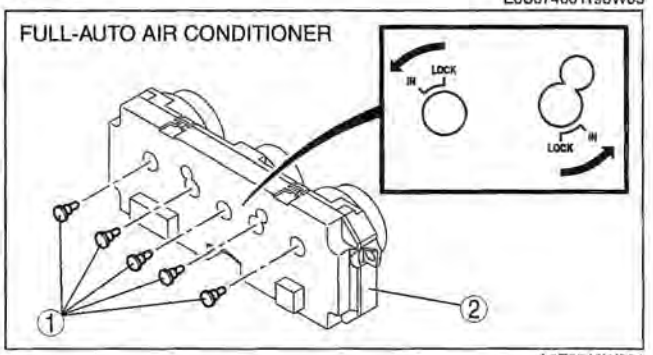
E6U740ZWB010

CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY [L3, AJ]

E6U074061190W03

1. Disassemble in the order indicated in the table.

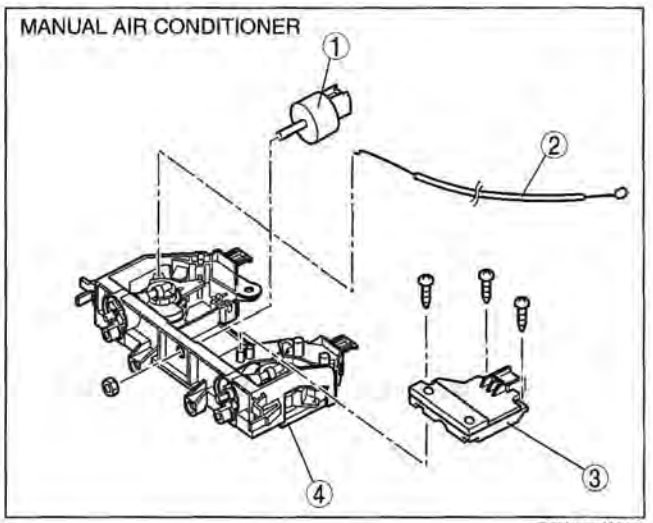
1	Illumination bulb
2	Body



A6E8540W061

1	Fan switch
2	Air mix wire (See 07–40–32 Wire Disassembly Note.) (See 07–40–32 Wire Assembly Note)
3	Mode switch
4	Body

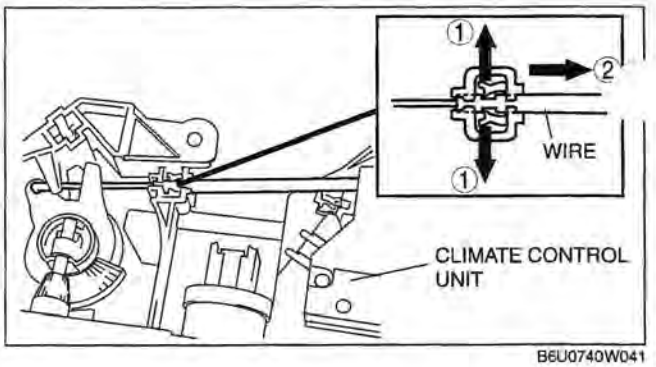
2. Assemble in the reverse order of disassembly.



B6U0740W040

Wire Disassembly Note

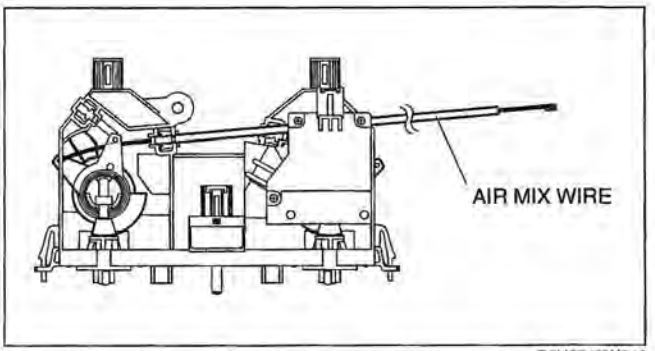
1. Disassemble the wire in the shown in the figure.



B6U0740W041

Wire Assembly Note

1. Assemble the wire to the position as shown in the figure.



B6U0740W042

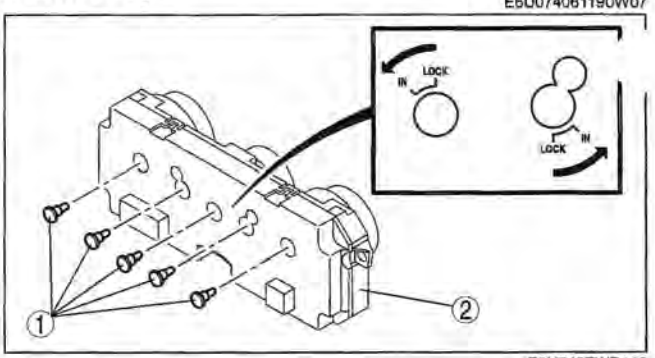
CLIMATE CONTROL UNIT DISASSEMBLY/ASSEMBLY [L3 WITH TC]

E6U074061190W07

1. Disassemble in the order indicated in the table.

1	Illumination bulb
2	Body

2. Assemble in the reverse order of disassembly.



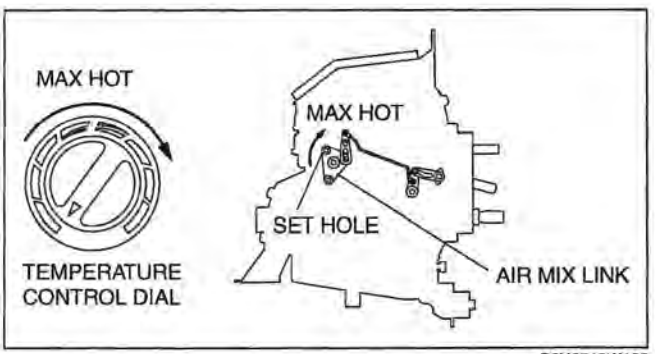
E6U740ZWB110

CLIMATE CONTROL UNIT WIRE ADJUSTMENT

E6U074061190W04

Air Mix Wire

1. Set the temperature control dial to max hot.
2. Set the air mix link to max hot in the direction shown by the arrow and insert a screwdriver at the set hole.
3. Connect the air mix wire to the air mix link.
4. Clamp the air mix wire to the wire clamp.
5. Verify that the temperature control dial rotates at full stroke.



C6U0740W10

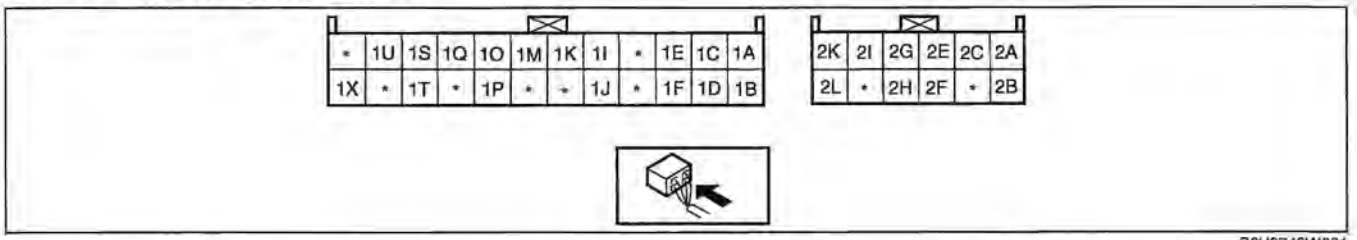
CLIMATE CONTROL UNIT INSPECTION [L3, AJ]

E6U074061190W05

Full-auto Air Conditioner

1. Connect all center panel connectors.
   Turn the ignition switch to ON position.
2. Measure the voltage at each climate control unit terminal and refer to the terminal voltage list.
   - If not as specified, inspect the parts listed under "Action" and the related wiring harness.
     — If there is any malfunction, replace the climate control unit.

Terminal Voltage List (Reference)



B6U0740W001

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
1A	Air mix 1	Air mix actuator	Moving to HOT Moving to COLD	See Figure 2	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 1A—F) • Inspect air mix actuator
1B	Air mix 2	Air mix actuator	Moving to HOT Moving to COLD	See Figure 2	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 1B—A) • Inspect air mix actuator
1C	PWM output	PWM unit	Fan speed: 1—7	See Figure 1	• Inspect for continuity or short circuit (Climate control unit—PWM unit: 1C—2A) • Inspect PWM unit
1D	Air mix 3	Air mix actuator	Moving to HOT Moving to COLD	See Figure 2	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 1D—D) • Inspect air mix actuator
1E	Rear window defroster SW signal	Rear window defroster relay	Rear window defroster switch is off	12	• Inspect for continuity or short circuit (Climate control unit—rear window defroster relay: 1E—E) • Inspect rear window defroster relay
			Rear window defroster switch is on	Below 1.0	• Inspect terminal voltage of climate control unit (2H, 2L) • Inspect center panel
1F	On-board diagnostic signal	DLC	Terminal A of DLC is shorted.	Below 1.0	• Inspect for continuity (Climate control unit—DLC: 1F—A)
			Other	5	• Inspect short circuit (Climate control unit—DLC: 1F—A) • Inspect terminal voltage of climate control unit (2H, 2L)
1G	—	—	—	—	—
1H	—	—	—	—	—

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
1I	GND	• Passenger compartment temperature sensor • Evaporator temperature sensor • Ambient temperature sensor • Water temperature sensor • Solar radiation sensor • Airflow mode actuator	Under any condition	Below 1.0	• Inspect terminal voltage of climate control unit (2L)
1J	Air mix 4	Air mix actuator	Moving to HOT Moving to COLD	See Figure 2	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 1J—C) • Inspect air mix actuator
1K	Ambient temperature sensor input	Ambient temperature sensor	Depends on temperature surrounding sensor	See Figure 4	• Inspect for continuity (Climate control unit—ambient temperature sensor: 1K—B, 1I—A) • Inspect for short circuit (Climate control unit—ambient temperature sensor: 1K—B) • Inspect ambient temperature sensor • Inspect terminal voltage of climate control unit (2H, 2t
1L	—	—	—	—	—
1M	Passenger compartment temperature sensor input	Passenger compartment temperature sensor	Depends on temperature surrounding sensor	See Figure 5	• Inspect for continuity (Climate control unit—passenger compartment temperature sensor: 1M—B, 1I—A) • Inspect for short circuit (Climate control unit—passenger compartment temperature sensor: 1M—B) • Inspect passenger compartment temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)
1N	—	—	—	—	—
1O	Water temperature sensor input	Water temperature sensor	Depends on temperature surrounding sensor	See Figure 6	• Inspect for continuity (Climate control unit—water temperature sensor: 1O—A, 1I—B) • Inspect for short circuit (Climate control unit—water temperature sensor: 1O—A) • Inspect water temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
1P	A/C	Refrigerant pressure switch	Fan switch at OFF	12	• Inspect for continuity or short circuit (Climate control unit—refrigerant pressure switch: 1P—C) (Refrigerant pressure switch—PCM: B—1AC (L3), 41 (AJ)) • Inspect refrigerant pressure switch • Inspect PCM terminal voltage (1AC (L3), 41 (AJ)) (See 01–40A–9 PCM INSPECTION [L3]) (See 01–40C–6 PCM INSPECTION [AJ])
			Fan switch at 1st position, A/C switch ON	Below 1.0	• Inspect terminal voltage of climate control unit (2H, 2L)
1Q	Evaporator temperature sensor input signal	Evaporator temperature sensor	Depends on temperature surrounding sensor	See Figure 3	• Inspect for continuity (Climate control unit—evaporator temperature sensor: 1Q—A, 1I—B) • Inspect for short circuit (Climate control unit—evaporator temperature sensor: 1Q—A) • Inspect evaporator temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)
1R	—	—	—	—	—
1S	Solar radiation sensor input	Solar radiation sensor	Incandescent light (**60W**) shining on solar radiation sensor from distance of **approx. 100mm {3.9 in}**	4.5	• Inspect for continuity or short circuit (Climate control unit—solar radiation sensor: 1S—B, 2C—A) • Inspect terminal voltage of climate control unit (2C) • Inspect solar radiation sensor
			Light to solar radiation sensor block	Below 1.0	
1T	GND	Ground	Under any condition	Below 1.0	• Inspect for continuity (Climate control unit—ground: 1T—GND) • Inspect center panel
1U	Potentiometer signal	Airflow mode actuator	VENT mode	4.1	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 1W—C) • Inspect airflow mode actuator • Inspect terminal voltage of climate control unit (2C)
			BI-LEVEL mode	3.3	
			HEAT mode	2.3	
			HEAT/DEF mode	1.5	
			DEFROSTER mode	0.9	
1V	—	—	—	—	—
1W	—	—	—	—	—
1X	Hazard warning SW signal	Hazard warning switch	Hazard warning switch is off	12	• Inspect for continuity or short circuit (Climate control unit—flasher unit: 1X—H) • Inspect flasher unit
			Hazard warning switch is on	Below 1.0	• Inspect terminal voltage of climate control unit (1T) • Inspect center panel

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
2A	Panel light control signal	Panel light control switch	Headlight switch ON and panel light control switch at max. illumination	0.2	• Inspect for continuity (Climate control unit— panel light control switch: 2A—C' (Panel light control switch-ground: C—GND) • Inspect panel light control switch
			Headlight switch ON and panel light control switch at min. illumination	10.2	• Inspect for short circuit (Climate control unit— panel light control switch: 2A—C)
2B	TNS signal	TNS relay	Headlight switch OFF	Below 1.0	• Inspect for short circuit (Climate control unit—TNS relay: 2B—D) • Inspect TNS relay • Inspect headlight switch
			Headlight switch ON	12	• Inspect for continuity or short circuit (Climate control unit—TNS relay: 2B—D) • Inspect TNS relay • Inspect headlight switch
2C	+5 V	• Airflow mode actuator	Ignition switch at ON position	5	• Inspect for short circuit (Climate control unit—airflow mode actuator: 2C—B, B, A) • Inspect air mix actuator • Inspect airflow mode actuator • Inspect solar radiation sensor • Inspect terminal voltage of climate control unit connector (2H, 2L)
			Ignition switch at LOCK position	Below 1.0	• Replace climate control ur
2D	—	—	—	—	—
2E	Motor drive signal	Airflow mode actuator	Moving to DEFROSTER	12	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 2E—F, 2G—D) • Inspect airflow mode actuator
			Moving to VENT	Below 1.0	
2F	Backup power supply	ROOM 15 A fuse	Under any condition	B+	• Inspect for continuity or short circuit (Climate control unit—fuse: 2F— ROOM 15 A fuse) • Inspect ROOM 15 A fuse
2G	Motor drive signal	Airflow mode actuator	Moving to VENT	12	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 2G—D, 2E—F) • Inspect airflow mode actuator
			Moving to DEFROSTER	Below 1.0	
2H	IG2	A/C 15 A fuse	Ignition switch at ON position	B+	• Inspect for continuity or short circuit (Climate control unit—fuse: 2H—A/C 15 A fuse) • Inspect A/C 15 A fuse
			Ignition switch at LOCK position	Below 1.0	• Inspect for short circuit (Climate control unit—fuse: 2H—A/C 15 A fuse)
2I	Motor drive signal	Air intake actuator	Moving to RECIRCULATE	12	• Inspect for continuity or short circuit (Climate contr unit—air intake actuator: 2I—F, 2K—D) • Inspect air intake actuator
			Moving to FRESH	Below 1.0	
2J	—	—	—	—	—

Terminal	Signal	Connected to	Test condition	Voltage (V)	Action
2K	Motor drive signal	Air intake actuator	Moving to FRESH	12	• Inspect for continuity or short circuit (Climate control unit—air intake actuator: 2K—D, 2I—F) • Inspect air intake actuator
			Moving to RECIRCULATE	Below 1.0	
2L	GND	Ground	Under any condition	Below 1.0	• Inspect for continuity (Climate control unit—ground: 2L—GND)

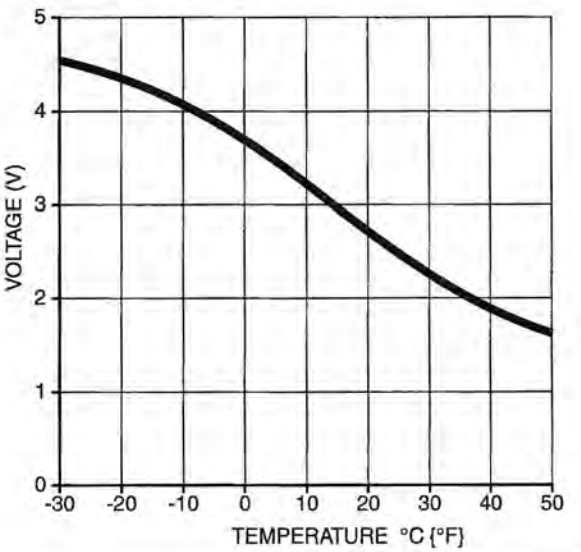

Figure 5 (Cabin temperature sensor)

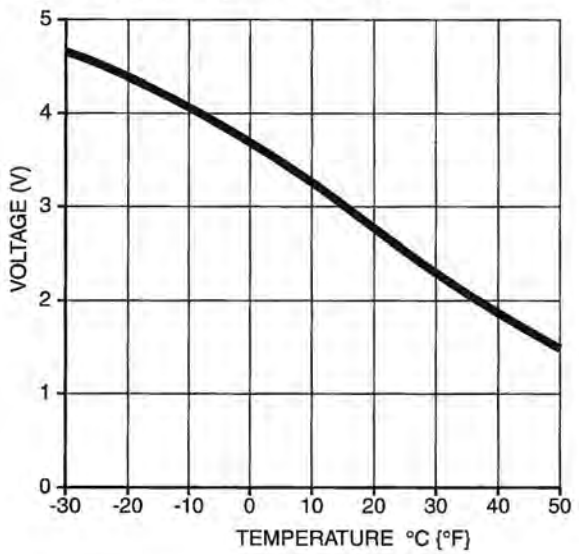

Figure 6 (Water temperature sensor)

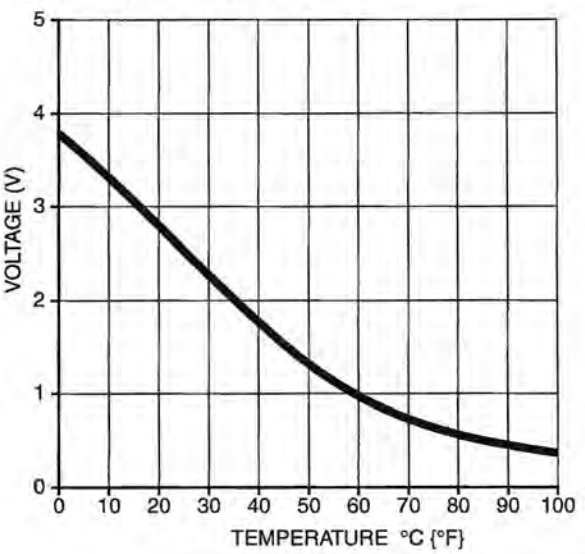


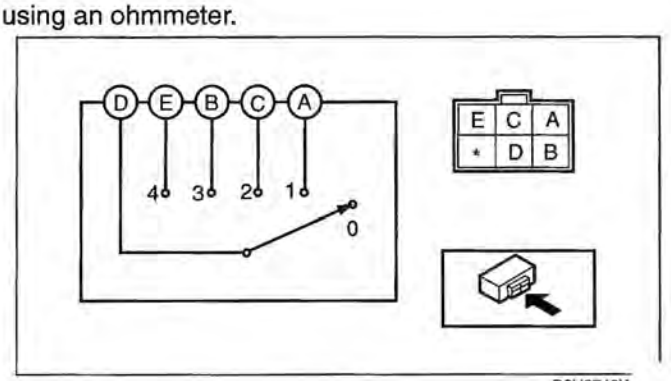
Manual Air Conditioner
Fan switch

1. Remove the climate control unit.
2. Inspect for continuity between the fan switch terminals using an ohmmeter.
   - If not as specified, replace the fan switch.

○—○ : Continuity

Switch position	Terminal				
	D	A	B	C	E
0					
1	○	○			
2	○			○	
3	○				○
4	○		○		

B6U0740W015



B6U0740V

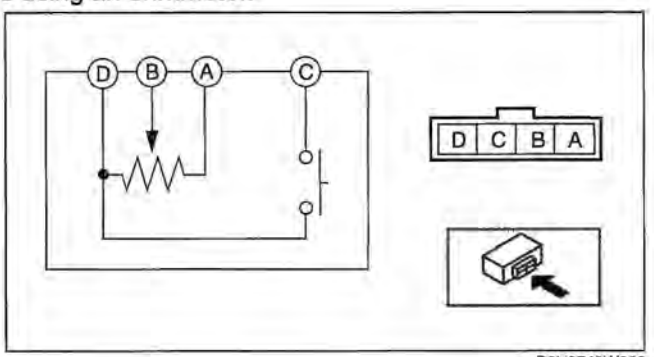
Mode switch

1. Remove the climate control unit.
2. Inspect for continuity between the mode switch terminals using an ohmmeter.
   - If not as specified, replace the climate control unit.

○—○: Continuity

Switch position	Terminal	
	C	D
VENT, BI-LEVEL, HEAT		
HEAT/DEF, DEFROSTER	○	○

B6U0740W017



B6U0740W033

3. Verify that the resistance between the terminals of the mode switch is as shown in the table.
   - If not as specified, replace the mode switch.

Terminals	Resistance (ohm)				
	VENT	BI-LEVEL	HEAT	HEAT/DEF	DEFROSTER
A—B	0	2.48	4.96	7.44	9.92
B—D	9.92	7.44	4.96	2.48	0

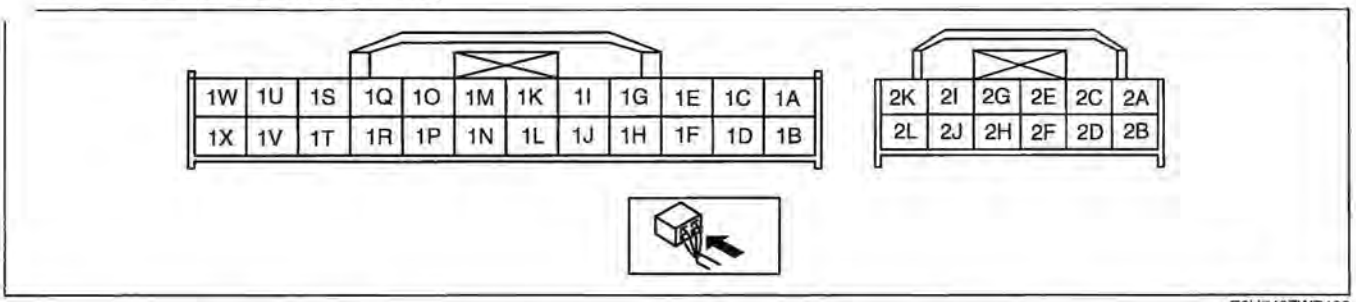
07–40

CLIMATE CONTROL UNIT INSPECTION [L3 WITH TC]

E6U074061190W08

1. Connect the all center panel connectors.
2. Turn the ignition switch to ON position.
3. Measure the voltage at each climate control unit terminal and refer to the terminal voltage table.
   - If there is any malfunction, inspect the parts listed under "Inspection item(s)" and the related wiring harness.
     — If the parts under "Inspection item(s)" are found to be normal, replace the climate control unit.

'minal Voltage Table (Reference)



E6U740ZWB109

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item(s)
1A	Blower motor feedback signal	• Blower motor • Power MOS FET	Fan switch is OFF	12	1. Inspect for continuity or short circuit (Climate control unit—blower motor: 1A—A) (Climate control unit—power MOS FET: 1A—A, 1C—E) (Blower motor—blower relay: B—C) (Blower relay—fuse: D—BLOWER 40 A fuse) 2. Inspect for continuity (Power MOS FET—ground: A—GND) (Blower relay—ground: A—GND) 3. Inspect power MOS FET 4. Inspect blower motor 5. Inspect blower relay 6. Inspect BLOWER 40 A fuse 7. Replace power MOS FET
			Fan switch is at manual LO	7.8	
			Fan switch is at manual HI	0.2	

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item(s)
1B	+5 V	• Air mix actuator • Airflow mode actuator • Solar radiation sensor	Ignition switch at ON position	5.0	• Inspect for short circuit (Climate control unit— air mix actuator, airflow mode actuator, solar radiation sensor: 1B—A, B, A) • Inspect air mix actuator • Inspect airflow mode actuator • Inspect solar radiation sensor • Inspect terminal voltage of climate control unit connector (2H, 2L)
			Ignition switch at LOCK position	Below 1.0	• Replace climate control unit
1C	Blower motor control signal	Power MOS FET	Fan switch is OFF	Below 1.0	• Inspect terminal voltage of climate control unit (1A)
			Fan switch is at manual LO	4.1	
			Fan switch is at manual HI	7.9	
1D	—	—	—	—	—
1E	Rear window defroster SW signal	Rear window defroster relay	Rear window defroster switch is off	12	• Inspect for continuity or short circuit (Climate control unit—rear window defroster relay: 1E—E) • Inspect rear window defroster relay
			Rear window defroster switch is on	Below 1.0	• Inspect terminal voltage of climate control unit (2H, 2L) • Inspect center panel
1F	On-board diagnostic signal	A/C check connector	Terminal A of A/C check connector is shorted.	Below 1.0	• Inspect for continuity (Climate control unit—A/C check connector: 1F—A)
			Other	5.4	• Inspect short circuit (Climate control unit—A/C check connector: 1F—A) • Inspect terminal voltage of climate control unit (2H, 2L)
1G	—	—	—	—	—
1H	—	—	—	—	—
1I	GND	• Passenger compartment temperature sensor • Evaporator temperature sensor • Ambient temperature sensor • A/C water temperature sensor • Air mix actuator • Airflow mode actuator	Under any condition	Below 1.0	• Inspect terminal voltage of climate control unit (2L)
1J	—	—	—	—	—

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item(s)
1K	Ambient temperature sensor input	Ambient temperature sensor	Depends on temperature surrounding sensor	See Figure 2	• Inspect for continuity (Climate control unit—ambient temperature sensor: 1K—B, 1I—A) • Inspect for short circuit (Climate control unit—ambient temperature sensor: 1K—B) • Inspect ambient temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)
1L	—	—	—	—	—
1M	Passenger compartment temperature sensor input	Passenger compartment temperature sensor	Depends on temperature surrounding sensor	See Figure 3	• Inspect for continuity (Climate control unit—passenger compartment temperature sensor: 1M—B, 1I—A) • Inspect for short circuit (Climate control unit—passenger compartment temperature sensor: 1M—B) • Inspect passenger compartment temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)
1N	—	—	—	—	—
1O	A/C water temperature sensor input	A/C water temperature sensor	Depends on temperature surrounding sensor	See Figure 4	• Inspect for continuity (Climate control unit—A/C water temperature sensor: 1O—A, 1I—B) • Inspect for short circuit (Climate control unit—A/C water temperature sensor: 1O—A) • Inspect A/C water temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)
1P	A/C	Refrigerant pressure switch	Fan switch at OFF	12	• Inspect for continuity or short circuit (Climate control unit—refrigerant pressure switch: 1P—C (Refrigerant pressure switch—PCM: B—1AC) • Inspect refrigerant pressure switch • Inspect PCM terminal voltage (1AC) (See 01–40B–6 PCM INSPECTION [L3 WITH TC])
			Fan switch at 1st position, A/C switch ON	Below 1.0	• Inspect terminal voltage of climate control unit (2H, 2L)
1Q	Evaporator temperature sensor input signal	Evaporator temperature sensor	Depends on temperature surrounding sensor	See Figure 1	• Inspect for continuity (Climate control unit—evaporator temperature sensor: 1Q—B, 1I—A) • Inspect for short circuit (Climate control unit—evaporator temperature sensor: 1Q—B) • Inspect evaporator temperature sensor • Inspect terminal voltage of climate control unit (2H, 2L)

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item(s)
1R	—	—	—	—	—
1S	Solar radiation sensor input	Solar radiation sensor	Incandescent light (**60W**) shining on solar radiation sensor from distance of **approx. 100mm {3.9 in}**	4.0	• Inspect for continuity or short circuit (Climate contr unit—solar radiation senso 1S—B, 1B—A) • Inspect terminal voltage of climate control unit (1B) • Inspect solar radiation sensor
			Light to solar radiation sensor block	Below 1.0	
1T	GND	Ground	Under any condition	Below 1.0	• Inspect for continuity (Climate control unit—ground: 1T—GND) • Inspect center panel
1U	Potentiometer signal	Air mix actuator	Set temperature at MAX COLD	0.6	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 1U—C) • Inspect air mix actuator • Inspect terminal voltage of climate control unit (1B)
			Set temperature at MAX HOT	4.3	
1V	—	—	—	—	—
1W	Potentiometer signal	Airflow mode actuator	VENT mode	4.3	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 1W—C) • Inspect airflow mode actuator • Inspect terminal voltage of climate control unit (1B)
			BI-LEVEL mode	3.3	
			HEAT mode	2.3	
			HEAT/DEF mode	1.5	
			DEFROSTER mode	0.6	
1X	Hazard warning SW signal	Hazard warning switch	Hazard warning switch is off	12	• Inspect for continuity or short circuit (Climate control unit—flasher unit: 1X—H) • Inspect flasher unit
			Hazard warning switch is on	Below 1.0	• Inspect terminal voltage of climate control unit (1T) • Inspect center panel
2A	Panel light control signal	Panel light control switch	Headlight switch ON and panel light control switch at max. illumination	0.2	• Inspect for continuity (Climate control unit— panel light control switch: 2A—C) (Panel light control switch—ground: C—GND) • Inspect panel light control switch
			Headlight switch ON and panel light control switch at min. illumination	10.2	• Inspect for short circuit (Climate control unit— panel light control switch: 2A—C)
2B	TNS signal	TNS relay	Headlight switch OFF	Below 1.0	• Inspect for short circuit (Climate control unit—TNS relay: 2B—D) • Inspect TNS relay • Inspect headlight switch
			Headlight switch ON	12	• Inspect for continuity or short circuit (Climate control unit—TNS relay: 2B—D) • Inspect TNS relay • Inspect headlight switch
2C	Motor drive signal	Air mix actuator	Moving to COLD	12	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 2C—D, 2D—F) • Inspect air mix actuator
			Moving to HOT	Below 1.0	
2D	Motor drive signal	Air mix actuator	Moving to HOT	12	• Inspect for continuity or short circuit (Climate control unit—air mix actuator: 2C—D, 2D—F) • Inspect air mix actuator
			Moving to COLD	Below 1.0	

Terminal	Signal	Connected to	Test condition	Voltage (V)	Inspection item(s)
2E	Motor drive signal	Airflow mode actuator	Moving to DEFROSTER	12	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 2E—F, 2G—D) • Inspect airflow mode actuator
			Moving to VENT	Below 1.0	
2F	Backup power supply	ROOM 15 A fuse	Under any condition	B+	• Inspect for continuity or short circuit (Climate control unit—fuse: 2F— ROOM 15 A fuse) • Inspect ROOM 15 A fuse
2G	Motor drive signal	Airflow mode actuator	Moving to VENT	12	• Inspect for continuity or short circuit (Climate control unit—airflow mode actuator: 2G—D, 2E—F) • Inspect airflow mode actuator
			Moving to DEFROSTER	Below 1.0	
2H	IG2	A/C 15 A fuse	Ignition switch at ON position	B+	• Inspect for continuity or short circuit (Climate control unit—fuse: 2H—A/C 15 A fuse) • Inspect A/C 15 A fuse
			Ignition switch at LOCK position	Below 1.0	• Inspect for short circuit (Climate control unit—fuse: 2H—A/C 15 A fuse)
2I	Motor drive signal	Air intake actuator	Moving to RECIRCULATE	12	• Inspect for continuity or short circuit (Climate control unit—air intake actuator: 2I—F, 2K—D) • Inspect air intake actuator
			Moving to FRESH	Below 1.0	
2J	—	—	—	—	—
2K	Motor drive signal	Air intake actuator	Moving to FRESH	12	• Inspect for continuity or short circuit (Climate control unit—air intake actuator: 2K—D, 2I—F) • Inspect air intake actuator
			Moving to RECIRCULATE	Below 1.0	
2L	GND	Ground	Under any condition	Below 1.0	• Inspect for continuity (Climate control unit—ground: 2L—GND)

FOREWORD

E6U080200000W01

Outline

- The OBD (on-board diagnostic) test inspects the integrity and function of the air bag system and outputs the results when requested by the specific tests.
- The OBD test also:
  - — Provides a quick inspection of the air bag system.
  - — Is usually performed at the start of each diagnostic procedure.
  - — Provides verification after repairs to ensure that no other faults occurred during service.
- The OBD test is divided into three tests:
  - — Read/clear diagnostic results
  - — PID/data monitor and record
- The diagnostic DTC can be read/cleared, using the **SST** (WDS or equivalent).

Note

- When the air bag system is malfunctioning, turn the ignition switch to the ON position to display the current DTC, using the air bag system warning light on the instrument cluster. However this light is strictly for reference. Make sure to inspect the system, using the **SST** (WDS or equivalent).

Read/clear diagnostic results

- This function allows you to read or clear DTCs in the SAS control module memory.

PID/data monitor and record

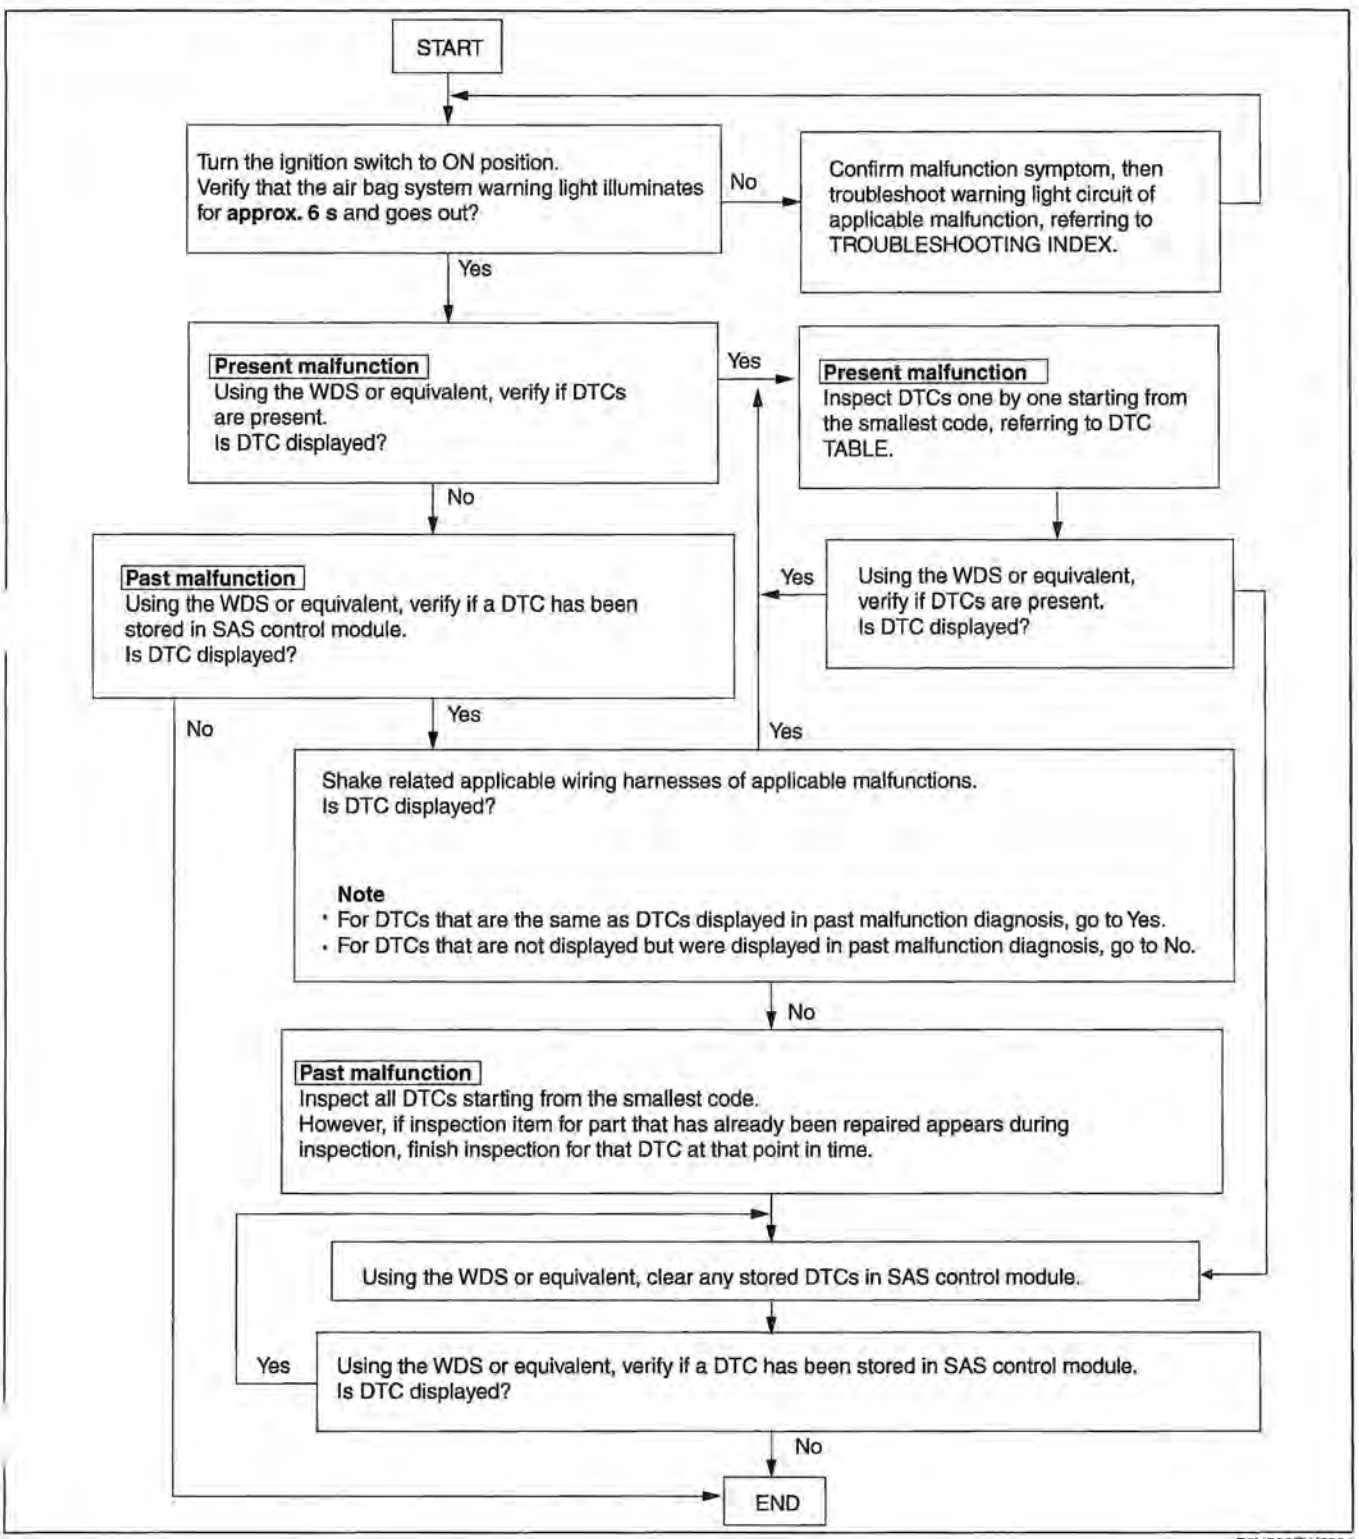
- This function allows you access certain data values, input signals, calculated values, and system status information.

Flowchart

- Use the following flowchart to verify the cause of the trouble.

Note

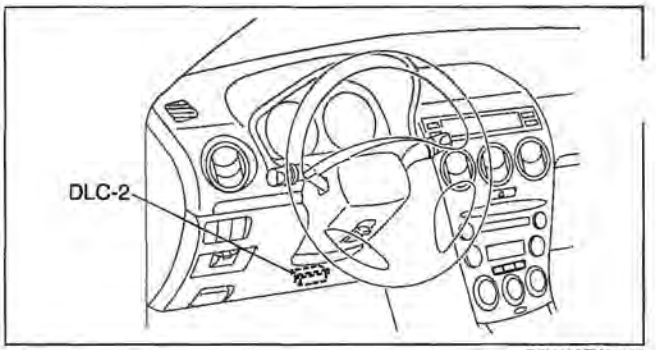
- When performing the inspection of the past malfunction code, the applicable DTCs may be added to memory by removing or disconnecting the related parts. Inspect only the DTCs that were indicated before inspecting.
- When DTCs for a present malfunction are no longer output after present or past malfunctions or both have been repaired, be sure to perform past malfunction display cancellation to prevent repair of malfunctions that have already been repaired.



E6U802ZW5001

DTCs Reading Procedure

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
2. Retrieve DTC using the **SST** (WDS or equivalent).



D6U802ZW7001

Clearing DTCs Procedure

1. After repairs have been made, perform the DTC reading procedure.
2. Erase DTCs using the **SST** (WDS or equivalent).
3. Ensure that the customer's concern has been resolved.

PID/Data Monitor and Record Procedure

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
2. Access and monitor PIDs using the **SST** (WDS or equivalent).

DTC TABLE

E6U080200000W03

- DTCs are common for present and past malfunction diagnosis.

Note

- When DTCs not shown in the DTC table are displayed, replace the SAS control module.
- If the air bag system warning light does not illuminate or remains illuminated when the ignition switch is turned to the ON position, inspect and repair the air bag system warning light circuitry and then confirm that the air bag system warning light is operational.
- The air bag system warning light will flash the DTC pattern for five cycles, and then it will remain illuminated until the ignition switch is turned to the LOCK position.

DTC				Malfunction location	Page
WDS or equivalent	Air bag system warning light				
	Flashing pattern		Priority ranking		
B1013	16		19	Seat weight sensor calibration error	(See 08–02–14 DTC B1013.)
B1017	14		4	Deployment prohibited because configuration is not set	(See 08–02–15 DTC B1017.)
B1317	—	Air bag system warning light is illuminated all the time	—	SAS control module power supply voltage increases (16.1 V or more)	(See 08–02–16 DTC B1317, B1318.)
B1318	—	Air bag system warning light is illuminated all the time	—	SAS control module power supply voltage decreases (less than 9 V)	(See 08–02–16 DTC B1317, B1318.)
B1231	13		3	SAS control module activation (deployment) control freeze	(See 08–02–15 DTC B1231.)
B1342	12		2	SAS control module	(See 08–02–18 DTC B1342.)
	—	Air bag system warning light is illuminated all the time.	1	SAS control module (DTC 12 detection circuit malfunction)	
B1869	—	Air bag system warning light is illuminated all the time.	1	Air bag system warning light system circuit open	(See 08–02–18 DTC B1869, B1870.)
	—	Air bag system warning light does not illuminate.	—	Air bag system warning light system circuit short to ground	
B1870	—	Air bag system warning light is illuminated all the time.	1	Air bag system warning light system circuit short to power supply	
B1877	33		13	Driver-side pre-tensioner seat belt system resistance high	(See 08–02–20 DTC B1877, B1878, B1879, B1885.)
B1878				Driver-side pre-tensioner seat belt system circuit short to power supply	
B1879				Driver-side pre-tensioner seat belt system circuit short to ground	

DTC				Malfunction location	Page
WDS or equivalent	Air bag system warning light				
	Flashing pattern		Priority ranking		
B1881	34		12	Passenger-side pre-tensioner seat belt system resistance high	(See 08–02–22 DTC B1881, B1882, B1883, B1886.)
B1882				Passenger-side pre-tensioner seat belt system circuit short to power supply	
B1883				Passenger-side pre-tensioner seat belt system circuit short to ground	
B1884	18		20	Passenger air bag deactivation (PAD) indicator circuit open or short to body ground	(See 08–02–24 DTC B1884, B1890.)
B1885	33		13	Driver-side pre-tensioner seat belt system resistance low	(See 08–02–20 DTC B1877, B1878, B1879, B1885.)
B1886	34		12	Passenger-side pre-tensioner seat belt system resistance low	(See 08–02–22 DTC B1881, B1882, B1883, B1886.)
B1890	18		20	Passenger air bag deactivation (PAD) indicator circuit short to power supply	(See 08–02–24 DTC B1884, B1890.)
B1913	19		11	Driver-side air bag module (inflator No.1) system circuit short to ground	(See 08–02–26 DTC B1913, B1916, B1932, B1934.)
	21		10	Passenger-side air bag module (inflator No.1) system circuit short to ground	(See 08–02–28 DTC B1913, B1925, B1933, B1935.)
B1916	19		11	Driver-side air bag module (inflator No.1) system circuit short to power supply	(See 08–02–26 DTC B1913, B1916, B1932, B1934.)
B1925	21		10	Passenger-side air bag module (inflator No.1) system circuit short to power supply	(See 08–02–28 DTC B1913, B1925, B1933, B1935.)
B1932	19		11	Driver-side air bag module (inflator No.1) system resistance high	(See 08–02–26 DTC B1913, B1916, B1932, B1934.)
B1933	21		10	Passenger-side air bag module (inflator No.1) system resistance high	(See 08–02–28 DTC B1913, B1925, B1933, B1935.)
B1934	19		11	Driver-side air bag module (inflator No.1) system resistance low	(See 08–02–26 DTC B1913, B1916, B1932, B1934.)
B1935	21		10	Passenger-side air bag module (inflator No.1) system resistance low	(See 08–02–28 DTC B1913, B1925, B1933, B1935.)

DTC				Malfunction location	Page
WDS or equivalent	Air bag system warning light				
	Flashing pattern		Priority ranking		
B1992	22		15	Driver-side side air bag module system circuit short to power supply	(See 08–02–30 DTC B1992, B1993, B1994, B1995.)
B1993				Driver-side side air bag module system circuit short to ground	
B1994				Driver-side side air bag module system resistance high	
B1995				Driver-side side air bag module system resistance low	
B1996	23		14	Passenger-side side air bag module system circuit short to power supply	(See 08–02–32 DTC B1996, B1997, B1998, B1999.)
B1997				Passenger-side side air bag module system circuit short to ground	
B1998				Passenger-side side air bag module system resistance high	
B1999				Passenger-side side air bag module system resistance low	
B2228	19		11	Driver-side air bag module (inflator No.2) system circuit short to ground	(See 08–02–34 DTC B2228, B2230, B2232, B2234.)
B2229	21		10	Passenger-side air bag module (inflator No.2) system circuit short to ground	(See 08–02–36 DTC B2229, B2231, B2233, B2235.)
B2230	19		11	Driver-side air bag module (inflator No.2) system circuit short to power supply	(See 08–02–34 DTC B2228, B2230, B2232, B2234.)
B2231	21		10	Passenger-side air bag module (inflator No.2) system circuit short to power supply	(See 08–02–36 DTC B2229, B2231, B2233, B2235.)
B2232	19		11	Driver-side air bag module (inflator No.2) system resistance high	(See 08–02–34 DTC B2228, B2230, B2232, B2234.)
B2233	21		10	Passenger-side air bag module (inflator No.2) system resistance high	(See 08–02–36 DTC B2229, B2231, B2233, B2235.)
B2234	19		11	Driver-side air bag module (inflator No.2) system resistance low	(See 08–02–34 DTC B2228, B2230, B2232, B2234.)
B2235	21		10	Passenger-side air bag module (inflator No.2) system resistance low	(See 08–02–36 DTC B2229, B2231, B2233, B2235.)
B2290	16		19	Seat weight sensor signal malfunction	(See 08–02–38 DTC B2290.)

DTC				Malfunction location	Page
WDS or equivalent	Air bag system warning light				
	Flashing pattern		Priority ranking		
B2296	42		9	Crash zone sensor system (communication error, sensor internal circuit abnormal)	(See 08–02–40 DTC B2296.)
B2444	43		8	Driver-side side air bag sensor system (sensor internal circuit abnormal)	(See 08–02–42 DTC B2444, U2017.)
B2445	44		7	Passenger-side side air bag sensor system (sensor internal circuit abnormal)	(See 08–02–44 DTC B2445, U2018.)
B2477	54		5	Configuration error	(See 08–02–46 DTC B2477.)
B2773	24		17	Driver-side curtain air bag module system resistance low	(See 08–02–46 DTC B2773, B2774, B2775, B2776.)
B2774				Driver-side curtain air bag module system resistance high	
B2775				Driver-side curtain air bag module system circuit short to ground	
B2776				Driver-side curtain air bag module system circuit short to power supply	
B2777	25		16	Passenger-side curtain air bag module system resistance low	(See 08–02–48 DTC B2777, B2778, B2779, B2780.)
B2778				Passenger-side curtain air bag module system resistance high	
B2779				Passenger-side curtain air bag module system circuit short to ground	
B2780				Passenger-side curtain air bag module system circuit short to power supply	
B2867	31		6	SAS control module connector poor connection	(See 08–02–50 DTC B2867.)
C1947	49		22	Seat track position sensor circuit short to ground	(See 08–02–52 DTC C1947, C1948, C1981.)
C1948				Seat track position sensor circuit resistance out of range	
C1981				Seat track position sensor circuit open or short to power supply	
U2017	43		8	Driver-side side air bag sensor system (communication error)	(See 08–02–42 DTC B2444, U2017.)
U2018	44		7	Passenger-side side air bag sensor system (communication error)	(See 08–02–44 DTC B2445, U2018.)

PID/DATA MONITOR TABLE

E6U080200000W04

PID name (definition)	Unit/condition	Condition/specification	SAS control module terminal
CCNT_RCM (Number of continuous DTC)	—	• DTC is detected: 1—255 • DTC is not detected: 0	—
CRSH_ST_D1 (Driver-side side air bag sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	2Z, 2AA
CRSH_ST_D2 (Driver-side side air bag sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	2Z, 2AA
CRSH_ST_F1 (Crash zone sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	1B, 1C
CRSH_ST_F2 (Crash zone sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	1B, 1C
CRSH_ST_P1 (Passenger-side side air bag sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	2B, 2C
CRSH_ST_P2 (Passenger-side side air bag sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	2B, 2C
D_ABAGR2 (Driver-side air bag module (inflator No.2) resistance)	ohm	Under any condition: 1.5—3.7 ohms	1G, 1J
D_PTENSFLT (Driver-side pre-tensioner seat belt circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Pre-tensioner seat belt circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2P, 2S
DABAGR (Driver-side air bag module (inflator No.1) resistance)	ohm	Under any condition: 1.5—3.7 ohms	1S, 1V
DR_BUKL (Driver-side buckle switch state)	Buckled/ Unbuckled	• Buckle switch on: Buckled • Buckle switch off: Unbuckled	2T
DR_PTENS (Driver-side pre-tensioner seat belt resistance)	ohms	Under any condition: 1.5—3.1 ohms	2P, 2S
DS_AB (Driver-side side air bag module resistance)	ohms	Under any condition: 1.4—3.2 ohms	2M, 2O
DS_AB_ST (Driver-side side air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Pre-tensioner seat belt circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2M, 2O
DS_CURT_ST (Driver-side curtain air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2V, 2Y
DS1_STAT (Driver-side air bag module (inflator No.1) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1S, 1V

PID name (definition)	Unit/condition	Condition/specification	SAS control module terminal
DS2_STAT (Driver-side air bag module (inflator No.2) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1G, 1J
DSB_P_ST (Driver-side pre-tensioner seat belt circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Pre-tensioner seat belt circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2P, 2S
DTC_CLR_ST* (Seat weight sensor status)	Started/ Normal/ End In Process/ OCS Fault	Fault information cleared at seat weight sensor	1I
IGN_V_2 (IG1 voltage)	V	Ignition switch to ON position: B+	1W
OCS_CAL_ST* (Seat weight sensor calibration status)	Starting/ Normal End/ Commanding/ NG (Voltage)/ NG (Weight)/ In Process Timeout/ OCS Fault	• Seat weight sensor calibration start-up: Starting • Seat weight sensor calibration completed normally: Normal End • Seat weight sensor calibration command being sent: Commanding • Voltage malfunction during seat weight sensor calibration: NG (Voltage) • Weight error during seat weight sensor calibration: NG (Weight) • Seat weight sensor calibration time limit passed: Timeout • Seat weight sensor calibration being processed: In Process • Seat weight sensor or Seat weight sensor control module malfunction: OCS Fault	1I
OSC_SYS_ST* (Seat weight sensor status)	Empty/ SMALL/ Indeterminate/ LARGE/ Invalid	Occupant classification status determined by seat weight sensor	1I
OCSFLT_BTS (Passenger sensing system belt tension sensor malfunction status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor calibration error: FAULT	1I
OCSFLT_CAL (Passenger sensing system calibration status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor calibration error: FAULT	1I
OCSFLT_COM (Passenger sensing system communication status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor control module communication error: FAULT	1I
OCSFLT_L (Passenger sensing system (LH) malfunction status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor (LH) malfunction: FAULT	1I
OCSFLT_MDL (Passenger sensing system control module malfunction status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor control module malfunction: FAULT	1I
OCSFLT_R (Passenger sensing system (RH) malfunction status)	OK/ FAULT	• Sensor normal: OK • Seat weight sensor (RH) malfunction: FAULT	1I
OD_CRST_D1 n demand driver-side side r bag sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	2Z, 2AA
OD_CRST_D2 (On demand driver-side side air bag sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	2Z, 2AA

PID name (definition)	Unit/condition	Condition/specification	SAS control module terminal
OD_CRST_F1 (On demand crash zone sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	1B, 1C
OD_CRST_F2 (On demand crash zone sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	1B. 1C
OD_CRST_P1 (On demand passenger-side side air bag sensor communication state)	OK/ FAULT	• Sensor normal: OK • Sensor communication error: FAULT	2B, 2C
OD_CRST_P2 (On demand passenger-side side air bag sensor circuit state)	OK/ FAULT	• Sensor normal: OK • Sensor internal circuit error: FAULT	2B, 2C
OD_D_CURT (On demand driver-side curtain air bag module circuit fault state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2V, 2Y
OD_DAB1_ST (On demand driver-side air bag module (inflator No.1) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1S, 1V
OD_DAB2_ST (On demand driver-side air bag module (inflator No.2) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1G, 1J
OD_DSAB_ST (On demand driver-side side air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2M, 2O
OD_P_CURT (On demand passenger-side curtain air bag module circuit fault state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2A, 2D
OD_PAB1_ST (On demand passenger-side air bag module (inflator No.1) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1M, 1P
OD_PAB2_ST (On demand passenger-side air bag module (inflator No.2) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1A,1D
OD_PSAB_ST (On demand passenger-side side air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2I, 2L
P_ABAGR2 (Passenger-side air bag module (inflator No.2) resistance)	ohms	Under any condition: 1.4—2.9 ohms	1A, 1D

PID name (definition)	Unit/condition	Condition/specification	SAS control module terminal
P_PTENSFLT (Passenger-side pre-tensioner seat belt circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Pre-tensioner seat belt circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2G, 2J
PABAGR (Passenger-side air bag module (inflator No.1) resistance)	ohms	Under any condition: 1.4—2.9 ohms	1M, 1P
PS_AB (Passenger-side side air bag module resistance)	ohms	Under any condition: 1.4—3.2 ohms	2I, 2L
PS_AB_ST (Passenger-side side air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2I, 2L
PS_BUKL (Passenger-side buckle switch state)	Buckled/ Unbuckled	• Buckle switch on: Buckled • Buckle switch off: Unbuckled	2H
PS_CURT_ST (Passenger-side curtain air bag module circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2A, 2D
PS_PTENS (Passenger-side pre-tensioner ət belt resistance)	ohm	Under any condition: 1.5—3.1 ohms	2G, 2J
S_WEIGHT (Seat weight sensor measured weight of passenger)	Kg	Display of load (body weight) on passenger-side seat	1I
PS1_STAT (Passenger-side air bag module (inflator No.1) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1M, 1P
PS2_STAT (Passenger-side air bag module (inflator No.2) circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Air bag module circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	1A, 1D
PSB_P_ST (Passenger-side pre-tensioner seat belt circuit state)	SQ_LOWRES OPEN SHRT_B+ SHRT_GND Normal	• Pre-tensioner seat belt circuit resistance low: SQ_LOWRES • Related wiring harness circuit open: OPEN • Related wiring harness short to power supply: SHRT_B+ • Related wiring harness short to ground: SHRT_GND • Related wiring harness normal: Normal	2G, 2J
TRAK_SW (Seat track position sensor state)	Forward/ Rearward	• Front seat front position: Forward • Front seat rear position: Rearward	2W, 2X

* : Used during seat weight sensor calibration setting. Not necessary for diagnostic.

DTC B1013

E6U080200000W05

DTC B1013	Seat weight sensor calibration error
DETECTION CONDITION	Warning • **Detection conditions are for understanding the DTC outline before performing an inspectio Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Calibration set value not within valid range.
POSSIBLE CAUSE	• Weight acting on passenger-side front seat during calibration • Improperly installed passenger-side front seat part at time of calibration • Deformed floor where attached to passenger-side front seat • Deformed passenger-side front seat under-bracket or frame • Seat weight sensor deformed or malfunction • Seat weight sensor control module malfunction • SAS control module malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SEAT WEIGHT SENSOR** Properly install the passenger-side front seat. Inspect the seat weight sensor. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.) Is the seat weight sensor normal?	Yes	Replace the SAS control module. (See: 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE FRONT SEAT** Turn the ignition switch to the LOCK position. Disconnect the negative battery cable and wait for **1 min or more.** Remove the passenger-side front seat and visually inspect for the following: — Seat under-bracket deformation — Seat frame deformation — Seat weight sensor deformation — Foreign objects stuck in seat Are any of the parts deformed or are any foreign objects stuck in the seat?	Yes	Replace any deformed parts or remove any foreign objects. • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed, go the next step. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)
		No	Go to the next step.
3	**INSPECT FLOOR** Visually inspect the installation parts of the passenger-side front seat for the following: — Abnormal floor deformation — Installation hole of passenger-side front seat is improperly positioned Is the floor normal?	Yes	Go to the next step.
		No	Repair floor deformation. • After repair, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the floor has been repaired, go the next step. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)
4	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE** Replace the seat weight sensor. After replacement, perform seat weight sensor calibration. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.) Reperform the DTC inspection. Is DTC B1013 indicated?	Yes	Replace the seat weight sensor control module. (See 08–10–13 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 08–10–14 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [L3 WITH TC].) • After replacement, perform seat weight sensor calibration and reperform the DTC inspection. If the DTC is displayed even though the seat weight sensor control module has been replaced, replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1017

E6U080200000W28

DTC B1017	Deployment prohibited because configuration is not set
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration has not been set
POSSIBLE CAUSE	• SAS control module configuration has not been set • SAS control module malfunction

Diagnostic procedure

INSPECTION		ACTION
CONFIGRATION • Using the WDS or equivalent, perform SAS control module configuration. • Is DTC B1017 indicated?	Yes	Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
	No	DTC troubleshooting completed.

DTC B1231

E6U080200000W06

DTC B1231	SAS control module activation (deployment) control freeze
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • SAS control module determined collision

Diagnostic procedure

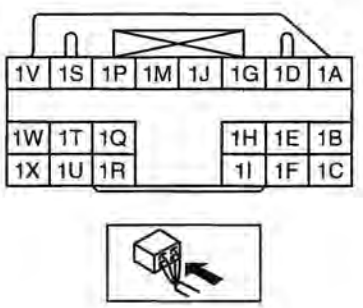
ACTION
Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION)

DTC B1317, B1318

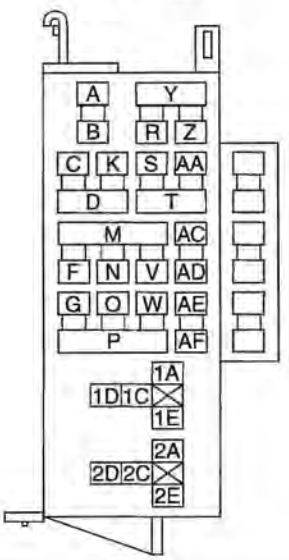
E6U080200000W29

DTC	B1317	SAS control module power supply voltage increases (16.1 V or more)
	B1318	SAS control module power supply voltage decreases (less than 9 V)
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection with only detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • When the SAS control module power supply voltage is not **within 9—16 V**.
POSSIBLE CAUSE		• Open or short circuit in wiring harness between battery and SAS control module • SAS 10 A fuse malfunction • Battery malfunction • SAS control module malfunction

SAS CONTROL MODULE WIRING HARNESS-SIDE CONNECTOR



FUSE BLOCK



Diagnostic procedure

Step	Inspection		Action
1	**INSPECT FUSE** • Remove the SAS 10 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse.
2	**INSPECT BATTERY** • Measure the battery positive voltage. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	The battery has a malfunction. Inspect the charge/discharge system.
3	**INSPECT WIRING HARNESS BETWEEN BATTERY AND FUSE BLOCK** • Turn the ignition switch to the ON position. • Measure the fuse block terminal N voltage. • Is the voltage **9 V—16 V**?	Yes	Install the fuse, then go to the next step.
		No	Repair the wiring harness between the fuse block and ignition switch.
4	**INSPECT FUSE BLOCK** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components.** **(See 08–10–3 SERVICE WARNINGS.)** **(See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.) • Disconnect the clock spring connector. • Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.) • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side curtain air bag module connector. • Disconnect the front seat connector. • Remove the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) • Disconnect the SAS control module connector. • Turn the ignition switch to the ON position. • Measure the SAS control module terminal 1W voltage. • Is the voltage **9 V—16 V**?	Yes	Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	Repair the wiring harness between the fuse block and SAS control module.

DTC B1342

E6U080200000W07

DTC B1342	SAS control module
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in SAS control module inner circuit
POSSIBLE CAUSE	• SAS control module malfunction

Diagnostic procedure

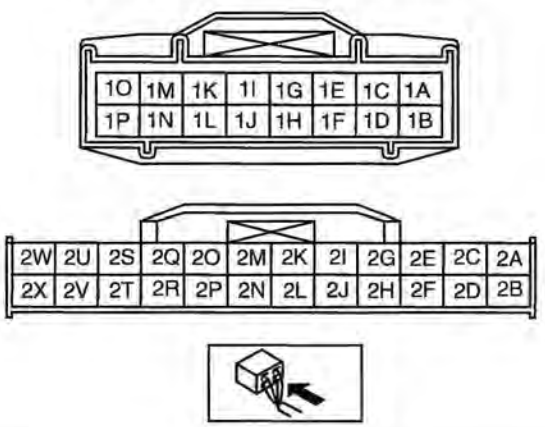
ACTION
• Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)

DTC B1869, B1870

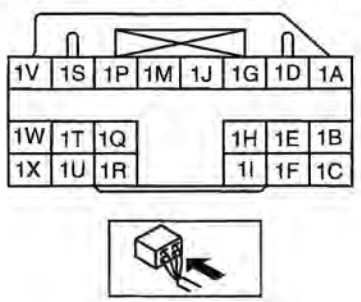
E6U080200000W09

DTC	B1869	Air bag system warning light system circuit open or short to ground
	B1870	Air bag system warning light system circuit short to power supply
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in air bag system warning light circuit
POSSIBLE CAUSE		• METER IG 15 A fuse malfunction • Instrument cluster malfunction • Malfunction of connectors between instrument cluster and SAS control module • Open or short circuit in wiring harness between METER IG 15 A fuse and instrument cluster • Open or short circuit in wiring harness between instrument cluster and SAS control module • SAS control module malfunction

INSTRUMENT CLUSTER CONNECTOR



SAS CONTROL MODULE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT METER IG 15 A FUSE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable. • Remove the METER IG 15 A fuse. • Is fuse normal?	Yes	Reinstall METER IG 15 A fuse, then go to the next step.
		No	Replace the METER IG 15 A fuse.

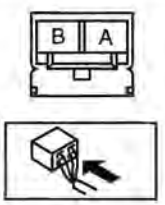
STEP	INSPECTION		ACTION
2	**INSPECT FOR CONTINUITY BETWEEN METER IG 15 A FUSE AND INSTRUMENT CLUSTER** • Connect the negative battery cable. • Turn the ignition switch to ON position. • Measure the voltage at instrument cluster connector terminal 2V. • Is voltage **9 V or more**?	Yes	Go to the next step.
		No	Repair the wiring harness.
3	**INSPECT WIRING HARNESS BETWEEN INSTRUMENT CLUSTER AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Disconnect the instrument cluster. • Inspect the following wiring harness between SAS control module and instrument cluster terminals for short to ground, short to power supply, and open circuit: — 1T—1O • Is wiring harness normal?	Yes	Go to the next step.
		No	Replace the wiring harness.
4	**INSPECT AIR BAG SYSTEM WARNING LIGHT** • Connect the instrument cluster. • Turn the ignition switch to ON position. • Is air bag system warning light illuminated?	Yes	Go to the next step.
		No	Replace the instrument cluster. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
5	**INSPECT AIR BAG SYSTEM WARNING LIGHT** • Using jumper wire, ground instrument cluster terminal 1O to body. • Does air bag system warning light go out?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Replace the instrument cluster. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)

DTC B1877, B1878, B1879, B1885

E6U080200000W10

DTC	B1877	Driver-side pre-tensioner seat belt system resistance high
	B1878	Driver-side pre-tensioner seat belt system circuit short to power supply
	B1879	Driver-side pre-tensioner seat belt system circuit short to ground
	B1885	Driver-side pre-tensioner seat belt system resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.5—3.1 ohms**) detected in driver-side pre-tensioner seat belt circuit • Malfunction in wiring harness between driver-side pre-tensioner seat belt and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side pre-tensioner seat belt and SAS control module • Driver-side pre-tensioner seat belt malfunction • SAS control module malfunction

DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR



Diagnostic procedure

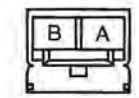
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — DR_PTENS • Is resistance of driver-side pre-tensioner seat belt normal? — Resistance: **1.5—3.1 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the driver-side B-pillar lower trim. • Disconnect the driver-side pre-tensioner seat belt connector. • Is there cracking or chipping in driver-side pre-tensioner seat belt connector?	Yes	Replace the wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE PRE-TENSIONER SEAT BELT OR RELATED WIRING HARNESS** • Connect the leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to driver-side pre-tensioner seat belt terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — DSB_P_ST • Is related wiring harness normal?	Yes	Replace the driver-side pre-tensioner seat belt. (See 08–11–3 FRONT SEAT BELT REMOVAL/ INSTALLATION.)
		No	Replace the wiring harness, then go to next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the driver-side pre-tensioner seat belt connector. • Are any one or all of the following DTCs displayed? — B1877 — B1878 — B1879 — B1885	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B1881, B1882, B1883, B1886

E6U080200000W11

DTC	B1881	Passenger-side pre-tensioner seat belt system resistance high
	B1882	Passenger-side pre-tensioner seat belt system circuit short to power supply
	B1883	Passenger-side pre-tensioner seat belt system circuit short to ground
	B1886	Passenger-side pre-tensioner seat belt system resistance low
DETECTION CONDITION		Warning • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.5—3.1 ohms**) detected in passenger-side pre-tensioner seat belt circuit • Malfunction in wiring harness between passenger-side pre-tensioner seat belt and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side pre-tensioner seat belt and SAS control module • Passenger-side pre-tensioner seat belt malfunction • SAS control module malfunction

PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR



Diagnostic procedure

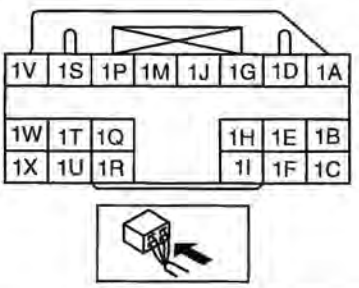
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — PS_PTENS • Is resistance of passenger-side pre-tensioner seat belt normal? — Resistance: **1.5—3.1 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE PRE-TENSIONER SEAT BELT CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the passenger-side B-pillar lower trim. • Disconnect the passenger-side pre-tensioner seat belt connector. • Is there cracking or chipping in passenger-side pre-tensioner seat belt connector?	Yes	Replace the wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE PRE-TENSIONER SEAT BELT OR RELATED WIRING HARNESS** • Connect the leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to passenger-side pre-tensioner seat belt terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — PSB_P_ST • Is related wiring harness normal?	Yes	Replace the passenger-side pre-tensioner seat belt. (See 08–11–3 FRONT SEAT BELT REMOVAL/ INSTALLATION.)
		No	Replace the wiring harness, then go to next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connec the passenger-side pre-tensioner seat belt connector. • Are any one or all of the following DTCs displayed? — B1881 — B1882 — B1883 — B1886	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B1884, B1890

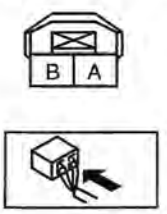
E6U080200000W08

DTC	B1884	Passenger air bag deactivation (PAD) indicator circuit open or short to body ground
	B1890	Passenger air bag deactivation (PAD) indicator circuit short to power supply
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Malfunction in PAD indicator circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between PAD indicator and SAS control module • Open circuit in wiring harness between battery and PAD indicator • PAD indicator malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



PAD INDICATOR CONNECTOR



Diagnostic procedure

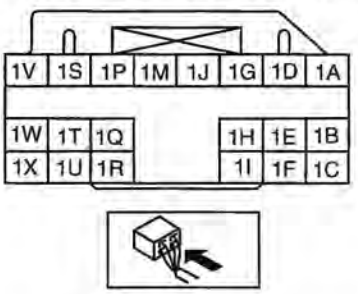
STEP	INSPECTION		ACTION
1	**INSPECT OPERATION OF PAD INDICATOR** • Turn the ignition switch to the ON position. • Does the PAD indicator illuminate?	Yes	Go to the next step.
		No	Go to Step 6.
2	**INSPECT FUSE** • Remove the SAS 10 A fuse. • Is the fuse normal?	Yes	Install the fuse, then go to the next step.
		No	Replace the fuse.
3	**INSPECT BATTERY** • Measure the battery positive voltage. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	Battery is malfunctioning Inspect the charge/discharge system.
4	**INSPECT WIRING HARNESS BETWEEN BATTERY AND PAD INDICATOR** • Turn the ignition switch to the ON position. • Measure the PAD indicator terminal A voltage. • Is the voltage **9 V or more**?	Yes	Go to the next step.
		No	Repair the wiring harness between the battery and PAD indicator.
5	**INSPECT PAD INDICATOR** • Ground PAD indicator connector terminal B using a jumper wire. • Turn the ignition switch to the ON position. • Does the PAD indicator illuminate?	Yes	Go to the next step.
		No	Replace the air bag wiring harness.
6	**INSPECT WIRING HARNESS BETWEEN PAD INDICATOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally deploy the air bag modules and pre-tensioner front buckles, which may seriously injure you. Read the service warnings before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side curtain air bag module connector. • Disconnect the front seat connector. • Remove the console. • Disconnect the SAS control module connector. • Inspect the wiring harness between PAD indicator terminal B and SAS control module terminal 1U for the following: — Short to ground — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the air bag wiring harness.

DTC B1913, B1916, B1932, B1934

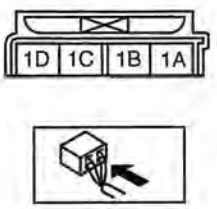
E6U080200000W12

DTC	B1913	Driver-side air bag module (inflator No.1) system circuit short to ground
	B1916	Driver-side air bag module (inflator No.1) system circuit short to power supply
	B1932	Driver-side air bag module (inflator No.1) system resistance high
	B1934	Driver-side air bag module (inflator No.1) system resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.5—3.7 ohms**) detected in driver-side air bag module (inflator No.1) circuit • Malfunction in wiring harness between driver-side air bag module (inflator No.1) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between clock spring and SAS control module • Clock spring malfunction • Driver-side air bag module (inflator No.1) malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



CLOCK SPRING CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1)** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — DABAGR • Is resistance value of driver-side air bag module normal? — Resistance: **1.5—3.7 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR (CLOCK SPRING)** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the driver-side air bag module. • Is there cracking or chipping in driver-side air bag module connector?	Yes	Replace the wiring harness.
		No	Go to the next step.

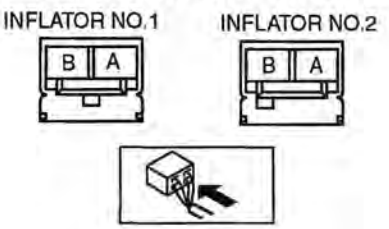
STEP	INSPECTION		ACTION
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.1) OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to driver-side air bag module (inflator No.1) terminal 3A and 3B, and driver-side air bag module (inflator No.2) terminal 4A and 4B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_DAB1_ST • Is related wiring harness normal?	Yes	Replace the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08–10–17 CLOCK SPRING INSPECTION.) • Is clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring. (See 08–10–15 CLOCK SPRING REMOVAL/ INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN CLOCK SPRING AND SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Inspect the following wiring harnesses between SAS control module and clock spring terminals for short to ground, short to power supply, and open circuit: — 1S—1D — 1V—1C • Is wiring harness normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Replace the wiring harnesses.

DTC B1913, B1925, B1933, B1935

E6U080200000W13

DTC	B1913	**Passenger-side air bag module (inflator No.1) system circuit short to ground**
	B1925	**Passenger-side air bag module (inflator No.1) system circuit short to power supply**
	B1933	**Passenger-side air bag module (inflator No.1) system resistance high**
	B1935	**Passenger-side air bag module (inflator No.1) system resistance low**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—2.9 ohms**) detected in passenger-side air bag module (inflator No.1) circuit • Malfunction in wiring harness between passenger-side air bag module (inflator No.1) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side air bag module (inflator No.1) and SAS control module • Passenger-side air bag module (inflator No.1) malfunction • SAS control module malfunction

PASSENGER-SIDE AIR BAG MODULE CONNECTOR



Diagnostic procedure

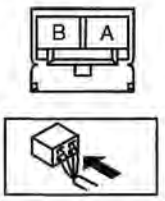
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1)** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — PABAGR • Is resistance of passenger-side air bag module normal? — Resistance: **1.4—2.9 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) CONNECTOR** **Warning** • **Handling air bag system components improperly can accidentally deploy air bag modules and pre-tensioner seat belts, which may seriously injure you. Read air bag system service warnings and cautions before handling air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Is there cracking or chipping in passenger-side air bag module connector?	Yes	Replace wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.1) OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to passenger-side air bag module (inflator No.1) terminal A and B, and passenger-side air bag module (inflator No.2) terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_PAB1_ST • Is related wiring harness normal?	Yes	Replace the passenger-side air bag module. (See 08–10–7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
		No	Replace the wiring harness, then go to the next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side air bag module connector. • Are any one or all of the following DTCs displayed? — B1913 — B1925 — B1933 — B1935	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B1992, B1993, B1994, B1995

E6U080200000W14

DTC	B1992	**Driver-side side air bag module system circuit short to power supply**
	B1993	**Driver-side side air bag module system circuit short to ground**
	B1994	**Driver-side side air bag module system resistance high**
	B1995	**Driver-side side air bag module system resistance low**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—3.2 ohms**) detected in driver-side side air bag module circuit • Malfunction in wiring harness between driver-side side air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side side air bag module and SAS control module • Driver-side side air bag module malfunction • SAS control module malfunction

DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR



Diagnostic procedure

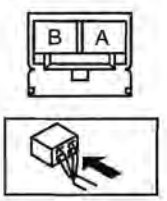
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — DS_AB • Is resistance of driver-side side air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the driver-side side air bag module. • Is there cracking or chipping in driver-side side air bag module connector?	Yes	Replace the wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE SIDE AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to driver-side side air bag module terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_DSAB_ST • Is related wiring harness normal?	Yes	Replace the driver-side side air bag module. (See 08–10–8 SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
		No	Replace the wiring harness, then go to next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Connect the driver-side side air bag module connector. • Are any one or all of the following DTCs displayed? — B1992 — B1993 — B1994 — B1995	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B1996, B1997, B1998, B1999

E6U080200000W15

DTC	B1996	Passenger-side side air bag module system circuit short to power supply
	B1997	Passenger-side side air bag module system circuit short to ground
	B1998	Passenger-side side air bag module system resistance high
	B1999	Passenger-side side air bag module system resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—3.2 ohms**) detected in passenger-side side air bag module circuit • Malfunction in wiring harness between passenger-side side air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side side air bag module and SAS control module • Passenger-side side air bag module malfunction • SAS control module malfunction

PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR



Diagnostic procedure

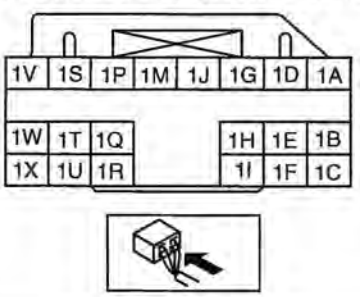
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — PS_AB • Is resistance of passenger-side side air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE SIDE AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Remove the passenger-side side air bag module. • Is there cracking or chipping in passenger-side side air bag module connector?	Yes	Replace wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE SIDE AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to passenger-side side air bag module terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_PSAB_ST • Is related wiring harness normal?	Yes	Replace the passenger-side side air bag module. (See 08–10–8 SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
		No	Replace the wiring harness, then go to the next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Connect the passenger-side side air bag module connector. • Are any one or all of the following DTCs displayed? — B1996 — B1997 — B1998 — B1999	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2228, B2230, B2232, B2234

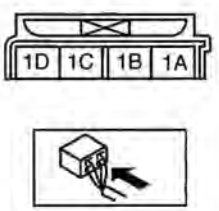
E6U080200000W16

DTC	B2228	Driver-side air bag module (inflator No.2) system circuit short to ground
	B2230	Driver-side air bag module (inflator No.2) system circuit short to power supply
	B2232	Driver-side air bag module (inflator No.2) system resistance high
	B2234	Driver-side air bag module (inflator No.2) system resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.5—3.7 ohms**) detected in driver-side air bag module (inflator No.2) circuit • Malfunction in wiring harness between driver-side air bag module (inflator No.2) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between clock spring and SAS control module • Clock spring malfunction • Driver-side air bag module (inflator No.2) malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



CLOCK SPRING CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2)** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — D_ABAGR2 • Is resistance of driver-side air bag module normal? — Resistance: **1.5—3.7 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE AIR BAG MODULE CONNECTOR (CLOCK SPRING)** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the driver-side air bag module. • Is there cracking or chipping in driver-side air bag module connector?	Yes	Replace the wiring harness.
		No	Go to the next step.

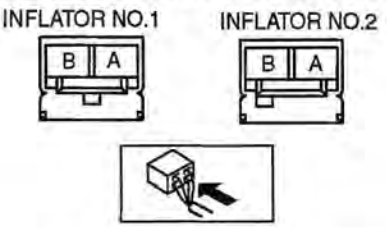
STEP	INSPECTION		ACTION
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE AIR BAG MODULE (INFLATOR NO.2) OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to driver-side air bag module (inflator No.1) terminal 3A and 3B, and driver-side air bag module (inflator No.2) terminal 4A and 4B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_DAB2_ST • Is related wiring harness normal?	Yes	Replace the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	**INSPECT CLOCK SPRING** • Inspect the clock spring. (See 08–10–17 CLOCK SPRING INSPECTION.) • Is clock spring normal?	Yes	Go to the next step.
		No	Replace the clock spring. (See 08–10–15 CLOCK SPRING REMOVAL/INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN CLOCK SPRING AND SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Inspect the following wiring harnesses between SAS control module and clock spring terminals for short to ground, short to power supply, and open circuit: — 1G—1B — 1J—1A • Is wiring harness normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Replace the wiring harnesses.

DTC B2229, B2231, B2233, B2235

E6U080200000W17

DTC	B2229	Passenger-side air bag module (inflator No.2) system circuit short to ground
	B2231	Passenger-side air bag module (inflator No.2) system circuit short to power supply
	B2233	Passenger-side air bag module (inflator No.2) system resistance high
	B2235	Passenger-side air bag module (inflator No.2) system resistance low
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—2.9 ohms**) detected in passenger-side air bag module circuit • Malfunction in wiring harness between passenger-side air bag module (inflator No.2) and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side air bag module (inflator No.2) and SAS control module • Passenger-side air bag module (inflator No.2) malfunction • SAS control module malfunction

PASSENGER-SIDE AIR BAG MODULE CONNECTOR



Diagnostic procedure

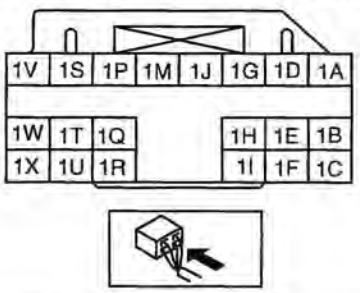
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2)** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — P_ABAGR2 • Is resistance of passenger-side air bag module normal? — Resistance: **1.4—2.9 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Is there cracking or chipping in passenger-side air bag module connector?	Yes	Replace wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE AIR BAG MODULE (INFLATOR NO.2) OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to passenger-side air bag module (inflator No.1) terminal A and B, and passenger-side air bag module (inflator No.2) terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect negative battery cable. • Turn the ignition switch to ON position. • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_PAB2_ST • Is related wiring harness normal?	Yes	Replace the passenger-side air bag module. (See 08–10–7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
		No	Replace the wiring harness, then go to next step.
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect passenger-side air bag module connector. • Are any one or all of the following DTCs displayed? — B2229 — B2231 — B2233 — B2235	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2290

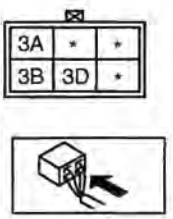
E6U080200000W18

DTC B2290	Passenger sensing system malfunction
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspectio. Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • Passenger sensing system circuit malfunction
POSSIBLE CAUSE	• Seat weight sensor calibration not properly set • Communication error between SAS control module and seat weight sensor control module • Seat weight sensor control module internal malfunction • LH or RH seat weight sensor malfunction

SAS CONTROL MODULE CONNECTOR



SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR



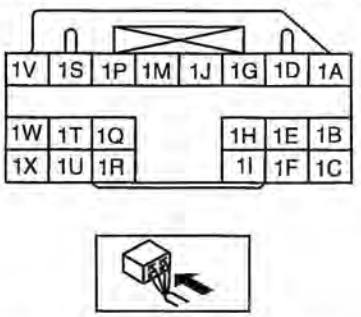
STEP	INSPECTION		ACTION
1	**INSPECT SEAT WEIGHT SENSOR CONTROL MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** Turn the ignition switch to the LOCK position. Disconnect the negative battery cable and wait for **1 min or more**. Disconnect the seat weight sensor control module connector. Is there any malfunction of the seat weight sensor control module connector?	Yes	Repair or replace the wiring harness. After replacement, reperform the DTC inspection and verify that no DTCs are displayed.
		No	Go to the next step.
2	**INSPECTION WIRING HARNESS** Disconnect the SAS control module connector. Verify continuity in the following wiring harnesses: — Between SAS control module terminal 1I and seat weight sensor control module terminal 3D — Between the battery and seat weight sensor control module terminal 3A — Between seat weight sensor control module terminal 3B and body ground Is the continuity normal?	Yes	Go to the next step.
		No	If there is any malfunction in the wiring harnesses, repair or replace the applicable wiring harness. After replacement, reperform the DTC inspection and verify that no DTCs are displayed.
3	**INSPECT PASSENGER SENSING SYSTEM** Connect the seat weight sensor control module connector. Connect the SAS control module. Connect the negative battery cable. Verify the following PIDs using the WDS or equivalent. (See 08–02–10 PID/DATA MONITOR TABLE.) — OCSFLT_MDL — OCSFLT_COM — OCSFLT_L — OCSFLT_R — OCSFLT_SNS — OCSFLT_CAL Do all PIDs display "OK"?	Yes	Go to the next step.
		No	Replace the following parts according to the WDS or equivalent screen: **OCSFLT_MDL or OCSFLT_COM** • If FAULT is displayed: — Seat weight sensor control module (See 08–10–13 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 08–10–14 SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [L3 WITH TC].) **OCSFLT_L** • If FAULT is displayed: — Seat weight sensor (LH) (See 09–13–9 FRONT SEAT DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC].) (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC].) **OCSFLT_R** • If FAULT is displayed: — Seat weight sensor (RH) (See 09–13–9 FRONT SEAT DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC].) (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC].) **OCSFLT_SNS** • If FAULT is displayed: — Seat weight sensor (See 09–13–9 FRONT SEAT DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC].) (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC].) **OCSFLT_CAL** • If FAULT is displayed: — Perform seat weight sensor calibration (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)
4	**INSPECT SAS CONTROL MODULE** Reperform the DTC inspection. Is DTC B2290 indicated?	Yes	Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2296

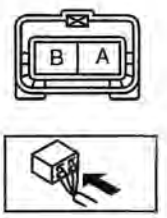
E6U080200000W19

DTC B2296	Crash zone sensor system (communication error, sensor internal circuit abnormal)
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in wiring harness between crash zone sensor and SAS control module • Malfunction in crash zone sensor circuit
POSSIBLE CAUSE	• Open or short circuit in wiring harness between crash zone sensor and SAS control module • SAS control module malfunction • Crash zone sensor malfunction

SAS CONTROL MODULE CONNECTOR



CRASH ZONE SENSOR CONNECTOR



Diagnostic procedure

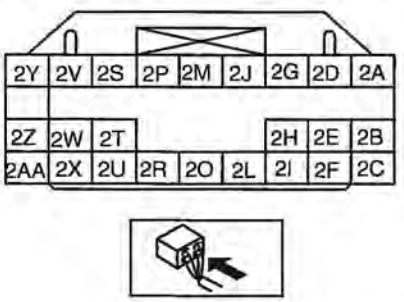
STEP	INSPECTION		ACTION
1	**INSPECT CRASH ZONE SENSOR CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to the LOCK position. • Disconnect the negative battery cable and wait tor **1 min or more**. • Disconnect the crash zone sensor connector. • Is there any malfunction of the crash zone sensor connector?	Yes	Replace wiring harnesses.
		No	Go to next step.
2	**INSPECT WIRING HARNESS BETWEEN CRASH ZONE SENSOR AND SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Disconnect the crash zone sensor connector. • Connect the negative battery cable. • Inspect the following wiring harnesses between SAS control module and crash zone sensor terminals for short to ground, short to power supply, and open circuit: — 1B—A — 1C—B • Is wiring harness okay?	Yes	Replace the crash zone sensor, then go to next step. (See 08–10–11 CRASH ZONE SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the wiring harnesses.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **more than 1 minute**. • Connect the all SAS control module connectors. • Connect the crash zone sensor connector. • Is DTC B2296 indicated?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2444, U2017

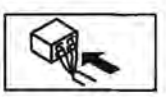
E6U080200000W22

DTC	B2444	Driver-side side air bag sensor system (sensor internal circuit abnormal)
	U2017	Driver-side side air bag sensor system (communication error)
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in wiring harness between driver-side side air bag sensor and SAS control module • Malfunction in driver-side side air bag sensor circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side side air bag sensor and SAS control module • Driver-side side air bag sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



DRIVER-SIDE SIDE AIR BAG SENSOR CONNECTOR



Diagnostic procedure

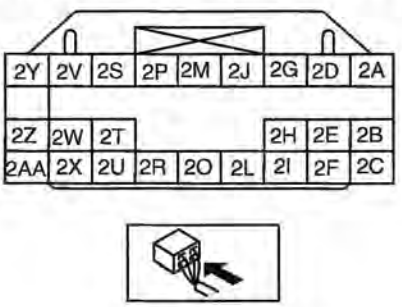
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE SIDE AIR BAG SENSOR** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_CRST_D1 — OD_CRST_D2 • Is driver-side side air bag sensor normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT WIRING HARNESS BETWEEN DRIVER-SIDE SIDE AIR BAG SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling air bag system components improperly can accidentally deploy air bag modules and pre-tensioner seat belts, which may seriously injure you. Read AIR BAG SYSTEM SERVICE WARNINGS before handling air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Disconnect the driver-side side air bag sensor connector. • Connect the negative battery cable. • Inspect the following wiring harnesses between SAS control module and driver-side side air bag sensor terminals for short to ground, short to power supply, and open circuit: — 2Z—A — 2AA—B • Is wiring harness normal?	Yes	Replace the driver-side side air bag sensor, then go to next step. (See 08–10–12 SIDE AIR BAG SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the wiring harnesses.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **more than 1 minute**. • Connect the all SAS control module connectors. • Connect the driver-side side air bag sensor connector. • Are DTCs B2444 or U2017 or both indicated?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2445, U2018

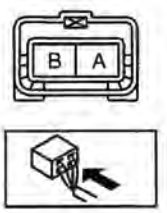
E6U080200000W23

DTC		
	B2445	Passenger-side side air bag sensor system (sensor internal circuit abnormal)
	U2018	Passenger-side side air bag sensor system (communication error)
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in wiring harness between passenger-side side air bag sensor and SAS control module • Malfunction in passenger-side side air bag sensor circuit
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side side air bag sensor and SAS control module • Passenger-side side air bag sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



PASSENGER-SIDE SIDE AIR BAG SENSOR CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE SIDE AIR BAG SENSOR** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — OD_CRST_P1 — OD_CRST_P2 • Is passenger-side side air bag sensor normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT WIRING HARNESS BETWEEN PASSENGER-SIDE AIR BAG SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling air bag system components improperly can accidentally deploy air bag modules and pre-tensioner seat belts, which may seriously injure you. Read AIR BAG SYSTEM SERVICE WARNINGS before handling air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Disconnect the passenger-side side air bag sensor connector. • Connect the negative battery cable. • Inspect the following wiring harnesses between SAS control module and passenger-side side air bag sensor terminals for short to ground, short to power supply, and open circuit: — 2B—A — 2C—B • Is wiring harness normal?	Yes	Replace the passenger-side side air bag sensor, then go to next step. (See 08–10–12 SIDE AIR BAG SENSOR REMOVAL/ INSTALLATION.)
		No	Replace the wiring harnesses.
3	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Connect the all SAS control module connectors. • Connect the passenger-side side air bag sensor connector. • Are DTCs B2445 or U2018 or both indicated?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2477

E6U080200000W30

DTC B2477	Configuration error
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspectio Performing an inspection according to only the detection conditions may cause injury due to an operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • SAS control module configuration has not been performed correctly.
POSSIBLE CAUSE	• SAS control module configuration error • SAS control module malfunction

Diagnostic procedure

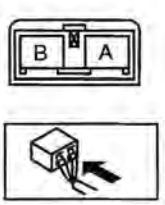
STEP	INSPECTION		ACTION
1	**INSPECT SAS CONTROL MODULE** • Using the WDS or equivalent, perform SAS control module configuration. • Is DTC B2477 indicated?	Yes	Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2773, B2774, B2775, B2776

E6U080200000W24

DTC		
DTC	B2773	**Driver-side curtain air bag module system resistance low**
	B2774	**Driver-side curtain air bag module system resistance high**
	B2775	**Driver-side curtain air bag module system circuit short to ground**
	B2776	**Driver-side curtain air bag module system circuit short to power supply**
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—3.2 ohms**) detected in driver-side curtain air bag module circui • Malfunction in wiring harness between driver-side curtain air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between driver-side curtain air bag module and SAS control module • Driver-side curtain air bag module malfunction • SAS control module malfunction

DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR



Diagnostic procedure

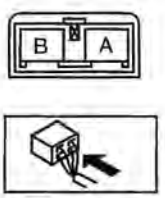
STEP	INSPECTION		ACTION
1	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — DR_CURTN • Is resistance of driver-side curtain air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT DRIVER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the driver-side curtain air bag module connector. • Is there cracking or chipping in driver-side curtain air bag module connector?	Yes	Replace the wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN DRIVER-SIDE CURTAIN AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to driver-side curtain air bag module terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Are any one or all of the following DTCs displayed? — B2773 — B2774 — B2775 — B2776	Yes	Replace the wiring harness, then go to next step.
		No	Replace the driver-side curtain air bag module. (See 08–10–10 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect driver-side curtain air bag module connector. • Are any one or all of the following DTCs displayed? — B2773 — B2774 — B2775 — B2776	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2777, B2778, B2779, B2780

E6U080200000W25

DTC	B2777	Passenger-side curtain air bag module system resistance low
	B2778	Passenger-side curtain air bag module system resistance high
	B2779	Passenger-side curtain air bag module system circuit short to ground
	B2780	Passenger-side curtain air bag module system circuit short to power supply
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Abnormal resistance (other than **1.4—3.2 ohms**) detected in passenger-side curtain air bag module circuit • Malfunction in wiring harness between passenger-side curtain air bag module and SAS control module
POSSIBLE CAUSE		• Open or short circuit in wiring harness between passenger-side curtain air bag module and SAS control module • Passenger-side curtain air bag module malfunction • SAS control module malfunction

PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR



Diagnostic procedure

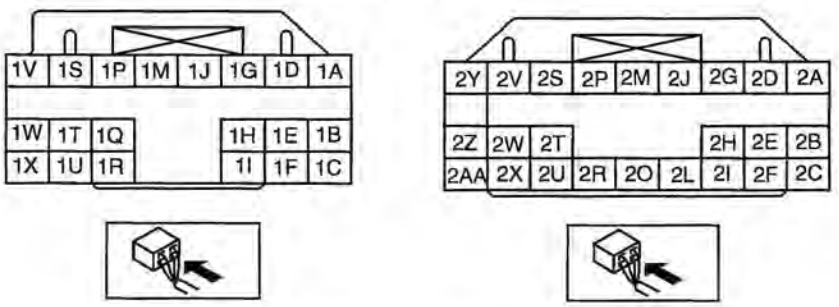
STEP	INSPECTION		ACTION
1	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — PS_CURTN • Is resistance of passenger-side curtain air bag module normal? — Resistance: **1.4—3.2 ohms**	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.
2	**INSPECT PASSENGER-SIDE CURTAIN AIR BAG MODULE CONNECTOR** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Disconnect the passenger-side curtain air bag module connector. • Is there cracking or chipping in passenger-side curtain air bag module connector?	Yes	Replace the wiring harness.
		No	Go to the next step.
3	**VERIFY WHETHER MALFUNCTION IS IN PASSENGER-SIDE CURTAIN AIR BAG MODULE OR RELATED WIRING HARNESS** • Connect leads of **SST** (Fuel and thermometer checker) or apply 2-ohm resistor to passenger-side curtain air bag module terminal A and B. • Set resistance of **SST** (Fuel and thermometer checker) to 2 ohms. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Are any one or all of the following DTCs displayed? — B2777 — B2778 — B2779 — B2780	Yes	Replace the wiring harness, then go to next step.
		No	Replace the passenger-side curtain air bag module. (See 08–10–10 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.)
4	**INSPECT SAS CONTROL MODULE** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the passenger-side curtain air bag module connector. • Are any one or all of the following DTCs displayed? — B2777 — B2778 — B2779 — B2780	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

DTC B2867

E6U080200000W26

DTC B2867	SAS control module connector poor connection
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • There is no continuity between poor connection detector bar terminals of SAS control module.
POSSIBLE CAUSE	• Poor connection of any SAS control module connectors • Malfunction of any SAS control module connectors • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



Diagnostic procedure

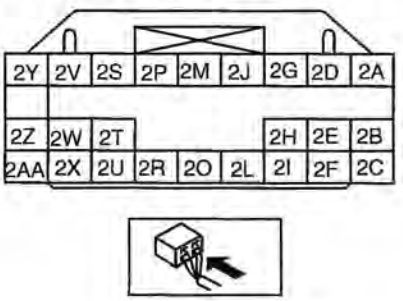
STEP	INSPECTION		ACTION
1	**VERIFY THAT ALL SAS CONTROL MODULE CONNECTORS ARE CONNECTED WITH SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Turn up floor covering. • Are all SAS control module connectors securely connected?	Yes	Go to next step.
		No	Reconnect connector properly.
2	**INSPECT ALL SAS CONTROL MODULE CONNECTORS** • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Disconnect the all SAS control module connectors. • Are poor connection detector bars of all SAS control module connectors normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Replace wiring harnesses.

DTC C1947, C1948, C1981

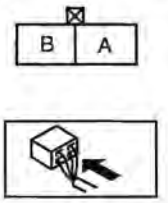
E6U080200000W27

DTC	C1947	Seat track position sensor circuit short to ground
	C1948	Seat track position sensor circuit resistance out of range
	C1981	Seat track position sensor circuit open or short to power supply
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding DTC outline before performing inspection. Performing inspection with only detection conditions may cause injury due to operating error or damage the system. When performing inspection, always follow inspection procedure.** • Malfunction in seat track position sensor circuit.
POSSIBLE CAUSE		• Malfunction of connector between seat track position sensor and SAS control module. • Open or short circuit in wiring harness between seat track position sensor and SAS control module. • Seat track position sensor malfunction • SAS control module malfunction

SAS CONTROL MODULE CONNECTOR



SEAT TRACK POSITION SENSOR CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT SEAT TRACK POSITION SENSOR CIRCUIT** • Check the following PID/DATA monitor, using **SST** (WDS or equivalent). (See 08–02–10 PID/DATA MONITOR TABLE.) — TRAK_SW • Is seat track position sensor circuit normal?	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Go to the next step.

STEP	INSPECTION		ACTION
2	**INSPECT WIRING HARNESS BETWEEN SEAT TRACK POSITION SENSOR AND SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the seat track position sensor connector • Inspect the following wiring harness between SAS control module and seat track position sensor terminals for short to ground, short to power supply, and open circuit: — 2W—A — 2X—B • Is wiring harness normal?	Yes	Replace the seat track position sensor, then go to the next step.
		No	Replace the wiring harness, then go to the next step.
3	**INSPECT SAS CONTROL MODULE** • Connect the SAS control module connector. • Connect the clock spring connector. • Connect the passenger-side air bag module connector. • Connect the driver-and passenger-side curtain air bag module connectors. • Connect the driver-and passenger-side side air bag module connectors. • Connect the driver-and passenger-side pre tensioner seat belt connectors. • Connect the seat track position sensor connector. • Are any one or all of the following DTCs displayed? — C1947 — C1948 — C1981	Yes	**Present malfunction diagnosis:** • Replace the SAS control module. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.) **Past malfunction diagnosis:** • Troubleshooting completed.
		No	Troubleshooting completed.

08–03 SYMPTOM TROUBLESHOOTING

AIR BAG SYSTEM 08–03–1
Troubleshooting Index 08–03–1
NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE 08–03–2
Diagnostic Procedure 08–03–2
NO.2 AIR BAG SYSTEM WARNING LIGHT IS ILLUMINATED ALL THE TIME 08–03–4
Diagnostic Procedure 08–03–4

AIR BAG SYSTEM

E6U080300000W01

Troubleshooting Index

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting item	Description	Page
1	Air bag system warning light does not illuminate.	Malfunction in air bag system warning circuit (short to ground).	(See 08–03–2 NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE)
2	Air bag system warning light is illuminated all the time.	Malfunction in air bag system warning circuit (open circuit or short to power supply).	(See 08–03–4 NO.2 AIR BAG SYSTEM WARNING LIGHT IS ILLUMINATED ALL THE TIME)

NO.1 AIR BAG SYSTEM WARNING LIGHT DOES NOT ILLUMINATE

E6U080300000W02

1	**Air bag system warning light does not illuminate.**
DETECTION CONDITION	Malfunction in air bag system warning light circuit (short to ground)
POSSIBLE CAUSE	• SAS control module malfunction • Instrument cluster (print plate) malfunction • Short to ground circuit in wiring harness between instrument cluster and SAS control module

Diagnostic Procedure

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	**INSPECT OTHER WARNING AND INDICATOR LIGHTS CIRCUIT IN INSTRUMENT CLUSTER** • Turn the ignition switch to ON position. • Do other warning and indicator lights illuminate?	Yes	Turn the ignition switch to LOCK position, then go to the next step.
		No	Inspect the instrument cluster power supply system and ground system, then go to Step 5.
2	**INSPECT SAS CONTROL MODULE** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver- and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Does air bag system warning light illuminate?	Yes	Replace the SAS control module, then go to Step 5. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Go to the next step.
*3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND INSTRUMENT CLUSTER FOR SHORT TO GROUND** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable. • Disconnect the instrument cluster connector. • Is there continuity between instrument cluster terminal 10 and ground?	Yes	Replace the wiring harness, then go to Step 5.
		No	Go to the next step.

STEP	INSPECTION		ACTION
4	**INSPECT INSTRUMENT CLUSTER** • Connect the instrument cluster connector. • Connect the negative battery cable. • Does air bag system warning light illuminate with ignition switch ON?	Yes	Go to the next step.
		No	Replace the instrument cluster, then go to the next step. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
5	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more.** • Connect the all SAS control module connectors. • Connect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Connect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Connect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Connect the passenger-side air bag module connector. • Connect the clock spring connector. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Does air bag system warning light operate properly?	Yes	Complete troubleshooting, then explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO.2 AIR BAG SYSTEM WARNING LIGHT IS ILLUMINATED ALL THE TIME

E6U080300000W03

2	**Air bag system warning light is illuminated all the time.**
DETECTION CONDITION	Malfunction in air bag system warning light circuit (open circuit or short to power supply).
POSSIBLE CAUSE	• Weak battery • SAS control module malfunction • Instrument cluster (print plate) malfunction • No connection in SAS control module connector • Poor contact in instrument cluster connector (16-pin) • Open or short to power supply circuit in wiring harness between instrument cluster and SAS control module • Poor contact at terminals 1T, 1X and/or 1W of SAS control module connector • Poor contact in wiring harness between terminal 1X of SAS control module connector and ground • Poor contact in wiring harness between AIR BAG 15 A fuse and terminal 1W of SAS control module

Diagnostic Procedure

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

STEP	INSPECTION		ACTION
1	**INSPECT BATTERY** • Measure voltage of battery. • Is voltage **9 V or more**?	Yes	Go to the next step.
		No	Battery is weak. Inspect charge/discharge system, then go to Step 10. (See 01–17A–2 BATTERY INSPECTION [L3, AJ].) (See 01–17B–2 BATTERY INSPECTION [L3 WITH TC].)
2	**VERIFY THAT SAS CONTROL MODULE CONNECTOR IS CONNECTED** **Warning** • **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Turn up floor covering. • Are all SAS control module connectors securely connected?	Yes	Go to the next step.
		No	Reconnect connector properly, then go to Step 10.

STEP	INSPECTION		ACTION
* 3	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND INSTRUMENT CLUSTER FOR CONTINUITY** • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver- and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module connectors. • Disconnect the instrument cluster connector. • Is there continuity between SAS control module terminal 1T and instrument cluster terminal 1O?	Yes	Go to the next step.
		No	Replace the wiring harness, then go to Step 10.
* 4	**INSPECT WIRING HARNESS BETWEEN SAS CONTROL MODULE AND INSTRUMENT CLUSTER FOR SHORT TO POWER SUPPLY** • Connect the negative battery cable. • Turn the ignition switch to ON position. • Measure voltage at instrument cluster terminal 1O. • Is voltage **9 V or more**?	Yes	Replace the wiring harness, then go to Step 10.
		No	Go to the next step.
5	**CHECK TO SEE WHETHER MALFUNCTION IS IN AIR BAG SYSTEM WARNING LIGHT IN INSTRUMENT CLUSTER** • Connect the instrument cluster terminal 1O to ground, then reconnect connector. • Does air bag system warning light illuminate with ignition switch ON?	Yes	Replace the instrument cluster, then go to Step 10. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION.)
		No	Go to the next step.
6	**INSPECT POWER SUPPLY CIRCUIT OF SAS CONTROL MODULE (TERMINAL 1W)** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the all SAS control module connectors. • Connect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Connect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Connect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Connect the passenger-side air bag module connector. • Connect the clock spring connector. • Inspect voltage for PID/DATA monitor IGN_VOLT item using **SST** (WDS or equivalent). • Is voltage of at least one terminal **9 V or more**?	Yes	Go to Step 9.
		No	Go to the next step.

STEP	INSPECTION		ACTION
7	**INSPECT WIRING HARNESS BETWEEN BATTERY AND FUSE BLOCK** • Remove the driver-side front side trim. • Remove the fuse block without disconnecting connectors. • Turn the ignition switch to ON position. • Measure voltage at terminals D (JB–01) of fuse block connector. • Is voltage of at least one terminal **more than 9 V**?	Yes	Go to the next step.
		No	Repair the wiring harnesses, then go to Step 9.
8	**INSPECT WIRING HARNESS BETWEEN FUSE BLOCK AND SAS CONTROL MODULE** • Measure voltage at terminals I (JB–03) of fuse block connector. • Is voltage of at least one terminal **9 V or more**?	Yes	Repair the wiring harnesses, then go to Step 10.
		No	Inspect the fuse block, then go to Step 10.
9	**VERIFY THAT SAS CONTROL MODULE CONNECTOR TERMINAL 1X IS GROUND** • Turn the gnition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Remove the column cover. • Disconnect the clock spring connector. • Remove the glove compartment. • Disconnect the passenger-side air bag module connector. • Disconnect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Disconnect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Remove the B-pillar lower trims. (Vehicles with pre-tensioner seat belt) • Disconnect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Turn up floor covering. • Disconnect the all SAS control module control model connectors. • Inspect wiring harness between SAS control module connector terminal 1X and ground for the following: — Short to power supply — Open circuit • Is wiring harness normal?	Yes	Replace the SAS control module, then go to the next step. (See 08–10–12 SAS CONTROL MODULE REMOVAL/ INSTALLATION.)
		No	Replace the wiring harnesses, then go to the next step.
10	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Turn the ignition switch to LOCK position. • Disconnect the negative battery cable and wait for **1 min or more**. • Connect the all SAS control module connectors. • Connect the driver and passenger-side pre-tensioner seat belt connectors. (Vehicles with pre-tensioner seat belt) • Connect the driver and passenger-side curtain air bag module connectors. (Vehicles with curtain air bag) • Connect the driver and passenger-side side air bag module connectors. (Vehicles with side air bag) • Connect the passenger-side air bag module connector. • Connect the clock spring connector. • Connect the instrument cluster connector. • Connect the negative battery cable. • Turn the ignition switch to ON position. • Does air bag system warning light operate properly?	Yes	Complete troubleshooting, thethen explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

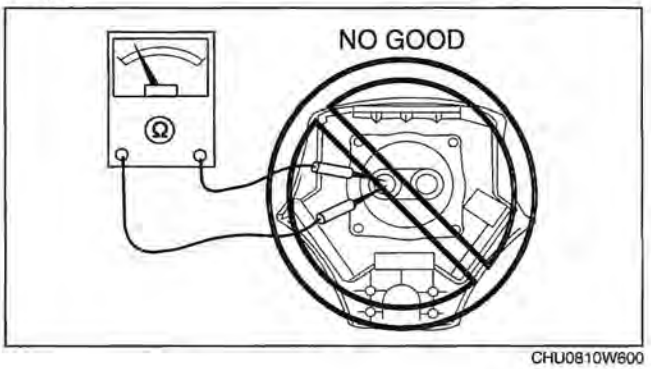
SERVICE WARNINGS

E6U081000000W02

Air Bag Module Inspection

- **Inspecting an air bag module using a tester can operate (deploy) the air bag module, which may cause serious injury. Do not use a tester to inspect an air bag module. Always use the on-board diagnostic function to diagnose the air bag module for malfunctions.**



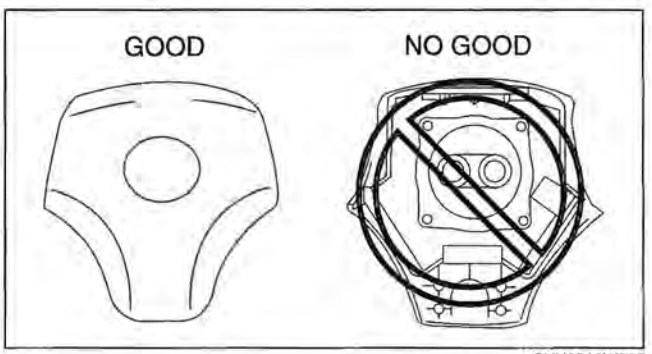
CHU0810W600

Air Bag Module Handling

- **Before removing the air bag module or disconnecting the air bag module connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.**
- **Handling a live (undeployed) air bag module that is pointed toward your body could result in serious injury if the air bag module were to accidentally operate (deploy). When carrying a live (undeployed) air bag module, point the deployment surface away from your body to lessen the chance of injury in case it operates (deploys).**

CHU0810W601

- **A live (undeployed) air bag module placed with its deployment surface to ground is dangerous. If the air bag module were to accidentally operate (deploy), it could cause serious injury. Always place a live (undeployed) air bag module with its deployment surface up.**



CHU0810W602

Side Air Bag Module Handling

- **When a side air bag module operates (deploys) due to a collision, the interior of the seat back (pad, frame, trim) may become damaged. If a side air bag does not operate (deploy) normally from a seat back that has been reused, a serious accident may result. After a side air bag has operated (deployed), always replace both the side air bag module and the seat back (pad, frame, trim) with new parts. After servicing, verify that the seat operates normally and that the wiring harness is not caught.**

Seat Weight Sensor Handling

- **The passenger-side seat and the seat weight sensor may become deformed or otherwise damaged due to operation (deployment) of the front or side air bag in an accident. This may cause the passenger sensing function to operate improperly and result in a serious accident. Always replace the passenger seat and seat weight sensor with new ones after the front or side air bags have operated (deployed). After servicing, verify that the seat operates normally and that the wiring harness is not caught. If the collision is not hard enough to cause the front or side air bags to operate (deploy), inspect the seat weight sensor and replace it if there is any malfunction.**

SAS Control Module Handling

- Removing the SAS control module or disconnecting the SAS control module connector with the ignition switch at the ON position can activate the sensor in the SAS control module and operate (deploy) the air bags and pre-tensioner seat belt, which may cause serious injury. Before removing th SAS control module or disconnecting the SAS control module connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- Connecting the SAS control module connector with the SAS control module not securely fixed to the vehicle is dangerous. The sensor in the SAS control module could send an electrical signal to the air bag modules and pre-tensioner seat belt. This will operate (deploy) the air bags and pre-tensioner seat belt, which may result in serious injury. Therefore, before connecting the connector, securely fix the SAS control module to the vehicle.
- Because a sensor is built into the SAS control module, once the air bags and pre-tensioner seat belt have operated (deployed) due to a collision or other causes, the SAS control module must be replaced with a new one even if the used one does not have any visible external damage or deformation. The used SAS control module may have been damaged internally, which may cause improper operation. If the SAS control module is reused, the air bags and pre-tensioner seat belt may not operate (deploy) normally, which could result in a serious accident. Always replace the SAS control module with a new one. The SAS control module cannot be bench-checked or self-checked.

Crash Zone Sensor Handling

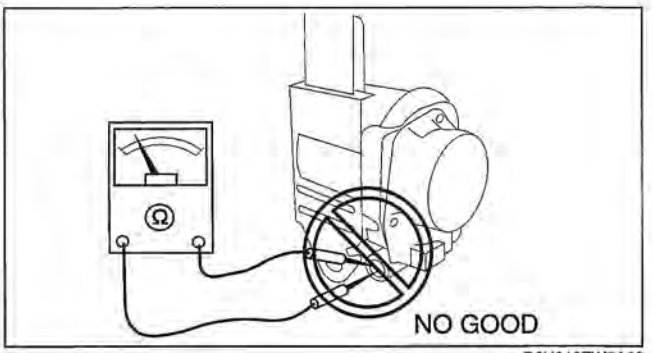
- Removing the crash zone sensor or disconnecting the crash zone sensor connector with the ignition switch at the ON position can activate the crash zone sensor and operate (deploy) the air bags and pre-tensioner seat belt, which may cause serious injury. Before removing the crash zone sensor or disconnecting the crash zone sensor connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- If the crash zone sensor is subjected to shock or the sensor is disassembled, the air bags and pre-tensioner seat belt may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the crash zone sensor to shock or disassemble the sensor.
- Because a sensor is built into the crash zone sensor, once the air bags and pre-tensioner seat belt hav operated (deployed) due to a collision or other causes, the crash zone sensor must be replaced with new one even if the used one does not have any visible external damage or deformation. If the crash zone sensor is reused, the air bags and pre-tensioner seat belt may not operate (deploy) normally, which could result in a serious accident. Always replace the crash zone sensor with a new one. The crash zone sensor cannot be bench-checked or self-checked.

Side Air Bag Sensor Handling

- Removing the side air bag sensor or disconnecting the side air bag sensor connector with the ignition switch at the ON position can activate the side air bag sensor and operate (deploy) the side air bag, which may cause serious injury. Before removing the side air bag sensor or disconnecting the side air bag sensor connector, always turn the ignition switch to the LOCK position, disconnect the negative battery cable, and then wait for 1 min or more to allow the backup power supply of the SAS control module to deplete its stored power.
- If the side air bag sensor is subjected to shock or the sensor is disassembled, the side air bag may accidentally operate (deploy) and cause injury, or the system may fail to operate normally and cause a serious accident. Do not subject the side air bag sensor to shock or disassemble the sensor.
- Because a sensor is built into the side air bag sensor, once the air bag has operated (deployed) due to a collision or other causes, the side air bag sensor must be replaced with a new one even if the used one does not have any visible external damage or deformation. If the side air bag sensor is reused, the side air bag may not operate (deploy) normally, which could result in a serious accident. Always replace the side air bag sensor with a new one. The side air bag sensor cannot be bench-checked or self-checked.

Pre-tensioner Seat mBelt Inspection

- **Inspecting a pre-tensioner seat belt using a tester can operate (deploy) the pre-tensioner seat belt, which may cause serious injury. Do not use a tester to inspect a pre-tensioner seat belt. Always use the on-board diagnostic function to diagnose the pre-tensioner seat belt for malfunctions.**



D6U810ZW7A02

SERVICE CAUTIONS

E6U081000000W03

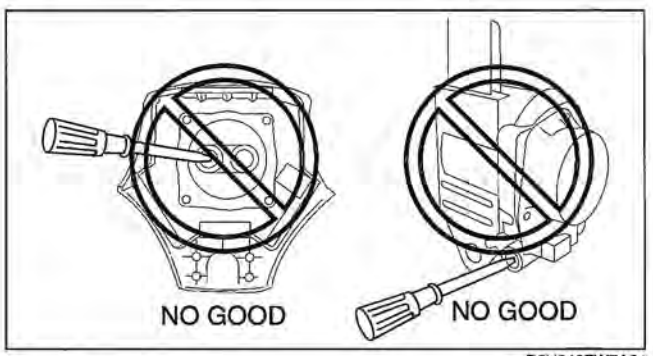
Air Bag System Component Disassembly

- Disassembling the air bag system components could cause it to not operate (deploy) normally. Never disassemble any air bag system components.

CHU0810W604

Air Bag Module, Pre-tensioner Seat Belt Handling

- **Oil, grease, or water on the air bag modules may cause the air bags and pre-tensioner seat belt to fail to operate (deploy) in an accident. Never allow oil, grease, or water to get on the air bag modules or pre-tensioner seat belt.**
- **Inserting a screwdriver or similar object into the connector of an air bag module or a pre-tensioner seat belt may damage the connector and cause the air bag module or the pre-tensioner seat belt to operate (deploy) improperly, which may cause serious injury. Never insert any foreign objects into the air bag module or seat belt connectors.**



D6U810ZW7A01

Seat Weight Sensor Handling

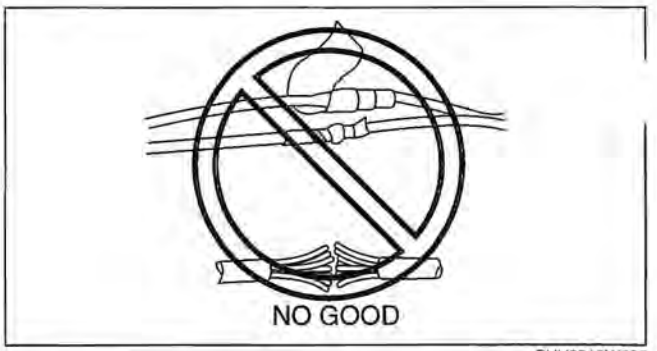
- **The seat weight sensor has a built-in strain gauge which may operate improperly if the sensor is dropped by itself or when installed to the seat. If it is dropped, replace the seat weight sensor with a new one.**
- **Oil, grease, or water on the seat weight sensor may cause the system to operate (deploy) improperly. Never allow oil, grease, or water to get on the seat weight sensor.**
- **Foreign material in the seat weight sensor components may cause the system to operate (deploy) improperly. Always make sure that no foreign material can get into the seat weight sensor.**
- **Disassembling the seat weight sensor, or tightening any of the nuts and bolts installed to the sensor body may cause it to operate (deploy) improperly. Never disassemble the seat weight sensor or tighten any of the nuts or bolts installed to the body of the sensor.**

Bag Module, Pre-tensioner Seat Belt Reuse

Even if an air bag module or a pre-tensioner seat belt does not operate (deploy) in a collision and does not have any external signs of damage, it may have been damaged internally, which may cause improper operation. Before reusing a live (undeployed) air bag module and the pre-tensioner seat belt, always use the on-board diagnostic to diagnose the air bag module and the pre-tensioner seat belt to verify that they have no malfunction.

Air Bag Wiring Harness Repair

- Incorrectly repairing an air bag wiring harness can accidentally operate (deploy) the air bag module and pre-tensioner seat belt. If a problem is found in the air bag wiring harness, always replace the wiring harness with a new one.



CHU0810W606

DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

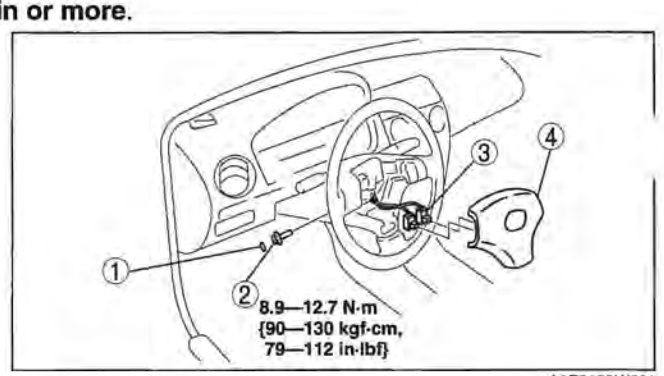
E6U081057010W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**
- **Due to the adoption of 2-step deployment control in the driver-side air bag module, depending on the impact force, it is possible that inflator No. 2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No. 1 and 2.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove in the order indicated in the table.

1	Cover
2	Bolt
3	Connector (See 08–10–6 Connector Removal Note)
4	Driver-side air bag module

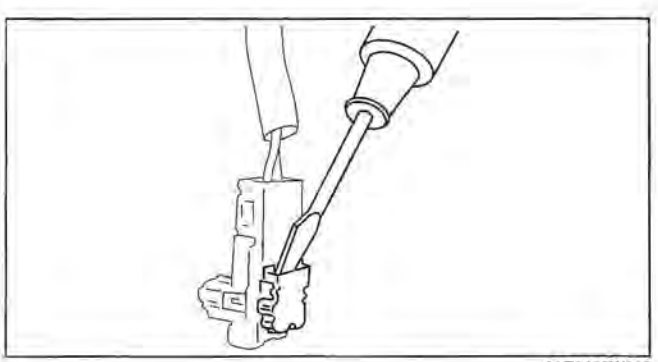


A6E8130W001

4. Install in the reverse order of removal.
5. Turn the ignition switch to the ON position.
6. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

Connector Removal Note

1. Using a flathead screwdriver, pry out the connector's stopper plate.
2. Disconnect the connector.



A6E8130W002

PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION

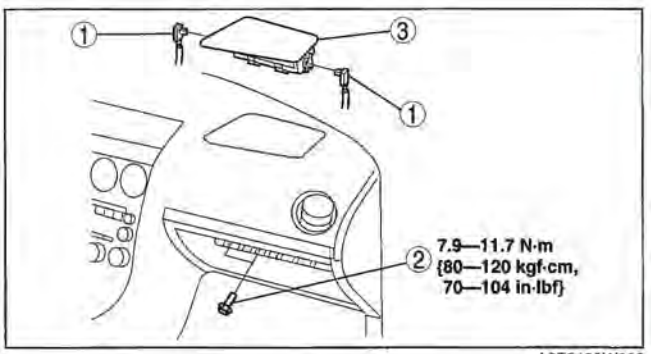
E6U081057050W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**
- **Due to the adoption of 2-step deployment control in the passenger-side air bag module, depending on the impact force, it is possible that inflator No. 2 might not deploy. In such cases, before disposing of the air bag module, make sure to follow the inflator deployment procedures and verify complete deployment of inflators No. 1 and 2.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the glove compartment.
4. Remove in the order indicated in the table.

1	Connector (See 08–10–7 Connector Removal Note)
2	Bolt
3	Passenger-side air bag module

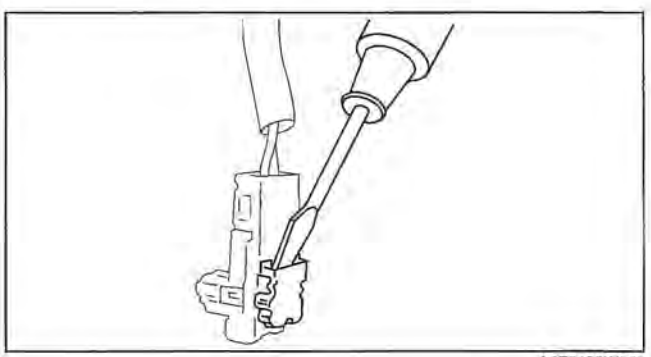


A6E8130W003

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

Connector Removal Note

1. Using a flathead screwdriver, pry out the connector stopper plate.
2. Disconnect the connector.



A6E8130W002

SIDE AIR BAG MODULE REMOVAL/INSTALLATION

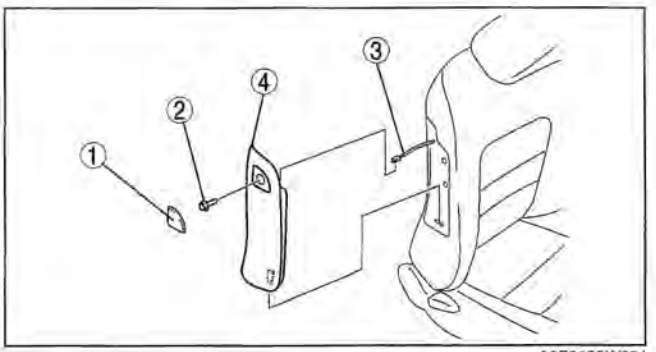
E6U081000147W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**
- **If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.**

1. Remove in the order indicated in the table.

1	Cover
2	Bolt
3	Connector (See 08–10–8 Connector Removal Note)
4	Side air bag module

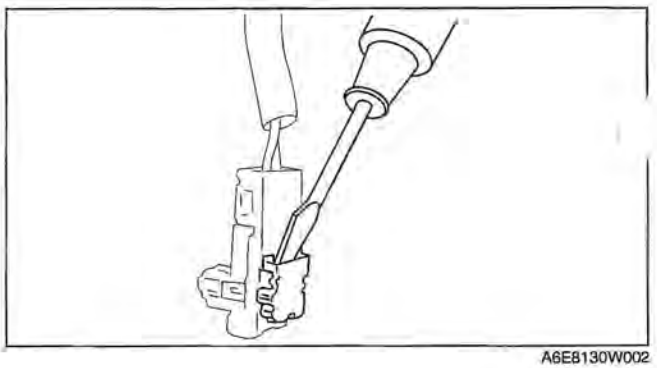


A6E8130W004

2. Install in the reverse order of removal.
3. Turn the ignition switch to the ON position.
4. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

Connector Removal Note

1. Using a flathead screwdriver, pry out the connector's stopper plate.
2. Disconnect the connector.



A6E8130W002

SIDE AIR BAG MODULE REMOVAL/INSTALLATION [L3 WITH TC]

E6U081000147W02

Warning

- **Handling the air bag module improperly can accidentally deploy the air bag module, which may seriously injure you. Read the air bag system service warnings and cautions before handling the air bag module. (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)**

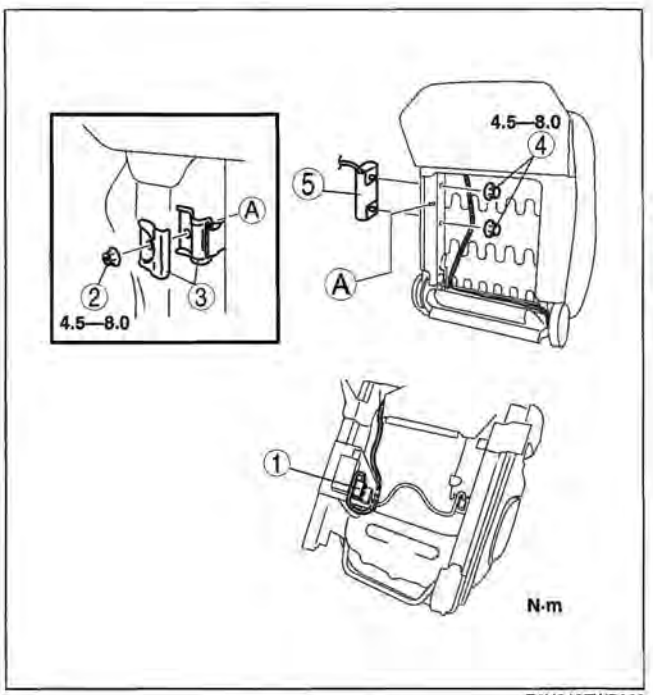
Warning

- **If the side air bag module is installed with debris in the seat back, the foreign material may be scattered when the side air bag module operates (deploys), causing injury. Verify that there is no foreign material in the seat back before installing the side air bag module.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front seat. (See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].)
4. Partially peel back the seat back trim.
5. Remove in the order indicated in the table.

1	Connector
2	Bolt A
3	Holder bracket
4	Bolt B
5	Side air bag module

6. Install in the reverse order of removal.
7. Turn the ignition switch to ON position.
8. Verify that the air bag system warning light illuminates for **approx. 6 s** and then goes off.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.



E6U810ZWB002

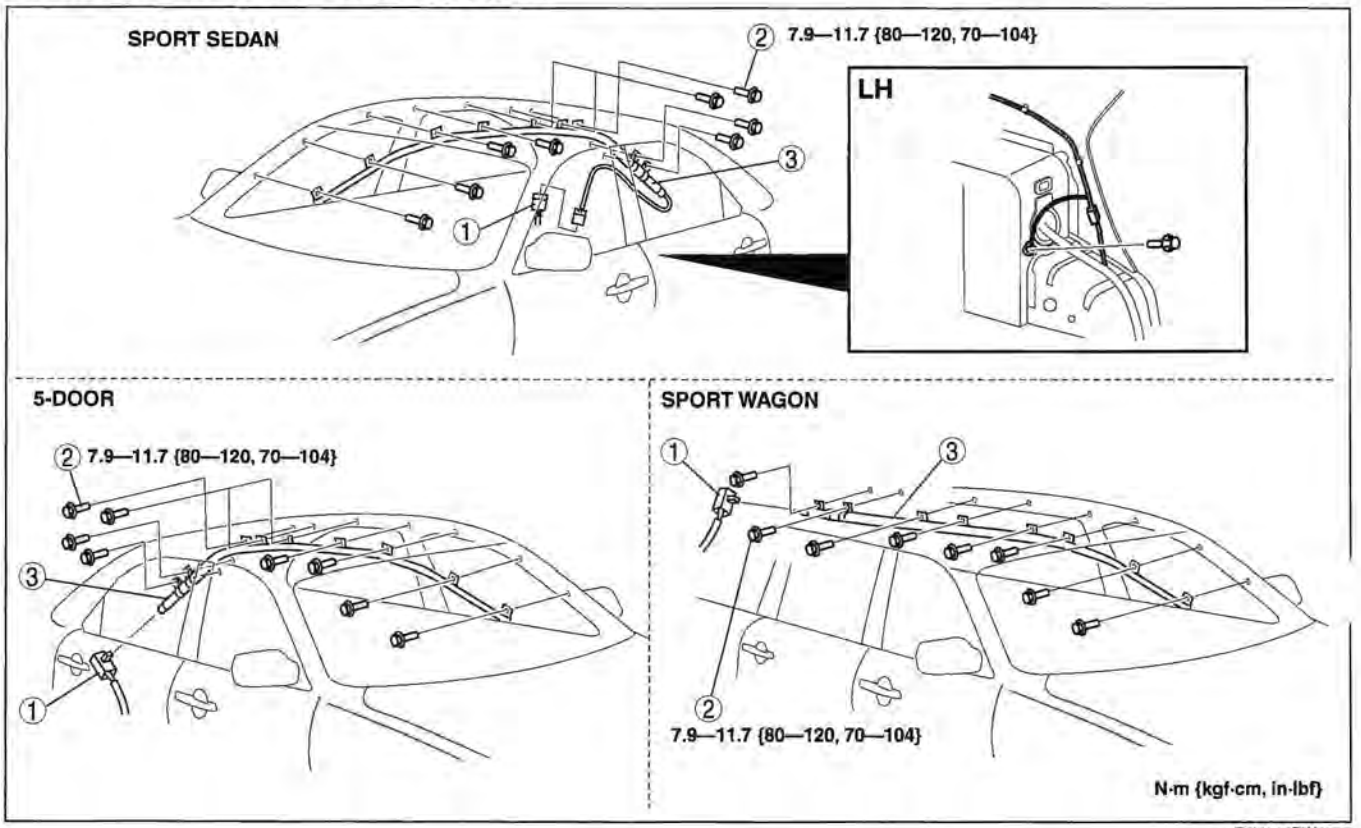
CURTAIN AIR BAG MODULE REMOVAL/INSTALLATION

E6U081000171W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air ba modules and pre-tensioner seat belts, which may seriously injure you. Read the service warning and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.



E6U810ZW5102

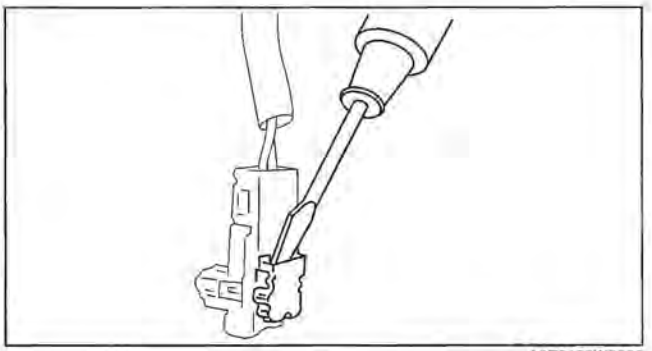
1	Connector (See 08–10–11 Connector Removal Note (5-Door, Sport Wagon).)

2	Bolt
3	Curtain air bag module

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

Connector Removal Note (5-Door, Sport Wagon)

1. Using a flathead screwdriver, pry out the connector's stopper plate.
2. Disconnect the connector.



A6E8130W0022

CRASH ZONE SENSOR REMOVAL/INSTALLATION

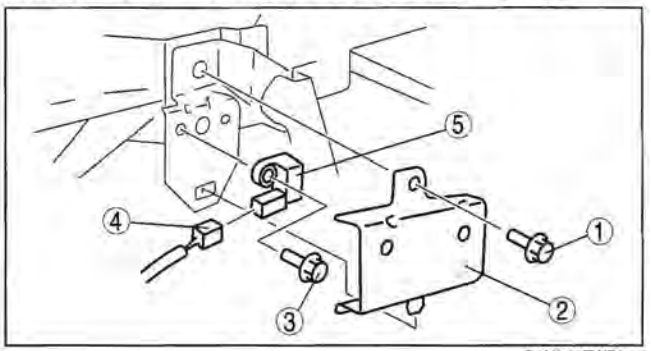
E6U081000145W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the radiator grille. (L3, AJ) (See 09–16–3 RADIATOR GRILLE REMOVAL/INSTALLATION.)
4. Remove the front bumper. (L3 with TC) (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.

1	Bolt
2	Cover
3	Bolt
4	Connector
5	Crash zone sensor



E6UB10ZWB004

6. Install in the reverse order of removal.
7. Turn the ignition switch to the ON position.
8. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic function.

SIDE AIR BAG SENSOR REMOVAL/INSTALLATION

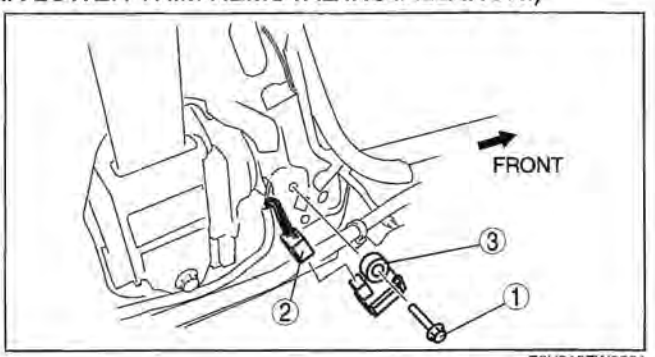
E6U081000146W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the B-pillar lower trim. (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Side air bag sensor



E6U810ZW5001

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic function.

SAS CONTROL MODULE REMOVAL/INSTALLATION

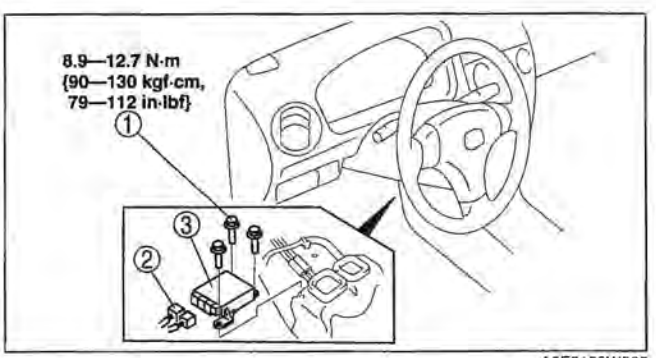
E6U081057030W01

Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Partially peel off the floor covering.
4. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	SAS control module



A6E8130W006

5. Install in the reverse order of removal.
6. Turn the ignition switch to the ON position.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.

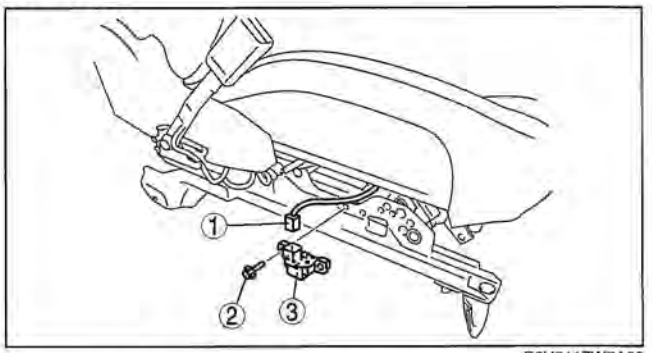
SEAT TRACK POSITION SENSOR REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

E6U081057030W05

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more.**
   Remove in the order indicated in the table.

1	Connector
2	Bolt
3	Seat track position sensor

4. Install in the reverse order of removal.



E6U811ZW7A02

SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

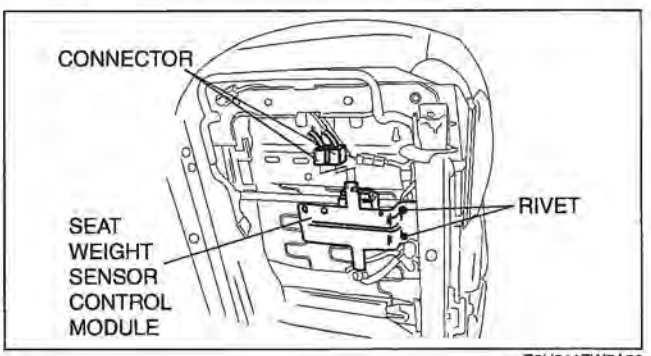
E6U081057030W02

Caution

- **When the seat weight sensor control module is replaced with a new one, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**

Removal

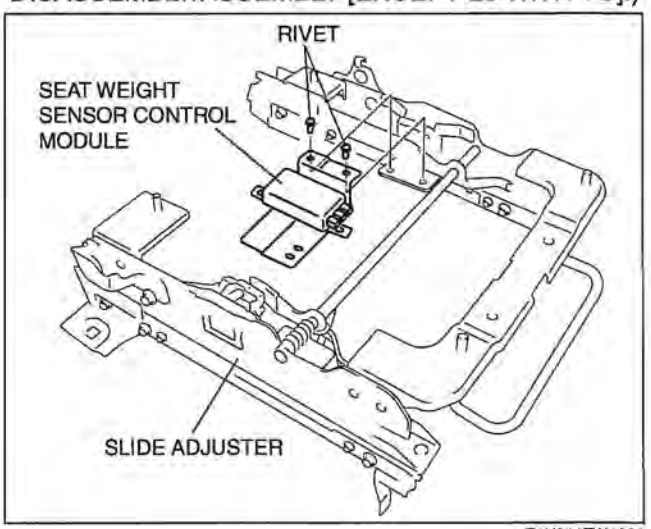
1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more.**
3. Remove the front passenger's seat. (See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
4. Remove the seat weight sensor control module connector.
5. Remove the seat weight sensor control module installation rivets using a drill.
6. Remove the seat weight sensor control module.



E6U811ZW7A03

Installation

1. Remove the seat adjuster. (See 09–13–9 FRONT SEAT DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC].)
2. Set the rivet to the riveter, and then secure the seat weight sensor control module to the seat adjusater with the rivets.
3. Install in the reverse order of removal.



E6U811ZW7A01

SEAT WEIGHT SENSOR CONTROL MODULE REMOVAL/INSTALLATION [L3 WITH TC]

E6U081057030W06

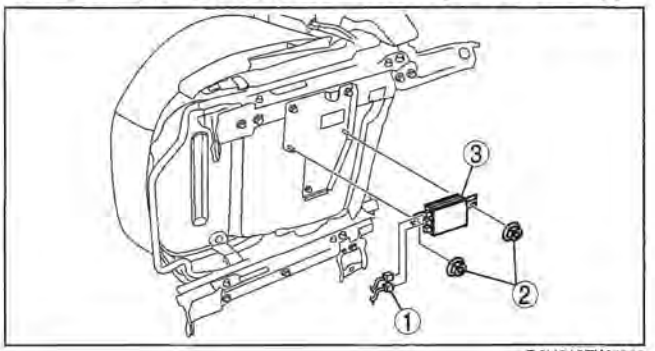
Caution

- **When the seat weight sensor control module is replaced with a new one, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more**.
3. Remove the front passenger's seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove in the order indicated in the table.

1	Connector
2	Nut
3	Seat weight sensor control module

5. Install in the reverse order of removal.



D6U810ZW7001

SEAT WEIGHT SENSOR CALIBRATION

E6U081057030W03

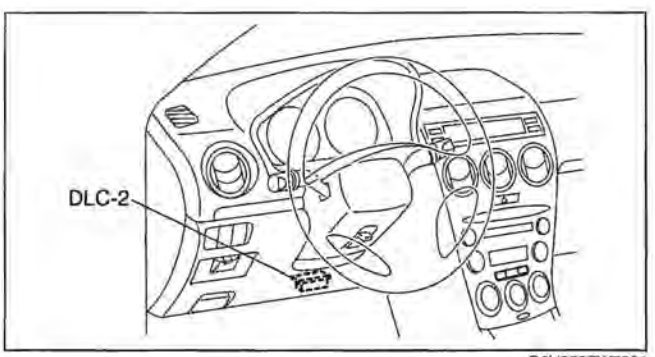
Caution

- **If any of the following work is performed, perform the seat weight sensor calibration using the WDS or equivalent.**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**
- **If any of the following work is performed, perform the seat weight sensor inspection using the WDS or equivalent. (See 08–10–15 SEAT WEIGHT SENSOR INSPECTION.)**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**
  - **— Or, the vehicle is involved in a collision**

1. Have two **20 kg {44 lb}** weights ready to use.
2. Connect the WDS or equivalent to the DLC-2 (16-pin).
3. Select "Body" from the menu.
4. Select "Restraints".
5. Select "Seat Weight Sensor ReZero Procedure".
6. Perform calibration following the procedures on the WDS or equivalent screen.

Note

- When "Lightly pat the passenger seat cushion" is displayed on the WDS or equivalent screen, lightly pat horizontally approx. five times on the headrest or upper side of the seat back trim of the passenger-side front seat.



D6U802ZW7001

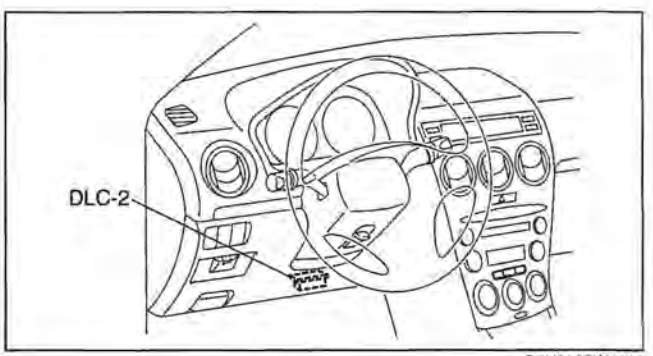
SEAT WEIGHT SENSOR INSPECTION

E6U081057030W04

Caution

- **If any of the following work is performed, perform the seat weight sensor inspection using the WDS or equivalent.**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**
  - **— Or, the vehicle is involved in a collision**
- **If any of the following work is performed, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**

1. Connect the WDS or equivalent to the DLC-2 (16-pin).
2. Select "Body" from the menu.
3. Select "Restraints".
4. Select "Seat Weight Sensor ReZero Procedure".
5. Perform inspection following the procedures on the WDS or equivalent screen.



D6U802ZW7001

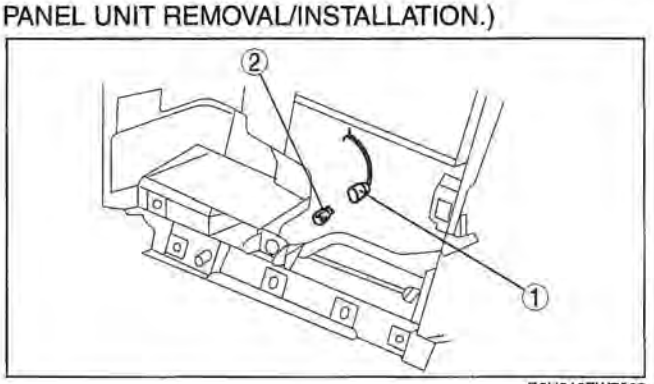
PASSENGER AIR BAG DEACTIVATION (PAD) INDICATOR REMOVAL/INSTALLATION

E6U081000000W04

1. Disconnect the negative battery cable.
2. Remove the center panel unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Socket
2	Passenger air bag deactivation (PAD) indicator bulb

4. Install in the reverse order of removal.



D6U810ZW7002

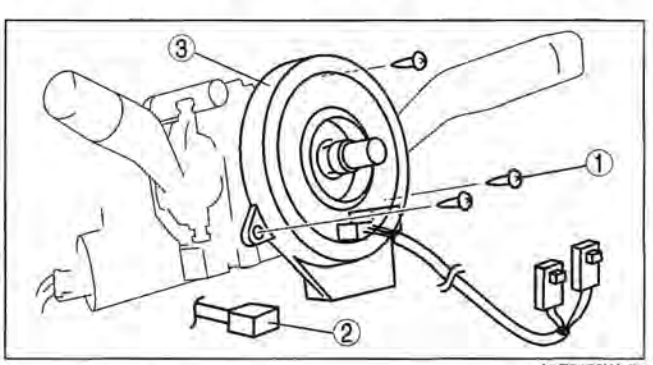
CLOCK SPRING REMOVAL/INSTALLATION

E6U081066123W01

1. Disconnect the negative battery cable.
2. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Remove the steering wheel. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
4. Remove the column cover.
5. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Clock spring (See 08–10–16 Clock Spring Installation Note)

6. Install in the reverse order of removal.
7. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there are malfunctions in the system. Inspect the system using the on-board diagnostic.



A6E8130W008

Clock Spring Installation Note

Caution
- **If the clock spring is not adjusted, the spring wire in the clock spring will break due to overtensic when the steering wheel is turned. Always adjust the clock spring after installing it.**

- Adjust the clock spring after installing it. (See 08–10–16 CLOCK SPRING ADJUSTMENT.)

CLOCK SPRING ADJUSTMENT

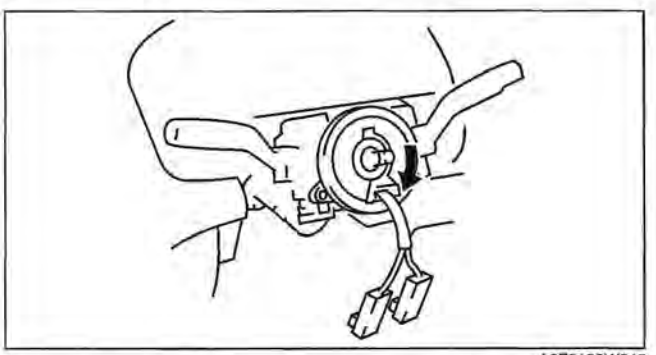
E6U081066123W02

Note
- The adjustment procedure is also specified on the caution label of the clock spring.

1. Set the front wheels straight ahead.

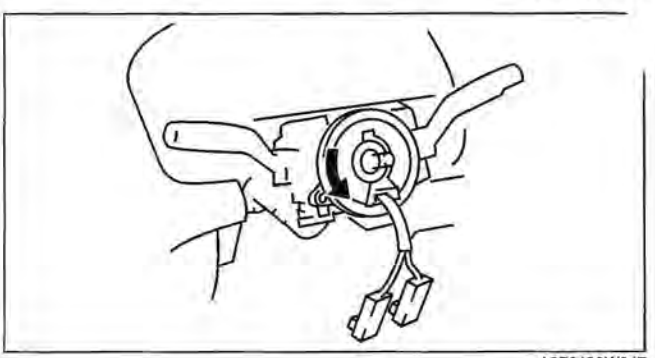
Caution
- **The clock spring will break if over-wound. Do not forcibly turn the clock spring.**

2. Turn the clock spring clockwise until it stops.



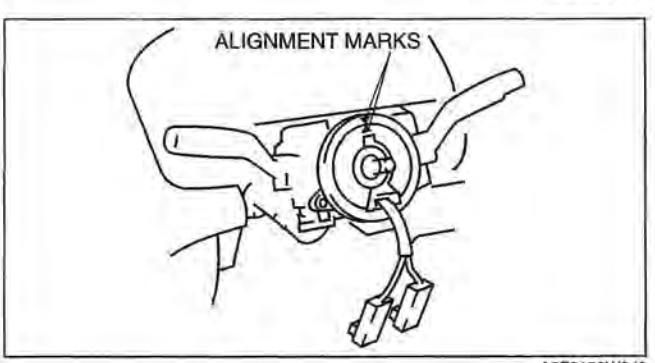
A6E8130W046

3. Turn the clock spring counterclockwise **2 3/4 turns**.



A6E8130W047

4. Align the mark on the clock spring with the mark on the outer housing.



A6E8130W048

CLOCK SPRING INSPECTION

E6U081066123W03

1. Remove the clock spring. (See 08–10–15 CLOCK SPRING REMOVAL/INSTALLATION.)
2. Verify that the continuity is as indicated in the table.
   - If not as indicated in the table, replace the clock spring.

Note

- When the vehicle-side connector for the clock spring is disconnected, terminals 1A, 1B, 1C and 1D are shorted to prevent unexpected operation (deployment) of the air bag module.

O—O: Continuity

Test condition	Terminal																				
	1A	1B	1C	1D	2A	2B	2C	2D	2E	2G	2H	3A	3B	4A	4B	5A	5B	5C	5D	5E	5G	5H

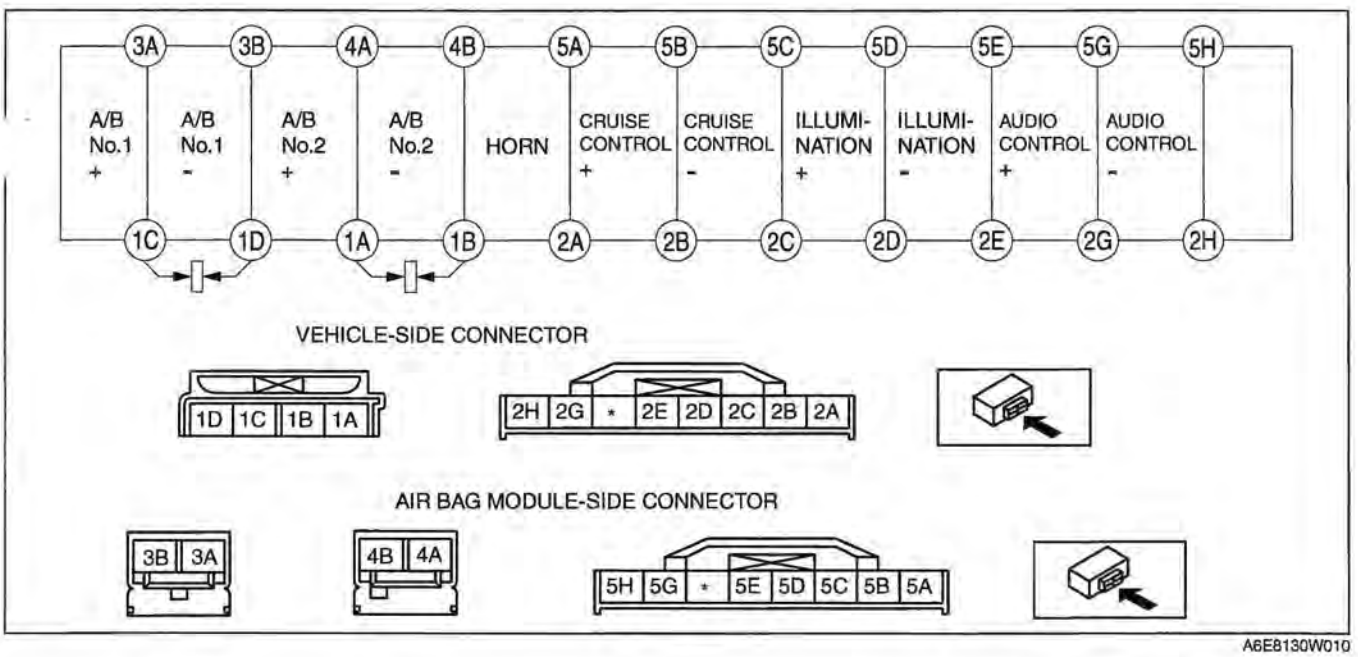
A6E8130W009



A6E8130W010

AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DEPLOYMENT PROCEDURES

E6U081057000W01

Warning

- **A live (undeployed) air bag module and pre-tensioner seat belt may accidentally deploy when it is disposed of and cause serious injury. Do not dispose of a live (undeployed) air bag module and pre-tensioner seat belt. If the SSTs (Deployment tool and Adapter harness) are not available, consult the nearest Mazda representative for assistance.**

Caution

- **Deploying the air bag modules and pre-tensioner seat belts inside the vehicle may cause damage to the vehicle interior. When the vehicle is not to be scrapped, always deploy the air bag modules and pre-tensioner seat belts outside the vehicle.**

- When the vehicle is to be scrapped, deploy the air bag modules and pre-tensioner seat belts inside the vehicle. (See 08–10–18 Deployment Procedure for Inside of Vehicle (Only When Vehicle Is To Be Scrapped).)
- When the vehicle is not to be scrapped, deploy the air bag modules and pre-tensioner seat belts outside the vehicle. (See 08–10–24 Deployment Procedure for Outside of Vehicle.)

Note

- When disposing of a deployed air bag module and pre-tensioner seat belt, refer to the disposal procedure, (See 08–10–34 AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES.)

Deployment Procedure for Inside of Vehicle (Only When Vehicle Is To Be Scrapped)

1. Inspect the **SST** (Deployment tool). (See 08–10–34 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Move the vehicle to an open space, away from strong winds, and close all of the vehicle's doors and windows.
3. Turn the ignition switch to the LOCK position.
4. Disconnect the negative battery cable and wait for **1 min or more**.
5. Follow the appropriate procedure for deploying the driver-side air bag module, passenger-side air bag module, side air bag module, curtain air bag module, or pre-tensioner seat belt.

Driver-side air bag module

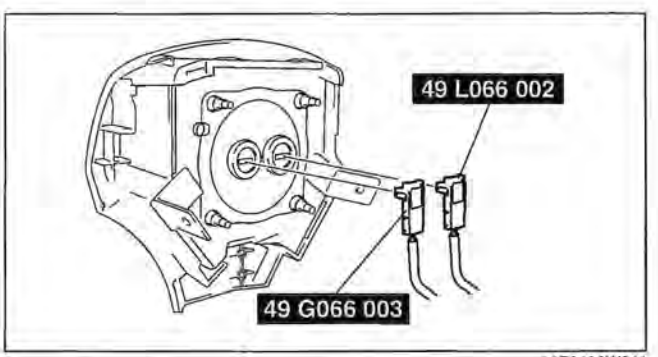
Warning

- **The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.**

Note

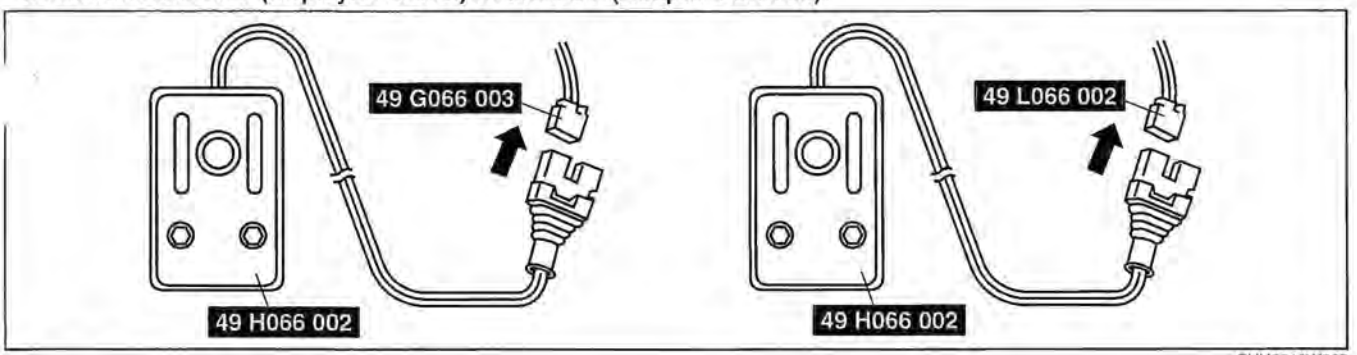
- The **SSTs**, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the driver-side air bag module.

1. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Connect the SST (Adapter harness) to the driver-side air bag module as shown in the figure.
3. Install the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)



A6E8130W011

4. Connect the **SST** (Deployment tool) to the SST (Adapter harness).



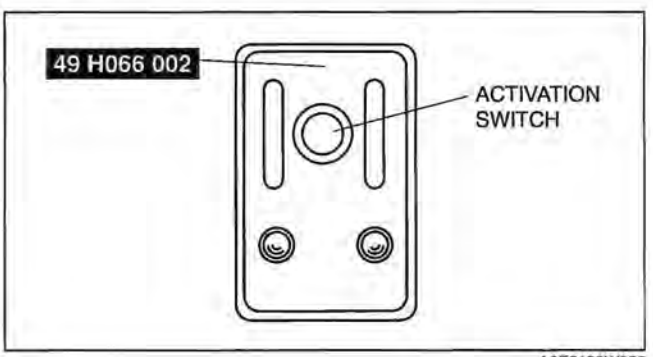
CHU0810W302

5. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
7. Make sure all persons are standing **at least 6 m {20 ft}** away from the vehicle.
8. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. if no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. if the two operation (explosive) sounds are not heard, perform Step 8 again. In case that the two operation (explosive) sounds in total are not verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can get burned. Do not touch the air bag module for at least 15 min after deployment.**

9. Disconnect the **SST** (Deployment tool) from the **SST** (Adapter harness).



A6E8130W028

Passenger-side air bag module

Warning

- **The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.**

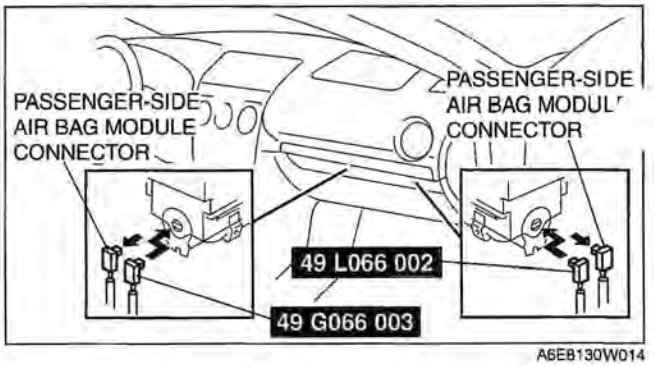
Note

- The **SSTs**, two types of adapter harnesses (for inflators No.1 and No.2) and two deployment tools are to be used to operate (deploy) the passenger-side air bag module.

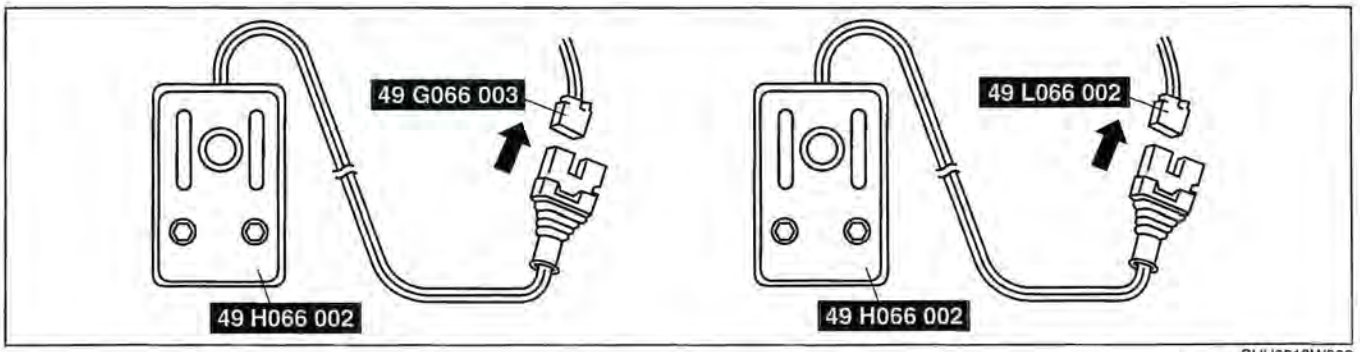
Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)

_. Disconnect the passenger-side air bag module connector.

3. Connect the **SST** (Adapter harness) to the passenger-side air bag module as shown in the figure.
4. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).



A6EB130W014



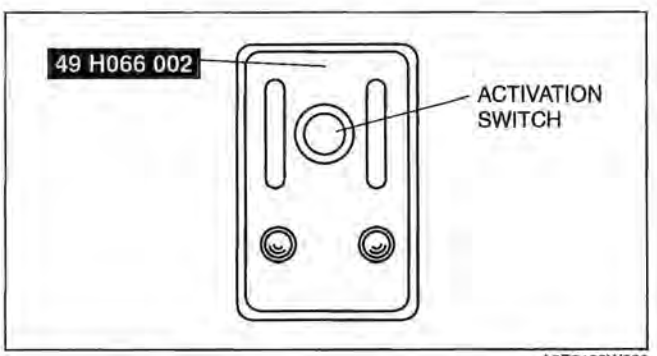
CHU0810W302

5. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
6. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
7. Make sure all persons are standing **at least 6 m {20 ft}** away from the vehicle.
8. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 8 again. In case that the two operation (explosive) sounds in total are not verified even though Step 8 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module tor at least 15 min after deployment.**

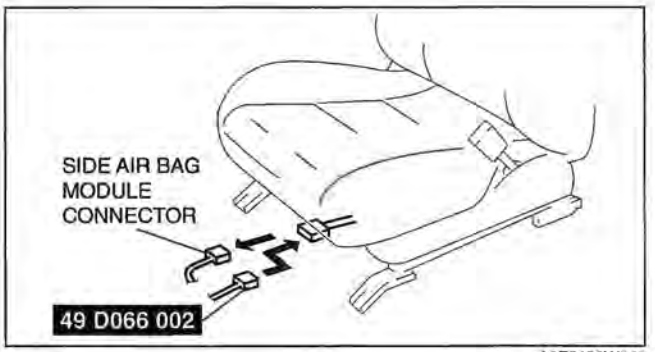
9. Disconnect the **SST** (Deployment tool) from the **SST** (Adapter harness).
10. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
11. Perform Steps 5 through 8, in order to deploy the passenger-side air bag module.



A6E8130W028

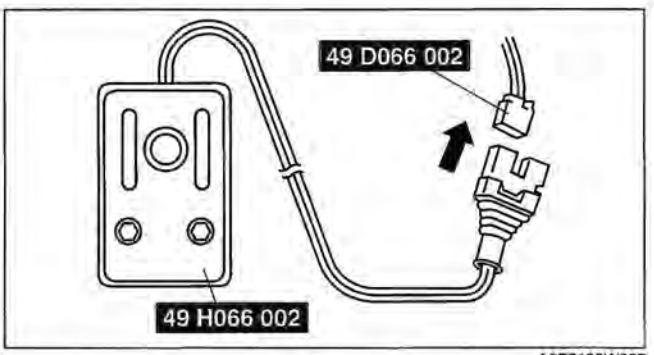
Side air bag module

1. Disconnect the side air bag module connector.
2. Connect the **SST** (Adapter harness) to the side air bag module.



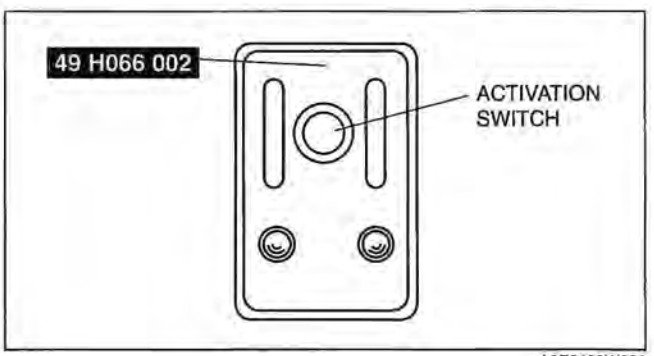
A6EB130W029

3. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
4. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
5. Verify that the red light on the **SST** (Deployment tool) is illuminated.
6. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



A6EB130W027

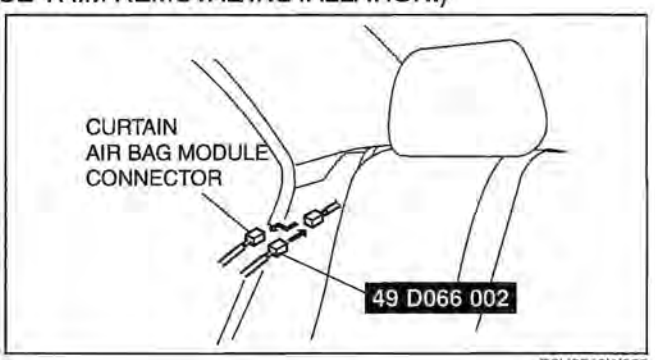
7. Press the activation switch on the **SST** (Deployment tool) to deploy the side air bag module.



A6EB130W028

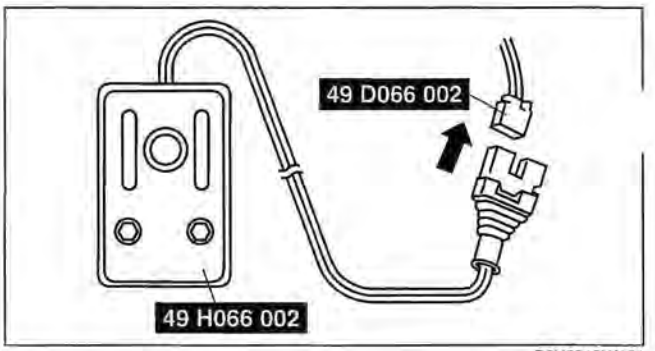
Curtain air bag module (sport sedan)

1. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
2. Disconnect the curtain air bag module connector.
3. Connect the **SST** (Adapter harness) to the curtain air bag module.



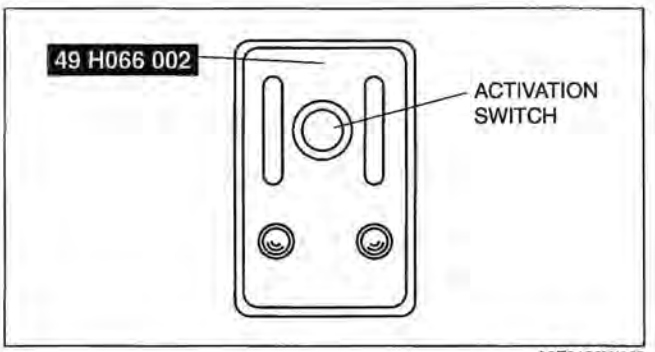
B6U0810W003

4. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
5. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
6. Verify that the red light on the **SST** (Deployment tool) is illuminated.
7. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



B6U0810W101

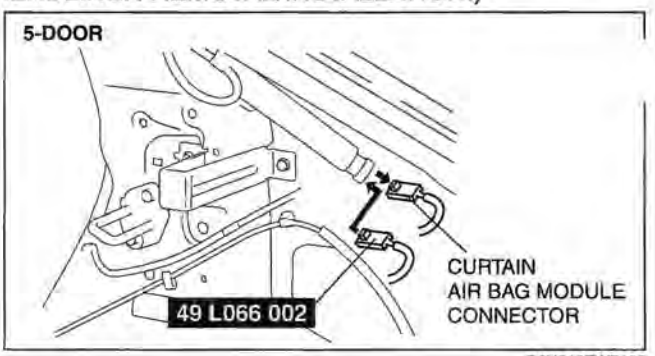
8. Press the activation switch on the **SST** (Deployment tool) to deploy the curtain air bag module.



A6E8130W028

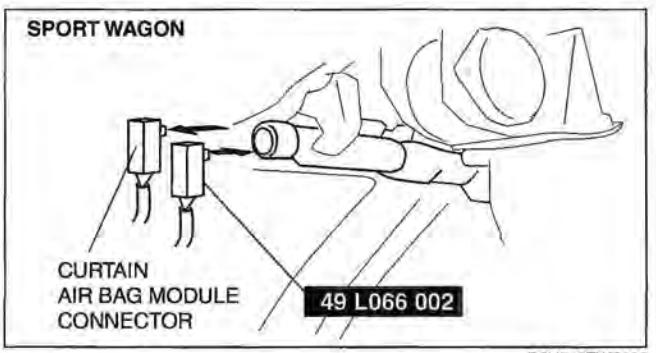
Curtain air bag module (5-door, sport wagon)

1. Remove the trunk side trim. (5-Door) (See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. Remove the headliner. (Sport Wagon) (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
3. Disconnect the curtain air bag module connector.



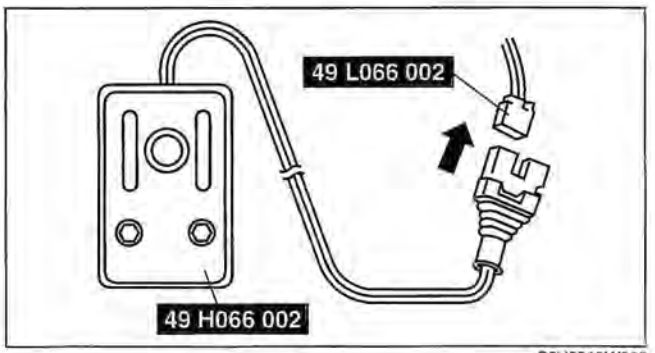
D6U810ZW7102

4. Connect the **SST** (Adapter harness) to the curtain air bag module.



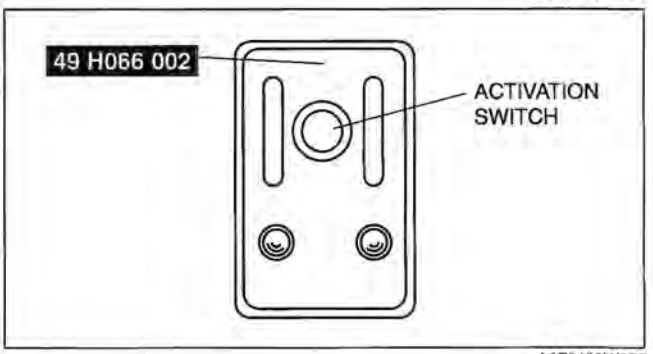
D6U810ZW7103

5. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
6. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
7. Verify that the red light on the **SST** (Deployment tool) is illuminated.
8. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



C6U0810W005

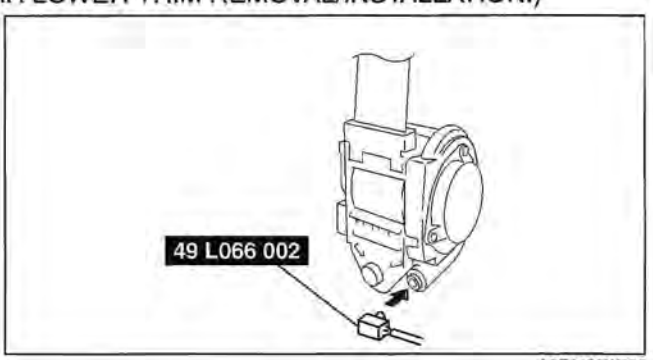
9. Press the activation switch on the **SST** (Deployment tool) to deploy the curtain air bag module.



A6E8130W028

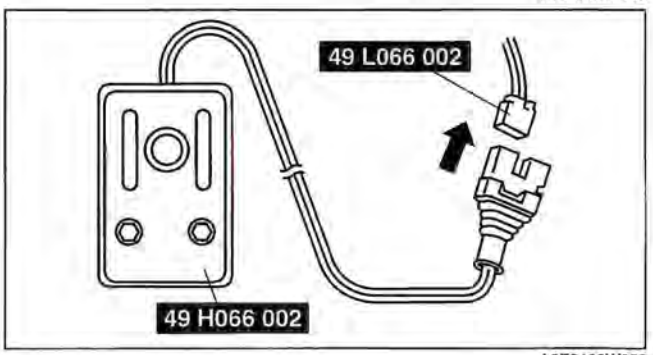
Pre-tensioner seat belt

1. Remove the B-pillar lower trim. (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
2. Remove the pre-tensioner seat belt and connect the **SST** (Adapter harness) to it as shown in the figure. (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   Install the pre-tensioner seat belt.



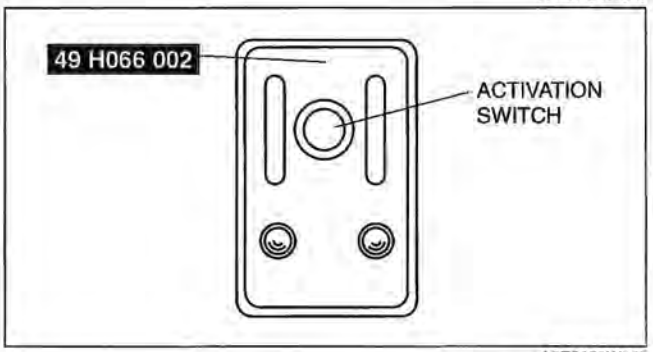
A6E8130W030

4. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
5. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
6. Verify that the red light on the **SST** (Deployment tool) is illuminated.
7. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



A6E8130W052

8. Press the activation switch on the **SST** (Deployment tool) to deploy the pre-tensioner seat belt.



A6E8130W028

Deployment Procedure for Outside of Vehicle

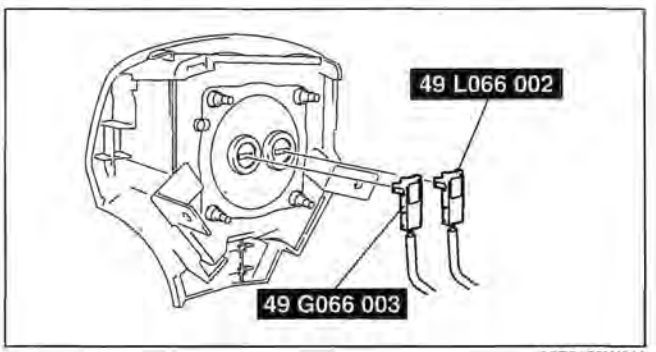
1. Inspect the **SST** (Deployment tool). (See 08–10–34 INSPECTION OF SST (DEPLOYMENT TOOL).)
2. Turn the ignition switch to the LOCK position.
3. Disconnect the negative battery cable and wait for **1 min or more.**
4. Follow the appropriate procedure for deploying the driver-side air bag module, passenger-side air bag modui side air bag module, curtain air bag module, or pre-tensioner seat belt.

Driver-side air bag module

Warning

- **The driver-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both driver-side air bag module inflators simultaneously, following the procedure below.**

1. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Connect the **SST** (Adapter harness) to the driver-side air bag module as shown in the figure,

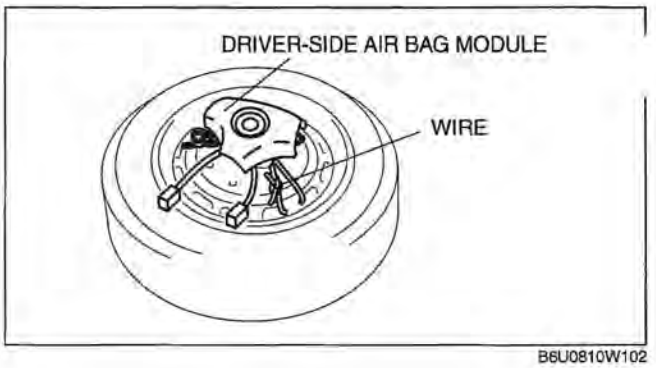


A6E8130W011

3. Place the driver-side air bag module on the center of the tire wheel with the module facing up. To secure the air bag module to the tire wheel, wrap the wire through the wheel and around the bolt installation hole **at least 4 times**.

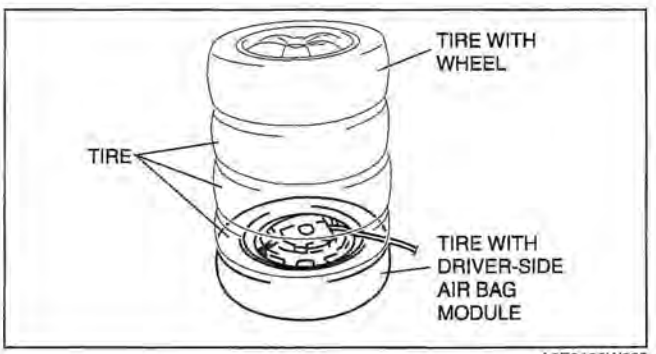
Warning

- **If the air bag module is not properly installed to the tire wheel, serious injury may occur when the module is deployed. When installing the air bag module to the tire wheel, make sure the module is facing up.**



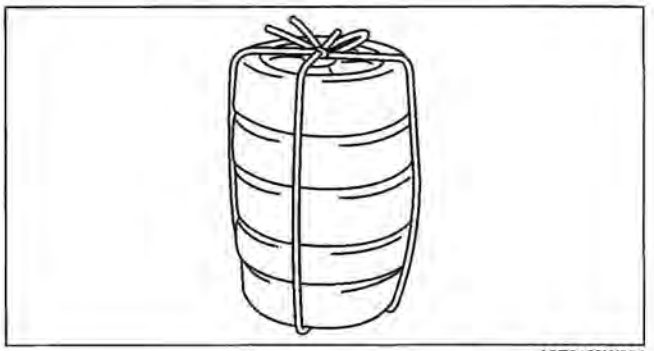
B6U0810W102

4. Stack three tires on top of the tire with the air bag module. Stack another tire that has a wheel on top of the four tires.



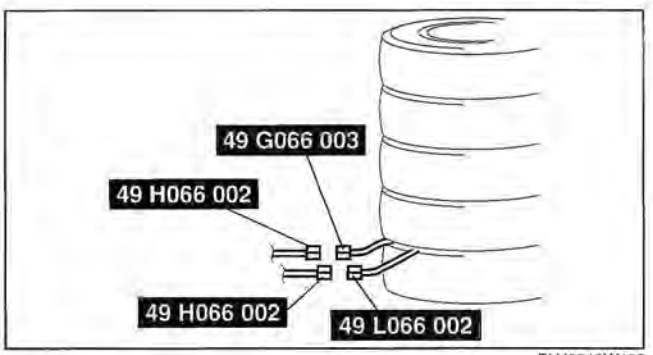
A6E8130W033

5. Tie all tires together with wire.



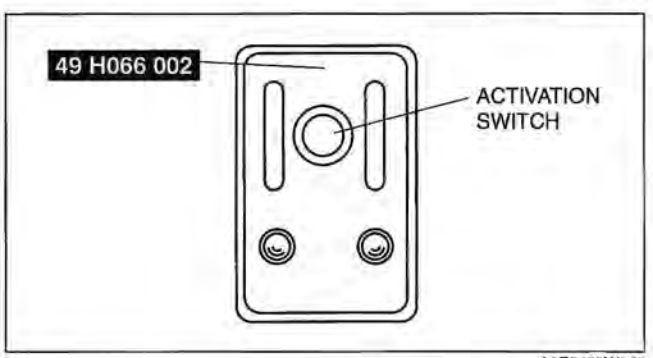
A6E8130W034

6. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
7. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
8. Verify that the red lamp on both **SSTs** (Deployment tool) is illuminated.
9. Make sure all persons are standing **at least 6 m {20 ft}** away from the vehicle.



BHJ0810W106

10. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3 s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6E8130W028

Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 10 again. In case that the two operation (explosive) sounds in total are not verified even through Step 10 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

11. Disconnect the **SST** (Deployment tool) from the **SST** (Adapter harness).

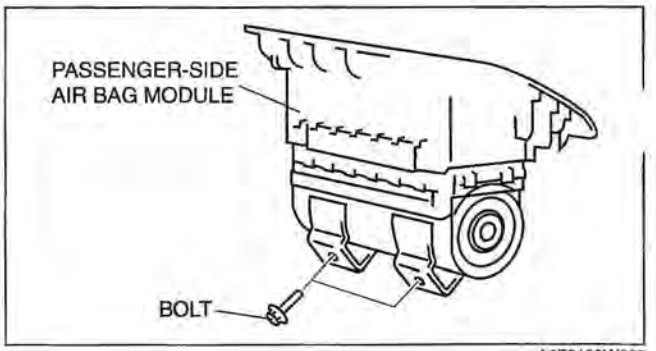
Passenger-side air bag module

Warning

- **The passenger-side air bag module is a dual inflator type. If one inflator is forced to operate (deploy), the other may operate (deploy) accidentally. To prevent injury while disposing of the air bag module, make sure to operate (deploy) both passenger-side air bag module inflators simultaneously, following the procedure below.**

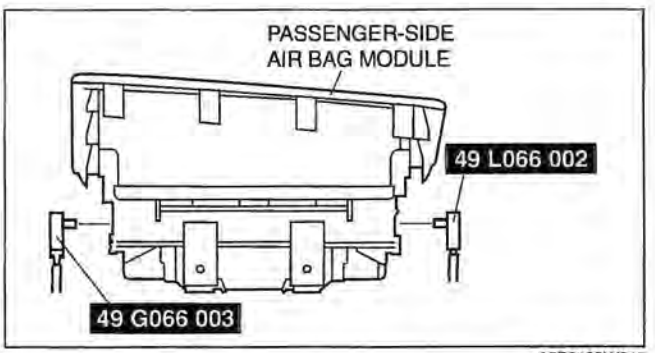
1. Remove the passenger-side air bag module. (See 08–10–7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)

2. Install the bolts to the passenger-side air bag module.



A6E8130W035

3. Connect the **SST** (Adapter harness) to the passenger-side air bag module as shown in the figure.

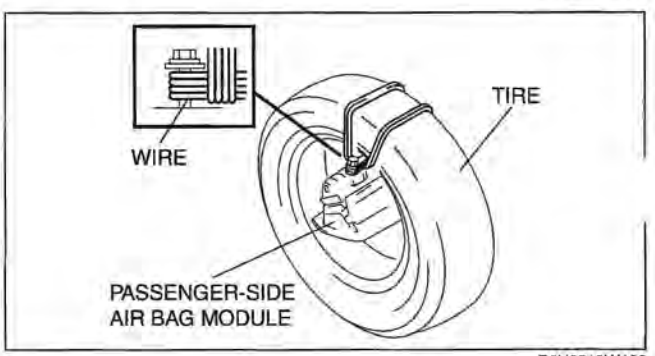


A6E8130W015

4. Tie the passenger-side air bag module to the tire with the module facing the center of the tire. Wrap the wire through the tire and around the bolts **at least 4 times**.

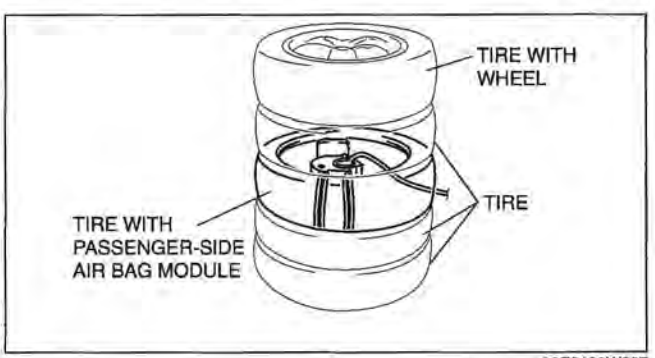
Warning

- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is deployed, When installing the air bag module to the tire, make sure the module is facing the center of the tire.**



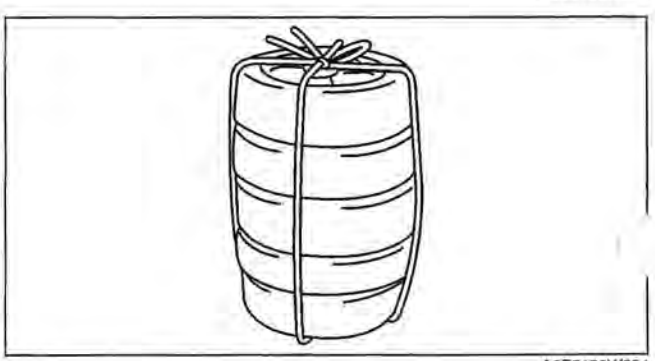
B6U0810W103

5. Stack the tire with the passenger-side air bag module on top of two tires. Stack another tire that has a wheel on top of the four tires.



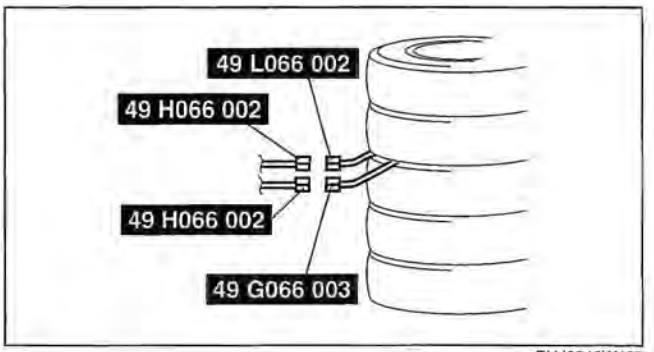
A6E8130W037

6. Tie all tires together with wire.



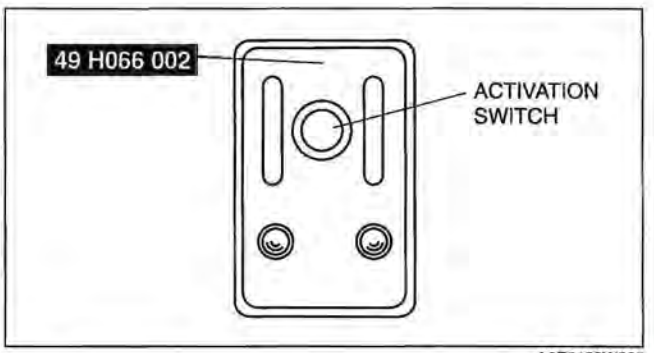
A6E8130W034

7. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
8. Connect both **SSTs** (Deployment tool) to the battery. Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.
9. Verify that the red lamp on the **SSTs** (Deployment tool) is illuminated.
10. Make sure all persons are standing **at least 6 m {20 ft}** away from the vehicle.



BHJ0810W107

11. Press the activation switch on the **SST** (Deployment tool) connected with 49 L066 002 (a yellow connector) of the **SST** (Adapter harness), and **after 3s**, press the activation switch on the other **SST** (Deployment tool) to operate (deploy) the air bag module (both inflators).



A6EB130W028

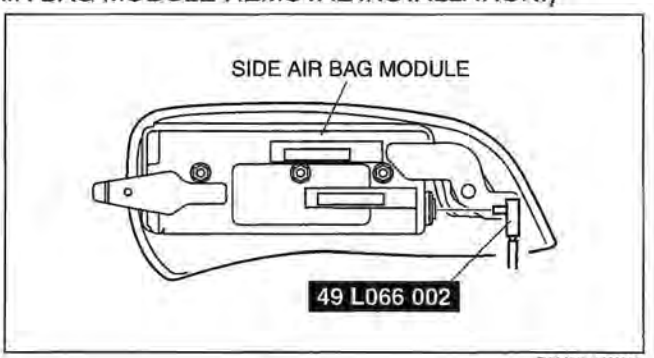
Warning

- **Verify that air bag module operation (explosive) sound occurs twice. If no operation (explosive) sound was heard or a single operation (explosive) sound was heard, both inflators would not have operated (deployed) properly. This may cause serious injury because the air bag module may operate (deploy) accidentally. If the two operation (explosive) sounds are not heard, perform Step 11 again. In case that the two operation (explosive) sounds in total are not verified even though Step 11 is performed again, leave the air bag module alone for 30 min or more before getting near it again.**
- **The air bag module is very hot immediately after it is operated (deployed). You can be burned. Do not touch the air bag module for at least 15 min after deployment.**

12. Disconnect the **SST** (Deployment tool) from the **SST** (Adapter harness).
13. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
14. Perform Steps 8 through 11, in order to deploy the passenger-side air bag module.

Side air bag module

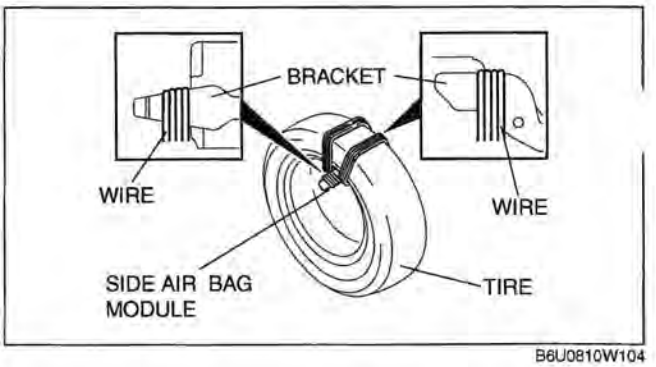
1. Remove the side air bag module. (See 08–10–8 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
2. Connect the **SST** (Adapter harness) to the side air bag module as shown in the figure.



B6U0810W108

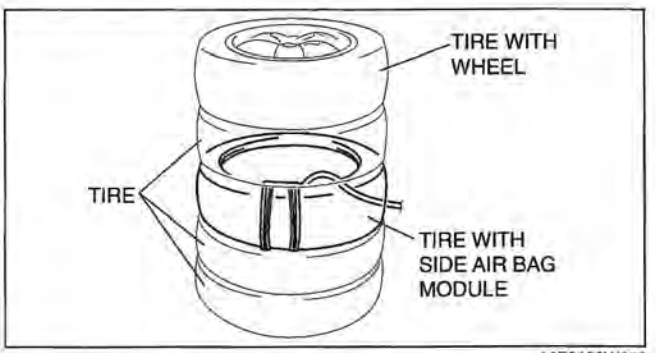
3. Tie the side air bag module to the tire with the module facing the center of the tire. Wrap the wire through the tire and around the bracket **at least 4 times**.

   Warning
   - **If the air bag module is not properly installed to the tire, serious injury may occur when the module is deployed. When installing the air bag module to the tire, make sure the module is facing the center of the tire.**



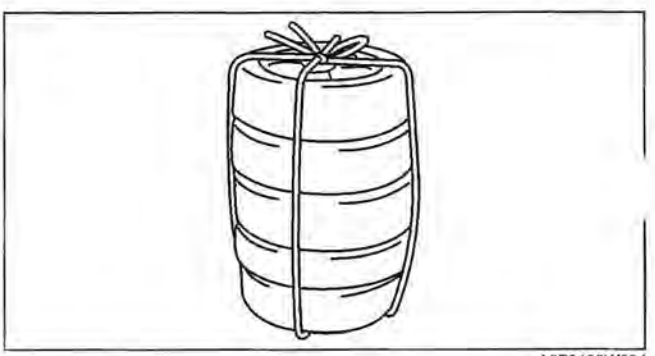
B6U0810W104

4. Stack the tire with the side air bag module on top of two tires. Stack a tire on top of three tires. Stack another tire that has a wheel on top of the four tires.



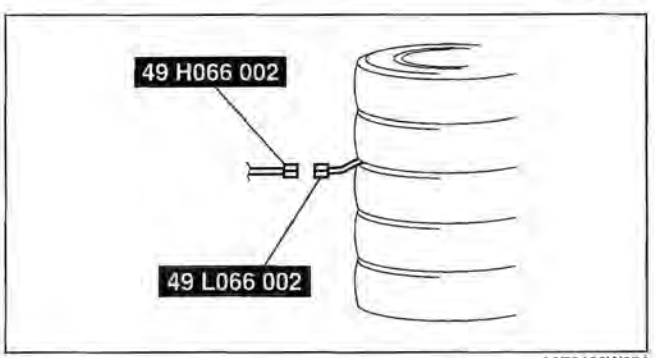
A6E8130W053

5. Tie all tires together with wire.



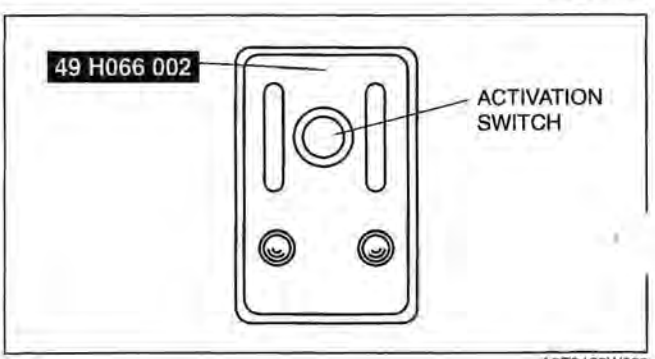
A6E8130W034

6. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
7. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
8. Verify that the red light on the **SST** (Deployment tool) is illuminated.
9. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



A6E8130W054

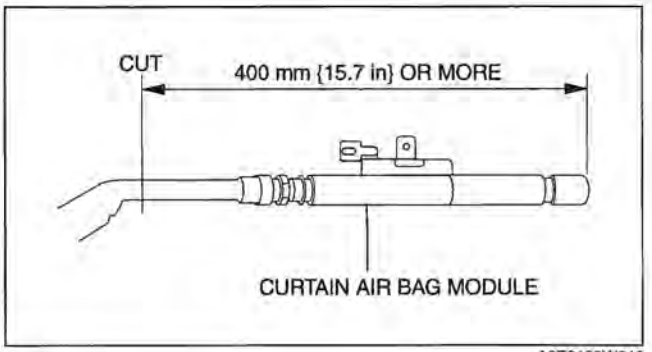
10. Press the activation switch on the **SST** (Deployment tool) to deploy the side air bag module.



A6E8130W028

Curtain air bag module (sport sedan)

1. Remove the curtain air bag module. (See 08–10–10 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Secure the curtain air bag module in a vise, and cut off the deployment section, as shown in the figure.

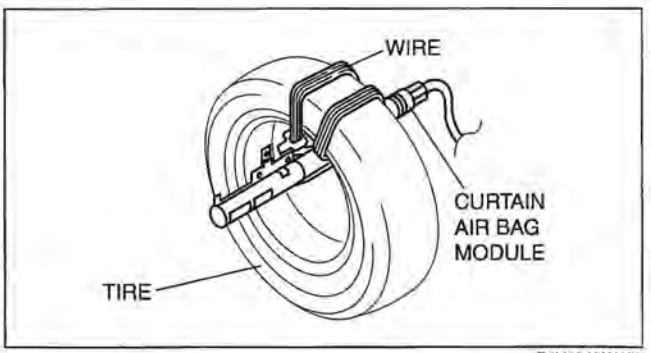


A6E8130W013

Warning

- **Be sure not to collapse the pipe on the side where it is cut. If it is collapsed, the interior pressure of the pipe will build up and can cause it to explode during air bag module deployment.**

3. Tie the side air bag module to the tire with the module facing the center of the tire. Wrap the wire through the tire and around the bracket **at least 4 times**.

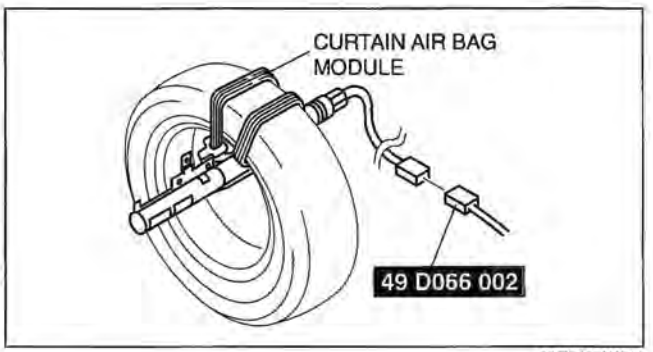


B6U0810W105

Warning

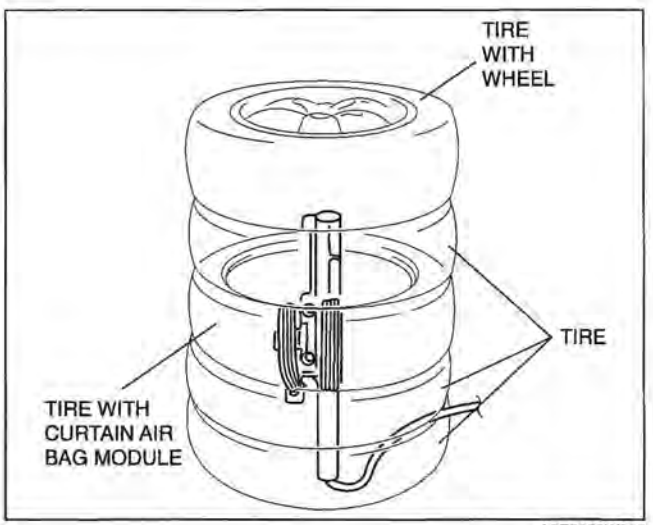
- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is deployed. When installing the air bag module to the tire, make sure the module is facing the downward.**

4. Connect the **SST** (Adapter harness) to the curtain air bag module as shown in the figure.



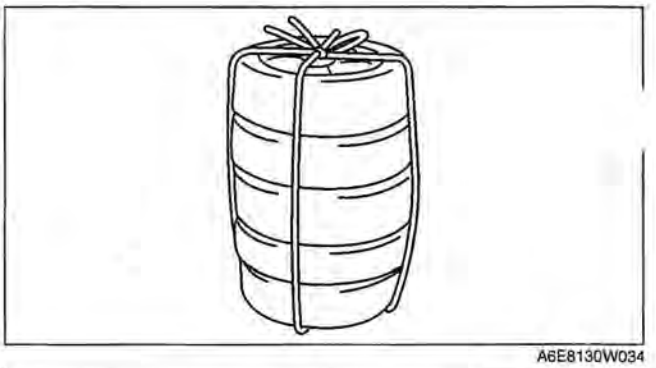
A6E8130W019

5. Stack the tire with the curtain air bag module on top of two tires. Stack a tire on top of three tires. Stack another tire that has a wheel on top of the four tires.



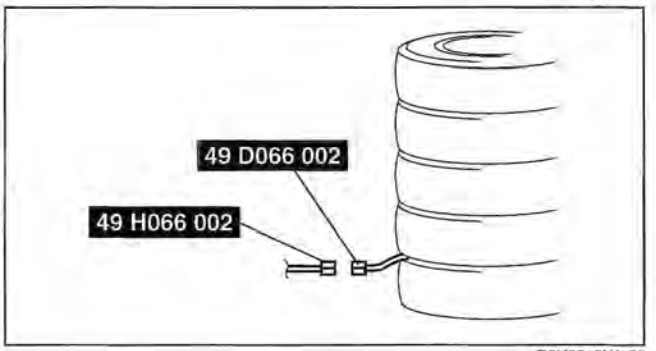
A6E8130W020

6. Tie all tires together with wire.



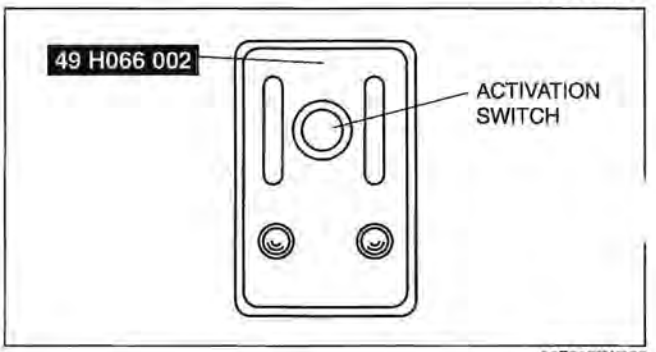
A6E8130W034

7. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
8. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
9. Verify that the red light on the **SST** (Deployment tool) is illuminated.
10. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



B6U0810W106

11. Press the activation switch on the **SST** (Deployment tool) to deploy the curtain air bag module.



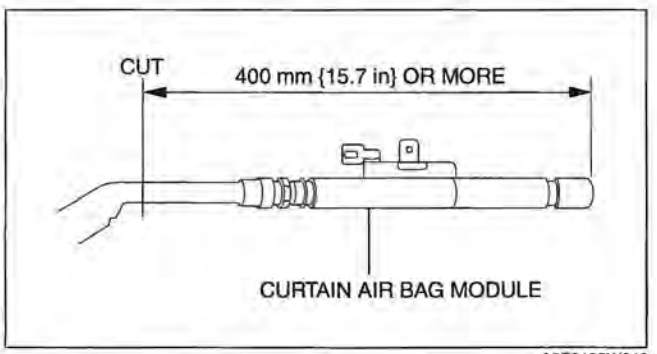
A6E8130W028

Curtain air bag module (5-door, sport wagon)

1. Remove the curtain air bag module. (See 08–10–10 CURTAIN AIR BAG MODULE REMOVAL/ INSTALLATION.)
2. Secure the curtain air bag module in a vise, and cut off the deployment section, as shown in the figure.

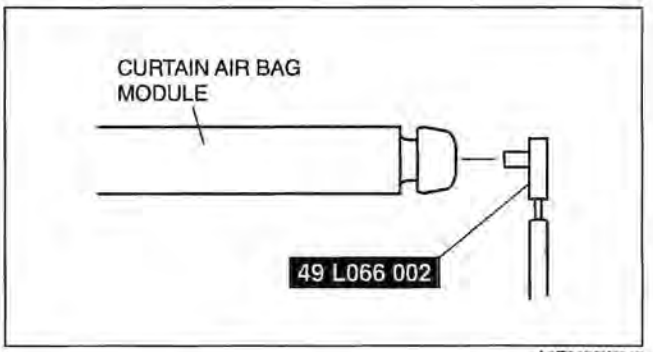
Warning

- **Be sure not to collapse the pipe on the side where it is cut. If it is collapsed, the interior pressure of the pipe will build up and can cause it to explode during air bag module deployment.**



A6E8130W013

3. Connect the **SST** (Adapter harness) to the curtain air bag module as shown in the figure.

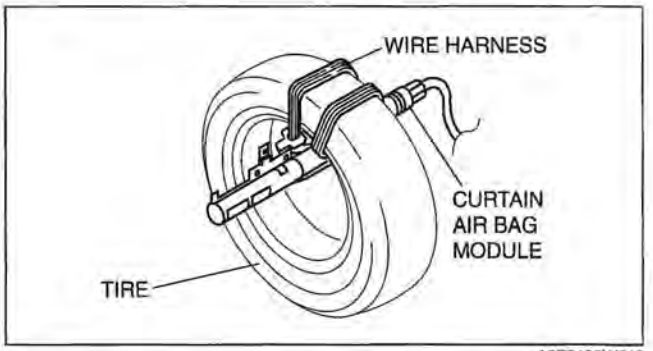


A6E8130W040

4. Tie the side air bag module to the tire with the module facing the center of the tire. Wrap the wire harness through the tire and around the bracket **at least 4 times**.

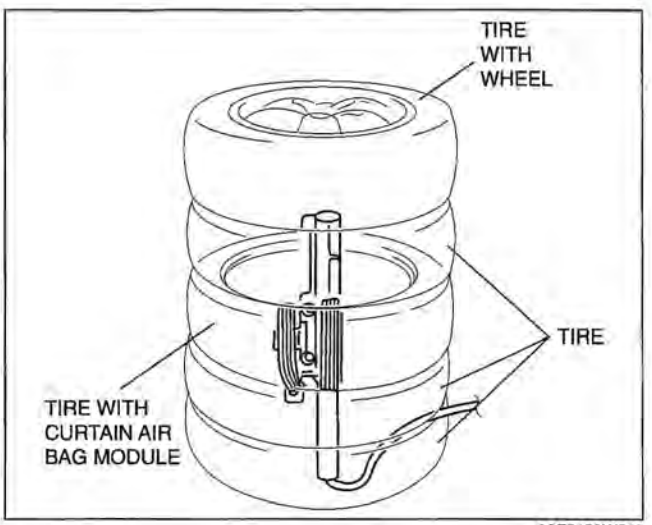
Warning

- **If the air bag module is not properly installed to the tire, serious injury may occur when the module is deployed. When installing the air bag module to the tire, make sure the module is facing the downward.**



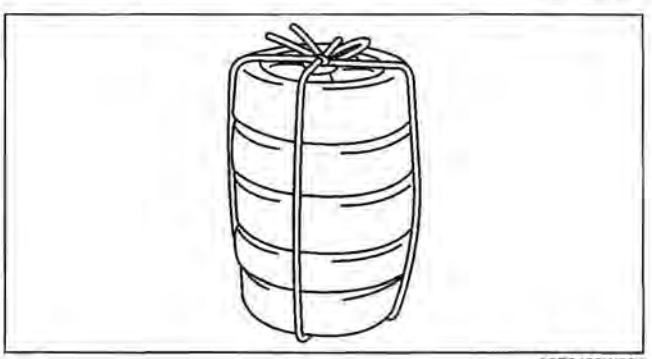
A6E8130W018

5. Stack the tire with the curtain air bag module on top of two tires. Stack a tire on top of three tires. Stack another tire that has a wheel on top of the four tires.



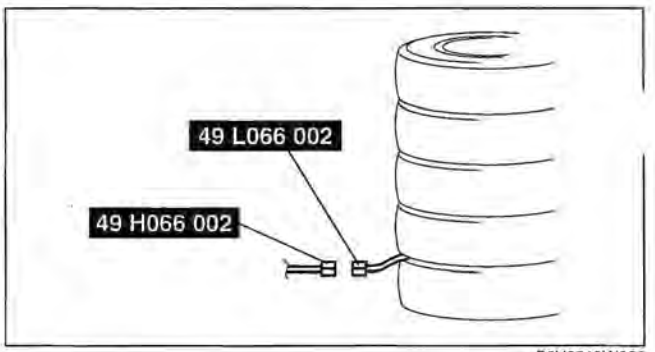
A6E8130W020

6. Tie all tires together with wire.



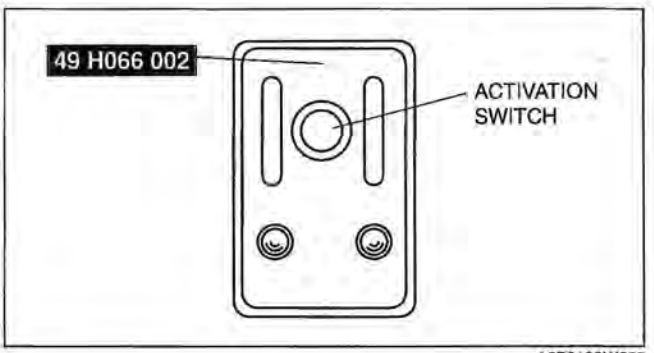
A6E8130W034

7. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
8. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
9. Verify that the red light on the **SST** (Deployment tool) is illuminated.
10. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



C6U0810W006

11. Press the activation switch on the **SST** (Deployment tool) to deploy the curtain air bag module.



A6E8130W028

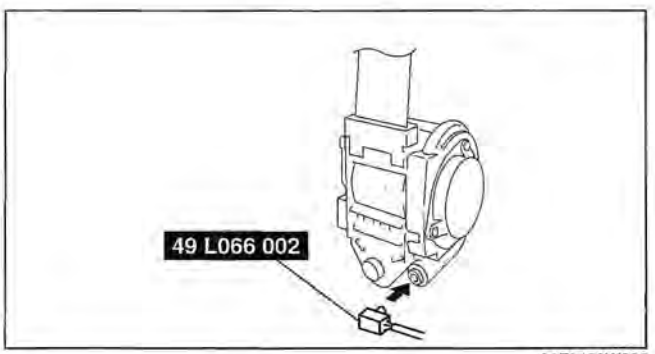
Pre-tensioner seat belt

1. Remove the pre-tensioner seat belt. (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)

Warning

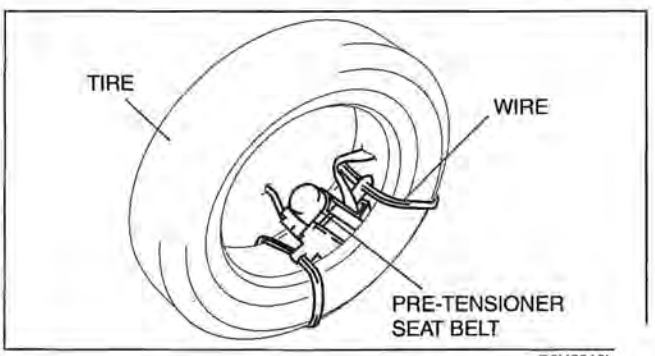
- **If the pre-tensioner seat belt is not properly installed to the tire, serious injury may occur when th pre-tensioner part is deployed. When installing the pre-tensioner seat belt to the tire, make sure the pre-tensioner part is inside the tire.**

2. Connect the **SST** (Adapter harness) to the pre-tensioner seat belt as shown in the figure.



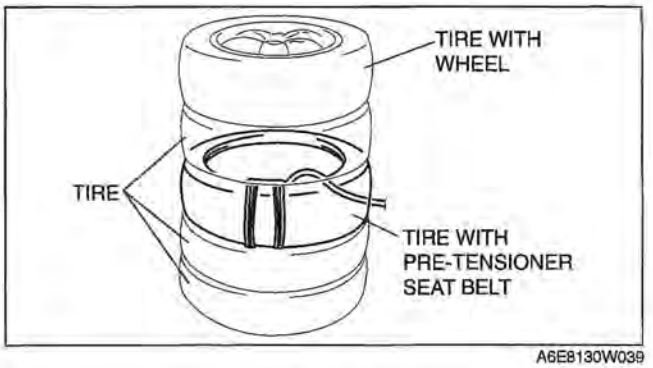
A6E8130W030

3. With the pre-tensioner part inside the tire, tie the pre-tensioner seat belt to the tire. Wrap the wire through the tire and around the pre-tensioner seat belt **at least 4 times**.



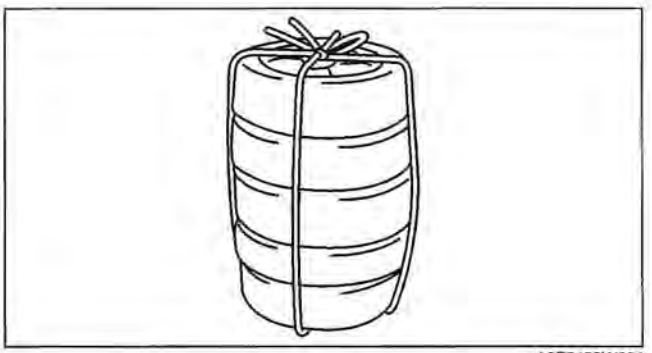
B6U0810V

4. Stack the tire with the pre-tensioner seat belt on top of two tires. Stack a tire on top of the three tires. Stack another tire that has a wheel on top of the four tires.



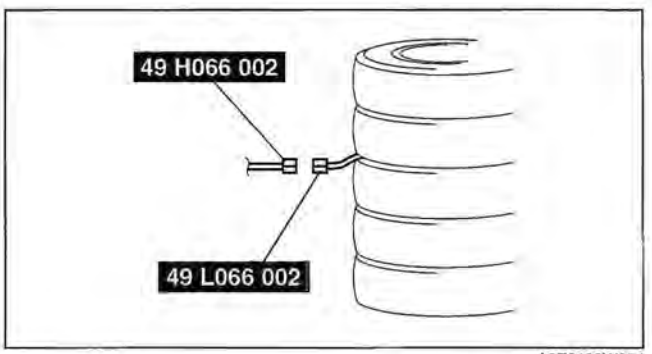
A6E8130W039

5. Tie all tires together with wire.



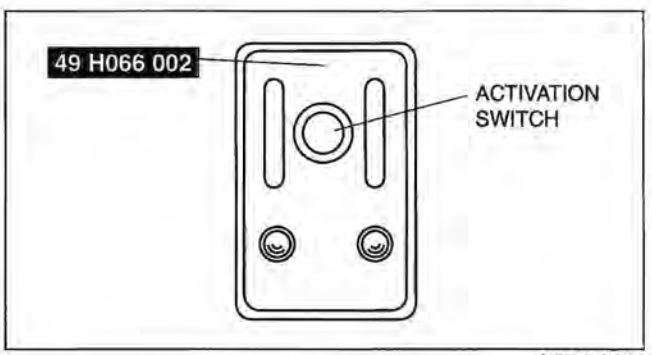
A6E8130W034

6. Connect the **SST** (Deployment tool) to the **SST** (Adapter harness).
7. Connect the red clip of the **SST** (Deployment tool) to the positive battery terminal and the black clip to the negative battery terminal.
8. Verify that the red light on the **SST** (Deployment tool) is illuminated.
9. Make sure all persons are standing **at least 6 m {20 ft}** from the vehicle.



A6E8130W054

10. Press the activation switch on the **SST** (Deployment tool) to deploy the pre-tensioner seat belt.



A6E8130W028

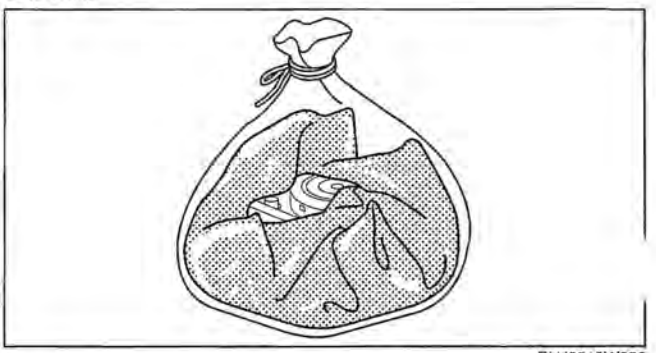
AIR BAG MODULE AND PRE-TENSIONER SEAT BELT DISPOSAL PROCEDURES

E6U081057000W02

Warning

- **A live (undeployed) air bag module or pre-tensioner seat belt may accidentally operate (deploy) when it is disposed of and cause serious injury. Always refer to the "AIR BAG MODULE AND PR TENSIONER SEAT BELT DEPLOYMENT PROCEDURES" and dispose of air bag modules and pre-tensioner seat belts in a deployed condition.**
- **The air bag modules and the pre-tensioner seat belts are very hot immediately after they are deployed. You can be burned. Do not touch an air bag module and pre-tensioner seat belt for at least 15 min after deployment.**
- **Pouring water on the deployed air bag module and pre-tensioner seat belt is dangerous. The water will mix with the residual gases to form a gas that can make breathing difficult. Do not pour water on the deployed air bag module and pre-tensioner seat belt.**
- **The deployed air bag module or pre-tensioner seat belt may contain deposits of sodium hydroxide, a caustic byproduct of the gas-generated combustion. If this substance gets into your eyes or on your hands, it can cause irritation and itching. When handling the deployed air bag module and pre-tensioner seat belt, wear gloves and safety glasses.**
- **Due to the adoption of 2-step deployment control in both the driver and passenger-side air bag modules, depending on the impact force, it is possible that inflator No.2 might not operate (deploy). Before disposing of the air bag module, always follow the inflator deployment procedures and verify the complete operation (deployment) of inflators No.1 and 2.**

1. Remove the deployed air bag module or pre-tensioner seat belt.
2. Put the air bag module or pre-tensioner seat belt in a plastic bag, seal the bag, and then dispose of it.

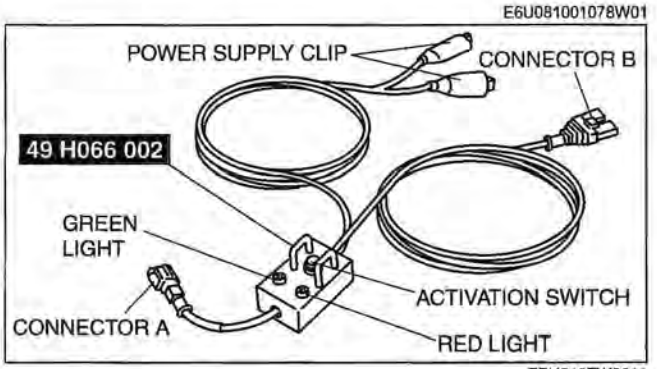


BHJ0810W023

INSPECTION OF SST (DEPLOYMENT TOOL)

1. Before using the **SST** (49 H066 002), inspect its operation.

E6U081001078W01



EPU810ZW3011

Inspection Procedure

1. Follow the steps below to inspect the **SST** (49 H066 002).
   - If not as indicated in the table, replace the **SST** (49 H066 002) because it has a malfunction.

Warning

- **Do not use a malfunctioning SST (49 H066 002), otherwise it could cause the air bag module or pre-tensioner seat belt to accidentally operate (deploy).**

Caution

- **Because the permissible voltage for the SST (49 H066 002) is 12 V, do not connect a 24 V power source because it will damage the SST. Always connect only a 12 V power source.**

Step	Inspection procedure	Light condition	
		Green	Red
1	Connect the power supply red clip to the positive battery terminal, and the black clip to the negative battery terminal.	On	Off
2	Connect connectors A and B.	Off	On
3	Press the activation switch.	On	Off

FRONT SEAT BELT REMOVAL/INSTALLATION

E6U081157630W01

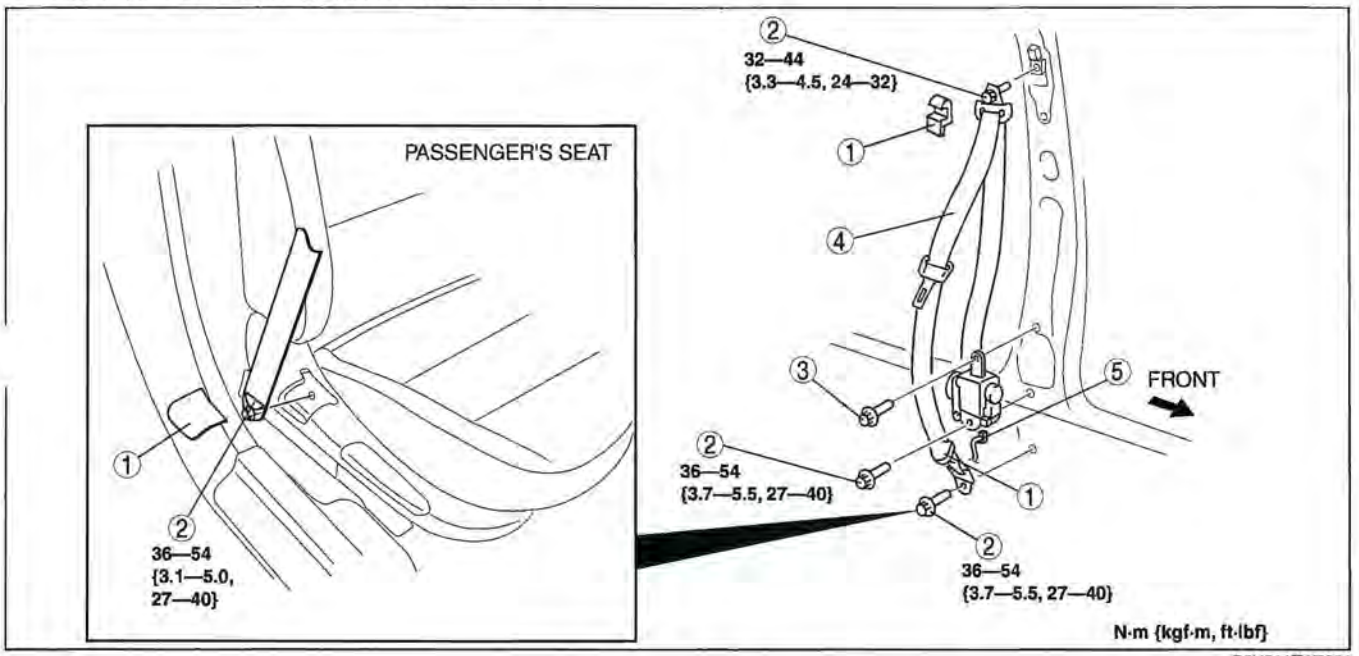
Warning

- **Handling the air bag system components improperly can accidentally operate (deploy) the air bag modules and pre-tensioner seat belts, which may seriously injure you. Read the service warnings and cautions before handling the air bag system components. (See 08–10–3 SERVICE WARNINGS.)(See 08–10–5 SERVICE CAUTIONS.)**
- **The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable or work carefully, avoiding excessive impact to the lower part of the B-pillar.**

Caution

- **The ELR has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **1 min or more.**
3. Remove the B-pillar lower trim. (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.



D6U811ZW7004

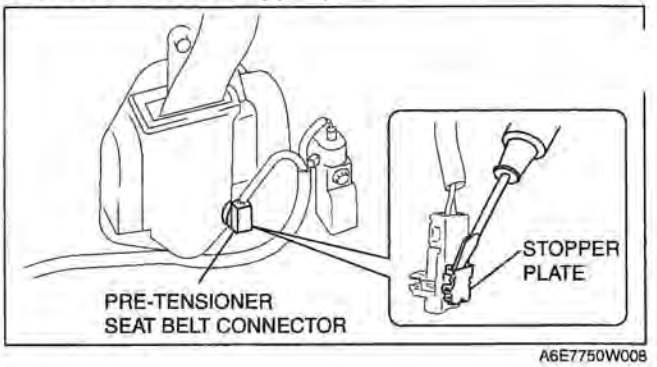
1	Cover
2	Bolt
3	screw

4	Front seat belt
5	Pre-tensioner seat belt connector (See 08–11–4 Pre-tensioner Seat Belt Connector Removal Note)

5. Install in the reverse order of removal.
6. Verify that the air bag system warning light illuminates for **approx. 6 s** and goes out.
   - If the air bag system warning light does not operate in the manner described above, there is a malfunction in the system. Inspect the system using the on-board diagnostic function.

Pre-tensioner Seat Belt Connector Removal Note

1. Using a flathead screwdriver, pry out the pre-tensioner seat belt connector stopper plate.
2. Disconnect the pre-tensioner seat belt connector.



A6E7750W008

REAR SIDE SEAT BELT REMOVAL/INSTALLATION

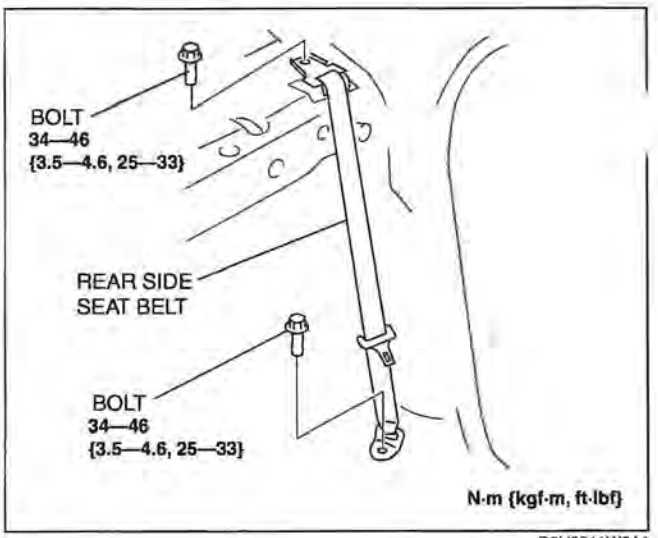
E6U081157830W01

Caution

- **The ELR has a spring that will unwind if the retractor's cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

Sport Sedan

1. Fold the rear seat back.
2. Remove the rear side seats. (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].)(See 09–13–14 REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6]
3. Remove the rear package trim. (See 09–17–16 REAR PACKAGE TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
4. Remove the bolts.
5. Remove the rear side seat belt.
6. Install in the reverse order of removal.



D6U0811W0A1

5-Door, Sport Wagon

Note

- Rear side seat belts are built into the rear seat back. See rear seat disassembly/assembly to remove/install the rear side seat belt.

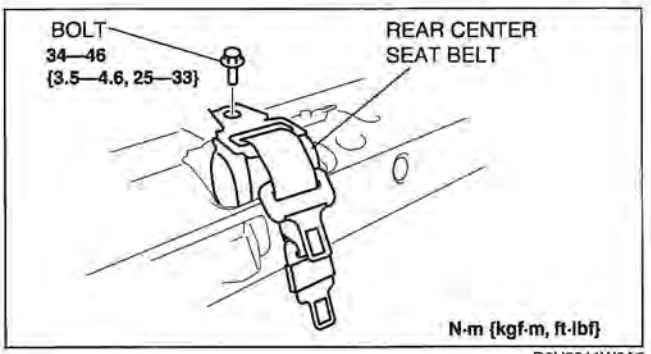
REAR CENTER SEAT BELT REMOVAL/INSTALLATION

E6U081157830W03

Caution
- **The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.**

Sport Sedan

1. Fold down the rear seat back.
2. Remove the rear package trim. (See 09–17–16 REAR PACKAGE TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
3. Remove the bolt.
4. Remove the rear center seat belt.
5. Install in the reverse order of removal.



D6U0811W0A2

5-Door

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
3. Remove the trunk side trim. (See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
4. Remove the C-pillar trims. (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
5. Remove the bolts.

1	Bolt
2	Rear center seat belt

6. Remove the rear center seat belt.

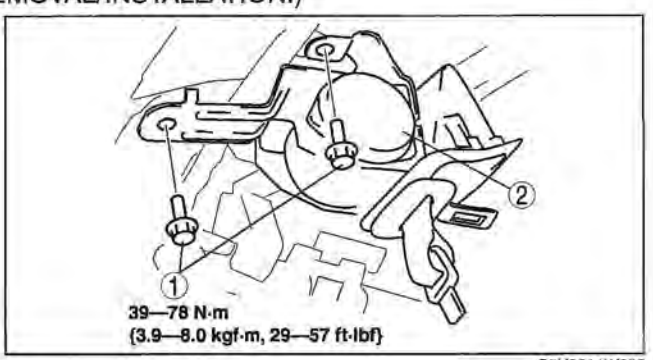
1. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
2. Remove the bolts.

1	Bolt
2	Rear center seat belt

3. Remove the rear center seat belt.
4. Install in the reverse order of removal.

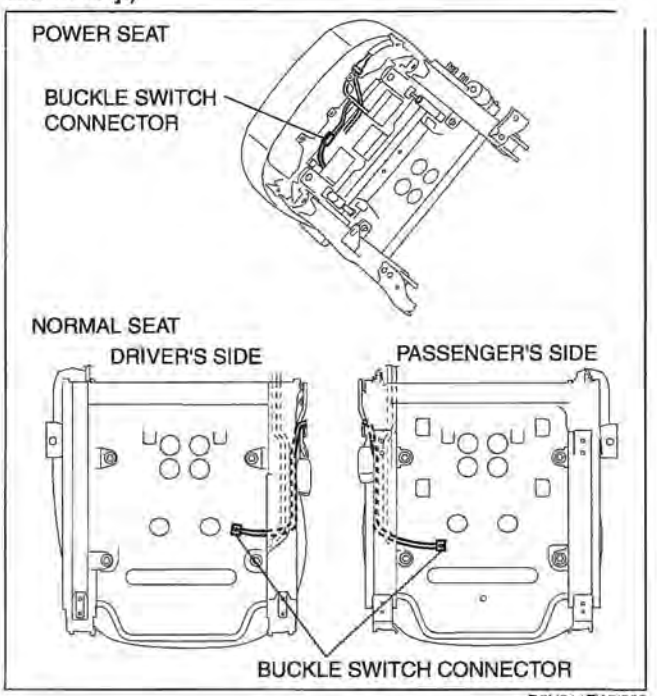


C6U0811W003

FRONT BUCKLE REMOVAL/INSTALLATION

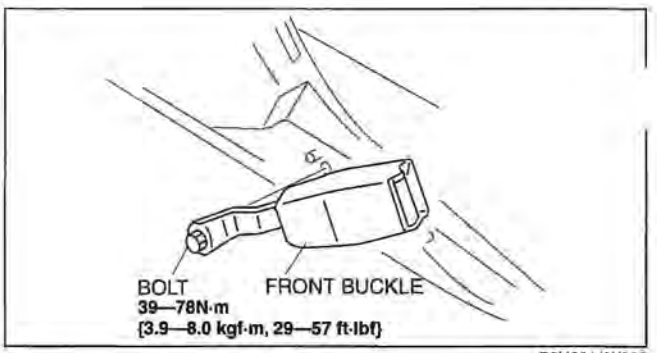
E6U081157620W01

1. Disconnect the negative battery cable.
2. Remove the front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].) (See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
3. Disconnect the buckle switch connector.



D6U811ZW7003

4. Remove bolt.
5. Install in the reverse order of removal.

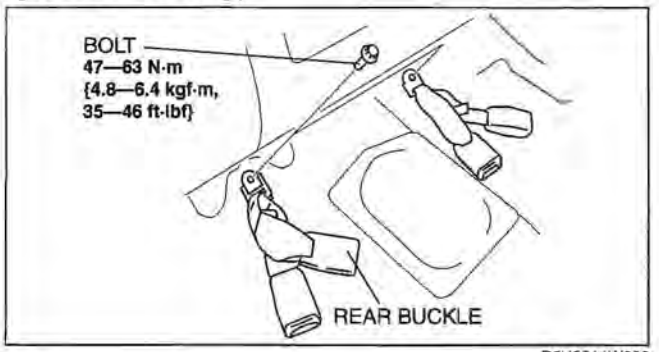


B6U0811W002

REAR BUCKLE REMOVAL/INSTALLATION

E6U081157720W01

1. Remove the rear seat cushion. (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–13–14 REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6].)
2. Remove the bolts.
3. Remove the rear buckles.
4. Install in the reverse order of removal.



B6U0811W009

SEAT BELT INSPECTION

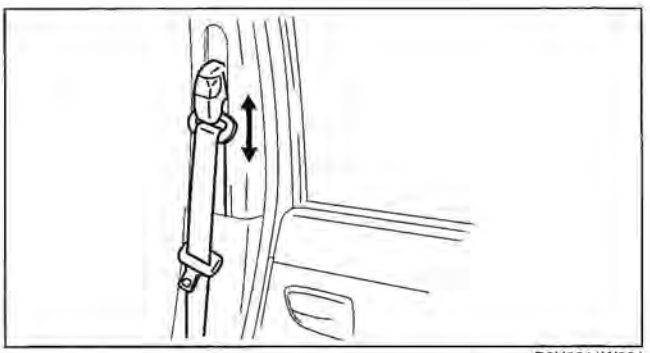
E6U081157000W03

Belt

1. Verify that the belt is installed properly with no twists or kinks.
   Verify that there is no damage to the seat belt and no deformation of the metal fittings.
   - If there is any malfunction, replace the seat belt.

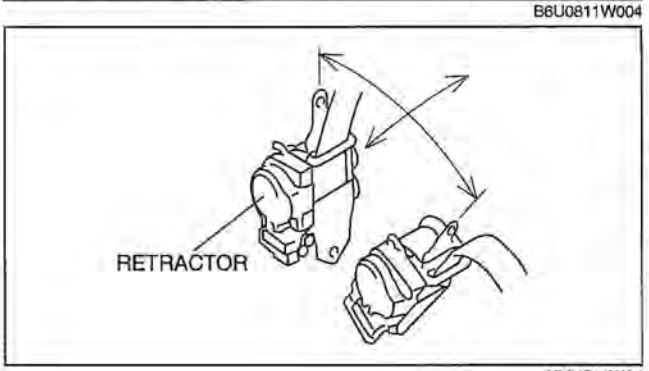
ELR

1. Verify that the belt can be pulled out smoothly, and that it retracts smoothly.
   - If there is any malfunction, replace the seat belt.
2. Verify that the retractor locks when the belt is pulled quickly.
   - If there is any malfunction, replace the seat belt.
3. Remove the retractor.



B6U0811W004

4. While pulling the seat belt out, make sure that the seat belt does not lock when the retractor is tilted slowly **up to 15°** from the mounted position and locks when the retractor is tilted **40° or more**.
   - If not as specified, replace the seat belt.



YMU811WA4

ALR

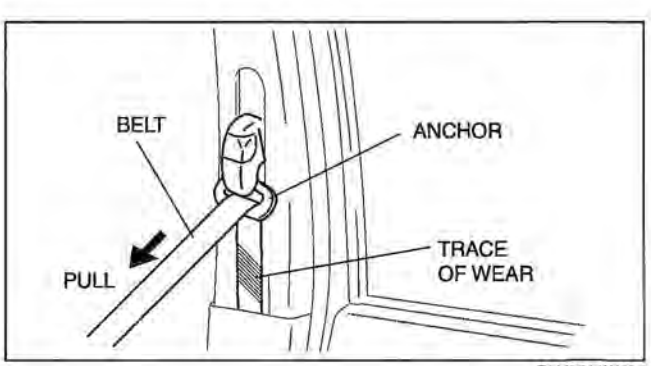
1. Pull the belt out fully to change the lock mode from ELR to ALR.
2. Verify that retractor makes a clicking sound as the belt slowly retracts. If no sound is heard, the lock mode has not changed to ALR. If necessary, repeat Step 1.
   - If there is any malfunction, replace the seat belt.
3. Verify that the retractor locks when pulled.
   - If there is any malfunction, replace the seat belt.
4. Verify that the lock mode changes to ELR when the belt is fully pulled out.
   - If there is any malfunction, replace the seat belt.

Load Limiter Retractor

Warning

- **When the load limiter operates, the belt and anchor rub against each other strongly leaving a trace of wear. If the seat belt is used in this state, the seat belt will not function to its designed effect and there is the possibility of serious injury to passengers. Be sure to replace the seat belt once the load limiter operates.**

1. If the vehicle has been subjected to a shock in an accident, pull the belt from the retractor and confirm that there is no trace of wear (the load limiter has not operated) by visually inspecting and feeling the belt.
   - If there is any malfunction, replace the seat belt.



B6U0811W005

BUCKLE SWITCH INSPECTION

E6U081157620W02

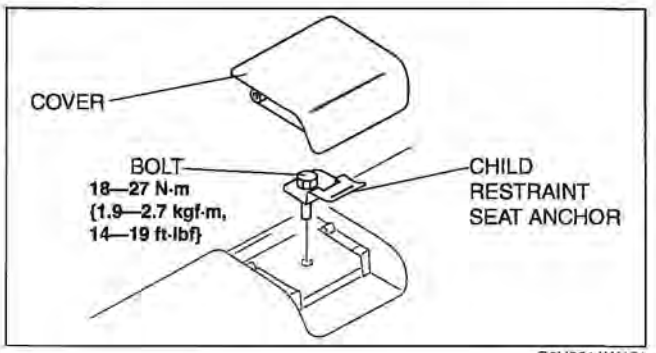
1. Since the buckle switch cannot be inspected separately, perform air bag DTC inspection.

CHILD-RESTRAINT SEAT ANCHOR REMOVAL/INSTALLATION

E6U081100117

Sport Sedan

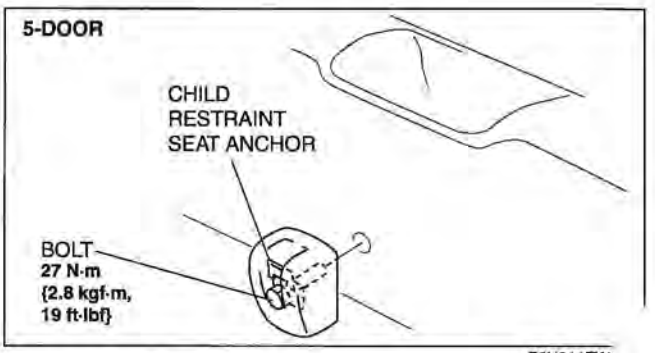
1. Remove the cover.
2. Remove the bolt and child restraint seat anchor.
3. Install in the reverse order of removal.



C6U0811W101

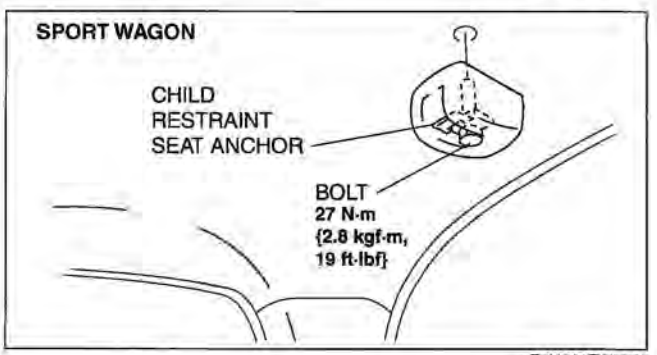
5-Door, Sport Wagon

1. Remove the bolt and child restraint seat anchor.



E6U811ZW_

2. Install in the reverse order of removal.



E6U811ZW5003

MULTIPLEX COMMUNICATION SYSTEM [L3, AJ]

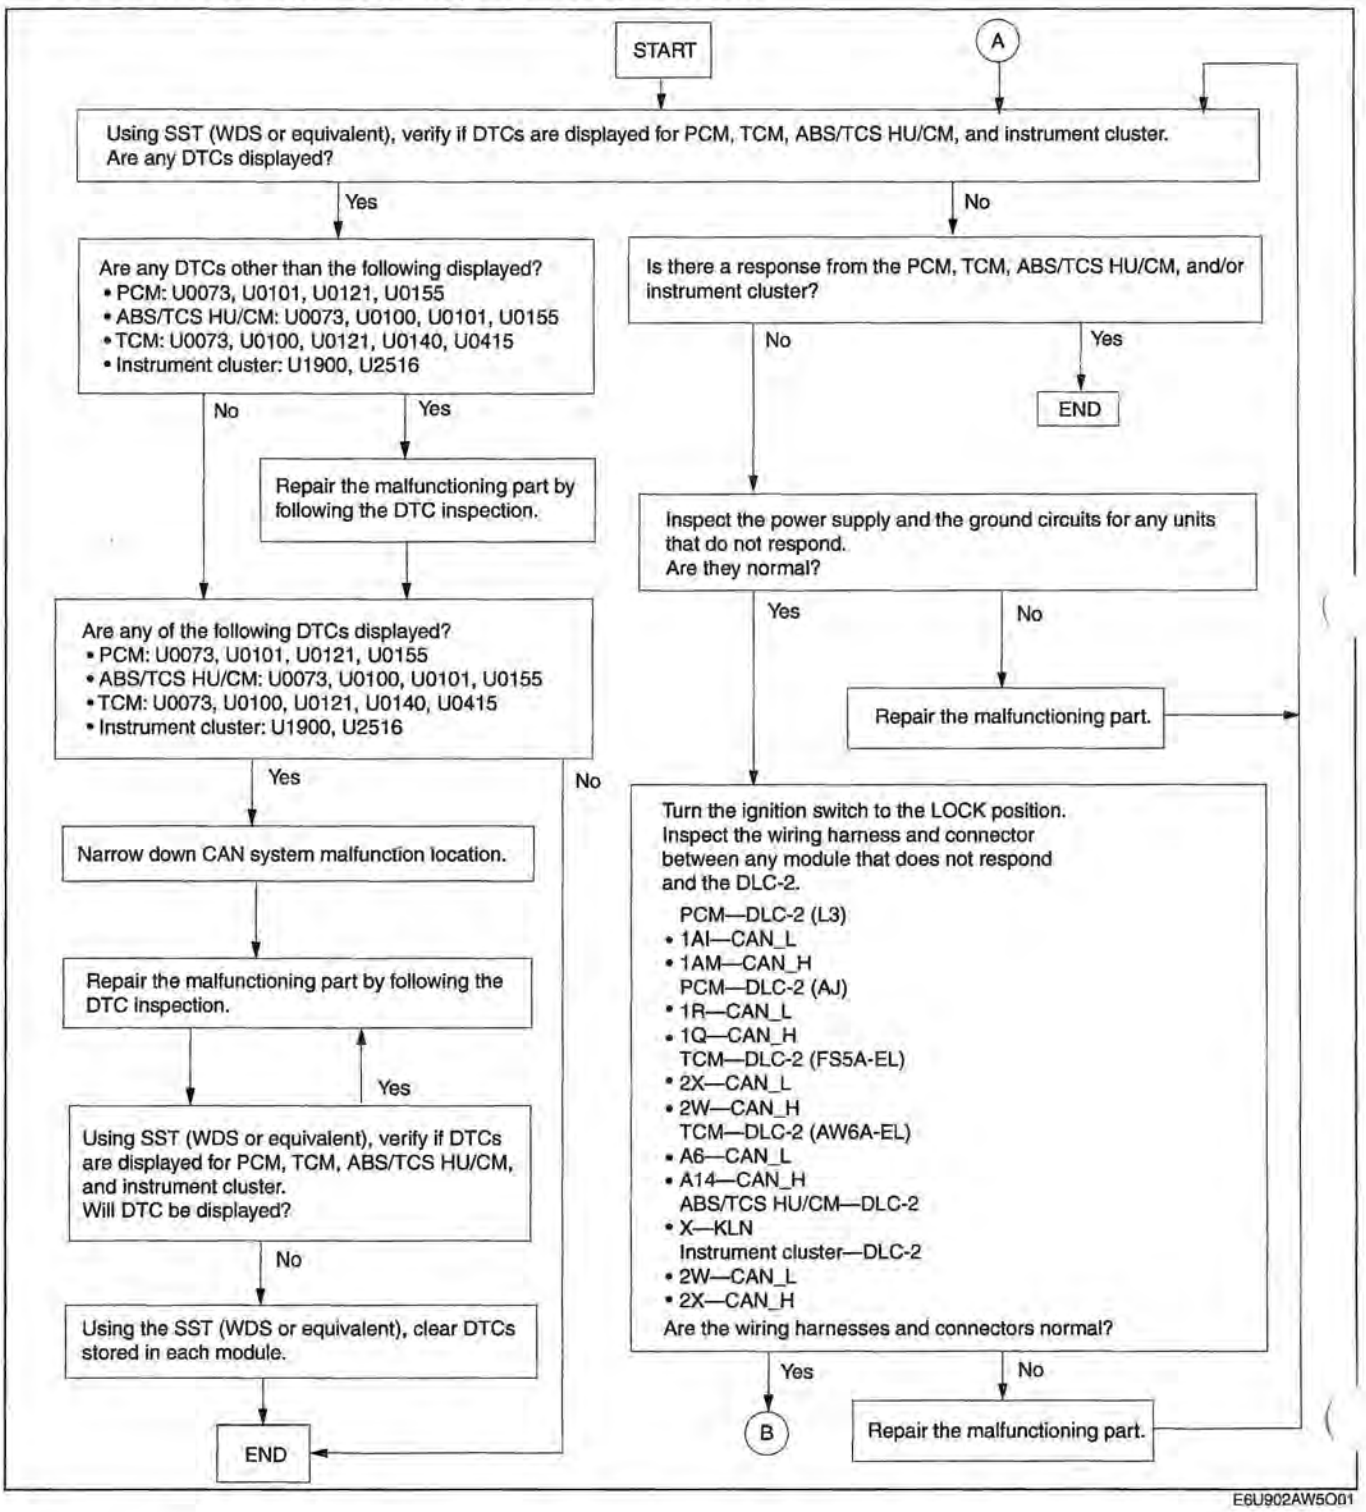
E6U090255430W01

Outline

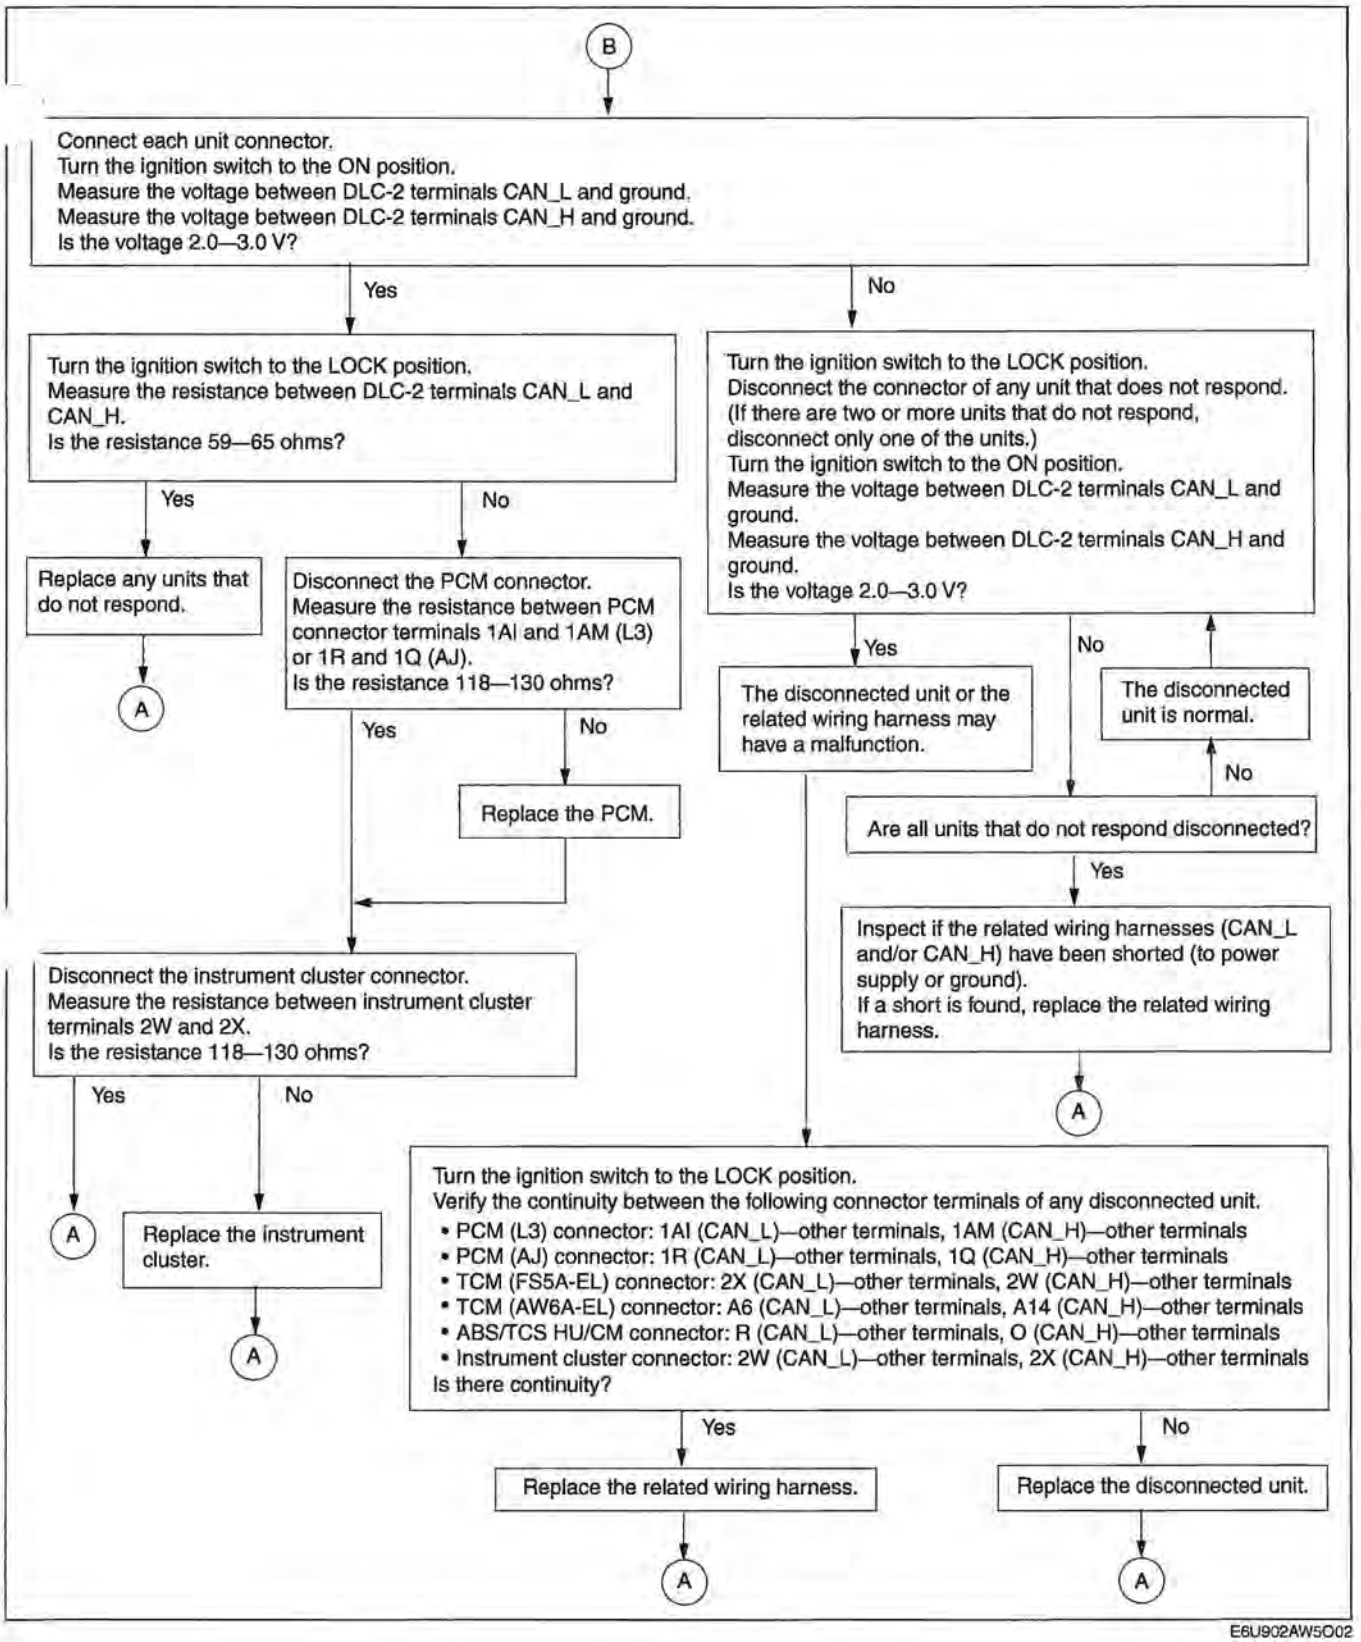
- If the controller area network (CAN) system is malfunctioning, read the DTCs of the following modules, using the **SST** (WDS or equivalent) to determine the malfunctioning system.
  - — PCM
  - — ABS/TCS HU/CM
  - — TCM
  - — Instrument cluster

Flowchart

- Use the following flowchart to verify the cause of the trouble.



E6U902AW5O01



E6U902AW5O02

DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)]

E6U090255430W02

DTC	Malfunction location	DTC output module	Page
U0073	CAN system communication error	• PCM • TCM • ABS/TCS HU/CM	(See 09–02A–7 DTC U007' U2516 [L3, AJ])
U0100	Communication error to PCM	• TCM • ABS/TCS HU/CM	(See 09–02A–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3, AJ])
U0101	Communication error to TCM	• PCM • ABS/TCS HU/CM	
U0121	Communication error to ABS/TCS HU/CM	• PCM • TCM	
U0140	Communication error to instrument cluster	TCM	
U0155	Communication error to instrument cluster	• PCM • ABS/TCS HU/CM	
U0415	Abnormal message from ABS/TCS HU/CM	TCM	
U1900	Communication error	Instrument cluster	(See 09–02A–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3, AJ])
U2516	CAN system communication error	Instrument cluster	(See 09–02A–7 DTC U0073, U2516 [L3, AJ])

PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)]

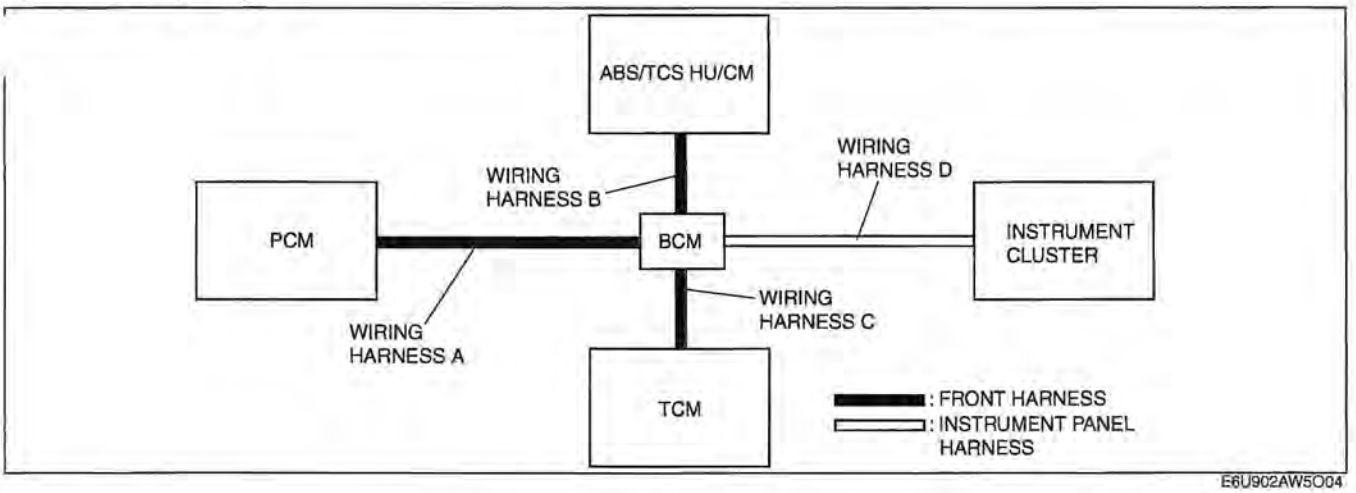
E6U090255430W03

PID name (definition)	Condition	Specification	PID monitor module	Terminal
ABS_MSG (Missing message from the ABS/TCS HU/CM	Present	Circuit in the ABS/TCS HU/CM is normal	Instrument cluster	• ABS/TCS HU/CM: O, R • Instrument cluster: 2W, 2X
	Not Present	Circuit in the ABS/TCS HU/CM is abnormal		
PCM_MSG (Missing message from the PCM)	Present	Circuit in the PCM is normal	• ABS/TCS HU/CM • Instrument cluster	
	Not Present	Circuit in the PCM is abnormal		
TCM_MSG (Missing message from the TCM)	Present	Circuit in the TCM is normal	• ABS/TCS HU/CM • Instrument cluster	
	Not Present	Circuit in the TCM is abnormal		

PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3, AJ]

E6U090255430W04

System Wiring Diagram



E6U902AW5O04

PCM

1. Check the display of DTC U0101, U0121 and/or U0155, using the **SST** (WDS or equivalent). (See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status			Malfunction location
	ABS/TCS HU/CM	TCM	Instrument cluster	
PCM	—	—	—	• Wiring harness A • BCM • PCM
	—	X	X	• Wiring harness B • BCM • ABS/TCS HU/CM
	X	—	X	• Wiring harness C • BCM • TCM
	X	X	—	• Wiring harness D • BCM • Instrument cluster

ABS/TCS HU/CM

1. Check the display of DTC U0100, U0101 and/or U0155, using the **SST** (WDS or equivalent). (See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
2. Access and monitor the "PCM_MSG" and "TCM_MSG" of PID using the **SST** (WDS or equivalent).
3. Referring to the PID/DATA MONITOR, confirm the display status of the PID. (See 09–02A–4 PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
4. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status			Malfunction location
	PCM	TCM	Instrument cluster	
ABS/TCS HU/CM	—	—	—	• Wiring harness B • BCM • ABS/TCS HU/CM
	—	X	X	• Wiring harness A • BCM • PCM
	X	—	X	• Wiring harness C • BCM • TCM
	X	X	—	• Wiring harness D • BCM • Instrument cluster

TCM

1. Check the display of DTC U0100, U0121 (AW6A-EL), U0140 (AW6A-EL) and/or U0415 (AW6A-EL) using the **SST** (WDS or equivalent). (See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
2. Access and monitor the "TCM_MSG" of ABS/TCS HU/CM and instrument cluster PID using the **SST** (WDS c equivalent).
3. Referring to the PID/DATA MONITOR, confirm the display status of the PID. (See 09–02A–4 PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
4. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status			Malfunction location
	PCM	ABS/TCS HU/CM	Instrument cluster	
TCM	—	—	—	• Wiring harness C • BCM • TCM
	—	X	X	• Wiring harness A • BCM • PCM
	X	—	X	• Wiring harness B • BCM • ABS/TCS HU/CM
	X	X	—	• Wiring harness D • BCM • Instrument cluster

Instrument Cluster

1. Access and monitor the "ABS_MSG", "PCM_MSG" and "TCM_MSG" of PID using the **SST** (WDS or equivalent).
2. Referring to the PID/DATA MONITOR, confirm the display status of the PID. (See 09–02A–4 PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)].)
3. Referring to the following table, determine the malfunctioning part of the CAN system.

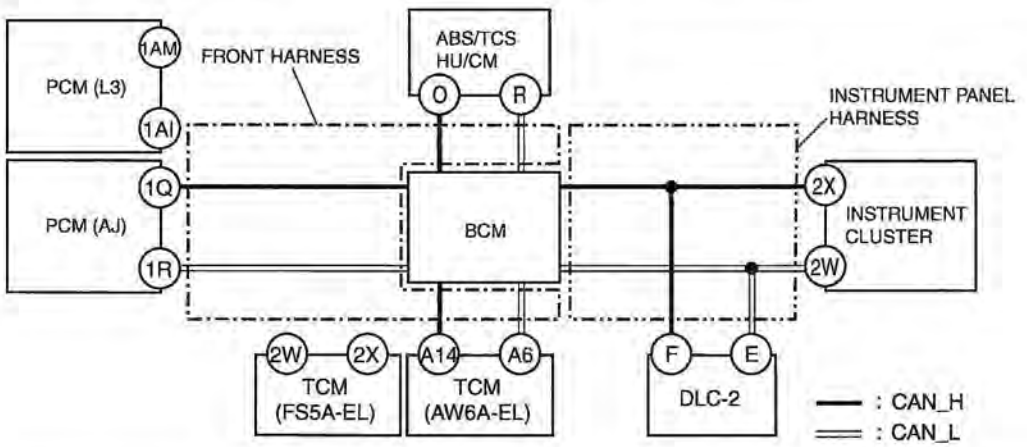
X: Normal
—: Communication error

Module	Communication status			Malfunction location
	PCM	ABS/TCS HU/CM	TCM	
Instrument cluster	—	—	—	• Wiring harness D • BCM • Instrument cluster
	—	X	X	• Wiring harness A • BCM • PCM
	X	—	X	• Wiring harness B • BCM • ABS/TCS HU/CM
	X	X	—	• Wiring harness C • BCM • TCM

DTC U0073, U2516 [L3, AJ]

E6U090255430W05

DTC	U0073	PCM ABS/TCS HU/CM TCM	CAN system communication error
	U2516	Instrument cluster	
DETECTION CONDITION	**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only detection conditions may cause injury due to operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • CAN system related harness malfunction • Related module communication error		
POSSIBLE CAUSE	• Open or short circuit in wiring harness • Malfunction of connectors between PCM, ABS/TCS HU/CM, TCM, BCM, and instrument cluster • PCM malfunction • ABS/TCS HU/CM malfunction • TCM malfunction • BCM malfunction • Instrument cluster malfunction		



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U2516	Yes	Determine malfunctioning part in CAN system. (See 09–02A–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3, AJ])
		No	Go to the next step.
2	**INSPECT CONNECTOR** • Inspect the connector of the module that outputs the DTC. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT WIRING HARNESSES** • Inspect for the following malfunctioning wiring harnesses: — Short to GND — Short to power supply — Twisted pair short each other — Open circuit • Is there any malfunction?	Yes	Replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the WDS or equivalent. • Perform KOEO/KOER self-test. • Is the same DTC present?	Yes	Replace the module that outputs the DTC, then retry this step.
		No	Troubleshooting completed.

MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC]

E6U090255430W11

Outline

- If the controller area network (CAN) system is malfunctioning, read the DTCs of the following modules, using the **SST** (WDS or equivalent) to determine the malfunctioning system.
  - — PCM
  - — DSC HU/CM
  - — AWD control module
  - — Keyless control module
  - — Instrument cluster

Flowchart

- Use the following flowchart to verify the cause of the trouble.

STEP	INSPECTION		ACTION
1	**INSPECT DTC INDICATION** • Using the WDS or equivalent, inspect if DTCs are displayed for the following module: — PCM — DSC HU/CM — AWD control module — Keyless control module — Instrument cluster • Are any DTCs displayed?	Yes	Go to the next step.
		No	Go to Step 5.
2	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U0100 — U0114 — U0121 — U0155 — U0323 — U0516 — U1900 — U2023 — U2511 — U2516	Yes	Repair the malfunctioning part by following the related DTC inspection. Go to the next step.
		No	Go to the next step.
3	**INSPECT CAN SYSTEM-RELATED DTC** • Are any of the following DTCs displayed? — PCM: U0073, U0121, U0155 — DSC HU/CM: U0073, U0100, U0114, U0155, U2511 — AWD control module: U0073, U0100, U0121 — Keyless control module: U0073, U0100, U0323, U2023 — Instrument cluster: U1900, U2516	Yes	Repair the malfunctioning part by following the DTC inspection. Go to the next step.
		No	Troubleshooting completed.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Clear the DTC from the CAN system-related modules using the WDS or equivalent. • Start the engine. • Are any of the CAN related DTCs displayed?	Yes	Go back to Step 3.
		No	Troubleshooting completed.
5	**INSPECT COMMUNICATION CONDITION** • Is there a response from the following modules? — PCM — DSC HU/CM — AWD control module — Keyless control module — Instrument cluster	Yes	Troubleshooting completed.
		No	Go to the next step.
6	**INSPECT MODULES THAT DO NOT RESPOND** • Inspect the power supply and the ground circuit for any units that do not respond. • Are they normal?	Yes	Go to the next step.
		No	Repair the malfunctioning part, then go back to Step 1.

STEP	INSPECTION		ACTION
7	**INSPECT CONNECTOR AND WIRING HARNESS BETWEEN MODULES THAT DO NOT RESPOND AND DLC-2** • Turn the ignition switch to the LOCK position. • Inspect the wiring harness and connector between any module that does not respond and the DLC-2. **PCM—DLC-2** • 2U—F • 2R—E **DSC HU/CM—DLC-2** • AG—F • AF—E **AWD control module—DLC-2** • G—F • H—E **Keyless control module—DLC-2** • 4AA—F • 4Z—E **Instrument cluster—DLC-2** • 2X—F • 2W—E	Yes	Go to the next step.
		No	Repair the malfunctioning part, then go back to Step 1.
8	**INSPECT WIRING HARNESS** • Turn the ignition switch to the ON position (Engine off). • Measure the voltage between the following terminals. — DLC-2 terminals F and E • Is the voltage **2.0—3.0 V**?	Yes	Go to the next step.
		No	Go to Step 12.
9	**INSPECT WIRING HARNESS** • Turn the ignition switch to the LOCK position. • Measure the resistance between the following terminals. — DLC-2 terminals F and E • Is the resistance **59—65 ohms**?	Yes	Replace the modules that do not respond, then go back to Step 1.
		No	Go to the next step.
10	**INSPECT PCM** • Disconnect the PCM connector. • Measure the resistance between following terminals. — PCM terminals 2U and 2R (part-side) • Is the resistance **118—130 ohms**?	Yes	Go to the next step.
		No	Replace the PCM, then go to the next step.
11	**INSPECT INSTRUMENT CLUSTER** • Disconnect the instrument cluster connector. • Measure the resistance between the following terminals. — Instrument cluster terminals 2X and 2W (part-side) • Is the resistance **118—130 ohms**?	Yes	Go to next step.
		No	Replace the instrument cluster, then go to the next step.
12	**CLASSIFY WIRING HARNESS MALFUNCTION OR MODULE MALFUNCTION** • Turn the ignition switch to the LOCK position. • Disconnect the connector of any unit that does not respond. (If there are two or more units that do not respond, disconnect only one of the units.) • Turn the ignition switch to the ON position. • Measure the voltage between the following terminals. — DLC-2 terminals F and E • Is voltage **2.0—3.0 V**?	Yes	Go to the next step.
		No	Retry this step with other module connector disconnected. If all units that do not respond are disconnected, go to Step 14.

STEP	INSPECTION		ACTION
13	**INSPECT WIRING HARNESS OF ANY UNIT THAT DOES NOT RESPOND** • Turn the ignition switch to the LOCK position. • Inspect for continuity between the following connector terminals of any disconnected unit. **PCM** • 2U—other terminals • 2R—other terminals **DSC HU/CM** • AG—other terminals • AF—other terminals **AWD control module** • G—other terminals • H—other terminals **Keyless control module** • 4AA—other terminals • 4Z—other terminals **Instrument cluster** • 2X—other terminals • 2W—other terminals Is there continuity?	Yes	Repair or replace the wiring harness, then go back to Step 1.
		No	Replace the disconnected unit, then go back to Step 1.
14	**INSPECT KLN RELATED WIRING HARNESS** • Inspect the related wiring harnesses (KLN) for the short circuit (to power supply or ground). • Is the wiring harness normal?	Yes	If wiring harness is normal but DSC HU/CM does not respond, inspect DSC HU/CM. Go back to Step 1.
		No	Repair or replace the wiring harness, then go back to Step 1.
15	**INSPECT CAN RELATED WIRING HARNESS** • Inspect the related wiring harnesses (CAN_L and/or CAN_H) for the short circuit (to power supply or ground). • Is the wiring harness normal?	Yes	Go back to Step 1.
		No	Replace the wiring harness, then go back to Step 1.

DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)]

E6U090255430W12

DTC	Malfunction location	DTC output module	Page
U0073	CAN system communication error	• PCM • DSC HU/CM • AWD control module • Keyless control module	(See 09–02B–8 DTC U0073, U2516 [L3 WITH TC])
U0100	Communication error to PCM	• DSC HU/CM • AWD control module • Keyless control module	(See 09–02B–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3 WITH TC])
U0114	Communication error to AWD control module	DSC HU/CM	
U0121	Communication error to DSC HU/CM	• PCM • AWD control nodule	
U0155	Communication error to instrument cluster	• PCM • DSC HU/CM	
U0323	Communication error to instrument cluster	Keyless control module	
U1900	Communication error to other modules	Instrument cluster	(See 09–02B–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3 WITH TC])
U2023	Abnormal message from PCM	Keyless control module	
U2511	Abnormal message from AWD control module	DSC HU/CM	
U2516	CAN system communication error	Instrument cluster	(See 09–02B–8 DTC U0073, U2516 [L3 WITH TC])

PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)]

E6U090255430W13

PID name (definition)	Condition	Specification	PID monitor module	Terminal
ABS_MSG (Missing message from the DSC HU/CM	Present	Circuit in the DSC HU/CM is normal	Instrument cluster	• DSC HU/CM: AF, AG • Instrument cluster: 2W, 2X
	Not Present	Circuit in the ABS/TCS HU/CM is abnormal		
AWD_MSG (Missing message from the AWD control module)	Present	Circuit in the AWD control module is normal	• DSC HU/CM • Instrument cluster	
	Not Present	Circuit in the AWD control module is abnormal		
IC_MSG (Missing message from the instrument cluster)	Present	Circuit in the instrument cluster is normal	DSC HU/CM	
	Not Present	Circuit in the instrument cluster is abnormal

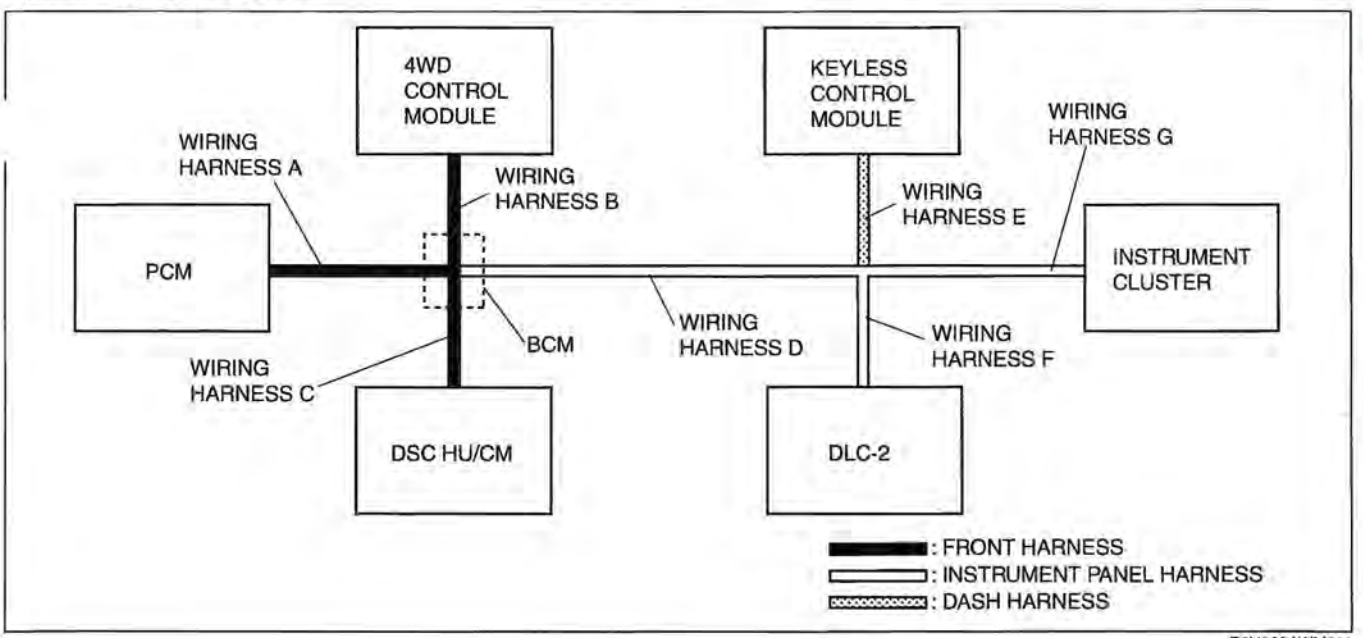
PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3 WITH TC]

E6U090255430W14

System Wiring Diagram



E6U902AWM001

PCM

1. Check the display of DTC U0121 and/or U0155, using the **SST** (WDS or equivalent). (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status		Malfunction location
	DSC HU/CM	Instrument cluster	
PCM	—	—	• Wiring harness A • PCM
	—	X	• Wiring harness C • DSC HU/CM
	X	—	• Wiring harness D • Wiring harness G • Instrument cluster

DSC HU/CM

1. Check the display of DTC U0100, U0114, U0155 and/or U2511, using the **SST** (WDS or equivalent). (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
2. Access and monitor the "PCM_MSG" and "AWD_MSG" of PID using the **SST** (WDS or equivalent).
3. Referring to the PID/DATA MONITOR, confirm the display status of the PID. (See 09–02B–5 PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
4. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status			Malfunction location
	PCM	AWD control module	Instrument cluster	
DSC HU/CM	—	—	—	• Wiring harness C • DSC HU/CM
	—	X	X	• Wiring harness A • PCM
	X	—	X	• Wiring harness B • AWD control module
	X	X	—	• Wiring harness D • Wiring harness G • Instrument cluster

AWD Control Module

1. Check the display of DTC U0100 and/or U0121 using the **SST** (WDS or equivalent). (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
2. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status		Malfunction location
	PCM	DSC HU/CM	
AWD control module	—	—	• Wiring harness D • AWD Control Module
	—	X	• Wiring harness A • PCM
	X	—	• Wiring harness C • DSC HU/CM

Keyless Control Module

1. Check the display of DTC U0100, U0323 and/or U2023 using the **SST** (WDS or equivalent). (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
   Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status		Malfunction location
	PCM	Instrument cluster	
Keyless control module	—	—	• Wiring harness E • Keyless control module
	—	X	• Wiring harness A • PCM
	X	—	• Wiring harness D • Wiring harness G • Instrument cluster

Instrument Cluster

1. Check the display of DTC U1900 using the **SST** (WDS or equivalent). (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
2. Access and monitor the "ABS_MSG", "AWD_MSG", "PCM_MSG", "RKE_MSG" and "TPM_MSG" of PID using the **SST** (WDS or equivalent).
3. Referring to the PID/DATA MONITOR, confirm the display status of the PID. (See 09–02B–5 PID/DATA MONITOR TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)
4. Referring to the following table, determine the malfunctioning part of the CAN system.

X: Normal
—: Communication error

Module	Communication status				Malfunction location
	PCM	DSC HU/CM	AWD control module	Keyless control module	
Instrument cluster	—	—	—	—	• Wiring harness G • Instrument cluster
	—	X	X	X	• Wiring harness A • PCM
	X	—	X	X	• Wiring harness C • DSC HU/CM
	X	X	—	X	• Wiring harness B • AWD control module
	X	X	X	—	• Wiring harness E • Keyless control module
	—	—	—	X	• Wiring harness D

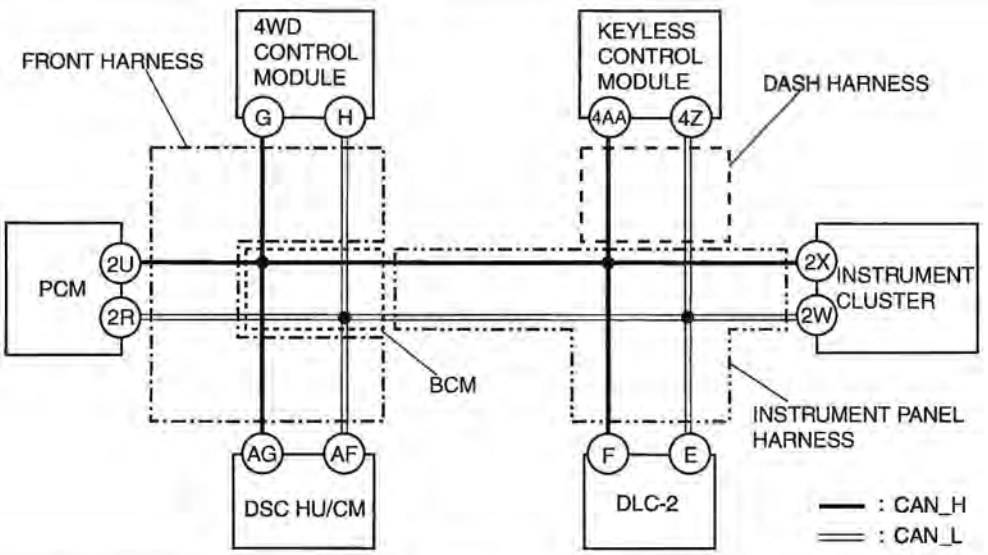
Repair Procedure

1. Inspect the connector of malfunctioning module.
   - If there is any malfunction, repair or replace the connector.
2. Inspect the malfunctioning wiring harnesses as follow:
   - If there is any malfunction, repair or replace the wiring harnesses.
   - If there is no malfunction, replace the malfunctioning module.
     - — Short to GND
     - — Short to power supply
     - — Twisted pair short each other
     - — Open circuit
3. Make sure to reconnect all disconnected connectors.
4. Clear the CAN system related DTCs using the WDS or equivalent.
5. Verify if the CAN system related DTCs are displayed using the WDS or equivalent.
   - If the same following DTCs are present, replace the malfunctioning module.
     - — U0073 (PCM, DSC HU/CM, AWD control module, keyless control module)
     - — U2516 (Instrument cluster)
   - If other DTC is present, perform the appropriate DTC inspection. (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)].)

DTC U0073, U2516 [L3 WITH TC]

E6U090255430W15

DTC	U0073	PCM DSC HU/CM AWD control module Keyless control module	CAN system communication error
	U2516	Instrument cluster	
DETECTION CONDITION		**Warning** • **Detection conditions are for understanding the DTC outline before performing an inspection. Performing an inspection according to only detection conditions may cause injury due to operating error, or damage the system. When performing an inspection, always follow the inspection procedure.** • CAN system related harness malfunction • Related module communication error	
POSSIBLE CAUSE		• Open or short circuit in wiring harness • Malfunction of connectors between PCM, DSC HU/CM, TCM, AWD control module, keyless control module and instrument cluster • PCM malfunction • DSC HU/CM malfunction • AWD control module malfunction • Keyless control module malfunction • Instrument cluster malfunction	



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CAN SYSTEM-RELATED DTC** • Are any DTCs other than the following displayed? — U0073 — U2516	Yes	Determine malfunctioning part in CAN system. (See 09–02B–5 PROCEDURES FOR DETERMINING THE LOCATION OF A MALFUNCTION [L3 WITH TC])
		No	Go to the next step.
2	**INSPECT CONNECTOR** • Inspect the connector of the module that outputs the DTC. • Is it normal?	Yes	Go to the next step.
		No	Repair or replace the connector, then go to Step 4.
3	**INSPECT WIRING HARNESSES** • Inspect for the following malfunctioning wiring harnesses: — Short to GND — Short to power supply — Twisted pair short each other — Open circuit • Is there any malfunction?	Yes	Replace the wiring harness, then go to the next step.
		No	Go to the next step.
4	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC using the WDS or equivalent. • Start the engine. • Is the same DTC present?	Yes	Replace the module that outputs the DTC, then retry this step.
		No	Troubleshooting completed.

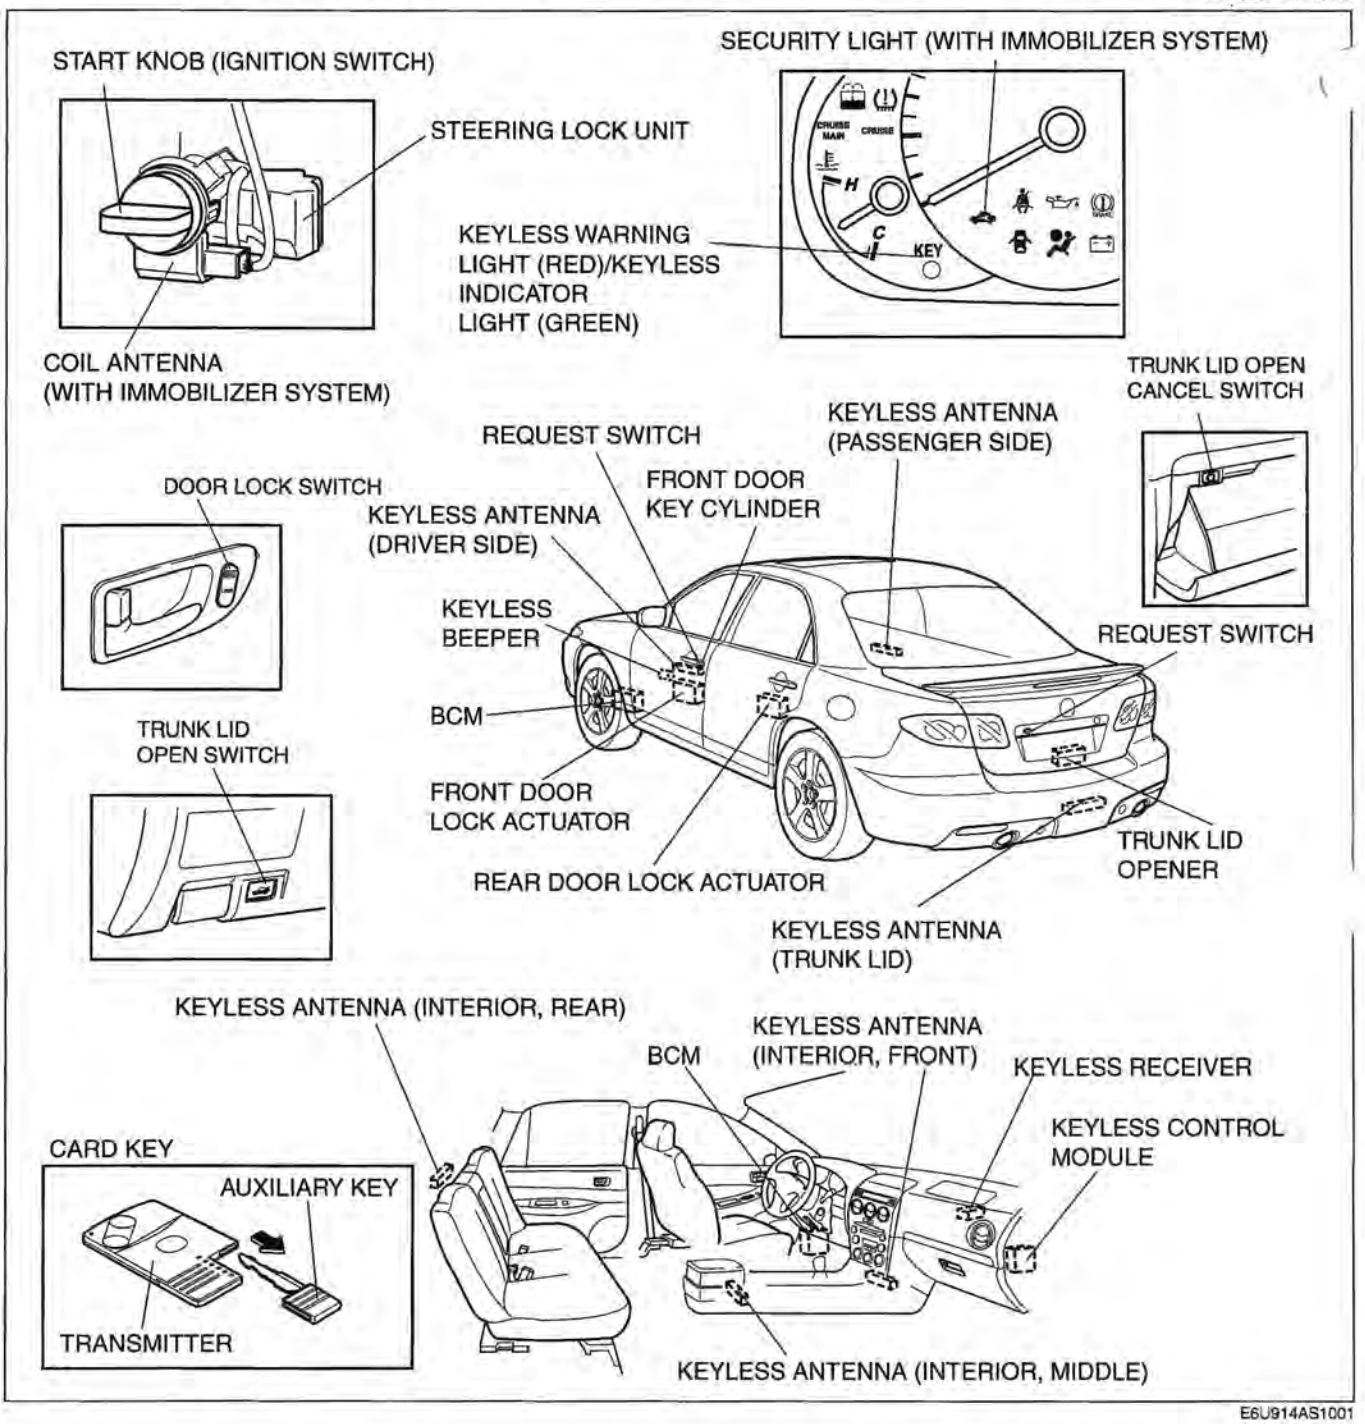
ADVANCED KEYLESS SYSTEM STRUCTURAL VIEW

E6U090267000W43

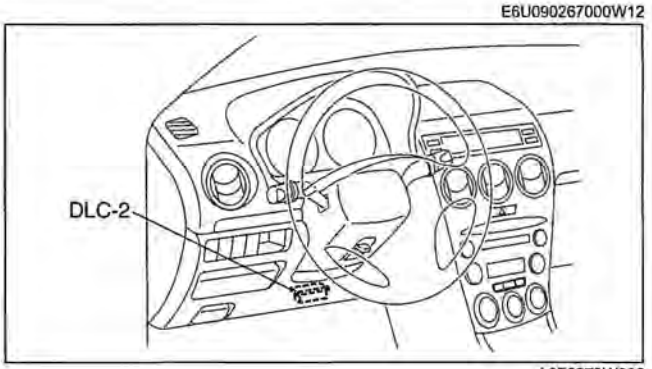


E6U914AS1001

DTC INSPECTION [ADVANCED KEYLESS SYSTEM]

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
   Verify the DTC with the **SST** (WDS or equivalent).
2. If a DTC is indicated, perform on-board diagnostic referring to the DTC table.

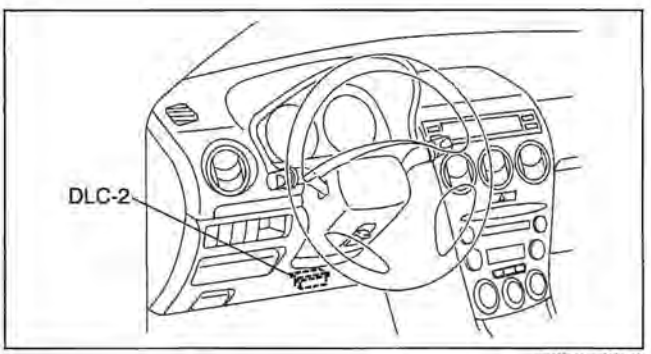
E6U090267000W12



A6E3970W002

PID/Data Monitor and Record Procedure

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
2. Access and monitor PIDs using the **SST** (WDS or equivalent).



A6E3970W002

09-02

DTC TABLE [ADVANCED KEYLESS SYSTEM]

E6U090267000W13

DTC No.	Description	Page
B1342	Keyless control module internal malfunction	(See 09-02C-5 DTC B1342 [ADVANCED KEYLESS SYSTEM])
B1134	Unprogrammed card key	(See 09-02C-6 DTC B1134 [ADVANCED KEYLESS SYSTEM])
B2477	Configuration error	(See 09-02C-7 DTC B2477 [ADVANCED KEYLESS SYSTEM])
B1317	Keyless control module power supply voltage increases.	(See 09-02C-8 DTC B1317/B1318 [ADVANCED KEYLESS SYSTEM])
B1318	Keyless control module power supply voltage decreases	(See 09-02C-8 DTC B1317/B1318 [ADVANCED KEYLESS SYSTEM])
B2170	Push switch (Steering lock unit)	(See 09-02C-9 DTC B2170 [ADVANCED KEYLESS SYSTEM])
B1126	Steering lock unit internal malfunction	(See 09-02C-10 DTC B1126 [ADVANCED KEYLESS SYSTEM])
U0236	Steering lock unit communication system	(See 09-02C-11 DTC U0236 [ADVANCED KEYLESS SYSTEM])
B1093	Steering lock unit communication error	(See 09-02C-12 DTC B1093 [ADVANCED KEYLESS SYSTEM])
U0214	Keyless receiver	(See 09-02C-13 DTC U0214 [ADVANCED KEYLESS SYSTEM])
B1133	Keyless antenna (Driver's door)	(See 09-02C-14 DTC B1133 [ADVANCED KEYLESS SYSTEM])
B1132	Keyless antenna (Front passenger door)	(See 09-02C-15 DTC B1132 [ADVANCED KEYLESS SYSTEM])
B1127	Keyless antenna (Interior, rear)	(See 09-02C-16 DTC B1127 [ADVANCED KEYLESS SYSTEM])
B1131	Keyless antenna (exterior, rear)	(See 09-02C-17 DTC B1131 [ADVANCED KEYLESS SYSTEM])
B1129	Keyless antenna (Interior, middle)	(See 09-02C-18 DTC B1129 [ADVANCED KEYLESS SYSTEM])

DTC No.	Description	Page
B112A	Keyless antenna (Interior, front)	(See 09–02C–19 DTC B112A [ADVANCED KEYLESS SYSTEM])
U0323	Communication error to instrument cluster	(See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC])
U0100	Communication error to PCM	(See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC])
U0140	Communication error to BCM	(See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC])
U0073	Control module communication error	(See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC])
U2023	Error signal from CAN related module	(See 09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC])

PID/DATA MONITOR TABLE [ADVANCED KEYLESS SYSTEM]

E6U090267000W14

PID/data monitor table

PID name (definition)	Data contents	Unit/ Operation	Terminal
DTC_CNT	Number of continuous DTCs	–	–
RPM	Engine speed	RPM	3Z, 3AA
VSS	Vehicle speed	KPH	3Z, 3AA
VPWR	Supply voltage	V	2D
NUMCARD	Number of programmed card keys	–	–
NUMKEY*	Number of programmed key ID numbers	–	–
DRSW_D	Door switch (Driver's door)	OPEN/ CLOSE	2R
DRSW_ALL	Door switch (All doors and liftgate)	OPEN/ CLOSE	2R
REQ_SW_D	Request switch (Driver's door)	On/Off	3H
REQ_SW_P	Request switch (Passenger door)	On/Off	3J
REQ_SW_BK	Request switch (Trunk lid/Liftgate)	On/Off	3L
LOCK_SW_D	Door lock-link switch	On/Off	3E
IMMOBI	Immobilizer system equipped or not	On*/Off	–
TR/LG_SW	Trunk/liftgate latch switch	OPEN/ CLOSE	2R
IG_KEY_IN	Key reminder switch	Key-In/Key-Out	2O
IG_SW_ST	Ignition switch (Push switch)	Pushed/Not Pushed	2N
BUZZER	Keyless buzzer	On/Off	3Y
PWR_IG1	Power supply (IG1)	On/Off	2B
PWR_ACC	Power supply (ACC)	On/Off	2I

* : Vehicles with immobilizer system

ACTIVE COMMAND MODE TABLE [ADVANCED KEYLESS SYSTEM]

Command name	Output part name	Unit/ Operation	Terminal
BZR_OUT	Keyless buzzer	On/Off	3Y
BZR_INN	Interior buzzer (Instrument cluster)	On/Off	3Z, 3AA
LNP_RED	Keyless warning light (red)	On/Off	3Z, 3AA
LNP_GREEN	Keyless indicator light (green)	On/Off	3Z, 3AA
HAZARD	Hazard flashers	On/Off	2R
DR_LOCK	All doors Lock/Off	Lock/Off	2R
DR_UNLOCK	All doors Unlock/Off	Unlock/Off	2R
2STG_UNLK	All doors Unlock/Off	Unlock/Off	2R

DTC B1342 [ADVANCED KEYLESS SYSTEM]

E6U090267000W15

DTC B1342	Keyless control module internal malfunction.
POSSIBLE CAUSE	• Malfunction in the keyless control module internal circuit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1342	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

DTC B1134 [ADVANCED KEYLESS SYSTEM]

E6U090267000W16

DTC B1134	Unprogrammed card key.
POSSIBLE CAUSE	• Unprogrammed card key. • Malfunction in the keyless control module internal circuit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NUMBER OF REGISTERED CARD KEYS** • Using the WDS or equivalent, perform the PID/data monitor inspection and confirm the number of registered keys. (See 09–02C–4 PID/DATA MONITOR TABLE [ADVANCED KEYLESS SYSTEM].) • Is card key registered?	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	• Using the WDS or equivalent, register a card key if necessary. (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) • Go to the next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1134	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

DTC B2477 [ADVANCED KEYLESS SYSTEM]

E6U090267000W17

DTC B2477	Configuration error.
DETECTION CONDITION	• Keyless control module configuration has not been performed correctly.
POSSIBLE CAUSE	• Keyless control module configuration error. • Malfunction in the keyless control module internal circuit

Diagnostic procedure

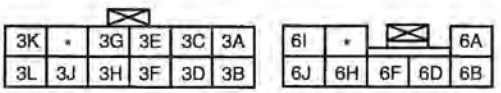
STEP	INSPECTION		ACTION
1	**PERFORM INSTRUMENT KEYLESS CONTROL MODULE CONFIGURATION** • Perform keyless control module configuration. • Is B2477 displayed?	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	• Go to the next step.
2	**VERIFY TROUBLESHOOTING OF DTC B2477 COMPLETED** • Clear the DTC from the memory. • Is any DTC displayed?	Yes	Go to the applicable DTC inspection.
		No	DTC troubleshooting completed.

DTC B1317/B1318 [ADVANCED KEYLESS SYSTEM]

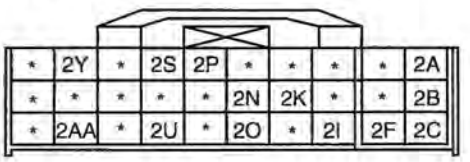
E6U090267000W18

DTC	B1317	Keyless control module power supply voltage increases (16.1 V or more)
	B1318	Keyless control module power supply voltage decreases (less than 9 V)
DETECTION CONDITION		• When the keyless control module power supply voltage is not **within 9—16 V.**
POSSIBLE CAUSE		• Open or short circuit in wiring harness between battery and keyless control module • Battery malfunction • Keyless control module malfunction

BCM HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

Step	Inspection		Action
1	**INSPECT FUSE** • Remove the ROOM 15 A fuse. • Is the fuse normal?	Yes	Go to the next step.
		No	Replace the fuse.
2	**INSPECT BATTERY** • Measure the battery positive voltage. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	The battery has a malfunction. Inspect the charge/discharge system.
3	**INSPECT WIRING HARNESS BETWEEN BATTERY AND BCM** • Measure the BCM terminal 3J voltage. • Is the voltage **9 V—16 V**?	Yes	Install the fuse, then go to the next step.
		No	Repair the wiring harness between the BCM and battery.
4	**INSPECT BCM** • Measure the voltage at the BCM terminal 6H. • Is the voltage **9 V—16 V**?	Yes	Go to the next step.
		No	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN PJB AND SAS CONTROL MODULE** • Turn the ignition switch to the ON position. • Measure the keyless control module terminal 2D voltage. • Is the voltage **9 V—16 V**?	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	Repair the wiring harness between the BCM and keyless control module.

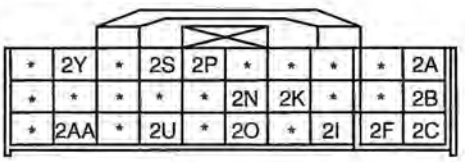
DTC B2170 [ADVANCED KEYLESS SYSTEM]

E6U090267000W19

DTC B2170	Push switch.
DETECTION CONDITION	• Detect the push switch OFF signal when ignition switch is ON position.
POSSIBLE CAUSE	• Steering lock unit malfunction • Open or short circuit in wiring harness between keyless control module and steering lock unit • Keyless control module malfunction

STEERING LOCK UNIT HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and steering lock unit connector. • Is there continuity between keyless control module terminal 2N and steering lock unit terminal E?	Yes	Replace the steering lock unit and perform the resetting procedure for the steering lock unit. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM])
		No	Repair the wiring harness between the steering lock unit and keyless control module.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B2170	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

DTC B1126 [ADVANCED KEYLESS SYSTEM]

E6U090267000W20

DTC B1126	Steering lock unit internal malfunction.
DETECTION CONDITION	• Detect the steering lock unit maifunction signal.
POSSIBLE CAUSE	• Steering lock unit maifunction

Diagnostic procedure

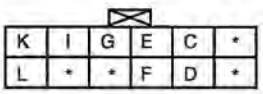
STEP	INSPECTION		ACTION
1	**INSPECT STEERING LOCK UNIT** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1126	Yes	Replace the steering lock unit and perform the resetting procedure for the steering lock unit. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

DTC U0236 [ADVANCED KEYLESS SYSTEM]

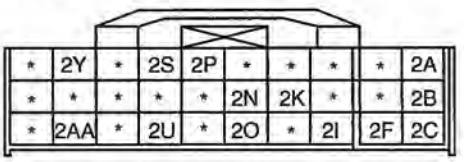
E6U090267000W21

DTC U0236	Steering lock unit communication system.
DETECTION CONDITION	• Steering lock unit communication error
POSSIBLE CAUSE	• Steering lock unit maifunction • Open or short circuit in wiring harness between keyless control module and steering lock unit • Keyless control module malfunction

STEERING LOCK UNIT
HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE HARNESS
SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and steering lock unit connector. • Is there continuity between keyless control module terminal 2P and steering lock unit terminal K?	Yes	• Replace the steering lock unit and perform the resetting procedure for the steering lock unit. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) • Go to the next step.
		No	• Repair the wiring harness between the steering lock unit and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: U0236	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

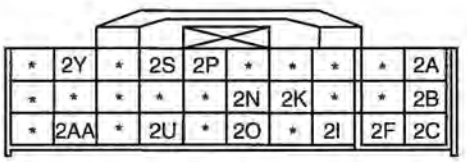
DTC B1093 [ADVANCED KEYLESS SYSTEM]

E6U090267000W22

DTC B1093	Unprogrammed steering lock unit.
DETECTION CONDITION	• Unprogrammed steering lock unit.
POSSIBLE CAUSE	• Steering lock unit malfunction • Open or short circuit in wiring harness between keyless control module and steering lock unit • Keyless control module malfunction

STEERING LOCK UNIT HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

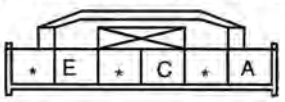
STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and steering lock unit connector. • Is there continuity between keyless control module terminal 2P and steering lock unit terminal K?	Yes	• Perform the resetting procedure for the steering lock unit. (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) • Go to the next step.
		No	• Repair the wiring harness between the steering lock unit and keyless control module. • Go to next step.
2	**INSPECT STEERING LOCK UNIT** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1093	Yes	• Replace the steering lock unit and perform the resetting procedure for the steering lock unit. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) • Go to the next step.
		No	DTC troubleshooting completed.
3	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1093	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

DTC U0214 [ADVANCED KEYLESS SYSTEM]

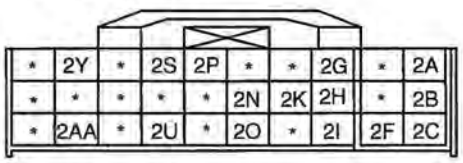
E6U090267000W23

DTC U0214	Keyless receiver.
DETECTION CONDITION	• When the keyless receiver power supply voltage is **less than 7.5 V.**
POSSIBLE CAUSE	• Keyless receiver malfunction • Open or short circuit in wiring harness between keyless control module and keyless receiver • Keyless control module malfunction

KEYLESS RECEIVER HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WIRING HARNESS BETWEEN KEYLESS RECEIVER AND GROUND** • Disconnect keyless receiver connector. • Is there continuity between keyless receiver terminal E and ground?	Yes	Go to next step.
		No	• Repair the wiring harness between the keyless receiver and ground. • Go to next step.
2	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless receiver connector. • Inspect the continuity between the following connector terminals. — keyless control module: 2S—keyless receiver: A — keyless control module: 2U—keyless receiver: C • Is there continuity?	Yes	Go to next step.
		No	• Repair the wiring harness between the keyless receiver and keyless control module. • Go to next step.
3	**INSPECT KEYLESS RECEIVER POWER SUPPLY CIRCUIT** • Turn ignition switch to ON position. • Measure voltage at terminal 2S of keyless control module connector. • Is voltage **more than 7.5 V**?	Yes	Replace keyless receiver. (See 09–14–18 KEYLESS RECEIVER REMOVAL/INSTALLATION)
		No	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)

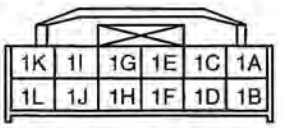
DTC B1133 [ADVANCED KEYLESS SYSTEM]

E6U090267000W24

DTC B1133	Keyless antenna (front driver's door)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (front driver's door) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction

KEYLESS ANTENNA HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (driver's door) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 1A—keyless antenna: A — keyless control module: 1B—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (driver's door). (See 09–14–19 KEYLESS ANTENNA REMOVAL/ INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (driver's door) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1133	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

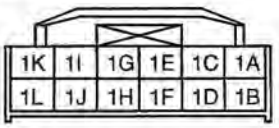
DTC B1132 [ADVANCED KEYLESS SYSTEM]

E6U090267000W25

DTC B1132	Keyless antenna (front passenger's door)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (front passenger's door) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction

KEYLESS ANTENNA HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (front passenger's door) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 1C—keyless antenna: A — keyless control module: 1D—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (front passenger's door). (See 09–14–19 KEYLESS ANTENNA REMOVAL/INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (front passenger's door) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1132	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

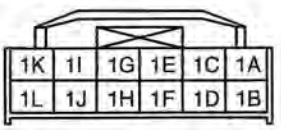
DTC B1127 [ADVANCED KEYLESS SYSTEM]

E6U090267000W26

DTC B1127	Keyless antenna (interior, rear)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (interior, rear) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction

KEYLESS ANTENNA HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (interior, rear) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 1G—keyless antenna: A — keyless control module: 1H—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (interior, RR). (See 09–14–19 KEYLESS ANTENNA REMOVAL/ INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (interior, rear) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1127	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

delete

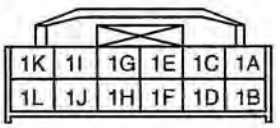
DTC B1131 [ADVANCED KEYLESS SYSTEM]

E6U090267000W28

DTC B1131	Keyless antenna (exterior, rear)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (exterior, rear) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction

KEYLESS ANTENNA HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



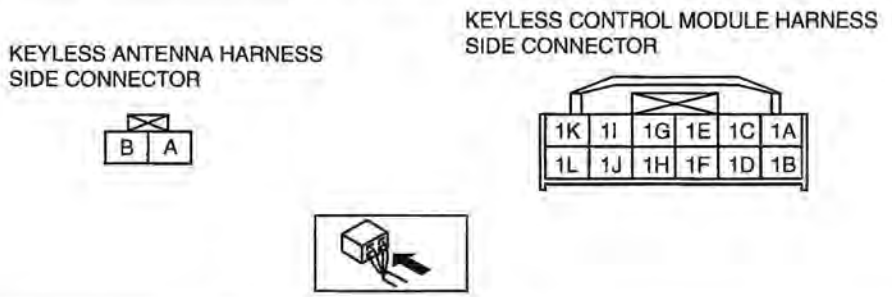
Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (exterior, rear) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 1E—keyless antenna: A — keyless control module: 1F—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (liftgate). (See 09–14–19 KEYLESS ANTENNA REMOVAL/ INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (exterior, rear) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1131	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

DTC B1129 [ADVANCED KEYLESS SYSTEM]

E6U090267000W29

DTC B1129	Keyless antenna (interior, middle)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (interior, middle) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (interior, middle) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 1K—keyless antenna: A — keyless control module: 1L—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (interior, front). (See 09–14–19 KEYLESS ANTENNA REMOVAL/ INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (interior, middle) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B1129	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

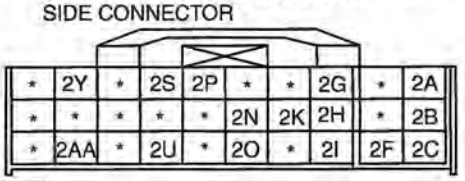
DTC B112A [ADVANCED KEYLESS SYSTEM]

E6U090267000W30

DTC B1129	Keyless antenna (interior, front)
DETECTION CONDITION	Keyless antenna dose not operated.
POSSIBLE CAUSE	• Keyless antenna (interior, front) malfunction • Open or short circuit in wiring harness between keyless control module and keyless antenna • Keyless control module malfunction

KEYLESS ANTENNA HARNESS SIDE CONNECTOR

KEYLESS CONTROL MODULE HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module connector and keyless antenna (interior, front) connector. • Inspect the continuity between the following connector terminals. — keyless control module: 2G—keyless antenna: A — keyless control module: 2H—keyless antenna: B • Is there continuity?	Yes	• Replace keyless antenna (interior, front). (See 09–14–19 KEYLESS ANTENNA REMOVAL/ INSTALLATION) • Go to next step.
		No	• Repair the wiring harness between the keyless antenna (interior, front) and keyless control module. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — WDS or equivalent: B112A	Yes	Replace the keyless control module and perform the resetting procedure for the advanced keyless system when replacing the keyless control module. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM].) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–17 KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) (See 09–14–39 SECURITY ACCESS PROCEDURE)
		No	DTC troubleshooting completed.

09–02D ON-BOARD DIAGNOSTIC [AUDIO]

STARTING PROCEDURE FOR ON-BOARD DIAGNOSTIC TEST MODE 09–02D–1
SUPPLIER IDENTIFICATION PROCEDURE 09–02D–2
Identification Using the Label or Inscribed Lettering 09–02D–2
Identification Using the On-board Diagnostic Test Mode 09–02D–2
MEMORY CLEARING PROCEDURE 09–02D–2

DTC 16:ER12 ..... 09–02D–4
DTC 17:ER11 ..... 09–02D–4
DTC 18:ER11 ..... 09–02D–5
DTC 19:ER11 ..... 09–02D–5
DIAGNOSTIC ASSIST FUNCTION 09–02D–5
Structural View 09–02D–5
Button Inspection 09–02D–6
Speaker Inspection 09–02D–6
Radio Reception Condition Inspection 09–02D–6

STARTING PROCEDURE FOR ON-BOARD DIAGNOSTIC TEST MODE

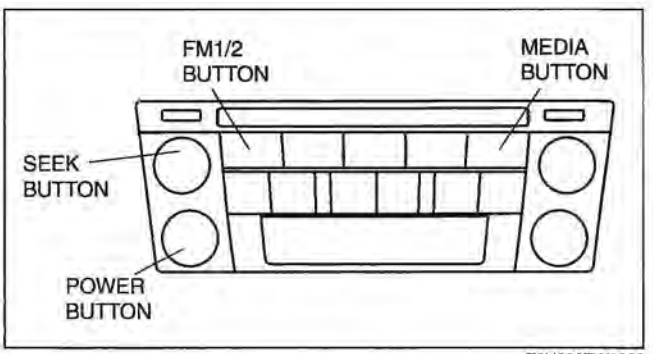
E6U090266900W10

Note
- All DTCs displayed in the on-board diagnostic test mode should be entered in the Audio Repair Order Form.

1. Turn the ignition switch to the ACC or ON position.
2. Turn the POWER switch off.
3. While pressing the POWER button, simultaneously press the FM1/2 button and the MEDIA button for **2 s or more**.

Note
- If several DTCs are in the memory, they can be displayed using the SEEK button.

4. To stop the on-board diagnostic test mode, turn the ignition switch off.



E6U920ZW5006

SUPPLIER IDENTIFICATION PROCEDURE

E6U090266900W11

Note
- The supplier can vary with the module. When asking the supplier (service center) for repair or replacement, identify the supplier and fill in the Audio Repair Order Form with the following procedures.

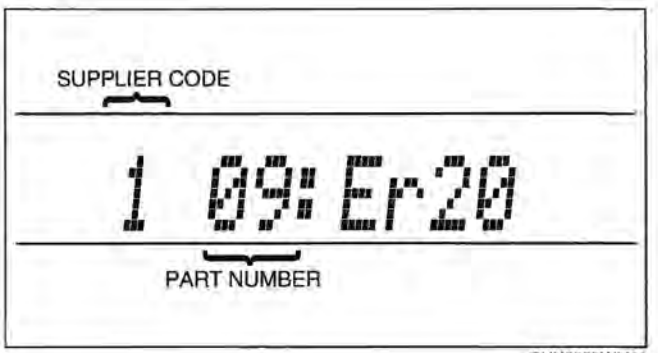
Identification Using the Label or Inscribed Lettering

1. Remove the audio unit.
2. Verify the supplier by referring to the label attached to each unit.

Identification Using the On-board Diagnostic Test Mode.

1. Start the on-board diagnostic test mode.
2. Identify the device and supplier codes by referring to the LCD display.

Note
- If no DTC is stored, no codes will be displayed.



CHU0902WM02

Supplier code	Supplier name
1	SANYO Automedia
2	Panasonic
3	CLARION
4	Pioneer

Part number	Part name
00	Cassette deck
03	CD player
05	CD changer (external)
06	CD changer (upper module)
09	Base unit
10	MP3 applicable CD player system
11	Sirius unit
16	CAN system
21	Center panel
22	MP3 applicable CD changer

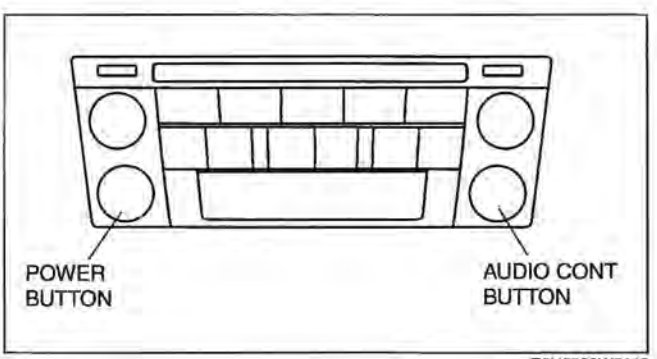
MEMORY CLEARING PROCEDURE

E6U090266900W12

1. Start the on-board diagnostic test mode.
2. While pressing the POWER button, simultaneously press the AUDIO CONT button for **2 s or more**.

Caution
- **Before clearing the memory, be sure to enter all of the DTCs displayed in the on-board diagnostic test mode in the Audio Repair Order Form.**

3. To stop the on-board diagnostic test mode, turn the ignition switch off.



E6U0920W5113

DTC TABLE [AUDIO SYSTEM]

E6U090266900W13

Screen display DTC (When starting on-board diagnostic test function)	Detection condition	Possible cause/inspection
00: Er01	Cassette deck cannot implement insert and eject commands.	Cassette deck malfunction
00: Er03	Reel built into cassette deck does not operate.	Verify condition of the cassette deck.
00: Er04	Cassette tape is worn out.	• Tape wear • Verify condition of the cassette deck.
00: Er10	Cassette deck does not operate.	• Malfunction of connectors between base unit and cassette deck • Cassette deck malfunction
03: Er01	CD player cannot implement insert and eject commands.	CD player malfunction
03: Er02	Cannot change tracks.	CD player malfunction
03: Er07	CD reading error.	• Defective CD (scratches or dirt) • CD player malfunction
03: Er10	CD player does not operate.	• Malfunction of connectors between base unit and CD player • CD player malfunction
05: Er01	CD changer (external) cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er10	CD changer (external) does not operate.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
06: Er01	CD changer (upper module) cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er02	Cannot change tracks.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er10	CD changer (upper module) does not operate.	• Malfunction of connectors between base unit and CD changer (upper module) • CD changer (upper module) malfunction
07: Er01	MD player cannot implement insert and eject commands.	MD player malfunction
07: Er02	Cannot change tracks.	MD player malfunction
07: Er07	MD reading error.	Defective MD
07: Er08	Blank unrecorded MD is inserted.	Defective MD
07: Er10	MD player does not operate.	• Malfunction of connectors between base unit and MD player • MD player malfunction
09: Er20	Audio system does not operate.	Voltage at base unit is low.
09: Er21	Broken sound/No sound	Inspect the audio system operation according to vehicle condition.
09: Er22	No radio reception	Inspect the radio operation according to vehicle condition.
10: Er01	MP3 applicable CD player cannot implement insert and eject commands.	MP3 applicable CD player malfunction
10: Er02	Cannot change tracks.	MP3 applicable CD player malfunction
10: Er07	MP3 CD reading error.	Incorrect format CD

Screen display DTC (When starting on-board diagnostic test function)	Detection condition	Possible cause/inspection
10: Er10	MP3 applicable CD player does not operate.	• Malfunction of connectors between base unit and MP3 applicable CD player • MP3 applicable CD player malfunction
11: Er01	SSI bus communication error	• Poor connection of the connectors • Radio unit malfunction • Sirius unit malfunction
11: Er03	Poor connection of antenna	• Poor connection of antenna connector
11: Er10	Radio system does not operate.	• Malfunction of connectors between base unit and Sirius unit • Sirius unit malfunction
16: Er12	—	CAN system
21: Er17	Incorrect combination (base unit and center panel)	Install the correct base unit or the center panel.
21: Er18		
21: Er19	Communication error between base unit and center panel	Malfunction of connectors between base unit and center panel
22: Er01	MP3 applicable CD changer cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er02	Cannot change tracks.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er10	MP3 applicable CD changer does not operate.	• Malfunction of connectors between base unit and MP3 applicable CD changer • MP3 applicable CD changer malfunction
no Err	No DTCs stored	No DTCs stored

DTC 16:ER12

E6U090266900W14

DTC 16:Er12	CAN system communication error
DETECTION CONDITION	• CAN system communication error
POSSIBLE CAUSE	• Malfunction of wiring harness between base unit and other CAN system related module • Audio unit malfunction

Diagnostic procedure

ACTION
(See09–02A–2 MULTIPLEX COMMUNICATION SYSTEM [L3, AJ].) (See09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC].)

DTC 17:ER11

E6U090266900W15

DTC 17:Er11	CAN system communication error
DETECTION CONDITION	• ALC function does not operate.
POSSIBLE CAUSE	• Malfunction of wiring harness between base unit and other CAN system related module • CAN system related module malfunction

Diagnostic procedure

ACTION
(See09–02A–2 MULTIPLEX COMMUNICATION SYSTEM [L3, AJ].) (See09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC].)

DTC 18:ER11

E6U090266900W16

DTC 18:Er11	CAN system communication error
DETECTION CONDITION	• CAN system communication error
POSSIBLE CAUSE	• Malfunction of wiring harness between base unit and other CAN system related module • CAN system related module malfunction

Diagnostic procedure

ACTION
(See09–02A–2 MULTIPLEX COMMUNICATION SYSTEM [L3, AJ].) (See09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC].)

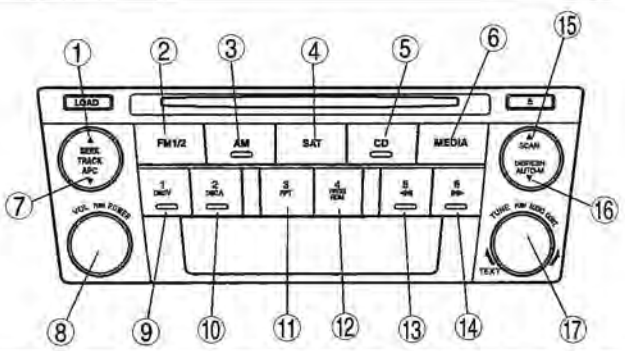
(See09–02A–2 MULTIPLEX COMMUNICATION SYSTEM [L3, AJ].) (See09–02B–2 MULTIPLEX COMMUNICATION SYSTEM [L3 WITH TC].)

DIAGNOSTIC ASSIST FUNCTION

E6U090266900W18

09–02D

Structural View
Buttons



E6U0920W5112

1	SEEK button (upper)
2	FM1/2 button
3	AM button
4	SAT button
5	CD button
6	MEDIA button
7	APC button (lower)
8	POWER/VOLUME button
9	Preset button "1"

10	Preset button "2"
11	Preset button "3"
12	Preset button "4"
13	Preset button "5"
14	Preset button "6"
15	SCAN button
16	AUTO-M button
17	AUDIO CONT/TUNE/TEXT button

Button Inspection

1. With the audio power on, press the POWER button and simultaneously press the MEDIA button for **approx. 1 s.**
2. Inspect according to the following table:

INSPECTION	DISPLAY	ACTION	
• Start the button inspection mode. • Press all buttons.	—	The buzzer sounds.	The button is normal.
		The buzzer does not sound.	Replace the base unit.

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

Speaker Inspection

1. With the audio power on, press the POWER button and simultaneously press the AUTO-M button for **approx. 1 s.**
2. Inspect according to the following table:

INSPECTION	DISPLAY	ACTION	
• Start the speaker inspection mode. • Does each speaker output sound in the following order? 1. Front door speaker and tweeter (LH) 2. Front door speaker and tweeter (RH) 3. Rear speaker (RH) 4. Rear speaker (LH)	—	Yes	Speakers, and wiring harness between the base unit and speakers are normal.
		No	• Inspect the following parts. — Malfunctioning speaker — Wiring harness between base unit and malfunctioning speaker

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

Radio Reception Condition Inspection

1. With the audio power on, press the POWER button and simultaneously press the PRESET 2 button for **approx. 1 s.**
2. Inspect according to the following table:

Caution

- **Even if the system is normal, radio reception may be difficult depending on where the system is inspected (indoors/outdoors, or conditions at the location). Before inspecting the system, verify that radio reception is adequate.**
- **When inspecting, select a frequency band (radio station) with the best reception.**

INSPECTION	DISPLAY	ACTION
Start the radio reception condition inspection mode.	NORMAL CONDITION S-METER 5 | S-METER 9	Antenna, antenna feeder and base unit are normal.
	S-METER 3 | S-METER 4	Change the frequency (radio station) and inspect again.
	MALFUNCTION PRESENT S-METER 0 | S-METER 2	Inspect the antenna and antenna feeder. • If either the antenna or the antenna feeder is not normal, replace the malfunctioning part. • If the antenna and antenna feeder are normal, replace the base unit.

3. Turn the audio off or the ignition switch to the LOCK position to stop the diagnostic assist function.

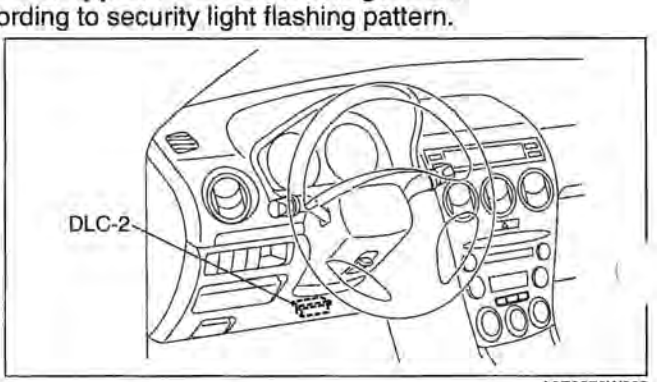
Caution

- **When the engine does not start or stalls and the following DTCs are not indicated, refer to engir symptom troubleshooting. (See 01–03B–18 NO.3 WILL NOT CRANK [L3 WITH TC])**

Note

- When the immobilizer system is defective, the engine cannot be started.
- If engine condition is normal but security light stays on, inspect for short circuit between security light. Repair or replace the wiring harness if necessary.
- The vehicle may fail to start or a DTC may be stored in the keyless control module and PCM if the following occurs:
  - — If a large, metal object is close to a valid key
  - — If an electrical device is close to a valid key
  - — If two or more valid keys are on the same key ring
- If any malfunction cannot be identified, verify that no metal object or electrical device is on the key ring.
- The security light repeatedly displays a DTC 10 times when the ignition switch is in the ON position.

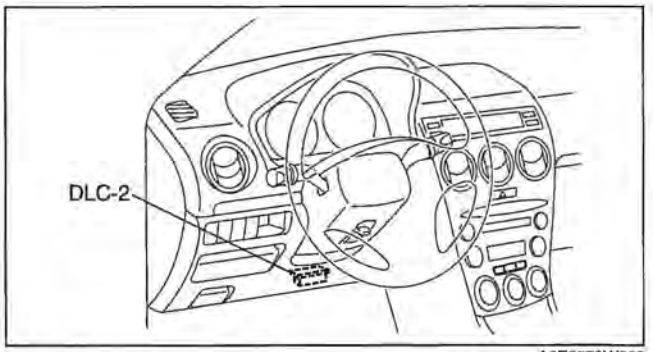
1. Turn the ignition switch to the ON position.
   - If there is any malfunction, the security light flashes rapidly for **approx. 1 minute** and starts displaying a DTC.
   - If there is no malfunction, the security light illuminates for **approx. 3 seconds** and goes off.
2. Verify the security light condition and read the DTC according to security light flashing pattern.
3. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
4. Verify the DTC with the **SST** (WDS or equivalent).
5. If a DTC is indicated, perform on-board diagnostic referring to the DTC table.



A6E3970W002

PID/Data Monitor and Record Procedure

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
   Access and monitor PIDs using the **SST** (WDS or equivalent).



A6E3970W002

DTC TABLE [IMMOBILIZER SYSTEM (ADVANCED KEYLESS SYSTEM)]

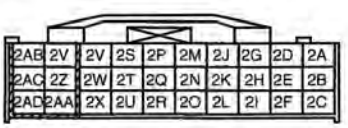
SECURITY LIGHT: DTC 11 (WDS OR EQUIVALENT: DTC -/B1681)

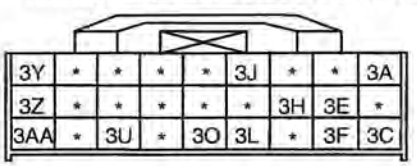
E6U090267000W34

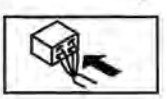
DTC 11 (-/B1681)	Communication error between the keyless control module and the PCM.
POSSIBLE CAUSE	• Defective keyless control module • Defective PCM • Defective wiring harness

PCM HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE WIRING HARNESS SIDE CONNECTOR





Diagnostic procedure

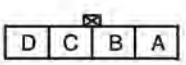
STEP	INSPECTION		ACTION
1	**INSPECT COMMUNICATION CIRCUIT FOR CONTINUITY** • Disconnect keyless control module and PCM connectors. • Is there continuity between the following terminals? — 3A—2Q — 3C—2T	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	Repair the wiring harness between the keyless control module and PCM, then go to the next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 11 — WDS or equivalent: -/B1681	Yes	Replace PCM and reprogram immobilizer system.
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 11 (WDS OR EQUIVALENT: DTC B1681/B1681)

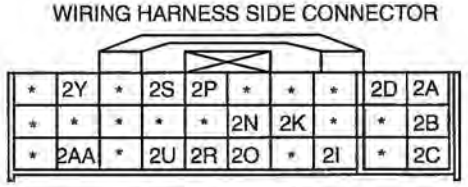
E6U090267000W35

DTC 11 (B1681/B1681)	**Communication error between the keyless control module and the coil antenna.**
POSSIBLE CAUSE	• Defective coil antenna • Defective keyless control module • Defective wiring harness

COIL ANTENNA HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER SUPPLY CIRCUIT OF COIL ANTENNA** • Disconnect coil antenna connector. • Turn ignition switch to ON position. • Measure voltage at terminal D of coil antenna connector. • Is voltage **more than 8 V**?	Yes	Go to next step.
		No	Repair wiring harness.
2	**INSPECT WIRING HARNESS BETWEEN COIL ANTENNA AND GROUND** • Turn ignition switch to LOCK position. • Inspect wiring harness between coil antenna terminal C and ground for following. — Short to power supply — Open circuit • Is wiring harness okay?	Yes	Go to next step.
		No	Repair wiring harness.
3	**INSPECT COIL ANTENNA INPUT SIGNAL CIRCUIT** • Connect coil antenna connector. • Turn ignition switch to ON position. • Is there continuity between the following terminals? — 2Y—B — 2AA—A	Yes	Replace coil antenna, then go to the next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Repair wiring harness.
4	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 11 — WDS or equivalent: B1681/B1681	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 12 (WDS OR EQUIVALENT: DTC B2103/B2103)

E6U090267000W36

DTC 12 (B2103/B2103)	Coil Antenna failure.
POSSIBLE CAUSE	• Defective coil antenna • Poor connection of coil antenna connector • Defective keyless control module

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT CONNECTOR CONNECTION** • Is connector of coil antenna and keyless control module connected securely?	Yes	Replace coil antenna. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Connect connector securely.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 12 — WDS or equivalent: B2103/B2103	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC -/B1600)

E6U090267000W37

DTC 13 (-/B1600)	ID number signal is not received.
POSSIBLE CAUSE	• No transponder in the key • Defective transponder in the key (ID number is not output.) • Defective coil antenna • Defective PCM • Defective keyless control module • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC -/B1600?	Yes	Go to Step 3.
		No	Go to the next step.
2	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC -/B2431?	Yes	Go to SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: -/B2431).
		No	Go to the next step.
3	**VERIFY VALID KEY** • Is there any key, other than the one that caused displayed DTC, which can start the engine?	Yes	Go to Step 5.
		No	Go to the next step.
4	**VERIFY WHETHER MALFUNCTION IS IN COIL ANTENNA OR KEY** • Using **SST** (WDS or equivalent) register an additional key. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC -/B1600 again?	Yes	Replace coil antenna, then go to step 6. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
5	**VERIFY WHETHER MALFUNCTION IS IN COIL ANTENNA OR KEY** • Using any other valid key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC -/B1600 again?	Yes	Replace coil antenna, then go to next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])

STEP	INSPECTION		ACTION
6	**INSPECT PCM** • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC -/B1600 again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC -/B2431)

E6U090267000W38

DTC 13 (-/B2431)	**ID number signal is not received.**
POSSIBLE CAUSE	• The procedure fails to program the transponder into PCM • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC -/B2431?	Yes	Go to Step 3.
		No	Go to next step.
2	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC -/B1600?	Yes	Go to SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: -/B1600).
		No	Go to next step.
3	**INSPECT KEYLESS CONTROL MODULE** • Erase key ID number using **SST** (WDS or equivalent) and register key ID number. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC -/B2431 again?	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.
4	**INSPECT PCM** • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC -/B1600 again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 14 (WDS OR EQUIVALENT: DTC -/B1602)

E6U090267000W39

DTC 14 (-/B1602)	PCM received invalid format of ID number from transponder.
POSSIBLE CAUSE	• Defective transponder in the key • Defective coil antenna • Defective PCM • Defective keyless control module • Any of the following items are touching or near the key head. — Spare keys — Keys for other vehicles equipped with an immobilizer system — Any metallic object — Any electronic device, or any credit or other cards with magnetic strips

Diagnostic procedure

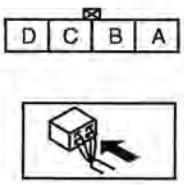
STEP	INSPECTION		ACTION
1	**INSPECT FOR OTHER PROPER KEYS** • Using any other valid key, turn ignition switch to ON position. • If there are no other valid keys, then register an additional key using **SST** (WDS or equivalent) and turn ignition switch to ON position. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) • Does **SST** (WDS or equivalent) indicate DTC -/B1602 again?	Yes	Replace coil antenna, then go to next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 14 — WDS or equivalent: -/B1602	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 15 (WDS OR EQUIVALENT: DTC -/B1601)

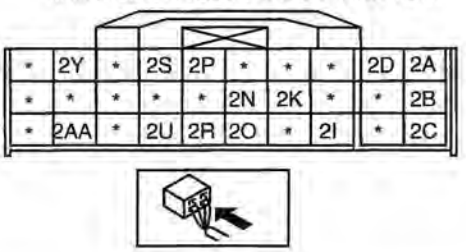
E6U090267000W40

DTC 15 (-/B1601)	PCM received incorrect ID number from key (transponder).
POSSIBLE CAUSE	• No keys have been registered after installation of new PCM • Unregistered key detected • Attempt made to register a ninth key **Note** • A maximum of only eight keys can be registered for a single vehicle. • Defective keyless control module • Defective PCM

COIL ANTENNA
HARNESS SIDE CONNECTOR



KEYLESS CONTROL MODULE
WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY REGISTERED KEY IN PCM** • Check following PID/DATA monitor using **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 2?	Yes	Go to next step.
		No	Go to Step 3.
2	**VERIFY REGISTERED KEY IN PCM** • Check following PID/DATA monitor using **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 8?	Yes	• Erase key ID number using **SST** (WDS or equivalent) and register key ID number. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]) • Go to next step.
		No	Go to next step.
3	**INSPECT COIL ANTENNA INPUT SIGNAL CIRCUIT** • Connect coil antenna connector. • Turn ignition switch to ON position. • Is there continuity between the following terminals? — 2Y—B — 2AA—A	Yes	Replace coil antenna, then go to the next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Repair wiring harness.
4	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 15 — WDS or equivalent: -/B1601	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 15 (WDS OR EQUIVALENT: DTC B1342/B1601)

E6U090267000W41

DTC 15 (B1342/B1601)	**Keyless control module malfunction.**
POSSIBLE CAUSE	• Defective keyless control module

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 15 — WDS or equivalent: B1342/B1601	Yes	Replace keyless control module, then go to the next step. (See 09–14–12 KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

SECURITY LIGHT: DTC 21 (WDS OR EQUIVALENT: DTC B1213/B1213)

E6U090267000W42

DTC 21 (B1213/B1213)	**Number of valid keys is below minimum.**
POSSIBLE CAUSE	• Less than two valid keys

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NUMBER OF VALID KEYS** • Check following PID/DATA monitor with **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 2? **Note** • To start the engine, two or more keys need to be registered.	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
		No	• Erase key ID numbers and register necessary key ID numbers. • Go to next step.
2	**INSPECT KEYLESS CONTROL MODULE** • Turn the ignition switch to the ON position. • Is the DTC displayed? — Security light: 21 — WDS or equivalent: B1213	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM])
		No	DTC troubleshooting completed.

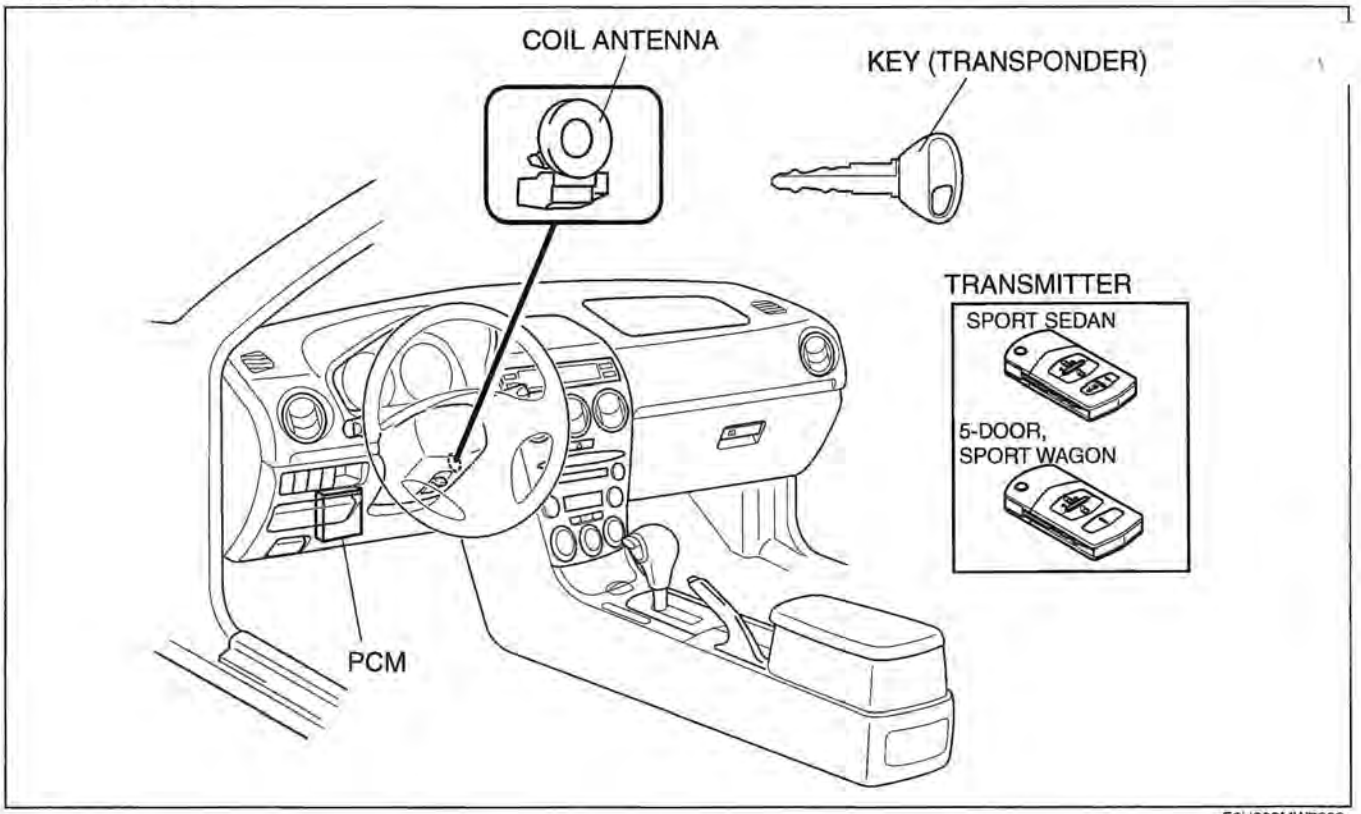
FOREWORD

E6U090267000W01

Structural View



E6U902MW7002

Caution

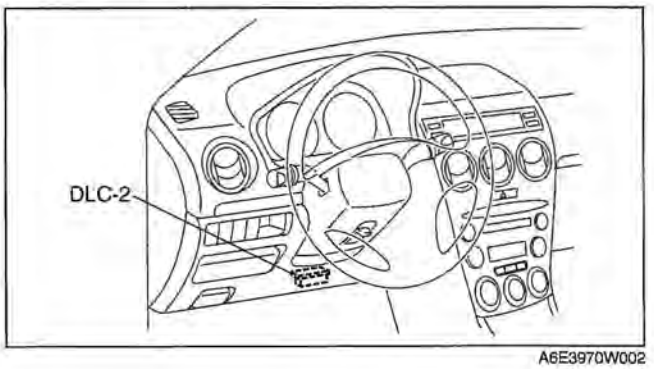
- **When the engine does not start or stalls and the following DTCs are not indicated, refer to engine symptom troubleshooting. (See 01–03A–17 NO.3 WILL NOT CRANK [L3]) (See 01–03C–16 NO.3 WILL NOT CRANK [AJ])**
- **If DTCs cannot be retrieved due to a security light circuit malfunction, refer to immobilizer system symptom troubleshooting. (See 09–03E–2 NO.1 SECURITY LIGHT REMAINS ON OR DOES NOT ILLUMINATE)**

Note

- When the immobilizer system is defective, the engine cannot be started.
- If engine condition is normal but security light stays on, inspect for short circuit between security light. Repair or replace the wiring harness if necessary.
- The vehicle may fail to start or a DTC may be stored in the PCM if the following occurs:
  - — If a large, metal object is close to a valid key
  - — If an electrical device is close to a valid key
  - — If two or more valid keys are on the same key ring
- If any malfunction cannot be identified, verify that no metal object or electrical device is on the key ring.
- The security light repeatedly displays a DTC 10 times when the ignition switch is in the ON position.

1. Turn the ignition switch to the ON position.
   - If there is any malfunction, the security light flashes rapidly for **approx. 1 minute** and starts displaying a DTC.
   - If there is no malfunction, the security light illuminates for **approx. 3 seconds** and goes off.
2. Verify the security light condition and read the DTC according to security light flashing pattern.

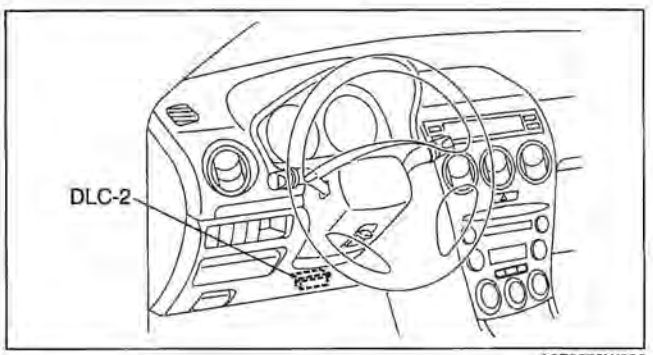
3. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
4. Verify the DTC with the **SST** (WDS or equivalent). If a DTC is indicated, perform on-board diagnostic referring to the DTC table.



A6E3970W002

PID/Data Monitor and Record Procedure

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
2. Access and monitor PIDs using the **SST** (WDS or equivalent).



A6E3970W002

DTC TABLE [IMMOBILIZER SYSTEM]

E6U090267000W02

DTC			Description	Page
Security light	Security light flashing pattern	WDS OR EQUIVALENT		
11		B1681	Coil signal is not received.	(See 09–02F–4 SECURITY LIGHT: DTC 11 (WDS OR EQUIVALENT: DTC B1681))
12		B2103	Coil failure.	(See 09–02F–6 SECURITY LIGHT: DTC 12 (WDS OR EQUIVALENT: DTC B2103))
13		B1600	ID number signal is not received.	(See 09–02F–6 SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC B1600))
		B2431	Transponder programming failure.	(See 09–02F–7 SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC B2431))
14		B1602	PCM received invalid format of ID number from transponder.	(See 09–02F–7 SECURITY LIGHT: DTC 14 (WDS OR EQUIVALENT: DTC B1602))
15		B1601	PCM received incorrect ID number from key (transponder).	(See 09–02F–7 SECURITY LIGHT: DTC 15 (WDS OR EQUIVALENT: DTC B1601))
21		B1213	Number of valid keys is below minimum.	(See 09–02F–8 SECURITY LIGHT: DTC 21 (WDS OR EQUIVALENT: DTC B1213))

DTC			Description	Page
Security light	Security light flashing pattern	WDS OR EQUIVALENT		
Not illuminated	—	B1342	PCM is defective.	(See 09–02F–8 SECURITY LIGHT: NOT ILLUMINATED (WDS OR EQUIVALENT: DTC B1342))

Note

- Perform the following if the security light stays on:
  - — If engine stalls, go to symptom troubleshooting NO.11 "ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES" in.
    (See 01–03A–36 NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [L3].)
    (See 01–03C–34 NO.11 ENGINE STALLS/QUITS, ENGINE RUNS ROUGH, MISSES, BUCK/JERK, HESITATION/STUMBLE, SURGES [AJ].)
  - — If engine won't start, go to symptom troubleshooting NO.6 "CRANKS NORMALLY BUT WILL NOT START" in. (See 01–03A–25 NO.6 CRANKS NORMALLY BUT WILL NOT START [L3].)
    (See01–03C–24 NO.6 CRANKS NORMALLY BUT WILL NOT START [AJ].)
  - — If engine condition is normal but light stays on, inspect for continuity between the following wiring harness and body ground: security light and PCM terminal 2W (L3) or 2 (AJ). Repair or replace the wiring harness.

PID/DATA MONITOR TABLE [IMMOBILIZER SYSTEM]

E6U090267000W03

PID name (Description)	Unit	Specification	PCM terminal
NUMKEYS (Number of key stored in module)	–	Number of registered keys: 0—8	–

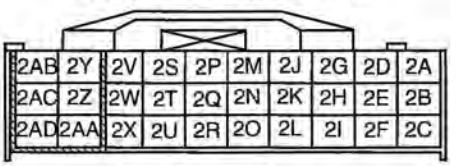
SECURITY LIGHT: DTC 11 (WDS OR EQUIVALENT: DTC B1681)

E6U090267000W

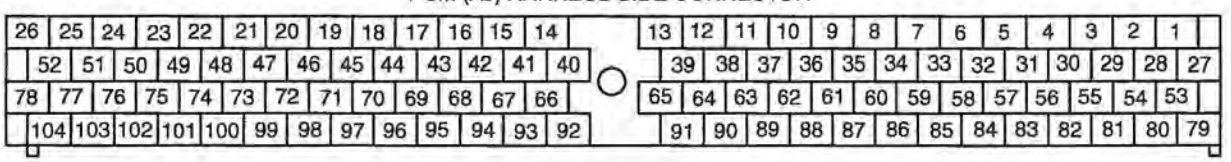
DTC 11 (B1681)	Coil signal is not received.
POSSIBLE CAUSE	• Defective wiring harness • Defective coil • Defective PCM

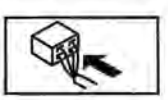
COIL
HARNESS SIDE CONNECTOR

PCM (L3)
HARNESS SIDE CONNECTOR



PCM (AJ) HARNESS SIDE CONNECTOR





Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER SUPPLY CIRCUIT OF COIL** • Disconnect coil connector. • Turn ignition switch to ON position. • Measure voltage at terminal D of coil connector. • Is voltage **more than 8 V**?	Yes	Go to next step.
		No	Repair wiring harness.
2	**INSPECT WIRING HARNESS BETWEEN COIL AND GROUND** • Turn ignition switch to LOCK position. • Inspect wiring harness between coil terminal C and ground for following. — Short to power supply — Open circuit • Is wiring harness okay?	Yes	Go to next step.
		No	Repair wiring harness.
3	**INSPECT COIL INPUT SIGNAL CIRCUIT** • Connect coil connector. • Turn ignition switch to ON position. • Measure voltage at terminal B of coil connector. • Is voltage **more than 8 V**?	Yes	Go to Step 5.
		No	Go to next step.
4	**INSPECT COIL INPUT SIGNAL CIRCUIT** • Turn ignition switch to LOCK position. • Disconnect PCM connector. • Turn ignition switch to ON position. • Measure voltage at terminal 2T (L3) or 65 (AJ) of PCM connector. • Is voltage **more than 8 V**?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Go to next step.
5	**INSPECT COMMUNICATION CIRCUIT (INPUT) FOR CONTINUITY** • Turn ignition switch to LOCK position. • Disconnect coil and PCM connectors. • Is there continuity between coil connector terminal B and PCM connector terminal 2T (L3) or 65 (AJ)?	Yes	Go to next step.
		No	Repair wiring harness.
6	**INSPECT COIL INPUT SIGNAL CIRCUIT** • Measure resistance between coil connector terminal B and ground. • Is resistance **more than 10 kilohms**?	Yes	Replace coil. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Repair wiring harness.
7	**INSPECT COIL OUTPUT SIGNAL CIRCUIT** • Connect coil and PCM connectors. • Turn ignition switch to ON position. • Measure voltage at terminal A of coil connector. • Is voltage **more than 8 V**?	Yes	Replace coil. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Go to next step.
8	**INSPECT COIL OUTPUT SIGNAL CIRCUIT** • Turn ignition switch to LOCK position. • Disconnect coil connector. • Turn ignition switch to ON position. • Measure voltage at terminal A of coil connector. • Is voltage **more than 8 V**?	Yes	Replace coil. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Go to next step.
9	**INSPECT COMMUNICATION CIRCUIT (OUTPUT) FOR CONTINUITY** • Turn ignition switch to LOCK position. • Disconnect PCM connector. • Is there continuity between coil terminal A and PCM terminal 2Q (L3) or 66 (AJ)?	Yes	Go to next step.
		No	Repair wiring harness.
10	**INSPECT COIL OUTPUT SIGNAL CIRCUIT** • Measure resistance between PCM terminal 2Q (L3) or 66 (AJ) and ground. • Is resistance **more than 10 kilohms**?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Repair wiring harness.

SECURITY LIGHT: DTC 12 (WDS OR EQUIVALENT: DTC B2103)

E6U090267000W05

DTC 12 (B2103)	Coil failure.
POSSIBLE CAUSE	• Defective coil • Poor connection of coil connector

Diagnostic procedure

STEP	INSPECTION		ACTION
–	**INSPECT CONNECTOR CONNECTION** • Is connector of coil and PCM connected securely?	Yes	Replace coil. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	Connect connector securely.

SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC B1600)

E6U090267000W06

DTC 13 (B1600)	ID number is not received.
POSSIBLE CAUSE	• No transponder in the key • Defective transponder in the key (ID number is not output.) • Defective coil • Defective PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC B1600?	Yes	Go to Step 3.
		No	Go to next step.
2	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC B2431?	Yes	Go to SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: B2431).
		No	Go to next step.
3	**VERIFY VALID KEY** • Is there any key, other than the one that caused displayed DTC, which can start the engine?	Yes	Go to Step 5.
		No	Go to next step.
4	**VERIFY WHETHER MALFUNCTION IS IN COIL OR KEY** • Using **SST** (WDS or equivalent) register an additional key. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]) • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC B1600 again?	Yes	Replace coil, then go to step 6. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
5	**VERIFY WHETHER MALFUNCTION IS IN COIL OR KEY** • Using any other valid key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC B1600 again?	Yes	Replace coil, then go to next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
6	**INSPECT PCM** • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC B1600 again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Troubleshooting is completed.

SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: DTC B2431)

E6U090267000W07

DTC 13 (B2431)	ID number programing failure.
POSSIBLE CAUSE	• The procedure fails to program the transponder into PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC B2431?	Yes	Go to Step 3.
		No	Go to next step.
2	**VERIFY DTC USING SST** • Does **SST** (WDS or equivalent) indicate DTC B1600?	Yes	Go to SECURITY LIGHT: DTC 13 (WDS OR EQUIVALENT: B1600).
		No	Go to next step.
3	**INSPECT PCM** • Erase key ID number using **SST** (WDS or equivalent) and register key ID number. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]) • Using registered key, turn ignition switch to ON position. • Does **SST** (WDS or equivalent) indicate DTC B2431 again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Troubleshooting is completed.

SECURITY LIGHT: DTC 14 (WDS OR EQUIVALENT: DTC B1602)

E6U090267000W08

DTC 14 (B1602)	PCM received invalid format of ID number from key (transponder)
POSSIBLE CAUSE	• Defective transponder in the key • Defective coil • Defective PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FOR OTHER PROPER KEYS** • Using any other valid key, turn ignition switch to ON position. • If there are no other valid keys, then register an additional key using **SST** (WDS or equivalent) and turn ignition switch to ON position. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]) • Does security light or **SST** (WDS or equivalent) indicate DTC 14 (B1602) again?	Yes	Replace coil, then go to next step. (See 09–14–28 COIL REMOVAL/INSTALLATION)
		No	• Dispose of defective key. • Duplicate key if necessary. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
2	**INSPECT PCM** • Turn ignition switch to ON position with the registered key. • Does security light or **SST** (WDS or equivalent) indicate DTC 14 (B1602) again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Troubleshooting is completed.

SECURITY LIGHT: DTC 15 (WDS OR EQUIVALENT: DTC B1601)

E6U090267000W09

DTC 15 (B1601)	PCM received incorrect ID number from key (transponder).
POSSIBLE CAUSE	• No keys have been registered after installation of new PCM • Unregistered key detected • Attempt made to register a ninth key **Note** • A maximum of only eight keys can be registered for a single vehicle. • Defective PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY REGISTERED KEY IN PCM** • Check following PID/DATA monitor using **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 0?	Yes	Go to next step.
		No	Go to Step 3.
2	**VERIFY REGISTERED KEY IN PCM** • Check following PID/DATA monitor using **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 8?	Yes	• Erase key ID number using **SST** (WDS or equivalent) and register key ID number. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]) • Go to next step.
		No	Go to next step.
3	**INSPECT PCM** • Erase key ID number using **SST** (WDS or equivalent) and register key ID number. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]) • Using registered key, turn ignition switch to ON position. • Does security light or **SST** (WDS or equivalent) indicate DTC 15 (B1601) again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Troubleshooting is completed.

SECURITY LIGHT: DTC 21 (WDS OR EQUIVALENT: DTC B1213)

E6U090267000W10

DTC 21 (B1213)	Number of valid keys is below minimum.
POSSIBLE CAUSE	• Less than two valid keys

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY NUMBER OF VALID KEYS** • Check following PID/DATA monitor with **SST** (WDS or equivalent). — NUMKEYS • Is NUMKEYS displayed more than 2? **Note** • To start the engine, two or more keys need to be registered.	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	• Erase key ID numbers and register necessary key ID numbers. • Go to next step.
2	**VERIFY DTC** • Does security light or **SST** (WDS or equivalent) indicate DTC 21 (B1213) again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Troubleshooting is completed.

SECURITY LIGHT: NOT ILLUMINATED (WDS OR EQUIVALENT: DTC B1342)

E6U090267000W11

Not illuminated (B1342)	PCM is defective
POSSIBLE CAUSE	• Defective PCM

Diagnostic procedure

STEP	INSPECTION		ACTION
–	**INSPECT PCM** • Turn ignition switch to ON position from LOCK again. • Does **SST** (WDS or equivalent) indicate DTC B1342 again?	Yes	Replace PCM and reprogram immobilizer system. (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Connect connectors properly.

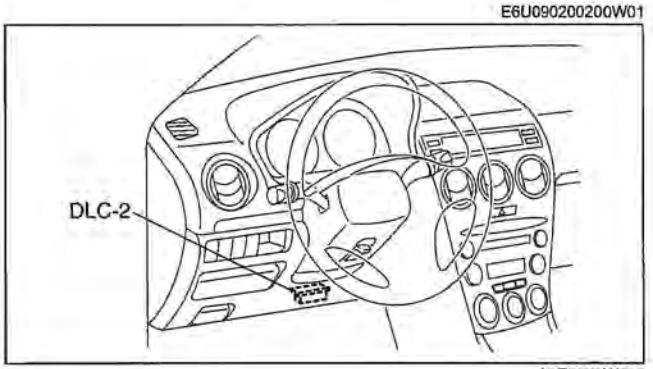
DTC INSPECTION [BCM]

1. Connect the WDS or equivalent to the DLC-2.
2. Verify if any DTCs are displayed.
   - If any DTCs are displayed, perform the troubleshooting according to the corresponding DTC inspection.
3. Disconnect the WDS or equivalent.

E6U090200200W01



A6E3970W002

DTC TABLE [BCM]

E6U090200200W02

DTC No.	Description	Detection condition	Page
1317	Battery voltage high	Input voltage from the battery is excessively high	(See 09–02G–2 DTC B1317.)
B1318	Battery voltage low	Input voltage from the battery is excessively low	(See 09–02G–3 DTC B1318.)
B1342	ECU is faulted	BCM microcomputer malfunction	(See 09–02G–4 DTC B1342.)
B2572	Driver door lock switch short to ground	Short to GND in wiring harness between BCM and driver-side door lock-link switch	(See 09–02G–5 DTC B2572.)
B2721	Trunk lid ajar output short to ground	Short to GND in wiring harness between BCM and trunk compartment light switch	(See 09–02G–6 DTC B2721.)
B1873	Turn signal/hazard power feed circuit short to ground	Short to GND in wiring harness between BCM and hazard warning switch	(See 09–02G–7 DTC B1873.)
B1320	Door ajar LF circuit open	Open circuit in wiring harness between BCM and door switch (driver-side)	(See 09–02G–8 DTC B1320.)
B1328	Door ajar RF circuit open	Open circuit in wiring harness between BCM and door switch (passenger-side)	(See 09–02G–9 DTC B1328.)
B1572	Door ajar LR circuit open	Open circuit in wiring harness between BCM and door switch (LH)	(See 09–02G–10 DTC B1572.)
B1614	Rear wiper interval switch input circuit short to ground	Short to GND in wiring harness between BCM and rear wiper and washer switch (INT)	(See 09–02G–11 DTC B1614.)
B1520	Hood latch switch circuit open	Open circuit in wiring harness between BCM and hood latch switch	(See 09–02G–12 DTC B1520.)
B1506	Light turn signal right circuit short to ground	Short to GND in wiring harness between BCM and turn switch	(See 09–02G–13 DTC B1506.)
B2218	Door lock switch circuit short to ground	Short to GND in wiring harness between BCM and door lock switch	(See 09–02G–14 DTC B2218.)
1311	Unlock switch circuit open	Open circuit in wiring harness between BCM and driver-side door lock-link switch (unlock signal)	(See 09–02G–15 DTC B1311.)

PID/DATA MONITOR TABLE [BCM]

E6U090200200W03

PID/data monitor item	Input/output part	Unit/Condition (Tester display)	BCM terminal
C_LOCK_SW	Door lock switch	LOCK/OFF	7M
C_UNLK_SW		UNLOCK/OFF	
CCNT_GE	DTC	—	—
DRSW_REAR	Rear door switch (LH/RH)	OPEN/CLOSE	7D, 1F
DRSW_P	Front door switch (passenger's side)	OPEN/CLOSE	7F
DRSW_D	Front door switch (driver's side)	OPEN/CLOSE	7B
HAZARD	Hazard warning switch	On/Off	4G
HOOD_SW	Hood switch	OPEN/CLOSE	8M
LLSW_D	Driver-side door lock-link switch	LOCK/UNLOCK	7C, 7E
LLSW_P_R	Except driver-side door lock-link switch	LOCK/UNLOCK	7G
TR/LG_SW	Trunk compartment light switch	OPEN/CLOSE	2F
TRNK_UNLK	Trunk lid key cylinder switch	UNLOCK/OFF	2L
TURN_SW_L	Turn switch (LH)	On/Off	4C
TURN_SW_R	Turn switch (RH)	On/Off	4E
WPINT_REAR	Rear wiper switch (INT position)	On/Off	4I

DTC B1317

E6U090200200W04

DTC B1317	Battery voltage high
DETECTION CONDITION	Input voltage from the battery is excessively high
POSSIBLE CAUSE	• Battery malfunction • Generator malfunction • BCM malfunction

Diagnostic procedure

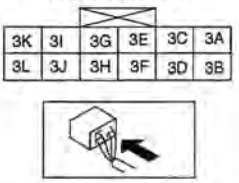
STEP	INSPECTION		ACTION
1	**INSPECT DTC FROM PCM** • Connect the WDS or equivalent to the DLC-2. • Are any DTCs from the PCM displayed?	Yes	Perform DTC inspection. (See 01–02A–18 DTC TABLE [L3].) (See 01–02B–14 DTC TABLE [L3 WITH TC].) (See 01–02C–13 DTC TABLE [AJ].) Go to the next step.
		No	Go to the next step.
2	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the BCM memory using the WDS or equivalent. • Turn the ignition switch to LOCK position then ON position. • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1318

E6U090200200W05

DTC B1318	Battery voltage low
DETECTION CONDITION	Input voltage from the battery is excessively low
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 3J and battery • Short to GND in wiring harness between BCM terminal 3J and battery • Battery malfunction • Generator malfunction • BCM malfunction

BCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DTC FROM PCM** • Connect the WDS or equivalent to the DLC-2. • Are any DTCs from the PCM displayed?	Yes	Perform DTC inspection. (See 01–02A–18 DTC TABLE [L3].) (See 01–02B–14 DTC TABLE [L3 WITH TC].) (See 01–02C–13 DTC TABLE [AJ].) Go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT BCM POWER SUPPLY CIRCUIT FOR OPEN CIRCUIT** • Disconnect the negative battery cable. • Disconnect the positive battery cable. • Inspect for continuity between following terminals: — BCM terminal 3J (wiring harness-side) — battery positive terminal (wiring harness-side) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT BCM POWER SUPPLY CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — BCM terminal 3J (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to the next step.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Clear the DTC from the BCM memory using the WDS or equivalent. • Turn the ignition switch to LOCK position then ON position. • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1342

E6U09020020CW08

DTC B1342	ECU is faulted
DETECTION CONDITION	BCM microcomputer malfunction
POSSIBLE CAUSE	• BCM microcomputer malfunction

Diagnostic procedure

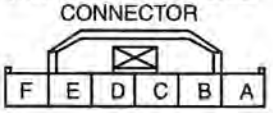
STEP	INSPECTION		ACTION
1	INSPECT DTC • Clear the DTC from the BCM memory using the WDS or equivalent. • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2572

E6U090200200W07

DTC B2572	Driver door lock switch short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and driver-side door lock-link switch
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 7E and front door lock-link switch (driver-side) terminal D • Front door latch and lock actuator (driver-side) malfunction • BCM malfunction

DOOR LOCK-LINK SWITCH WIRING HARNESS-SIDE CONNECTOR



BCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between BCM terminal 7E (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09–14–8 FRONT DOOR LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09–14–8 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

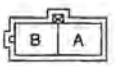
DTC B2721

E6U090200200W08

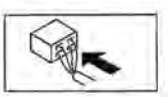
DTC B2721	Trunk lid/liftgate ajar output short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and trunk compartment light switch (4SD) or cargo compartment light switch (5HB, WGN)
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 2F and trunk compartment light switch terminal C or cargo compartment light switch terminal B • Trunk compartment light switch malfunction • Cargo compartment light switch malfunction • BCM malfunction

TRUNK COMPARTMENT LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR

CARGO COMPARTMENT LIGHT SWITCH WIRING HARNESS-SIDE CONNECTOR



BCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TRUNK COMPARTMENT LIGHT SWITCH CONNECTOR** • Disconnect the trunk compartment light switch connector. • Inspect the trunk/cargo compartment light switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT TRUNK COMPARTMENT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between BCM terminal 2F (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT TRUNK/CARGO COMPARTMENT LIGHT SWITCH** • Inspect the trunk/cargo compartment light switch. (See 09–18–34 TRUNK COMPARTMENT LIGHT SWITCH INSPECTION [SPORT SEDAN].) (See 09–18–31 CARGO COMPARTMENT LIGHT SWITCH INSPECTION [5-DOOR, SPORT WAGON].) • Is there any malfunction?	Yes	Replace the trunk/cargo compartment light switch, then go to the next step. (See 09–14–24 TRUNK LID OPENER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–14–25 LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1873

E6U0902002OOW09

DTC B1873	Turn signal/hazard power feed circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and hazard warning switch
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 4G and hazard warning switch terminal 1X • Hazard warning switch malfunction • BCM malfunction

HAZARD WARNING SWITCH WIRING HARNESS-SIDE CONNECTOR

1W	1U	1S	1Q	1O	1M	1K	1I	1G	1E	1C	1A
1X	1V	1T	1R	1P	1N	1L	1J	1H	1F	1D	1B

BCM WIRING HARNESS-SIDE CONNECTOR

4O	4M	4K	4I	4G	4E	4C	4A
4P	4N	4L	4J	4H	4F	4D	4B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT HAZARD WARNING SWITCH CONNECTOR** • Disconnect the hazard warning switch connector. • Inspect the hazard warning switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT HAZARD WARNING SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between BCM terminal 4G (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT HAZARD WARNING SWITCH** • Inspect the hazard warning switch. (See 09–18–21 WARNING SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the hazard warning switch, then go to the next step. (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1320

E6U090200200W10

DTC B1320	Door ajar (driver-side) circuit open
DETECTION CONDITION	Open circuit in wiring harness between BCM and front door switch (driver-side)
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 7B and door switch (driver-side) terminal A • Door switch (driver-side) malfunction • BCM malfunction

DOOR SWITCH (DRIVER-SIDE) WIRING HARNESS-SIDE CONNECTOR

BCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DOOR SWITCH (DRIVER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the door switch (driver-side) connector. • Inspect the door switch (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DOOR SWITCH (DRIVER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between BCM terminal 7B (wiring harness-side) and door switch (driver-side) terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09–18–36 DOOR SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the door switch (driver-side), then go to the next step. (See 09–18–36 DOOR SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1328

E6U090200200W11

DTC B1328	Door ajar (passenger-side) circuit open
DETECTION CONDITION	Open circuit in wiring harness between BCM and door switch (passenger-side)
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 7F and door switch (passenger-side) terminal G • Door switch (passenger-side) malfunction • BCM malfunction

DOOR SWITCH (PASSENGER-SIDE) WIRING HARNESS-SIDE CONNECTOR

BCM WIRING HARNESS-SIDE CONNECTOR

7W	7U	7S	7Q	7O	7M	7K	7I	7G	7E	7C	7A
7X	7V	7T	7R	7P	7N	7L	7J	7H	7F	7D	7B

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT DOOR SWITCH (PASSENGER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the door switch (passenger-side) connector. • Inspect the door switch (passenger-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DOOR SWITCH (PASSENGER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between BCM terminal 7F (wiring harness-side) and door switch (passenger-side) terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT DOOR SWITCH (PASSENGER-SIDE)** • Inspect the door switch (passenger-side). (See 09–18–36 DOOR SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the door switch (passenger-side), then go to the next step. (See 09–18–36 DOOR SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

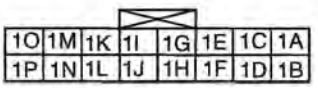
DTC B1572

E6U090200200W12

DTC B1572	Door ajar (RL/RR) circuit open
DETECTION CONDITION	Open circuit in wiring harness between BCM and door switch (Rear, LH) Open circuit in wiring harness between BCM and door switch (Rear, RH)
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 1F and door switch (Rear, LH) terminal A • Open circuit in wiring harness between BCM terminal 7D and door switch (Rear, RH) terminal A • Door switch malfunction • BCM malfunction

DOOR SWITCH (RL/RR) WIRING HARNESS-SIDE CONNECTOR

BCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

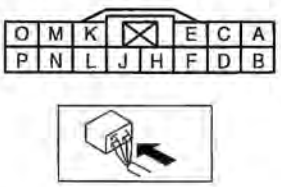
STEP	INSPECTION		ACTION
1	**INSPECT DOOR SWITCH (LH) CONNECTOR** • Turn the ignition switch off. • Disconnect the door switch (RR or RL) connector. • Inspect the door switch (RR or RL) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DOOR SWITCH (LH) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between BCM terminal (wiring harness-side) and door switch (LH) terminal (wiring harness-side). — 1F—A (RL) — 7D—A (RR) • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT DOOR SWITCH (LH)** • Inspect the door switch (RR/RL). (See 09–18–36 DOOR SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the door switch (RR/RL), then go to the next step. (See 09–18–36 DOOR SWITCH REMOVAL/ INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B1614

E6U090200200W13

DTC B1614	Rear wiper INT switch input circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and rear wiper and washer switch (INT)
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 4I and windshield wiper and washer switch terminal H • Windshield wiper and washer switch malfunction • BCM malfunction

WINDSHIELD WIPER AND WASHER SWITCH WIRING HARNESS-SIDE CONNECTOR



BCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH CONNECTOR** • Disconnect the windshield wiper and washer switch connector. • Inspect the windshield wiper and washer switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between BCM terminal 4I (wiring harness-side) and body GND. • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT WINDSHIELD WIPER AND WASHER SWITCH** • Inspect the windshield wiper and washer switch. (See 09–19–10 WIPER AND WASHER SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the windshield wiper and washer switch, then go to the next step. (See 09–19–9 WIPER AND WASHER SWITCH REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

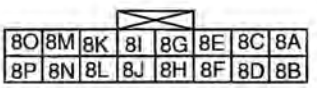
DTC B1520

E6U09O200200W15

DTC B1520	Hood latch switch circuit open
DETECTION CONDITION	Open circuit in wiring harness between BCM and hood latch switch
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 8M and hood latch switch terminal A • Hood latch switch malfunction • BCM malfunction

HOOD LATCH SWITCH WIRING HARNESS-SIDE CONNECTOR

BCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

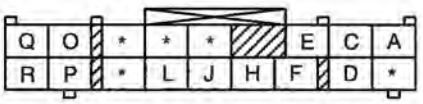
STEP	INSPECTION		ACTION
1	**INSPECT HOOD LATCH SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the hood latch switch connector. • Inspect the hood latch switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT HOOD LATCH SWITCH SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between BCM terminal 8M (wiring harness-side) and hood latch switch terminal A (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT HOOD LATCH SWITCH** • Inspect the hood latch switch. (See 09–14–27 HOOD SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the hood latch switch, then go to the next step. (See 09–10–3 HOOD REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–10–4 HOOD REMOVAL/INSTALLATION [L3 WITH TC].)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

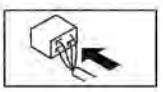
DTC B1506

E6U090200200W16

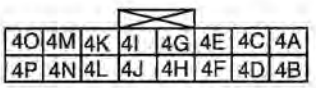
DTC B1506	Turn signal right circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and turn switch
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 4C and light switch terminal A (LH) • Short to GND in wiring harness between BCM terminal 4E and light switch terminal E (RH) • Light switch malfunction • BCM malfunction

TURN SWITCH WIRING HARNESS-SIDE CONNECTOR





BCM WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT LIGHT SWITCH CONNECTOR** • Disconnect the light switch connector. • Inspect the light switch connector terminals for poor connection (such as damaged/ pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT LIGHT SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — BCM terminal 4C (wiring harness-side) — body GND — BCM terminal 4E (wiring harness-side) — body GND • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. • Is there any malfunction?	Yes	Replace the light switch, then go to the next step. (See 09–18–21 LIGHT SWITCH INSPECTION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

DTC B2218

E6U090200200W14

DTC B2218	Door lock switch circuit short to ground
DETECTION CONDITION	Short to GND in wiring harness between BCM and door lock switch
POSSIBLE CAUSE	• Short to GND in wiring harness between BCM terminal 7M and door lock switch (driver's side) terminal A • Short to GND in wiring harness between BCM terminal 7M and door lock switch (passenger's side) terminal A • Door lock switch malfunction • BCM malfunction

DOOR LOCK SWITCH WIRING HARNESS-SIDE CONNECTOR

BCM WIRING HARNESS-SIDE CONNECTOR

7W	7U	7S	7Q	7O	7M	7K	7I	7G	7E	7C	7A
7X	7V	7T	7R	7P	7N	7L	7J	7H	7F	7D	7B

Diagnostic procedure

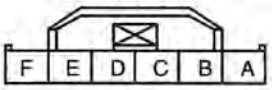
STEP	INSPECTION		ACTION
1	**INSPECT DOOR LOCK SWITCH CONNECTOR** • Turn the ignition switch off. • Disconnect the door lock switch connector. • Inspect the door lock switch connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT DOOR LOCK SWITCH SIGNAL CIRCUIT FOR SHORT TO GND** • Inspect for continuity between following terminals: — BCM terminal 7M (wiring harness-side) — door lock switch (driver's side) terminal A (wiring harness-side) — BCM terminal 7M (wiring harness-side) — door lock switch (passenger's side) terminal A (wiring harness-side) • Is there continuity?	Yes	Repair or replace the wiring harness for a possible short to GND, then go to Step 5.
		No	Go to the next step.
4	**INSPECT DOOR LOCK SWITCH** • Inspect the door lock switch. (See 09–14–11 DOOR LOCK SWITCH INSPECTION.) • Is there any malfunction?	Yes	Replace the door lock switch, then go to Step 5.
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	Troubleshooting completed.

DTC B1311

E6U090200200W17

DTC B1311	Unlock switch circuit open
DETECTION CONDITION	Open circuit in wiring harness between BCM and driver-side door lock-link switch (unlock signal)
POSSIBLE CAUSE	• Open circuit in wiring harness between BCM terminal 7C and door lock-link switch (driver-side) terminal E • Front door latch and lock actuator malfunction • BCM malfunction

DOOR LOCK-LINK SWITCH WIRING HARNESS-SIDE CONNECTOR



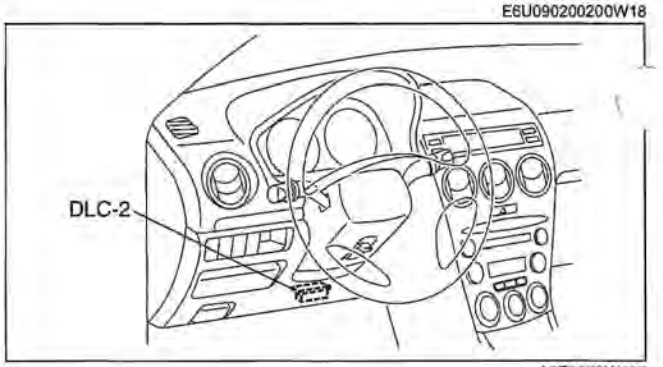
BCM WIRING HARNESS-SIDE CONNECTOR

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) CONNECTOR** • Turn the ignition switch off. • Disconnect the front door latch and lock actuator (driver-side) connector. • Inspect the front door latch and lock actuator (driver-side) connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
2	**INSPECT BCM CONNECTOR** • Disconnect the BCM connector. • Inspect the BCM connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is there any malfunction?	Yes	Repair or replace the terminal, then go to Step 5.
		No	Go to the next step.
3	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE) SIGNAL CIRCUIT FOR OPEN CIRCUIT** • Inspect for continuity between BCM terminal 7C (wiring harness-side) and front door latch and lock actuator (driver-side) terminal E (wiring harness-side). • Is there continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness for a possible open circuit, then go to Step 5.
4	**INSPECT FRONT DOOR LATCH AND LOCK ACTUATOR (DRIVER-SIDE)** • Inspect the front door latch and lock actuator (driver-side). (See 09–14–8 FRONT DOOR LOCK ACTUATOR INSPECTION.) • Is there any malfunction?	Yes	Replace the front door latch and lock actuator (driver-side), then go to the next step. (See 09–14–8 FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION.)
		No	Go to the next step.
5	**VERIFY TROUBLESHOOTING COMPLETED** • Make sure to reconnect all disconnected connectors. • Perform the self-test. (See 09–02G–16 BCM SELF-TEST.) • Is the same DTC present?	Yes	Replace the BCM. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)
		No	DTC troubleshooting completed.

BCM SELF-TEST

E6U090200200W18



A6E3970W002

1. Connect the WDS or equivalent to the DLC-2.
2. Set up the WDS or equivalent (including the vehicle recognition).
3. Verify the following vehicle conditions:
   - Ignition switch is at ON position.
   - All the switches are turned off (except the ignition switch).
   - All the doors, hood, trunk lid, and liftgate are closed.
   - All the doors, and liftgate are unlocked.
   - Parking brake lever is pulled.
   - Hazard warning switch is turned to off.
   - Turn switch is turned to off.
   - Rear wiper switch is turned to off.
   - Door lock switch is not pressed.
4. Perform procedures according to directions on the WDS or equivalent screen.
5. Verify if any DTCs are displayed.
   - If any DTCs are displayed, perform the troubleshooting according to the corresponding DTC inspection.
6. Disconnect the WDS or equivalent.

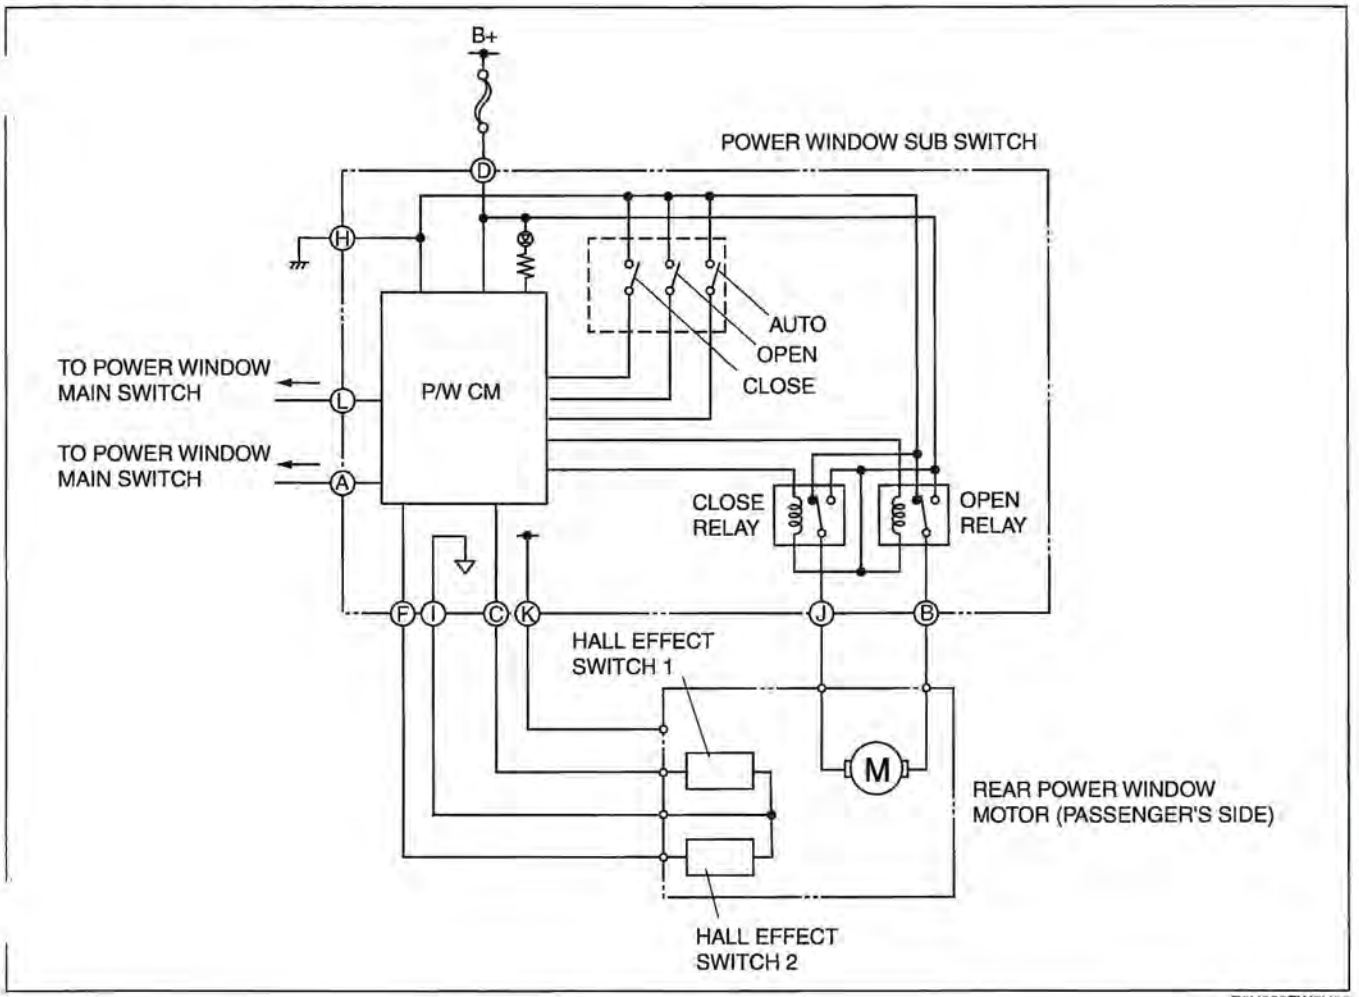
Power Window Subswitch



E6U903ZW5H08

INTERMITTENT CONCERN TROUBLESHOOTING

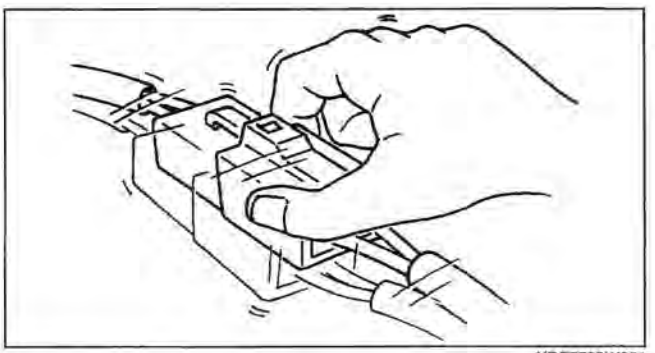
E6U090358000W21

Vibration Method

- If a malfunction occurs or becomes worse while driving on a rough road or when the engine is vibrating, perform following the steps:

Note

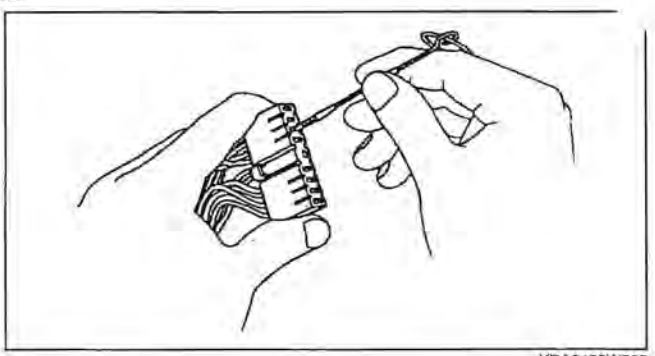
- There are several reasons why vehicle or engine vibration could cause an electrical malfunction. Some of the things to inspect for:
  - — Connectors not fully seated.
  - — Wiring harnesses not having full play.
  - — Wires laying across brackets or moving parts.
  - — Wires routed too close to hot parts.
- An improperly routed, improperly clamped, or loose wiring harness can cause wiring to become pinched between parts.
- The connector joints, points of vibration, and places where wiring harnesses pass through the firewall, body panels are the major areas to be inspected.
- Inspect for DTCs or malfunctions by slightly shaking wiring harnesses and connectors that are suspected of causing the malfunction.



YDE7780W001

Connector Terminal Check Method

1. Inspect the connection condition of each female terminal.
2. Insert the male terminal into the female terminal to inspect for looseness.



YDA8180W000

FOREWORD

E6U090358000W22

- Always perform basic power window system inspection before troubleshooting.
- Troubleshooting procedures provide information unique to malfunctions of the automatic window return function.

BASIC POWER WINDOW SYSTEM INSPECTION

E6U090358000W23

Manual Mode Function Inspection

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Turn the power-cut switch to UNLOCK. • Does each door glass move up and down in manual mode using the power window subswitch?	Yes	Go to the next step.
		No	• Inspect the following items: — Power window main switch (power-cut switch system malfunction) — Power window subswitch power supply fuses — Power window subswitch ground wiring harness — Power window subswitch power supply wiring harnesses — Wiring harness between power window subswitch and power window motor — Power window subswitch — Power window motor • Repair or replace the malfunctioning part, then go to the next step.
2	• Does the driver-side door glass move up and down in manual mode using the power window main switch?	Yes	Go to the next step.
		No	• Inspect the following items: — Power window main switch power supply fuses — Power window main switch ground wiring harness — Power window main switch power supply wiring harnesses — Wiring harness between power window main switch and power window motor — Power window main switch • Repair or replace the malfunctioning part, then go to the next step.
3	• Does each other door glass other than the driver-side door glass move up and down in manual mode using the power window main switch?	Yes	Go to the next step.
		No	• Perform the power window initialization procedure for any door glass that does not move up and down, and reinspect. (See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) • If it does not move up and down upon reinspection, inspect the following: — Wiring harness between power window main switch and subswitch • Repair or replace the malfunctioning part, then go to the next step.
4	• Turn the power-cut switch to LOCK. • Push/pull the power window main switch (switches for all windows in manual mode). • Does only driver-side front door glass move up and down?	Yes	• Manual mode function is normal. • Go to the automatic mode function inspection.
		No	Replace the power window main switch, then go to the automatic mode function inspection (power-cut switch system malfunction).

Automatic Mode Function Inspection

Note

- Perform the following inspection for the power window main switch and the power window subswitches fr each window.

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Operate the power window switch in automatic mode. • Does the door glass move up and down in automatic mode?	Yes	Go to the next step.
		No	• Door glass does not move up and down in automatic mode: — Go to Step 1 of NO. 1 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE. • Door glass moves up and down in automatic mode, but door glass reverses: — Go to Step 1 of NO. 3 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE.
2	• Gently pull the power window switch while the door glass is moving down in automatic mode. • Does the glass stop?	Yes	Go to the next step.
		No	Replace the power window switch, then go to the automatic door glass return function inspection.
3	• Gently press the power window switch while the door glass is moving up in automatic mode. • Does the glass stop?	Yes	• Automatic mode function is normal. • Go to the automatic door glass return function inspection.
		No	Replace the power window switch, then go to the automatic door glass return function inspection.

Automatic Door Glass Return Function Inspection

Note

- Perform the following inspection for the power window main switch and the power window subswitches fo each window.
- With the switch held at auto-up, the door glass does not automatically reverse even when a foreign objec is encountered.

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Lower the door glass completely. • Use the power window switch to close the door glass in automatic mode. • Does the door glass automatically reverse even though the glass does not encounter a foreign object while it is moving up in automatic mode?	Yes	Go to Step 1 of NO. 3 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE.
		No	Go to the next step.
2	• Lower the door glass completely. • Take a hammer and hold it against the inside of the top of the window frame so that the door glass will hit its handle when it is closed. • Raise the door glass using automatic mode. • When the door glass hits the hammer handle, does it immediately reverse and move down to **approx. 200 mm {7.87 in}** from the completely closed position?	Yes	• Automatic door glass return function inspection is normal. • Go to the IG OFF timer function inspection.
		No	Go to Step 1 of NO. 2 DOOR GLASS DOES NOT REVERSE, EVEN WHEN ENCOUNTERING A FOREIGN OBJECT IN ITS PATH.

IG OFF Timer Function Inspection

STEP	INSPECTION		ACTION
1	• Close all doors. • Turn the ignition switch to the ON position. • In automatic mode, push down the power window main switch for the driver-side front door glass. The door glass should move down **within approx. 43 s** after ignition switch off. • In manual mode (finger continuously depressing the power window main switch), the door glass should move down **within approx. 43 s** after ignition switch off. • Does the driver-side front door glass move down?	Yes	Go to the next step.
		No	• Perform the driver-side power window initialization procedure, and reinspect.(See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) • If it does not move up and down upon reinspection, inspect the following: — Wiring harness for the door open/close signal system — Latch switch • Repair or replace the malfunctioning part, and reinspect. — If operation is not normal, replace the power window main switch, and then go to the next step.
2	• Turn the ignition switch to the ON position. • In automatic mode, pull up the power window main switch for the driver-side front door glass. The door glass does not move up **within approx. 43 s** after ignition switch off. • Verify that driver-side front door glass does not operate. • Does the driver-side front door glass move up?	Yes	• Perform the driver-side power window initialization procedure, and reinspect.(See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) — If operation is not normal, replace the power window main switch, then go to the next step.
		No	Go to the next step.
3	• Turn the ignition switch to the ON position. • Lower the driver-side front door glass completely. • Take a hammer and hold it against the inside of the top of the door glass frame so that the door glass will hit its handle when it is closing. • Raise the door glass using manual mode. • When the door glass hits the hammer handle, does it immediately reverse and move down to **approx. 200 mm {7.87 in}** from the completely closed position?	Yes	Go to the next step.
		No	• Perform the driver-side power window initialization procedure, and reinspect.(See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) — If operation is not normal, replace the power window main switch, then go to the next step.
4	• Open front door. • Turn the ignition switch to the ON position. • Push/pull the power window main switch for the door glass **within approx. 43 s** after ignition switch off. • Verify that the door glass does not move up or down. • Does the door glass move up or down?	Yes	• Inspect the door switch and related wiring harness. • If above parts are normal, replace the power window main switch, then go to the next step. • If the above parts have any malfunction, repair or replace the malfunction part, then go to the next step.
		No	Go to the next step.
5	• Close front door. • Turn the ignition switch to the ON position. • Push/pull the power window main switch for door glass after **approx. 60 s** after ignition switch off. • Verify that the door glass does not move up or down. • Does the door glass move up or down?	Yes	• Perform the driver-side power window initialization procedure, and reinspect.(See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) — If operation is not normal, replace the power window main switch, then go to the two-step down function inspection.
		No	• The IG OFF timer function is normal. • Go to the two-step down function inspection.

Two-step Down Function Inspection

- The distance the door glass opens can be changed using the two-step down function (**approx. 20—100 mm {0.79—3.93 in}**).
- The two-step down function can be made inoperative. (The function is operative at the initial setting.)
- The two-step down function does not function during IG OFF timer.

Note

- Perform the following inspection for the power window main switch and the power window subswitches for each window.

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Raise door glass completely. • When the door glass is lowered using manual mode, does it move down to **approx. 30 mm {1.2 in}** from the completely closed position and stop for 1 s? (This inspection cannot be performed during IG OFF timer function operation.)	Yes	• Two-step down function is normal. • Reinspect malfunction symptoms.
		No	• Perform the power window initialization procedure and verify auto-up/down operation.(See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) — If the automatic function does not operate, go to Automatic Door Glass Return Function Inspection. — If the automatic function operates but the two-step down function does not, replace the power window switch.

SYMPTOM TROUBLESHOOTING CHART

E6U090358000W24

No.	TROUBLESHOOTING ITEM	PAGE
1	Door glass does not move up and down in automatic mode	(See 09–03A–9 NO. 1 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE.)
2	Door glass does not reverse, even when encountering a foreign object in its path.	(See 09–03A–12 NO. 2 DOOR GLASS DOES NOT REVERSE, EVEN WHEN ENCOUNTERING A FOREIGN OBJECT IN ITS PATH.)
3	Door glass does not reverse, even when encountering a foreign object in its path.	(See 09–03A–12 NO. 3 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE.)
4	Abnormal noise during the power window operation	(See 09–03A–14 NO. 4 ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENING OR CLOSING.)

NO. 1 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE

E6U090358000W25

Note
- Perform the following inspection for the power window system component parts of windows where the door glass cannot be operated automatically.

1	Door glass does not move up and down in automatic mode
POSSIBLE CAUSE	• Open circuit or short to power supply in sensor 1 signal, ground signal from wiring harness (between power window switch and power window motor), inner power window switch, or inner motor: Steps 3–6 • Open circuit or short to power supply/ground in sensor 2 signal from wiring harness (between power window switch and power window motor), inner power window switch, or inner motor: Steps 7–11 **Note** • The automatic function and the IG OFF timer function do not operate while the power window switch is in fail-safe mode. The fail-safe operates when sensor 1, and/or sensor 2, and/or the sensor power supply malfunctions. • Sensor 1 and/or 2 malfunction — When the door glass is moving up and down, the power window switch cannot sense a pulse signal from sensor 1 during the time it senses 5 pulses (2.5 cycles) from sensor 2. — When the door glass is moving up and down, the switch cannot sense a pulse signal from sensor 2 during the time it senses 5 pulses (2.5 cycles) from sensor 1. — There are three abnormal pulses in a pulse signal while the door glass is moving up or down. — There are 20 cycle pulses from a closed position while the door glass is moving up. — There is no pulse signal for 1 s after the door glass is moved down.

09-03

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT WHETHER POWER WINDOW SWITCH ENTERS FAIL-SAFE MODE OR NOT** • Did the door glass move up or down in automatic mode?	Yes	Reinspect malfunction symptoms.
		No	Go to the next step. (Power window switch may enter fail-safe mode.)
2	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Inspect the voltage at the following power window switch terminals (sensor 1 signal): — Driver's side: 2C — Passenger's side: C • Does the voltage alternate between **0 V** and **approx. 12 V** when the door glass is moving up and down?	Yes	Go to Step 7.
		No	Go to the next step.
3	**VERIFY SENSOR 1 OUTPUT SIGNAL** • Turn the ignition switch to the ON position. • Inspect the voltage at the following power window motor terminals (sensor 1 signal): — terminal: A • Is the voltage alternate between **0 V** and **approx. 12 V** when the door glass is moving up and down in manual mode?	Yes	Go to the next step.
		No	Replace the power window motor, then go to Step 12.

STEP	INSPECTION		ACTION
4	**INSPECT WIRING HARNESS BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR FOR CONTINUITY** • Turn the ignition switch to the LOCK position. • Disconnect the power window switch connector. • Is there continuity between the following power window switch terminals and power window motor terminals? — Driver's side: • 2C–A (sensor 1 signal) • 2B–D (sensor power supply) • 2A–C (ground signal) — Passenger's side: • C–A (sensor 1 signal) • K–D (sensor power supply) • I–C (ground signal)	Yes	Go to the next step.
		No	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
5	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR POWER WINDOW SWITCH** • Turn the ignition switch to the ON position. • Inspect the voltage at the following power window switch terminals: — Driver's side • 2C (sensor 1 signal) • 2A (ground signal) — Passenger's side • C (sensor 1 signal) • I (ground signal) • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
		No	Replace the power window switch (open circuit or short to power supply in power window switch).
6	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Is there continuity between the following power window switch terminals (wiring harness-side) and ground? — Driver's side • 2C (sensor 1 signal) • 2B (sensor power supply) — Passenger's side • C (sensor 1 signal) • K (sensor power supply)	Yes	Replace the wiring harness between the power window switch and power window motor, then go to Step 12.
		No	Go to the next step.
7	**VERIFY WHETHER MALFUNCTION IS IN POWER WINDOW SWITCH OR ELSEWHERE** • Turn the ignition switch to the ON position. • Inspect the voltage at the following power window switch terminals. — Driver's side : 2D — Passenger's side : F • Does the voltage alternate between **0 V** and **approx. 12 V** when the door glass is moving up and down?	Yes	Replace the power window switch (malfunction in power window switch automatic mode control), then go to Step 11.
		No	Go to the next step.
8	**VERIFY SENSOR 2 OUTPUT SIGNAL** • Turn the ignition switch to the ON position. • Inspect the voltage at power window motor terminal B (sensor 2 signal). • Does the voltage alternate between **0 V** and **approx. 12 V** when door glass is moving up and down?	Yes	Go to the next step.
		No	Replace the power window motor, then go to Step 12.

STEP	INSPECTION		ACTION
9	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Disconnect the power window switch connector and power window motor connector. • Is there continuity between the following power window switch terminals and power window motor terminals? — Driver's side : 2D-B (sensor 2 signal) — Passenger's side :F-B(sensor 2signl)	Yes	Go to the next step.
		No	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
10	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR ELSEWHERE** • Is there continuity between the following power window switch terminals (sensor 2 signal) — Driver's side : 2D — Passenger's side : F	Yes	Repair the wiring harness between the power window switch and power window motor, then go to Step 12.
		No	Go to the next step.
11	**VERIFY WHETHER MALFUNCTION IS IN WIRING HARNESS (BETWEEN POWER WINDOW SWITCH AND POWER WINDOW MOTOR) OR POWER WINDOW SWITCH** • Turn the ignition switch to the ON position. • Measure the voltage at the following power window switch terminals (sensor 2 signal). • Is there continuity between the following power windowswitch terminals (sensor 2 signal) — Driver's side : 2D — Passenger's side :F • Is the voltage **approx. 12 V**?	Yes	Repair the wiring harness between the power window switch and front driver-side power window motor, then go to the next step.
		No	Replace the power window switch (open circuit or short to power supply/ground in power window switch), then go to the next step.
12	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Is malfunction no longer present?	Yes	• Troubleshooting completed. • Explain repairs to the customer.
		No	Reinspect malfunction symptoms, then repeat from Step 1 if malfunction recurs.

NO. 2 DOOR GLASS DOES NOT REVERSE, EVEN WHEN ENCOUNTERING A FOREIGN OBJECT IN ITS PATH

E6U090358000W26

Note
- Perform the following inspection for the power window system component parts of the windows where th door glass does not reverse, even when encountering a foreign object in its path.

2	**Door glass does not reverse, even when encountering a foreign object in its path.**
POSSIBLE CAUSE	• Automatic window return range did not reset after battery disconnection

Diagnostic procedure

STEP	INSPECTION		ACTION
1	**VERIFY CUSTOMER COMPLAINT** • Did the customer complain that the door glass did not reverse when near complete closed position?	Yes	• The system is normal. • Explain to the customer that automatic window return power window system does not operate when near complete closed position.
		No	Go to the next step.
2	**RESET REVERSE AREA STORED IN DOOR GLASS MOTOR** • Perform the power window initialization procedure. (See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.) • Did malfunction disappear?	Yes	• Troubleshooting completed. • Explain to the customer that misadjustment of automatic window return range was the problem.
		No	Replace the power window switch. • Verify auto-up/down operation and if the automatic function does not operate, go to Step 1 of NO. 1 DOOR GLASS DOES NOT MOVE UP AND DOWN IN AUTOMATIC MODE. • If the automatic function operates, replace the power window switch.

NO. 3 DOOR GLASS REVERSES EVEN THOUGH THE GLASS DOES NOT ENCOUNTER A FOREIGN OBJECT WHILE IT IS MOVING UP IN AUTOMATIC MODE

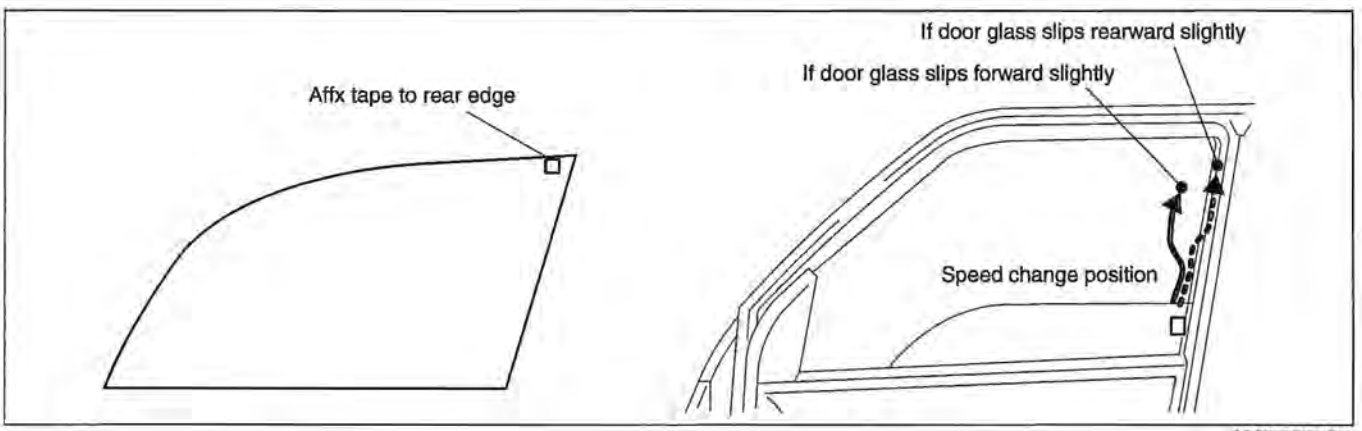
E6U090358000W27

Note
- Perform the following inspection for the power window system component parts of windows where the door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.

3	**Door glass reverses even though the glass does not encounter a foreign object while it is moving up in automatic mode.**
POSSIBLE CAUSE	• TOROUBLESHOOTING HINTS: increase sliding resistance of door glass while raising the glass. — Improper installation of side visor — Regulator motor malfunction — Pinch any foreign material between door glass and door glass run channel — Inadequate installation of carrier plate and door glass — Door glass run channel malfunction — Door glass guide malfunction **Note** • When the switch detects to pinch something, auto reverse pinch protection function operates to open the door glass automatically. • If the sliding resistance of door glass is increased and door glass raising speed is slow down, the auto reverse pinch protection function sometime operates. • If the door glass raising speed is slow down, inspect the following parts: — If door glass rotates forward slightly: inspect the vehicle front side of door glass guide and/or door glass run channel. — If door glass rotates backward slightly: inspect the vehicle rear side of door glass guide and/or door glass run channel.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Confirm the symptom. • Does the symptom occur under the following condition? — Bumping road — Opening/closing door	Yes	System is normal. (Explain to customer that this is normal operation on this system.)
		No	Go to the next step.
2	• Inspect the side visor installation condition. • Is the side visor normal?	Yes	Go to the next step.
		No	Install the side visor properly, then go to next step.
3	• Put any tape on the back side of the door glass. • Run the engine at idle. • Inspect the door glass operating speed. • Is there any speed cange?(e.g., slow down)	Yes	Put the mark the speed change position on either door shell or door glass run channel. Go to step 5.
		No	Go to the next step.
4	• Inspect the door glass operating speed again. • Is the speed change frequently (e.g.,5-6 times)?	Yes	Replace the regulator motor. Then go to step 8.
		No	Go to step 8.
5	• Is there any foreign material between door glass run channel and door glass? • Is there any rough surface on the sliding surface?	Yes	**If there is any foreign material:** • Remove the foreign material. **If there is any rough surface on the sliding surface:** • Replace the door glass run channel. • Confirm the symptom again. If there is a same symptom, return to step 3.
		No	Go to the next step.
6	• Inspect the installation condition of carrier plate and door glass. • Are both parts installed securely?	Yes	Go to the next step.
		No	Install them securely. Confirm the symptom again. If there is a same symptom, return to step 3
7	• Inspect the door glass run channel and door glass guide. • Are both parts normal?	Yes	Go to the next step.
		No	Install door glass run channel and door glass guide properly. Confirm the symptom again. If there is a same symptom, return to step 3.
8	• Inspect the door glass operating speed. • Is there any speed change?	Yes	Perform step 3 in this procedure again.
		No	Troubleshooting is completed.



DPE903BW1S01

NO. 4 ABNORMAL NOISE WHILE THE DOOR GLASS IS OPENING OR CLOSING

E6U090358000W29

4	Abnormal noise while the power window operation
POSSIBLE CAUSE	• Loosen bolt for installing the door glass to the carrier plate. • Deform resin park on the regulator. — Wear mark on the resin park caused by cable — Deform gear inside regulator motor **Note** • Identify the noise generating place using the stethoscope or any equivalent.

Diagnostic procedure

Abnormal noise	Occurence timing	Possible route cause	Noise generating place	Action
Clicking noise	Beginning door glass operation	Loosen bolt for installing the the door glass to carrier plate.	Between dcarrier plate and lower side of door glass.	Re-tighten bolt.
Groaning noise	While operating door glass	Noise is created due to the wear mark on the resin part of the regulator guide caused by cable. **Note** • There is no groaning noise on thevehicle equipped with roller type regulator guide.	Regulator guide	Replace the regulator guide
Booming noise		Deform gear inside regulator motor.	Gear inside regulator motor	Replace the regulator motor
Chattering noise

Transmitter malfunction							X	
Open or short circuit in wiring harness between key cylinder switch and BCM							X	

E6U903ZW5H07

Note

- The global closing system won't operate under the following conditions:
  - — Leave the door, liftgate or trunk open.
  - — Leave ignition key into the steering lock.
  - — Start knob is not in LOCK position
- Power window automatic operation function does not operate after the power window is initialized.
- Outside temperature and/or vehicle battery voltage condition may cause the incorrect operation of the power window (e.g., Door glass automatically opens in the closing operation.)

NO. 1 ALL DOOR GLASSES ARE INOPERATIVE

E6U090358000W12

1	All door glasses are inoperative
POSSIBLE CAUSE	• Power window main switch malfunction • Power window regulator malfunction • Low battery voltage • Power window initial set is incorrect • Open circuit in wiring harness between power window main switch and BCM • BCM malfunction

Diagnostic Procedure

Step	Inspection		Action
1	• Operate power windows by power window main switch. • Does power window operate?	Yes	Go to the next step.
		No	Inspect the following part and repair or replace the suspect part: • Power window main switch (See 09–12–7 POWER WINDOW MAIN SWITCH INSPECTION.) • Power window regulator • Battery voltage
2	• Activate automatic function • Does the function operate?	Yes	Go to the next step.
		No	Initialize the power window. (See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.)
3	• Lock or unlock the doors using the key. • Do the doors lock/unlock properly?	Yes	Inspect the open circuit in wiring harness between power window main switch and the BCM. Repair or replace the suspect wiring harness.
		No	Inspect BCM. Replace the BCM if necessary. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION.)

09–03E

NO. 2 TRANSMITTER WON'T OPERATE ANY DOOR GLASS AT ALL

E6U090358000W13

2	Transmitter won't operate any door glass at all
POSSIBLE CAUSE	• BCM malfunction • Keyless unit malfunction • Open circuit in wiring harness between keyless unit and BCM • Leave door, lift gate or trunk open • Leave ignition key into the steering lock

Diagnostic Procedure

Step	Inspection		Action
1	• Lock or unlock the doors using the transmitter. • Do all doors lock/unlock properly?	Yes	Inspect the following part and repair or replace the suspect part: • Keyless unit • BCM (See 09–40–2 BODY CONTROL MODULE (BCM) INSPECTION.)
		No	Go to the next step.
2	• Make sure that all doors, lift gate and trunk are closed. • Are all doors, lift gate and trunk closed?	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the system does not operate if any door leaves open.
3	• Make sure that the ignition key is inserted the steering lock. • Is the ignition key inserted into the steering lock?	Yes	The system is normal. Explain to the customer that the system does not operate if the ignition key is inserted the steering lock.
		No	Go to the next step.
4	• Do all doors lock/unlock properly now?	Yes	The system is normal. Go to Step 1 if the same symptom is duplicated.
		No	Inspect the following part and repair or replace the suspect part: — Keyless unit — Open circuit in wiring harness between keyless unit and BCM.

NO. 3 KEY WON'T OPERATE ANY DOOR GLASS AT ALL

E6U090358000W14

3	Key won't operate any door glass at all
POSSIBLE CAUSE	• BCM malfunction • Key cylinder switch malfunction

Diagnostic Procedure

Step	Inspection		Action
1	• Lock or unlock doors using key. • Do doors lock/unlock properly?	Yes	Inspect the BCM. (See 09–40–2 BODY CONTROL MODULE (BCM) INSPECTION.) Replace BCM if necessary. (See 09–40–1 BODY CONTROL MODULE (BCM) REMOVAL/ INSTALLATION.)
		No	Inspect key cylinder switch. Repair or replace the key cylinder switch if necessary.

NO. 4 SOME DOOR GLASSES ARE INOPERATIVE

E6U090358000W16

4	Some door glasses are inoperative
POSSIBLE CAUSE	• Power window subswitch malfunction • Power window regulator malfunction • Low battery voltage • Power window initial set is incorrect • Open or short circuit in wiring diagram between power window main switch and power window subswitch

Diagnostic Procedure

Step	Inspection		Action
1	• Operate the power windows by power window subswitch. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect the following part and repair or replace the suspect part: — Power window subswitch (See 09–12–9 POWER WINDOW SUBSWITCH INSPECTION.) — Power window regulator — Battery voltage
2	• Active automatic function. • Does the function operate?	Yes	Inspect open circuit in the wiring harness between power window main switch and power window subswitch. Repair or replace the suspect wiring harness if necessary.
		No	Initialize the power window.

NO. 5 DOOR GLASS AUTOMATICALLY STOPS DURING OPENING OR CLOSING OPERATION

E6U090358000W17

5	Door glass automatically stops during opening or closing operation
POSSIBLE CAUSE	• Power window main switch malfunction • Power window subswitch malfunction • Power window regulator malfunction • Low battery voltage • Power window initial set is incorrect • BCM malfunction • Keyless unit malfunction • Key cylinder switch malfunction • Door glass is installed improperly • Keyless system inoperative due to out side of operating area or outside interference on the transmitter

Diagnostic procedure

Step	INSPECTION		ACTION
1	• Stop to open/close the window operation by power window main/subswitch.. • Are the power window automatic stop function and manual stop function normal?	Yes	Inspect the following parts and repair or replace the suspect part: — Power window main switch (See 09–12–7 POWER WINDOW MAIN SWITCH INSPECTION.) — Power window subswitch (See 09–12–9 POWER WINDOW SUBSWITCH INSPECTION.) — Power window regulator — Battery voltage — Door glass installation condition
		No	Go to the next step.
2	• Does the power window automatic stop function operate?	Yes	Initialize the power window. (See 09–12–11 POWER WINDOW INITIALIZATION PROCEDURE.)
		No	Go to the next step.
3	• Stop to close the power window by the transmitter. • Does the system stop to open the window?	Yes	Inspect the following parts and repair or replace the suspect part: — Keyless unit — BCM (See 09–40–2 BODY CONTROL MODULE (BCM) INSPECTION.)
		No	Go to the next step.
4	• Stop to close the power window by the transmitter. • Does the system stop to close the window?	Yes	Inspect the following part and repair or replace the suspect part: — Keyless unit — BCM (See 09–40–2 BODY CONTROL MODULE (BCM) INSPECTION.) — Keyless system inoperative due to out side of operating area or outside interference on the transmitter
		No	Go to the next step.
5	• Stop to operate the power window by key. • Does the system work properly?	Yes	Inspect the following part and repair or replace the suspect part: — Key cylinder switch — BCM (See 09–40–2 BODY CONTROL MODULE (BCM) INSPECTION.)
		No	The system is normal. Go to Step 1 if the same symptom is duplicated.

09–03

NO. 6 DOOR GLASS AUTOMATICALLY OPENS IN THE CLOSING OPERATION

E6U090358000W18

6	Door glass automatically opens in the closing operation
POSSIBLE CAUSE	• Power window regulator malfunction • Low battery voltage • Door glass is installed improperly

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Door glass opens in the closing operation by the power window main/subswitch. • Does the system work properly?	Yes	Inspect the power window regulator. Repair or replace it if necessary.
		No	Inspect the following part and repair or replace the suspect part: — Door glass installation condition — Power window regulator — Battery **Note** • Outside temperature and/or vehicle battery voltage condition may cause the incorrect operation of the power window (e.g., Door glass automatically opens in the closing operation)

NO. 7 ALL DOOR GLASSES OPERATE INCORRECTLY

E6U090358000W19

7	All door glasses operate incorrectly
POSSIBLE CAUSE	• BCM malfunction • Key cylinder switch malfunction • Open or short circuit in wiring diagram between power window main switch and power window subswitch • Transmitter malfunction • Open or short circuit in wiring harness between key cylinder switch and BCM • Power window main switch malfunction • Power window subswitch malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Operate the power windows by the transmitter. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect the transmitter. Repair or replace it if necessary.
2	• Operate the power windows by the key. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect the following part and repair or replace the suspect part: — Key cylinder switch — Open or short circuit in wiring harness between key cylinder switch and BCM
3	• Operate the power windows by the power window main switch. • Does the power window operate properly?	Yes	Go to the next step.
		No	Inspect the power window main switch. Replace the power window main switch if necessary. (See 09–12–6 POWER WINDOW SWITCH REMOVAL/INSTALLATION.)
4	• Does the power windows operate properly?	Yes	The system is normal. Go to Step 1. if the same symptom is duplicated.
		No	Inspect the following part and repair or replace the suspect part: — BCM — Power window subswitch — Open or short circuit in wiring diagram between power window main switch and power window subswitch.

NO. 8 SOME DOOR GLASSES OPERATE INCORRECTLY

E6U090358000W28

8	Some door glasses operate incorrectly
POSSIBLE CAUSE	• Power window subswitch malfunction

Diagnostic procedure

ACTION
Inspect the suspect power window subswitch and repair or replace the switch. (See 09–12–9 POWER WINDOW SUBSWITCH INSPECTION.)

E6U903AZW5S0

CONFIRMATION STEP 1: AUDIO PANEL SWITCH CONFIRMATION

E6U090366900W02

- Verify the customer complain and identify either the center panel malfunction or audio unit malfunction.

How to activate audio panel switch confirmation mode

1. Turn the audio system on.
2. Press the POWER button and simultaneously press the CLOCK button for **approx. 1 s.**
3. The audio panel switch confirmation mode is now activated.

STEP	INSPECTION		ACTION
1	• Press each button on the center panel. • Does buzzer sound when pressing each button?	Yes	Verify the customer complain and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
2	• Disassemble and reassemble the center panel and audio unit. • Activate the audio panel switch confirmation mode. • Does buzzer sound when pressing each button?	Yes	Go to the next step.
		No	Replace the center panel. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)
3	• Does the audio system operate properly?.	Yes	The system is normal.
		No	Verify the customer complain and then go to the appropriate symptom troubleshooting procedure.

CONFIRMATION STEP 2: AUDIO CONTROL SWITCH CONFIRMATION

E6U090366900W03

- Verify the customer complain and identify either the audio control switch malfunction or audio unit malfunction.

STEP	INSPECTION		ACTION
1	• Is the symptom related to either the audio control switch or audio panel operation?	Yes	Verify the customer complain and then go to the appropriate symptom troubleshooting procedure.
		No	**The symptom is related to the audio panel operation:** • Follow the "Confirmation Step 1". **The symptom is related to the audio control switch operation:** • Go to the next step.
2	• Disconnect the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connectors for poor connection. (such as damaged/pulled-out pins, corrosion). — Terminal N (ST SW1) — Terminal P (ST SW2) • Are all the pins normal?	Yes	Go to the next step.
		No	**If the audio unit side connector is wrong:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
3	• Inspect the continuity between the audio unit wiring harness-side connector terminal N and P while operating the audio control switch. • Does the resistance change?	Yes	Verify the customer complain and then go to the appropriate symptom troubleshooting procedure.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Remove the audio control switch. • Inspect the continuity between the audio unit wiring harness-side connector (24-pin) terminal and the audio control switch wiring harness-side connector (8-pin) terminal. — Terminal N (24-pin) — Terminal G (8-pin) — Terminal P (24-pin) — Terminal E (8-pin) • Is there the continuity?	Yes	Replace the audio control switch. (See 09–20–7 AUDIO CONTROL SWITCH REMOVAL/ INSTALLATION.)
		No	Repair or replace the related wiring harnesses.

NO.1 AF NOISE OR POP NOISE ON ALL SOURCES (RADIO, CD, CASSETTE TAPE)

E6U090366900W04

1	AF noise or POP noise on all sources (Radio, CD, Cassette tape)/Possible DTC: 09:Er20, 09:Er21

Troubleshooting hints

Low vehicle battery voltage.

- Jammed radio signals from after market equipment.
- Speaker malfunction (e.g., any foreign material, broken)
- Improper speaker installation
- Audio unit malfunction
- Audio amplifier malfunction (with BOSE)
- Poor connection of audio unit connector, terminal damage
- Antenna malfunction (e.g., poor ground)
- Open or short circuit in wiring harness between audio amplifier and ground (with BOSE)
- Woofer malfunction (with BOSE)
- Poor connection of woofer connector, terminal damage (with BOSE)

Note

- AF noise is "Petit Petit" noise that generally occurs with switch ON/OFF operations of electrical equipment other than the audio unit, or "Gee" continual noise that occurs when electrical equipment is operated. This is caused by noise entrance to the power supply wiring, signal wiring, speaker cable or head of cassette deck etc. Therefore noise can be heard regardless of radio wave condition or audio volume position. The noise will start after one click from the minimum position of volume button but normally does not change even when volume is turned to higher position.
- POP noise is "Putsun", "Poco" or "Putsun" noise that occurs with switch ON/OFF operation of the audio unit, or with switching Radio to CD. Even normal audio unit sometimes emit small noise depending on conditions.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the vehicle battery voltage. • Is the vehicle battery voltage normal? **Specification:** **Ignition switch ON: 11.5 V or more** **Idle: 12.5 V or more**	Yes	Go to the next step.
		No	Charge the battery, then go to the next step.
2	• Turn the audio system on. • Is there any noise?	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the vehicle battery voltage was low.
3	• Is any of the following after-market equipment installed? (Inspect especially near the antenna.) — Radar — Remote engine starter — Anti-theft device — Other	Yes	Go to the next step.
		No	Go to the Step 5.
4	• Remove the after-market equipment. • Turn the audio system on. • Is there any noise?	Yes	Go to the next step.
		No	The system is normal. The after-market electrical devices might make a noise.
5	• Is there the noise from all speakers?	Yes	Go to the Step 7.
		No	Go to the next step.
6	• Inspect the suspect speaker. • Is the speaker normal?	Yes	Go to the next step.
		No	**If there is any foreign material on the speaker:** • Remove the foreign material from the speaker. **If the speaker is malfunctioning:** • Replace the speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].) (See 09–20–10 TWEETER REMOVAL/INSTALLATION.) **If the speaker is not installed properly:** • Install the speaker properly.

STEP	INSPECTION		ACTION
7	• Attempt to duplicate the symptom on the other vehicle. • Is the noise better than the customer's vehicle?	Yes	Go to the next step. (with BOSE) Go to Step 11. (without BOSE)
		No	The system is normal. Explain the noise generation mechanism to the customer. **Note** • The noise may be heard depends on the operating speed of audio power and/or mode switch.
8	• Is there any noise from the woofer?	Yes	Go to the next step.
		No	Go to Step 11.
9	• Turn the ignition switch to the LOCK position. • Remove the woofer. • Inspect the connection of the woofer connector (6-pin) terminal A (B+), B (GND), G (WOOF IN+) and H (WOOF IN-). • Is the connector connected securely?	Yes	Replace the woofer. (See 09–20–11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
		No	Repair or replace the terminal or connector. Go to the next step.
10	• Is there any noise?	Yes	Replace the woofer. (See 09–20–11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
		No	The system is normal.
11	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Inspect the connection of the audio unit connector (24-pin) (for sound signal line). • Is the connector connected securely?	Yes	Go to Step 13. (with BOSE) Go to Step 14. (without BOSE)
		No	Repair or replace the terminal or connector. Go to the next step.
12	• Is there any noise?	Yes	Go to the next step. (with BOSE) Go to Step 14. (without BOSE)
		No	The system is normal.
13	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector. • Inspect between the audio amplifier wiring harness-side connector (26-pin) terminal V and ground. • Is there continuity?	Yes	Go to Step 15.
		No	Repair or replace the terminal or connector. Go to the nex step.
14	• Is there any noise?	Yes	Go to the next step.
		No	The system is normal.
15	• Inspect the ground condition of the manual antenna. • Is the ground condition normal?	Yes	Replace the audio amplifier. (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Repair or replace the ground. Go to the next step.
16	• Is there any noise?	Yes	Replace the audio amplifier. (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	The system is normal.

NO.2 NO POWER ON THE ENTIRE AUDIO SYSTEM

E6U090366900W05

2	No power on the entire audio system/Possible DTC: 09:Er20

Troubleshooting hints

Poor connection of audio unit connector, terminal damage

- Audio unit malfunction
- Burnt fuse (B+)
- Burnt fuse (ACC)
- Open or short circuit in power supply (B+) wiring harness
- Open or short circuit in power supply (ACC) wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the LOCK position. • Inspect the following fuses: — ACC — ROOM • Are the fuses normal?	Yes	Go to the next step.
		No	Replace with the appropriate standard fuse. • If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
2	• Remove the audio unit. • Inspect the connection of the audio unit connector (24-pin). • Disconnect the audio unit connector and inspect both the audio unit and wiring harness-side connectors for poor connection. (such as damaged/pulled-out pins, corrosion). — Terminal 1B (B+) — Terminal 1R (ACC) — Terminal 1W (GND) • Are all the pins normal?	Yes	Go to the next step.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit side connector is wrong:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
3	• Connect the audio unit connector. • Inspect the voltage for the power supply line (B+, ACC). **Specification:** **Ignition switch ON: 11.5 V or more** **Idle: 12.5 V or more** • Is the voltage normal?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses.
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal 1W and the ground. • Is there the continuity?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the wiring harness.

NO.3 NO SOUND FROM ALL SPEAKERS [VEHICLES WITH BOSE]

E6U090366900W06

3	**No sound from all speakers/Possible DTC: 00:Er10, 03:Er07, 03:Er10, 06:Er07, 06:Er10, 09:Er20, 09:Er21, 10:Er10, 11:Er10, 22:Er07, 22:Er10**

Troubleshooting hints

- Speaker malfunction (e.g., any foreign material, broken)
- Audio amplifier malfunction
- Open or Short circuit in wiring harness between audio amplifier and speaker
- Open or short circuit in wiring harness between audio amplifier and audio unit.
- Short circuit inside speaker

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Press AUDIO CONT button more than 1 second. • Play the CD or Radio. • Adjust the volume between "10" to "15". • Is there the sound?	Yes	The system is normal.
		No	Go to the next step.
2	• Measure the voltage at the audio amplifier terminal U. (vehicle harness-side) • Is the voltage B+?	Yes	Go to Step 4.
		No	Repair or replace the wiring harness between the audio amplifier and fuse. Go to the next step.
3	• Is there any sound?	Yes	The system is normal.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (26-pin). • Inspect the continuity between the following terminals of the audio amplifier connector and the speaker connector: **For front door speaker (LH)** — Terminal B — Terminal B — Terminal D — Terminal A **For front door speaker (RH)** — Terminal Y — Terminal A — Terminal W — Terminal B **For rear door speaker (LH)** — Terminal C — Terminal B — Terminal A — Terminal A **For rear door speaker (RH)** — Terminal X — Terminal B — Terminal Z — Terminal A — Is there a continuity?	Yes	Go to the next step.
		No	Repair or replace the repair related wiring harnesses.
4	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (26-pin). • Inspect the continuity between the audio amplifier connector and ground: **For front door speaker** — Terminal B (LH+) — GND — Terminal D (LH-) — GND — Terminal W (RH+) — GND — Terminal Y (RH+) — GND **For rear door speaker** — Terminal C (LH+) — GND — Terminal A (LH-) — GND — Terminal X (RH+) — GND — Terminal Z (RH-) — GND — Is there a continuity?	Yes	Repair or replace the related wiring harnesses or speaker unit. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
5	• Turn the ignition switch to the LOCK position. • Disconnect the audio amplifier connector (26-pin) and audio unit connector (24-pin). • Inspect the continuity between the audio amplifier terminal Q (vehicle harness-side) (AMP CONT) and the audio unit terminal 1J (vehicle harness-side). — Is there a continuity?	Yes	Replace the audio amplifier. (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Repair or replace the wiring harness between the audio amplifier and the audio unit. Go to the next step.
6	• Is there any sound?	Yes	The system is normal.
		No	Replace the audio amplifier. (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)

NO.3 NO SOUND FROM ALL SPEAKERS [VEHICLES WITHOUT BOSE]

E6U090366900W07

3	**No sound from all speakers/Possible DTC: 00:Er10, 03:Er07, 03:Er10, 06:Er07, 06:Er10, 09:Er20, 09:Er21, 10:Er10, 11:Er10, 22:Er07, 22:Er10**

oubleshooting hints

- Speaker malfunction (e.g., any foreign material, broken)
- Audio unit malfunction
- Short circuit in wiring harness between audio unit and speaker
- Short circuit inside speaker

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Press AUDIO CONT button more than 1 second. • Play the CD or Radio. • Adjust the volume between "10" to "15". • Is there the sound?	Yes	The system is normal.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector terminal and ground: **For front speaker** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear speaker** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND — Is there a continuity?	Yes	Repair or replace the related wiring harnesses or speaker unit. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

09–03

NO.4 NO SOUND FROM SOME SPEAKERS [VEHICLES WITH BOSE]

E6U090366900W08

4	**No sound from some speaker/Possible DTC: —**

Troubleshooting hints

- Speaker malfunction (e.g., any foreign material, broken)
- Audio unit malfunction
- Audio amplifier malfunction
- Short circuit inside speaker
- Open or short circuit in wiring harness between audio amplifier and speaker
- Open or short circuit in wiring harness between audio amplifier and audio unit
- Poor connection of audio unit connector, terminal damage
- Poor connection of audio amplifier connector

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Press AUDIO CONT button more than one second (BAL/FAD cancel mode). • Press the POWER button and simultaneously press the AUTO-M button for approx. 1 s. **Note** • The sounded speaker now changes in the order of left— door speaker, right — door speaker, right — rear speaker and left — rear speaker. • Is there any speaker with no sound?	Yes	**If no sound from some speaker:** • Go to the next step. **If no sound at all:** • Go to the troubleshooting of "No.3 No sound from all speakers".
		No	The troubleshooting is completed.
2	• Does the same speaker have no sound if changing the sound source? (radio, CD)	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **Note** • If the different speaker has no sound now, the audio unit is malfunctioning.
3	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). (for sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector and ground. **For front door speaker** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear door speaker** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND • Is there a continuity?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Disconnect the audio amplifier connector (26-pin). • Inspect the continuity between the following terminals of the audio amplifier wiring harness-side connector (26-pin) and the audio unit wiring harness-side connector (24-pin). **For front door speaker** — Terminal H (LH+) — Terminal 1A (LH+) — Terminal G (LH-) — Terminal 1C (LH-) — Terminal L (RH+) — Terminal 1D (RH+) — Terminal K (RH-) — Terminal 1F (RH-) **For rear door speaker** — Terminal J (LH+) — Terminal 1S (LH+) — Terminal I (LH-) — Terminal 1U (LH-) — Terminal H (RH+) —Terminal 1V (RH+) — Terminal F (RH-) — Terminal 1X (RH-) • Is there a continuity?	Yes	Go to the next step.
		No	Repair or replace the related wiring harnesses between the audio amplifier and the audio unit. Go to the next step.

STEP	INSPECTION		ACTION
6	• Inspect the connection of the audio amplifier connector (26-pin). • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio amplifier connector (26-pin) securely.
7	• Disconnect the audio amplifier (26-pin) and the speaker connector. • Inspect the continuity between the following terminals of the audio amplifier connector (26-pin) and the speaker connector. **For front door speaker (LH)** — Terminal B — Terminal B — Terminal D — Terminal A **For front door speaker (RH)** — Terminal Y — Terminal A — Terminal W — Terminal B **For rear door speaker (LH)** — Terminal C — Terminal B — Terminal A — Terminal A **For rear door speaker (RH)** — Terminal X — Terminal B — Terminal Z — Terminal A • Is there a continuity?	Yes	Go to the next step.
		No	Repair or replace the wiring harness.
8	• Inspect the continuity between the following terminals of the audio amplifier wiring harness-side connector (26-pin) and ground. **For front door speaker** — Terminal B (LH+) — GND — Terminal D (LH-) — GND — Terminal W (RH+) — GND — Terminal Y (RH-) — GND **For rear door speaker** — Terminal C (LH+) — GND — Terminal A (LH-) — GND — Terminal X (RH+) — GND — Terminal Z (RH-) — GND • Is there a continuity?	Yes	Repair or replace the short circuit between the audio amplifier and speaker harness or inside the speaker unit. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio amplifier operates to cut the sound.
		No	Go to the next step.
9	• Remove the suspect speaker. • Disconnect the speaker connector (2-pin) and inspect the resistance of speaker. • Is the resistance normal? **Specification:** • Speaker resistance + wiring harness resistance **Note** • If the speaker lead wire contacts to either ground or vehicle frame, replace the speaker.	Yes	Replace the audio amplifier. (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Replace the speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].) (See 09–20–10 TWEETER REMOVAL/INSTALLATION.)

NO.4 NO SOUND FROM SOME SPEAKERS [VEHICLES WITHOUT BOSE]

E6U090366900W09

4	No sound from some speaker/Possible DTC: —

Troubleshooting hints

- Speaker malfunction (e.g., any foreign material, broken)
- Audio unit malfunction
- Short circuit inside speaker
- Open or short circuit in wiring harness between audio unit and speaker
- Poor connection of audio unit connector, terminal damage

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Press AUDIO CONT button more than one second (BAL/FAD cancel mode). • Press the POWER button and simultaneously press the AUTO-M button for approx. 1 s. **Note** • The sounded speaker now changes in the order of left— door speaker, right — door speaker, right — rear speaker and left — rear speaker. • Is there any speaker with no sound?	Yes	**If no sound from some speaker:** • Go to the next step. **If no sound at all:** • Go to the troubleshooting of "No.3 No sound from all speakers".
		No	The troubleshooting is completed.
2	• Does the same speaker have no sound if changing the sound source? (radio, CD)	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **Note** • If the different speaker has no sound now, the audio unit is malfunctioning.
3	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). (for sound signal line) • Is the connector connected securely?	Yes	Go to the next step.
		No	Connect the audio unit connector (24-pin) securely.
4	• Turn the ignition switch to the LOCK position. • Remove the audio unit. • Disconnect the audio unit connector (24-pin). • Inspect the continuity between the audio unit wiring harness-side connector and ground. **For door speaker** — Terminal 1A (LH+) — GND — Terminal 1C (LH-) — GND — Terminal 1D (RH+) — GND — Terminal 1F (RH-) — GND **For rear speaker** — Terminal 1S (LH+) — GND — Terminal 1U (LH-) — GND — Terminal 1V (RH+) — GND — Terminal 1X (RH-) — GND • Is there a continuity?	Yes	Repair or replace the related wiring harnesses or speaker unit. **Note** • If there is a short circuit between the speaker harness or speaker lead wire and ground, the protector circuit inside the audio unit operates to cut the sound.
		No	Go to the next step.
5	• Remove the suspect speaker. • Disconnect the speaker connector (2-pin) and inspect the resistance of speaker. • Is the resistance normal? **Specification:** • Speaker resistance + wiring harness resistance **Note** • If the speaker lead wire contacts to either ground or vehicle frame, replace the speaker.	Yes	Replace the speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09–20–10 REAR DOOR SPEAKER REMOVAL/ INSTALLATION.) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–20–11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].) (See 09–20–10 TWEETER REMOVAL/INSTALLATION.)
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.5 BROKEN SOUND OR POOR SOUND QUALITY

E6U090366900W10

5	Broken sound or poor sound quality/Possible DTC: 09:Er21

Troubleshooting hints

Speaker malfunction (e.g., any foreign material, broken)
- Improper speaker installation
- Audio unit malfunction (without BOSE)
- Audio amplifier malfunction (with BOSE)
- Vibration of door trim and/or package trim

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Are there a broken sound or poor sound quality from all speakers?	Yes	Go to the next step.
		No	Go to Step 5.
2	• Inspect the sound while adjusting the sound volume. • Is there a broken sound or poor sound quality between "15" and "20"?	Yes	Go to the next step.
		No	The system is normal.
3	• Inspect the BASS/TREB. • Is there a poor sound quality at "-3 — +3" of "BASS/TREB"? **Note** • When press the AUDIO CONT button for a few seconds, BASS/TREB is set at "0".	Yes	Go to the next step.
		No	If there is a broken sound at "-6—+6" of BASS/TREB with the maximum volume, the system is normal.
4	• Attempt to duplicate the symptom on the other vehicle. • Is the sound better than the customer's vehicle?	Yes	Replace the audio unit. (without BOSE) (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) Replace the audio amplifier. (with BOSE) (See 09-20-8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	The system is normal.
5	• Identify the speaker with a broken sound by adjusting BAL/FADE. • Is the suspect speaker installed upward?	Yes	Go to Step 7.
		No	Go to the next step.
6	• Inspect the speaker installation condition. • Is the speaker installed properly?	Yes	Go to the next step.
		No	Install the speaker properly.
7	• Remove the speaker. • Is there any foreign material or damage on the speaker?	Yes	Repair or replace the suspect speaker.
		No	Go to the next step.
8	• Inspect the sound again. • Is there broken sound?	Yes	Go to the next step.
		No	Inspect the vibration from the door trim and/or package trim. Repair or replace the suspect trim as necessary.
9	• Replace with the speaker known to be good. (e.g., swap right and left speakers) • Does the broken sound appear at the same location?	Yes	Replace the audio unit. (without BOSE) (See 09-20-4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09-20-5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09-20-6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) Replace the audio amplifier. (with BOSE) (See 09-20-8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
		No	Replace the speaker. (See 09-20-9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09-20-11 WOOFER REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09-20-11 WOOFER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].) (See 09-20-10 TWEETER REMOVAL/INSTALLATION.)

NO.6 SOUND BECOMES LOUDLY OR WEAKLY WHILE DRIVING THE VEHICLE

E6U090366900W11

6	Sound becomes loudly or weakly while driving the vehicle/Possible DTC: —

Troubleshooting hints

- Audio unit malfunction

Note

- Inspect the ALC function while driving the vehicle with playing the CD, etc.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the ALC function turn on?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
2	• Turn the ALC function off. • Does the sound change while driving the vehicle?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	The system is normal. Explains the ALC function to the customer.

NO.7 ALC FUNCTION IS INOPERATIVE

E6U090366900W12

7	ALC function is inoperative/Possible DTC: 16:Er12, 17:Er11

Troubleshooting hints

- Audio unit malfunction
- Open or short circuit in vehicle speed signal wiring harness (e. g., instrument cluster)

Note

- Inspect the ALC function while driving the vehicle with playing the CD, etc.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ALC function on. • Inspect the ALC function operation when driving the vehicle. • Does the ALC system operate properly?.	Yes	The system is normal. Explains the ALC function to the customer.
		No	Go to the next step.
2	• Retrieve the DTCs from all vehicle modules using the WDS or equivalent. • Is there the following DTC displayed? — Vehicle speed signal wiring harness — Can signal wiring harness	Yes	Go to the appropriate DTC inspection.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.8 AUDIO SYSTEM ILLUMINATION DOES NOT ILLUMINATE AT ALL

E6U090366900W13

8	Audio system illumination does not illuminate at all/Possible DTC: 09:Er20, 21:Er19

Troubleshooting hints

Poor connection of audio unit connector, terminal damage

- Audio unit malfunction
- Burnt fuse (TNS signal)
- Open or short circuit in TNS signal wiring harness
- Center panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Are all illumination on the audio unit turned OFF?	Yes	Go to the next step.
		No	Replace the center panel. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)
2	• Turn the ignition switch to the LOCK position. • Inspect the fuse (ILLUMI). • Is the fuse normal?	Yes	Go to the Step 4.
		No	Go to the next step.
3	• Turn the ignition switch to the LOCK position. • Disconnect the audio unit connector (24-pin) and inspect the continuity between the audio unit wiring harness-side connector terminal 1E (TNS) and the ground. • Is there continuity?	Yes	Repair or replace the short circuit in the suspect wiring harness. After repair the harness, replace with the appropriate standard fuse.
		No	Go to the next step.
4	• Inspect the connection of the audio unit connector (24-pin). • Inspect both the audio unit and wiring harness-side connector terminal 1E for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If poor connection of audio unit connector:** • Securely connect the audio unit connector. **If the audio unit side connector is wrong:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector is wrong:** • Repair or replace the pins and/or the connector.
5	• Connect the audio unit connector (24-pin). • Turn the ignition switch to the ACC position. • Inspect the voltage at the audio unit connector terminal 1E (TNS). • Is the voltage **B+** when the light switch is turned to the TNS position?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Repair or replace the related wiring harness (TNS signal).

NO.9 INFORMATION DISPLAY DOES NOT DISPLAY AT ALL

E6U090366900W14

9	Information display does not display at all/Possible DTC: 09:Er20, 21:Er19

Troubleshooting hints

- Audio unit malfunction
- Center panel display malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Press the POWER button and simultaneously press the SEEK button for **approx. 0.2 s.** • Does the information display properly?	Yes	Go to the next step.
		No	Replace the information display. (See 09–22–24 INFORMATION DISPLAY REMOVAL/ INSTALLATION.)
2	• Press either CLC or SET button on the information display. • Does the beep sound?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Replace both audio unit and information display. (CAN communication malfunction) (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) (See 09–22–24 INFORMATION DISPLAY REMOVAL/ INSTALLATION.)

FOREWORD [CD PLAYER/CHANGER]

E6U090366900W15

Troubleshooting Index

No.	Items	Symptom	Possible DTC
1	CD player/changer	CD player/changer does not load the CD or ejects the CD immediately	03:Er01, 03:Er10, 06:Er01, 06:Er10, 10:Er01, 10:Er10, 22:Er01, 22:Er10
2		CD player/changer does not eject the CD	03:Er01, 06:Er01, 10:Er01, 22:Er01
3		CD player/changer does not play the CD/No sound	03:Er07, 03:Er10, 06:Er07, 10:Er07, 22:Er07
4		Sound jumps	03:Er02, 06:Er02, 10:Er02, 22:Er02
5		CD player/changer scratches on the CD	03:Er02, 06:Er02, 10:Er02, 22:Er02
6	CD changer	Disc changer is inoperative	06:Er01, 06:Er10, 22:Er01, 22:Er10
7	MP3 applicable CD player	CD player does not play the MP3-formatted file	10:Er07, 22:Er07
8		MP3-formatted file folder selection is inoperative/Track search is inoperative	10:Er02, 22:Er02

E5U903AZW5S0

NO.1 CD PLAYER/CHANGER DOES NOT LOAD THE CD OR EJECTS THE CD IMMEDIATELY

E6U090366900W16

1	**CD player/changer does not load the CD or ejects the CD immediately** **Possible DTC: 03:Er01, 03:Er10, 06:Er01, 06:Er10, 10:Er01, 10:Er10, 22:Er01, 22:Er10**

Troubleshooting hints

- CD is inserted upside down
- Audio units is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion)
- Deformed disc is used (e.g., out of specification (thickness), bent disc)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
2	• Replace with a CD known to be operational. • Does the CD player/changer load the CD?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	Visually inspect the CD. — Is there any dirt, scratch or deformation on the CD? — Is the CD a non-conventional disc?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). • Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) • All the pins and connector normal?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	**If the audio unit connector/pin is wrong:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.) **If the wiring harness-side connector/pin is wrong:** • Repair or replace the pins and/or the connector.

NO.2 CD PLAYER/CHANGER DOES NOT EJECT THE CD

E6U090366900W17

2	**CD player/changer does not eject the CD** **Possible DTC:03:Er01, 06:Er01, 10:Er01, 22:Er01**

Troubleshooting hints

- Audio units is malfunctioning
- Defective CD. (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Poor connection of audio unit connector or terminal (e.g., damaged, bent, pulled-out pin, corrosion)
- Improper center panel installation
- Improper CD cover installation
- Deformed disc is used (e.g., out of specification (thickness), bent disc).
- Multiple CDs are inserted into the CD player at the same time

Note

- The CD may be malfunctioning if the CD player/changer does not eject the certain CD only. Inspect the CD player/changer operation using the CD known to be operational.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the operation of the audio system other than CD player/changer (e.g. Radio). • Does other audio system operate?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Inspect the connection of the audio unit connector (24-pin). • Inspect both audio unit connector and wiring harness-side connector for poor connection. (such as damaged/bent/pulled-out pins, corrosion) • All the pins and connector normal?	Yes	Go to the next step.
		No	**If the audio unit connector/pin is wrong:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.) **If the wiring harness-side connector/pin is wrong:** • Repair or replace the pins and/or the connector.
3	• Eject the CD. • Is the CD ejected from the CD player/changer?	Yes	Go to the next step.
		No	Inspect the center panel and CD cover installation. Securely install the center panel and/or CD cover as necessary.
4	• Insert the CD into the CD player/changer. • Does the CD insert into the CD player/changer smoothly?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Install the center panel and/or CD cover properly, then go to the next step.
5	• Is the CD ejected from the CD player/changer?	Yes	Troubleshooting completed. Explain repairs to the customers.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.3 CD PLAYER/CHANGER DOES NOT PLAY THE CD/NO SOUND

E6U090366900W18

3	**CD player/changer does not play the CD/No sound** **Possible DTC:03:Er07, 03:Er10, 06:Er07, 10:E07, 22:Er07**

Troubleshooting hints

- CD is inserted upside down
- Audio units is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the radio ON and inspect that there is a sound. • Is there a sound? **Note** • Check for the volume dial position.	Yes	Go to the next step.
		No	Go to the symptom troubleshooting No.3 (Audio system).
2	• Was CD inserted properly, label-side up?	Yes	Go to the next step.
		No	Explain to the customer that CD should be inserted into the slot, label-side up.
3	• Replace with a CD known to be operational. • Does the CD player/changer load the CD?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
4	• Visually inspect the CD. — Is there any dirt, scratch or deformation on the CD? — Is the CD a non-conventional disc? — Is there a CD in MP3 recording?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be use.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.4 SOUND JUMPS

E6U090366900W19

4	**Sound jumps** **Possible DTC:03:Er02, 06:Er02, 10:Er02, 22:Er02**

Troubleshooting hints

- Audio unit is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Improper audio unit installation (e.g., rattle, loose)
- Inadequate tire pressure

Note

- The CD may be malfunctioning if the sound jumps on the certain CD only. Inspect the CD player/changer operation using a CD known to be operational.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Does the sound jump when the vehicle is stopped?	Yes	Go to the Step 6.
		No	Go to the next step.
2	• Drive the vehicle. • Does the sound jump when driving over uneven surfaces?	Yes	Go to the next step.
		No	Go to the Step 6.
3	• Is the audio unit installed securely?	Yes	Go to the next step.
		No	Install the audio unit securely.
4	• Inspect the tire pressure. • Is the tire pressure normal?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
5	• Adjust the tire pressure within specification. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Audio system is normal. Explain repairs to the customers.
6	• Replace with a CD known to be operational. • Does the sound jump when driving the vehicle?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Audio system is normal. Explain to the customer that the CD is malfunctioning.

NO.5 CD PLAYER/CHANGER SCRATCHES ON THE CD

E6U090366900W20

5	**CD player/changer scratches on the CD** **Possible DTC:03:Er02, 06:Er02, 10:Er02, 22:Er02**

Troubleshooting hints

- Audio unit is malfunctioning
- Deformed disc is used (e.g., out of specification (thickness), bent disc)
- Multiple CDs are inserted into the CD player at the same time

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Were the multiple CDs inserted into the CD player at the same time?	Yes	Explain to the customer to insert a CD one by one.
		No	Go to the next step.
2	• Visually inspect the CD. • Is the CD a deformed disc (e.g., out of specification (thickness), bent disc)?	Yes	Audio system is normal. Explain to the customer that the CD is malfunctioning.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.6 DISC CHANGE IS INOPERATIVE

E6U090366900W21

6	**Disc change is inoperative** **Possible DTC:06:Er01, 06:Er10, 22:Er01, 22:Er10**

Troubleshooting hints

- Audio unit is malfunctioning
- Improper center panel installation
- Center panel is malfunctioning

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the CD changer operation. • Does the CD changer operate properly?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting "No.3 CD player/ changer does not play the CD/No sound".
2	• Inspect the followings: — Is the display shown properly when operating the disc change button? — Does the radio band selection operate properly?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
3	• Inspect the center panel installation. • Does the CD changer change the disc properly after re-installing the center panel?	Yes	Install the center panel securely and properly.
		No	Go to the "No.1 Audio panel switch inspection" in this section. Replace the center panel as necessary.

NO.7 CD PLAYER DOES NOT PLAY THE MP3-FORMATTED FILE

E6U090366900W22

7	CD player does not play the MP3-formatted file Possible DTC10:Er07, 22:Er07

Troubleshooting hints

- CD-R/RW written format is out of specification
- MP3 and other format data are on the CD-R/RW
- File extension for MP3-formatted file is incorrect (Correct. ".mp3", incorrect: e.g., RIFF)
- Defective CD-R/RW (e.g. dirty CD, scratch)
- MP3 applicable CD player is malfunctioning

Note

- Free-software for MP3-formatting available on the market may cause deterioration of sound quality, or cause noise and defective play, which could result in the CD player not playing customer made MP3-formatted files.
- The CD player may not play the CD-R/RW properly due to the disc condition.
- If there are MP3-formatted files and other files on the same disc, the CD player may not play the disc.
- If there are MP3-formatted files and audio data on the same disc, the CD player loads and plays the first session of the data only.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct?	Yes	Go to the next step.
		No	Write the CD-R/RW to the correct specification.
2	• Inspect the recorded data on the CD-R/RW. • Are there MP3 and other format data on the CD-R/RW.	Yes	Replace with an operational CD-R/RW disc (MP3-formatted file data only), then inspect the CD player operation. **If the CD player plays the MP3-formatted file:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if MP3 and other format data are on the CD-R/RW. **If the CD player does not play the MP3-formatted file:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
3	• Inspect the CD-R/RW written format. • Is the written format within the specification (".mp3" is the correct file extension)?	Yes	Replace with a CD-R/RW disc using the ".mp3" file extension, then inspect the CD player operation. **If the CD player plays the MP3-formatted file:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if the correct file extension is not used. **If the CD player does not play the MP3-formatted file:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
4	• Visually inspect the CD-R/RW. • Is there any dirt or scratches on the CD-R/RW?	Yes	Clean the disc or replace it with an operational CD-R/RW.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.8 MP3-FORMATTED FILE FOLDER SELECTION IS INOPERATIVE/TRACK SEARCH IS INOPERATIVE

E6U090366900W23

8	**MP3-formatted file folder selection is inoperative/Track search is inoperative** **Possible DTC:10:Er02, 22:Er02**

Troubleshooting hints

- Defective CD-R/RW (e.g. dirty CD, scratch)
- Conflict of ID tag version for CD-R/RW
- Improper folder and/or music title in CD-R/RW
- The number of characters for the folder/audio file name on the CD-R/RW exceeds the maximum number of characters
- Improper encode on CD-R/RW
- MP3 applicable CD player is malfunctioning

Note

- ID3 is a tagging format for MP3-formatted files. ID3 allows metadata (e.g., title, artist, track number) to be added to the MP3-formatted file.
- There are two versions in the ID tag.
  - — ID3v1: This is the most widespread standard tag format and most software is compatible with this version. There is a limitation on the maximum number of characters for the text data.
  - — ID3v2: There are a variety of versions in V2, but there is no interchangeability among the versions.

Limitation on the maximum number of characters for the text data (ID3v1)

Item	Maximum number of characters	Description
Title	30	Music title
Artist	30	Artist name
Album	30	Album title
Year	4	Album produced year/CD wholesale year
Genre	—	Music category selection
Comment	30	Free comment
Track	3	Track number

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Visually inspect the CD-R/RW. • Is there any dirt or scratches on the CD-R/RW?	Yes	Clean the disc or replace it with an operational CD-R/RW.
		No	Go to the next step.
2	• Inspect the ID tag version. • Is the ID tag correct?	Yes	Go to the next step.
		No	Write the CD-R/RW to the correct ID tag version.
3	• Inspect folder and audio file name. • Are all file name input correctly?	Yes	Go to the next step.
		No	Use a CD-R/RW with folder and audio file names that are input correctly.
4	• Inspect the the folder and audio file names on the CD-R/RW. • Is the encode correct? **Note** • Unreadable characters may be displayed if incorrect encode is used.	Yes	Go to the next step.
		No	Use the correct encode.
5	• Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Input the folder and audio file name within the maximum number of characters.

NO.9 CD PLAYER DOES NOT INDICATE THE MP3 TITLE TEXT

E6U090366900W24

9	CD player does not indicate the MP3 title text Possible DTC:10:Er02, 22:Er02

Troubleshooting hints

- Defective CD-R/RW (e.g. dirty CD, scratch)
- Conflict of ID tag version for CD-R/RW
- The number of characters for the folder/audio file name on the CD-R/RW exceeds the maximum number of characters
- Improper encode in CD-R/RW
- MP3 applicable CD player is malfunctioning
- No title input in CD-R/RW
- Input title text using 2-byte characters

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Visually inspect the CD-R/RW. • Is there any dirt or scratches on the CD/R/RW?	Yes	Clean the disc or replace it with an operational CD-R/RW.
		No	Go to the next step.
2	• Inspect the LCD. • Is the CD (other than MP3 compatible) displayed on the LCD?	Yes	Go to the next step.
		No	Go to the symptom troubleshooting No.9 (Entire audio system).
3	• Inspect the ID tag version. • Is the ID tag correct?	Yes	Go to the next step.
		No	Write the CD-R/RW to the correct ID tag version.
4	• Is the title text input into the CD-R/RW?	Yes	Go to the next step.
		No	Input the title text. **Note** • Do not input the title text using two-byte characters.
5	• Inspect the folder and audio file names on the CD-R/RW. • Is the encode correct?	Yes	Go to the next step.
		No	Use the correct encode.
6	• Inspect the number of characters for the folder and audio file name. • Is the number of characters within the maximum number of characters?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Input the folder and audio file name within the maximum number of characters.

NO.10 CD PLAYER DOES NOT PLAY THE AUDIO DATA (CDDA)

E6U090366900W25

10	CD player does not play the audio data (CDDA) Possible DTC:10:Er02, 22:Er02

Troubleshooting hints

- CD-R/RW written format is out of specification
- Defective CD-R/RW (e.g., dirty CD, scratch)
- MP3 applicable CD player is malfunctioning
- Data other than audio data is on CD-R/RW

Note

- The CD player may not play the CD-R/RW properly due to the disc condition.
- If there are MP3-formatted files and audio data on the same disc, the CD player loads and plays the first session of the data only.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Replace with an audio-CD known to be operational. • Does the CD player play the audio-CD properly?	Yes	Go to the next step.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
2	• Inspect the written format of the recorded data on the CD-R/RW. • Is the written format correct?	Yes	Go to the next step.
		No	Write the CD-R/RW to the correct specification.
3	• Inspect the recorded data in the CD-R/RW. • Is any data other than the audio data recorded on the CD-R/RW?	Yes	Replace with a CD-R/RW known to be operational (record audio data only), then inspect the CD player operation. **If the CD-R/RW plays:** • Audio system is normal. Explain to the customer that the CD player does not operate properly if the audio data and other data are recorded on the CD-R/RW. **If the CD-R/RW does not play:** • Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.)
		No	Go to the next step.
4	• Visually inspect the CD-R/RW. • Is there any dirt or scratches on the CD-R/RW?	Yes	Clean the disc or replace it with an operational CD-R/RW.
		No	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.11 TRACK CHANGE IS INOPERATIVE

E6U090366900W26

11	**Track change is inoperative** **Possible DTC:03:Er02, 06:Er02, 10:Er02, 22:Er02**

Troubleshooting hints

- Audio unit is malfunctioning
- Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD, condensation)
- Non-conventional discs (e.g., 8 cm (3 in) CD, 8 cm (3 in) disc adapter, heart-shaped disc, octagonal disc)
- Center panel is malfunctioning
- MP3 applicable CD player is malfunctioning

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Replace with a CD known to be operational. • Does the CD player change the track?	Yes	Explain to the customer that the defective CD or non-conventional disc cannot be used.
		No	Go to the next step.
2	• Inspect the center panel installation. • Does the CD player change the track number on the display when pressing the track up or down button?	Yes	Replace the audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the "No.1 Audio panel switch inspection" in this section. Replace the center panel as necessary.

FOREWORD [RADIO]

E6U090366900W27

Note

- In case location, time, and broadcasting station etc. can be specified through interview to customer, possibility that signal environment causes problem is high.
- Perform confirmation of symptom and evaluation under conditions that customer reported (location, time, broadcasting station etc.). If not possible, perform it under equivalent conditions.
- Before inspection or repair, record the broadcasting stations that customer preset and reset them accordingly after the inspection or repair. Adjust the clock too.

Troubleshooting Index

No.	Symptom	Possible DTC
1	No radio reception (AM/FM)/No or low volume	09:Er20, 09:Er22
2	Noise from radio (AM only)	09:Er22
3	Noise from radio (FM only)	09:Er22
4	Cannot tune (SEEK does not stop)	09:Er20, 09:Er22
5	Cannot preset (preset function does not operate)	21:Er19
6	Reception frequency of radio slips	09:Er22

Quick Diagnostic Chart (Radio)

DPE903EW1O03

CONFIRMATION STEP 1: RECEPTION CONDITION SYMPTOM (EXAMPLE)

E6U090366900W28

Symptom	Antenna signal condition	Source
Only a buzzing sound from the speakers	• There is no broadcasting wave. • Signals from antenna to audio unit are not transmitted.	• Electric noise caused by the operation of internal circuit from audio unit itself • Atmosphere noise
A buzzing or crunching sound and normal sound produced at the same time from the speakers	• Though signals are transmitted from antenna to audio unit, electric noise from other sources is larger.	• Electrical noise caused by operation of electrical component on vehicle • Electrical noise from high tension wire, transformer substation (factory), electrical feeder line (street car), or motorcycle.
A thumping sound and normal sound produced at the same time from the speakers (FM only)	• Noise occurs due to radio wave environment at specific places (e.g. in valleys between buildings). Noise varies when own vehicle or surrounding vehicles moves. (FM only)	• Interference between direct and reflected waves of FM signals causes noise (Multipass noise).

CONFIRMATION STEP 2: ANTENNA SYSTEM SYMPTOM (EXAMPLE)

E6U090366900W29

Possible cause	AM reception condition	FM reception condition
• Antenna feeder axis, open circuit • Antenna feeder plug not attached	NG: No reception	YES: Reception possible. (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder axis (+) to ground (-), open circuit	NG: No reception	NG: No reception
• Antenna feeder and antenna, poor ground	YES: Reception possible (Noise may occur)	YES: Reception possible (Sensitivity decreases, but reception is possible under strong electric field.)
• Antenna feeder, jack and plug poor connection	NG: No reception (Depending on connection conditions)	YES: Reception possible (Depending on connection conditions)

CONFIRMATION STEP 3: ANTENNA SYSTEM SIMPLE INSPECTION

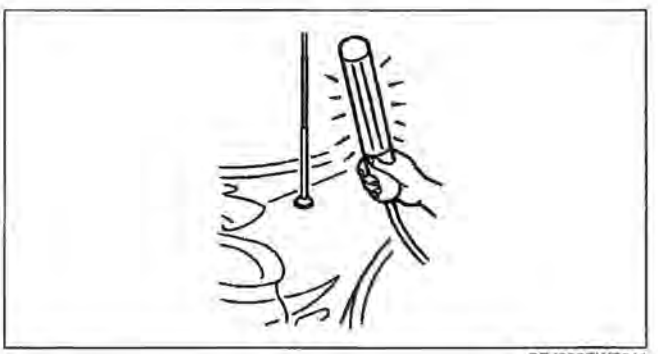
E6U090366900W30

Note

- Because the antenna system is equipped with a capacitor, the continuity cannot be checked. Therefore proceed the following simple inspection.
  1. Turn the AM radio on.
  2. Tune to the frequency that there is no broadcast and you will hear a buzzing sound.
  3. Turn a work light on and shake it around the antenna rod (around 10—20 mm)
  4. If a whirring sound from the speaker synchronized to the work light movement is confirmed, the antenna system is normal.

Note

- Use a fluorescent light type for the inspection. Accurate diagnostic cannot be done with an incandescent light.



CPJ902EWB011

NO.1 NO RADIO RECEPTION (AM/FM)/NO OR LOW VOLUME

E6U090366900W31

1	No radio reception (AM/FM)/no or low volume/Possible DTC: 09:Er20, 09:Er22
POSSIBLE CAUSE	• Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Audio unit malfunction • Antenna plug poor connection • Antenna feeder malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna rod is not installed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the audio unit on. • Is the LCD indicated correctly?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Measure voltage at B+ and ACC terminals. • Is voltage okay? **Specification** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more**	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom No. 2 (Entire audio system).
3	• Set volume to 10 to 15. • Is buzzing sound or voice confirmed?	Yes	Go to the next step.
		No	Follow diagnostic procedure for symptom No. 3 (Entire audio system) or No. 4 (Entire audio system).
4	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Push PRESET buttons and check preset conditions. • Has preset been stored?	Yes	The system is normal.
		No	Preset broadcasting stations.
6	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Remove aftermarket electronic equipment. • Turn the audio unit on and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
8	• Refer to confirmation step 3, and inspect antenna system. • Is a whirring sound present?	Yes	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Go to the next step.
9	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
10	• Turn the ignition switch to the LOCK position. • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09–20–15 ANTENNA FEEDER LOCATION [SPORT SEDAN].) (See 09–20–15 ANTENNA FEEDER LOCATION [5-DOOR].) (See 09–20–16 ANTENNA FEEDER LOCATION [SPORT WAGON].)
		No	Go to the next step.

STEP	INSPECTION		ACTION
11	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? **Note** • Due to following differences, you may feel difference in reception efficiency. **(Vehicle side factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — Volume concern type: It decreases change of volume when signals become weak. (Noise is easy to be conspicuous) — Noise decrease type: It decreases volume when signals become weak, so that noise is not conspicuous.	Yes	The system is normal. (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition.)
		No	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.2 NOISE FROM RADIO (AM ONLY)

E6U090366900W32

2	Noise from radio (am only)/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Antenna rod not installed • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Noise from electrical system on vehicle (e.g. fuel pump) • Battery malfunction • Charging system malfunction • Audio unit malfunction • Antenna plug poor connection • Antenna feeder malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna installation loosened

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.
		No	Go to the next step.
2	• Inspect antenna rod condition. • Is antenna rod installed?	Yes	Go to the next step.
		No	Advise customer to install antenna rod when radio is used.
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed? **Note** • TV antenna located closely to audio antenna can be cause of noise. Relocate TV antenna.	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn audio unit on and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
5	• Measure battery voltage. • Is battery voltage okay? **Standard** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Inspect that battery cables are connected to terminals securely.	Yes	Go to the next step.
		No	Charge battery. Inspect charging system, and repair or replace if necessary.

STEP	INSPECTION		ACTION
6	• Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? **Note** • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on WDS is used.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? **Note** • Inspect following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc.	Yes	Go to the next step.
		No	Troubleshooting completed. **Note** • The audio unit supplies 12 V battery power to the antenna amplifier for the AM radio reception in the radio mode. The audio unit cannot receive the AM signals without the 12 V battery power to the antenna amplifier. If the AM signals become strong, the audio unit may receive the signal with noises.
8	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
9	• Turn the ignition switch to the LOCK position. • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09–20–15 ANTENNA FEEDER LOCATION [SPORT SEDAN].) (See 09–20–15 ANTENNA FEEDER LOCATION [5-DOOR].) (See 09–20–16 ANTENNA FEEDER LOCATION [SPORT WAGON].)
		No	Go to the next step.
10	Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit? **Note** • Due to following differences, you may feel difference in reception efficiency. **(Vehicle side factor)** — Antenna installation location, height, feeder wiring routing, optional electrical equipment **(Audio unit factor)** — Volume concern type: It decreases change of volume when signals become weak. (Noise is easy to be conspicuous) — Noise decrease type: It decreases volume when signals become weak, so that noise is not conspicuous.	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Go to the next step.
11	• Retighten ground for antenna and antenna amplifier. Retighten antenna rod. • Is noise present, after retightening?	Yes	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Troubleshooting completed.

NO.3 NOISE FROM RADIO (FM ONLY)

E6U090366900W33

3	Noise from radio (FM only)/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Antenna rod not installed • Jamming from aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) • Noise from electrical system on vehicle (e.g. fuel pump) • Battery malfunction • Charging system malfunction • Audio unit malfunction • Antenna plug poor connection • Antenna feeder malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna installation loosened **Note** • FM broadcast has feature "sound quality is good" and "resistant to noise", but FM broadcast has particular noises. Though audio unit is designed to reduce noise, there are times noise occurs due to conditions.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Tune to correct frequency of broadcasting station. If not preset, preset it.
		No	Go to the next step.
2	• Inspect antenna rod condition. • Is antenna rod installed?	Yes	Go to the next step.
		No	Advise customer to install antenna rod when radio is used.
3	• Is aftermarket electronic equipment (two-way radio, navigation system, mobile phone, etc.) installed?	Yes	Go to the next step.
		No	Go to Step 5.
4	• Remove aftermarket electronic equipment. • Turn audio unit ON and check reception condition. • Is reception improved?	Yes	The system is normal. (Explain to customers that aftermarket electronic equipment is cause of noise)
		No	Go to the next step.
5	• Measure battery voltage. • Is battery voltage okay? **Standard** **With ignition switch ON: 11.5 V or more** **At idling: 12.5 V or more** **Note** • Inspect that battery cables are connected to terminals securely.	Yes	Go to the next step.
		No	Charge battery. Inspect charging system, and repair or replace if necessary.
6	• Is noise occurring only when vehicle electrical system (e.g. fuel pump) operates? **Note** • Identify subject electrical component by disconnecting fuse, turning switch ON & OFF, or disconnecting & connecting connector. • It will be easy when simulation function on WDS is used.	Yes	Go to the next step.
		No	Go to Step 8.
7	• Inspect power supply, ground condition, and noise prevention capacitor for electrical component. • Is noise present after inspection? **Note** • Inspect following: — Power supply to electrical component for voltage drop (compare with battery voltage) — Resistance between ground of electrical component and body. (Should be close to 0 ohm) — Installation condition of noise prevention capacitor for fuel pump etc.	Yes	Go to the next step.
		No	Troubleshooting completed.

STEP	INSPECTION		ACTION
8	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
9	• Turn ignition switch to LOCK position. • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09–20–15 ANTENNA FEEDER LOCATION [SPORT SEDAN].) (See 09–20–15 ANTENNA FEEDER LOCATION [5-DOOR].) (See 09–20–16 ANTENNA FEEDER LOCATION [SPORT WAGON].)
		No	Go to the next step.
10	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit?	Yes	The system is normal (It is caused by electronic jamming from outside, or inferior broadcasting station signal condition).
		No	Go to the next step.
11	• Retighten ground fixation for antenna installation part and antenna amplifier. Retighten antenna rod. • Is noise present, after retightening? **Note** • When antenna is not grounded properly, FM noise is likely to be noticed.	Yes	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Troubleshooting completed.

NO.4 CANNOT TUNE (SEEK DOES NOT STOP)

E6U090366900W34

4	Cannot tune (seek does not stop)/Possible DTC: 09:Er20, 09:Er22
POSSIBLE CAUSE	• Center panel malfunction • Antenna plug poor connection • Antenna feeder malfunction • Audio unit malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave • Antenna rod not installed

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Inspect if feel of the SEEK button is normal when button is pushed and released. • Is it okay?	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace center panel if necessary.
2	• Inspect indication of Information display. • Is frequency indication increased or decreased when the SEEK button is pushed?	Yes	Go to the next step.
		No	Perform confirmation step 1: audio panel switch confirmation. Replace center panel if necessary.
3	• Manually tune to local broadcasting station and check reception condition. • Is reception okay?	Yes	Go to Step 6.
		No	Go to the next step.
4	• Inspect antenna plug connection condition. • Is connection okay?	Yes	Go to the next step.
		No	Insert antenna plug securely.
5	• Turn the ignition switch to the LOCK position. • Measure continuity between antenna feeder axis and ground. • Is there any continuity?	Yes	Replace antenna feeder. (See 09–20–15 ANTENNA FEEDER LOCATION [SPORT SEDAN].) (See 09–20–15 ANTENNA FEEDER LOCATION [5-DOOR].) (See 09–20–16 ANTENNA FEEDER LOCATION [SPORT WAGON].)
		No	Go to the next step.
6	• Check if number of broadcasting stations changes depending on time and place. • Does it change?	Yes	The system is normal. (Explain to customer that SEEK sometimes does not stop depending on signal reception condition.) **Note** • Signals tend to reach longer distances in the night. It is conspicuous in AM signals, several audio functions may stop due to foreign broadcasting station or noise. Though the audio system restrains sensitivity of SEEK and SCAN functions in the night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.
		No	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

NO.5 CANNOT PRESET (PRESET FUNCTION DOES NOT OPERATE)

E6U090366900W35

5	Cannot preset (preset function does not operate)/Possible DTC: 21:Er19
POSSIBLE CAUSE	• Audio unit malfunction • Center panel malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Tune to desired station and push channel preset button 1 for about 2 seconds to store it. • Repeat above for other stations using channel preset buttons 2 to 5. • Push channel preset button 1 to 6 one by one. • Are stored stations present?	Yes	Go to the next step.
		No	Go to Step 3.
2	• Turn the ignition switch to the LOCK and then to ACC. • Check if preset stations are stored by pushing preset buttons. • Are stations stored?	Yes	The system is normal. (Explain preset procedure to customer using Owner's Manual)
		No	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	• Remove center panel from audio unit, and reinstall center panel to audio unit to check the connector connections. • Turn audio power switch ON. • Push the POWER button and simultaneously push the CLOCK button for approximately 1 second to enter system to switch check mode. • Push all buttons and check if buzzer sounds. • Are all buttons okay?	Yes	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
		No	Replace center panel. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.)

NO.6 RECEPTION FREQUENCY OF RADIO SLIPS

E6U090366900W36

6	Reception frequency of radio slip/Possible DTC: 09:Er22
POSSIBLE CAUSE	• Audio unit malfunction • Electronic jamming from outside, or inferior condition of broadcasting station radio wave

Diagnostic procedure

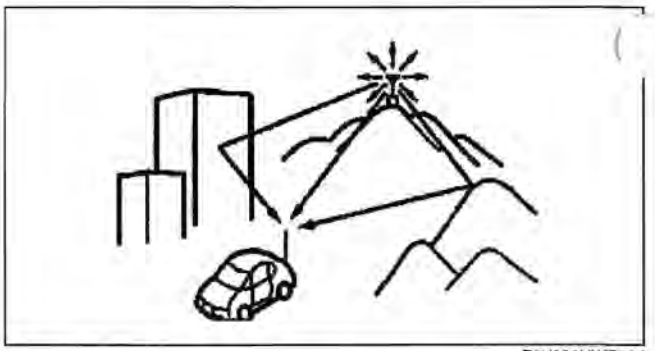
STEP	INSPECTION		ACTION
1	• Push the SEEK button and check if desired broadcasting station is tuned. • Is it okay?	Yes	Go to Step 3.
		No	Go to the next step.
2	• Check if other broadcasting station is received at certain place when indication of reception frequency stays. • Is other station received? **Note** • When you receive weak signal from one broadcasting station and come close to broadcasting antenna which emits strong signal, broadcasting with strong signal is sometimes received.	Yes	Go to the next step.
		No	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)
3	• Compare reception with other audio unit on same model (model/unit) under same problem conditions. • Is reception equivalent between customer's unit and compared unit?	Yes	Troubleshooting completed (Audio unit is normal).
		No	Replace audio unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ASSEMBLY.)

RADIO [REFERENCE]

E6U090366900W37

1. Multipath Noise

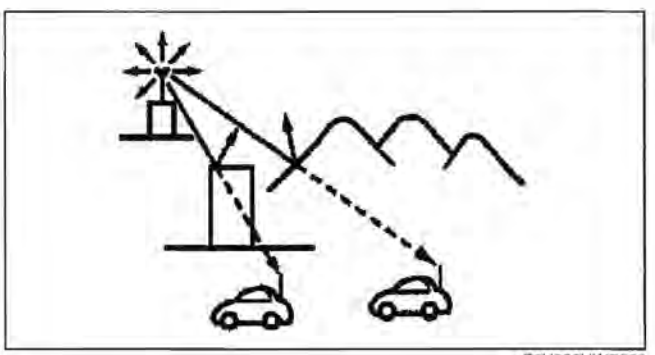
- Signals from an FM transmitter are a high frequency and similar to beams of light because they do not bend around corners, but they do reflect. Since FM signals can be reflected by obstructions, it is possible to receive both the direct signal and the reflected signal at the same time. This causes a slight delay in reception and may be heard as a broken sound or a distortion.



E6U902HWB007

2. Flutter/Skip Noise

- Signals become weak in valleys between mountains, tall building, and other obstacles. When the vehicle passes through such an area, the reception conditions may change suddenly, resulting in annoying noise.



E6U902HWB008

3. Stereo and Monaural Receptions

- As signals become weak, noise may appear more in stereo reception. Comparing to stereo reception, noise in monaural receptions is relatively less striking.

Measures in Audio System

Separation control

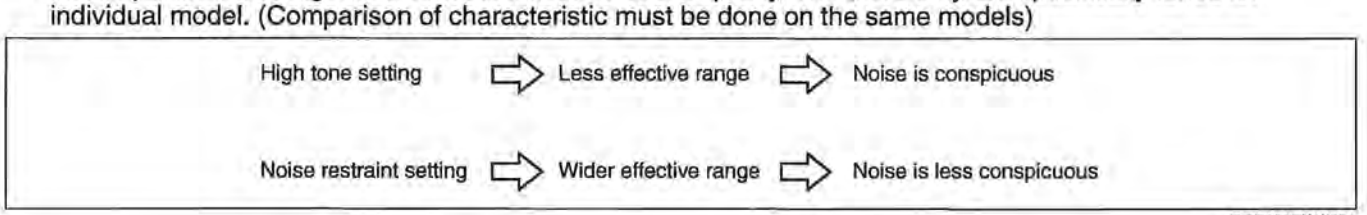
- Utilizing the characteristic of monaural reception that noise is relatively less striking than stereo reception, the audio system automatically changes the reception from stereo to monaural and lessens annoying noise when signals become weak or a multipath phenomenon occurs.

High tone control

- When signals become weak or a multipath phenomenon occurs, the audio system restrains volume level in high frequency band and lessens annoying noise.

Effect Setting of Separation Control and High Tone Control

- The separation and high tone controls influence sound quality, Therefore they are specifically tuned for individual model. (Comparison of characteristic must be done on the same models)



DPE903EW1V0A

Remarks

- Signals tend to reach longer distances in the night. It is conspicuous in AM signals, several audio functions may stop due to foreign broadcasting station or noise. though the audio system restrains sensitivity of SEEK and SCAN functions in the night, the audio system may select other than desired broadcasting station when signals are considerably strong. This function is linked to the parking light. When the parking light or headlight is turned on, SEEK and SCAN may not function for weak signals.

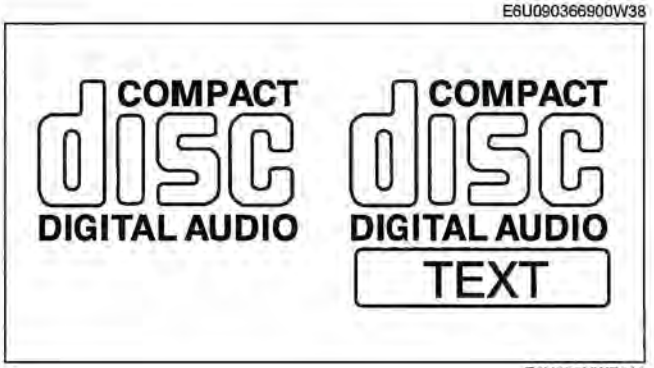
AUDIO CD [REFERENCE]

E6U090366900W38

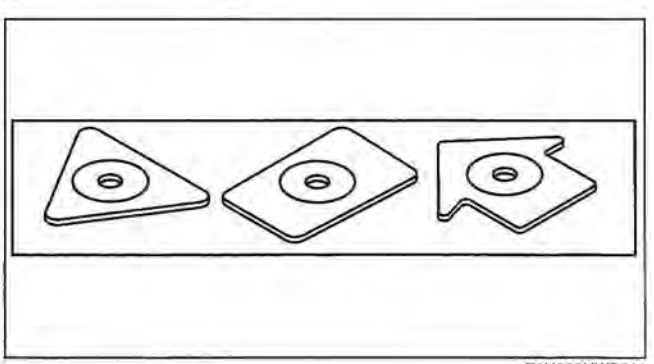


E6U903HWB010

- The CD player/changer has been designed to play CDs bearing the identification logo, COMPACT DISC DIGITAL AUDIO, as shown. No other discs can be played on the CD player/changer other than MP3 applicable one.
- The CD player/changer may not play the following CD:
  - — Defective CD (e.g., cracked, badly bent, rough edges, scratch, dirty CD condensation)
  - — 8 cm (3 in) CDs accessories (e.g., 8 cm (3 in) disc adapter, sticker, label)
  - — Nonstandard CD (e.g., Diameter/thickness is out of specification)
    Specification: 119.7—120.3 mm (4.668—4.692 in) of diameter, 12+0.3 or -0.1 mm (0.047+0.012 or 0.004 in) of thickness
- Do not use non-conventional discs. The CD player/changer could be damaged.

Examples:

- Although the same physical size as the compact disc, SACD uses a different kind of digital audio signal, Direct Stream Digital.
- The CD player/changer may not play the CD-R/RW properly due to the disc condition (excluding the MP3).



E6U903HWB011

MP3-Formatted File
Outline of CD-R and CD-RW

- Definition
  - — CD-R: The CD-R is a non-rewritable version. Once a section of a CD-R is written, it cannot be erased or rewritten.
  - — CD-RW: The CD-RW is a re-writable version of CD-ROM and can be written the data an unlimited number of times.
- Since a reflected laser beam amount of the CD-R/RW is less than the reflected laser beam amount of the conventional CD media, the CD player/changer may not play the CD-R/RW or have the sound jumped.
- Since the recording quality of the CD-R/RW vary widely, some CD-R/RW may not be played.

Recording method

- There are two methods for recording.
- Classification by recorder
  - — Record the audio data in the audio-CD by audio recorder
    - The price of the audio recorder and original audio-CD includes the copyright fee.
  - — Recorded the audio data in the conventional data-CD by the personal computer
    - The data-CD is cheaper than the audio-CD. But, there is a CD with the low quality.
- Classification by audio data uncompression/compression
  - — Uncompressed audio data
    - The CD-R/RW player can play the uncompressed audio data.
  - — Compressed audio data
    - It is possible to record the large quantity of music in a disc. The sound quality varies depends on the audio data compression format. The compressed audio data can be played on the applicable player only.
  - — Type of compression format:
    - MP3: MPEG Audio Layer 3 — Mazda genie MP3 applicable CD player is available.
    - WMA: Windows Media Audio
    - ATRAG: Adaptive TRansform Acoustic Coding

MP3

- The following condition should be met in order to record the MP3-formatted data on the MP3 applicable CD player:

Media	Applicable to the CD-R/RW
Logical format	ISO 9660 level 1&2 / Joliet / Romeo
Number of directly	8 directly
Number of files	Maximum 255 as a total number of file and folder Maximum 155 for folder
ID3 TAG	Applicable to Ver1.1, 2.3 and 2.4
File extension	MP3
Packet writing	Not applicable
Bit rate	8kbps—320kbps/VBR
Sampling rate	11.025kHz—48kHz

DTC TABLE [AUDIO SYSTEM]

E6U090366900W39

Screen display DTC (When starting on-board diagnostic test function)	Detection condition	Possible cause/inspection
00: Er01	Cassette deck cannot implement insert and eject commands.	Cassette deck malfunction
00: Er03	Reel built into cassette deck does not operate.	Verify condition of the cassette deck.
00: Er04	Cassette tape is worn out.	• Tape wear • Verify condition of the cassette deck.
00: Er10	Cassette deck does not operate.	• Malfunction of connectors between base unit and cassette deck • Cassette deck malfunction
03: Er01	CD player cannot implement insert and eject commands.	CD player malfunction
03: Er02	Cannot change tracks.	CD player malfunction
03: Er07	CD reading error.	• Defective CD (scratches or dirt) • CD player malfunction
03: Er10	CD player does not operate.	• Malfunction of connectors between base unit and CD player • CD player malfunction
05: Er01	CD changer (external) cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
05: Er10	CD changer (external) does not operate.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (external) malfunction
06: Er01	CD changer (upper module) cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er02	Cannot change tracks.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • CD changer (upper module) malfunction
06: Er10	CD changer (upper module) does not operate.	• Malfunction of connectors between base unit and CD changer (upper module) • CD changer (upper module) malfunction
07: Er01	MD player cannot implement insert and eject commands.	MD player malfunction
07: Er02	Cannot change tracks.	MD player malfunction
07: Er07	MD reading error.	Defective MD
07: Er08	Blank unrecorded MD is inserted.	Defective MD
07: Er10	MD player does not operate.	• Malfunction of connectors between base unit and MD player • MD player malfunction
09: Er20	Audio system does not operate.	Voltage at base unit is low.
09: Er21	Broken sound/No sound	Inspect the audio system operation according to vehicle condition.
09: Er22	No radio reception	Inspect the radio operation according to vehicle condition.
10: Er01	MP3 applicable CD player cannot implement insert and eject commands.	MP3 applicable CD player malfunction
10: Er02	Cannot change tracks.	MP3 applicable CD player malfunction
10: Er07	MP3 CD reading error.	Incorrect format CD

Screen display DTC (When starting on-board diagnostic test function)	Detection condition	Possible cause/inspection
10: Er10	MP3 applicable CD player does not operate.	• Malfunction of connectors between base unit and MP3 applicable CD player • MP3 applicable CD player malfunction
11: Er01	SSI bus communication error	• Poor connection of the connectors • Radio unit malfunction • Sirius unit malfunction
11: Er03	Poor connection of antenna	• Poor connection of antenna connector
11: Er10	Radio system does not operate.	• Malfunction of connectors between base unit and Sirius unit • Sirius unit malfunction
16: Er12	—	CAN system
21: Er17	Incorrect combination (base unit and center panel)	Install the correct base unit or the center panel.
21: Er18		
21: Er19	Communication error between base unit and center panel	Malfunction of connectors between base unit and center panel
22: Er01	MP3 applicable CD changer cannot implement insert, eject, and disc change commands.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er02	Cannot change tracks.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er07	CD reading error.	• Defective CD (curved, broken or foreign material stuck/attached, etc.) • MP3 applicable CD changer malfunction
22: Er10	MP3 applicable CD changer does not operate.	• Malfunction of connectors between base unit and MP3 applicable CD changer • MP3 applicable CD changer malfunction

Finishing Procedure For Diagnostic Function. 09–03D–11

CAR-NAVIGATION SYSTEM

E6U090366000W01

Troubleshooting Index

- Use the chart below and verify the trouble in order to diagnose the appropriate area.

No.	Malfunction symptom
1	Display screen does not open even if the ignition switch is turned to the ACC position.
2	Display screen changes to black.
3	Display screen changes to white.
4	System does not load map disc.
5	Vehicle position deviates from the route map.
6	Car-navigation control switch is inoperative.
7	No voice navigation
8	Display screen does not change to the night mode. (Front and rear combination lights operate normally.)

Quick diagnostic chart

x: Applied

Troubleshooting item / Possible factor	1	2	3	4	5	6	7	8
	Display screen does not open even if the ignition switch is turned to the ACC position.	Display screen changes to black.	Display screen changes to white.	System does not load the map disc.	Vehicle position deviates from the route map.	Car-navigation control switch is inoperative.	No voice navigation.	Display screen does not change to the night mode.
Open or short circuit in power supply (B+) wiring harness, or burnt fuse	X							
Open or short circuit in power supply (ACC) wiring harness, or burnt fuse	X							
Open or short circuit in GND wiring harness	X

E6U903BZW5S0

NO.1 DISPLAY SCREEN DOES NOT OPEN EVEN IF THE IGNITION SWITCH IS TURNED TO THE ACC POSITION.

E6U090366000W02

1	Display screen does not open even if the ignition switch is turned to the ACC position.
POSSIBLE CAUSE	• Open or short circuit in power supply (B+ or ACC) wiring harness or burnt fuse • Open or short circuit in GND wiring harness • LCD unit malfunction • Poor connection of LCD unit connector, terminal damage • Short circuit in car-navigation control signal wiring harness **Caution** • **Forcibly opening/closing, or placing an object on the display may cause the display screen to become inoperable.**

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ACC position. • Press the OPEN/CLOSE button on the LCD unit. • Does the display screen open?	Yes	The system is normal. **Note** • If the display screen is closed by pressing the OPEN/CLOSE button of the LCD unit with the ignition switch at the ACC position, the display screen will remain closed when the ignition switch is turned to the ACC position again.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Inspect the following fuses: — RADIO 15 A fuse — ROOM 15 A fuse • Are the fuses damaged?	Yes	Go to the next step.
		No	• Replace with the appropriate standard fuse. — If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
3	• Remove the cradle. • Disconnect the cradle connector (6-pin). • Turn the ignition switch to the ACC position. • Inspect the voltage between the cradle wiring harness-side connector (6-pin) terminal B (ACC) and G (GND). • Is the voltage B+?	Yes	Go to Step 5.
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Inspect the continuity between terminal B (ACC) and G (GND) at the cradle wiring harness-side connector. • Is there continuity?	Yes	Repair or replace the suspect wiring harness. Replace the LCD unit. (ACC protector circuit inside LCD is broken.)
		No	• Go to the next step.
5	• Remove the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the LCD unit connector (24-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector (24-pin).
6	• Disconnect the LCD unit connector (24-pin). • Inspect both LCD unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit connector is wrong:** Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
7	• Inspect the voltage between LCD unit wiring harness-side connector (24-pin) terminal Q (B+) and P (GND) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness.
8	• Turn the ignition switch to the ACC position. • Inspect the voltage between LCD unit wiring harness-side connector (24-pin) terminal O (ACC) and P (GND). • Is the voltage **B+**?	Yes	Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness.

NO.2 DISPLAY SCREEN CHANGES TO BLACK.

E6U090366000W03

2	Display screen changes to black.
POSSIBLE CAUSE	• Open or short circuit in car-navigation unit (power supply (B+)) wiring harness • Open or short circuit in car-navigation unit (power supply (ACC)) wiring harness • Open or short circuit in car-navigation unit (GND) wiring harness • Open or short circuit in wiring harness between LCD unit and car-navigation unit • Poor connection of car-navigation unit connector, terminal damage • Poor connection of LCD unit connector, terminal damage • Car-navigation unit malfunction • LCD unit malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Does the display screen change from black to NAVI mode when pressing the joystick of the car-navigation control switch?	Yes	The system is normal. **Note** • If the "VOICE" button is pressed for **approx. 2 s or more**, the "DISP OFF" menu appears on the bottom-left side of screen. If "DISP OFF" mode is selected, the LCD unit will not display anything. "DISP OFF" mode is cancelled when the ignition switch is turned to the LOCK position or the joystick of the remote control is pressed.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the car-navigation unit connector. (24-pin) • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector (24-pin).
3	• Disconnect the car-navigation unit connector (24-pin). • Inspect both car-navigation unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the car-navigation unit connector is wrong:** Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
4	• Inspect the voltage between the car-navigation unit wiring harness-side connector (16-pin) termnal B (B+) and A (GND). • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness as necessary.
5	• Turn the ignition switch to the ACC position. • Inspect the voltage between the car-navigation unit wiring harness-side connector (16-pin) termnal D (ACC) and A (GND). • Is the voltage B+?	Yes	Go to the next step.
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness as necessary.
6	• Turn the ignition switch to the LOCK position. • Remove the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the LCD unit connector (24-pin). • Is the LCD unit connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector (24-pin).
7	• Disconnect the LCD unit connector (24-pin). • Inspect both LCD unit connector and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit connector is wrong:** Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.

STEP	INSPECTION		ACTION
8	• Turn the ignition switch to the ACC position. • Inspect the continuity between the LCD unit wiring harness-side connector terminal and the car-navigation unit connector and wiring harness-side connector terminal. — A (24-pin, B)—T (24-pin, B) — B (24-pin, G)—V (24-pin, G) — C (24-pin, SYNC)—R (24-pin, SYNC) — D (24-pin, R)—X (24-pin, R) — E (24-pin, V.GND1)—U (24-pin, V.GND1) • Is there continuity?	Yes	Inspect for short circuit in the wiring harness. If there is a short circuit, repair or replace the suspect wiring harness. If the wiring harness is OK, then go to the next step.
		No	Repair or replace the suspect wiring harness.
9	• Inspect the continuity between the LCD unit wiring harness-side connector terminal and the car-navigation unit connector and wiring harness-side connector terminal. — I (24-pin, SI01)—N (24-pin, SI01) — K (24-pin, SI02)—P (24-pin, SI02) • Is there continuity?	Yes	Inspect for short circuit in the wiring harness. If there is a short circuit, repair or replace the suspect wiring harness. If the wiring harness is OK, then go to the next step.
		No	Repair or replace the suspect wiring harness.
10	• Dose system work properly?	Yes	Troubleshooting is completed.
		No	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

NO.3 DISPLAY SCREEN CHANGES TO WHITE.

E6U090366000W04

3	Display screen changes to white.
POSSIBLE CAUSE	• Car-navigation unit malfunction • LCD unit malfunction • Improper adjustment of the screen contrast

09–03

Diagnostic procedure

TEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ACC position. • Does the display screen change to "display quality adjustment" mode when pressing the MODE button for **approx. 2 s or more**?	Yes	Go to the next step.
		No	Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)
2	• Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the LCD unit, then go to the next step. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)
3	• Select "default display" or "display quality adjustment" mode in the NAVI mode. • Press "ENTER" button. • Does system work properly?	Yes	Troubleshooting is completed.
		No	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

NO.4 SYSTEM DOES NOT LOAD THE MAP DISC.

E6U090366000W05

4	System does not load the map disc.
POSSIBLE CAUSE	• Car-navigation unit malfunction • Map disc malfunction • Moisture inside of car-navigation unit • Non-designated disc is inserted **Note** • If dewdrops are formed inside of the car-navigation unit, the display screen shows the "The disc installed is not a map DVD" message. Remove the map disc, ventilate or remove moisture from the passenger compartment, and then leave it **for approx. 1 h**. The dewdrops will be removed and the car-navigation unit will operate normally. • In case of a dirty/damaged map disc or car-navigation unit malfunction, the display screen will show the "Please insert a map DVD" message for few seconds to 1 min, then change to "The disc installed is not a map DVD" message after the ignition switch is turned to the ACC position. • If a non-designated disc is inserted, the display screen shows the "The disc installed is not a map DVD" message.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Eject the map disc. • Is the map disc a designated disc?	Yes	Go to the next step.
		No	Insert the designated disc, then go to the next step.
2	• Eject the map disc then insert it again. • Does system load the map disc?	Yes	Troubleshooting is completed.
		No	Go to the next step.
3	• Eject the map disc and clean the surface of map disc with a soft cloth. • Insert map disc again. • Does system load the map disc?	Yes	Troubleshooting is completed.
		No	Replace car-navigation unit and map disc at the same time. (consult distributor) (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)

NO.5 VEHICLE POSITION DEVIATES FROM THE ROUTE MAP.

E6U090366000

5	Vehicle position deviates from the route map.
POSSIBLE CAUSE	• Jammed radio signals from after market equipment (radar, remote engine starter, anti-theft device etc.) • Open or short circuit in the wiring harness (vehicle speed signal related). • Car-navigation unit malfunction. • Poor connection of the GPS antenna connector, terminal damage • GPS antenna malfunction. • Open or short circuit in feeder line between antenna feeder and car-navigation unit.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is any of the following after-market equipment installed? — Radar — Remote engine starter — Anti-theft device. — Other	Yes	Go to the next step.
		No	Go to Step 3.
2	• Remove the after-market equipment. **Note** • The procedure requires an assistant. — Drive the vehicle without any obstacles. — Drive the vehicle indicator follow the steering wheel direction?.	Yes	System is normal. The after market electrical devices might be interrupting to the GPS reception.
		No	Go to the next step.
3	• Position the vehicle without any obstacles and receive GPS for **5 min.** at idle. • Does "GPS" show up on the left lower side of the display screen?	Yes	Go to the next step.
		No	Go to Step 8.

STEP	INSPECTION		ACTION
4	**Caution** • **This procedure requires an assistant.** • Diagnostic function is started. • Drive the vehicle. • Check the "Speed" on the diagnosis screen. • Does the "Speed" change according to the vehicle speed? **Note** • If the engine is started after diagnostic function is activated, the diagnostic function mode is reset.	Yes	Go to the next step.
		No	Go to Step 6.
5	**Caution** • **This procedure requires an assistant.** • Drive the vehicle and turn the steering wheel to the left and/or right. • Does the vehicle indicator follow the steering direction?	Yes	The system is normal. **Note** • The vehicle indicator might be out of position in the following areas: — Parallel road, high-level road, loop road, tower type parking lot
		No	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
6	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the car-navigation unit connector (16-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector (16-pin).
7	• Disconnect the car-navigation unit connector (16-pin). • Inspect both car-navigation unit connector and wiring harness-side connector terminal H for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Inspect for vehicle speed signal input circuit. Repair or replace if necessary.
		No	**If the car-navigation unit connector is wrong:** Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
8	**Note** • If the engine is started after diagnostic function is activated, the diagnostic function mode is reset. • Turn the ignition switch to the ON position. • Diagnostic function is started. • Inspect the "GPS antenna" on the diagnosis screen. • Is the "OK" indicated?	Yes	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
9	• Turn the ignition switch to the LOCK position. • Remove the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the connector between the car-navigation unit and GPS antenna. • is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the GPS antenna connector (2-pin).
10	• Disconnect the GPS antenna connector. • Inspect both GPS antenna connector and car-navigation unit connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the wiring harness-side connector is wrong:** Repair or replace the related wiring harness. **If the car-navigation unit side connector is wrong:** Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
11	• Inspect the continuity between the car-navigation unit wiring harness-side connector terminal and GPS antenna wiring harness-side connector terminal. • Is there continuity?	Yes	Inspect for short circuit in the wiring harness. If there is a short circuit, repair or replace the related wiring harness. If the wiring harness is OK, replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Repair or replace the related wiring harness.

NO.6 REMOTE CONTROL IS INOPERATIVE.

E6U090366000W07

6	Remote control is inoperative.
POSSIBLE CAUSE	• Remote control malfunction • Open or short circuit in the wiring harness (remote control signal) • Poor connection of the cradle connector, terminal damage • Poor connection of the LCD unit connector, terminal damage • LCD unit malfunction **Note** • The remote control is inoperative if the following circuit is malfunctioning: — LCD unit connector (24-pin) terminal I (SI01) - Car-navigation unit connector (24-pin) terminal N (SI01) — LCD unit connector (24-pin) terminal K (SI02) - Car-navigation unit connector (24-pin) terminal P (SI02) • When the ignition switch is turned off, then ACC position, display screen changes to black.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Are the switches only partly inoperative?	Yes	Replace the remote control.
		No	Go to the next step.
2	• Turn the ignition switch to the LOCK position. • Remove the cradle and inspect the connection of the cradle connector (6-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the cradle connector (6-pin).
3	• Turn the ignition switch to the LOCK position. • Disconnect the cradle connector (6-pin). • Inspect both the cradle and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the cradle side connector is wrong:** Replace the cradle. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
4	• Remove the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the car-navigation unit connector (24-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD unit connector.
5	• Disconnect the LCD unit connector (6-pin). • Inspect both the LCD unit and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit side connector is wrong:** Replace LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
6	• Turn the ignition switch to the LOCK position. • Disconnect the LCD unit connector (6-pin). • Disconnect the cradle connector (6-pin). • Inspect for continuity between cradle wiring harness-side connector terminal B and the LCD unit wiring harness-side connector terminal E. • Is there continuity?	Yes	Inspect for short sircuit in the wiring harness. If there is a short circuit, repair or replace the suspect wiring harnes. If the wiring harness is OK, go to the next step.
		No	Repair or replace the related wiring harness.
7	• Connect the LCD unit connector (6-pin). • Connect the cradle connector (6-pin). • Turn the ignition switch to the ON position. • Inspect the voltage at the cradle terminal B. • Is the voltage **B+**?	Yes	Replace the cradle. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
		No	Go to the next step.
8	• Turn the ignition switch to the LOCK position. • Disconnect the LCD unit connector (6-pin). • Turn the ignition switch to the ON position. • Inspect the voltage at terminal A (power). • Is the voltage **B+**?	Yes	Inspect the cradle wiring harness (power supply). Repair or replace if necessary.
		No	Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)

NO.7 NO VOICE NAVIGATION

E6U090366000W08

7	No voice navigation
POSSIBLE CAUSE	• Improper adjustment of the NAVI voice volume • Car-navigation unit malfunction • Poor connection of the driver-side front door speaker connector, terminal damage • Driver-side front door speaker malfunction • Poor connection of the car-navigation unit connector, terminal damage • Open or short circuit in driver-side front door speaker wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Is the voice navigation volume from "1" to "7"?	Yes	Go to the next step.
		No	Adjust the volume from "1" to "7".
2	• Turn the audio power switch (CD, MD, radio) to ON. • Does the driver-side front door speaker work?	Yes	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
3	• Turn the ignition switch to the LOCK position. • Remove the driver-side front door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) • Inspect the connection of the driver-side front door speaker connector (2-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	**If poor connection of door-side front door speaker connector:** Securely connect the driver-side front door speaker connector.
4	• Disconnect the driver-side front door speaker connector (2-pin). • Inspect both the driver-side front door speaker and wiring harness-side connector for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the driver-side front door speaker side connector is wrong:** Replace the driver-side front door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
5	• Remove the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the car-navigation unit connector (16-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the car-navigation unit connector.
6	• Disconnect the car-navigation unit connector (16-pin). • Inspect both the car-navigation unit and wiring harness-side connector terminal M and N for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the car-navigation unit side connector is wrong:** Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong:** Repair or replace the pins and/or the connector.
7	• Inspect for continuity between car-navigation unit and the driver-side front door speaker. • Is there continuity?	Yes	Inspect for short circuit in the wiring harness. If there is a short circuit, repair or replace the related wiring harness. If the wiring harness is ok, go to the next step.
		No	Repair or replace the wiring harness.
8	• Inspect the driver-side front door speaker. (See 09–20–9 FRONT DOOR SPEAKER INSPECTION • Is it normal?	Yes	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Replace the driver-side front door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)

NO.8 DISPLAY SCREEN DOES NOT CHANGE TO THE NIGHT MODE. (FRONT AND REAR COMBINATION LIGHTS OPERATE NORMALLY.)

E6U090366000W09

8	**Display screen does not change to the night mode. (Front and rear combination lights operate normally.)**
POSSIBLE CAUSE	• Improper setting of NAVI map indication • Open or short circuit in TNS signal wiring harness (TNS signal related) • LCD unit malfunction • Poor connection of the LCD unit connector, terminal damage • Car-navigation unit malfunction **Note** • The remote control is inoperative if the following circuit is malfunctioning: — LCD unit terminal I (SI01) - car-navigation unit terminal N (SI01) — LCD unit terminal K (SI02) - car-navigation unit terminal P (SI02) • When the ignition switch is turned off, then ACC position, display screen changes to black.

Diagnostic procedure

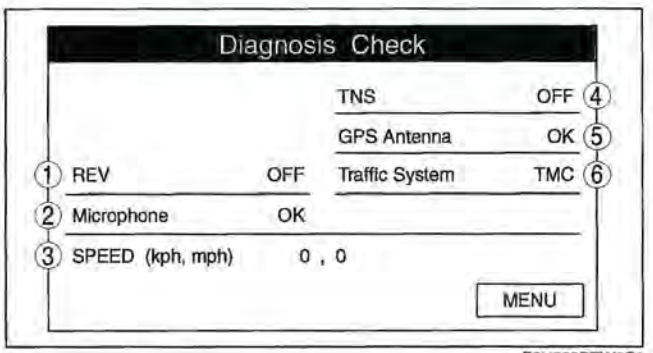
STEP	INSPECTION		ACTION
2	• Press the "MENU" button. • Select "Navigation Set Up". • Select "User Settings". • Inspect "Map Mode". • Is the "Map Mode" set to "Auto"?.	Yes	Go to the next step.
		No	The system is normal. Set the "Map Mode" to "Auto".
1	• Turn the ignition switch to the ON position. • Does the display screen change to the night mode when the light switch is turned to the TNS position, and the dimmer cancel switch is turned to OFF?	Yes	The system is normal.
		No	Go to the next step.
3	• Diagnostic function is started. • Turn the light switch to the TNS position. • Inspect the "TNS" on the diagnosis check screen. • Does the "TNS" indicate "ON"?	Yes	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
		No	Go to the next step.
4	• Turn the ignition switch to the LOCK position. • Remove the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) • Inspect the connection of the LCD unit connector (24-pin). • Is the connector securely connected?	Yes	Go to the next step.
		No	Securely connect the LCD connector.
5	• Disconnect the LCD unit connector (24-pin). • Inspect both the LCD unit and wiring harness-side connector terminal V for poor connection (such as damaged/pulled-out pins, corrosion). • Are all the pins normal?	Yes	Go to the next step.
		No	**If the LCD unit side connector is wrong** Replace the LCD unit. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.) **If the wiring harness-side connector is wrong** Repair or replace the pins and/or the connector.
6	• Inspect the voltage of the LCD unit wiring harness-side connector (24-pin) terminal V (TNS signal) • Is voltage **B+** when the light switch is turned to the TNS position?	Yes	Replace the LCD unit, then go to the next step. (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)
		No	Inspect for TNS signal circuit. Repair or replace if necessary.
7	• Dose system operate properly?	Yes	Troubleshootig is completed.
		No	Replace the car-navigation unit. (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/ INSTALLATION.)

REFERENCE INFORMATION

E6U090366000W10

Starting Procedure For Diagnostic Function

1. Turn the ignition switch to the ACC or ON position.
2. Press the MENU button.
3. Select "Navigation Set Up".
4. Select "Calibration".
5. Select "Map Version".
6. Press the joystick up **two times**, then down **two times**.
7. "Diagnosis Check" is displayed on the screen.



E6U903BZW5S1

No.	Display item	Description
1	REV	Indicate Reverse signal state. — ON: Reverse — OFF: Others
2	Microphone	Indicate the connection state of a microphone — OK: Connect — NCON: Disconnect
3	Speed*	Indicate the present vehicle speed by kph/mph (a maximum of 3 digits).
4	TNS*	Indicate the TNS signal state. — ON: Turn TNS on — OFF: Turn TNS off
5	GPS Antenna*	Indicate the connection state of a GPS antenna. — OK: Connect — NCON: Disconnect
6	Traffic System	Indicate the RDS-TMC system availability on the vehicle. — None: Not equip

* : It is used for symptom troubleshooting. (Troubleshooting index No. 5 and No. 8)

Finishing Procedure For Diagnostic Function

1. Turn the ignition switch to the LOCK position.
2. Turn the ignition switch to the ACC or ON position.
3. Return to the normal screen.

09–03E SYMPTOM TROUBLESHOOTING [IMMOBILIZER SYSTEM]

FOREWORD 09–03E–1
Troubleshooting Index 09–03E–1
NO.1 SECURITY LIGHT REMAINS ON OR DOES NOT ILLUMINATE..... 09–03E–2
Diagnostic Procedure 09–03E–2

FOREWORD

E6U090367000W01

Troubleshooting Index

- Use the chart below verify the symptoms of the trouble in order to diagnose the appropriate area.

No.	Troubleshooting item	Description	Page
1	Security light remains on or does not illuminate.	Malfunction in security light circuit.	(See 09–03E–2 NO.1 SECURITY LIGHT REMAINS ON OR DOES NOT ILLUMINATE)
2	Engine does not start. (When ignition switch is turned to ON position, security light illuminates for **approx. 3 seconds** and goes off.)	Malfunction in starter system circuit.	(See 01–03A–17 NO.3 WILL NOT CRANK [L3]) (See 01–03C–16 NO.3 WILL NOT CRANK [AJ])

NO.1 SECURITY LIGHT REMAINS ON OR DOES NOT ILLUMINATE

E6U090367000W02

1	Security light remains on or does not illuminate.
DETECTION CONDITION	Malfunction in security light circuit
POSSIBLE CAUSE	• PCM malfunction • Instrument cluster (print plate) malfunction • Open or short to power supply circuit in wiring harness between instrument cluster and PCM

Diagnostic Procedure

- When performing an asterisked (*) troubleshooting inspection, shake the wiring harness and connectors while doing the inspection to discover whether poor contact points are the cause of any intermittent malfunction. If there is a problem, check to make sure connectors, terminals and wiring harness are connected correctly and undamaged.

Step	Inspection		Action
1	**INSPECT OTHER WARNING AND INDICATOR LIGHTS CIRCUIT IN INSTRUMENT CLUSTER** • Turn ignition switch to ON position. • Do other warning and indicator lights illuminate?	Yes	Turn ignition switch to LOCK position, then go to next step.
		No	Inspect instrument cluster power supply system and ground system, then go to Step 4.
2	**INSPECT INSTRUMENT CLUSTER** • Turn ignition switch to LOCK position. • Disconnect negative battery cable. • Disconnect PCM connector. • Connect instrument cluster terminal 1G to ground using jumper wire. • Connect negative battery cable. • Turn ignition switch to ON position. • Does security light illuminate?	Yes	Go to next step.
		No	Replace instrument cluster, then go to Step 4. (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/ INSTALLATION)
* 3	**INSPECT WIRING HARNESS BETWEEN INSTRUMENT CLUSTER AND PCM** • Turn ignition switch to LOCK position. • Disconnect negative battery cable. • Disconnect instrument cluster connector. • Inspect wiring harness between instrument cluster terminal 1G and PCM terminal 2W (L3) for following: — Short to ground — Short to power supply — Open circuit • Is wiring harness normal?	Yes	Replace PCM and reprogram immobilizer system, then go to next step. (See 01–40A–9 PCM REMOVAL/INSTALLATION [L3]) (See 09–14–39 IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM])
		No	Replace wiring harness, then go to next step.
4	**CONFIRM THAT MALFUNCTION SYMPTOMS DO NOT RECUR AFTER REPAIR** • Turn ignition switch to LOCK position. • Disconnect negative battery cable. • Connect instrument cluster connector. • Connect PCM connector. • Connect negative battery cable. • Turn ignition switch to ON position. • Does security light operate properly?	Yes	Complete troubleshooting, then explain repairs to customer.
		No	Recheck malfunction symptoms, then repeat from Step 1 if malfunction recurs.

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Attempt to lock/unlock the door with the transmitter (card key). • Does door lock system work?	Yes	Go to the next step.
		No	Go to Step 7.
2	• Did the customer activate the keyless entry system within operative area **(2.5 m {8.2 ft}** from vehicle)?	Yes	Go to the next step.
		No	The system is normal. Explain to the customer that the system does not work without the system operative area.
3	• Did the customer use the keyless entry system in particular area, such as being near TV towers, power plants, power lines, or factories?	Yes	The system is normal. Area of operation is subject. Explain effect of outside interference on the transmitter (card key) to the customer.
		No	Go to the next step.
4	• Did the customer activate the keyless entry system with the key inserted into the steering lock?	Yes	The system is normal. Explain to the customer that the system does not work with the key inserted into the steering lock.
		No	Go to the next step.
5	• Are any of the following after-market electrical parts on the vehicle? — Cellular phone — Radio-wave equipment — Remote engine starter — TV — Other	Yes	Go to the next step.
		No	Go to Step 7.

STEP	INSPECTION		ACTION
6	• Disconnect the after-market electrical parts connectors and attempt to lock/unlock the doors with the transmitter (card key). • Does the keyless entry system work?	Yes	The system is normal. The after-market electrical parts are interfering with the keyless entry system.
		No	Go to the next step.
7	• Attempt to lock/unlock the doors with the transmitter (card key). • Does the door lock system work?	Yes	Go to the next step.
		No	Go to Step 9.
8	• Replace with a transmitter (card key) battery known to be good. • Does the keyless entry system operate properly?	Yes	Replace the transmitter (card key) battery, and then go to Step 24.
		No	Go to the next step.
9	• Visually inspect the transmitter (card key) battery. • Are the below items correct? — Transmitter (card key) battery installation (correct polarity) — Battery type (**CR2025**)	Yes	Go to the next step.
		No	Install the transmitter (card key) battery properly or replace with the specified transmitter (card key) battery (**CR2025**), then go to Step 24.
10	• Visually inspect the transmitter (card key). — Is there rust on the transmitter (card key) battery terminals (positive or negative)? — Is there poor connection between the terminals and battery?	Yes	Replace the transmitter (card key) or repair the transmitter (card key) battery terminal, then go to Step 24.
		No	Go to the next step.
11	• Inspect transmitter (card key) battery. • Is the battery voltage normal?	Yes	Go to Step 13.
		No	Go to the next step.
12	• Replace with a transmitter (card key) battery known to be good. • Does the keyless entry system operate properly?	Yes	Replace the transmitter (card key) battery, and then go to Step 24.
		No	Replace the transmitter (card key), and then go to Step 24.
13	• Inspect for the keyless receiver installation. • Is the bracket securely installed on the keyless receiver?	Yes	Go to the next step.
		No	Install the bracket securely, and then go to the next step.
14	• Inspect the ground wire on the keyless receiver bracket. • Is the ground wire tighten on the bracket?	Yes	Go to the next step.
		No	Tighten the ground wire, then go to the next step.
15	• Turn the ignition switch to the LOCK position. • Measure the voltage at keyless receiver terminal A? • Is the voltage **B+**?	Yes	Go to the next step.
		No	• Inspect ROOM 15 A fuse.. • Inspect and repair the wiring harness between the fuse block and the keyless receiver as necessary.
16	• Measure the voltage at keyless receiver terminal E? • Is the voltage **0 V**?	Yes	Go to the next step.
		No	• Inspect and repair the wiring harness between the ground wire and the keyless receiver as necessary. • Re-tighten the ground wire as necessary.
17	• Disconnect the keyless receiver connector (6-pin) and keyless control module connector (75-pin). • Is there continuity between the following terminals? — Keyless receiver connector terminal A— keyless control module connector terminal 2S	Yes	Go to the next step.
		No	• Inspect and repair the wiring harness between the keyless control module and the keyless receiver, then go to the next step.
18	• Remove the key from steering lock. • Measure the voltage at the keyless control module terminal 2U while operating the transmitter (card key)? • Is the voltage as below — **5 V→1.0** ς **o**ρ λεσσ	Yes	Go to the next step.
		No	Replace the keyless receiver, and then go to the next step.
19	• Measure the voltage at the keyless contorl module terminals 2B, 2D and 2I. — Terminal 2B: **IG1 voltage** — Terminal 2D: **B+** — Terminal 2B: **ACC voltage** • Is the voltage as above?	Yes	Go to the next step.
		No	• Inspect for fuse. • Inspect and repair the wiring harness between the keyless control module and the fuse block as necessa

STEP	INSPECTION		ACTION
20	• Measure the voltage at keyless control module terminal 2C? • Is the voltage **0 V**?	Yes	Go to the next step.
		No	• Inspect and repair the wiring harness between the ground wire and the keyless control module as necessary. • Re-tighten the ground wire as necessary.
21	• Measure the voltage at the keyless contorl module terminals 2O. — Insert the key into the steering lock: **B+** — Remove the key from steering lock: **1.0 V or less** • Is the voltage as above?	Yes	Go to the next step.
		No	• Inspect for key reminder switch. • Inspect and repair the wiring harness between the steering lock unit (key reminder switch) and the keyless control module.
22	• Measure the voltage at the keyless contorl module terminals 2R while operating the transmitter. — All doors locked: **1.0 V or less→B+→**1.0 V or less — Any door unlocked: **1.0 V or less→**B+→1.0 V or less • Is the voltage as above?	Yes	Replace the keyless control module.
		No	• Inspect and repair the wiring harness between the keyless control module (2R) and BCM (7I). — If the harness is normal, go to the next step. — If the harness is malfunctioning, repair the wiring harness.
23	• Measure the voltage at the BCM terminals 6A, 6B and 6F while operating the transmitter. — Lock all doors with the transmitter (card key): **1.0 V or less→B+→**1.0 V or less • (normal lock: 6A terminal) • (double lock: 6F terminal) — Unlock any door with the transmitter (card key): **1.0 V or less→**B+→1.0 V or less (6B terminal) • Is the voltage as above?	Yes	• Inspect and repair the wiring harness between the BCM and the door lock actuator. • Inspect for door lock actuator.
		No	Replace the BCM.
24	• Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customers
		No	Re-inspect the malfunction symptoms, then repeat form Step 1 if malfunction recurs.

NO.2 BLINK KEYLESS INDICATOR LIGHT

E6U090369000W11

2	Blink keyless indicator light
POSSIBLE CAUSE	• Low transmitter (card key) battery voltage.

Diagnostic procedure

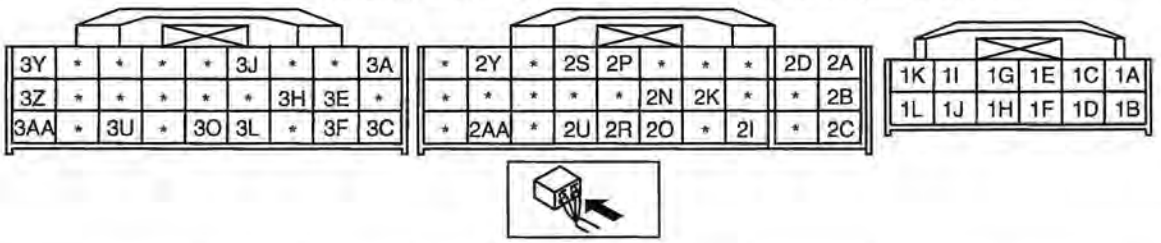
STEP	ACTION
1	• Replace wit new transmitter (card key) battery.

NO.3 ADVANCED KEYLESS ENTRY FUNCTION INOPERATIVE

E6U090369000W12

3	Advanced keyless entry function inoperative
POSSIBLE CAUSE	• Malfunction in the transmitter (card key). • Malfunction in the keyless control module. • Malfunction in the keyless receiver. • Malfunction in the keyless antenna. • Malfunction in the BCM. • Wrong usage.

KEYLESS CONTROL MODULE WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Retrieve the advanced keyless system DTC using the WDS or equivalent. • Are there DTC displayed?	Yes	Perform the applicable DTC diagnostic procedures.
		No	Go to the next step.
2	• Did the customer attempt to operate each front doors and liftgate using the request switch?	Yes	Go to the next step.
		No	Inspect the advanced keyless system operations using the request switch. If the advanced keyless system is inoperative, then go to the next step.
3	• Prepare the follwings: — Make sure that there is no transmitter (card key) inside the passenger compartment. — Close all doors including liftgate. — Remove the key from the steering lock. — Make sure that start knob is to the LOCK position. (Do not Press the knob) — Make sure that the transmitter (card key) is within the advanced keyless system operative area (**within 80 cm {2.6 ft}** from front door) • Does the advanced keyless system operate properly?	Yes	The system is normal. Explain the advanced keyless system operation.
		No	Go to the next step.
4	• Replace with a transmitter (card key) battery known to be good. • Operate the transmitter (card key). • Does the keyless entry system operate properly?	Yes	Replace the transmitter (card key). Then go to the next step.
		No	Go to the next step.
5	• Measure the voltage at the keyless control module terminals 3H, 3J and 3L while operating the request switch. — Operate driver's side front door request switch (4H): **5.0 V→1.0 V or less** — Operate passenger's side front door request switch (4J): **5.0 V→1.0 V or less** — Operate liftgate request switch (4L): **5.0 V→1.0 V or less** • Is the voltage as above?	Yes	Go to the next step.
		No	Inspect and repair the applicable wiring harness as necessary, then go to the next step.

STEP	INSPECTION		ACTION
6	• Measure the voltage at the following keyless control module terminal while operating the request switch. — Terminal 1A and 1B for driver's side keyless antenna — Terminal 1C and 1D for passengerr's side keyless antenna — Terminal 1E and 1F for exterior, rear keyless antenna — Terminal 1G and 1H for interior, rear (4SD)/interior, RR (5HB, WGN) keyless antenna — Terminal 1I and 1J for interior, RL keyless antenna (5HB, WGN) — Terminal 1K and 1L for interior, middle keyless antenna — Terminal 2G and 25H for interior, front keyless antenna • Is the voltage **within 4.0—6.0 V**?	Yes	Go to the next step.
		No	Inspect and repair the applicable wiring harness between the keyless antenna and the keyless control module, then go to the next step.
7	• Measure the voltage at the keyless control module terminals 2U (keyless receiver) while operating the any request switch. — **5.0 V**→1.0 V or less • Is the voltage as above?	Yes	Go to the next step.
		No	• Inspect the wiring harness between the keyless receiver and the keyless control module. — If the harness is normal, replace the keyless receiver. — If the harness is malfunctioning, repair the wiring harness. • Go to the next step.
8	• Measure the voltage at the keyless control module terminals 2R (BCM) while operating the request switch. — Unlock: **1.0 V or less**→**B+**←1.0 V or less • Is the voltage as above?	Yes	Inspect and repair the wiring harness between the BCM and the keyless control module, then go to the next step.
		No	Inspect the keyless control module. If the keyless control module is malfunctioning, replace the module.
9	• Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customers
		No	Re-inspect the malfunction symptoms, then repeat form Step 1 if malfunction recurs.

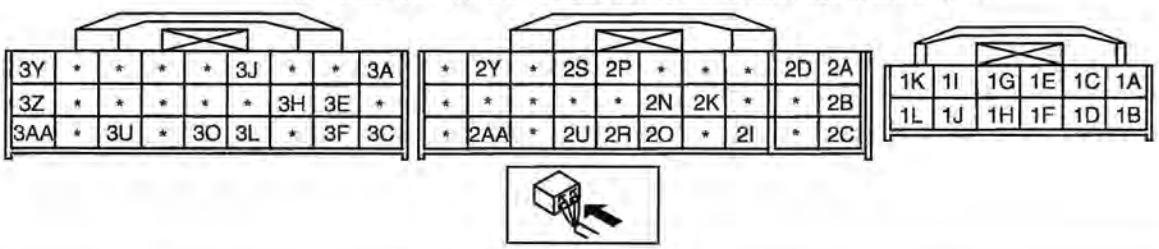
09-03

NO.4 ADVANCED KEYLESS START FUNCTION INOPERATIVE

E6U090369000W13

4	**Advanced keyless start function inoperative**
POSSIBLE CAUSE	• Malfunction in the transmitter (card key). • Malfunction in the keyless control module. • Malfunction in the keyless receiver. • Malfunction in the keyless antenna. • Malfunction in the PCM.

KEYLESS CONTROL MODULE WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Retrieve the advanced keyless system DTC using the WDS or equivalent. • Are there DTC displayed?	Yes	Perform the applicable DTC diagnostic procedures.
		No	Go to the next step.
2	• Attempt to start the engine using the key. • Does engine start?	Yes	Go to the next step.
		No	Go to symptom torubleshooting flow No.3 in 01-03 section.
3	• Bring the transmitter (card key) inside the passenger compartment. • Measure the voltage at the keyless control module terminal 2N (push switch) while pushing the start knob. • Is the voltage **0 V**?	Yes	Go to the next step.
		No	• Inspect the wiring harness between the steering lock unit and keyless control. — If the harness is normal, replace the steering lock unit. — If the harness is malfunctioning, repair the wiring harness. • Go to the next step.
4	• Replace with a transmitter (card key) battery known to be good. • Bring the transmitter (card key) inside the passenger compartment. • Does the keyless entry system operate properly?	Yes	Replace the transmitter (card key). Then go to the next step.
		No	Go to the next step.
5	• Measure the voltage at the following keyless control module terminal while pressing the start knob. — Terminal 1A and 1B for driver's side keyless antenna — Terminal 1C and 1D for passengerr's side keyless antenna — Terminal 1E and 1F for exterior, rear keyless antenna — Terminal 1G and 1H for interior, rear (4SD)/interior, RR (5HB, WGN) keyless antenna — Terminal 1I and 1J for interior, RL keyless antenna (5HB, WGN) — Terminal 1K and 1L for interior, middle keyless antenna — Terminal 2G and 25H for interior, front keyless antenna • Is the voltage **within 4.0—6.0 V**?	Yes	Go to Step 7.
		No	Inspect and repair the applicable wiring harness between the keyless antenna and the keyless control module, then go to the next step.
7	• Measure the voltage at the keyless control module terminals 2U (keyless receiver) while pressing the start knob. — **5.0 V**→1.0 V or less • Is the voltage as above?	Yes	Go to the next step.
		No	• Inspect the wiring harness between the keyless receiver and the keyless control module. — If the harness is normal, replace the keyless receiver. — If the harness is malfunctioning, repair the wiring harness. • Go to the next step.
8	• Does the keyless indicator light turn ON when pressing the start knob?	Yes	Go to Step 10.
		No	Go to the next step.
9	• Measure the voltage at the keyless control module terminals 2P while pressing the start knob. — **5.0 V**→1.0 V or less • Is the voltage as above?	Yes	Go to the next step.
		No	• Inspect the wiring harness between the steering lock unit and the keyless control module. — If the harness is normal, replace the keyless control module. — If the harness is malfunctioning, repair the wiring harness. • Go to the next step.
10	• Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customers
		No	Re-inspect the malfunction symptoms, then repeat form Step 1 if malfunction recurs.

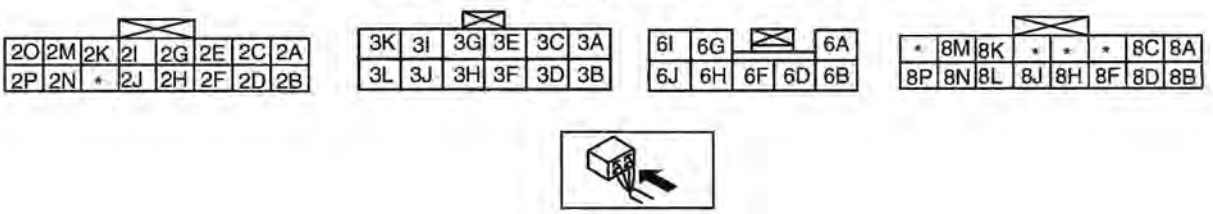
E6U090369000W04

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that the connectors, terminals and wiring harnesses are connected correctly and undamaged.

1	One or more on-board diagnostic functions inoperative
DESCRIPTION	• Malfunction in door lock linkage system
POSSIBLE CAUSE	• Malfunction in door lock linkage • Malfunction in BCM door lock/unlock signal circuit — BCM malfunction

BODY CONTROL MODULE (BCM) WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**CHECK HORN, AND HAZARD WARNING LIGHT OPERATION DURING ON-BOARD DIAGNOSIS** • Did all of the following items work during on-board diagnostic function operation? — Hazard warning lights flashed	Yes	Go to Step 5.
		No	Go to next step.
2	**INSPECT HAZARD WARNING LIGHT OPERATION DURING ON-BOARD DIAGNOSIS** • Did hazard warning lights flash during on-board diagnostic function operation?	Yes	Go to Step 5.
		No	Go to next step.
3	**INSPECT HAZARD WARNING LIGHT CIRCUIT** • Do hazard warning lights flash when hazard warning switch is on?	Yes	Go to next step.
		No	Inspect hazard warning light circuit.
*4	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (BETWEEN BCM AND TURN LIGHTS) OR BCM** • Measure the voltage at BCM terminals 3B and 3D (12-pin connector), and 2I and 2K (16-pin connector), and 8H and 8J (16-pin connector) during on-board diagnostic function operation. — When hazard warning light flashed: **Alternates between B+ and below 1.0 V** • Are the voltage as above?	Yes	Recheck malfunction symptoms, then repeat from Step 1 if malfunction reoccurs.
		No	• Inspect wiring harness between BCM and turn lights. — If wiring harness is normal, replace the BCM, then go to Step 8. — If wiring harness malfunction, repair wiring harness, then go to Step 8.
5	**VERIFY THAT ALL DOORS LOCK AND UNLOCK DURING ON-BOARD DIAGNOSIS** • Do all doors unlock and lock during on-board diagnostic function operation?	Yes	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.
		No	Go to the next step.
6	**INSPECT DOOR LOCK LINKAGE** • Operate the door lock knob and verify the door locks and unlocks manually. • Does every door lock system work?	Yes	Go to the next step.
		No	Inspect the door lock linkage.
*7	**INSPECT IF MALFUNCTION IS IN DOOR LOCK ACTUATOR, BCM GROUND CIRCUIT OR ELSEWHERE** • Measure the voltage at BCM terminals 6A, 6B and 6F. — All doors locked: **1.0 V or less → B+ → 1.0 V or less** (Normal lock: 6A terminal) (Double lock: 6G terminal) — Driver-side door unlocked: **1.0 V or less → B+ → 1.0 V or less** (Normal unlock: 6B terminal) • Is the voltage as above?	Yes	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.
		No	• Inspect the BCM connector. • Inspect the wiring harness between the BCM and door lock actuator. — If the above parts are normal, go to the next step. — If any of above parts are malfunctioning, repair the malfunctioning part.
8	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	• Troubleshooting completed. • Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if malfunction recurs.

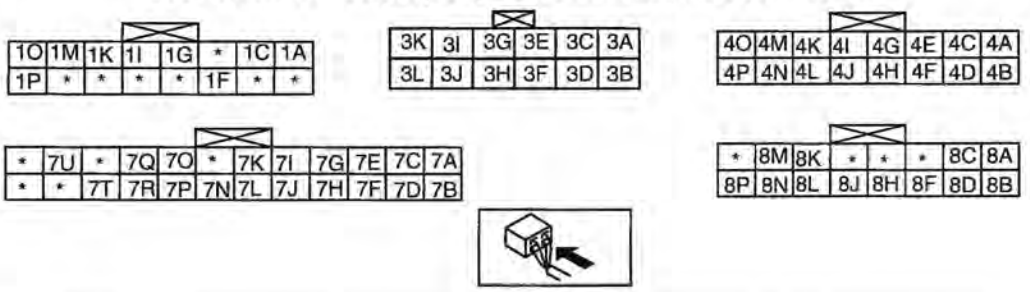
NO.2 ALL ON-BOARD DIAGNOSTIC FUNCTIONS INOPERATIVE

E8U090369000W05

- When performing an asterisked (*) troubleshooting inspection, slightly shake the wiring harness and connectors while performing the inspection to discover whether poor contact points are the cause of any intermittent malfunctions. If there is a problem, verify that the connectors, terminals and wiring harnesses ar connected correctly and undamaged.

2	All on-board diagnostic functions inoperative
DESCRIPTION	• Malfunction in BCM power supply circuit, door latch switch circuit, BCM ground circuit, or keyless receiver.
POSSIBLE CAUSE	• Malfunction in IG1 or power supply signal circuit of BCM — BCM power supply fuse malfunction — Malfunction in wiring harness between BCM power supply fuses and BCM • Malfunction in door open/closed signal circuit of BCM — Door latch switch system malfunction — BCM malfunction — Malfunction in wiring harness between BCM and door latch switch • Malfunction in BCM GND signal circuit — Malfunction in wiring harness between BCM and ground • Malfunction in keyless receiver — Keyless receiver malfunction — Malfunction in wiring harness between keyless receiver and BCM

BODY CONTROL MODULE (BCM) WIRING HARNESS SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT BCM POWER SUPPLY FUSES** • Are the BCM power supply fuses normal?	Yes	Go to the next step.
		No	Install an appropriate amperage fuse.
2	**INSPECT DOOR LATCH SWITCH INSTALLATION** • Are the door latch switches installed securely?	Yes	Go to the next step.
		No	Install the door latch switches securely, then go back to Step 5 of KEYLESS ENTRY SYSTEM PRELIMINARY INSPECTION.
*3	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND BCM) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Measure the voltage at the following BCM terminals: — IG1 signal (terminal 4O, 3I, 7U) — Power supply signal (terminal 3J, 3G, 3E, 4D, 4P, 8K) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and BCM, then go to Step 13.
*4	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (SHORT TO POWER SUPPLY BETWEEN FUSE BLOCK AND BCM, OR BETWEEN BCM AND GROUND) OR ELSEWHERE** • Turn the ignition switch to the LOCK position. • Disconnect the BCM connector. • Measure the voltage at the following BCM terminal (wiring harness-side): — IG1 signal (terminal 4O, 3I, 7U) • Is the voltage **B+**?	Yes	Repair the malfunctioning wiring harness, then go to Step 13.
		No	Go to the next step.

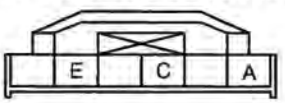
STEP	INSPECTION		ACTION
*5	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN BCM AND GROUND) OR ELSEWHERE** • Is there continuity between BCM terminal 7A, 8A and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the BCM and ground, then go to Step 13.
6	**INSPECT FOR CHECK CODE 04 IN INSTRUMENT CLUSTER** • Inspect the door latch switch using the instrument cluster input/output check mode. (See 09–22–7 INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE.) • Is DTC 04 displayed?	Yes	Go to the next step.
		No	Repair the door latch switch system using the DTC 04 inspection procedure, then go to Step 13.
7	**INSPECT BCM OR WIRING HARNESS (BETWEEN BCM AND DOOR LATCH SWITCHES FOR CONTINUITY)** • Open all doors. • Is there continuity between BCM terminals 1F, 7B, 7D, 7F and ground?	Yes	Replace the BCM and reprogram the transmitter ID code, then go to the next step.
		No	Repair the wiring harness between the BCM and door latch switches, then go to the next step.
8	**INSPECT POWER SUPPLY FUSE** • Is the keyless receiver power supply fuse normal?	Yes	Go to the next step.
		No	Install an appropriate amperage fuse.
9	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS RECEIVER) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Measure the voltage at the following keyless receiver terminal: — IG1 signal (terminal A) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless receiver, then go to Step 13.
10	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND GROUND) OR ELSEWHERE** • Is there continuity between keyless receiver terminal E and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and ground, then go to Step 13.
11	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR ELSEWHERE** • Turn the ignition switch to the ON position. • Disconnect the keyless receiver connector and BCM connector. • Is there continuity between the following terminals? — 7I (BCM connector)—C (keyless receiver connector)	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and BCM, then go to Step 13.
12	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR BCM** • Measure the voltage at keyless receiver terminal C. — When transmitter operated: • Any transmitter button is operated : **0.5 V** • Any transmitter button is not operated : **3.5 V** • Is the voltage normal?	Yes	Replace the BCM, then go to the next step.
		No	Replace the keyless receiver, then go to the next step.
13	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

NO.3 TRANSMITTER ID CODE CANNOT BE REPROGRAMMED [KEYLESS ENTRY SYSTEM]

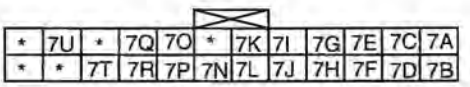
E6U090369000W06

3	Transmitter ID code cannot be reprogrammed
DESCRIPTION	• Malfunction in transmitter battery, transmitter, BCM circuit, or keyless receiver circuit.
POSSIBLE CAUSE	• Malfunction in transmitter battery, transmitter, BCM, or keyless receiver.

KEYLESS CONTROL MODULE
WIRING HARNESS-SIDE CONNECTOR



BODY CONTROL MODULE (BCM)
WIRING HARNESS-SIDE CONNECTOR



Diagnostic procedure

STEP	INSPECTION		ACTION
1	**INSPECT TRANSMITTER BATTERY INSTALLATION AND TYPE** • Visually inspect the transmitter battery. • Are the below items correct? — Transmitter battery installation (correct polarity) — Battery type: CR1620	Yes	Go to the next step.
		No	Properly install the battery or replace the battery with the specified battery (CR1620), and then go to Step 11.
2	**INSPECT TRANSMITTER BATTERY TERMINALS FOR RUST AND POOR CONNECTION** • Visually inspect the transmitter. — Is there rust on the transmitter battery terminals (positive or negative)? — Is there poor connection between the terminals and battery?	Yes	Replace the transmitter battery or repair the transmitter battery terminal, then go to Step 11.
		No	Go to the next step.
3	**INSPECT TRANSMITTER BATTERY** • Inspect the transmitter battery. • Is the battery voltage normal?	Yes	Go to the next step.
		No	Replace the transmitter battery, then go to Step 11.
4	**INSPECT IF MALFUNCTION IS IN TRANSMITTER BATTERY OR ELSEWHERE** • Replace with a transmitter battery known to be good. • Does the keyless entry system operate properly?	Yes	Replace the transmitter battery, then go to Step 11.
		No	Go to the next step.
5	**INSPECT IF MALFUNCTION IS IN TRANSMITTER OR BCM** • Reprogram the transmitter ID code using another known good transmitter. • Does the keyless entry system operate properly?	Yes	Replace the transmitter and reprogram the transmitter ID code, then go to Step 11.
		No	Go to the next step.
6	**INSPECT POWER SUPPLY FUSE** • Is the keyless receiver power supply fuse normal?	Yes	Go to the next step.
		No	Install an appropriate amperage fuse, then go to Step 11.
7	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN FUSE BLOCK AND KEYLESS RECEIVER) OR ELSEWHERE** • Measure the voltage at the following keyless receiver terminal: — Power supply signal (terminal A) • Is the voltage **B+**?	Yes	Go to the next step.
		No	Repair the wiring harness between the fuse block and keyless receiver, then go to Step 11.

STEP	INSPECTION		ACTION
8	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND GROUND) OR ELSEWHERE** • Is there continuity between keyless receiver terminal E and ground?	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and ground, then go to Step 11.
9	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR ELSEWHERE** • Disconnect the keyless receiver connector and BCM connector. • Is there continuity between the following terminals? — 7I (BCM connector)—C (keyless receiver connector)	Yes	Go to the next step.
		No	Repair the wiring harness between the keyless receiver and BCM, then go to Step 11.
10	**INSPECT IF MALFUNCTION IS IN WIRING HARNESS (NO CONTINUITY BETWEEN KEYLESS RECEIVER AND BCM) OR BCM** • Measure the voltage at BCM terminal C. — When transmitter operated: • Any transmitter button is operated: **0.5 V** • Any transmitter button is operated: **3.5 V** • Is the voltage normal?	Yes	Replace the BCM, then go to the next step.
		No	Replace the keyless receiver, then go to the next step.
11	**REINSPECT MALFUNCTION SYMPTOM AFTER REPAIR** • Does the keyless entry system operate properly?	Yes	Troubleshooting completed. Explain repairs to the customer.
		No	Reinspect the malfunction symptoms, then repeat from Step 1 if the malfunction recurs.

E6U903EW5O01

NO. 1 FUEL GAUGE NEEDLE POSITION INCORRECT

E6U090355430W03

1	Fuel gauge needle position incorrect
POSSIBLE CAUSE	• Fuel gauge sender unit malfunction • Instrument cluster malfunction • BCM malfunction • Connector or pin malfunction • Fuel gauge sender unit is improperly installed • Open or short circuit in wiring harness between instrument cluster and GND • Open or short circuit in wiring harness between instrument cluster and fuel gauge sender unit

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Inspect the fuel gauge needle does not move after ignition switch is turned off, or display does not indicate F even though fuel tank is full. • Is fuel gauge okay?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Start the instrument cluster input/output check mode. • Select the check code 22. • Display value is **12—129**?	Yes	Go to the next step.
		No	Go to Step 4.
3	• Perform the check code 23 inspection. • Is there any malfunction?	Yes	Replace the instrument cluster.
		No	Go to the next step.
4	• Perform the check code 22 inspection. • Is there any malfunction?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay? 	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.
6	• Turn the ignition switch to LOCK position. • Remove the instrument cluster. • Disconnect the instrument cluster connector. • Inspect for continuity the following wiring harness. — 2M terminal—GND — 2D terminal—GND • Is there continuity?	Yes	Repair or replace the wiring harness between the instrument cluster and GND.
		No	Go to the next step.
7	• Turn the ignition switch off. • Inspect the fuel gauge sender unit connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay?	Yes	Go to the next step.
		No	Repair or replace the terminal.
8	• Turn the ignition switch to LOCK position. • Inspect for continuity following the wiring harness between instrument cluster and fuel gauge sender unit. — 2M terminal—C terminal — 2D terminal—A terminal • Is there continuity?	Yes	Go to the next step.
		No	Inspect the BCM and BCM terminals. • If there is a malfunction, replace the BCM. • If there is no malfunction, repair or replace the wiring harness between instrument cluster and fuel gauge sender unit.
9	• Turn the ignition switch off. • Is fuel gauge sender unit installed properly?	Yes	Inspect the fuel gauge sender unit.
		No	Reinstall the fuel gauge sender unit.

NO. 2 ALL METERS AND GAUGES DO NOT OPERATE

E6U090355430W04

2	All meters and gauges do not operate
POSSIBLE CAUSE	• Instrument cluster malfunction • Connector or pin malfunction • Fuse malfunction • Open or short circuit in power supply (IG1) wiring harness • Open or short circuit in GND wiring harness

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the ignition switch to the ON position. • Inspect the following: — Does the odometer/tripmeter illuminate? — Does the fuel gauge operate? — Dose the MIL illumination turn off within **approx. 3 s**?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Inspect the METER fuse. • Is the fuse okay?	Yes	Go to the next step.
		No	Replace the fuse. • If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
3	• Turn the ignition switch to LOCK position. • Remove the instrument cluster. • Disconnect the instrument cluster connector. • Inspect the voltage between instrument cluster wiring harness-side connector terminal 2F and terminal 2V. • Turn the ignition switch to ON position. • Is the voltage B+?  	Yes	Go to the next step.
		No	Inspect the suspect wiring harness, then repair or replace the wiring harness.
4	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay?	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 3 ABS WARNING LIGHT ILLUMINATES

E6U090355430W05

3	ABS warning light illuminates
POSSIBLE CAUSE	• ABS/TCS HU/CM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and GND • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • Does the ABS warning light turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 4.
		No	Go to the next step.
3	• Start the instrument cluster input/output check mode. • Does the ABS warning light turn off with a check code other than 26?	Yes	Inspect the ABS/TCS HU/CM.
		No	Replace the instrument cluster.
4	• Disconnect the negative battery cable. • Measure the resistance between the DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect the DLC-2 terminals F and E for short to power supply or GND. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
6	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay?  	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

09–03H

NO. 4 MIL ILLUMINATES

E6U090355430W06

4	MIL illuminates
POSSIBLE CAUSE	• PCM malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and GND • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • Does the MIL turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 4.
		No	Go to the next step.
3	• Start the instrument cluster input/output check mode. • Does the MIL turn off with a check code other than 26?	Yes	Inspect the PCM.
		No	Replace the instrument cluster.
4	• Disconnect the negative battery cable. • Measure the resistance between the DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 6.
5	• Inspect the DLC-2 terminals F and E for short to power supply or GND. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
6	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay? 	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

NO. 5 BRAKE SYSTEM WARNING LIGHT ILLUMINATES

E6U090355430W07

5	Brake system warning light illuminates
POSSIBLE CAUSE	• ABS/TCS HU/CM malfunction • Brake fluid level sensor malfunction • Parking brake switch malfunction • Instrument cluster malfunction • Connector or pin malfunction • Short circuit in wiring harness between CAN-L, CAN-H and GND • Open circuit in CAN wiring harness (CAN-L, CAN-H) • CAN wiring harness (CAN-L, CAN-H) short each other

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Start the engine. • release the parking brake. • Does the brake system warning light turn off?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Are there a number of warning lights illuminated?	Yes	Go to Step 5.
		No	Go to the next step.
3	• Does the brake fluid need replenishment?	Yes	Add brake fluid.
		No	Go to the next step.
4	• Start the instrument cluster input/output check mode. • Does the brake system warning light turn off with a check code other than 26?	Yes	Inspect the ABS/TCS HU/CM, brake fluid level sensor, parking brake switch or connectors.
		No	Replace the instrument cluster.
5	• Disconnect the negative battery cable. • Measure the resistance between the DLC-2 terminals F and E. • Is the resistance **54—66 ohms**?	Yes	Go to the next step.
		No	Go to Step 7.
6	• Inspect the DLC-2 terminals F and E for short to power supply or GND. • Is there any malfunction?	Yes	Inspect the wiring harness and CAN system-related module. Repair or replace the malfunctioning part.
		No	Replace the instrument cluster.
7	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay? 	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

09–03H

NO. 6 INSTRUMENT CLUSTER ILLUMINATION DOES NOT ILLUMINATE

E6U090355430W08

6	Instrument cluster illumination does not illuminate
POSSIBLE CAUSE	• Instrument cluster malfunction • Connector or pin malfunction • Fuse malfunction

Diagnostic procedure

STEP	INSPECTION		ACTION
1	• Turn the light switch to the TNS position. • Does the instrument cluster illumination turn on?	Yes	Troubleshooting completed.
		No	Go to the next step.
2	• Does the non-illumination include the entire instrument cluster?	Yes	Go to the next step.
		No	Replace the instrument cluster.
3	• Inspect the ROOM and ILLUMI fuse. • Are the fuses okay?	Yes	Go to the next step.
		No	Replace the fuse. • If the fuse is melted, inspect the wiring harness for short to ground. Repair or replace the wiring harness, then replace the fuse.
4	• Turn the ignition switch off. • Inspect the instrument cluster connector terminals for poor connection (such as damaged/pulled-out pins, and corrosion). • Is the terminals are okay?  	Yes	Replace the instrument cluster.
		No	Repair or replace the terminal.

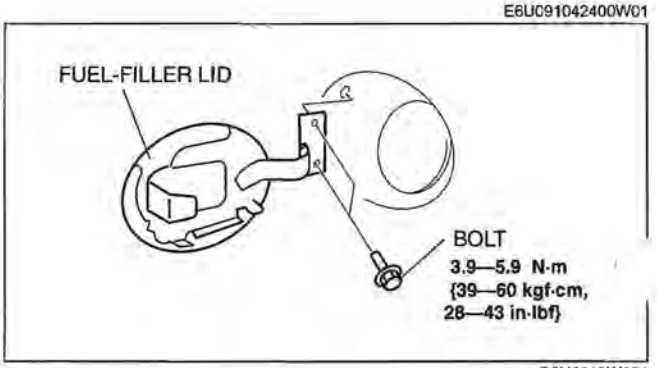
FUEL-FILLER LID REMOVAL/INSTALLATION

1. Remove the bolts, then remove the fuel-filler lid.
2. Install in the reverse order of removal.
3. Adjust the fuel-filler lid. (See 09–10–3 FUEL-FILLER LID ADJUSTMENT.)

E6U091042400W01



B6U0910W001

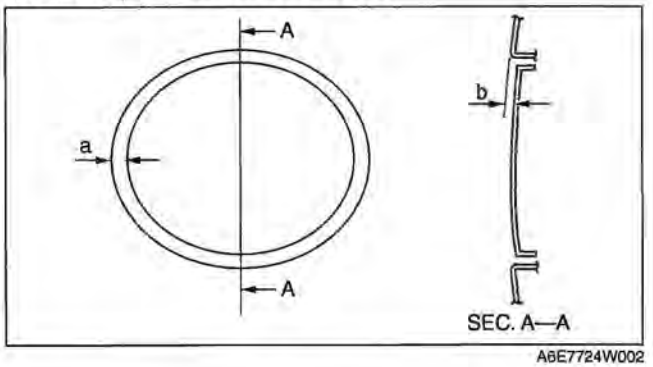
FUEL-FILLER LID ADJUSTMENT

E6U091042400W02

1. If not as specified, loosen the fuel-filler lid installation bolts, and reposition the fuel-filler lid.
2. Measure the gap and height difference between the fuel-filler lid and the body.

Clearance
a: 2.0—4.0 mm {0.079—0.15 in}
b: -1.5—0.5 mm {-0.06—0.019 in}

3. Tighten the bolts.



A6E7724W002

HOOD REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

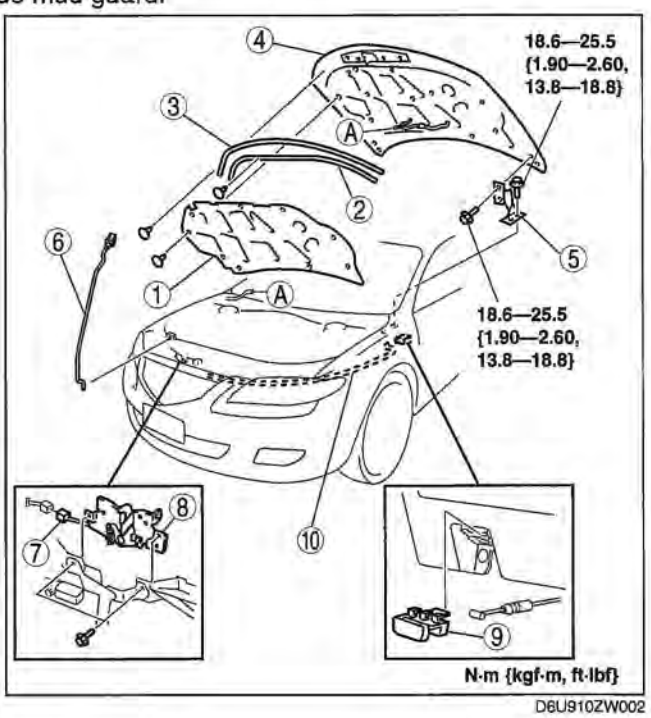
E6U091056601W01

Warning
- **Removing the hood without supporting can be dangerous. The hood may fall and injure you. Always perform the following procedure with at least another person.**

1. Disconnect the windshield washer hose.
2. To remove the hood hinge, remove the front fender panel.
3. To remove the hood lock, remove the radiator grille.
4. To remove the hood release cable, remove the driver-side mud guard.
5. Remove in the order indicated in the table.

1	Hood insulator
2	Shroud seal weatherstrip
3	Parting seal weatherstrip
4	Hood
5	Hood hinge
6	Hood stay
7	Hood switch connector (With theft-deterrent system)
8	Hood lock
9	Hood release lever (See 09–10–3 Hood Release Lever Removal Note)
10	Hood release cable

6. Install in the reverse order of removal.
7. Adjust the hood. (See 09–10–5 HOOD ADJUSTMENT [EXCEPT L3 WITH TC].)



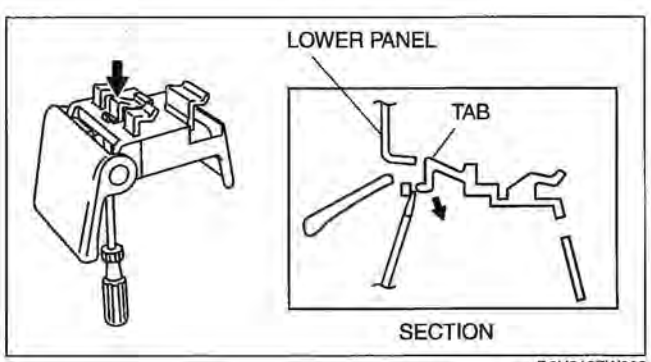
D6U910ZW002

09–10

Hood Release Lever Removal Note

1. Pull the hood release lever.
2. While pushing the tab in the direction of the arrow using a tape-wrapped, small flathead screwdriver, pull the hood release lever outward to remove it from the lower panel.

Caution
- **Remove the hood release cable, taking care not damage it by flathead screwdriver**



D6U910ZW003

HOOD REMOVAL/INSTALLATION [L3 WITH TC]

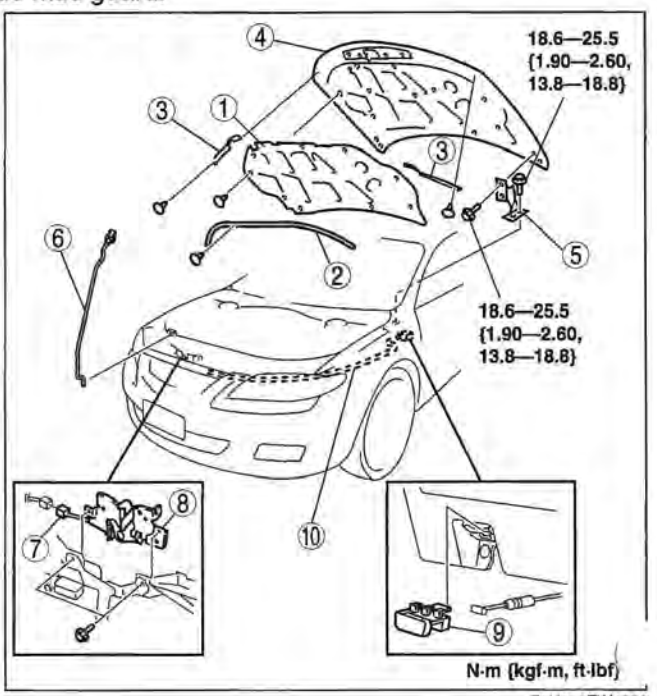
E6U091056601W03

Warning
- **Removing the hood without supporting can be dangerous. The hood may fall and injure you. Always perform the following procedure with at least another person.**

1. Remove the air guide.
2. To remove the hood hinge, remove the front fender panel.
3. To remove the hood lock, remove the front bumper.
4. To remove the hood release cable, remove the driver-side mud guard.
5. Remove in the order indicated in the table.

1	Hood insulator
2	Shroud seal weatherstrip
3	Parting seal weatherstrip
4	Hood
5	Hood hinge
6	Hood stay
7	Hood switch connector (With theft-deterrent system)
8	Hood lock
9	Hood release lever (See 09–10–4 Hood Release Lever Removal Note)
10	Hood release cable

6. Install in the reverse order of removal.
7. Adjust the hood. (See 09–10–6 HOOD ADJUSTMENT [L3 WITH TC].)

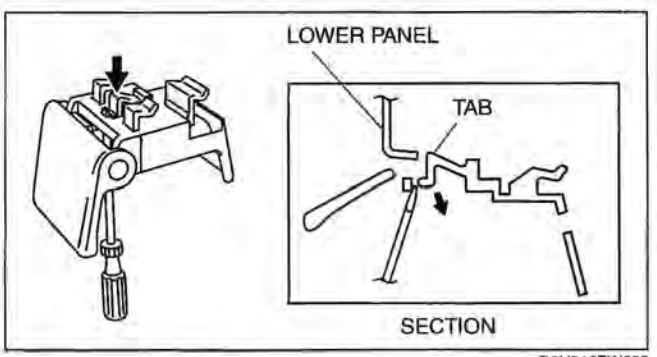


E6U910ZW1002

Hood Release Lever Removal Note

1. Pull the hood release lever.
2. While pushing the tab in the direction of the arrow using a tape-wrapped, small flathead screwdriver, pull the hood release lever outward to remove it from the lower panel.

Caution
- **Remove the hood release cable, taking care not damage it by flathead screwdriver**



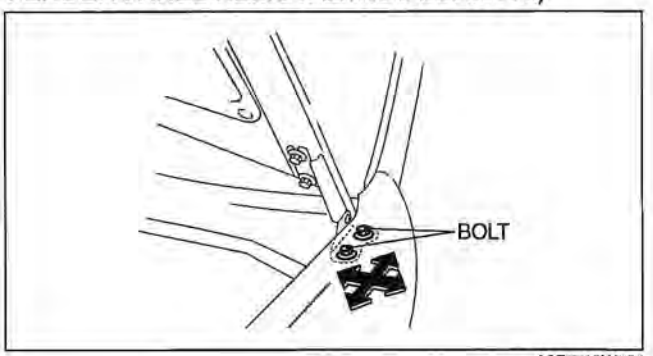
D6U910ZW003

HOOD ADJUSTMENT [EXCEPT L3 WITH TC]

E6U091056601W02

Gap Adjustment

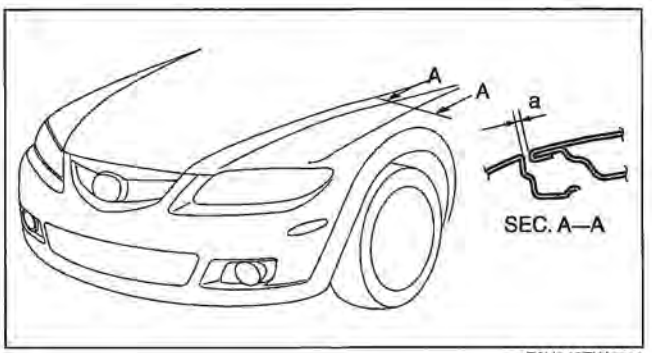
1. Remove the front fender panel. (See 09–10–16 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
2. Loosen the hood hinge installation bolts and reposition the hood.
3. Tighten the bolts.



A6E7710W002

4. Verify that the gap between the hood and the body is within the specification.

Clearance
a: 2.5—4.5 mm {0.10—0.17 in}

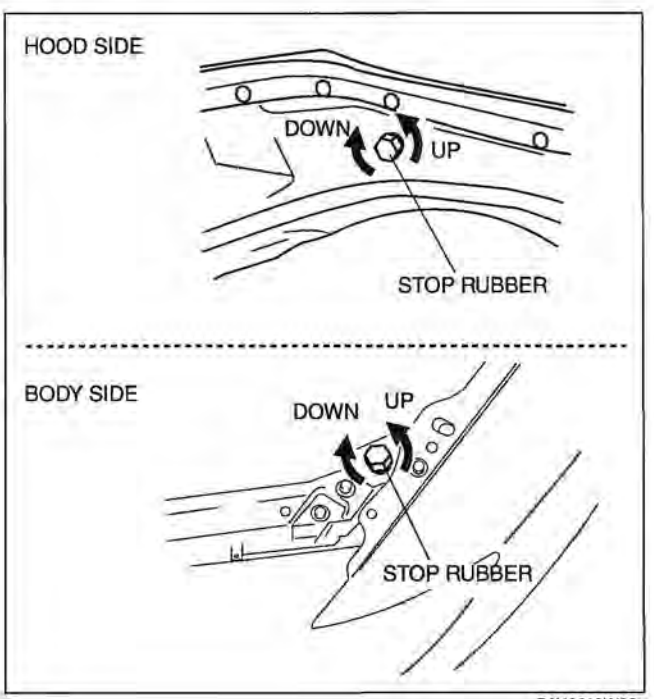


E6U910ZW5006

09–10

Height Adjustment

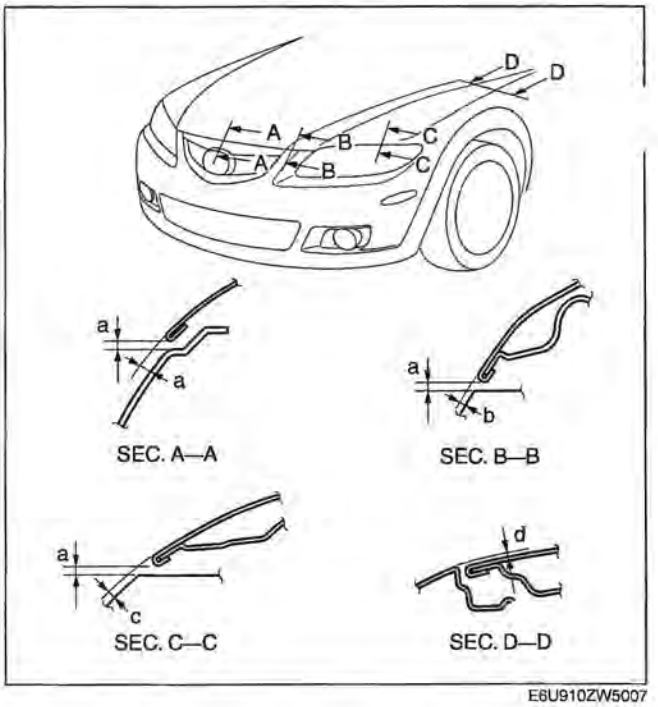
Turn the stop rubber to adjust the height of the hood.



B6U0910W005

2. Verify that the height difference between the hood and the body is within the specification.

Clearance
a: 3.0—6.0 mm {0.12—0.23 in}
b: 2.5—5.5 mm {0.10—0.22 in}
c: 2.4—5.4 mm {0.09—0.21 in}
d: -1.0—1.0 mm {-0.04—0.04 in}



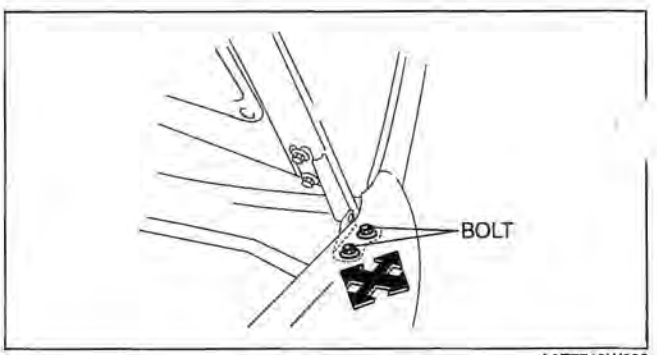
E6U910ZW5007

HOOD ADJUSTMENT [L3 WITH TC]

E6U091056601W04

Gap Adjustment

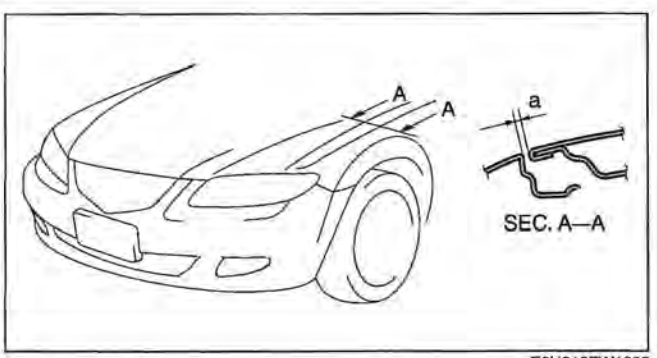
1. Remove the front fender.
2. Loosen the hood hinge installation bolts and reposition the hood.
3. Tighten the bolts.



A6E7710W002

4. Verify that the gap between the hood and the body is within the specification.

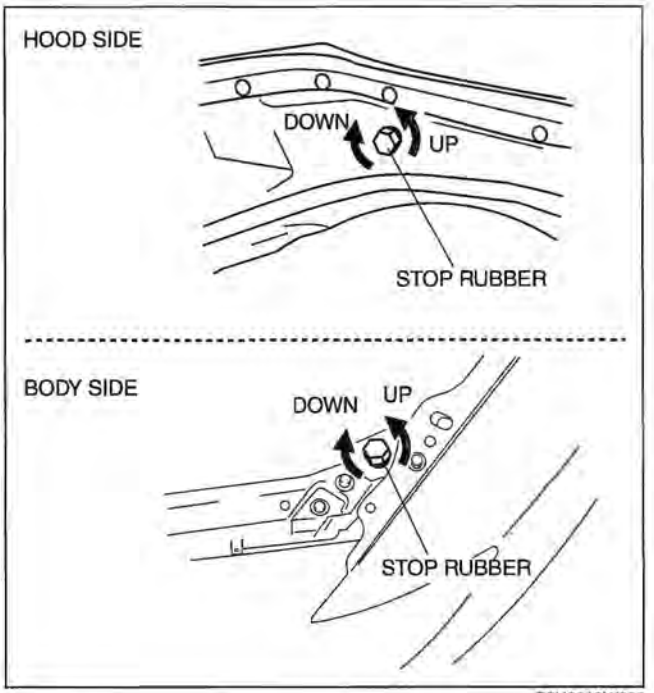
Clearance
a: 2.5—4.5 mm {0.10—0.17 in}



E6U910ZW1003

Height Adjustment

1. Turn the stop rubber to adjust the height of the hood.

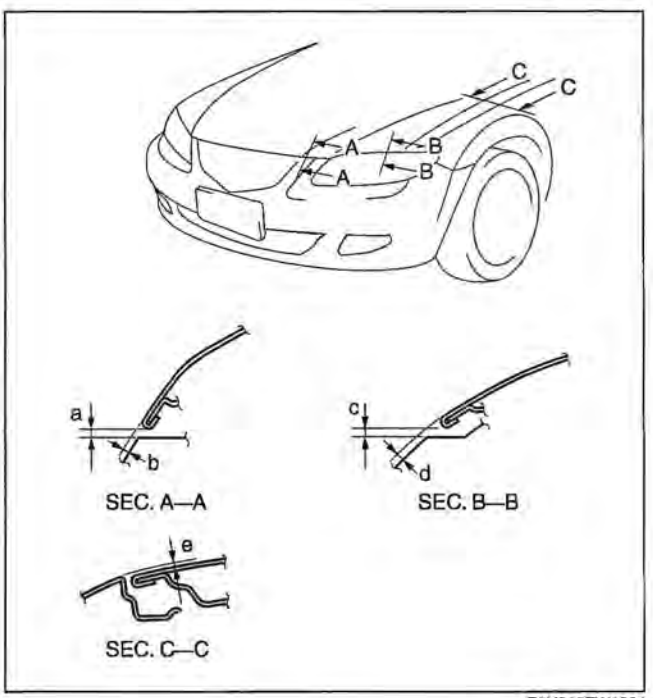


B6U0910W005

2. Verify that the height difference between the hood and the body is within the specification.

Clearance

a: 3.0—6.0 mm {0.12—0.23 in}
b: 2.5—5.5 mm {0.10—0.22 in}
c: 3.1—6.1 mm {0.13—0.24 in}
d: 3.6—6.6 mm {0.15—0.25 in}
e: -1.0—1.0 mm {-0.04—0.04 in}



E6U910ZW1004

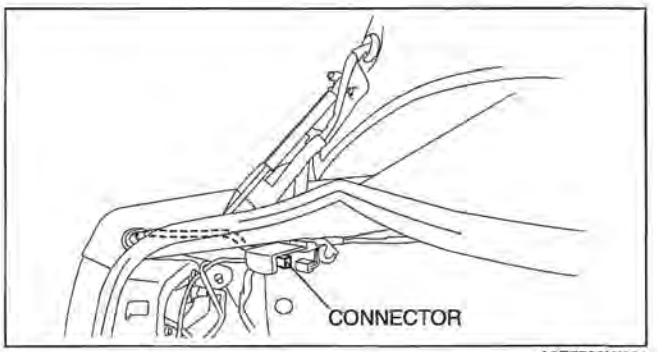
TRUNK LID REMOVAL/INSTALLATION

E6U091056801W01

Warning

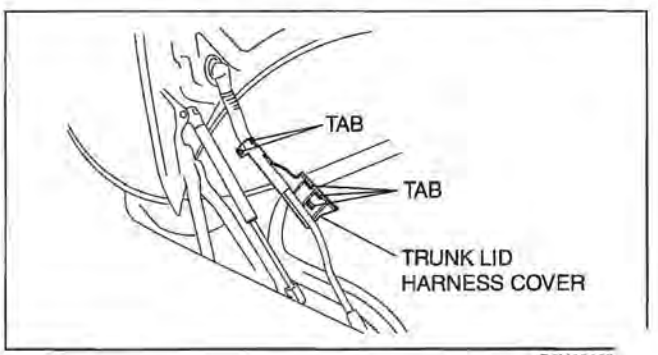
- **Removing the stay damper without supporting the trunk lid can be dangerous. The trunk lid may fall and injure you. Open the trunk lid fully and support it before removing the stay damper.**

1. Disconnect the negative battery cable.
2. Disconnect the trunk lid harness connector, and pull the trunk lid harness out from the cabin.



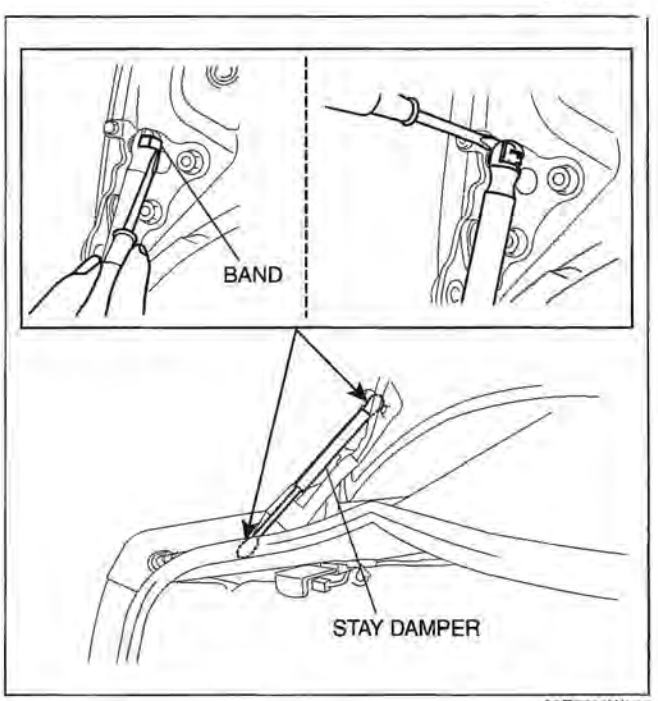
A6E7720W001

3. Disconnect the tabs, which secure the trunk lid harness to the trunk lid hinge.



B6U0910V

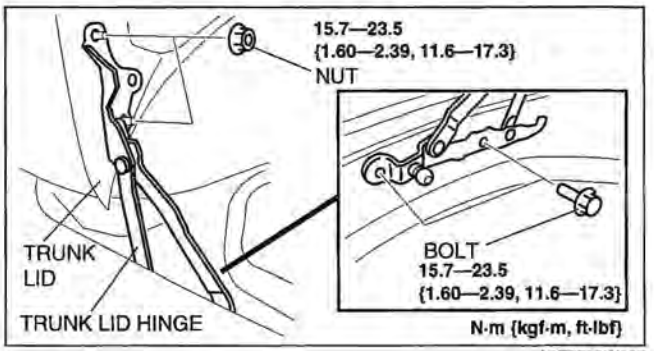
4. Pry away the stay damper band with a screwdriver.
5. Pry out the connecting part of the stay damper and the hinge with a screwdriver to disconnect them. Then remove the stay damper.



A6E7720W002

6. Remove the nuts, then remove the trunk lid.
7. Remove the bolts, then remove the trunk lid hinge.

Install in the reverse order of removal.
Adjust the trunk lid. (See 09–10–9 TRUNK LID ADJUSTMENT.)



A6E7720W007

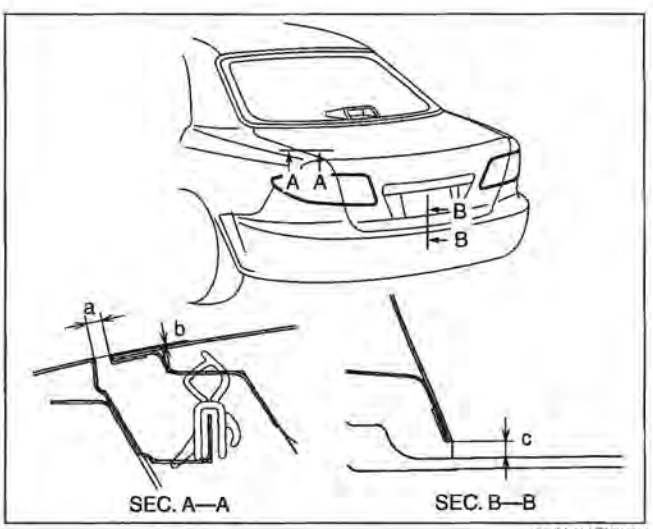
TRUNK LID ADJUSTMENT

E6U091056801W02

1. Measure the gap and height difference between the trunk lid and the body.
2. If not as specified, loosen the trunk lid hinge installation bolts or the trunk lid lock striker installation screws, and reposition the trunk lid.

Clearance
a: 2.5—4.5 mm {0.10—0.18 in}
b: -1.0—1.0 mm {-0.04—0.04 in}
c: 4.0—8.0 mm {0.16—0.31 in}

3. Tighten the bolts or screws.



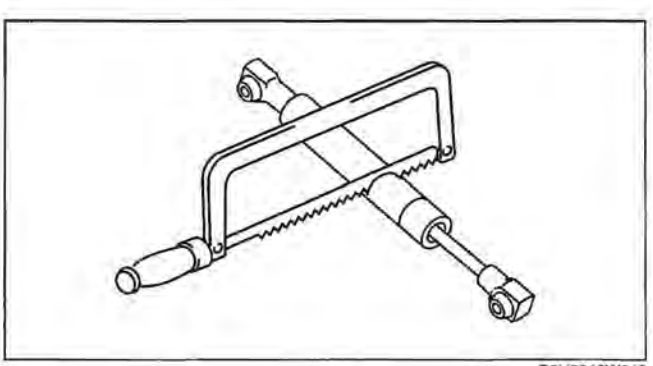
D6U910ZW006

STAY DAMPER DISPOSAL

E6U091056801W03

Note
- The gas in the stay damper is colorless, odorless, and non-toxic.

1. Wear protective eye wear.
2. Lay the stay damper flat.
3. Saw through the stay damper body using a hacksaw.
4. Allow the gas to escape from the stay damper.
5. Discard the stay damper.



B6U0910W018

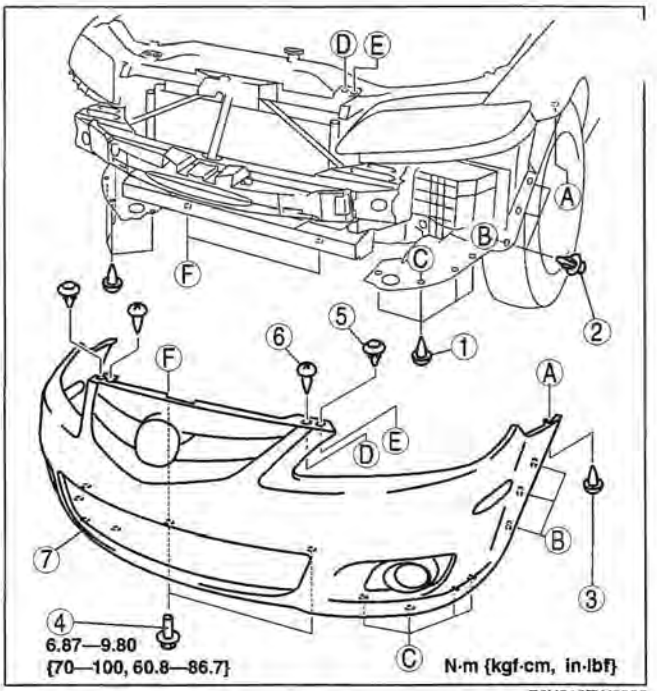
FRONT BUMPER REMOVAL/INSTALLATION

E6U091050000W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Screw A
2	Fastener A
3	Screw B
4	Bolt
5	Fastener B
6	Screw C
7	Front bumper (See 09–10–10 Front Bumper Removal Note) (See 09–10–10 Front Bumper Installation Note)

3. Disconnect the front side maker light connector.
4. Disconnect the front fog light connector. (Vehicles with front fog lights)
5. Install in the reverse order of removal.
6. Adjust the front fog light aiming for vehicles with front fog lights. (See 09–18–13 FRONT FOG LIGHT ADJUSTMENT.)



E6U910ZW5000

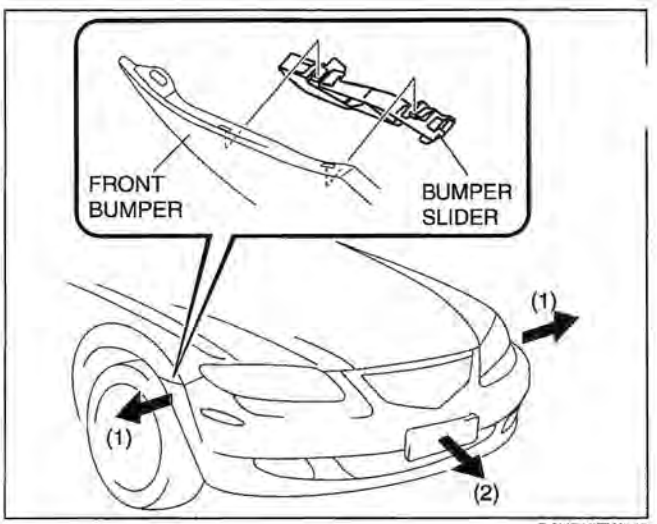
Front Bumper Removal Note

1. Pull the front bumper ends (wheel arch) outward to disengage from the bumper slider.

Caution

- **If only one side of the front bumper is disengaged from the bumper slider and the bumper falls, it could be damaged. When disengaging the front bumper from the slider, secure the bumper so that it does not fall.**

2. Remove the front bumper from the body.



D6U910ZW008

Front Bumper Installation Note

1. Spread the front bumper ends (wheel arches) apart.
2. Attach the front bumper to the body.
3. Press the front bumper connecting area into the body to engage with the bumper slider.

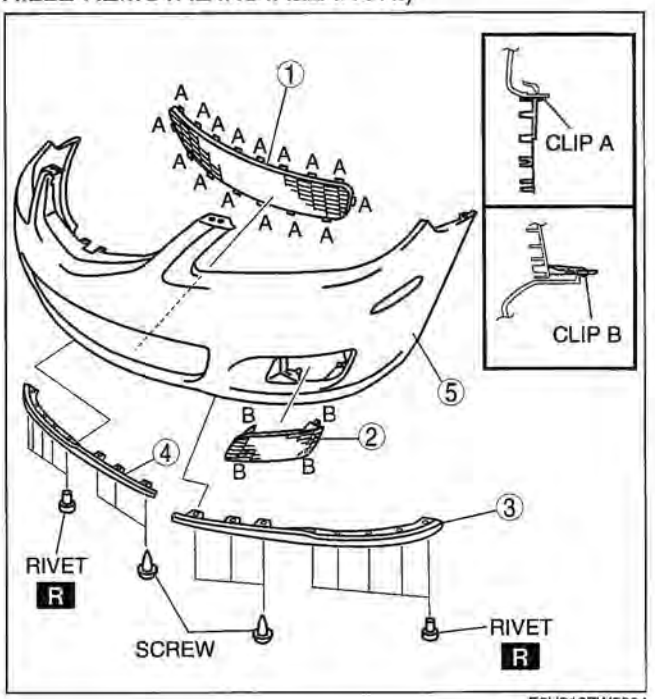
FRONT BUMPER DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC]

E6U091050000W02

1. Remove the front fog light. (Vehicles with front fog lights) (See 09–18–13 FRONT FOG LIGHT REMOVAL/INSTALLATION.)
   Remove the radiator grille. (See 09–16–3 RADIATOR GRILLE REMOVAL/INSTALLATION.)
2. Disassemble in the order indicated in the table.

1	Front bumper mesh
2	Front fog light hole cover
3	Airdam Skirt LH
4	Airdam Skirt RH
5	Front bumper fascia

4. Assemble in the reverse order of disassembly.

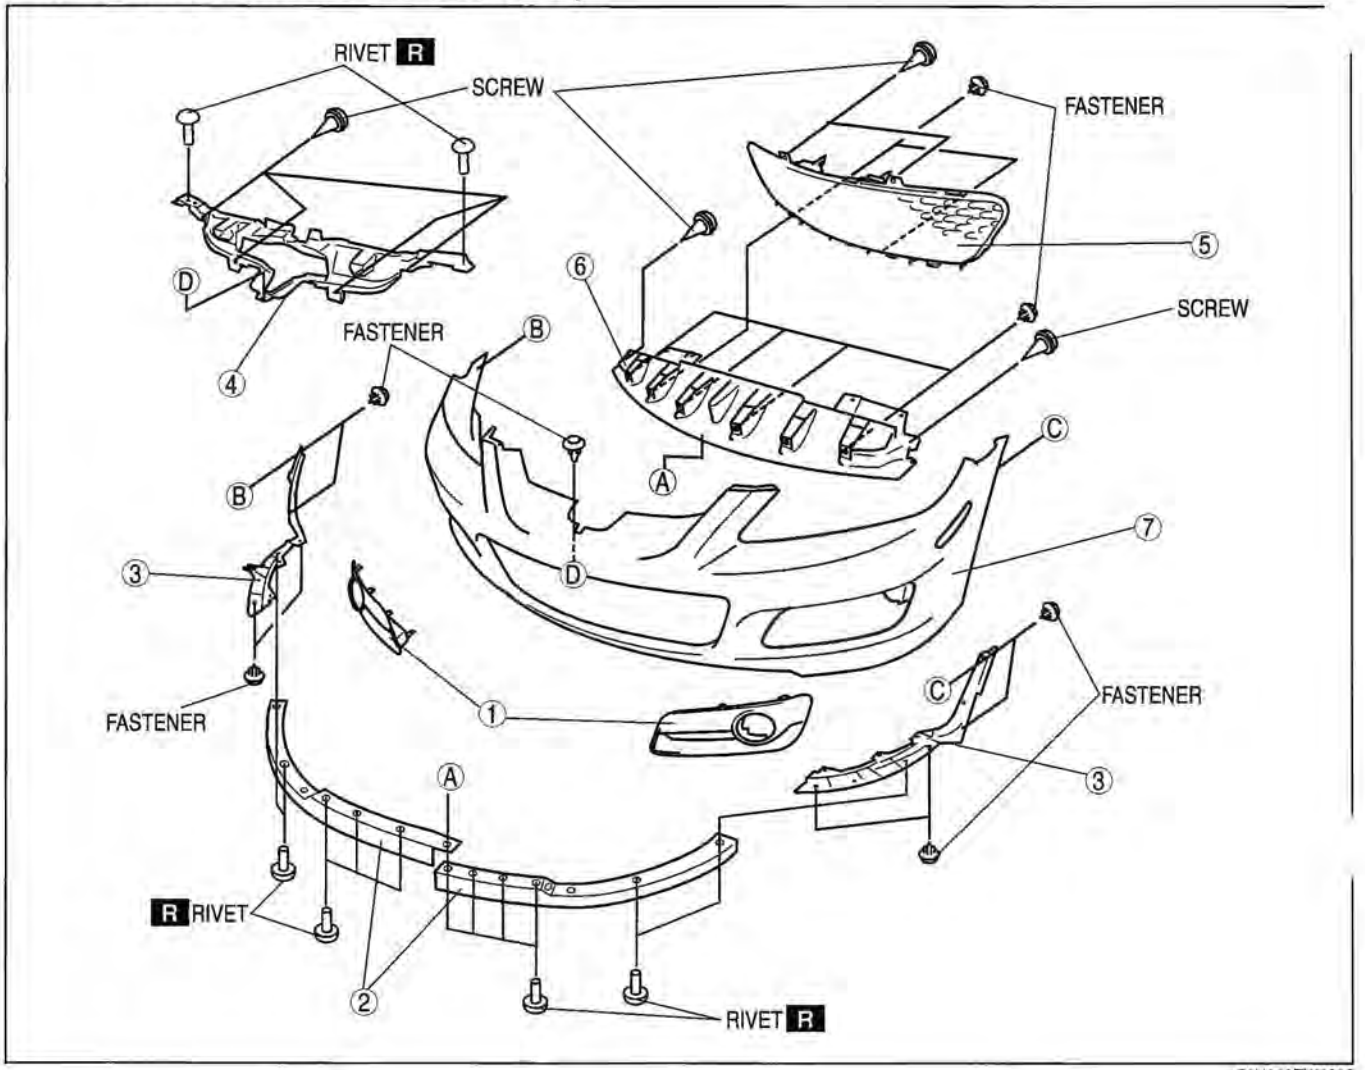


E6U910ZW5004

FRONT BUMPER DISASSEMBLY/ASSEMBLY [L3 WITH TC]

E6U091050000W06

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



E6U910ZW1006

1	Front fog light cover
2	Airdam Skirt
3	Bracket
4	Air guide upper

5	Front bumper mesh
6	Air guide lower
7	Front bumper fascia

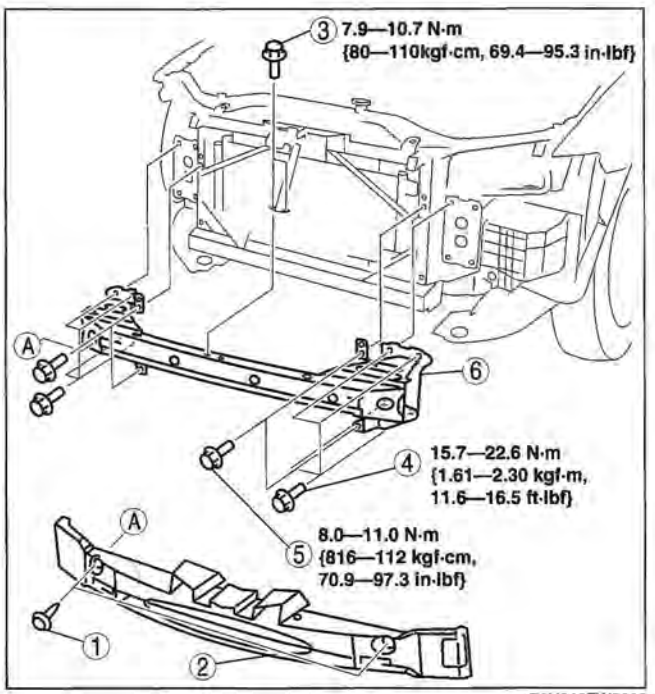
FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION

E6U091050000W03

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
   Remove the headlight. (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Support the radiator and the condenser using the wire.
5. Remove in the order indicated in the table.

1	Fastener
2	Front energy-absorbing foam
3	Bolt A
4	Bolt B
5	Bolt C
6	Front bumper reinforcement

6. Install in the reverse order of removal.



E6U910ZW5003

09–10

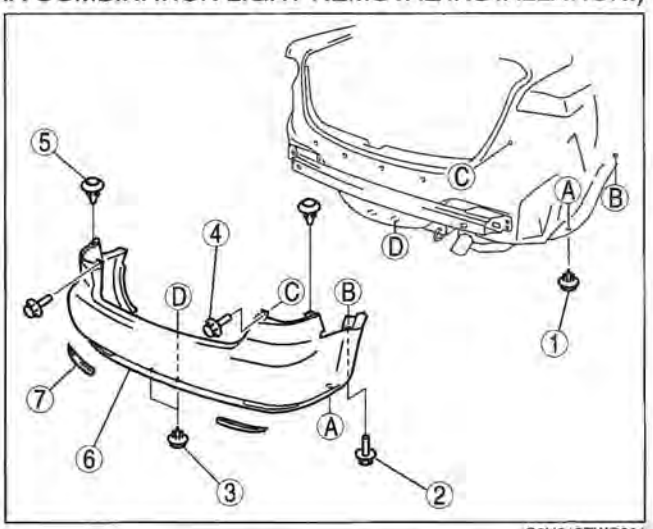
REAR BUMPER REMOVAL/INSTALLATION

E6U091050000W04

Disconnect the negative battery cable.
3. Remove the rear combination light. (See 09–18–14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Fastener A
2	Screw A
3	Fastener B
4	Screw B
5	Fastener C
6	Rear bumper (See 09–10–14 Rear bumper Removal Note) (See 09–10–14 Rear bumper Installation Note)
7	Reflector (See 09–10–14 Reflector Removal Note)

4. Install in the reverse order of removal.



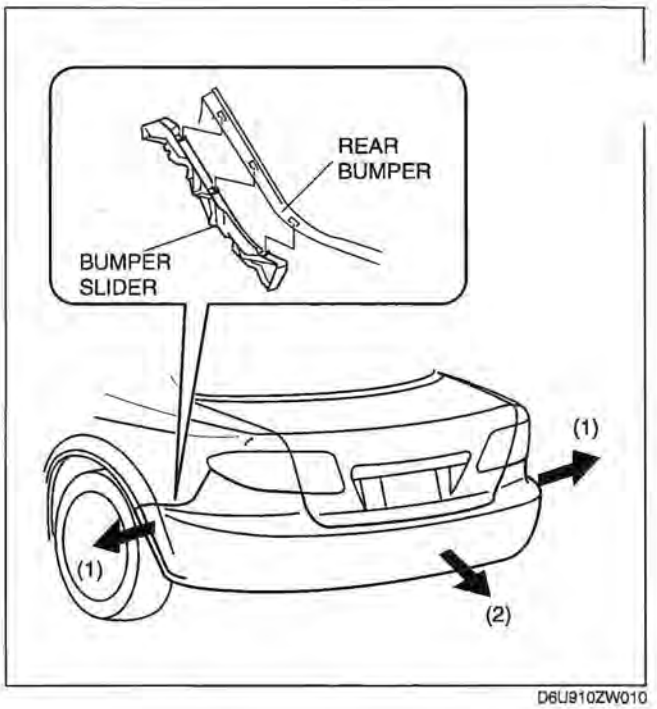
C6U910ZWC001

Rear bumper Removal Note

1. Pull the rear bumper ends (wheel arch) outward to disengage from the bumper slider.

Caution

- **If only one side of the rear bumper is disengaged from the bumper slider and the bumper falls, it could be damaged. When disengaging the rear bumper from the slider, secure the bumper so that it does not fall.**



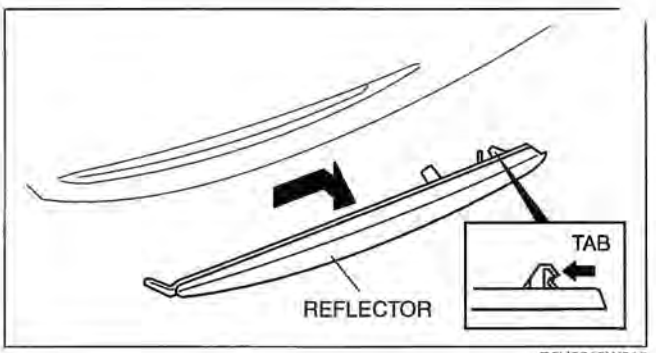
D6U910ZW010

Rear bumper Installation Note

1. Spread the rear bumper ends (wheel arches) apart.
2. Attach the rear bumper to the body.
3. Press the rear bumper connecting area into the body to engage with the bumper slider.

Reflector Removal Note

1. Lift the reflector up in the direction of the arrow, then unhook it from the rear bumper.



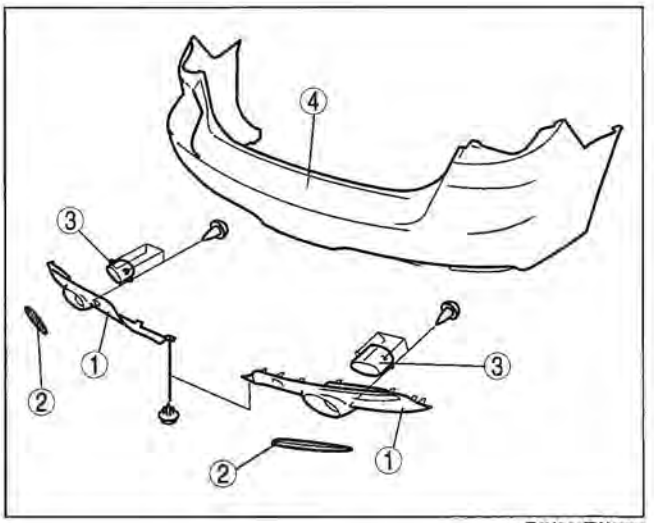
B6U0910W018

REAR BUMPER DISASSEMBLY/ASSEMBLY [L3 WITH TC]

E6U091050000W07

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

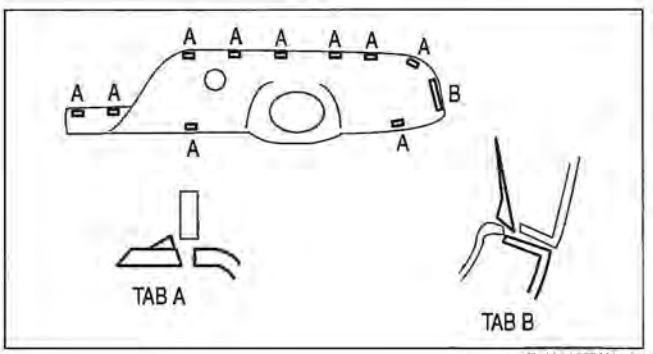
1	Bumper guard (See 09–10–15 Bumper Guard Removal Note)
2	Reflector (See 09–10–15 Reflector Removal Note)
3	Pipe garnish
4	Rear bumper fascia



E6U910ZW1009

Bumper Guard Removal Note

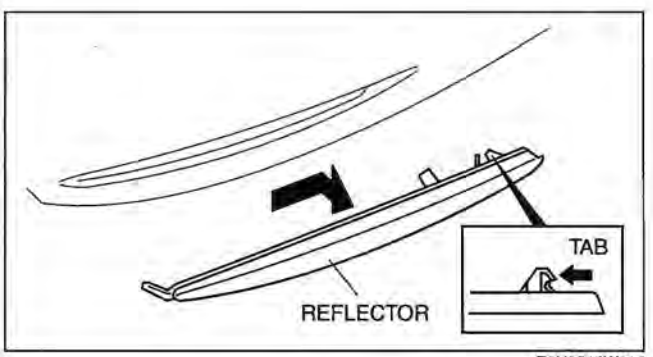
1. Detach tabs C and remove the bumper guard.



E6U910ZW1010

Reflector Removal Note

1. Lift the reflector up in the direction of the arrow, then unhook it from the rear bumper.

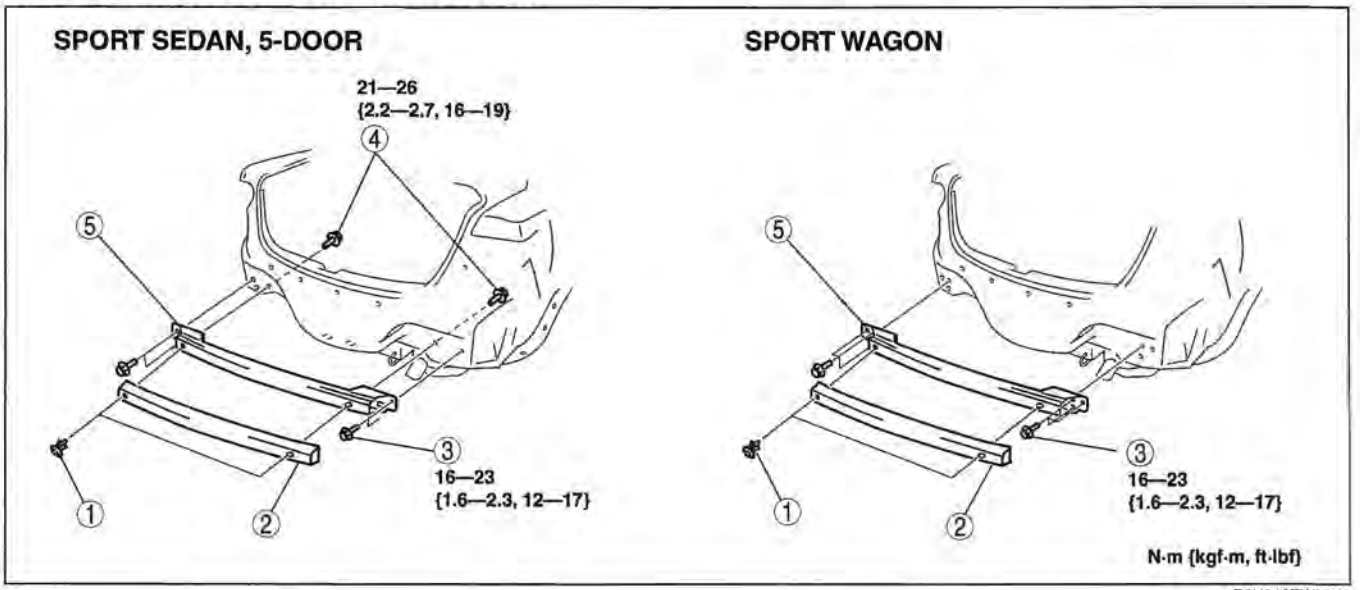


B6U0910W016

REAR BUMPER REINFORCEMENT REMOVAL/INSTALLATION

E6U091050000W05

1. Disconnect the negative battery cable.
2. Remove the trunk side trim. (See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the rear combination light. (See 09–18–14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove the rear bumper. (See 09–10–13 REAR BUMPER REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.



E6U910ZW5001

1	Fastener
2	Rear energy-absorbing foam
3	Bolt A
4	Bolt B
5	Rear bumper reinforcement

6. Install in the reverse order of removal.

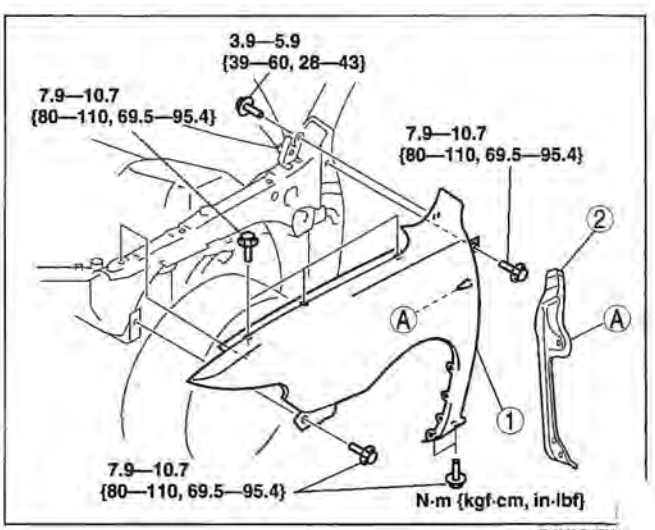
FRONT FENDER PANEL REMOVAL/INSTALLATION

E6U091052010W01

1. Disconnect the negative battery cable.
2. Remove the fender molding. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
4. Remove the front combination light. (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
5. Remove in the order indicated in the table.

1	Front fender panel
2	Seal plate

6. Install in the reverse order of removal.



B6U0910W

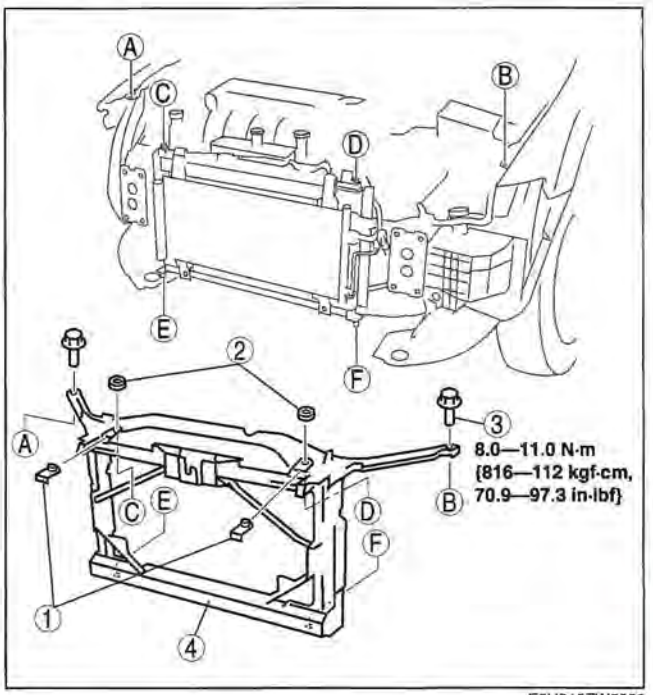
SHROUD PANEL REMOVAL/INSTALLATION

E6U091053140W01

1. Remove the following parts:
   (1) Hood (See 09–10–3 HOOD REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–10–4 HOOD REMOVAL/INSTALLATION [L3 WITH TC].)
   (2) Front bumper (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
   (3) Front combination light (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
   (4) Front bumper reinforcement (See 09–10–13 FRONT BUMPER REINFORCEMENT REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Radiator mount cover
2	Radiator mount rubber
3	Bolt
4	Shroud panel

3. Install in the reverse order of removal.



E6U910ZW5002

COWL PANEL REMOVAL/INSTALLATION

E6U091053580W01

1. Remove the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the windshield wiper motor. (See 09–19–5 WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Gusset
2	Cowl panel

5. Install in the reverse order of removal.

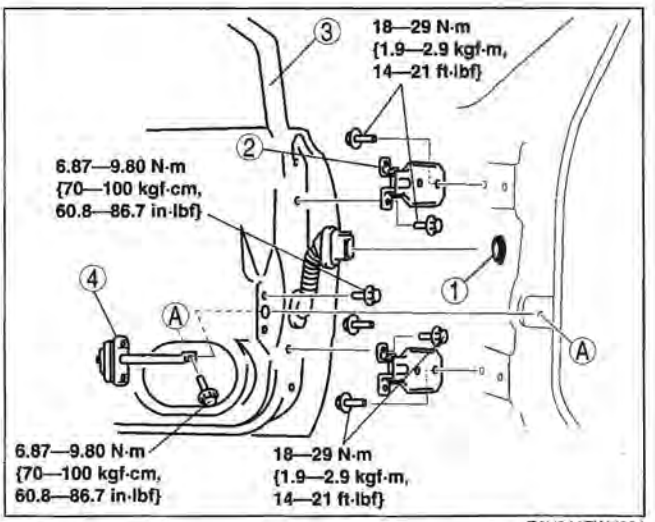
FRONT DOOR REMOVAL/INSTALLATION

E6U091158010W02

1. Disconnect the negative battery cable.
2. To remove the front door hinge, remove the front fender panel. (See 09–10–16 FRONT FENDER PANEL REMOVAL/INSTALLATION.)
3. To remove the checker, remove the front door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Connector (See 09–11–2 Connector Removal Note.)
2	Front door hinge
3	Front door
4	Checker

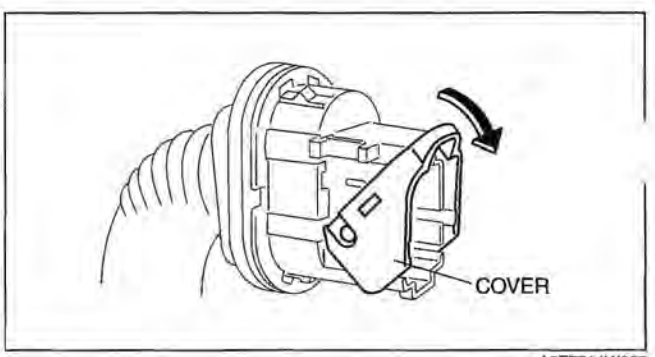
5. Install in the reverse order of removal.
6. Adjust the front door. (See 09–11–3 DOOR ADJUSTMENT.)



E6U911ZW7001

Connector Removal Note

1. Pull down the cover in the direction of the arrow and disconnect the connector.



A6E7714W007

REAR DOOR REMOVAL/INSTALLATION

E6U091158010W03

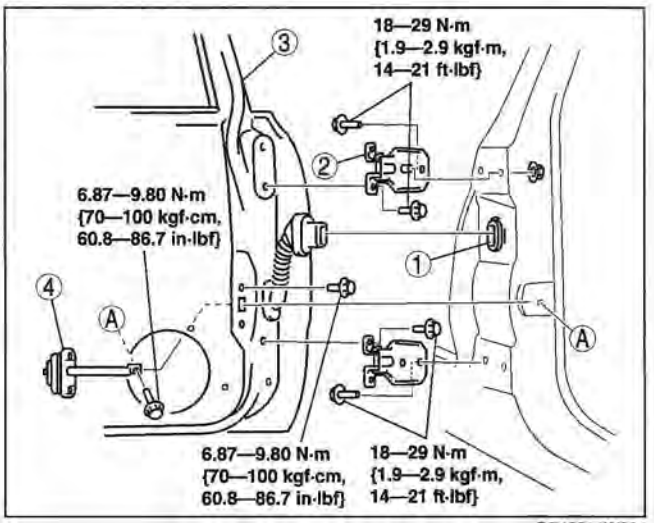
Warning

- **The side air bag sensor is attached to the lower part of the B-pillar. When working around the B-pillar, disconnect the negative battery cable or work carefully, avoiding excessive impact to the lower part of the B-pillar.**

1. Disconnect the negative battery cable.
2. To remove the checker, remove the rear door speaker. (See 09–20–10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)

3. Remove in the order indicated in the table.

1	Connector
2	Rear door hinge
3	Rear door
4	Checker



B6U0911W004

4. Install in the reverse order of removal.
5. Adjust the rear door. (See 09–11–3 DOOR ADJUSTMENT.)

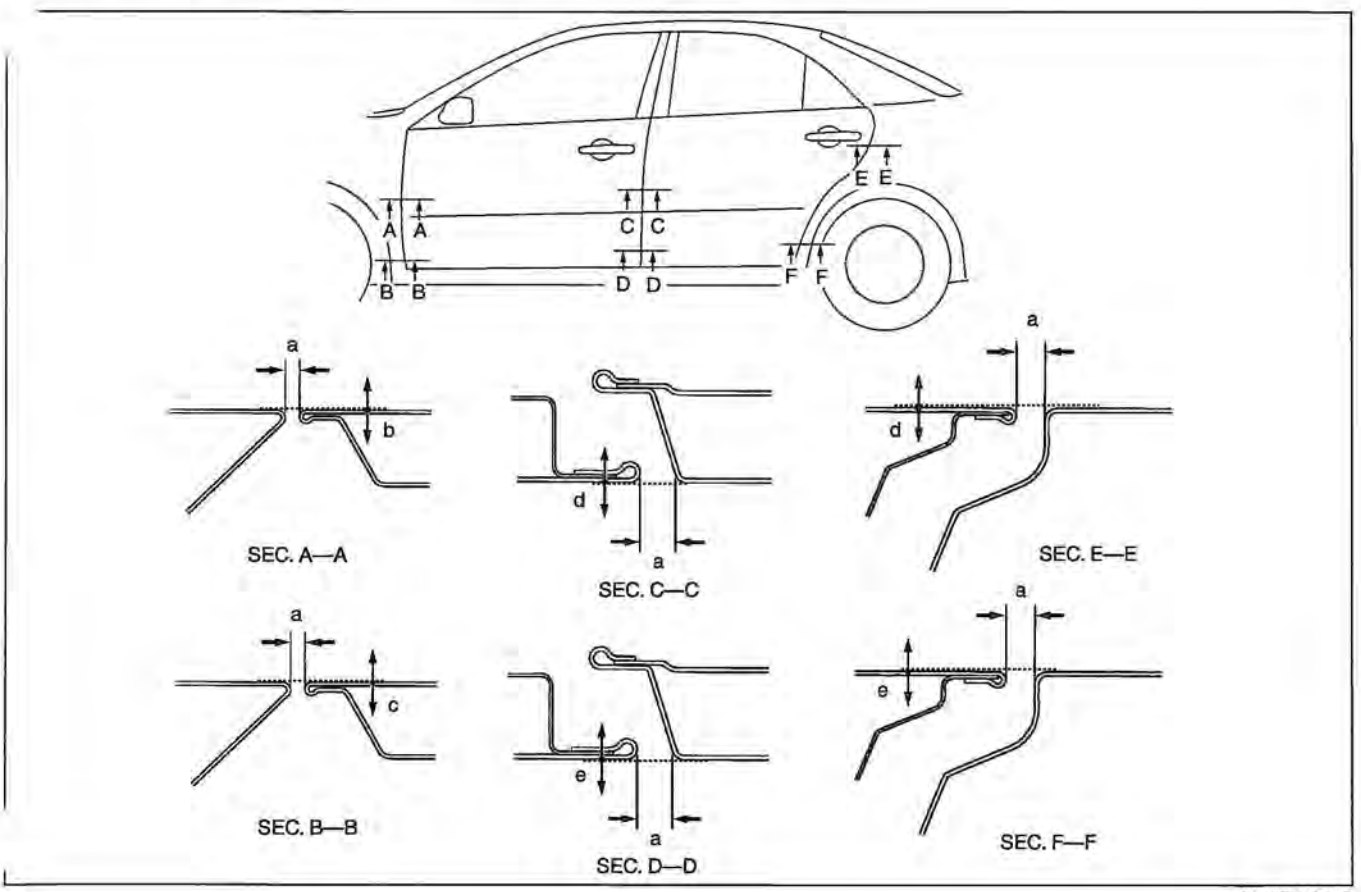
DOOR ADJUSTMENT

E6U091158010W04

1. Measure the gap and height difference between the front or rear door and the body.
2. If not as specified, loosen the front or rear door hinge installation bolts or the door lock striker installation screws, and reposition the door.

Clearance
a: 2.5—4.5 mm {0.10—0.18 in}
b: -0.8—1.2 mm {-0.03—0.05 in}
c: -0.3—1.7 mm {-0.01—0.07 in}
d: -1.0—1.0 mm {-0.04—0.04 in}
e: -0.5—1.5 mm {-0.02—0.06 in}

09–11



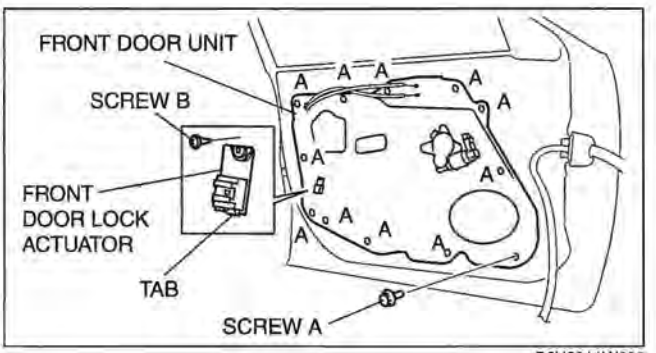
A6E7714W025

3. Tighten the bolts or screws.

FRONT DOOR UNIT REMOVAL/INSTALLATION

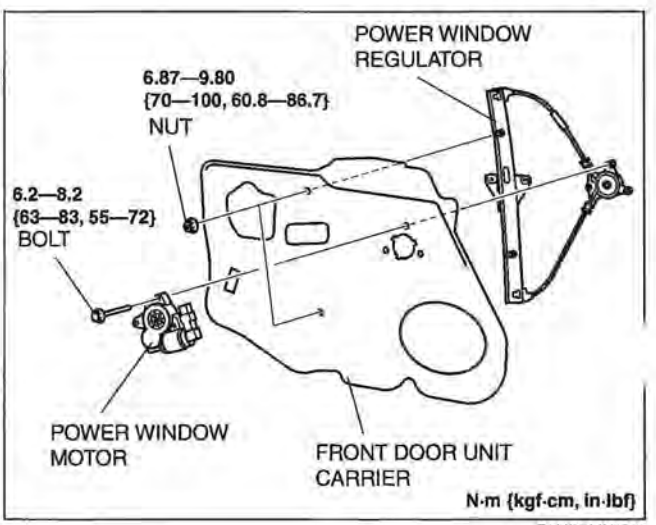
E6U091159970W01

1. Remove the front door glass. (See 09–12–3 FRONT DOOR GLASS REMOVAL/INSTALLATION.)
2. Remove the inner handle.
3. Remove the front door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.)
4. Disconnect the power window motor connector, front door lock actuator connector, and the power outside mirror connector.
5. Remove the front door harness from the front door unit.
6. Remove screws A.
7. Remove the screw B.
8. Remove the front door actuator tab from the front door unit.
9. Pull the front door unit slightly outward, and while keeping the power window regulator from catching on the front door, remove the front door unit from the front door.
10. Pull out the inner handle cable and door lock knob cable from the hole.



B6U0911W005

11. Remove the power window motor and power window regulator from the front door unit carrier.
12. Install in the reverse order of removal.

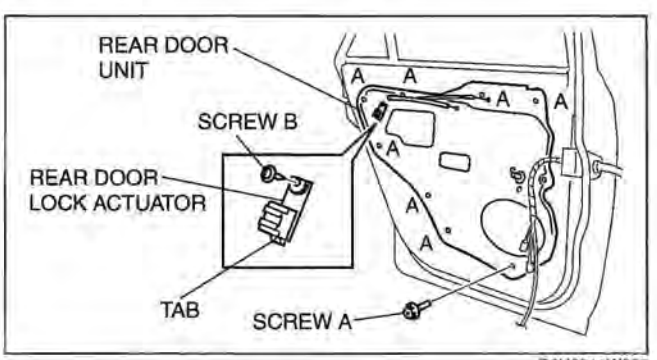


B6U0911W006

REAR DOOR UNIT REMOVAL/INSTALLATION

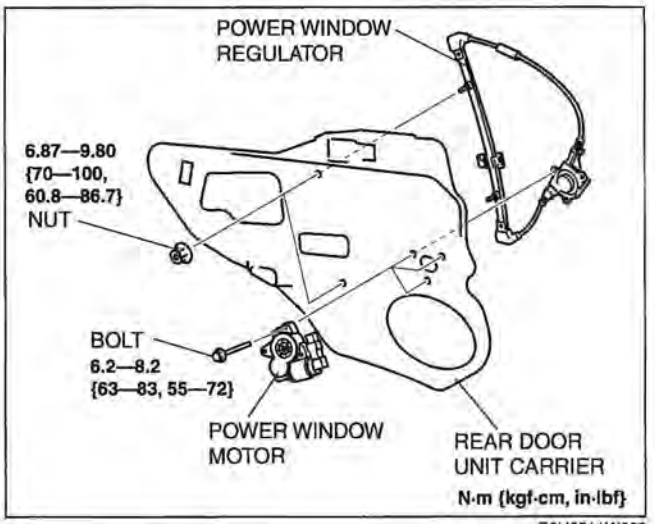
E6U091159970W02

1. Remove the rear door glass. (See 09–12–3 REAR DOOR GLASS REMOVAL/INSTALLATION.)
2. Remove the inner handle.
3. Remove the rear door speaker. (See 09–20–10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
4. Disconnect the power window motor connector and rear door lock actuator connector.
5. Remove the rear door harness from the rear door unit.
6. Remove screws A.
7. Remove the screw B.
8. Remove the rear door lock actuator tab from the rear door unit.
9. Pull the rear door unit slightly outward, and while keeping the power window regulator from catching on the rear door, remove the rear door unit from the rear door.
10. Pull out the inner handle cable and door lock knob cable from the hole.



B6U0911W007

11. Remove the power window motor and power window regulator from the rear door unit carrier.
12. Install in the reverse order of removal.



B6U0911W008

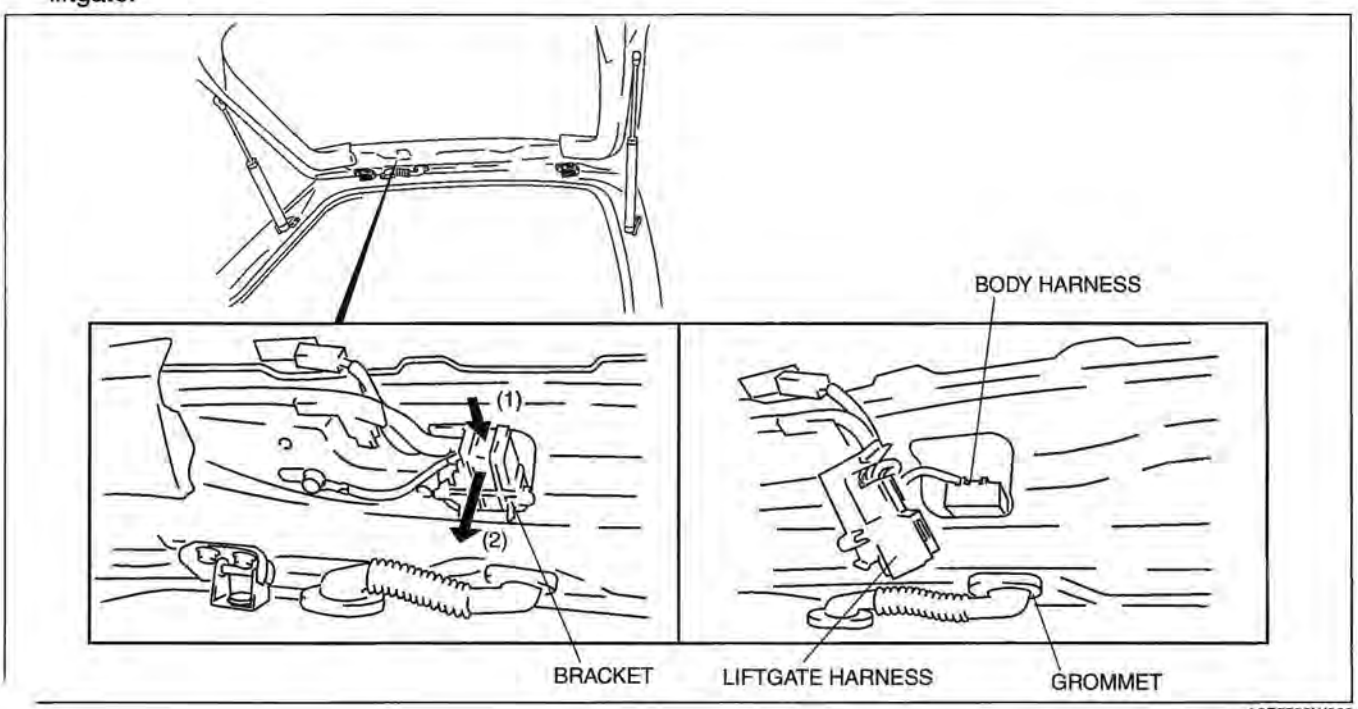
LIFTGATE REMOVAL/INSTALLATION [5-DOOR]

E6U091162010W01

Warning

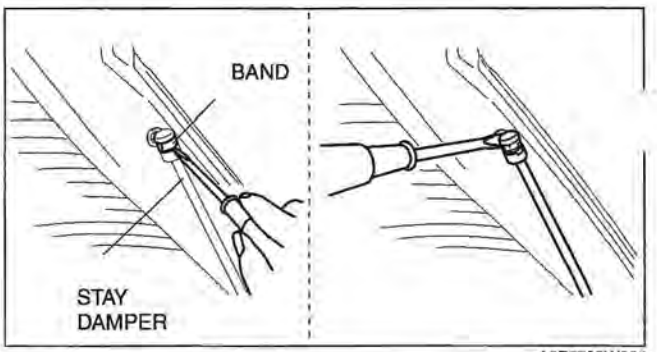
- **Removing the stay damper without supporting the liftgate can be dangerous. The liftgate may fall and injure you. Open the liftgate fully and support it before removing the stay damper.**

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
3. Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
4. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
   Press the liftgate harness connector's bracket, which is attached to the liftgate, to the (1) direction shown in the figure, and then detach the fit. Then remove the connector toward the (2) direction shown in the figure.
6. Disconnect the vehicle harness connector and the liftgate connector. Then remove the grommet from the liftgate.



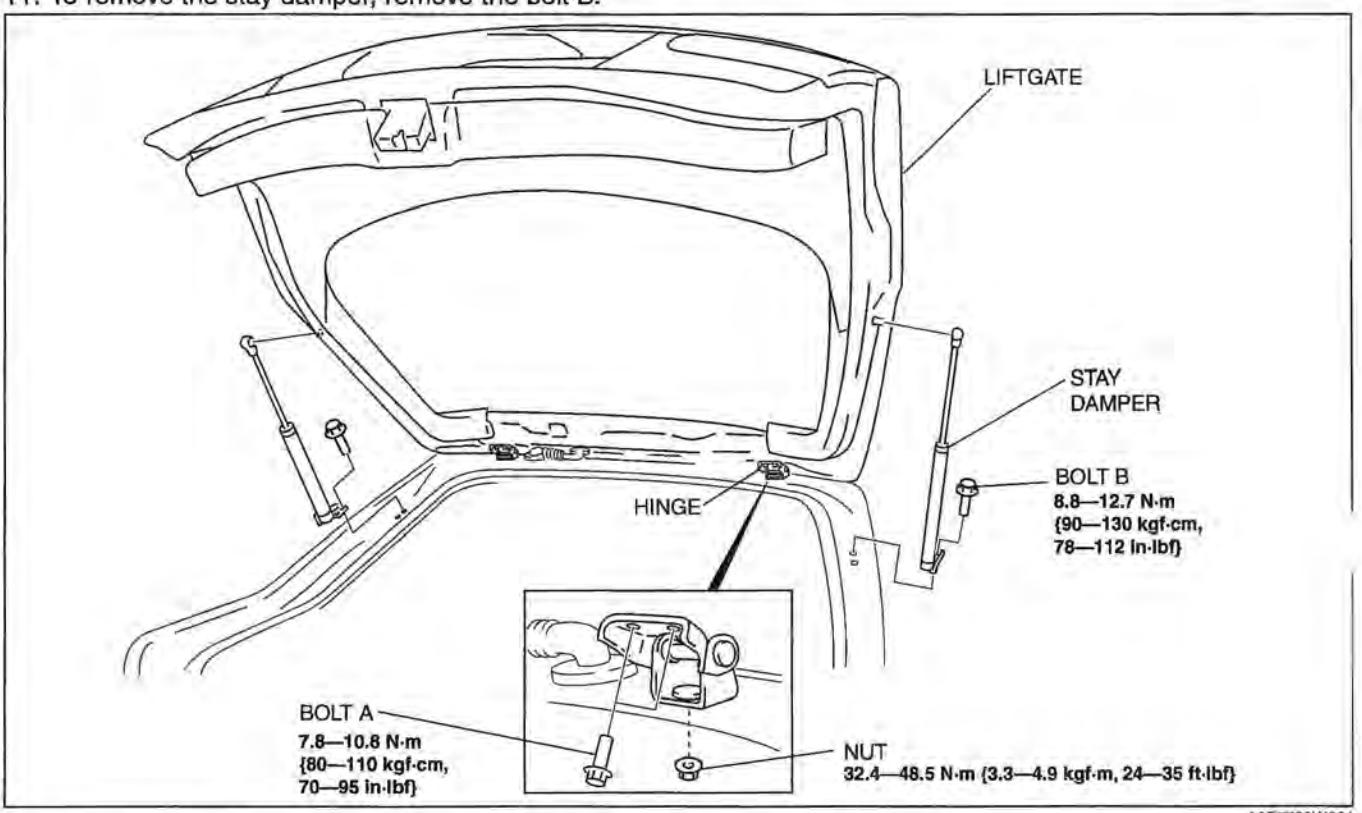
A6E7722W003

7. Pry away the stay damper's band with a screwdriver.
8. Pry out the connecting part of the stay damper and the hinge with a screwdriver to disconnect them. Then remove the stay damper.
9. Remove the bolts A, then remove the liftgate.
10. To remove the hinge, remove the headliner and the nut.



A6E7722W005

11. To remove the stay damper, remove the bolt B.



A6E7722W001

12. Install in the reverse order of removal.

LIFTGATE REMOVAL/INSTALLATION [SPORT WAGON]

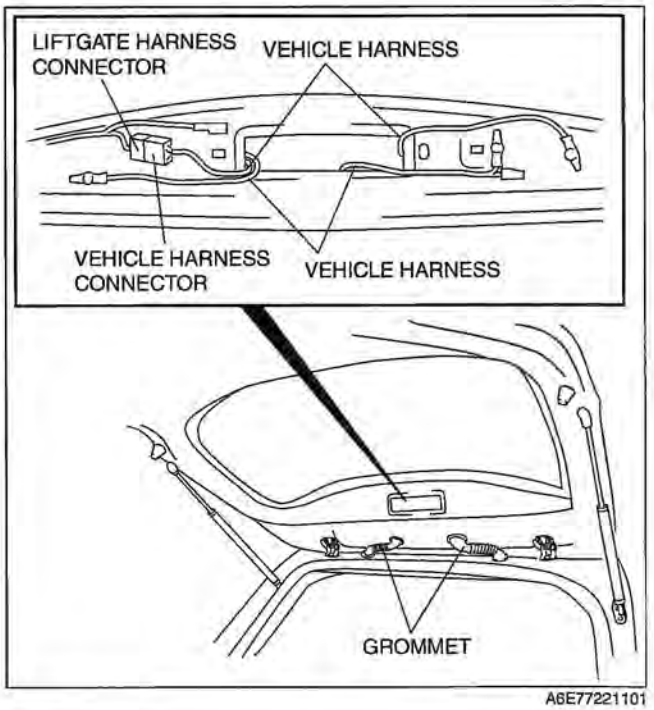
E6U091162010W02

Warning

- **Removing the stay damper without supporting the liftgate can be dangerous. The liftgate may fall and injure you. Open the liftgate fully and support it before removing the stay damper.**

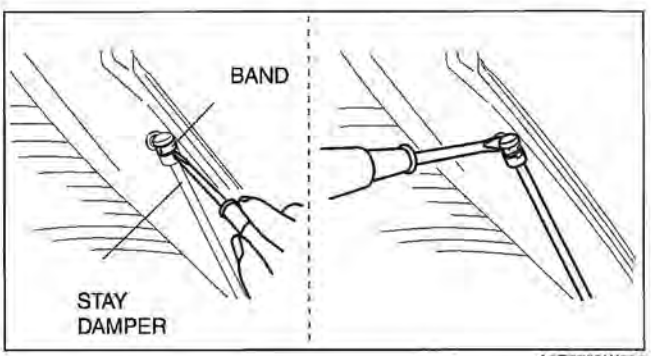
1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
3. Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
4. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
5. Disconnect the rear washer hose.

6. Disconnect the vehicle harness and the vehicle harness connector, attached to the liftgate, from the liftgate harness connector.



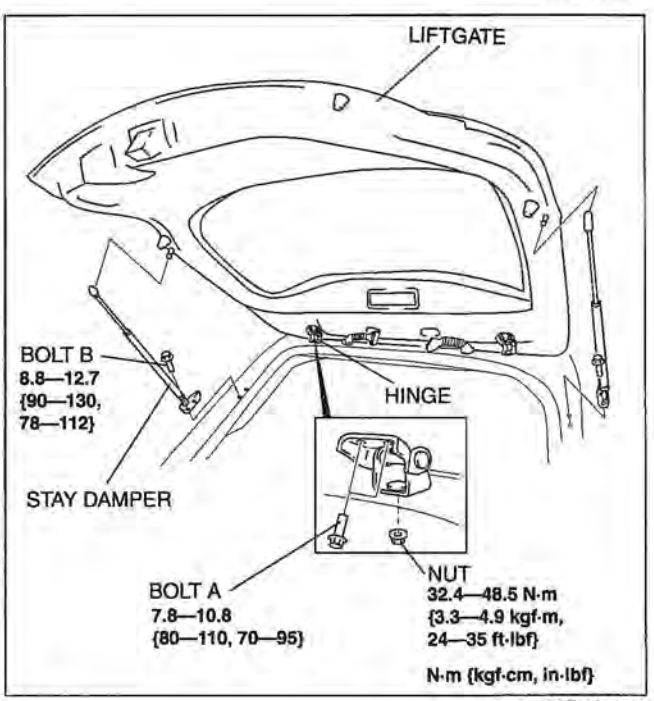
A6E77221101

7. Pry away the stay damper's band with a screwdriver.
8. Pry out the connecting part of the stay damper and the hinge with a screwdriver to disconnect them. Then remove the stay damper.
9. Remove the bolts A, then remove the liftgate.
10. To remove the hinge, remove the headliner and the nut.



A6E7722W005

11. To remove the stay damper, remove the bolt B.
12. Install in the reverse order of removal.



A6E77221102

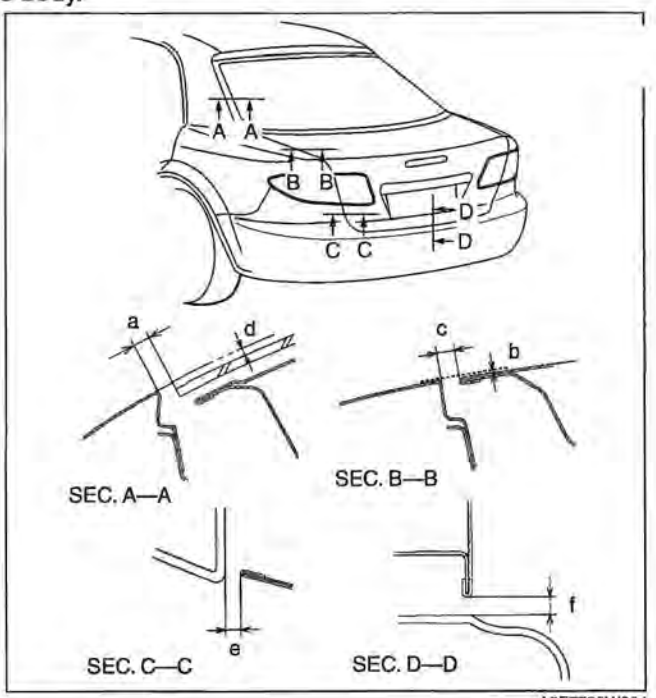
LIFTGATE ADJUSTMENT [5-DOOR]

E6U091162010W03

1. Measure the gap and height between the liftgate and the body.
2. If not as specified, loosen the liftgate hinge installation bolts or the liftgate striker installation screws, and reposition the liftgate.

Clearance
a: 3.0—7.0 mm {0.12—0.28 in}
b: -1.0—3.4 mm {-0.04—013 in}
c: 2.8—5.2 mm {0.11—0.24 in}
d: -1.2—1.2 mm {0.05—0.05 in}
e: 2.8—5.8 mm {0.11—0.22 in}
f:4.0—8.0 mm {0.16—0.31 in}

3. Tighten the bolts or screws.



A6E7722W004

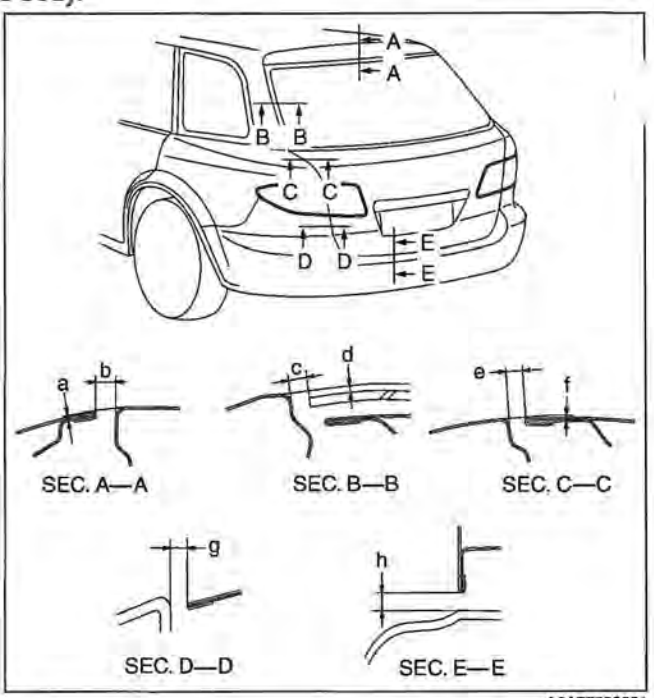
LIFTGATE ADJUSTMENT [SPORT WAGON]

E6U091162010W04

1. Measure the gap and height between the liftgate and the body.
2. If not as specified, loosen the liftgate hinge installation bolts or the liftgate striker installation screws, and reposition the liftgate.

Clearance
a: 0—2.0 mm {0—0.07 in}
b: 4.8—6.8 mm {0.19—0.26 in}
c: 3.5—7.5 mm {0.14—0.29 in}
d: 1.2—3.2 mm {0.05—0.12 in}
e: 2.8—5.2 mm {0.11—0.20 in}
f: -0.7—1.7 mm {-0.02—0.06 in}
g: 2.3—5.7 mm {0.10—0.22 in}
h: 4.0—8.0 mm {0.16—0.31 in}

3. Tighten the bolts or screws.



A6A77222001

STAY DAMPER DISPOSAL

E6U091162010W05

1. Referring to procedures for trunk lid stay damper disposal, dispose of the liftgate stay damper.

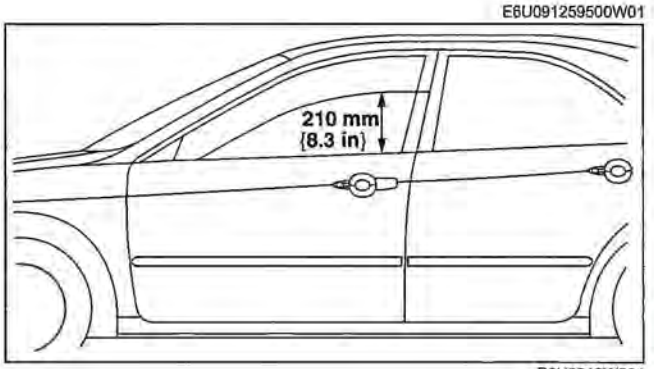
15	Quarter window glass (See 09–12–23 QUARTER WINDOW GLASS REMOVAL [SPORT WAGON].) (See 09–12–23 QUARTER WINDOW GLASS INSTALLATION [SPORT WAGON].)

FRONT DOOR GLASS REMOVAL/INSTALLATION

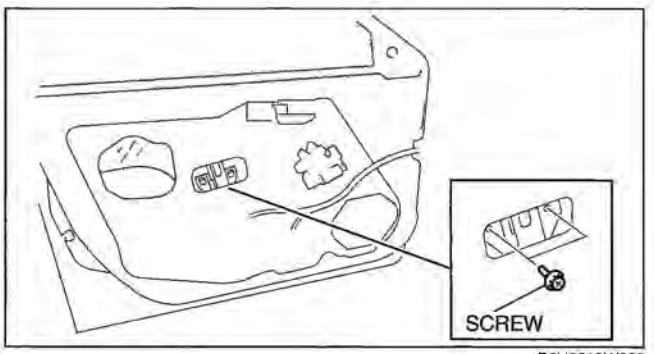
1. Operate the front door glass so that the distance from the top of the front door glass to the upper part of the front beltline molding is **210 mm {8.3 in}**.
2. Remove the front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the hole cover.

E6U091259500W01



B6U0912W001

4. Remove the screws.
   Lift out the front door glass.
5. Install in the reverse order of removal.



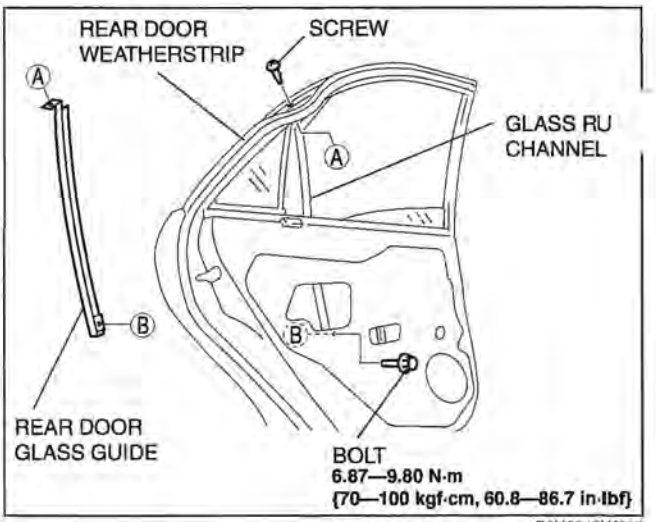
B6U0912W009

REAR DOOR GLASS REMOVAL/INSTALLATION

E6U091259500W02

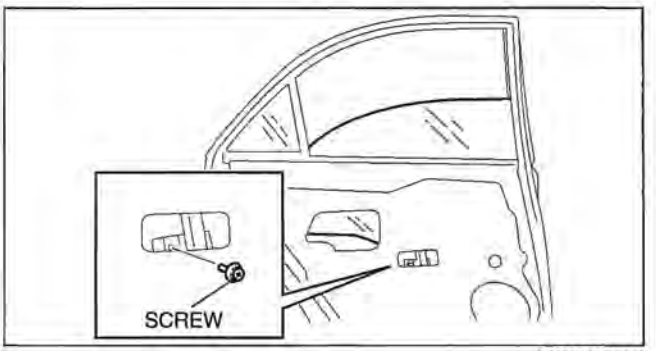
1. Fully roll down the rear door glass.
2. Remove the rear door trim. (See 09–17–13 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the hole cover.
4. Pull up the rear door weatherstrip and remove the screw.
5. Remove the bolt.

6. Remove the glass run channel from the rear door glass guide.



B6U0912W010

7. Lift the rear door glass to the position where the rear door glass installation screw is visible.
8. Remove the screw.
9. Lift out the rear door glass.
10. Install in the reverse order of removal.

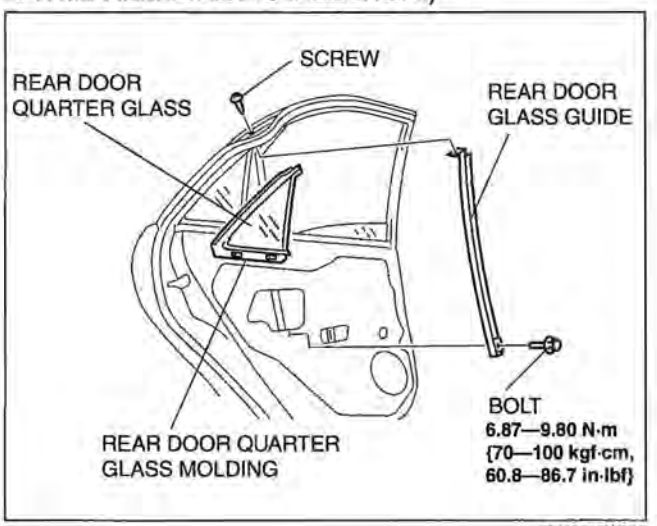


B6U0912W011

REAR DOOR QUARTER GLASS REMOVAL/INSTALLATION

E6U091259500v

1. Remove the rear door trim. (See 09–17–13 REAR DOOR TRIM REMOVAL/INSTALLATION.)
2. Remove the screw and bolt, then remove the rear door glass guide.
3. Remove the rear door quarter glass and the molding as a signal unit.
4. Remove the rear door quarter glass molding from the glass.
5. Install in the reverse order of removal.



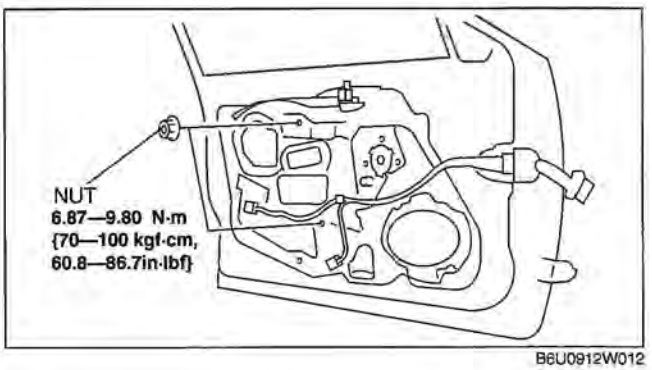
B6U0912W017

POWER WINDOW REGULATOR REMOVAL/INSTALLATION

E6U091258560W01

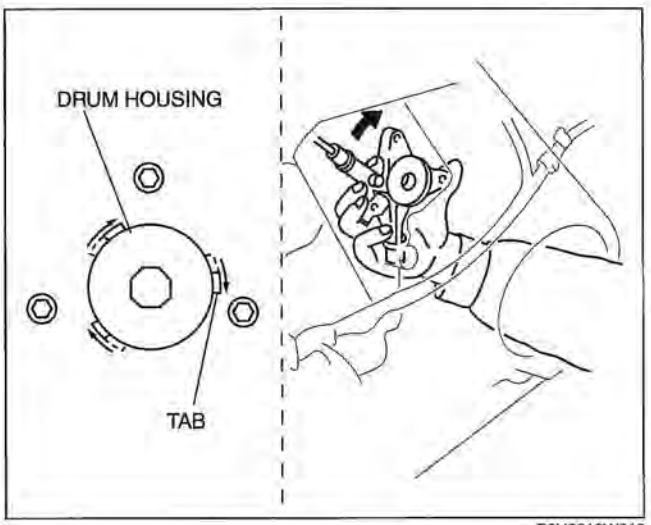
1. Disconnect the negative battery cable.
2. Remove the front door glass or rear door glass. (See 09–12–3 FRONT DOOR GLASS REMOVAL/INSTALLATION.) (See 09–12–3 REAR DOOR GLASS REMOVAL/INSTALLATION.)
3. Remove the front door speaker or rear door speaker. (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–10 REAR DOOR SPEAKER REMOVAL/INSTALLATION.)
4. Remove the power window motor. (See 09–12–5 POWER WINDOW MOTOR REMOVAL/INSTALLATION.)

5. Remove the nuts.



B6U0912W012

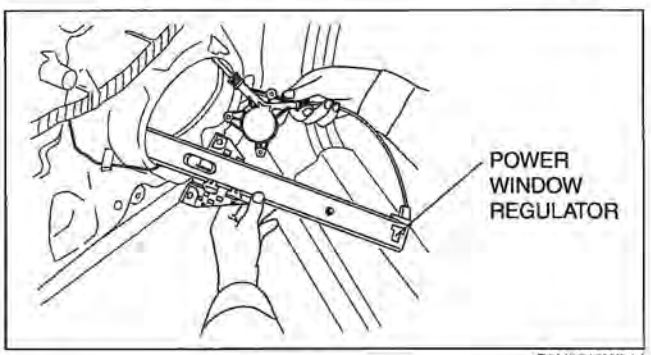
6. Insert hand through the speaker installation hole, rotate the regulator drum housing in the direction shown in the figure, and disengage the regulator drum housing from the door unit connection tabs.



B6U0912W013

Remove the power window regulator from the speaker installation hole.

8. Install in the reverse order of removal.



B6U0912W014

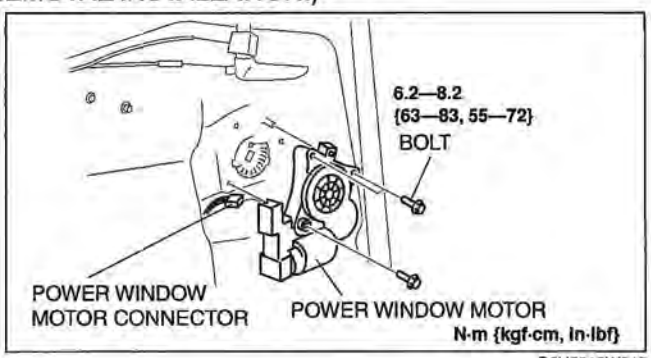
POWER WINDOW MOTOR REMOVAL/INSTALLATION

E6U091258560W02

1. Disconnect the negative battery cable.
2. Remove the front door trim or rear door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.) (See 09–17–13 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Disconnect the power window motor connector.
4. Remove the bolts.
5. Remove the power window motor from the power window regulator drum.
6. Install in the reverse order of removal.

Note

- When installing the power window motor to the power window regulator drum, the drum housing hook may come off the door unit. If this happens, remove the door speaker, insert your hand in the speaker installation hole, connect the drum housing hooks, and while supporting the drum housing, install the power window motor to the drum.



B6U0912W015

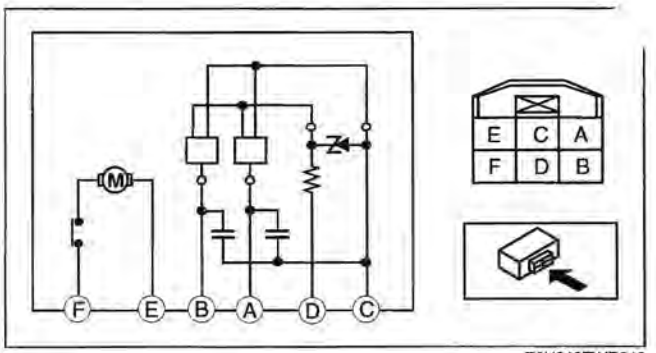
POWER WINDOW MOTOR INSPECTION

E6U091258560W03

Driver's Side and Passenger's Side

1. Disconnect the power window motor connector.
2. Apply battery positive voltage to the power window motor terminals E and F and inspect the operation the power window motor operation.
   - If there is any malfunction, replace the power window motor.

Motor operation	Terminal	
	F	E
UP	GND	B+
DOWN	B+	GND



E6U912ZWB019

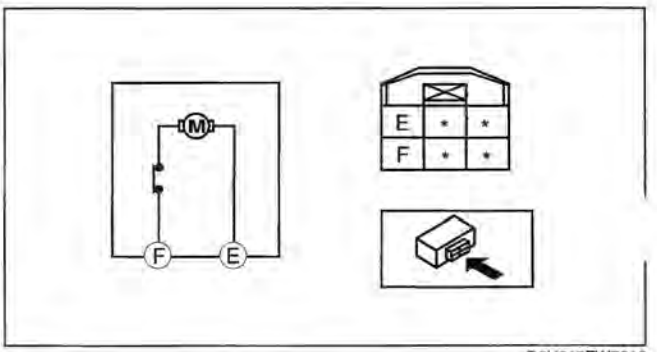
3. Apply **battery positive voltage** to the power window motor terminal D and connect terminal C to ground.
4. Measure the voltage at terminal B and A while performing Step 3.
   - If there is any malfunction, replace the power window motor.

Voltage
Pulse wave: MAX. 5 V, MIN. 0 V

Rear Side

1. Apply battery positive voltage to the power window motor terminals and inspect the power window motor operation.
   - If there is any malfunction, replace the power window motor.

Motor operation	Terminal	
	F	E
UP	GND	B+
DOWN	B+	GND

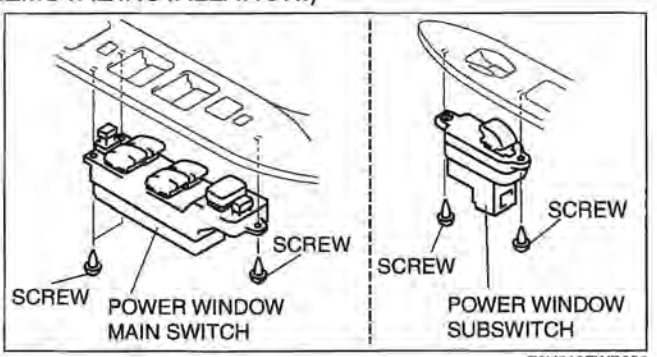


D6U912ZW7010

POWER WINDOW SWITCH REMOVAL/INSTALLATION

E6U091266330W01

1. Disconnect the negative battery cable.
2. Remove the front door trim or rear door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.) (See 09–17–13 REAR DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the screws, then the power window switch.
4. Install in the reverse order of removal.



E6U912ZWB002

POWER WINDOW MAIN SWITCH INSPECTION

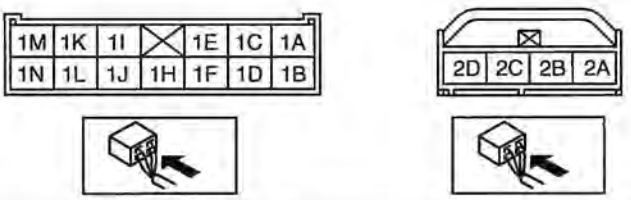
E6U091266330W02

Note
- Before proceeding with diagnosis of malfunctioning power windows, ensure the POWER WINDOW INITIALIZATION PROCEDURE has been performed.

Driver's Side

1. Measure the voltage at each terminal (other than terminals 1M and 2A).
   - If the voltage is not as specified in the Terminal Voltage Table, inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. Disconnect the negative battery cable.
3. Inspect the power window main switch connector for continuity at terminal 1M and 2A.
4. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the power window main switch.

POWER WINDOW MAIN SWITCH HARNESS-SIDE CONNECTOR



E6U912ZW5101

Terminal voltage list

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
1C	ACC	MIRR 5A	Ignition switch is at ACC position	B+	• Inspect MIRR 5A fuse • Related wiring harnesses
			Ignition switch is at LOCK position	Below 1.0	
1E	IG1	IG KEY1 30 A fuse	Ignition switch is at ON position	B+	• Inspect IG KEY1 30 A fuse • Related wiring harnesses
			Ignition switch is at LOCK position	Below 1.0	
1F	Power-cut signal	Power window subswitch	Ignition switch at ON and power-cut switch at UNLOCK	B+	• Power window subswitch (See 09–12–9 POWER WINDOW SUBSWITCH INSPECTION.) • Related wiring harnesses
1G	Communication	Power window subswitch passenger's side)	-	-	-
1H	Communication	BCM	-	-	-
1I	Close output	Power window motor	While door glass is opening	Below 1.0	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
			While door glass is closing	B+	
1K	Open output	Power window motor	While door glass is opening	B+	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
			While door glass is closing	Below 1.0	

09–12

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
1M	GND	Body Ground	Under any condition: inspect for continuity to ground	Continuity detected	• GND
1N	Power supply	P. WIND 30 A fuse	Under any condition	B+	• P. WIND 30 A fuse • Related wiring harnesses
2A	Sensor ground	Power window motor	Under any condition: inspect for continuity to ground	Continuity detected	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
2B	Power supply	Power window motor	While IG ON or IG OFF timer works	B+	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
2C	Pulse 1	Power window motor	Door glass is in motion	Alternates between 0 and B+	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
			Door glass is not in motion	0 or B+	
2D	Pulse 2	Power window motor	Door glass is in motion	Alternates between 0 and B+	• Power window motor (See 09–12–6 POWER WINDOW MOTOR INSPECTION.) • Related wiring harnesses
			Door glass is not in motion	0 or B+	

Rear Side

1. Remove the power window main switch. (See 09–12–6 POWER WINDOW SWITCH REMOVAL/ INSTALLATION.)
2. When inspecting the rear, turn the power-cut switch UNLOCK.
3. Inspect for continuity between the power window main switch terminals.
   - If not as specified, replace the power window main switch.

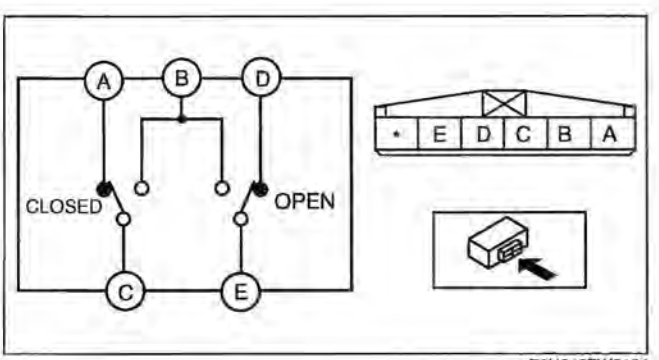
E6U912ZW5105



E6U912ZW5104

POWER WINDOW INITIALIZATION PROCEDURE

E6U091266330W04

Note

- Initial setting must be performed for the switch of each window front and rear.
- If the following operations have been performed, initial setting is reset, and auto up/down and two-step down operation are disabled. Therefore, performing initial setting is necessary.
  - — Negative battery cable disconnected or power window system power supply fuse removed (perform initial setting for the switches of all seats.)
  - — Power window switch connector disconnected (Perform initial setting for the switch connected with the connector.)
  - — Prolonged open/close operation of the power window main or sub switches causes the circuit breaker to activate and automatic operation is disabled.

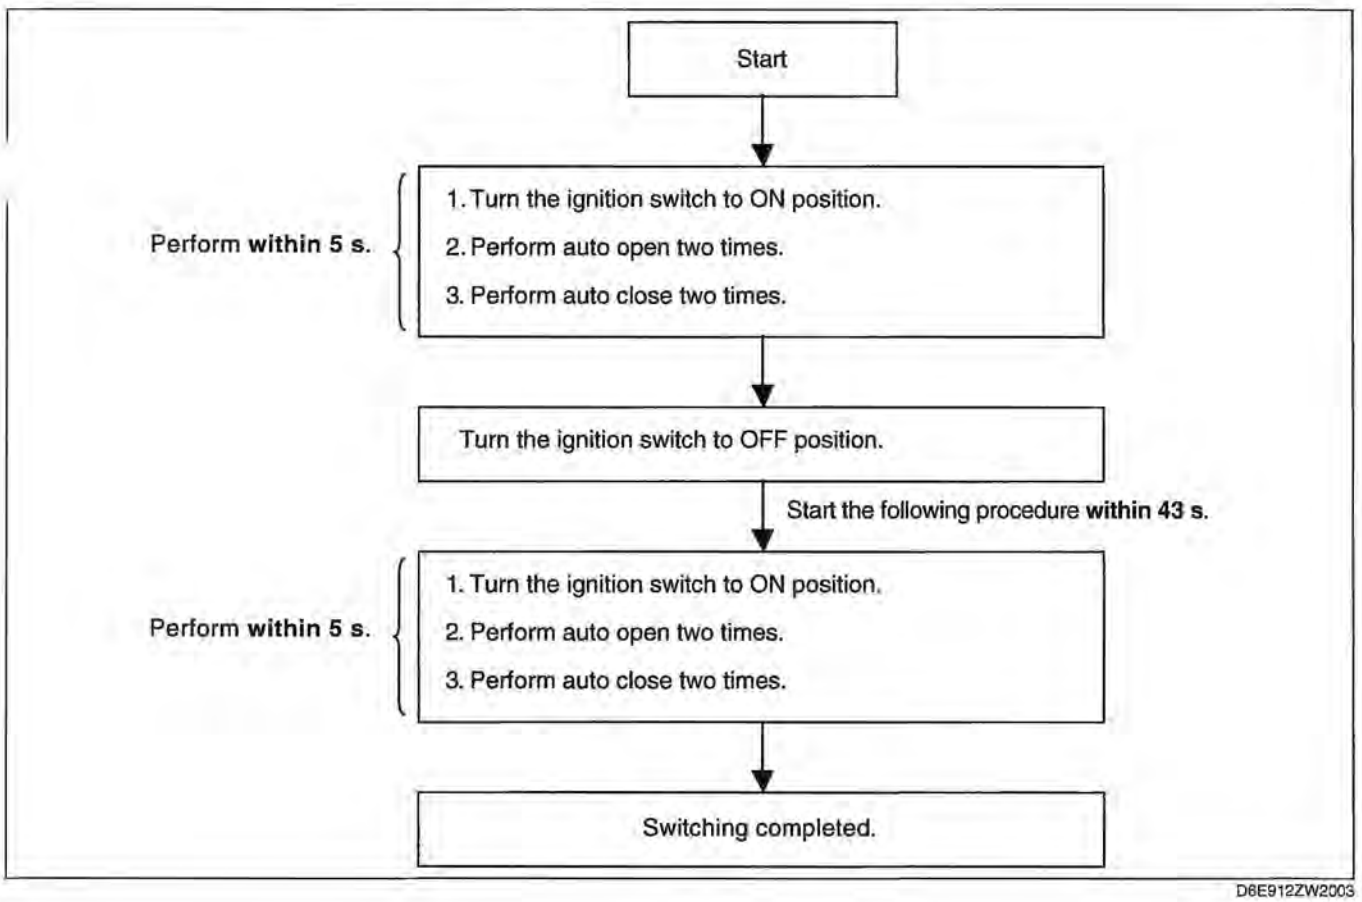
1. Turn the ignition switch to the ON position.
2. Press the switch of each window and fully open the door glass.
3. Pull the switch of each window to the manual-up position to fully close the door glass, and keep holding the switch up at the position for **approx. 2 s.**

TWO-STEP DOWN FUNCTION OPERATIVE/NON-OPERATIVE SWITCHING PROCEDURE

E6U091266330W05

Note

- By following the procedure below, the two-step down function is switched to non-operative when it is operative, and to operative when it is non-operative.



D6E912ZW2003

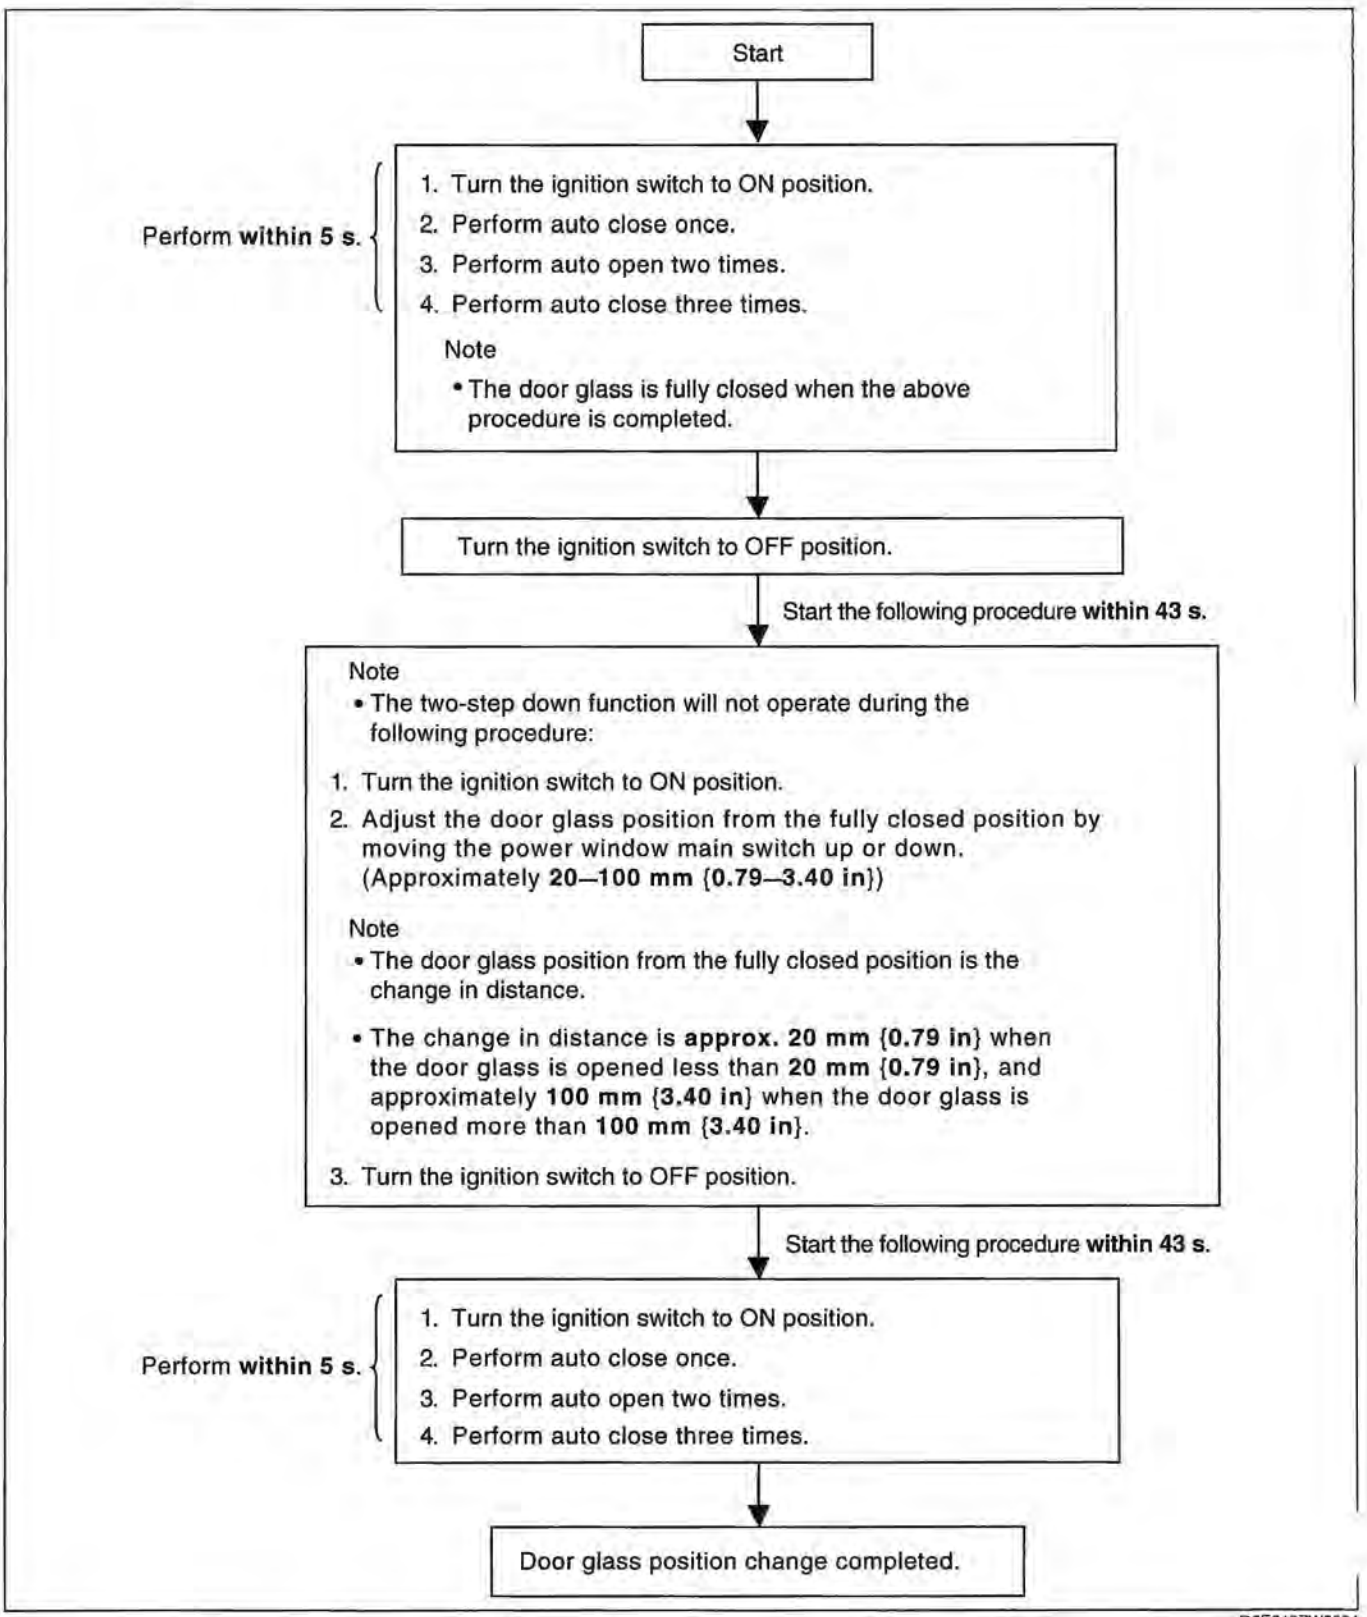
09–12

DOOR GLASS POSITION CHANGE PROCEDURE

E6U091266330W06

Note

- After performing the following procedure, verify that the two-step down function operates normally and th door glass position has changed. If the two-step down function does not operate or the door glass positic has not changed, the procedure was not performed properly. Repeat the procedure from the beginning.



D6E912ZW2004

WINDSHIELD REMOVAL

E6U091263900W01

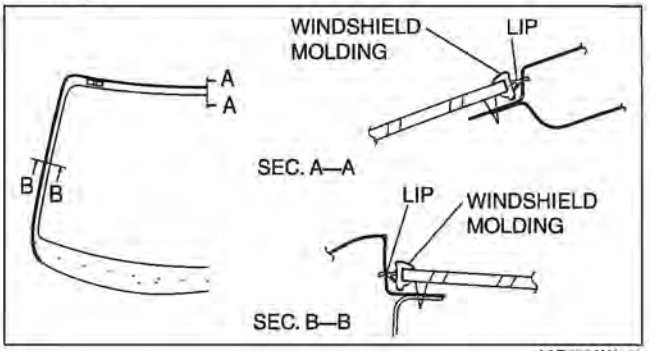
1. Remove the rearview mirror. (See 09–12–29 REARVIEW MIRROR REMOVAL/INSTALLATION.)
2. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
4. Apply protective tape along the edge of the body to protect it from damage.
5. Apply protective tape to the dashboard to protect it from damage.
6. Cut the lip of the windshield molding using a razor.

Warning

- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note

- The windshield molding is a replacement part.



A6E7738W006

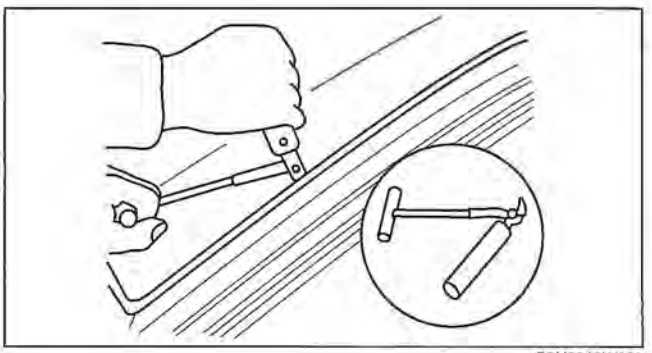
Not Reusing Windshield

1. Remove the base. (See 09–12–30 BASE REMOVAL.)

Note

- For the areas of the sealant that are difficult to cut, use the **SST** (piano wire) and follow the procedure under "Reusing Windshield."

2. Use the tool like that shown in the figure, and insert the blade into the sealant.
3. Pull through the sealant around the edge of the glass.
4. Remove the windshield.



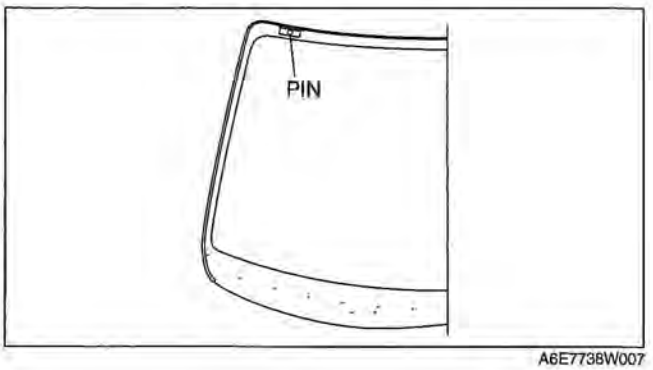
B6U0912W028

Reusing Windshield

Note

- Before removing the windshield from the body, mark the position of the windshield by affixing tape to the windshield and body panel.

1. Make a hole through the sealant, avoiding pins, from the inside of the vehicle using an awl.



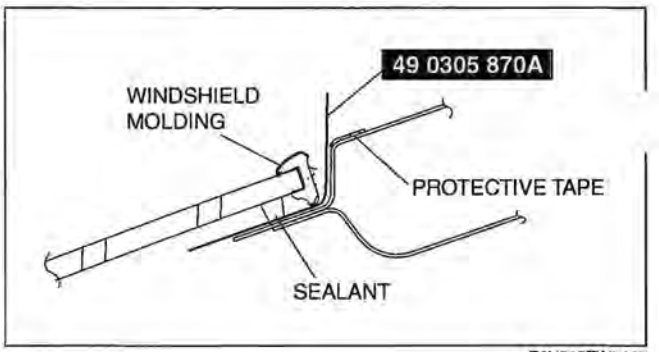
A6E7738W007

2. Pass the **SST** (piano wire) through the hole.

Warning
- **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

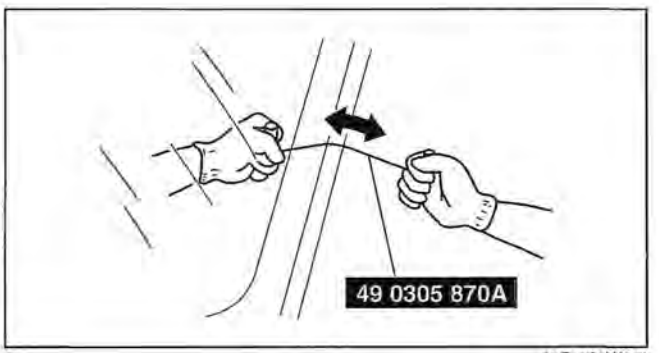
3. Wind each end of the **SST** (piano wire) around a bar.

Note
- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.



E6U912ZW5117

4. Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the windshield.
5. Remove the windshield.
6. Remove the pins from the windshield.
7. Remove the windshield molding from the windshield glass.



A6E7738W021

WINDSHIELD INSTALLATION

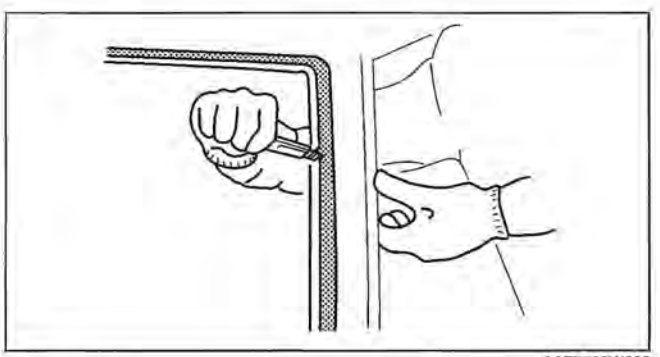
E6U091263900W02

Caution
- **To prevent the sealant from cracking or the glass from being pushed out by air pressure if a doc is closed, open all of the windows and leave them open until the sealant has hardened.**

1. Cut away the old sealant using a razor so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains along the perimeter of the frame.

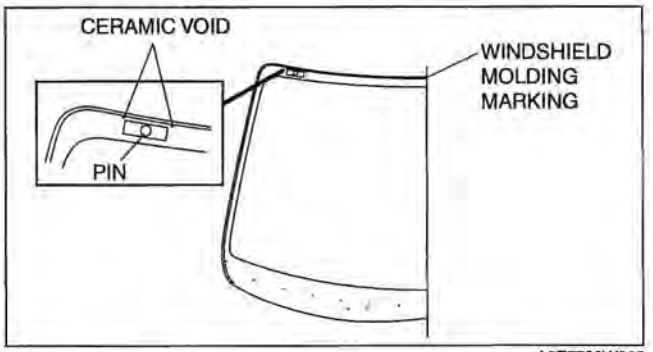
Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then put on new sealant to create a **2 mm {0.08 in}** layer.
3. Clean and degrease an **approx. 50.0 mm {1.97 in}** wide strip along the perimeter of the glass and the bonding area on the body.



A6E7738W023

4. If installing reused glass, install pins at the ceramic void on the upper part of the windshield.
5. If installing reused glass, align the windshield molding marking and the center of the upper section of the windshield, then install the molding to the windshield.

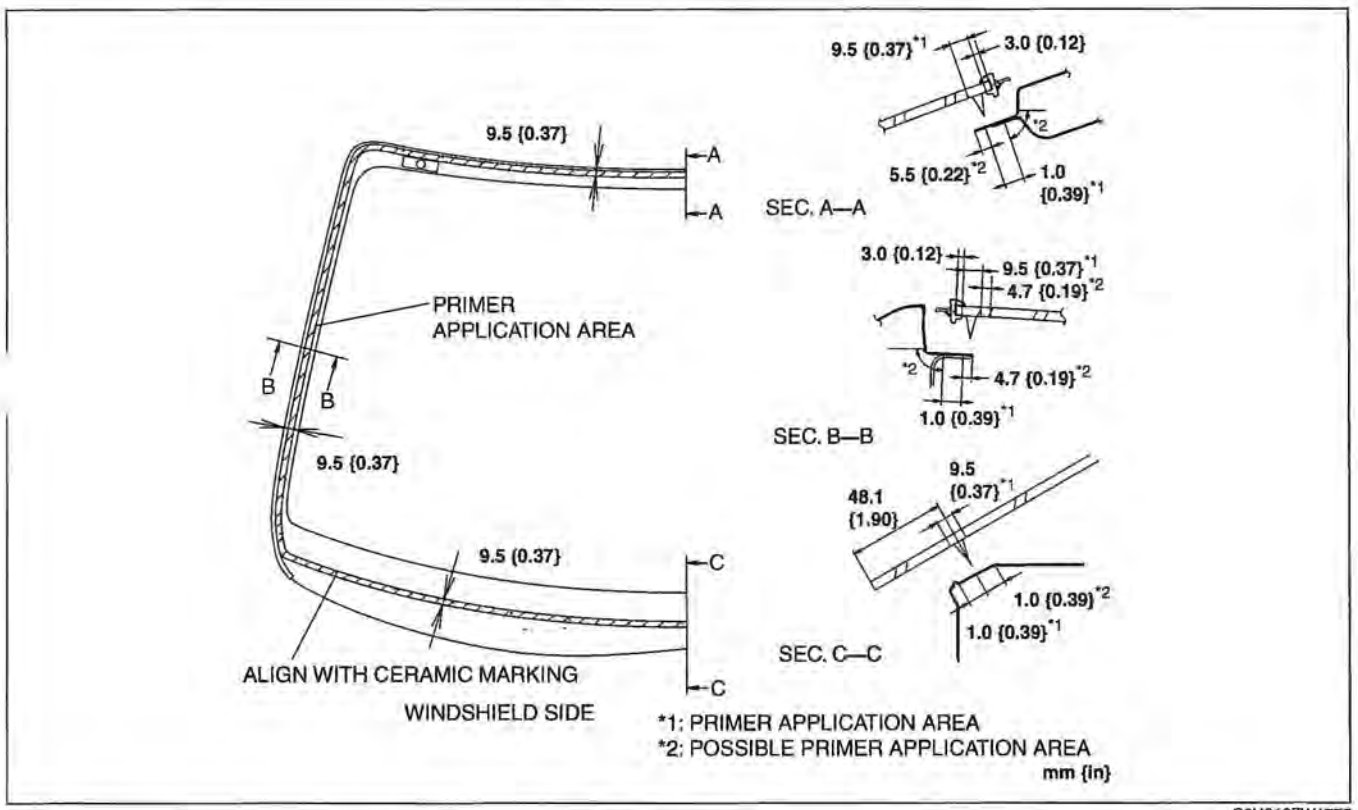


A6E7738W005

6. Use only glass primer on the glass. Allow it to dry for **approx. 30 min**.

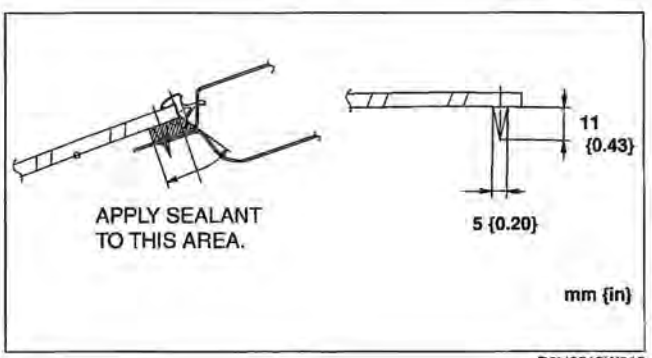
Caution

- **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass and body, which may cause leaks to occur.**



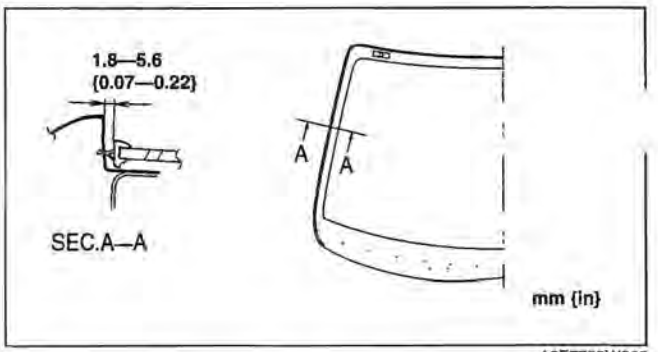
C6U912ZW1777

7. Apply sealant to the area of the glass surface as shown in the figure.
8. Set the windshield in place and insert the pins into the body. Install the windshield.



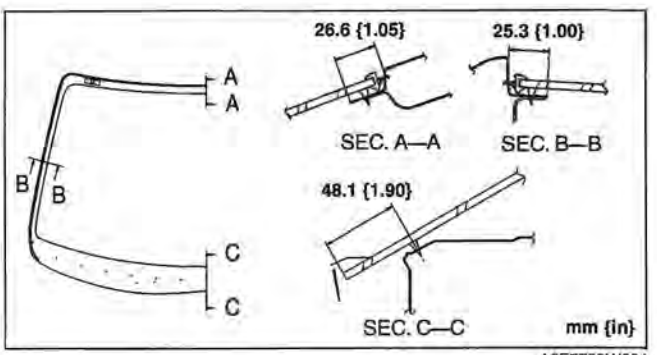
B6U0912W018

9. Verify that the gap of the A-pillar part as shown in the figure.



A6E7738W003

10. Keeping the measurement of the molding lip gap within specification, press completely along the perimeter of the glass.
11. Install the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
12. Install the headliner (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
13. Install the rearview mirror. (See 09–12–29 REARVIEW MIRROR REMOVAL/ INSTALLATION.)
14. Allow the sealant to harden completely.



A6E7738W004

Sealant hardening time: 24 hours

REAR WINDOW GLASS REMOVAL

E6U091263900W00

1. For the Sport sedan, remove the following parts:
   (1) Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
   (2) Remove the rear package trim. (See 09–17–16 REAR PACKAGE TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
2. For the 5-Door, remove the following parts:
   (1) Remove the rear wiper arm and blade. (See 09–19–14 REAR WIPER ARM AND BLADE REMOVAL/ INSTALLATION [5-DOOR, SPORT WAGON].)
   (2) Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (3) Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (4) Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. For the Sport Wagon, remove the following parts:
   (1) Remove the rear wiper arm and blade. (See 09–19–14 REAR WIPER ARM AND BLADE REMOVAL/ INSTALLATION [5-DOOR, SPORT WAGON].)
   (2) Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (3) Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (4) Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (5) Remove the rear wiper motor. (See 09–19–14 REAR WIPER ARM AND BLADE REMOVAL/ INSTALLATION [5-DOOR, SPORT WAGON].)
4. Apply protective tape along the edge of the body to protect it from damage.

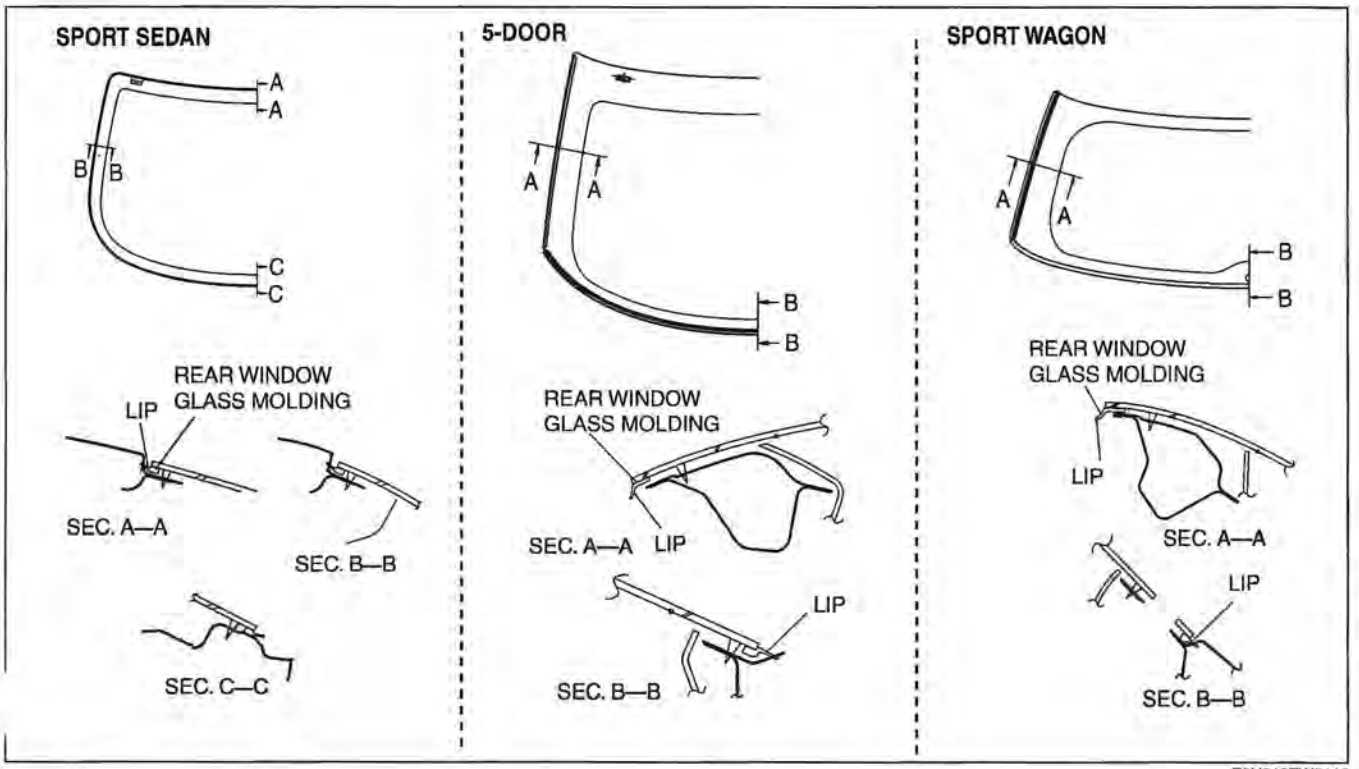
5. Cut the lip of the rear window molding using a razor.

Warning

- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note

- The rear window molding is a replacement part.



E6U912ZW5110

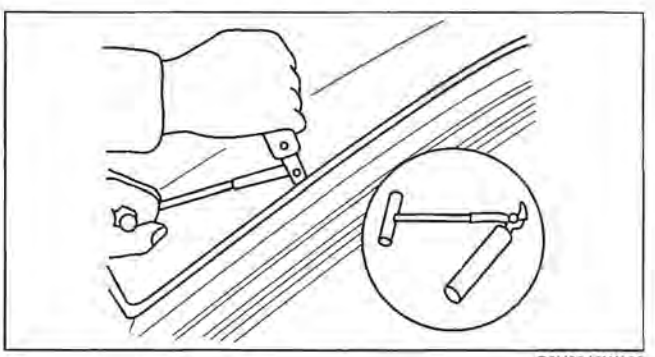
09–12

Not Reusing Rear Window Glass

Note

- For the areas of the sealant that are difficult to cut, use a **SST** (piano wire) and follow the procedure under "Reusing Rear Window Glass."

1. Use the tool like that shown in the figure, and insert the blade into the sealant.
2. Pull through the sealant around the edge of the glass.
3. Remove the rear window glass.

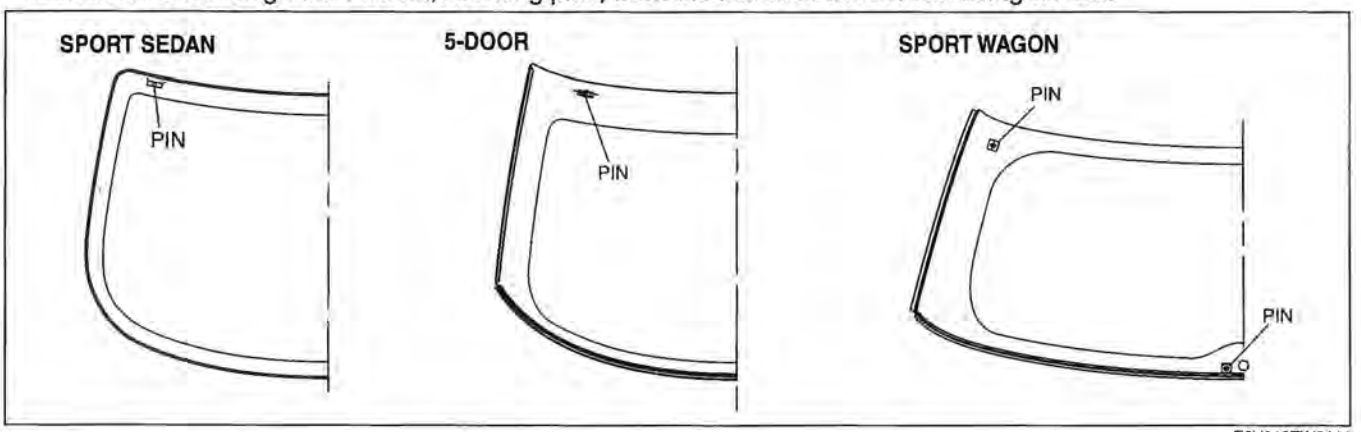


B6U0912W028

Reusing Rear Window Glass

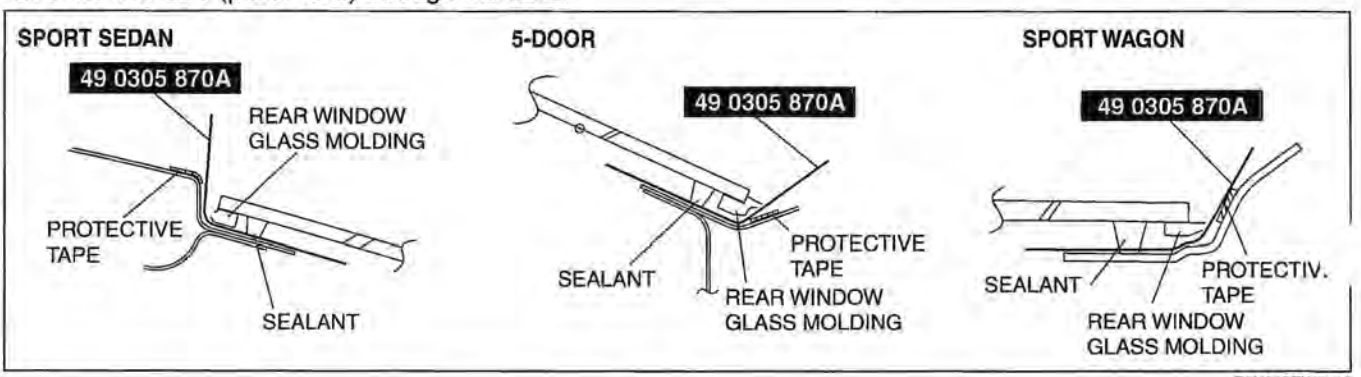
Note
- Before removing the rear window glass from the body, mark the position of the glass by affixing tape to th glass and body panel.

1. Make a hole through the sealant, avoiding pins, from the inside of the vehicle using an awl.



E6U912ZW5111

2. Pass the **SST** (piano wire) through the hole.



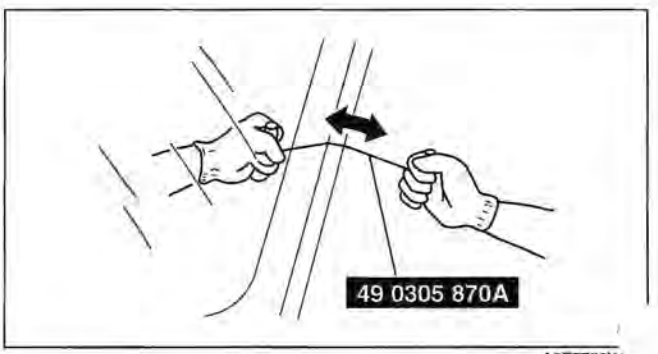
E6U912ZW5112

Warning
- **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

3. Wind each end of the **SST** (piano wire) around a bar.

Note
- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.

4. Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the rear window glass.
5. Remove the rear window glass.
6. Remove the pins from the glass.
7. Remove the rear window molding from the glass.



A6E7738W

REAR WINDOW GLASS INSTALLATION

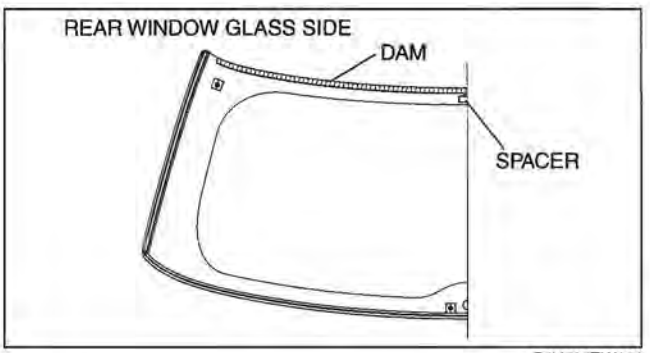
E6U091263900W04

Caution
- **To prevent the sealant from cracking or the glass from being pushed out by air pressure if a door is closed, open all of the windows and leave them open until the sealant has hardened.**

1. Cut away the old sealant using a razor so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains around the circumference of the frame.

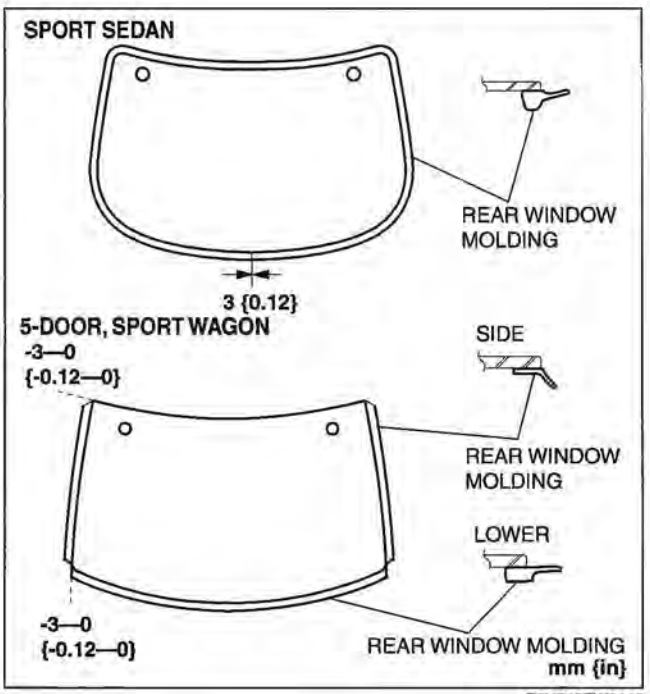
Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then put on new sealant to create a **2 mm {0.08 in}** layer.
3. Clean and degrease an **approx. 50.0 mm {1.97 in}** wide strip along the perimeter of the glass and the bonding area on the body.
4. Install the dams and spacer as shown in the figure. (Sport Wagon only)



C6U912ZW101

5. Install the molding as shown in the figure.



E6U912ZW5113

6. Use only glass primer on the glass. Allow it to dry for **approx. 30 min**.

Caution

- **Keep the area free of dirt and grease, and do not touch the surface or the primer may not proper' bond to the surface of the glass and body, which may cause leaks to occur.**

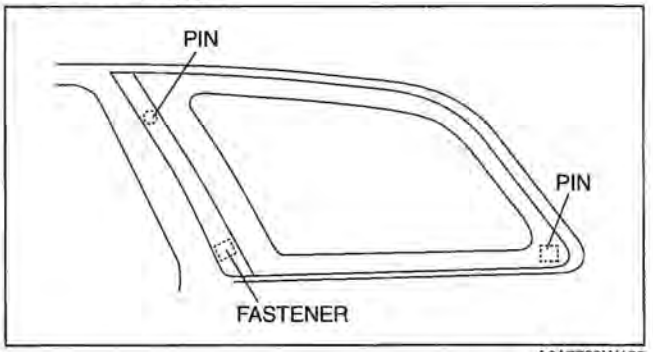
14. Allow the sealant to harden completely.

Sealant hardening time: 24 hours

QUARTER WINDOW GLASS REMOVAL [SPORT WAGON]

E6U091263900W05

1. Apply protective tape along the edge of the body to protect it from damage.
2. Make a hole through the sealant, avoiding pins, from the inside of the vehicle using an awl.



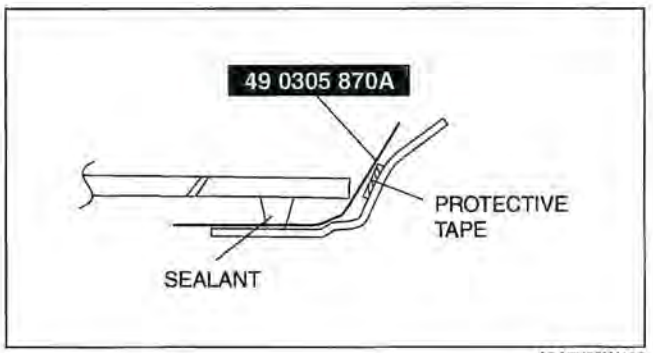
A6A7738W102

3. Pass the **SST** (piano wire) through the hole.

Warning
- **Using a SST (piano wire) with bare hands can cause injury. Always wear gloves when using a SST (piano wire).**

4. Wind each end of the **SST** (piano wire) around a bar.

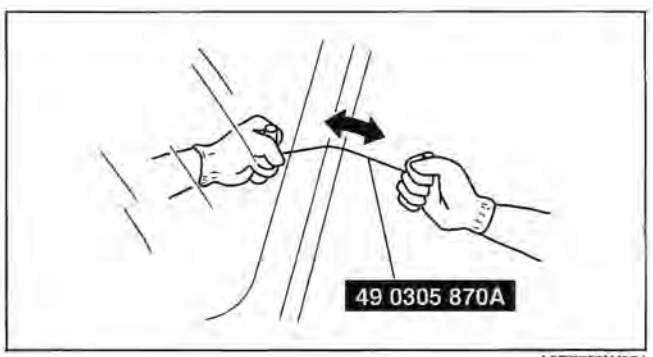
Note
- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking due to localized heating.



A6A7738W103

Fix one end of the **SST** (piano wire), and while pulling the other end, cut the sealant around the quarter window glass.

6. Remove the quarter window glass.



A6E7738W021

QUARTER WINDOW GLASS INSTALLATION [SPORT WAGON]

E6U091263900W06

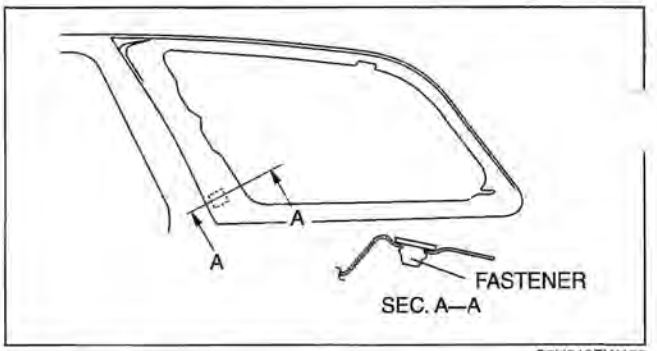
Caution
- **To prevent the sealant from cracking or the glass from being pushed out by air pressure if a door is closed, open all of the windows and leave them open until the sealant has hardened.**

1. Cut away the old sealant using a razor so that **1—2 mm {0.04—0.07 in}** thickness of sealant remains around the circumference of the frame.

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

2. If the sealant has come off completely in any one place, apply some primer after degreasing, and allow it **approx. 30 min** to dry. Then put on new sealant to create a **2 mm {0.08 in}** layer.
3. Clean and degrease an **approx. 50.0 mm {1.97 in}** wide strip around the circumference of the glass and the bonding area on the body.

4. Insert the spacer into the body.

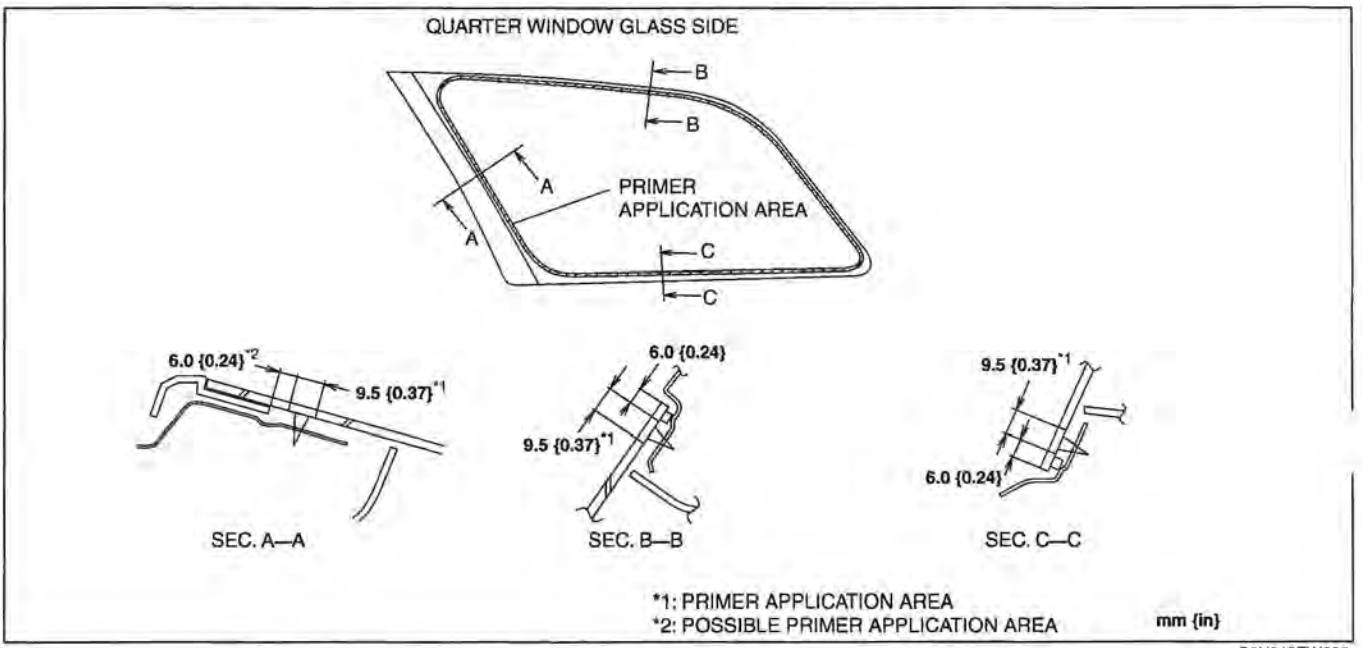


C6U912ZW100

5. Use only glass primer on the glass. Allow it to dry for **approx. 30 min.**

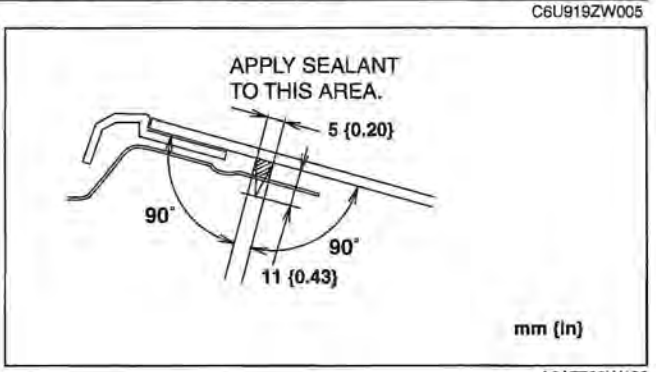
Caution

- **Keep the area free of dirt and grease, and do not touch the surface or the primer may not properly bond to the surface of the glass and body, which may cause leaks to occur.**



C6U919ZW005

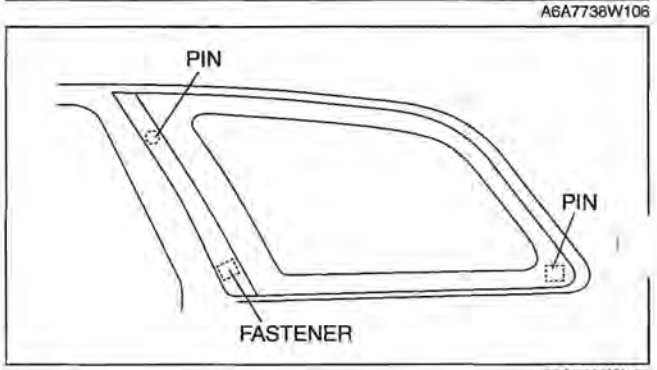
6. Apply sealant to the area of the glass surface as shown in the figure.



A6A7738W106

7. Set the quarter window glass in place and insert the pins and fastener into the body. Install the quarter window glass.
8. Allow the sealant to harden completely.

Sealant hardening time: 24 hours



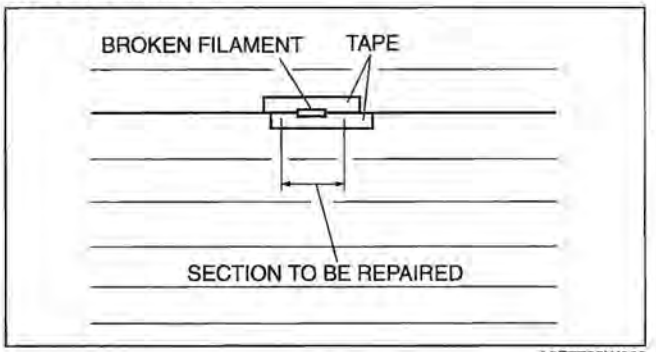
A6A7738W102

FILAMENT REPAIR

E6U091263000W01

1. Use isopropyl alcohol to clean around the damaged section of the filament.
2. Attach tape above and below the damaged section of the filament.
3. Using a small brush or marking pen, repair the filament with silver paint or equivalent.
4. After **2—3 min**, carefully remove the tape without disturbing the repaired area.

Caution
- **Do not use the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.**



A6E7736W003

5. Use a hot air blower heated to **150 °C {302 °F}** for **30 min** or let the paint set for **24 hours** at **25 °C {77 °F}** to allow it to dry completely.

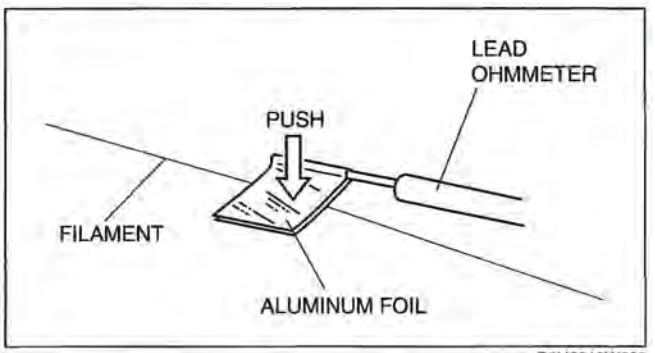
FILAMENT INSPECTION

E6U091263000W02

1. Turn the ignition switch to the ON position.
2. Turn the rear window defroster switch on.

Caution
- **Directly touching the rear window defroster filament with the lead of the voltmeter will damage it. Wrap aluminum foil around the end of the lead and test the filament by touching it with the foil.**

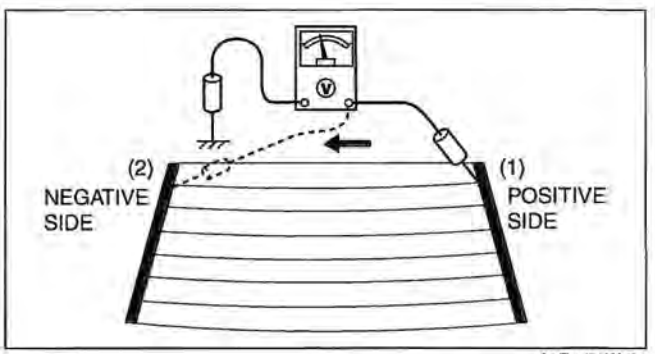
3. Connect the positive (+) lead of the voltmeter to the positive side of each filament and the negative (–) lead to ground.



B6U0912W030

4. Gradually, slide the positive (+) lead from the positive side to the negative side and measure the voltage. Verify that the ohmmeter decreases accordingly.
   - If the voltage is not as specified or it changes rapidly, the filament is faulty. Repair the filament.

Measurement point	Voltage (Reference value)
(1)→(2)	Approx. 12 V→ Approx. 0 V

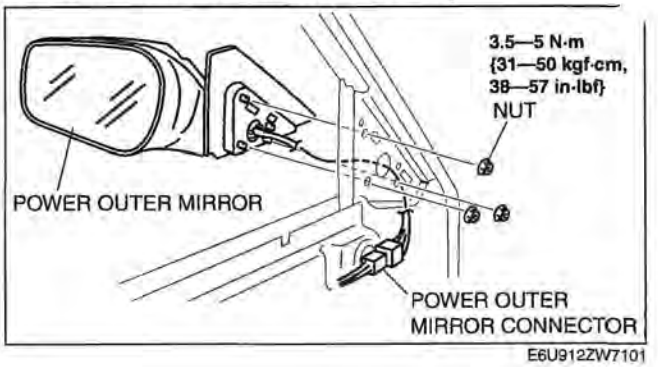


A6E7736W002

POWER OUTER MIRROR REMOVAL/INSTALLATION

E6U091269100W01

1. Disconnect the negative battery cable.
2. Remove the inner garnish.
3. Remove the front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Disconnect the power outer mirror connector.
5. Remove the nuts.
6. Remove the power outer mirror.
7. Install in the reverse order of removal.



E6U912ZW7101

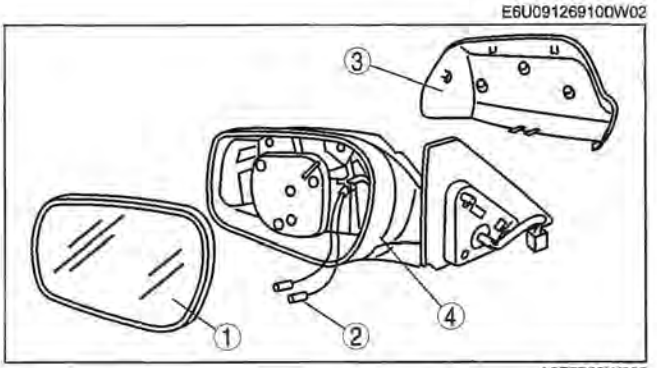
POWER OUTER MIRROR DISASSEMBLY/ASSEMBLY

E6U091269100W02

1. Disassemble in the order indicated in the table.

1	Outer mirror glass (See 09–12–26 Outer Mirror Glass Disassembly Note.) (See 09–12–27 Outer Mirror Glass Assembly Note.)
2	Connector (with heated outside mirror)
3	Cover (See 09–12–27 Cover Disassembly Note.)
4	Outside mirror

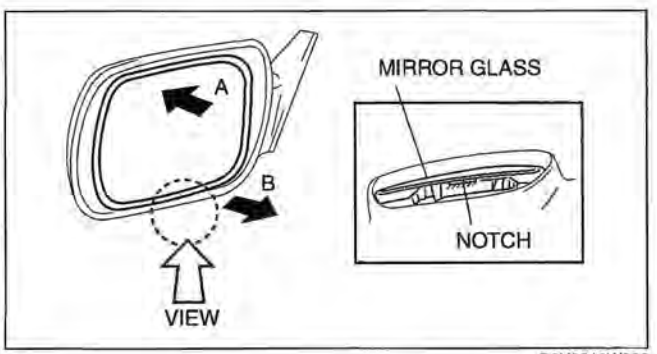
2. Assemble in the reverse order of disassembly.



A6E7732W002

Outer Mirror Glass Disassembly Note

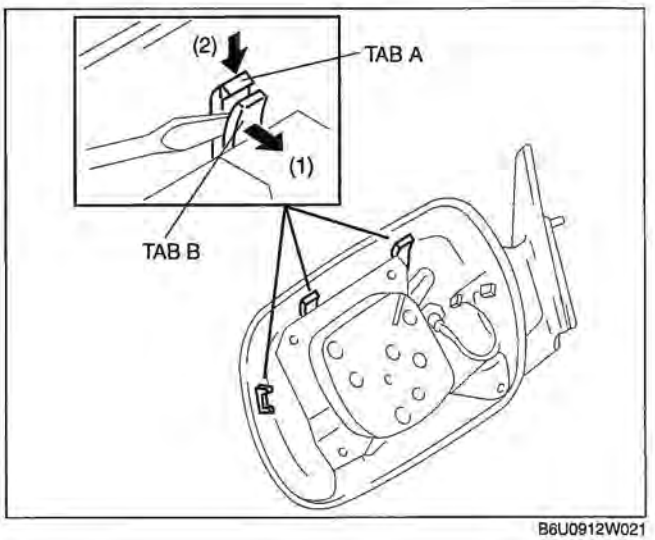
1. Press area A of the glass so that area B moves outward.
2. Insert a screwdriver into the notch and remove the glass from the mirror base.



B6U0912W020

Cover Disassembly Note

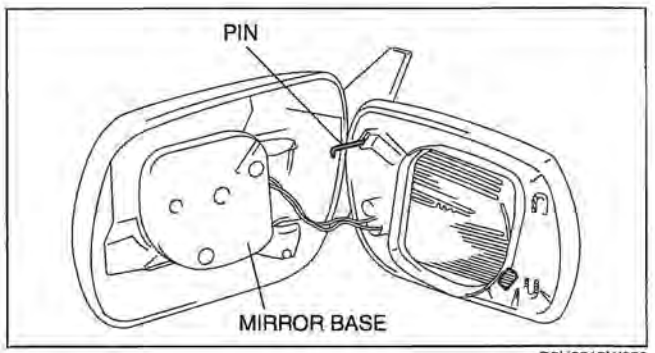
1. Pull off the tab A with a screwdriver and press the tab B downward.



B6U0912W021

Outer Mirror Glass Assembly Note

1. Press the outer mirror into the base so that the pin does not dislodge.



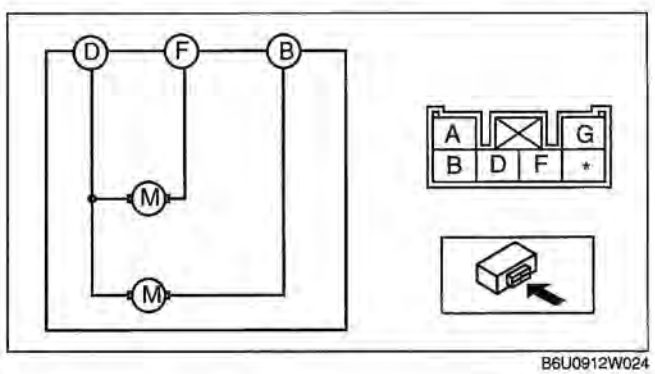
B6U0912W022

POWER OUTER MIRROR INSPECTION

E6U091269100W03

1. Disconnect the power outer mirror connector.
2. Apply battery positive voltage to the power outer mirror terminals, and inspect the operation of the power outer mirror.
   - If there is any malfunction, replace the power outer mirror.

Mirror operation	Terminal	
	B+	GND
Up	B	D
Down	D	B
Left	F	D
Right	D	F



B6U0912W024

3. Inspect for continuity between the power outer mirror heater terminals.
   - If there is any malfunction, replace the power outer mirror.

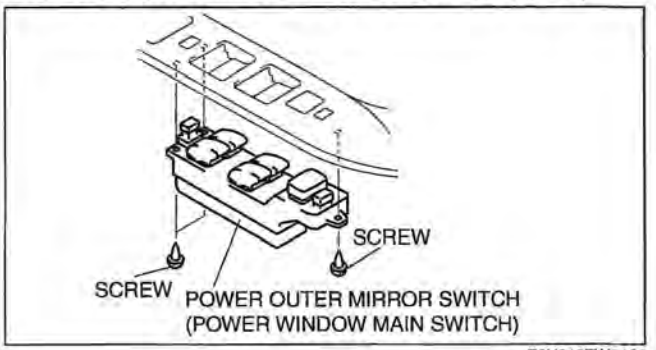
B6U0912W025

POWER OUTER MIRROR SWITCH REMOVAL/INSTALLATION

E6U091266600W01

Note
- The power outer mirror integrating the power window main switch.

1. Disconnect the negative battery cable.
2. Remove the driver-side front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the screws and the power outer mirror switch.
4. Install in the reverse order of removal.

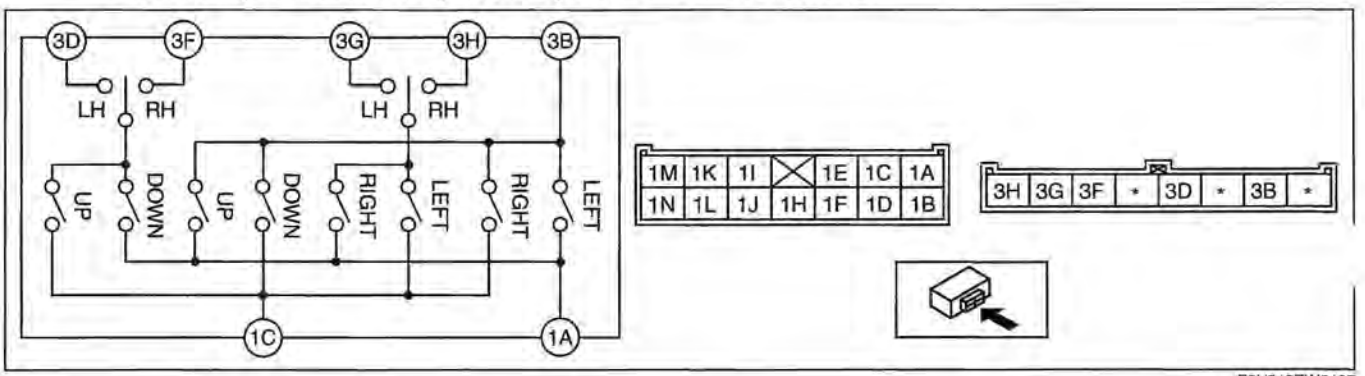


E6U912ZW5106

POWER OUTER MIRROR SWITCH INSPECTION

E6U091266600W02

1. Inspect for continuity between the power outer mirror switch terminals.
   - If there is any malfunction, replace the power window main switch.



E6U912ZW5107

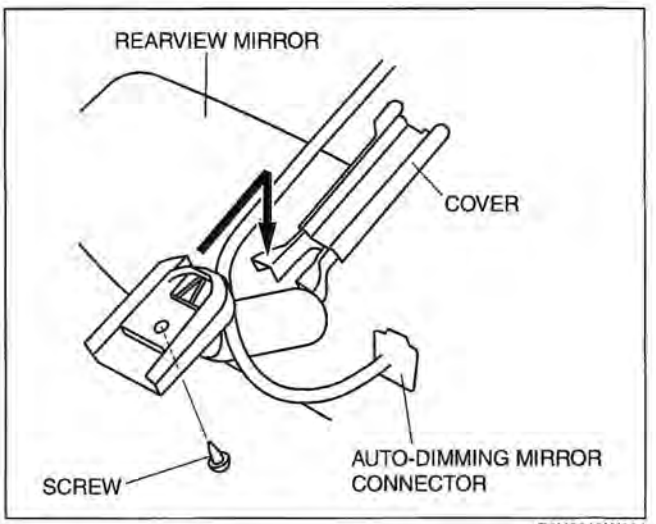
REARVIEW MIRROR REMOVAL/INSTALLATION

E6U091269220W01

Auto-dimming Mirror

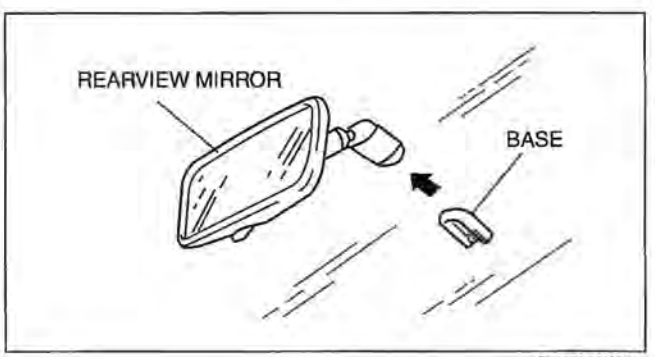
1. Disconnect the negative battery cable.
   Remove the cover.
3. Disconnect the auto-dimming mirror connector.
4. Remove the screw.
5. Remove the rearview mirror.
6. Install in the reverse order of removal.



B6U0912W031

Normal Type

1. Pull the rearview mirror in the direction indicated by the arrow.
2. Install in the reverse order of removal.



B6U0912W033

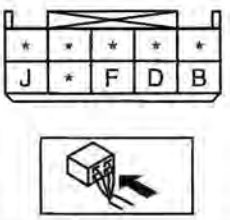
AUTO-DIMMING MIRROR INSPECTION

E6U091269220W02

1. Measure the voltage at each terminal (other than terminal F).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. Disconnect the negative battery cable.
3. Inspect the auto-dimming mirror connector for continuity at terminal F.
4. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the auto-dimming mirror.

Terminal Voltage Table (Reference)

AUTO-DIMMING MIRROR
HARNESS-SIDE CONNECTOR



C6U912ZW001

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
B	Power supply	A/C 15 A fuse	Ignition switch at ON	B+	• A/C 15 A fuse • Related wiring harnesses
D	R range signal	Back-up light switch/TR switch	R range	B+	• Back-up light switch/TR switch • Related wiring harnesses
			Other than R range	1.0 or less	
F	GND	Body ground	Under any condition: Inspect for continuity to ground.	Continuity detected	• GND • Related wiring harnesses
J	Power supply	ROOM 15 A fuse	Under any condition	B+	• ROOM 15 A fuse • Related wiring harnesses

BASE REMOVAL

E6U091269220W03

1. Remove the rearview mirror.
2. Wind each end of a wire around a bar.

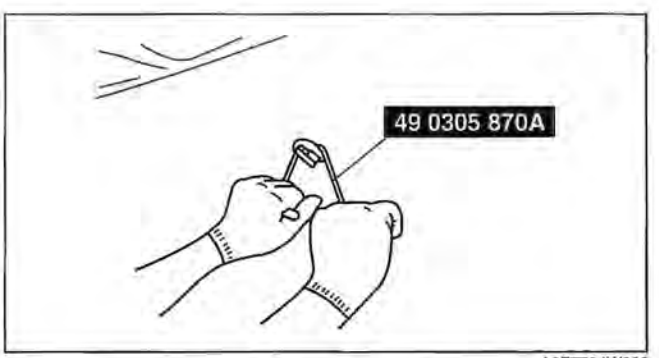
Warning

- **Using the SST (piano wire) with bare hands can cause injury. Always wear gloves when using the SST (piano wire).**

Note

- Use a long sawing action to spread the work over the whole length of the **SST** (piano wire) to prevent it from breaking.

3. Saw through the sealant to remove the base.



A6E7734W006

BASE INSTALLATION

E6U091269220W04

1. Cut away all of the original sealant using a razor.
2. Clean and degrease the ceramic coating on the glass and the base. Apply primer to the bonding area of the glass and the base.

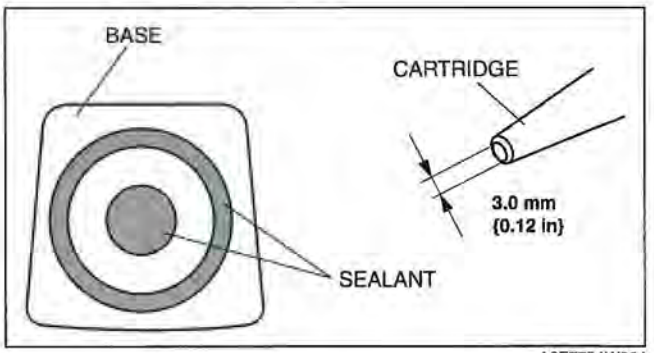
Caution

- **Keep the area free of dirt and grease, and do not touch the surface. Otherwise, the primer may not properly bond to the surface of the glass.**

4. Apply a **3.0 mm {0.12 in}** layer of sealant to the base.

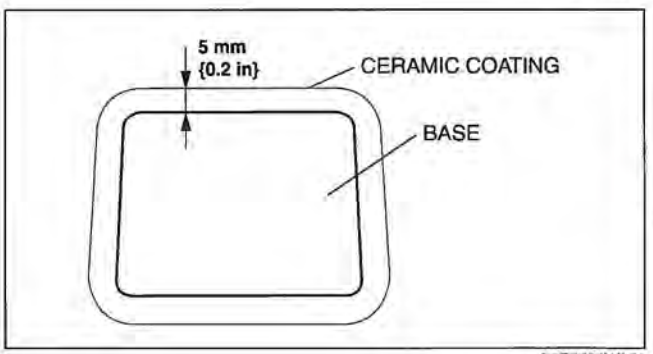
Note

- Use only glass primer on the glass, and body primer on the base. Allow the primer to dry for **approx. 30 min**.



A6E7734W004

5. Center the base in the ceramic coating and press it onto the glass.
6. Use isopropyl alcohol to remove any excess repair sealant.



A6E7734W005

Hardening time of sealant

Temperature	Surface hardening time	Time required until vehicle can be put into service
5 °C {41 °F}	Approx. 1.5 h	Approx. 12 h
20 °C {68 °F}	Approx. 1 h	Approx. 4 h
35 °C {95 °F}	Approx. 10 min.	Approx. 2 h

7. Install the rearview mirror.

FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC]

E6U091357100W01

Warning

- **Handling the front seat (with a side air bag) improperly can accidentally deploy the side air bag, which may seriously injure you. Read AIR BAG SYSTEM SERVICE WARNINGS before handling th front seat (with a side air bag). (See 08–10–3 SERVICE WARNINGS.)**

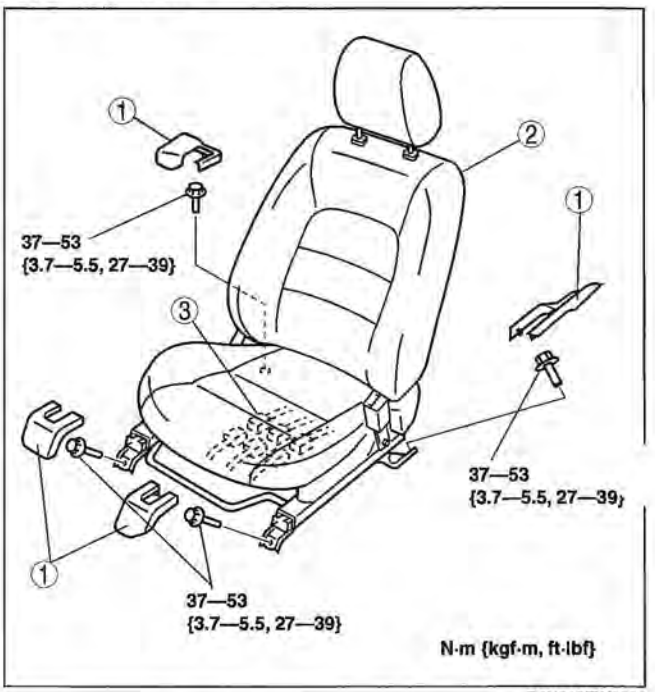
Caution

- **When the passenger's seat is removed, perform the seat weight sensor inspection using the WDS or equivalent after installing the passenger's seat. (See 08–10–15 SEAT WEIGHT SENSOR INSPECTION.)**
- **When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **more than 1 minute**.
3. Remove in the order indicated in the table.

1	Cover
2	Front seat
3	Connector

4. Install in the reverse order of removal.



D6U913ZW7002

FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

E6U091357100W03

Warning

- **Handling the front seat (with a side air bag) improperly can accidentally deploy the side air bag, which may seriously injure you. Read air bag system service warnings and cautions before handling the front seat (with a side air bag). (See 08–10–3 SERVICE WARNINGS.) (See 08–10–5 SERVICE CAUTIONS.)**

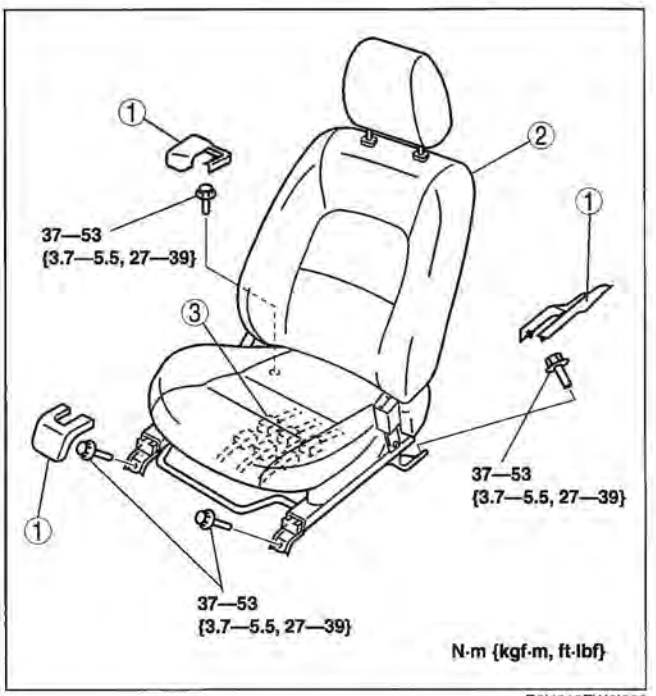
Caution

- **When the passenger's seat is removed, perform the seat weight sensor inspection using the WDS or equivalent after installing the passenger's seat. (See 08–10–15 SEAT WEIGHT SENSOR INSPECTION.)**
- **When the passenger's seat is replaced with a new one, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**

1. Turn the ignition switch to the LOCK position.
2. Disconnect the negative battery cable and wait for **more than 1 minute**.
3. Remove the seat belt anchor (passenger's side). (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Cover
2	Front seat
3	Connector

5. Install in the reverse order of removal.



E6U913ZW6I009

FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC]

E6U091357100W02

Warning

- **Handling the front seat (with a side air bag) improperly can accidentally deploy the side air bag, which may seriously injure you. Read AIR BAG SYSTEM SERVICE WARNINGS before handling th. front seat (with a side air bag). (See 08–10–3 SERVICE WARNINGS.)**

Caution

- **If any of the following work is performed, perform the seat weight sensor calibration using the WDS or equivalent. (See 08–10–14 SEAT WEIGHT SENSOR CALIBRATION.)**
  - **— Replacement with a new seat weight sensor**
  - **— Replacement with a new seat weight sensor control module**
  - **— Replacement with new passenger-side seat parts**
  - **— Disassembly of the passenger-side seat**
- **If any of the following work is performed, perform the seat weight sensor inspection using the WDS or equivalent. (See 08–10–15 SEAT WEIGHT SENSOR INSPECTION.)**
  - **— Removal of the passenger-side seat**
  - **— Loosening and retightening of passenger's seat fixing bolts**

1. Disconnect the negative battery cable and wait for **more than 1 minute**.
2. Remove the side air bag module. (See 08–10–8 SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Disassemble in the order indicated in the table.
4. Assemble in the reverse order of disassembly.

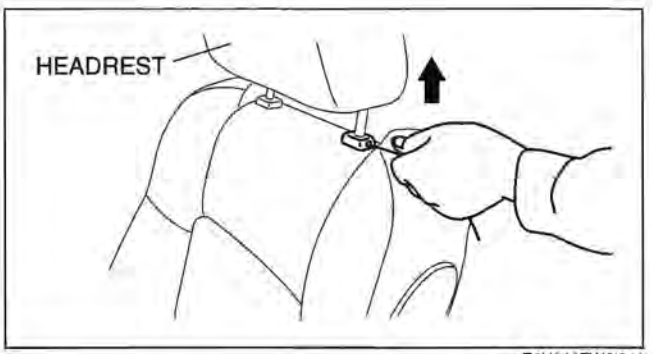
Headrest disassembly note

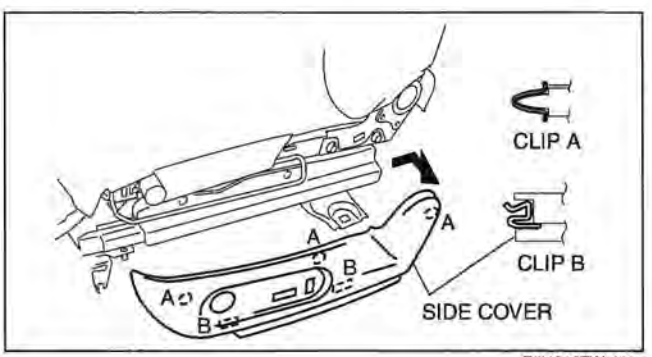
1. Insert a wire as shown in the figure and remove the headrest in the direction shown by the arrow.



E6U913ZW6I010

Side cover disassembly note

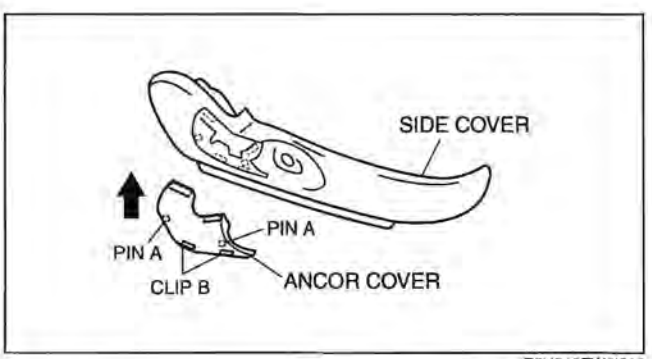
1. Remove the clips A and B.
2. Lift the side cover up in the direction of the arrow, then unhook slide adjuster.



E6U913ZW6I007

Anchor cover disassembly note

1. Remove the pins A and clips B from the side cover using a tape-wrapped flathead screwdriver.
2. Lift the anchor cover up in the direction of the arrow and remove it from the side cover.

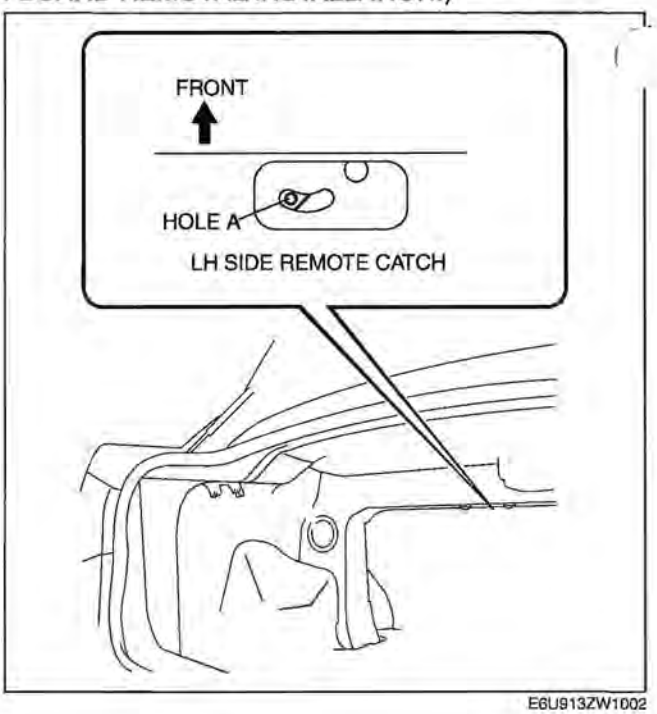


E6U913ZW6I011

REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6]

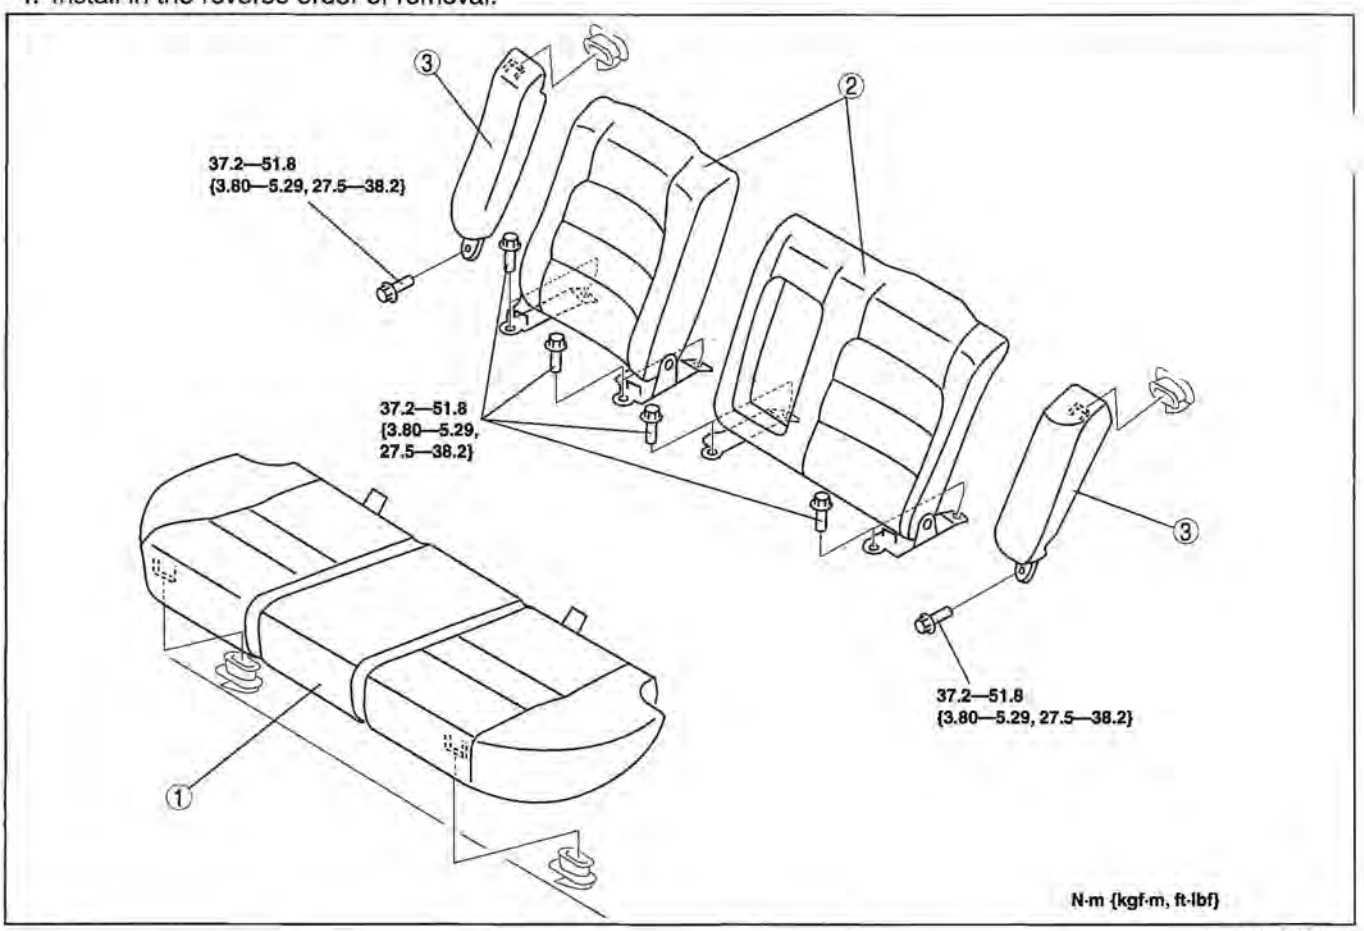
E6U091357200W07

1. Remove the partition board. (See 09–17–19 PARTITION BOARD REMOVAL/INSTALLATION.)
2. Release the remote catch.
   (1) Insert a flathead screwdriver into the hole A.
   (2) Move the flathead screwdriver towards the out side of the vehicle.
3. Remove in the order indicated in the table.



E6U913ZW1002

4. Install in the reverse order of removal.

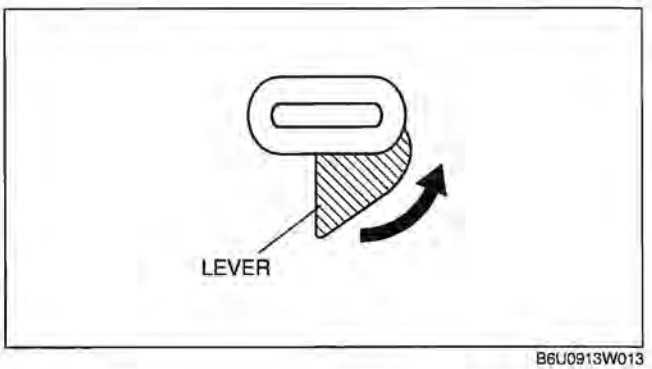


C6U0913W1

1	Rear seat cushion (See 09–13–15 Rear Seat Cushion Removal Note)
2	Rear seat back
3	Rear side seat (See 09–13–15 Rear Side Seat Removal Note)

Rear Seat Cushion Removal Note

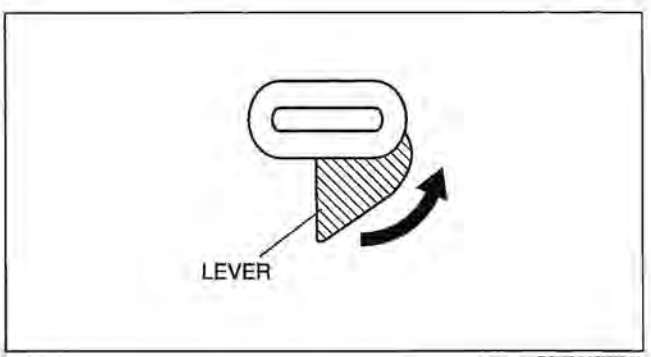
1. Remove the rear seat cushion while pushing the lever in the direction of the arrow.



B6U0913W013

Rear Side Seat Removal Note

1. Partially peel back the trunk side trim.
2. Remove the rear side seat while pushing the lever in the direction of the arrow.



B6U0913W013

REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091357200W01

1. Remove in the order indicated in the table.
2. Install in the reverse order of removal.

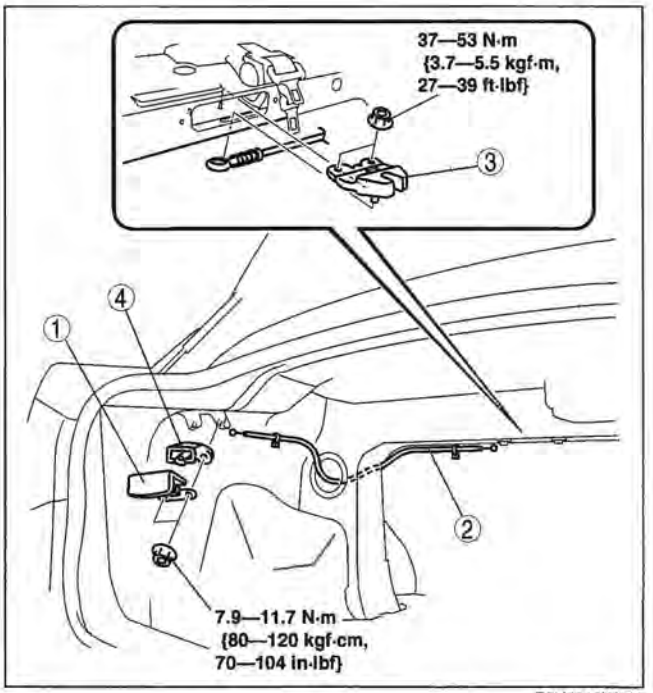
REMOTE HANDLE LEVER REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091357200W05

1. To remove the remote wire, remove the trunk side trim.
2. Remove in the order indicated in the table.

1	Remote handle lever
2	Remote wire
3	Remote catch
4	Seat bracket

3. Install in the reverse order of removal.



B6U0913W016

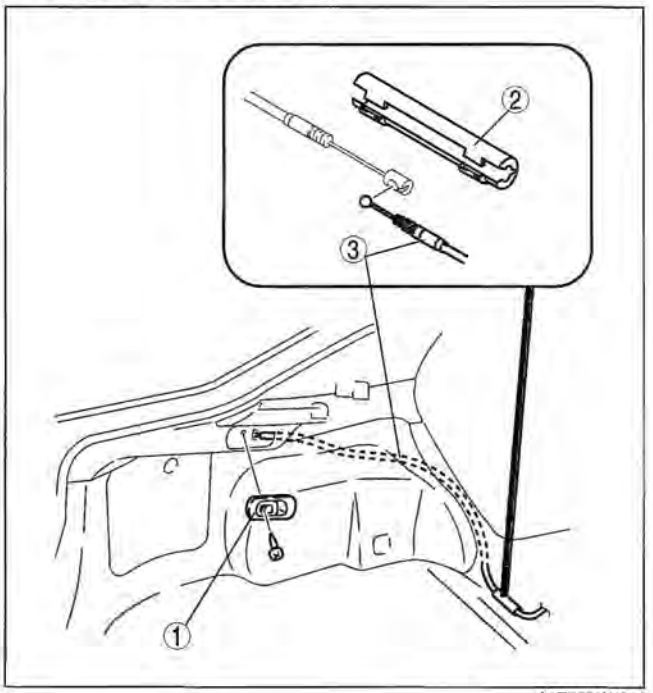
REMOTE HANDLE LEVER REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091357200W06

1. To remove the remote wire, remove the trunk side upper trim and trunk side lower trim.
2. Remove in the order indicated in the table.

1	Remote handle lever
2	Cover
3	Remote wire

3. Install in the reverse order of removal.



A6E7752W011

FRONT TILT MOTOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U091358000W01

1. Operate the power seat switch and move the seat back to the full-upright position.
2. Disconnect the negative battery cable.
3. Remove the driver's side front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC])
4. Remove the front cover (No.1, No.2) and side cover. (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBL. [L3 WITH TC])
5. Remove the seat cushion. (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC])
6. Remove in the order indicated in the table.

1	U ring
2	Washer
3	Nut

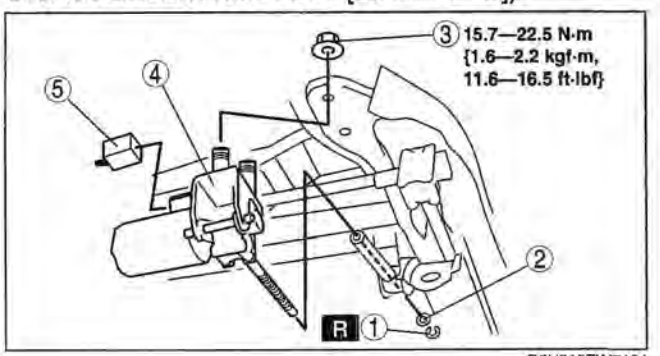
5	Connector



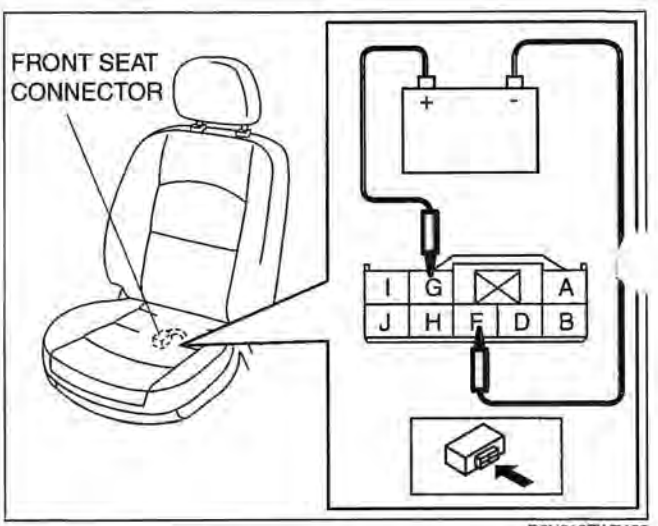
D6U913ZW7101

7. Install in the reverse order of removal.

Front Tilt Motor Removal Note

When motor is operable

1. Connect battery positive voltage to front seat connector terminal G and connect terminal F to ground.
2. Operate the power seat switch in the tilt-up direction so that the front tilt motor rotates and the shaft comes out from the guide.



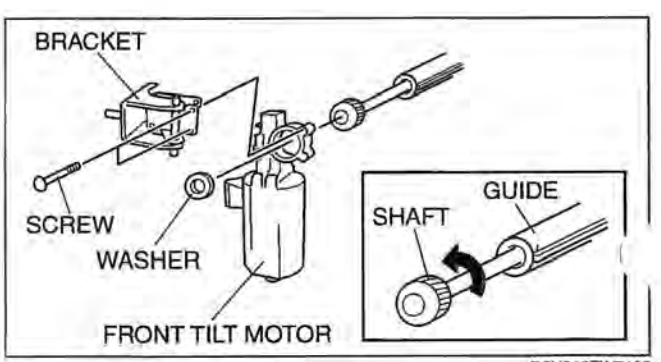
D6U913ZW7102

When motor is not operable

Caution

- **This procedure should be performed when the front tilt motor is replaced with a new one. A front tilt motor removed using this procedure should not be reinstalled to the vehicle as it may cause abnormal operation or noise.**

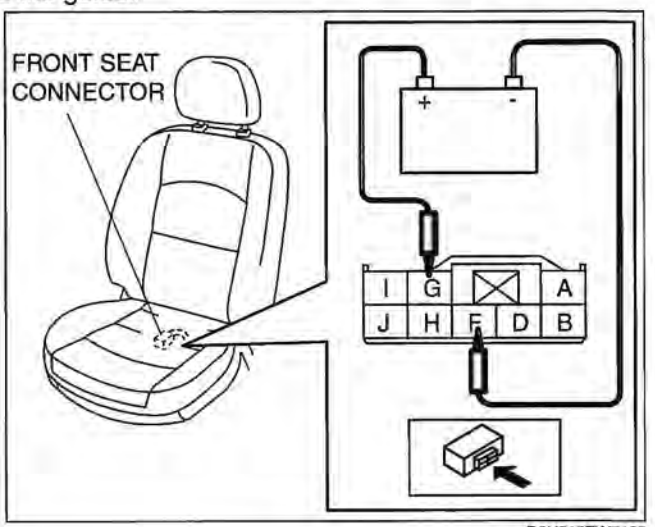
1. Remove the screws.
2. Remove the bracket.
3. Remove the front tilt motor and washer.
4. Turn the shaft in the direction indicated in the figure and remove it from the guide.



D6U913ZW7103

Front Tilt Motor Installation Note

1. Rotate the shaft by hand and insert it **approx. 5 mm** into the guide.
2. Connect battery positive voltage to front seat connector terminal G and connect terminal F to ground.



D6U913ZW7102

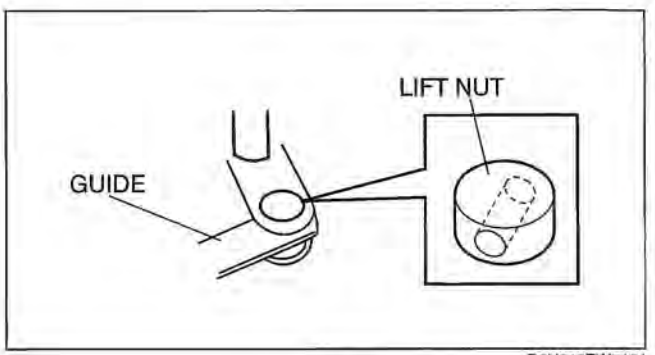
3. Operate the power seat switch in the tilt-down direction so that the front tilt motor rotates and the shaft is inserted into the guide.

Caution

- **If the lift nut is not in the correct position, it may strip the shaft screw, thereby causing the unit to not operate properly. Verify the lift nut position while inserting the shaft.**

Note

- Operate the motor until the notch for installing the U-ring is visible out of the guide.



D6U913ZW7104

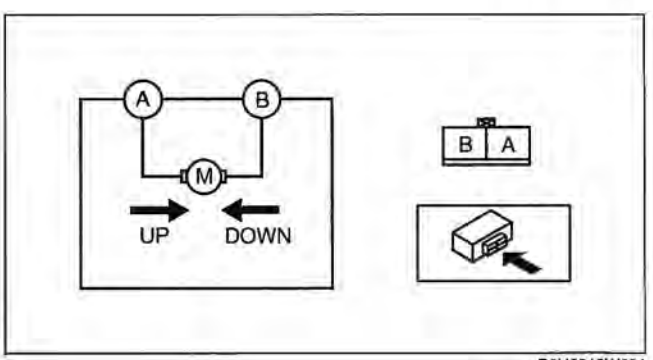
09-13

FRONT TILT MOTOR INSPECTION [L3 WITH TC]

E6U091358000W02

1. Disconnect the front tilt motor connector.
2. Apply battery positive voltage to the front tilt motor terminals and inspect the front tilt motor operation
   - If not as specified, replace the front tilt motor.

Motor operation	Connection	
	B+	GND
Up	A	B
Down	B	A



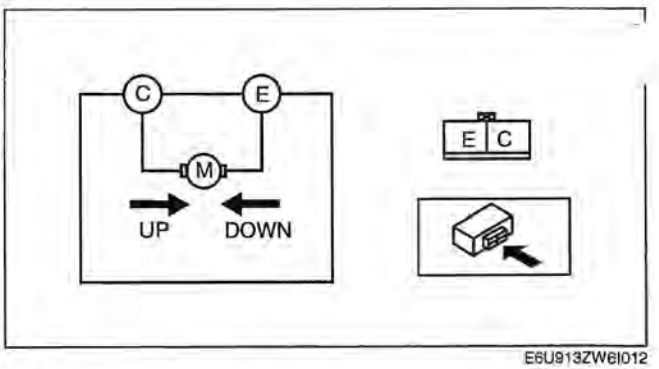
B6U0913W001

FRONT TILT MOTOR INSPECTION [EXCEPT L3 WITH TC]

E6U091358000W09

1. Disconnect the front tilt motor connector.
2. Apply battery positive voltage to the front tilt motor terminals and inspect the front tilt motor operation
   - If not as specified, replace the front tilt motor.

Motor operation	Connection	
	B+	GND
Up	C	E
Down	E	C



E6U913ZW6I012

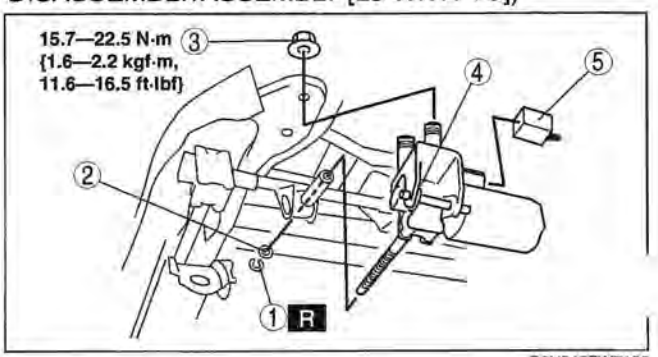
REAR TILT MOTOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U091358000W03

1. Operate the power seat switch and move the seat back to the full-upright position.
2. Disconnect the negative battery cable.
3. Remove the driver's side front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC])
4. Remove the front cover (No.1, No.2) and side cover. (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC])
5. Remove the seat cushion. (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC])
6. Remove in the order indicated in the table.

1	U ring
2	Washer
3	Nut
4	Rear tilt motor (See 09–13–24 Rear Tilt Motor Removal Note) (See 09–13–25 Rear Tilt Motor Installation Note)
5	Connector

7. Install in the reverse order of removal.

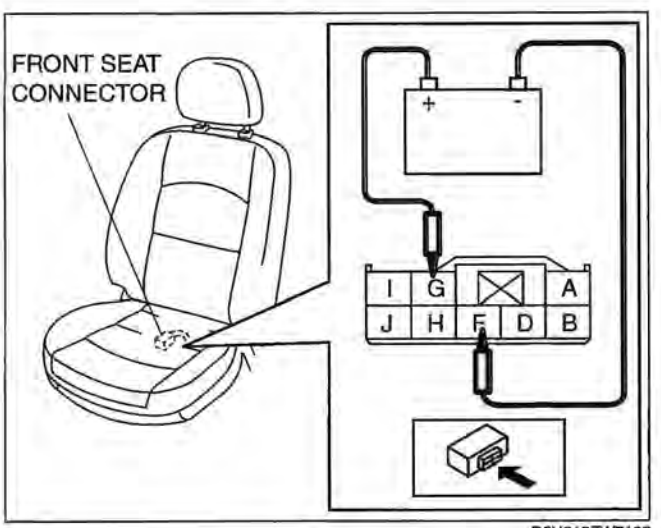


D6U913ZW7105

Rear Tilt Motor Removal Note

When motor is operable

1. Connect battery positive voltage to front seat connector terminal G and connect terminal F to ground.
2. Operate the power seat switch in the tilt-up direction so that the rear tilt motor rotates and the shaft comes out from the guide.

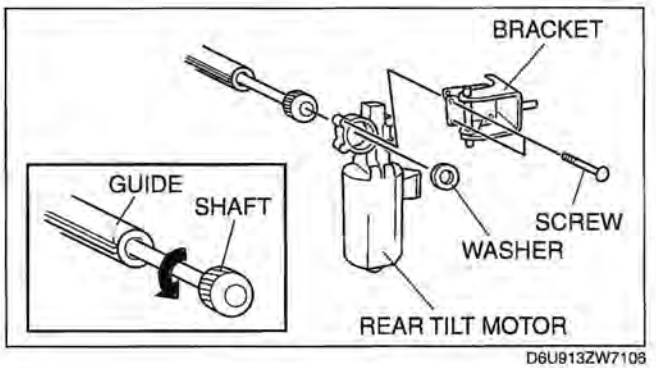


D6U913ZW7102

When motor is not operable

Caution
- **This procedure should be performed when the rear tilt motor is replaced with a new one. A rear tilt motor removed using this procedure should not be reinstalled to the vehicle as it may cause abnormal operation or noise.**

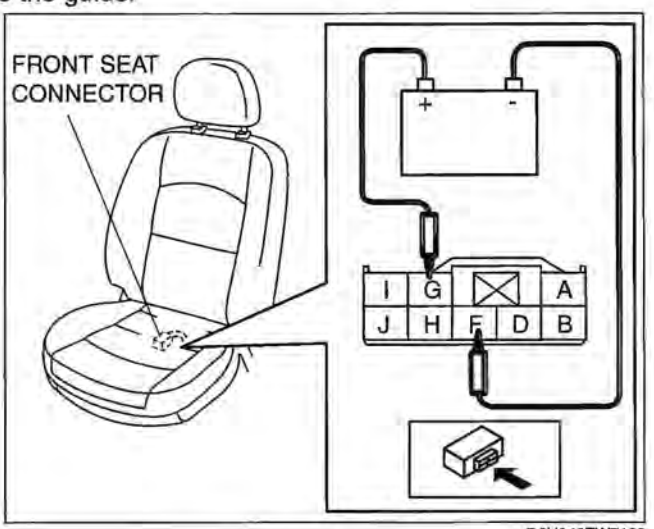
1. Remove the screws.
2. Remove the bracket.
3. Remove the rear tilt motor and washer.
4. Turn the shaft in the direction indicated in the figure and remove it from the guide.



D6U913ZW7108

Rear Tilt Motor Installation Note

1. Rotate the shaft by hand and insert it **approx. 5 mm** into the guide.
2. Connect battery positive voltage to front seat connector terminal G and connect terminal F to ground.

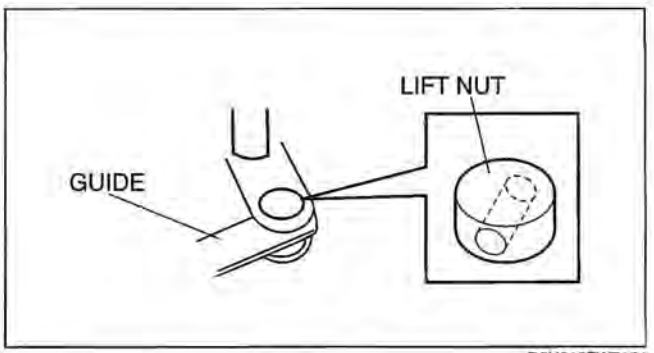


D6U913ZW7102

3. Operate the power seat switch in the tilt-down direction so that the rear tilt motor rotates and the shaft is inserted into the guide.

Caution
- **If the lift nut is not in the correct position, it may strip the shaft screw, thereby causing the unit to not operate properly. Verify the lift nut position while inserting the shaft.**

Note
- Operate the motor until the bracket contacts the guide.



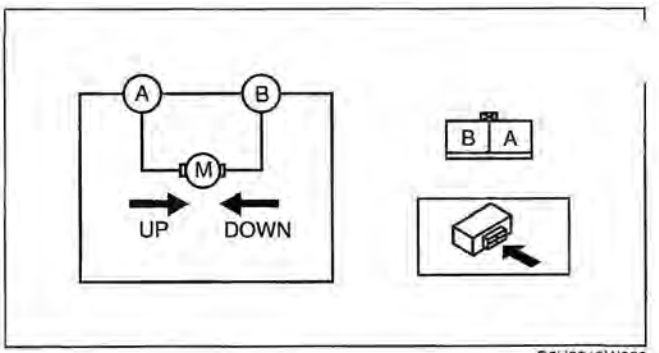
D6U913ZW7104

REAR TILT MOTOR INSPECTION [L3 WITH TC]

E6U091358000W04

1. Disconnect the rear tilt motor connector.
2. Apply battery positive voltage to the rear tilt motor terminals and inspect the rear tilt motor operation
   - If not as specified, replace the rear tilt motor.

Motor operation	Connection	
	B+	GND
Up	A	B
Down	B	A



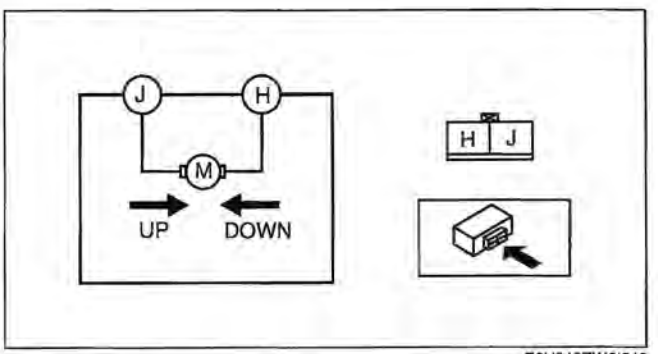
B6U0913W002

REAR TILT MOTOR INSPECTION [EXCEPT L3 WITH TC]

E6U091358000W10

1. Disconnect the rear tilt motor connector.
2. Apply battery positive voltage to the rear tilt motor terminals and inspect the rear tilt motor operation
   - If not as specified, replace the rear tilt motor.

Motor operation	Connection	
	B+	GND
Up	J	H
Down	H	J



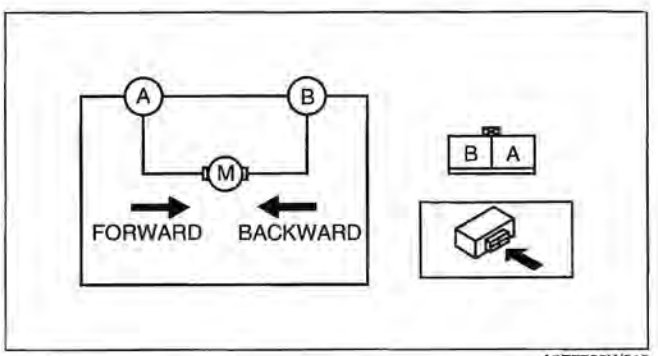
E6U913ZW6I013

SLIDE MOTOR INSPECTION [L3 WITH TC]

E6U091358000

1. Disconnect the slide motor connector.
2. Apply battery positive voltage to the slide motor terminals and inspect the slide motor operation
   - If not as specified, replace the seat cushion frame.

Motor operation	Connection	
	B+	GND
Forward	A	B
Backward	B	A



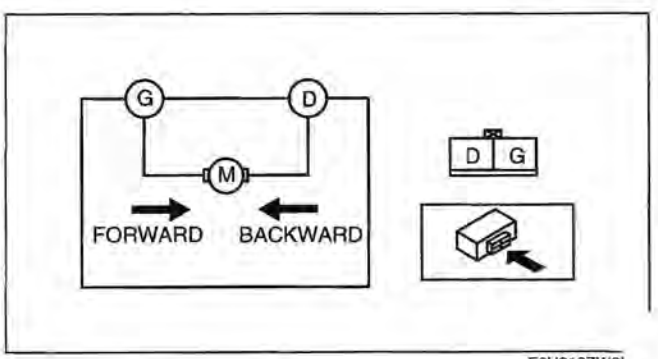
A6E7752W010

SLIDE MOTOR INSPECTION [EXCEPT L3 WITH TC]

E6U091358000W11

1. Disconnect the slide motor connector.
2. Apply battery positive voltage to the slide motor terminals and inspect the slide motor operation
   - If not as specified, replace the seat cushion frame.

Motor operation	Connection	
	B+	GND
Forward	G	D
Backward	D	G



E6U913ZW6I

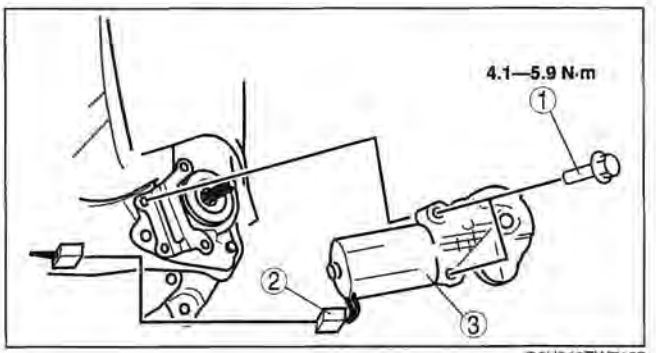
RECLINER MOTOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U091358000W06

1. Disconnect the negative battery cable.
2. Remove the driver's side front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC]) Remove the front cover (No.1, No.2) and side cover. (See 09–13–6 FRONT SEAT DISASSEMBLY/ASSEMBLY [L3 WITH TC])
4. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Recliner motor

5. Install in the reverse order of removal.

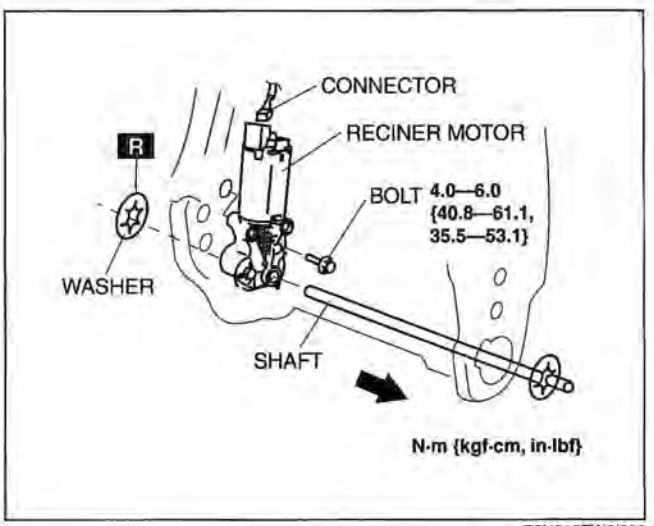


D6U913ZW7107

RECLINER MOTOR REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

E6U091358000W12

1. Disconnect the negative battery cable.
2. Remove the driver's side front seat. (See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
3. Remove the seat back frame. (See 09–13–9 FRONT SEAT DISASSEMBLY/ASSEMBLY [EXCEPT L3 WITH TC].)
4. Remove one of the two washers on either side from the recliner motor shaft.
5. Pull out the recliner motor shaft in the direction of the arrow and disconnect it from the recliner motor.
6. Remove the bolt.
7. Remove the recliner motor from the seat back frame.
8. Remove the connector.
9. Install in the reverse order of removal.



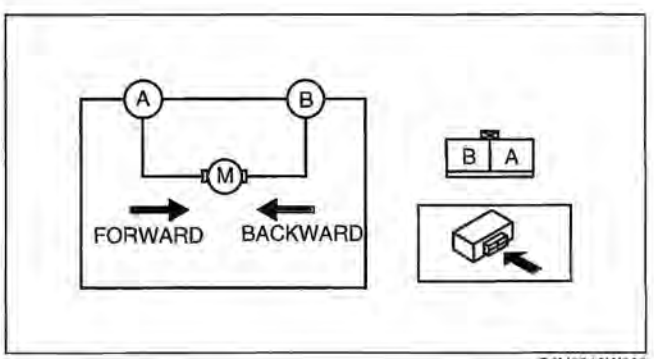
E6U913ZW6I008

RECLINER MOTOR INSPECTION [L3 WITH TC]

E6U091358000W07

1. Disconnect the recliner motor connector.
2. Apply battery positive voltage to the recliner motor terminals and inspect the recliner motor operation.
   - If not as specified, replace the recliner motor.

Motor operation	Connection	
	B+	GND
Forward	A	B
Backward	B	A



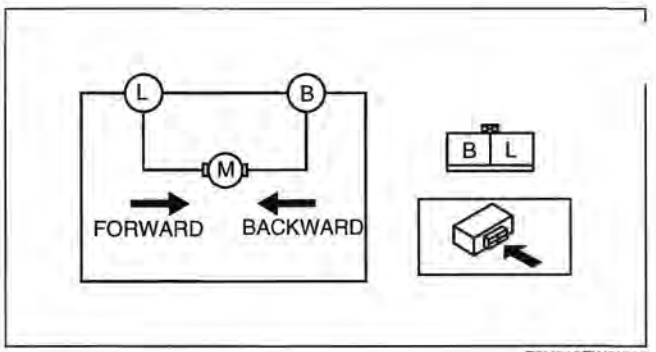
B6U0913W009

RECLINER MOTOR INSPECTION [EXCEPT L3 WITH TC]

E6U091358000W13

1. Disconnect the recliner motor connector.
2. Apply battery positive voltage to the recliner motor terminals and inspect the recliner motor operation.
   - If not as specified, replace the recliner motor.

Motor operation	Connection	
	B+	GND
Forward	L	B
Backward	B	L



E6U913ZW6I015

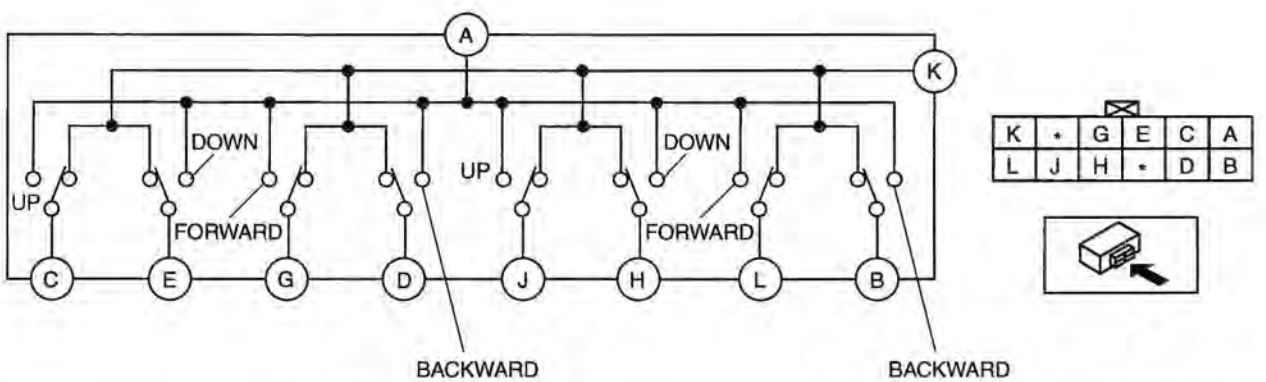
POWER SEAT SWITCH INSPECTION

E6U091358000W08

1. Disconnect the power seat switch connector.
2. Disconnect the rear tilt motor connector.
3. Inspect for continuity between the power seat switch connector terminals using an ohmmeter.
   - If not as specified, replace the power seat switch.

O—O : Continuity

Switch position		Terminal									
		A	B	C	D	E	G	H	J	K	L
Recliner	Forward	O	O							O	O
	Off		O							O	O
	Backward	O	O							O	O
Slide	Forward	O			O		O			O	
	Off				O		O			O	
	Backward	O			O		O			O	
Front tilt	Up	O		O		O				O	
	Off			O		O				O	
	Down	O		O		O				O	
Rear tilt	Up	O						O	O	O	
	Off							O	O	O	
	Down	O						O	O	O	



B6U0913W003

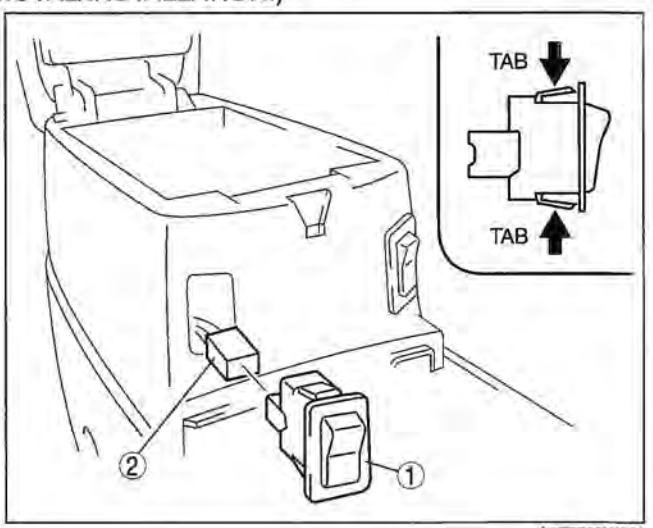
SEAT WARMER SWITCH REMOVAL/INSTALLATION

E6U091388110W01

1. Disconnect the negative battery cable.
2. Remove the panel No.1. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Seat warmer switch (See 09–13–29 Seat Warmer Switch Removal Note.)
2	Connector

4. Install in the reverse order of removal.



A6E7752W001

Seat Warmer Switch Removal Note

1. Squeeze the tabs of seat warmer switch and pull it outward to remove it.

SEAT WARMER SWITCH INSPECTION

1. Inspect for continuity between the seat warmer switch terminals using an ohmmeter.
   - If not as specified, replace the seat warmer switch.

○—○: Continuity ○—⓪—○ : Bulb

Switch position	Terminal				
	B	H	F	A	G
ON	○—⓪—○		○	○—⓪—○	
OFF	○—⓪—○			○—⓪—○

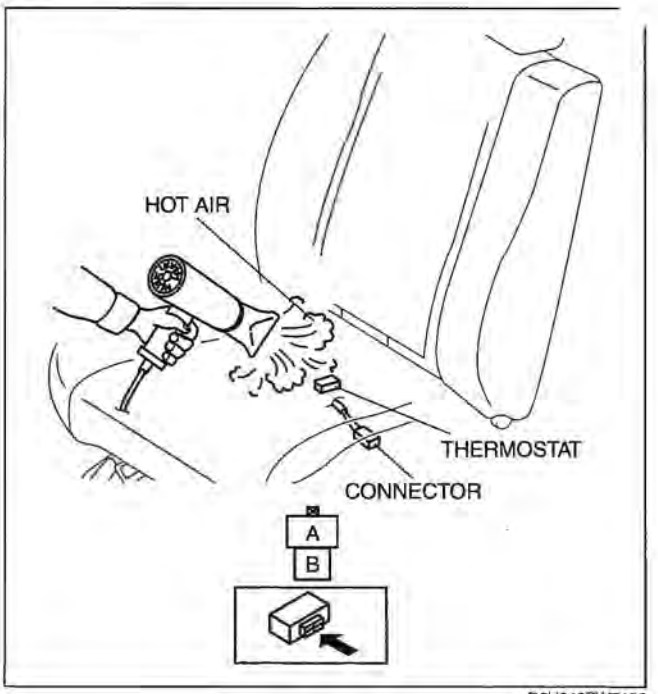
09–13

SEAT WARMER UNIT INSPECTION [L3 WITH TC]

E6U09138811OW03

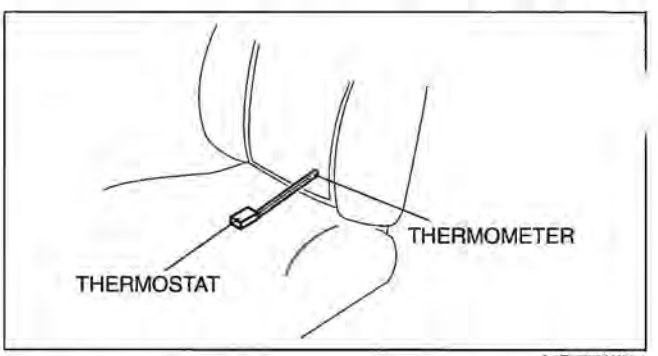
Seat Cushion

1. Remove the front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the seat cushion trim.
3. While inspecting for continuity between the connector terminals A and B, use a dryer to warm the thermostat of the seat warmer unit on seat cushion.



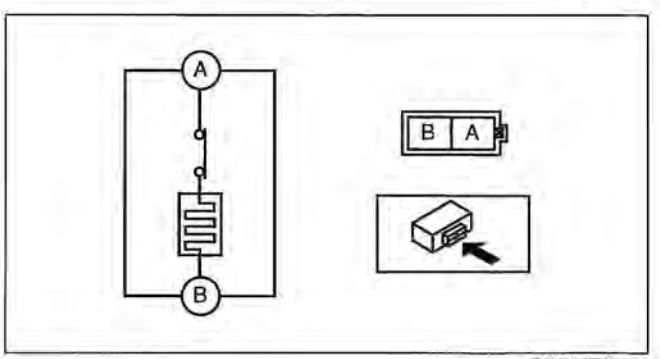
D6U913ZW7108

4. When the ohmmeter indicates that there is no continuity, turn off the dryer, then use a thermometer to measure the temperature of the thermostat.
5. Verify that the temperature is **approx. 37 °C {99 °F}**.



A6E7752W021

6. Using an ohmmeter, verify that there is continuity between the seat warmer unit connector terminals when temperature drops to **approx. 28 °C {82 °F}**.
   - If not as indicated in the table, replace the seat warmer unit.



E6U913ZW5006

○—○ : Continuity

Thermostat temperature	Terminal	
	A	B
More than approx. 37 °C {99 °F}		
Less than approx. 28 °C {82 °F}	○	○

C6U0913W102

Seat Back

1. Remove the front seat. (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].)
2. Verify that the continuity between terminals A and B is as indicated in the table.
   - If not as indicated in the table, replace the seat warmer unit.

O—O : Continuity

Test condition	Terminal	
	A	B
Under any condition	O	O

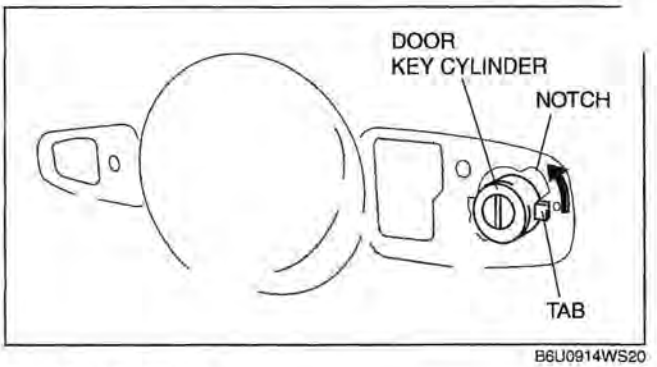
FRONT DOOR KEY CYLINDER REMOVAL/INSTALLATION

E6U091458490W01

1. Disconnect the rod.
2. Remove the front outer handle.
3. Turn the key cylinder in the direction indicated by the arrow and move the tab to the notch.
4. Pull the key cylinder outward to remove it.
5. Install in the reverse order of removal.

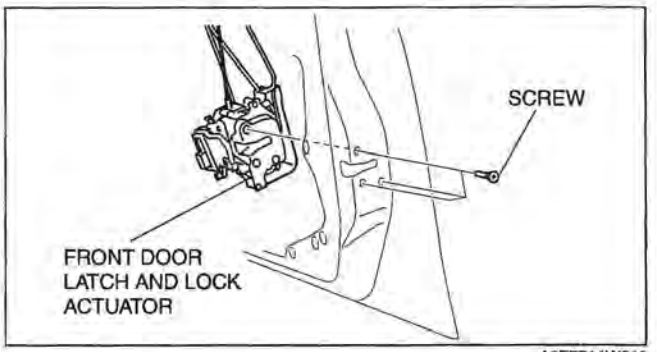


B6U0914WS20

FRONT DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

E6U091458490W02

1. Remove the front door unit.
2. Remove the screws, then remove the front door latch and door lock actuator.
3. Install in the reverse order of removal.



A6E7714W013

FRONT DOOR LOCK ACTUATOR INSPECTION

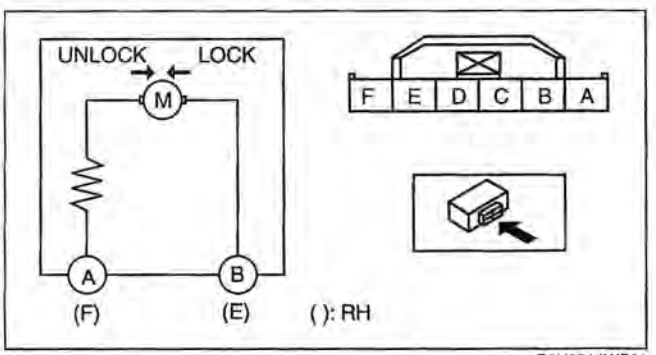
E6U091458490V

Door Lock Actuator

1. Disconnect the front door lock actuator connector.
2. Apply battery positive voltage to the front door lock actuator terminals and inspect the front door lock actuator operation.
   - If not as specified, replace the front door lock actuator.

Actuator operation	Connection	
	GND	B+
Lock	A (F)	B (E)
Unlock	A (F)	B (E)

( ) : RH



B6U0914WS01

Door Lock-link Switch

1. Disconnect the front door lock actuator connector.
2. Inspect for continuity between the door lock-link switch terminals using an ohmmeter.
   - If not as specified, replace the front door lock actuator.

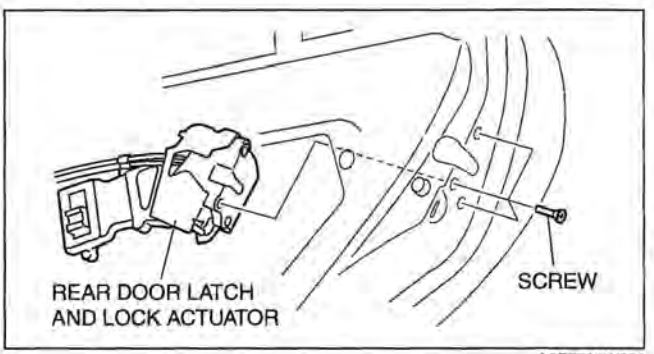
REAR DOOR LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION

E6U091458490W04

1. Remove the rear door unit.
2. Remove the screws, then remove the rear door latch and lock actuator.
3. Install in the reverse order of removal.



A6E7714W020

REAR DOOR LOCK ACTUATOR INSPECTION

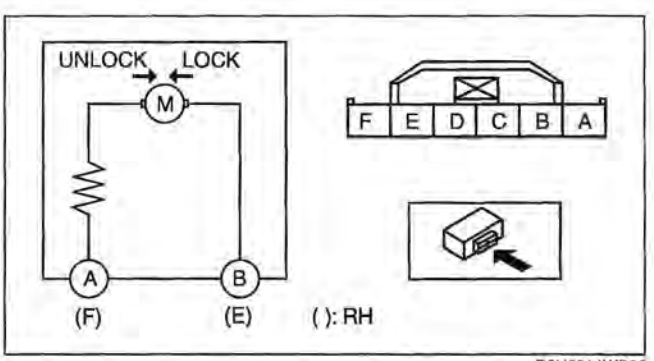
E6U091458490W05

Door Lock Actuator

1. Disconnect the rear door lock actuator connector.
2. Apply battery positive voltage to the rear door lock actuator terminals and inspect the rear door lock actuator operation.
   - If not as specified, replace the rear door lock actuator.

Actuator operation	Connection	
	GND	B+
Lock	A (F)	B (E)
Unlock	B (E)	A (F)

( ) : RH



B6U0914WS06

Door Lock-link Switch (With Theft-deterrent System)

1. Disconnect the rear door lock actuator connector.
2. Inspect for continuity between the door lock-link switch terminals using an ohmmeter.
   - If not as specified, replace the rear door lock actuator.

O—O : Continuity

Lock knob position	Terminal	
	D (C)	F (A)

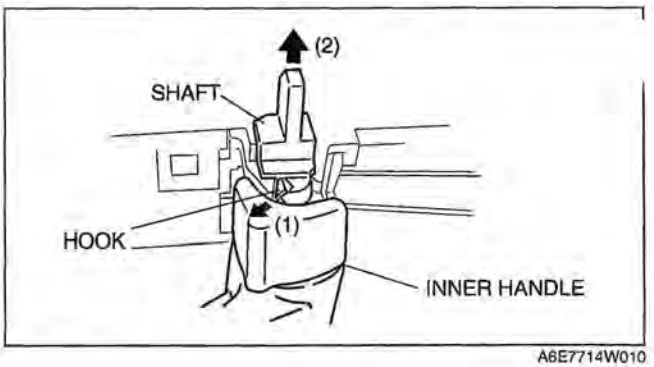
A6E7718W010

INNER HANDLE REMOVAL/INSTALLATION

E6U091459320W01

1. Remove the front door trim.
2. Using a flathead screwdriver, press and hold the tab in the direction indicated by arrow (1), and remove the shaft by pulling it in the direction indicated by arrow (2).
3. Pull off the inner handle, and remove the door lock knob cable and inner handle cable.
4. Install in the reverse order of removal.

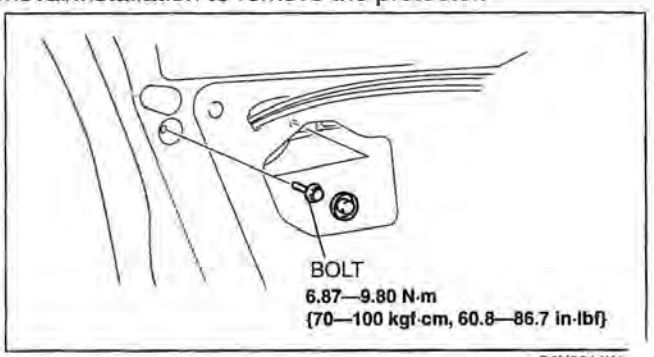


A6E7714W010

FRONT OUTER HANDLE REMOVAL/INSTALLATION

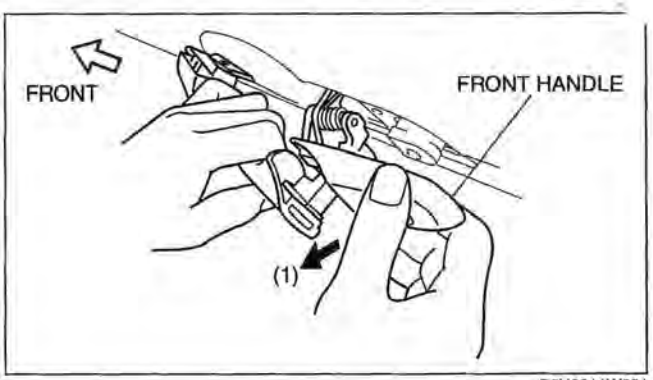
E6U091458410W01

1. Remove the front door glass.
2. Detach the outer handle and front door latch rod.
3. For protector-equipped vehicles, refer to key cylinder removal/installation to remove the protector.
4. Remove the bolts.



B6U0914W

5. With the rear side of the outer handle fixed and the outer handle lever pulled out (1), remove the rear side of the outer handle from the front door.
6. Pull out the front side of the outer handle from the front door.
7. Remove the request switch harness from the door. (with advanced keyless system)
8. Install in the reverse order of removal.

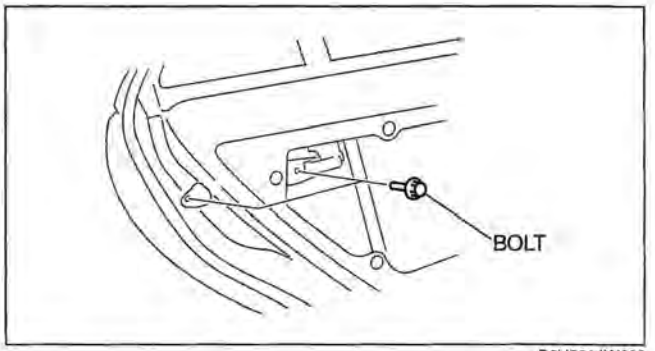


B6U0911W001

REAR OUTER HANDLE REMOVAL/INSTALLATION

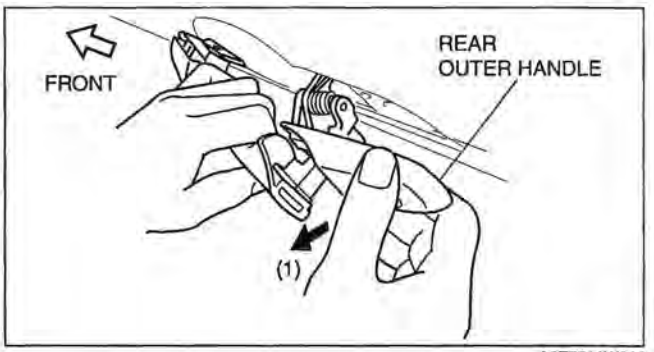
E6U091458410W02

1. Remove the rear door glass.
2. Remove the rear door unit.
   Remove the rear door latch.
3. Remove the bolts.
5. Detach the rear outer handle and rear door latch rod.



B6U0914W003

6. With the rear side of the rear outer handle fixed and the outer handle lever pulled out (1), remove the rear side of the rear outer handle from the rear door.
7. Pull out the front side of the rear outer handle from the rear door.
8. Install in the reverse order of removal.

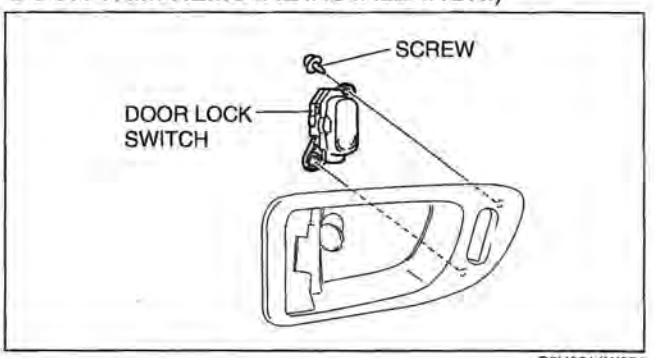


A6E7714W019

DOOR LOCK SWITCH REMOVAL/INSTALLATION

E6U091458490W06

Disconnect the negative battery cable.
2. Remove the inner handle cover. (See09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the screws, then remove the door lock switch.
4. Install in the reverse order of removal.



B6U0914W004

DOOR LOCK SWITCH INSPECTION

E6U091458490W07

1. Remove the door lock switch.
2. Inspect for continuity between the door lock switch terminals using an ohmmeter.
   - If not as specified, replace the door lock switch.

O—O : Continuity O-W-O : Resistance

Position	Terminal

B6U0914WSS2

KEYLESS CONTROL MODULE REMOVAL/INSTALLATION [WITH ADVANCED KEYLESS SYSTEM]

E6U091467820W01

Note

- If the keyless control module is replaced, always perform the following procedure.

Without immobilizer system

— Card key programming (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)

— Steering lock unit programming (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)

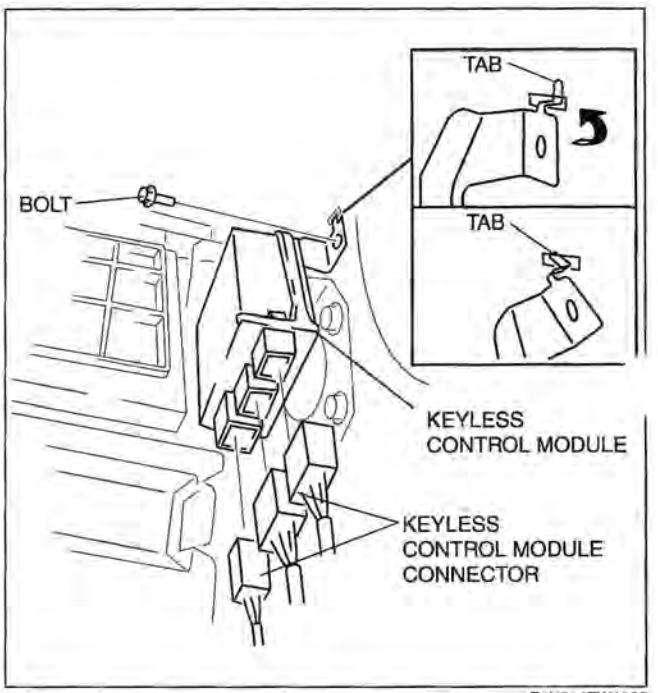
With immobilizer system

— Card key programming (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)

— Steering lock unit programming (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)

— Immobilizer system resetting (See 09–14–28 IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM].)

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Remove the bolt.
4. While inclining the keyless control module along the body panel in the direction indicated by the arrow, disengage the bracket tab from the hole in the body panel.
5. Disconnect the keyless control module connector.
6. Remove the keyless control module.



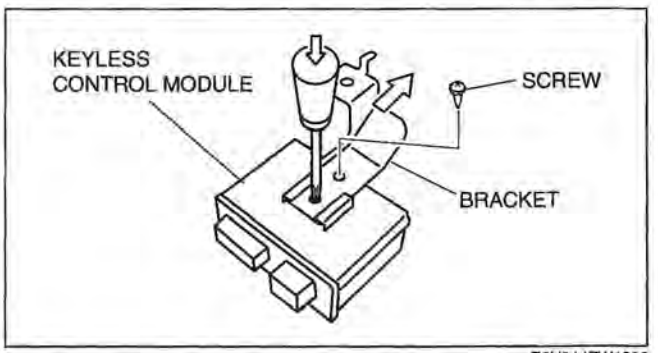
E6U914ZW1005

7. Remove the screw, then remove the bracket.

Note

- The screw which fixes the keyless control module and bracket is for a body ground connection. Be sure to secure the screw when installing.

8. Install in the reverse order of removal.



E6U914ZW1006

KEYLESS CONTROL MODULE INSPECTION [WITH ADVANCED KEYLESS SYSTEM]

E6U091467820W02

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, perform symptom troubleshooting [KEYLESS ENTRY SYSTEM].

Terminal Voltage Table (Reference)

KEYLESS CONTROL MODULE WIRING HARNESS SIDE CONNECTOR

CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]

E6U091469000W09

09-14

Caution

- **Do not place the following devices in the vehicle while programming, otherwise programming cannot be performed.**
  - **— WDS or equivalent**
  - **— Personal computer**
  - **— Device that can send/receive radio waves**
- **Verify that the other transmitter is not being operated around the servicing area during card key programming.**

Note

- Use the WDS or equivalent and start programming if the condition corresponds to the following:
  - — One or No Programmed Card Keys
  - — Keyless control module is replaced
- If six card keys are already programmed, the programming mode does not activate. If programming is needed, use the WDS or equivalent to erase the unnecessary card key programming.

With two programmed card keys

1. Bring the programmed card keys (2) and a unprogrammed card key into the vehicle.
2. Close all doors.
3. Insert the supplementary key into the ignition key cylinder.

Note

- Complete the procedures up to Step 7 within **30 s** after the supplementary key is inserted.

4. Turn the ignition switch to the ON position.
5. Press the UNLOCK button on card key 1.
6. Press the UNLOCK button on card key 2.
7. From the ignition switch in the ON position, switch the ignition switch in the order indicated below.
   — ACC→ON→ACC→ON→ACC→ON
8. Open the driver-side front door, press the door switch **twice**, and then close the door.

Note

- After Step 3 is completed and the card key programming mode is activated, the door lock actuator operates to lock, and then operates to unlock.
- If the door lock actuator does not operate, repeat the procedure from Step 2.

9. Press the UNLOCK button on the unprogrammed card key **twice**.

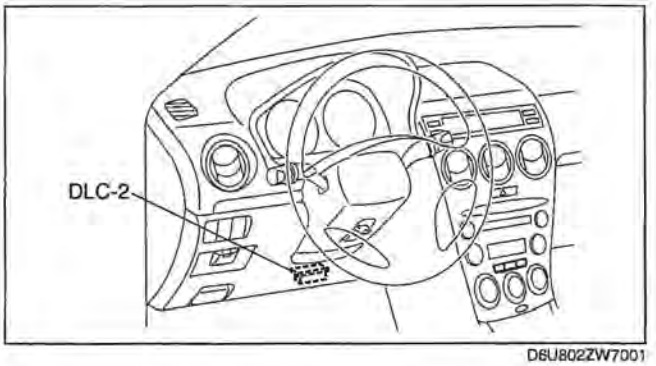
Note
- After Step 8 is completed and the card key is programmed, the door lock actuator operates to lock, and then operates to unlock.

10. If programming more card keys, remove the supplementary key once, and then repeat the procedure from Step 2.

Using WDS or Equivalent

1. Fully lower the driver-side door glass.
2. Connect the WDS or equivalent to the DLC-2.
3. Pull out the WDS or equivalent cable from the door glass opening and set the WDS or equivalent outside the vehicle.

Caution
- **Protect the cable and body contact area with a clean rag, otherwise they could be damaged.**



D6U802ZW7001

4. Select "BODY/SECURITY/PATS (immobilizer)" from the WDS or equivalent screen menu.
5. Security access begins and the WDS or equivalent displays the "OUT-CODE".

Note
- When "OUT-CODE" is first displayed, turning the ignition switch from the LOCK to the ON position **5 times** will change the "OUT-CODE".

6. Input the "IN-CODE" that corresponds to the "OUT-CODE " displayed on the WDS or equivalent screen.
7. Select "CARD KEY PROGRAMMING" from the WDS or equivalent screen menu.

Note
- After Step 7 is completed and the card key programming is activated, the door lock actuator operates to lock, and then operates to unlock.

8. Press the unprogrammed card key UNLOCK button **twice**.

Note
- After Step 8 is completed and the card key is programmed, the door lock actuator operates to lock, and then operates to unlock.

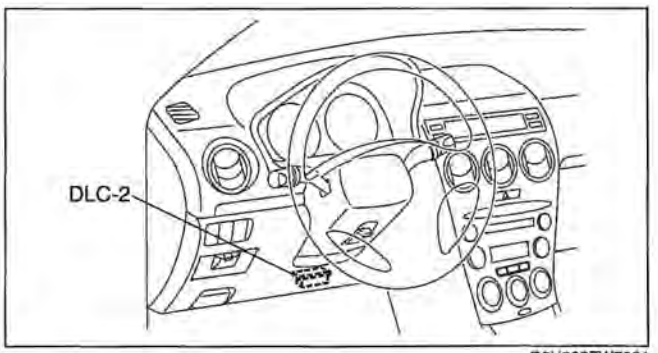
9. If programming more card keys, remove the supplementary key once, and then repeat the procedure from Step 7 by following the instructions on the WDS or equivalent screen.

CLEARING CARD KEY

E6U091469000W10

1. Fully lower the driver-side door glass.
2. Connect the WDS or equivalent to the DLC-2.
3. Pull out the WDS or equivalent cable from the door glass opening and set the WDS or equivalent outside the vehicle.

Caution
- **Protect the cable and body contact area with a clean rag, otherwise they could be damaged.**



D6U802ZW7001

4. Select "BODY/SECURITY/PATS (immobilizer)" from the WDS or equivalent screen menu.
5. Security access begins and the WDS or equivalent displays the "OUT-CODE".

Note
- When "OUT-CODE" is first displayed, turning the ignition switch from the LOCK to the ON position **5 time** will change the "OUT-CODE".

6. Input the "IN-CODE" that corresponds to the "OUT-CODE" displayed in the WDS or equivalent screen.
7. Select "CARD KEY CLEARING" from the WDS or equivalent screen menu.

STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM]

E6U091469000W11

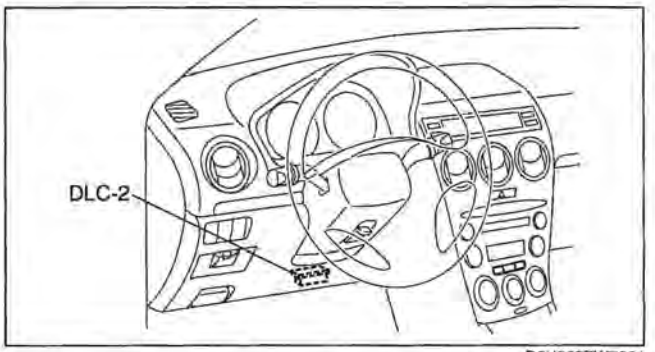
Caution

- **Do not place the following devices in the vehicle while programming, otherwise programming cannot be performed.**
  - **— WDS or equivalent**
  - **— Personal computer**
  - **— Device that can send/receive radio waves**

Note

- The steering lock unit and steering lock component are a single unit. Therefore, replace the steering lock component when replacing steering lock unit. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
- For this procedure, a programmed card key is necessary. If there is no programmed card key, perform the steering lock unit programming after the card key programming.

1. Bring the programmed card key into the vehicle.
2. Fully lower the driver-side door glass.
3. Connect the WDS or equivalent to the DLC-2.
4. Pull out the WDS or equivalent cable from the door glass opening and set the WDS or equivalent outside the vehicle.
5. Select "BODY/SECURITY/PATS (immobilizer)" from the WDS or equivalent screen menu.
6. Perform the security access according to the directions on the WDS or equivalent screen. (See 09–14–39 SECURITY ACCESS PROCEDURE.)
7. The security access begins and the WDS or equivalent displays "OUT-CODE".



D6U802ZW7001

Note

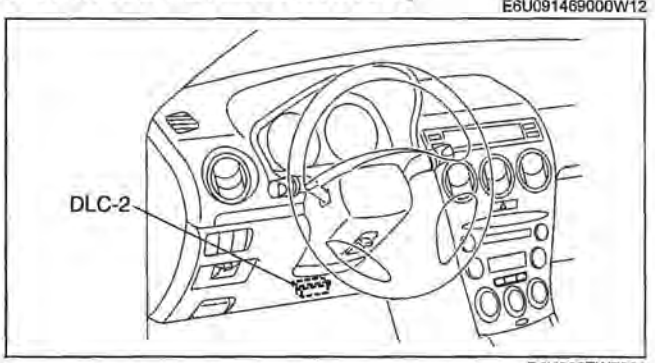
- When "OUT-CODE" is first displayed, turning the ignition switch from the LOCK to the ON position **5 times** will change the "OUT-CODE".

8. Input the "IN-CODE" that corresponds to the "OUT-CODE" displayed on the WDS or equivalent screen.
9. Select "STEERING LOCK UNIT PROGRAMMING" and perform procedures according to the directions on the WDS or equivalent screen.

KEYLESS CONTROL MODULE CONFIGURATION [WITH ADVANCED KEYLESS SYSTEM]

E6U091469000W12

1. Connect the WDS or equivalent to the DLC-2.
2. Select "Module Programming".
3. Select "Configuration/PMI".
4. Select "RKE" and perform procedures according to directions on the screen.



D6U802ZW7001

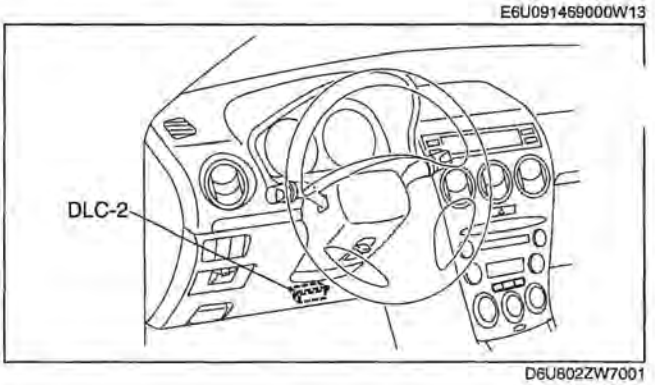
CUSTOMIZED FUNCTION SETTING PROCEDURE

E6U091469000W13

1. Connect the WDS or equivalent to the DLC-2.
2. Select "Module Programming".
3. Select "Programming change available parameter/RKE".
4. Select the item name, and than select either "Disable/Enable".

Items

- Automatic Lock
- Answer Back Buzzer
- Card Key Carrying Out Alarm
- Low Battery Warning

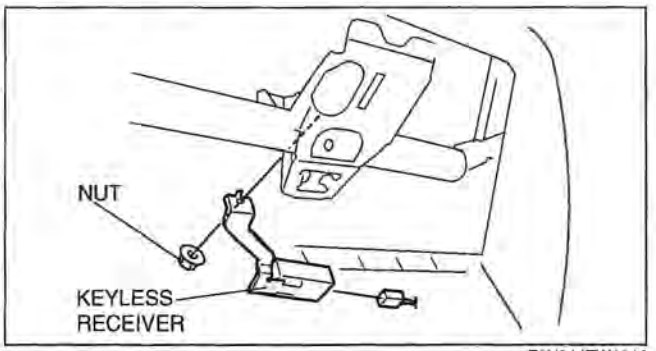


D6U802ZW7001

KEYLESS RECEIVER REMOVAL/INSTALLATION

E6U091469000W07

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Disconnect the keyless receiver module connector.
4. Remove the nut, then remove the keyless receiver.
5. Install in the reverse order of removal.



E6U914ZW1016

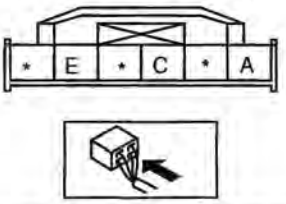
KEYLESS RECEIVER INSPECTION

E6U091469000W

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
2. If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, perform symptom troubleshooting [KEYLESS ENTRY SYSTEM].

Terminal Voltage Table (Reference)

KEYLESS RECEIVER
WIRING HARNESS-SIDE CONNECTOR



E6U914ZW1007

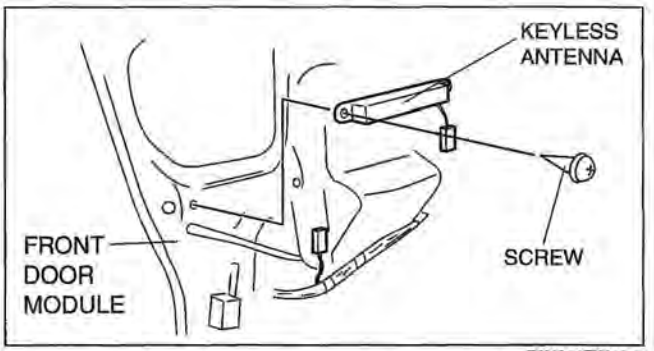
Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
A	Power supply	• BCM	Under any condition	B+	• BCM • Related wiring harnesses
C	Data	• BCM	• Under any condition: Inspect the wiring harness between the keyless receiver and BCM terminal 7I for continuity.	Continuity detected	• BCM • Related wiring harnesses
E	GND	Body ground	Under any condition: Inspect for continuity to ground.	Continuity detected	GND

KEYLESS ANTENNA REMOVAL/INSTALLATION

E6U091469000W14

Driver-side/passenger-side

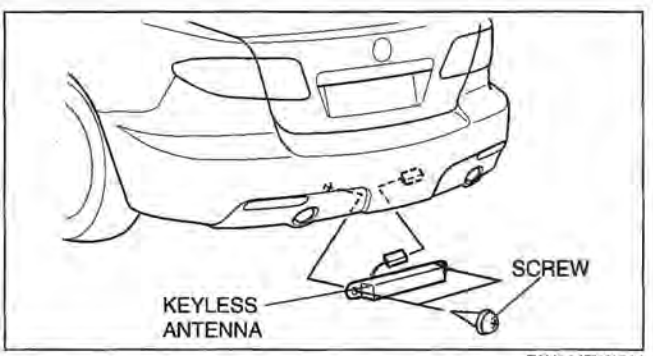
1. Disconnect the negative battery cable.
   Remove the front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
2. Remove the screws.
4. Disconnect the connector, then remove the keyless antenna.



E6U914ZW1010

Trunk Lid

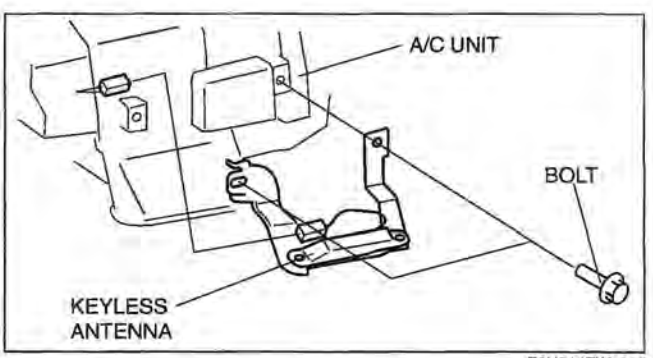
1. Disconnect the negative battery cable.
2. Remove the screws.
3. Disconnect the connector, then remove the keyless antenna.



E6U914ZW1014

Interior, Front

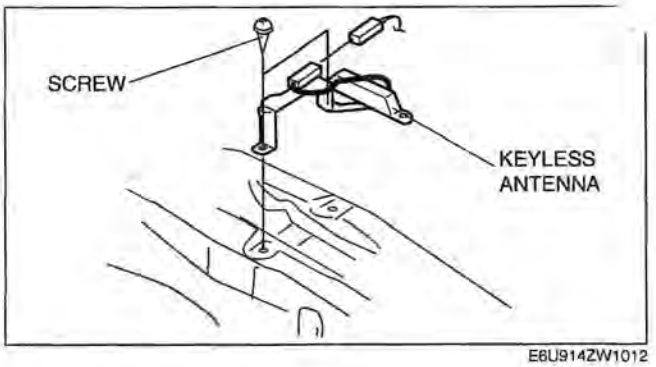
1. Disconnect the negative battery cable.
2. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
3. Remove the bolts.
4. Disconnect the connector, then remove the keyless antenna.



E6U914ZW1015

Interior, Middle

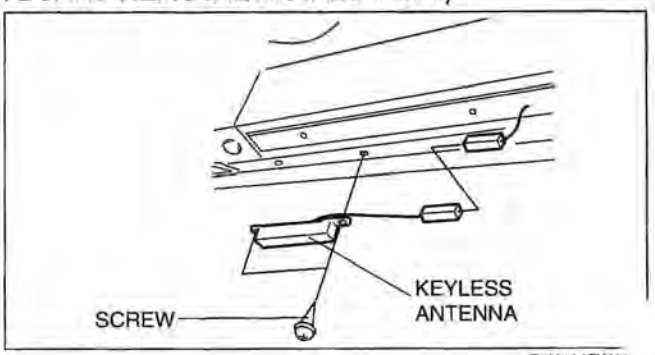
1. Disconnect the negative battery cable.
2. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
3. Remove the screws.
4. Disconnect the connector, then remove the keyless antenna.



E6U914ZW1012

Interior, Rear

1. Disconnect the negative battery cable.
2. Remove the partition board. (See 09–17–19 PARTITION BOARD REMOVAL/INSTALLATION.)

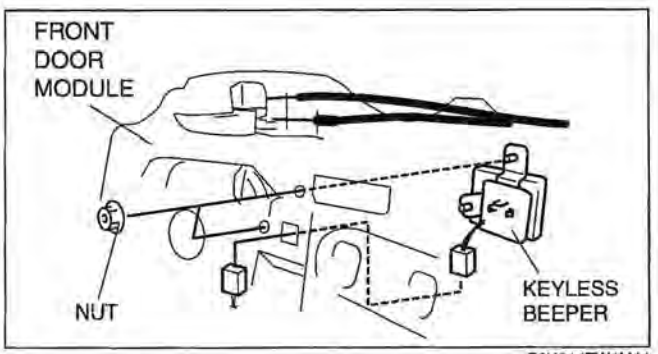


E6U914ZW10

KEYLESS BEEPER REMOVAL/INSTALLATION

E6U091469000W21

1. Disconnect the negative battery cable.
2. Remove the front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the front door speaker. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
4. Remove the screws.
5. Disconnect the connector.
6. Remove the keyless beeper from the speaker installation hole.



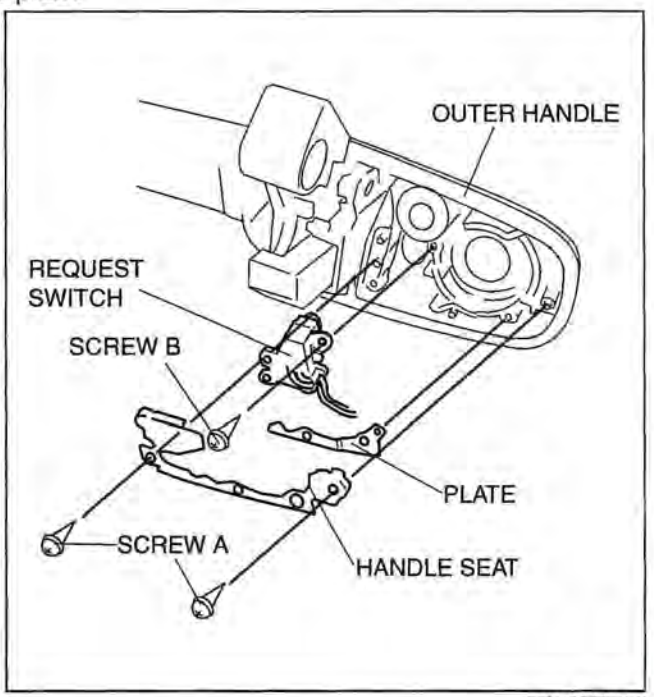
E6U914ZW1M11

REQUEST SWITCH REMOVAL/INSTALLATION

E6U091469000W22

Deiver-side/passenger-side

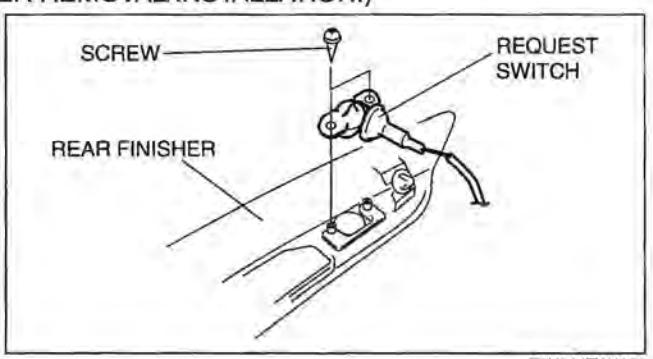
1. Disconnect the negative battery cable.
   Remove the front door trim. (See 09–17–12 FRONT DOOR TRIM REMOVAL/INSTALLATION.)
3. Remove the front outer handle. (See 09–14–10 FRONT OUTER HANDLE REMOVAL/INSTALLATION.)
4. Remove the screws A, then remove the handle seat and plate.
5. Remove screw B, then remove the request switch.



E6U914ZW1009

ınk Lld

1. Disconnect the negative battery cable.
2. Remove the rear finisher. (See 09–16–7 REAR FINISHER REMOVAL/INSTALLATION.)
3. Remove the screws, then remove the request switch.



E6U914ZW1008

REQUEST SWITCH INSPECTION

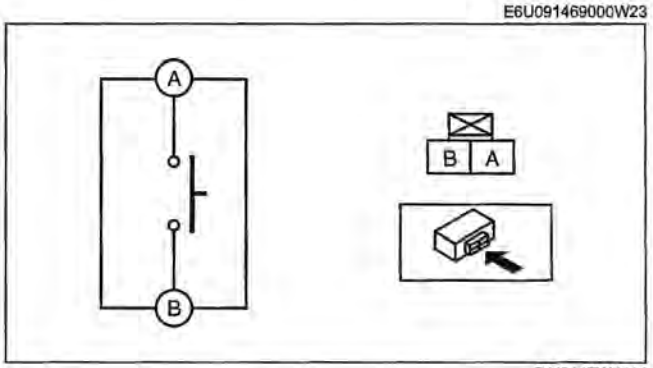
E6U091469000W23

1. Inspect for continuity between request switch terminals A and B.
   - If not as specified, replace the request switch.

O—O : Continuity

Switch position	Terminal	
	A	B
Push (ON)	O	O
Not push (OFF)		

E6U914ZW1018



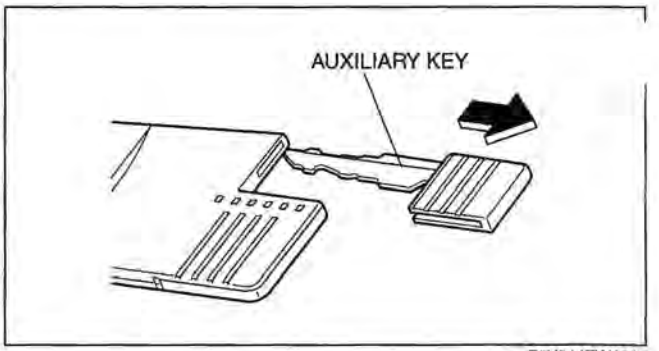
CJJ914ZW5014

CARD KEY BATTERY REPLACEMENT [WITH ADVANCED KEYLESS SYSTEM]

E6U091467543W03

Card Key Type

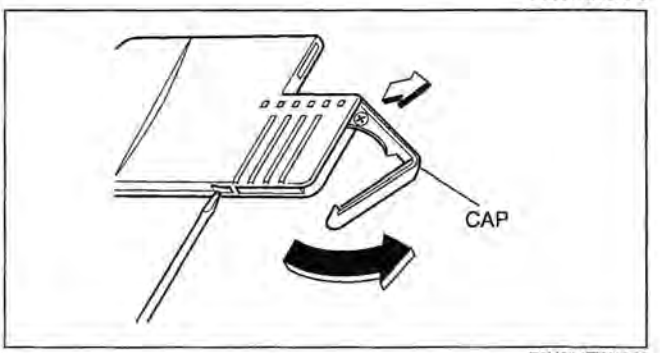
1. Pull out the auxiliary key.



E6U914ZW1019

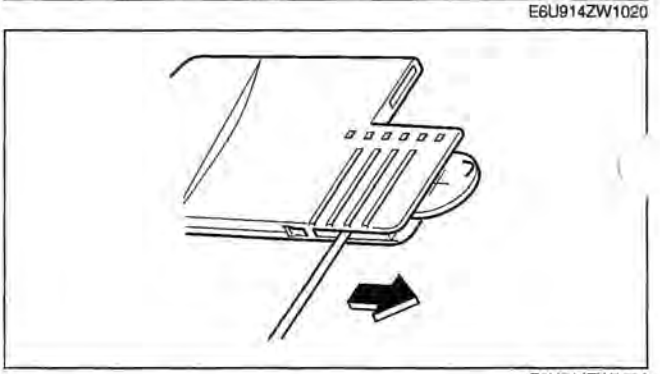
2. Replace the cap using a flathead screwdriver, then rotate and remove the cap.

   Caution
   - **Do not turn the cap excessively. The cap may be damaged.**



E6U914ZW1020

3. Insert a flathead screwdriver into the crack and press the battery out.

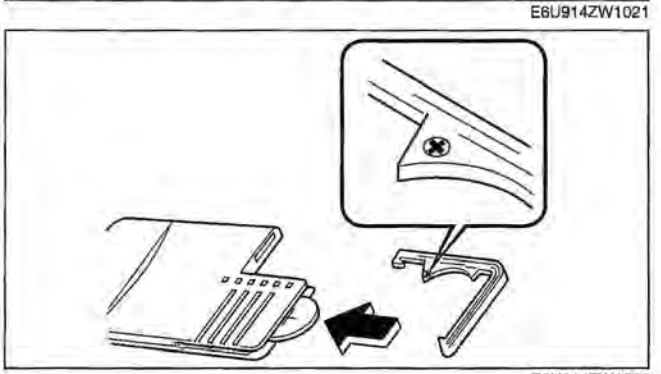


E6U914ZW1021

4. Insert the new battery (CR2025) with the positive pole (+) facing the (+) mark on the cap.

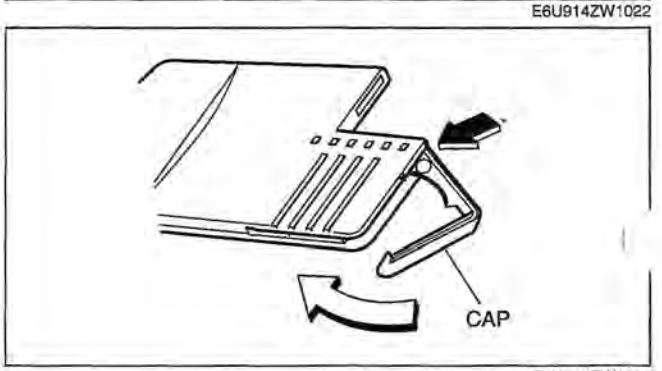
   Battery specification
   Lithium CR2025 × 1

   Note
   - The batteries will last about **1 years** when used **10 times** a day.



E6U914ZW1022

5. Rotate and close the cap.
6. Reinsert the auxiliary key.



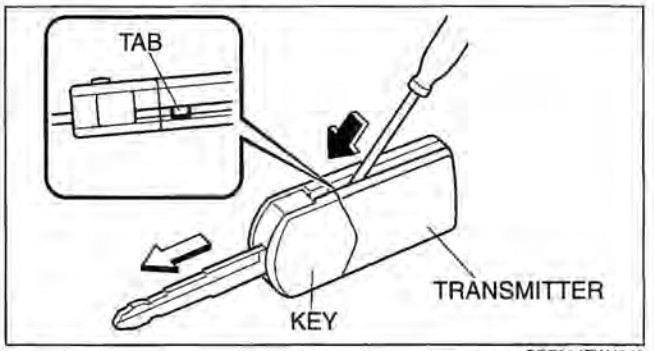
E6U914ZW1023

TRANSMITTER BATTERY REPLACEMENT [KEYLESS ENTRY SYSTEM]

EBU091467543W02

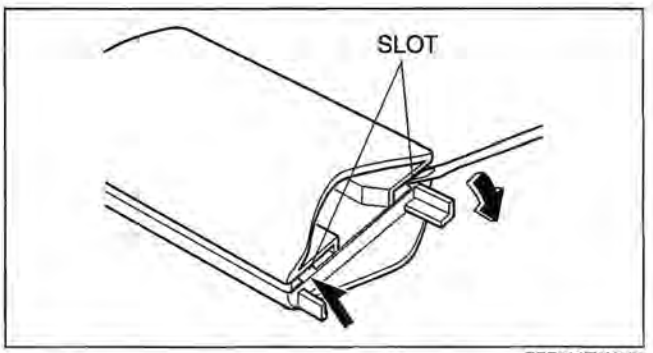
Retractable Key Type

1. Insert a small screwdriver into the slot and push the tab to remove the key from the transmitter.



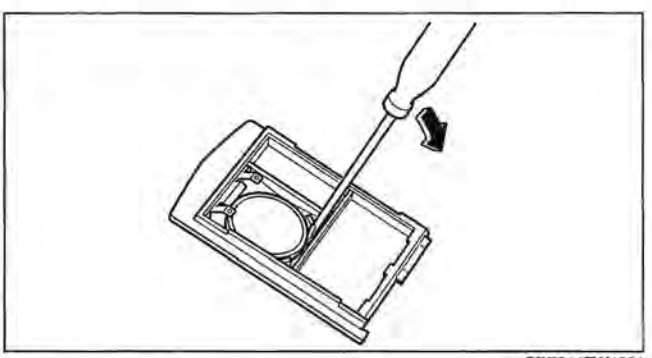
CBE914ZW4002

2. Insert a small screwdriver into the slot and gently pry open the transmitter.



CBE914ZW4003

3. Remove the battery.

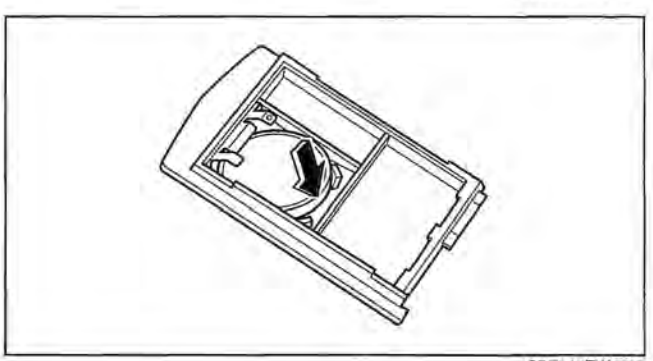


CBE914ZW4004

4. Put in the new battery (CR1620) with the positive pole (+) facing down.
5. Align the front and back covers and snap the transmitter shut.

Battery specification
Lithium CR1620 × 1

Note
- The batteries will last about **2 years** when used **10 times** a day.



CBE914ZW4005

6. Install the key to the transmitter.

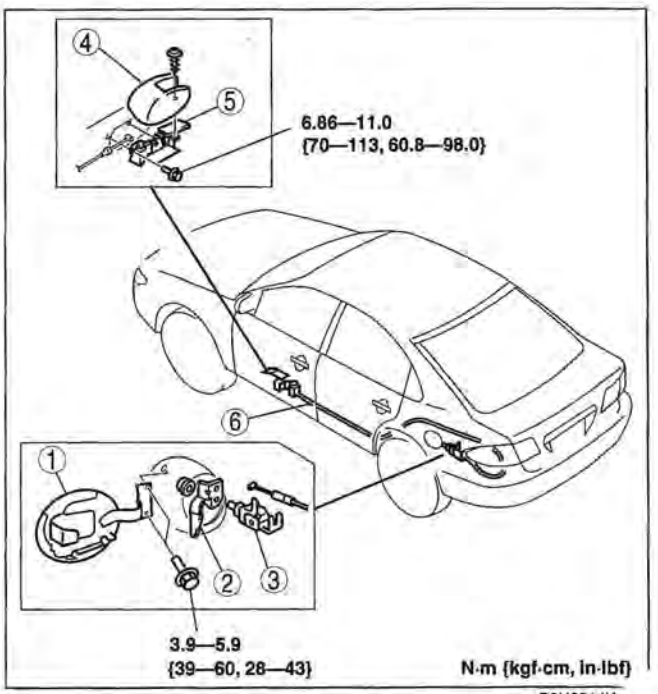
FUEL-FILLER LID AND OPENER REMOVAL/INSTALLATION

E6U091466640W01

1. To remove the fuel-filler lid opener, remove the left side trunk side trim.
2. To remove the fuel-filler lid opener cable, perform the following and partially peel back the floor covering.
   (1) Remove the driver-side front seat.
   (2) Remove the driver-side front scuff plate.
   (3) Remove the driver-side rear scuff plate.
   (4) Remove the driver-side B-pillar lower trim.
   (5) Remove the driver-side tire house trim.
3. Remove in the order indicated in the table.

1	Fuel-filler lid
2	Lift spring
3	Fuel-filler lid opener
4	Cover
5	Fuel-filler lid opener lever
6	Fuel-filler lid opener cable

4. Install in the reverse order of removal.
5. Adjust the fuel-filler lid. (See 09–10–3 FUEL-FILLER LID ADJUSTMENT.)

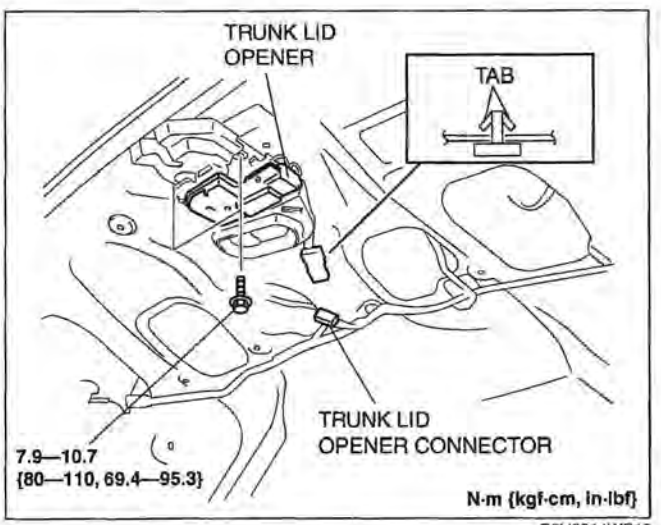


B6U0914W

TRUNK LID OPENER REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091467002W01

1. Disconnect the negative battery cable.
2. Disconnect the trunk lid opener connector.
3. Squeeze the tabs of the connector and pull it downward to remove it.
4. Disconnect the rod
5. Remove the bolts
6. Install in the reverse order of removal.



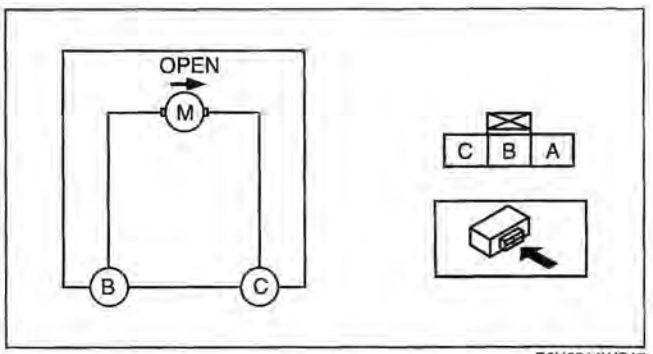
B6U0914WS16

TRUNK LID OPENER INSPECTION [SPORT SEDAN]

E6U091467002W02

1. Disconnect the trunk lid opener connector.
2. Apply battery positive voltage to the trunk lid opener terminals and inspect the trunk lid opener operation.
   - If not as specified, replace the trunk lid opener.

Actuator operation	Connection	
	B+	GND
Open	B	C



B6U0914WS17

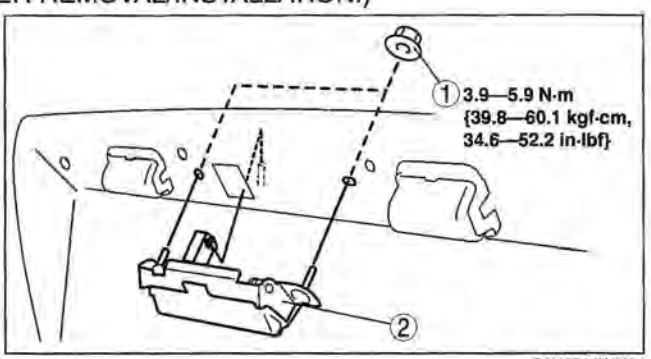
LIFTGATE OUTER HANDLE REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091462490W01

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
5. Remove the rear finisher. (See 09–16–7 REAR FINISHER REMOVAL/INSTALLATION.)
6. Remove in the order indicated in the table.

1	Nut
2	Liftgate outer handle

7. Install in the reverse order of removal.



C6U0914WM04

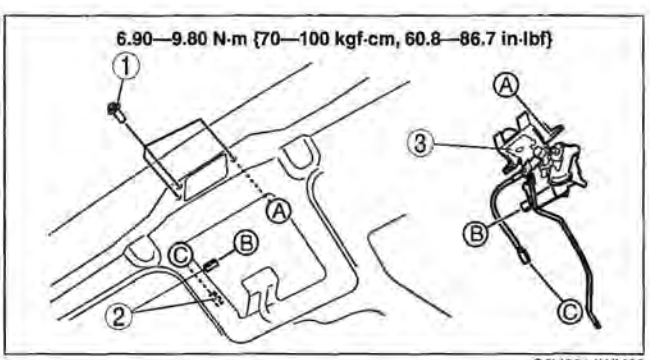
LIFTGATE LATCH AND LOCK ACTUATOR REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091462490W02

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the liftgate side trim. (See 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
5. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Liftgate latch and lock actuator

6. Install in the reverse order of removal.



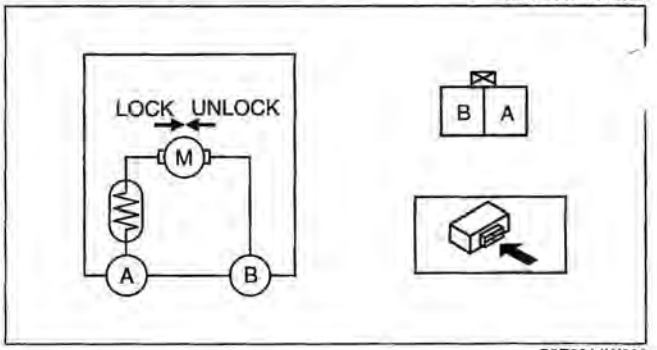
C6U0914WM02

LIFTGATE LOCK ACTUATOR INSPECTION [5-DOOR, SPORT WAGON]

E6U091462490W03

1. Apply battery positive voltage and connect ground to the corresponding liftgate lock actuator terminals, and inspect the liftgate lock actuator operation.
   - If not as specified, replace the liftgate latch and lock actuator.

Lock actuator operation	Connection	
	B+	GND
Lock	A	B
Unlock	B	A

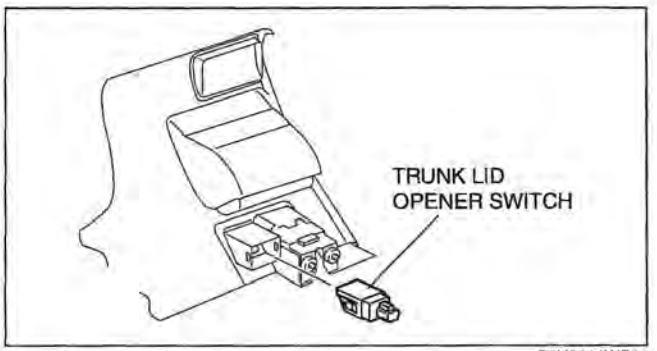


B3E0914W028

TRUNK LID OPENER SWITCH REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091467002W03

1. Disconnect the negative battery cable.
2. Remove the lower panel.
3. Disconnect the trunk lid open switch connector.
4. Squeeze the tabs of the trunk lid open switch and pull it toward you to remove it.
5. Remove the trunk lid open switch.
6. Install in the reverse order of removal.

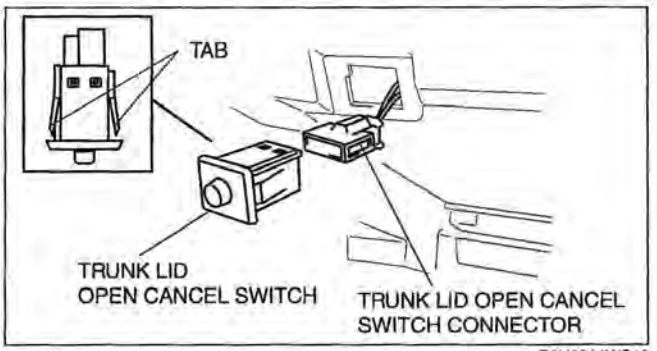


B6U0914WS21

TRUNK LID OPEN CANCEL SWITCH REMOVAL/INSTALLATION

E6U091467002

1. Disconnect the negative battery cable.
2. Remove the glove compartment.
3. Squeeze the tabs of the trunk lid open cancel switch and pull it forward to remove it.
4. Disconnect the trunk lid open cancel switch connector.
5. Remove the trunk lid open cancel switch.
6. Install in the reverse order of removal.



B6U0914WS13

TRUNK LID OPEN CANCEL SWITCH INSPECTION

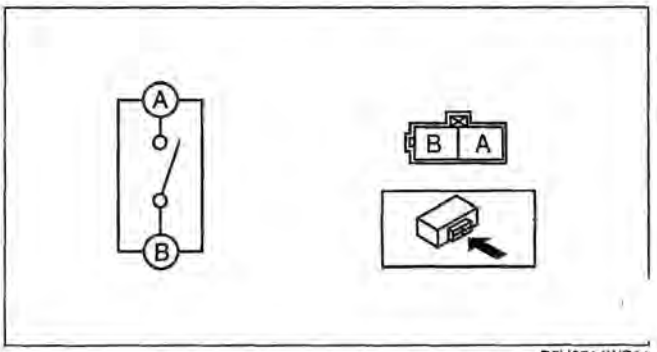
E6U091467002W05

1. Remove the trunk lid open cancel switch.
2. Inspect for continuity between the trunk lid open cancel switch terminals using an ohmmeter.
   - If not as specified, replace the trunk lid open cancel switch.

O—O : Continuity

Operation	Terminal	
	A	B
On	O	O
Off		

B6U0914WS12

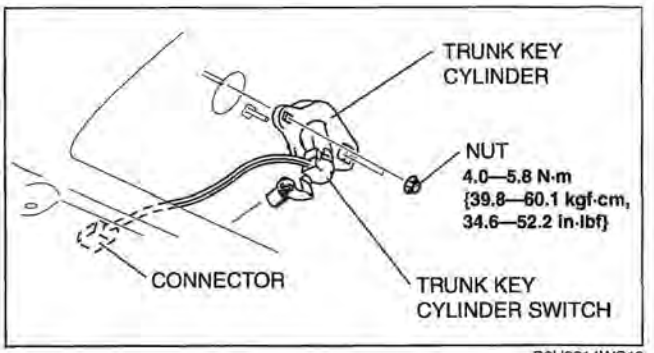


B6U0914WS11

TRUNK KEY CYLINDER REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091467002W06

1. Disconnect the negative battery cable.
2. Remove the trunk key cylinder switch connector.
3. Remove the nuts
4. Remove the trunk key cylinder.
5. Install in the reverse order of removal.



B6U0914WS18

TRUNK KEY CYLINDER SWITCH INSPECTION [SPORT SEDAN]

E6U091467002W07

1. Remove the trunk key cylinder switch.
2. Inspect for continuity between the trunk key cylinder switch terminals using an ohmmeter.
   - If not as specified, replace the trunk key cylinder switch.

O—O : Continuity

Operation	Terminal	
	A	B
On	O	O

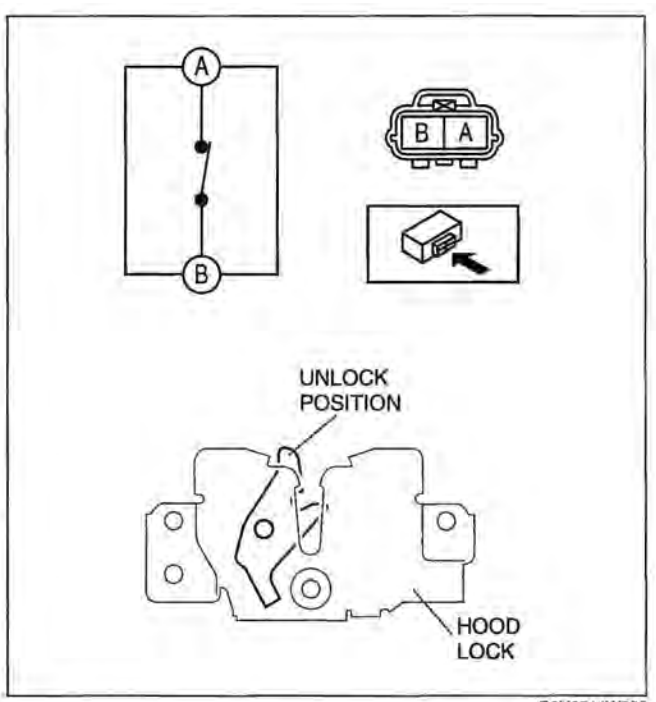
HOOD SWITCH INSPECTION

E6U091456100W01

Note
- Hood switch has a built-in hood lock.

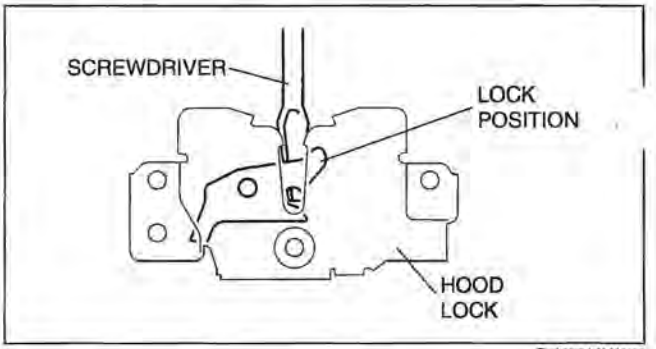
1. Open the hood.
2. Disconnect the negative battery cable.
3. Remove the radiator grille.
4. Disconnect the hood switch connector.
5. Inspect for continuity between the hood switch terminals A and B using an ohmmeter.
   - If there is no continuity, replace the hood switch.



B6U0914W300

6. Lock the hood lock using a flathead screwdriver or equivalent as shown.
7. Inspect for continuity between the hood switch terminals A and B using an ohmmeter.
   - If there is continuity, replace the hood switch.

Caution
- **After the inspection, unlock the hood lock. If closing the hood with the hood lock locked, the hood lock and/or hood striker may be broken.**



B6U0914W301

COIL REMOVAL/INSTALLATION

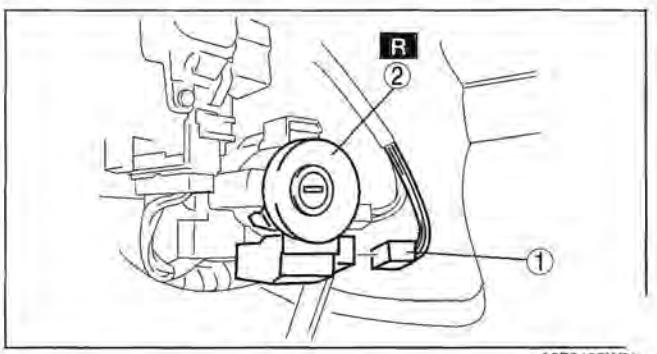
E6U091467004W01

Note
- Do not remove the coil unless you are replacing it.
- When only the coil is replaced, the immobilizer system reprogram procedure is not necessary.

1. Disconnect the negative battery cable.
2. Remove the column cover.
3. Remove in the order indicated in the table.

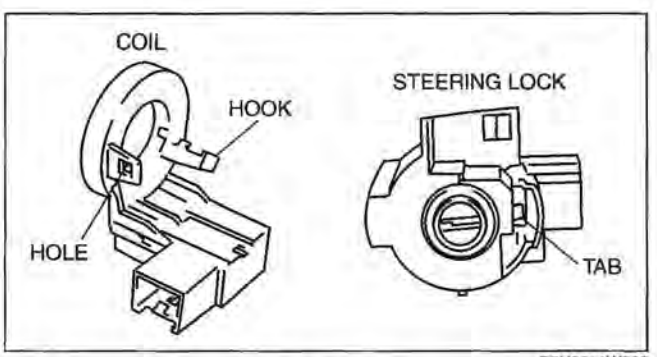
1	Connector
2	Coil (See 09–14–28 Coil Installation Note)

4. Install in the reverse order of removal.



A6E8122W001

Coil Installation Note
1. Install the hole of coil to the tab of steering lock.
2. Install the hook of coil to the steering lock.



B6U0914W302

IMMOBILIZER SYSTEM COMPONENT REPLACEMENT/KEY ADDITION AND CLEARING [WITH ADVANCED KEYLESS SYSTEM]

E6U091467000W06

Foreword
- When performing the following procedures, the immobilizer resetting procedure using the WDS or equivalent must also always be performed: "Keyless control module replacement", "PCM replacement", "Steering lock unit replacement", "Keyless control module and PCM joint replacement", "Keyless control module, PCM, and steering lock unit joint replacement", and "Key ID number clearing". The engine will not start unless all work is performed using the WDS or equivalent.
- A card key that can start the engine is necessary for the key programming. If there is no card key that can start the engine, perform the key programming after the card key programming. (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)
- There are two ways to add supplemental key: Using the WDS or equivalent or using two keys that can start the engine to program.
- When replacing any of the immobilizer system component parts, adding/clearing keys, or performing other functions, refer to the following table and perform the applicable procedure (No.1 to 5).
- Verify that the room fuse is equipped.

Ref. No.	Condition	Items necessary for procedure (prepare before starting procedure)	Cautionary notes
1	Since two or more keys that can start the engine are necessary, make a spare key. Or program an additional key.	• Programming key	• The WDS or equivalent is necessary for the additional key programming if "Customer spare key programming disable" is performed before the procedure using the WDS or equivalent. In this case, perform No. 2.
2	If there is only one key that can start the engine, make a spare key. If there is no key, program an additional key.	• Programmed card key • Programming key • WDS or equivalent	-
3	Clearing the programmed key ID number.	• Programming keys (two or more) • WDS or equivalent	• The key ID number programmed to the vehicle will be completely cleared. • The engine cannot be started unless the key is reprogrammed after the procedure. Before beginning the procedure, verify that the customer has turned in all of the keys for the vehicle. • The engine cannot be started unless two or more keys are reprogrammed after the procedure. • The two or more keys prepared before the procedure do not have to be new ones and there is no problem with using the key that was used to start the engine before the procedure.
3	Replacing all the keys. (Steering lock unit is not replaced)	• Programmed card key • Programming keys (two or more) • WDS or equivalent	• The keys (two or more) prepared before the procedure do not have to be new ones, and there is no problem with using the key that was used to start the engine before the procedure. • The engine cannot be started unless the key is reprogrammed after the procedure.
3	Replacing the PCM only.	• New PCM • Programmed card key • Programming keys (two or more) • WDS or equivalent	-
4	Changing the additional key programming procedure. (Method for programming other keys using two keys that can start the engine is disabled.)	• WDS or equivalent	• The additional key programming using No. 1 cannot be performed after the procedure. It is possible to restore the setting. For restoring the setting, the WDS or equivalent is necessary.
4	Changing the additional key programming procedure. Allows programming using two keys that can start the engine.	• WDS or equivalent	• New vehicles have this setting.
5	Replacing the steering lock unit only.	• New steering lock unit • Programmed card key • New keys (two or more) • WDS or equivalent	• Have two or more keys ready for programming before beginning the procedure, since the previous keys will be invalid. • The steering lock unit programming is necessary for the keyless control module before the key programming. • Two or more keys need to be programmed after the procedure to start the engine.
5	Replacing the PCM and steering lock unit at the same time.	• New PCM • New steering lock unit • Programmed card key • New keys (two or more) • WDS or equivalent	• Have two or more keys ready for programming before beginning the procedure, since the previous keys will be invalid. • Perform the steering lock unit programming. • Two or more keys need to be programmed after the procedure to start the engine.

Ref. No.	Condition	Items necessary for procedure (prepare before starting procedure)	Cautionary notes
5	Replacing the keyless control module only.	• New keyless control module • Programming card key • Programming keys (two or more) • WDS or equivalent	• Unless keys are reprogrammed after the procedure, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the card keys and keys for the vehicle. • Perform the card key programming. • Perform the steering lock unit programming. • Unless card keys and keys (two or more) are programmed after the procedure, the engine cannot be started. • The card key and keys (two or more) prepared before the procedure do not have to be new ones and there is no problem with using the keys that were used to start the engine before the procedure.
5	Replacing the keyless control module and steering lock unit at the same time.	• New keyless control module • New steering lock unit • Programming card key • New keys (two or more) • WDS or equivalent	• Unless keys are re-programmed after the procedure, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the card keys and keys for the vehicle. • Perform the card key programming. • Perform the steering lock unit programming. • The engine cannot be started unless a card key and keys (two or more) are programmed. • The card key and keys (two or more) prepared before the procedure do not have to be new ones and there is no problem with using the keys that were used to start the engine before the procedure.
5	Replacing the PCM and keyless control module at the same time.	• New PCM • New keyless control module • Programming card key • Programming keys (two or more) • WDS or equivalent	• Unless keys are reprogrammed after the procedure, the engine cannot be started. Befor beginning the procedure, verify that the customer has turned in all of the card keys and keys for the vehicle. • Perform the card key programming. • Perform the steering lock unit programming. • The engine cannot be started unless a card key and two or more keys are programmed after the procedure. • The card key and keys (two or more) prepared before the procedure do not have to be new ones and there is no problem with using the keys that were used to start the engine before the procedure.
5	Replacing the PCM, keyless control module, and steering lock unit at the same time.	• New PCM • New keyless control module • New steering lock unit • Programming card key • Programming keys (two or more) • WDS or equivalent	• Unless keys are reprogrammed after the procedure, the engine cannot be started. Before beginning the procedure, verify that the customer has turned in all of the card keys and keys for the vehicle. • Perform the card key programming. • Perform the steering lock unit programming. • The engine cannot be started unless a card key and two or more keys are programmed after the procedure. • The card key and keys (two or more) prepared before the procedure do not have to be new ones and there is no problem with using the keys that were used to start the engine before the procedure.
-	Replacing the coil antenna.	• New coil antenna	• Immobilizer system resetting is not necessary.

Caution

- **The following conditions may cause poor signal communication between the key and vehicle, resulting in the engine not starting or a key registration error. Do not perform any work under the following conditions:**
  - **— Placing the following items close to the key grip or contacting it.**
    - **Spare keys**
    - **Keys for other vehicles equipped with an immobilizer system**
    - **Any metallic object**
    - **Any electronic device, or any credit or other card with magnetic strips**
- **Do not place the following devices in the vehicle while programming, otherwise programming cannot be performed:**
  - **— WDS or equivalent**
  - **— Personal computer**
  - **— Devices that can send/receive the radio waves**

Note

- The "valid key" used in this manual indicates the key that can start the engine.
- If the key adding, programming, clearing, and immobilizer system construction parts replacement are performed, verify that the all keys can start the engine within **5 s** after the procedure.
- When verifying that the engine starts, wait at least **5 s or more** before starting the engine using the next key.
- If the engine cannot be started using a programmed key, repeat the procedure from the beginning.
- Do not start the engine unless indicated in the procedure. If the engine is started during the programming procedure, programming is stopped at that point. Repeat the procedure starting from the beginning if the engine is started before completion.
- Do not place the card key in the vehicle or bring it **within approx. 1 m** of the vehicle unless indicated in the procedure.
- Two or more key ID numbers must be programmed for the engine to start.
- A maximum of eight key ID numbers can be programmed for one vehicle. The WDS or equivalent can be used to verify the number of key ID numbers programmed to a single vehicle.
- Do not select a WDS or equivalent screen menu other than one indicated in the procedure.

)S or Equivalent Connecting Procedure

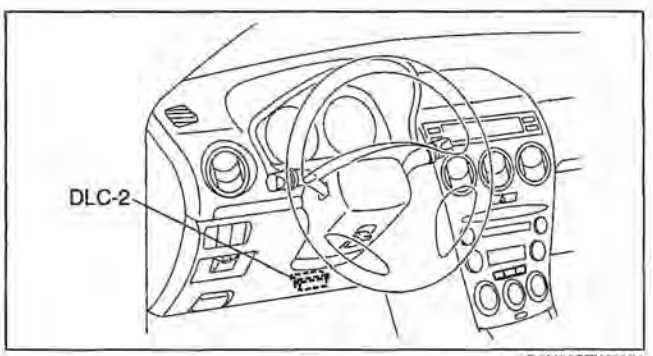
Caution

- **Do not place the WDS or equivalent in the vehicle while programming, otherwise programming cannot be performed.**

1. Fully lower the door glass.
2. Connect the WDS or equivalent to the DLC-2.
3. Pull out the WDS or equivalent cable from the door glass opening and set the WDS or equivalent outside the vehicle.

Caution

- **Protect the cable and body contact area with a clean rag, otherwise they could be damaged.**



D6U802ZW7001

No.1 Additional Key Programming Procedure (Using Two Valid Keys)

Caution

- **Do not place the following devices in the vehicle while programming, otherwise programming cannot be performed:**
  - **— Card key**
  - **— WDS or equivalent**
  - **— Personal computer**
  - **— Devices that can send/receive the radio waves**

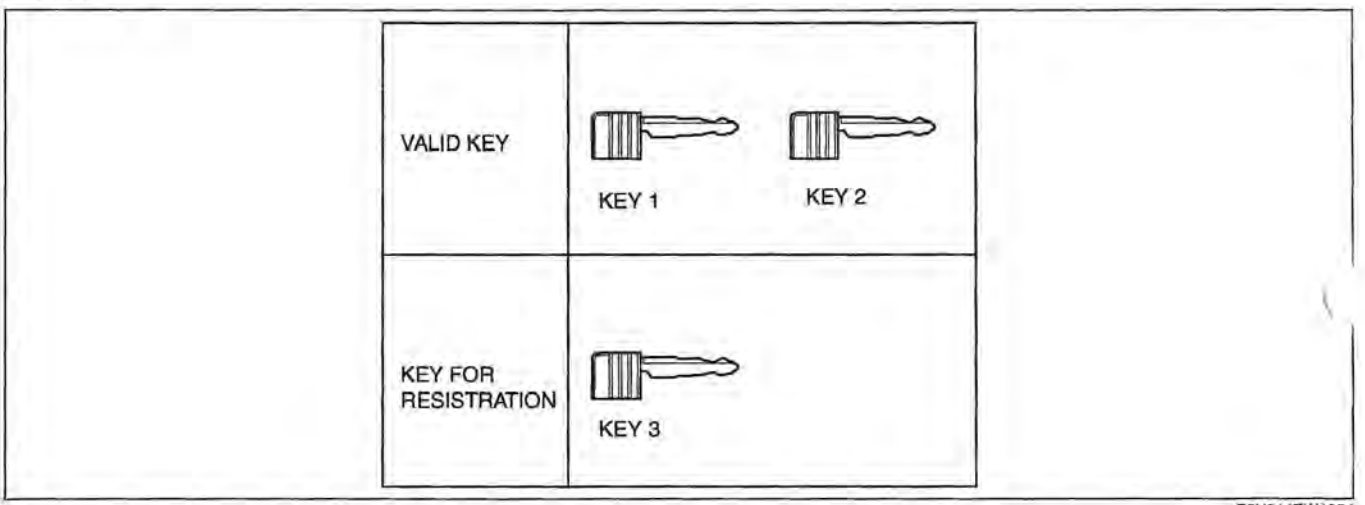
Condition

- Have two or more valid keys.

Note

- A maximum of eight keys can be programmed for one vehicle. If key programming is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the WDS or equivalent and verify the number of keys that have been programmed.
- If eight keys have already been programmed, and it is necessary to program other keys, the previously programmed key ID numbers must first be cleared. To clear the key, refer to "09–14–34 No.3 PCM, and Key Replacement Procedure (Clearing Previously Programmed Key ID Numbers, Key Re-program)".

Procedure



E6U914ZW1024

1. Prepare key 3 for programming.
2. Start the engine using key 1.
3. Verify that the security light illuminates for **approx. 3 s**, and then goes out.
4. Turn the ignition switch to the LOCK position.
5. Using key 1, turn the ignition switch to the ON position.
6. Verify that the security light illuminates for **approx. 3 s**, and then goes out.
7. Using key 1, turn the ignition switch to the LOCK position **within approx. 4 s** after the security light goes out.
8. Remove key 1.
9. Repeat Steps 2—5 using key 2 instead of key 1.
10. Repeat Steps 5—8 using key 3 instead of key 1.
11. If additional keys need to be programmed, repeat Steps 1—10, and replace key 3 in Step 10 with the key to be programmed (key 4).

No. 2 Key Additional Programming Procedure (Using the WDS or Equivalent)
Condition

- There is only one valid key. Or, there is no valid key but there is a card key that can start the engine.

Note

- A maximum of eight keys can be programmed for one vehicle. If key registration is not successful and DTC 15 appears even though the procedure was performed properly, use the PID/data monitor function of the WDS or equivalent and verify the number of keys that have been programmed.
- If eight keys have already been programmed, and it is necessary to program other keys, the previously programmed key ID numbers must first be cleared. To clear the key ID number, refer to "09–14–34 No.3 PCM, and Key Replacement Procedure (Clearing Previously Programmed Key ID Numbers, Key Re-program)".

Procedure

1. Prepare key 1 for programming.
2. Start the engine using a valid key or card key.

Caution

- **Do not place the card key in the vehicle when starting the engine with the valid key, otherwise programming cannot be performed. If the engine is started with the card key, remove the card key from the vehicle after the engine is started.**

3. Verify that the security light illuminates for **approx. 3 s**, and then goes out.
4. Turn the ignition switch to the LOCK position.
5. Connect the WDS or equivalent to the DLC-2. (See 09–14–31 WDS or Equivalent Connecting Procedure.)
6. Using key 1, turn the ignition switch to the ON position.

Note

- Although the security light flashes and DTC 15 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

Select "BODY/SECURITY/PATS (immobilizer) function" from the WDS or equivalent screen menu.
Select "Ignition key additional programming" from the WDS or equivalent screen menu.

Note

- After selecting the above menu, "operation is successful" is displayed. At this point, the key that turned the ignition switch to the ON position is completely programmed.

- In this procedure, the necessary number of the keys are completely programmed. To finish the additional key programming, go to Step 13.
- If additional keys need to be programmed, go to the next step.

9. Perform the security access according to the directions on the WDS or equivalent screen. (See 09–14–39 SECURITY ACCESS PROCEDURE.)
10. After verifying that the PATS function menu is displayed again on the WDS or equivalent screen, turn the ignition switch to the LOCK position and remove key 1.
11. Using the key to be programmed, turn the ignition switch to the ON position.
12. Return to the Step 6.
13. After verifying that the PATS function menu is displayed again on the WDS or equivalent screen, select the "Finish (this menu)" to finish the WDS or equivalent procedure.
14. After Step 10, wait **5 s or more**, and then turn the ignition switch to the LOCK position.

No.3 PCM, and Key Replacement Procedure (Clearing Previously Programmed Key ID Numbers, Key Reprogram)

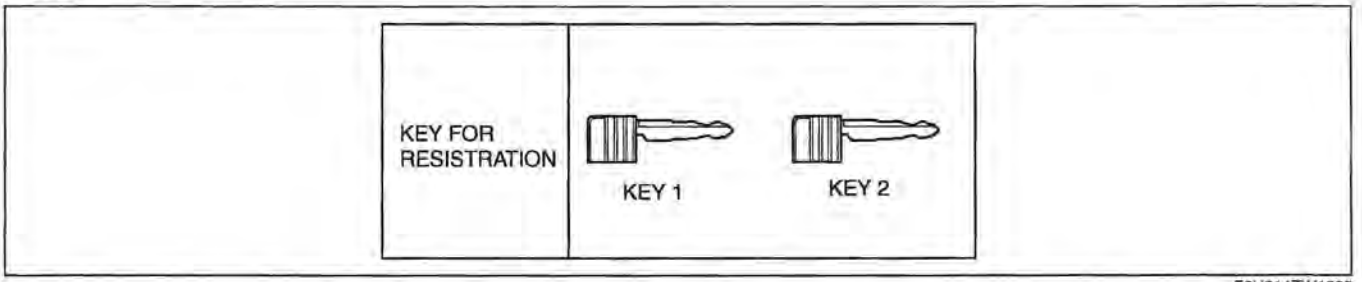
Condition

- Have two or more keys to be programmed after the key ID number clearing.

Caution

- **Before starting Step 1, complete the procedure for PCM replacement.**

Procedure



E6U914ZW1025

1. Prepare two or more keys to be programmed after the key ID number clearing.
2. Connect the WDS or equivalent to the DLC-2. (See 09–14–31 WDS or Equivalent Connecting Procedure.)
3. Using key 1, turn the ignition switch to the ON position.

Note

- Although the security light flashes and DTC 15 or 21 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

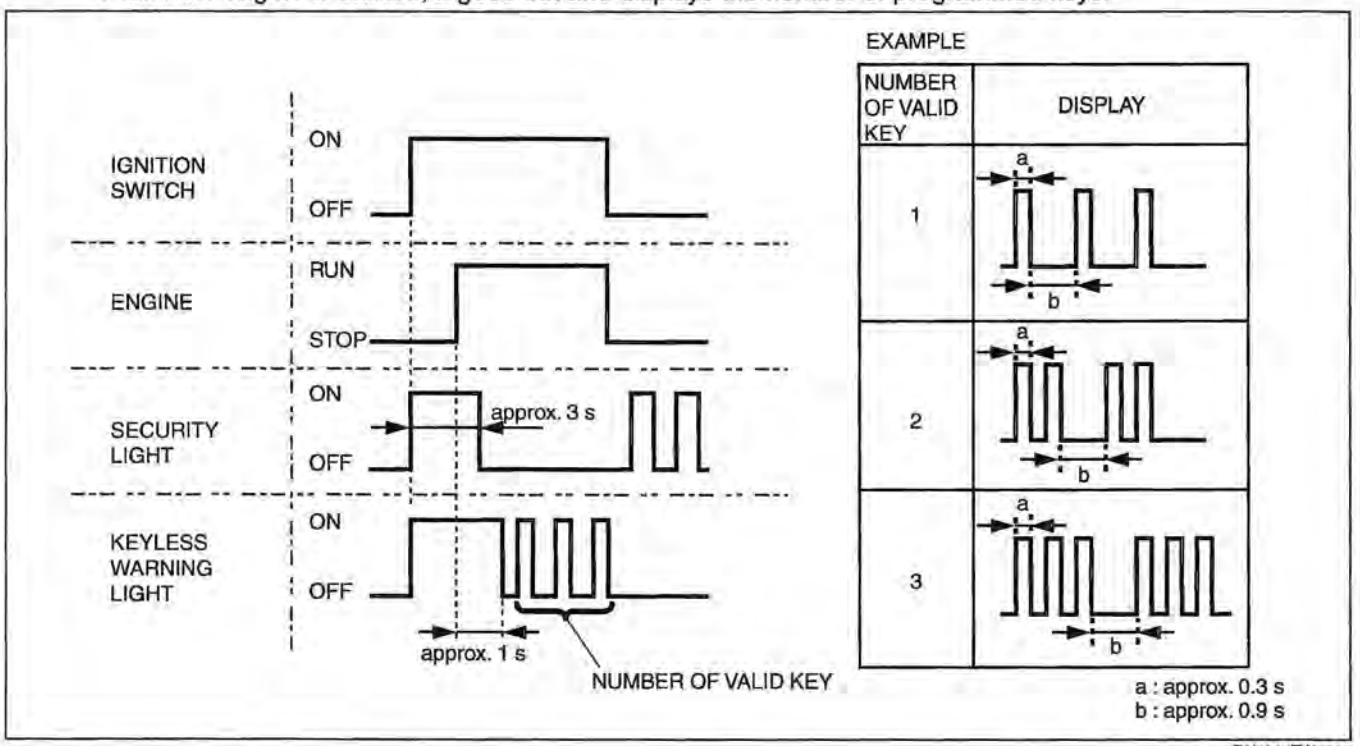
4. Verify that the keyless warning light illuminates for **approx. 3 s**, and then goes out.
5. Select "BODY/SECURITY/PATS (immobilizer) function" from the menu.
6. Select "Ignition key ID number Clearing" from the WDS or equivalent screen menu and perform the procedure according to the WDS or equivalent screen.
7. Perform the security access according to the direction of the WDS or equivalent screen. (See 09–14–39 SECURITY ACCESS PROCEDURE.)
8. After verifying that the PATS function menu is displayed again on the WDS or equivalent screen, select "Finish (this menu)" to finish the WDS or equivalent procedure.
9. After Step 9, wait **5 s or more**, and then turn the ignition switch to the LOCK position.
10. Using key 1, turn the ignition switch to the ON position.
11. After verifying that the security light and keyless warning light illuminates **for 3 s or more** turn the ignition switch to the LOCK position and remove key 1.

Note

- Although the security light flashes and DTC 21 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

12. Using key 2, turn the ignition switch to the ON position.
13. Verify that the security light and keyless warning light illuminates **for approx. 3 s**, and then goes out.
14. After verifying that the security light goes out, turn the ignition switch to the LOCK position using key 2, and then remove key 2.
15. If an additional key needs to be programmed, repeat Steps 13—15 with the additional key being key 3. If the ignition switch is held in the ON position **for 1 min or more**, the additional key programming procedure according to Steps 13—15 will not be possible. If this occurs, refer to "09–14–32 No.1 Additional Key Programming Procedure (Using Two Valid Keys)" to register any additional keys.
16. Start the engine with the key 1.

17. Verify that the security light and keyless warning light operate as follows:
    - From the point when the ignition switch is turned to the ON position, the security light illuminates **for approx. 3 s** and goes out.
    - The keyless warning light illuminates with the ignition switch turned to the ON position, and after **approx. 1 s** after the engine is started, it goes out and displays the number of programmed keys.



E6U914ZW1026

After verifying that the keyless warning light goes out, turn the ignition switch to the LOCK position using key 1.

18. Repeat Steps 17—19 using key 2 instead of key 1.

Note
- Perform Steps 17—19 as well when there are three or more programmed keys.

20. Start the engine with the card key and remove any key from the key cylinder.

Caution
- **Remove any key from the key cylinder.**

21. Verify that the security light and keyless warning light operate as follows:
    - From the point when the ignition switch is turned to the ON position, the security light illuminates **for approx. 3 s**, and goes out.
    - The keyless warning light illuminates when the ignition switch is turned to the ON position, and after **approx. 1 s** after the engine is started, it goes out.
22. Turn the ignition switch to the LOCK position after verifying that the keyless warning light goes out.

No. 4 Key Additional Programming Procedure Changing

Note
- This procedure is performed for enabling/diabling the "No.1 Additional Key Programming Procedure (Using Two Valid Keys)" setting.
- This procedure is possible when the vehicle is new, and when replacing the keyless unit with a new one.
- If "No.1 Additional Key Programming Procedure (Using Two Valid Keys)" is set to disable, the additional key programming can be only performed using the WDS or equivalent preventing the forging of a spare key by using two keys that can start the engine. This function is for use by rental car agencies or other companies with vehicle fleets.

Procedure
1. Using the key, turn the ignition switch to the ON position. (The key can be either the valid key or an unprogrammed key)

Note
- Although the security light flashes and DTC 15 is displayed when an unprogrammed key is used, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

2. Connect the WDS or equivalent to the DLC-2.
3. Select "BODY/SECURITY/PATS (immobilizer) function" from the WDS or equivalent screen menu.
4. Select "Customer spare key programming enable" or "Customer spare key programming disable" from the WDS or equivalent screen menu. The key additional programming procedure is as follows according to the selected menu:

Setting	Additional key programming procedure	
	Method using two valid keys	Method using the WDS or equivalent
Customer spare key programming enable	–	–
Customer spare key programming disable	×	–

– : Available

× : Unavailable

5. Perform the security access according to the directions on the WDS or equivalent screen. (See 09–14–39 SECURITY ACCESS PROCEDURE.)
6. After verifying that the PATS function menu is displayed again on the WDS or equivalent screen, select "Finish (this menu)" to finish the WDS or equivalent procedure.
7. After Step 6, wait **5 s or more** and then turn the ignition switch to the LOCK position.

No.5 Resetting Procedure for the Immobilizer System when Replacing the PCM, Keyless Control Module, or Steering Lock Unit

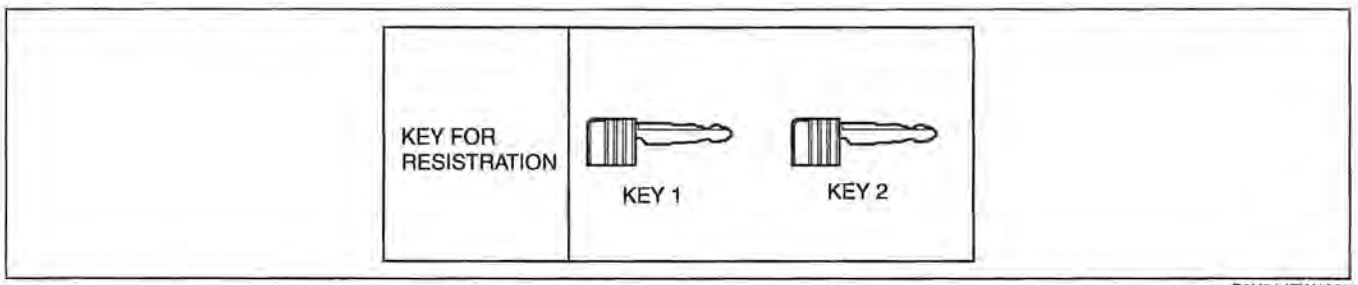
Condition

When the keyless control module is replaced
- — Have one or more card keys to be programmed after the replacement.
- — Have two or more keys to be programmed after the replacement.

• When the keyless control module is not to be replaced
- — Have one or more card keys to be programmed.
- — Have two or more keys to be programmed after the replacement.

Caution
- **Perform the procedures in the following order: "Key ID number clearing", "Card key programming", "Steering lock unit programming", and "Key programming". If there is a failure in the programming, the engine may not be started.**
- **When replacing only the PCM, start from Step 2. Key 1 in the procedure can be any valid key.**
- **Perform the "card key programming procedure" in Step 9 only when the keyless control module is replaced.**
- **Perform the "steering lock unit programming procedure" in Step 10 only when either the keyless control module or steering lock unit is replaced.**

Procedure



E6U914ZW1025

Prepare two or more keys to be programmed after the key ID number is cleared.
2. Connect the WDS or equivalent to the DLC-2. (See 09–14–31 WDS or Equivalent Connecting Procedure.)
3. Using key 1, turn the ignition switch to the ON position.

Note
- Although the security light flashes and DTC 15 or 21 is displayed, this does not indicate an improper procedure. Continue to perform the procedure as indicated.

4. Verify that the keyless warning light illuminates for **approx. 3 s** and then goes out.
5. Select "BODY/SECURITY/PATS (immobilizer) function" from the WDS or equivalent screen menu.
6. Select "Ignition key ID number clearing" from the WDS or equivalent screen menu and perform the procedure according to the WDS or equivalent screen.
7. Perform the security access according to the directions on the WDS or equivalent screen. (See 09–14–39 SECURITY ACCESS PROCEDURE.)

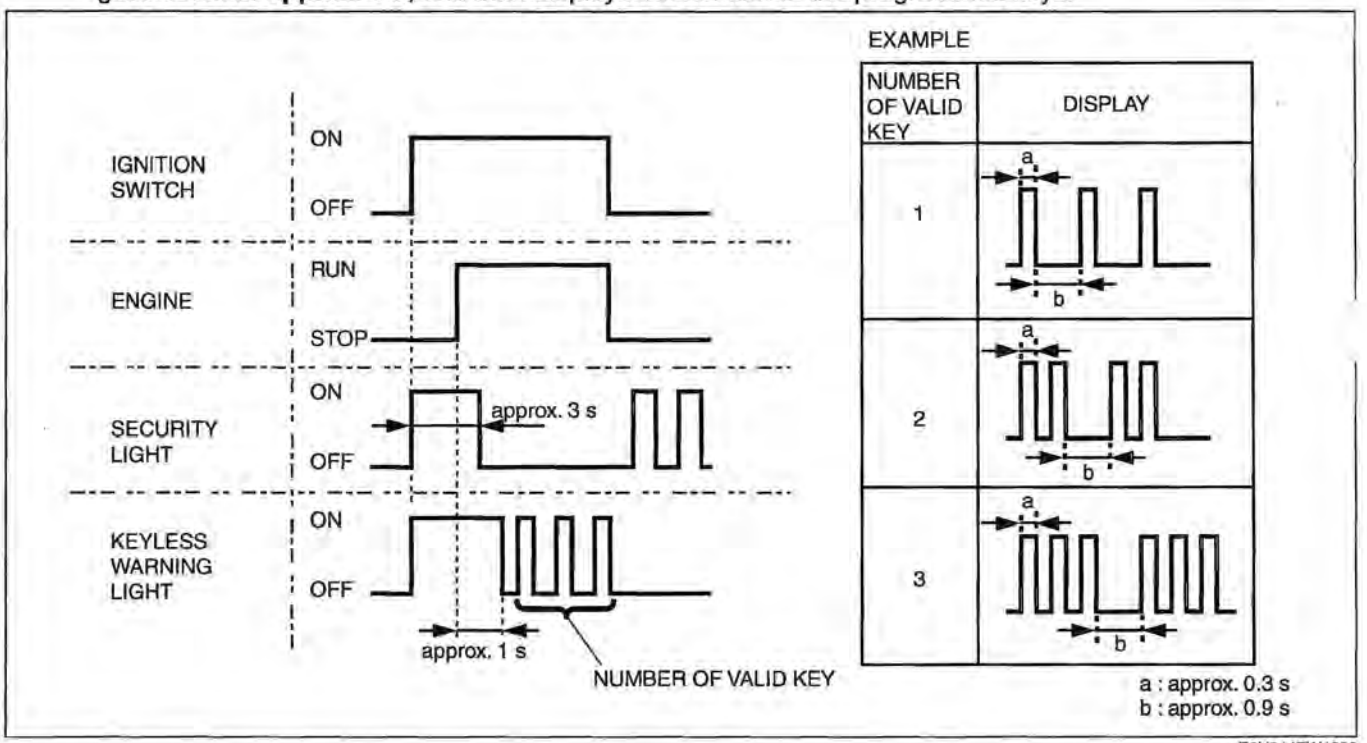
Caution
- **The WDS or equivalent displays "At least two or more keys must be programmed", however, do not perform the key programming and proceed to Step 8 or 9. If the procedure is not followed, the engine may not be started.**
  The key programming procedure is performed at Step 12—15.

8. Perform the card key programming. (when the keyless control module is replaced) (See 09–14–15 CARD KEY ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)
9. Perform the steering lock unit programming. (when either the keyless control module or steering lock unit is replaced) (See 09–14–17 STEERING LOCK UNIT ID CODE REGISTRATION [WITH ADVANCED KEYLESS SYSTEM].)
10. After verifying that the PATS function menu is displayed again on the WDS or equivalent screen, select "Finish (this menu)" to finish the WDS or equivalent procedure.
11. After Step 11, wait **5 s or more** and then turn the ignition switch to the LOCK position.
12. Using key 1, turn the ignition switch to the ON position.

13. After verifying that the security light and keyless warning light illuminate **for 3 s or more**, turn the ignition switch to the LOCK position and remove key 1.

Note
- Although the security light flashes and DTC 21 is displayed, this does not indicate an improper procedur. Continue to perform the procedure as indicated.

14. Using key 2, turn the ignition switch to the ON position.
15. Verify that the security light and keyless warning light illuminate **for approx. 3 s**, and then goes out.
16. After verifying that the security light goes out, turn the ignition switch to the LOCK position using key 2, and then remove key 2.
17. If additional keys need to be programmed, repeat Steps 15—17 with the additional key to be programmed being key 3. If the ignition switch is held in the ON position **for 1 min or more**, additional key programming according to Steps 15—17 will not be possible. If this occurs, refer to "09–14–32 No.1 Additional Key Programming Procedure (Using Two Valid Keys)" to program any additional keys.
18. Start the engine with key 1.
19. Verify that the security light and keyless warning light operate as follows:
    - From the point when the ignition switch is turned to the ON position, the security light illuminates **for approx. 3 s**, and goes out.
    - The keyless warning light illuminates when the ignition switch is turned to the ON position, and the light goes out after **approx. 1 s**, and then displays the number of the programmed keys.



E6U914ZW1026

20. After verifying that the keyless warning light goes out, turn the ignition switch to the LOCK position using key 1, and then remove the key.
21. Repeat Steps 19—21 using key 2 instead of key 1.

Note
- Perform Steps 19—21 as well when three or more keys are to be programmed.

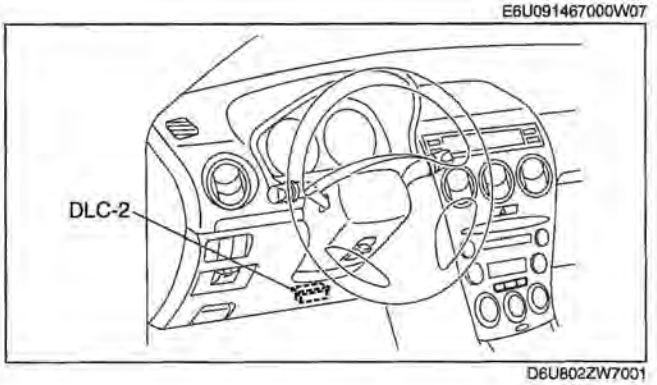
22. Start the engine using the card key.

Caution
- **Remove any key from the key cylinder.**

23. Verify that the security light and keyless warning light operate as follows:
    - From the point that ignition switch is turned to the ON position, the security light illuminates **for approx. 3** and goes out.
    - The keyless warning light illuminate when the ignition switch is turned to the ON position for **approx. 1 min**, and goes out.
24. After verifying that the keyless warning light goes out, turn the ignition switch to the LOCK position.

SECURITY ACCESS PROCEDURE

E6U091467000W07



D6U802ZW7001

1. Connect the WDS or equivalent to the DLC-2.
2. Select "BODY/SECURITY/PATS (immobilizer) function" from the WDS or equivalent screen menu.
3. Select the items to be performed from the following:
   - Additional card key programming
   - Card key ID number clearing
   - Steering lock unit programming
   - Ignition key additional programming (with immobilizer system)
   - Ignition key ID number clearing (with immobilizer system)
   - Customer spare key programming enable (with immobilizer system)
   - Customer spare key programming disable (with immobilizer system)
4. The security access begins and the WDS or equivalent displays the "OUT-CODE".

Note
- When "OUT-CODE" is first displayed, turning the ignition switch from the LOCK to the ON position **5 times** will change the "OUT-CODE".

5. Input "IN-CODE" corresponding to "OUT-CODE" displayed on the WDS or equivalent screen.
6. If the security access is successful, selected item can be performed.

IMMOBILIZER SYSTEM REPROGRAM PROCEDURE [WITH KEYLESS ENTRY SYSTEM]

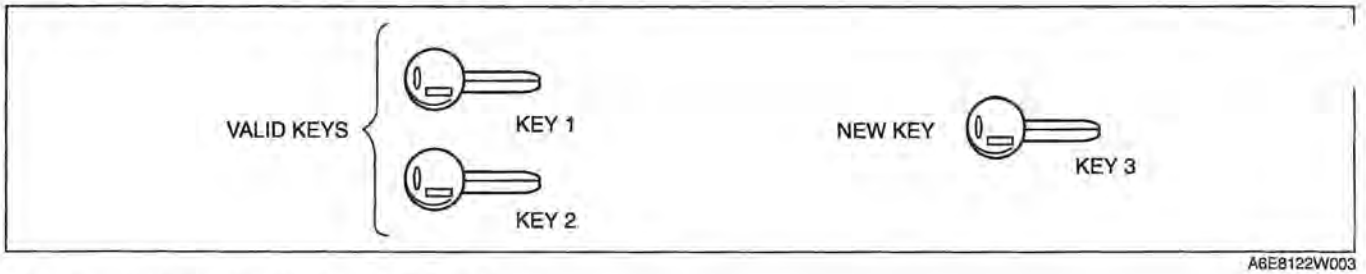
E6U091467000W04

09-14

Caution
- **Do not perform key registration or start the engine under the following conditions. Doing so could result in a key registration error or the engine not starting even with a correctly programmed key.**
  - **— If a large, metal object is close to a valid key**
  - **— If an electrical device is close to a valid key**
  - **— If two or more valid keys are on the same key ring**

Note
- When an error occurs during the reprogram procedures, except when the PCM is replaced, repeat the procedure from Step 1. If you still cannot reprogram, confirm how many keys can start the engine. Then, perform the key replacement or addition reprogram procedure according to the valid key number.
- To make a copy of the key or replace the immobilizer system component parts (the key(s), and/or PCM), the customer should bring all keys to the dealer. This is because the previously programmed key IDs are erased when reprogramming the key IDs into the PCM.
- The immobilizer system cannot be deactivated.
- Confirm that all keys programmed can start the engine after the reprogram procedure. When confirming, wait for **more than 5 seconds** before inserting the next key.
- When the customer does not need to register more than two keys, the following procedures can be stopped after programming two keys.
- If the engine is started during the key registration procedure, the key registration mode will be erased. Therefore, do not start the engine until the key registration procedure for all the necessary keys is finished.
- A maximum of 8 keys can be programmed for one vehicle.
- To start the engine, two or more keys need to be programmed.

Key Addition
When the customer has two or more valid keys



A6E8122W003

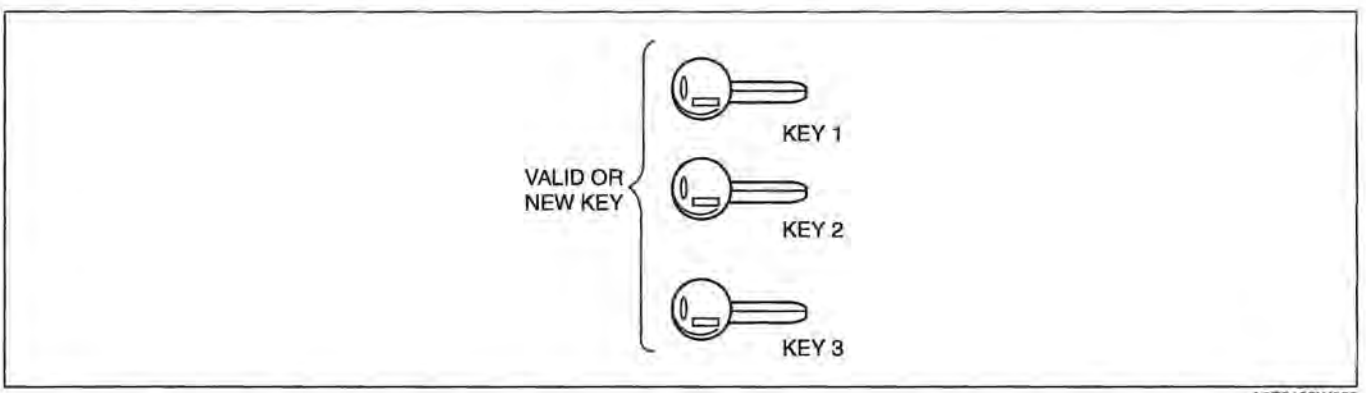
1. Cut new transponder-equipped key(s).
2. Using key 1, turn ignition switch to ON position.
   (1) Observe illumination of security light in instrument cluster.
   (2) After the security light turns off (after approx. 3 seconds from when ignition switch is turned to the ON position), turn key 1 to the LOCK position **within approx. 4 seconds** and remove it from the steering lock.
3. Repeat Step 2 with key 2.
4. Repeat Step 2 with key 3.
5. If there are 4—8 keys (new keys), repeat Step 2.
6. Verify that the engine starts using the programmed key.

When the customer has only one or no valid key

- If only one or no valid key is available, use the **SST** (WDS or equivalent) to register additional keys. (See 09–14–40 Key registration using SST (WDS or equivalent))

Key registration using SST (WDS or equivalent)

Note
- Additional keys can be programmed without having to erase the key codes already programmed.
- If 8 keys have already been programmed, this procedure cannot be used to register a key. To register a key under this condition, it is necessary to first erase all the key codes. (See 09–14–41 Key Replacemer

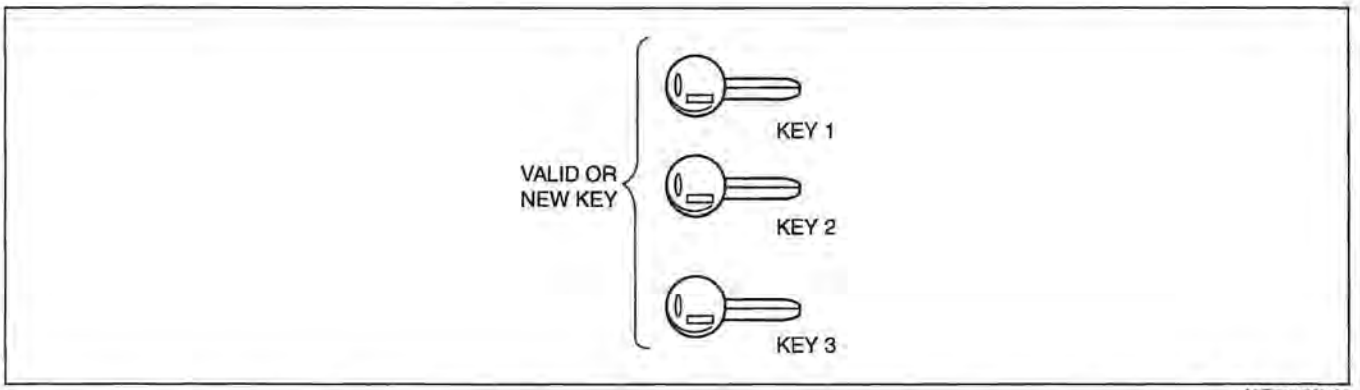


A6E8122W002

1. Cut new transponder equipped key(s) if necessary.
2. Connect the **SST** (WDS or equivalent).
3. Using key 1, turn ignition switch to the ON position.
   - Valid key: The security light illuminates, then turns off after **approx. 3 seconds**.
   - New key: The security light flashes rapidly for **approx. 1 minute** and start displaying the DTC 15 (WDS or equivalent: DTC B1601).
   (1) Perform security access approval. (See 09–14–42 Security Access Procedure.)
   (2) Select "Program additional ignition key".
   (3) Turn key 1 to the LOCK position and remove from the steering lock.
4. Using key 2, turn ignition switch to the ON position.
   (1) Select "Program additional ignition key".
   (2) Turn key 2 to the LOCK position and remove from the steering lock.
5. If there are 3—8 keys (new keys), repeat Step 4.
6. Verify that the engine starts using the programmed key.

Key Replacement

Note
- Perform this procedure to erase a previously programmed key code and register a new key.
- If a new key code is programmed by following this procedure, the engine will not start using the previously programmed keys. The keys need to be re-programmed.



A6E8122W002

1. Cut new transponder equipped key(s) if necessary.
2. Connect the **SST** (WDS or equivalent).
3. Using key 1, turn ignition switch to the ON position.
   - Valid key: The security light illuminates, then turns off after **approx. 3 seconds.**
   - New key: The security light flashes rapidly for **approx. 1 minute** and start displaying the DTC 15 (WDS or equivalent: DTC B1601).
   (1) Perform security access approval. (See 09–14–42 Security Access Procedure.)
   (2) Select "Ignition Key Code Erase".

   Note
   - Do not select any other command from this menu.

   (3) Turn key 1 to the LOCK position for **more than 1 second**.
   (4) Turn key 1 to the ON position for **more than 3 seconds**.

   Note
   - Security light will remain illuminated as long as key is in the ON position.

   (5) Remove key 1 from the steering lock.

   Note
   - After **approx. 1 minute** security light: DTC 21 (WDS or equivalent: DTC B1213) is output

4. Using key 2, turn ignition switch to the ON position for **more than 3 seconds**. Observe that security light illuminates (for **approx. 3 seconds**).
   (1) Verify that the security light is not illuminated, then turn key 2 to the LOCK position and remove from the steering lock.
5. If there are 3—8 keys (valid and/or new keys), repeat Step 4.
6. Verify that the engine starts using the programmed key.

PCM Replacement

- PCM must be replaced by performing "Programmable Module Installation Procedure." (See 01–40A–24 PCM REPLACEMENT [L3])(See 01–40B–20 PCM CONFIGURATION [L3 WITH TC]) (See 01–40C–23 PCM REPLACEMENT [AJ])
- After PCM replacement, and programmable module installation has been performed, refer to the procedure fo "Key Replacement", and perform key programming. (See 09–14–41 Key Replacement.)

Note

- To start the engine, two or more keys need to be programmed.

Customer Spare Key Programming Without Using SST (WDS or equivalent) Set-up

Note

- With this function, enabling and disabling of the "When the customer has two or more valid keys" function can be set using the **SST** (WDS or equivalent). This function is provided to prohibit drivers from performing the reprogram procedure on vehicles owned by rental car companies or other large vehicle fleet owners.

1. Connect the **SST** (WDS or equivalent).
2. Using valid or new key, turn ignition switch to the ON position.
3. Perform security access approval. (See 09–14–42 Security Access Procedure.)
4. Select "Customer Spare Key Programming Enable/Disable".
5. The following chart indicates setting of the customer spare key programming.

X: Applicable
–: Not applicable

Setting	Key registration method	
	Using 2 valid key	Using SST (WDS or equivalent)
Enable (Default)	X	X
Disable	–	X

Note

- At the time of new vehicle delivery, the function is set on "Enable".

Security Access Procedure

Note

- When using the **SST** (WDS or equivalent) to perform "Ignition Key Code Erase" or "Customer Spare Key Programming Enable/Disable", it is necessary to obtain security access approval.

1. Connect the **SST** (WDS or equivalent).
2. Select "Tool box", "Body", "Security", and then "PATS Functions" (in this order).
3. The **SST** (WDS or equivalent) will read out an outcode depending on the designated procedure.

Caution

- **After reading out the outcode, do not turn ignition switch from LOCK to ON position 5 times, otherwise the outcode value will be changed.**

4. Access the Mazda official website to obtain the incode that corresponds to the outcode. Refer to Service Information Ref. No. A001/02 for details of this procedure.
5. Input the incode to the **SST** (WDS or equivalent).
6. Verify that the security access procedure finishes normally.

TRANSMITTER ID CODE REGISTRATION [KEYLESS ENTRY SYSTEM]

E6U091467820W03

Note

- When programming the ID code into a keyless control module, verify that other transmitters are not being operated in the vicinity.

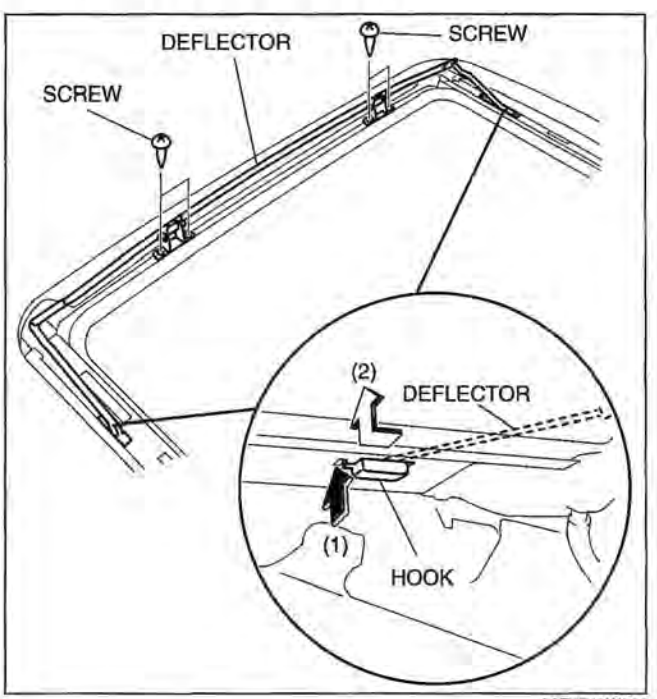
DEFLECTOR REMOVAL/INSTALLATION

E6U091569850W01

1. Fully open the glass panel.
2. Disconnect the negative battery cable.
3. Partially peel back the seaming welt.
4. Remove the following parts:
   (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
5. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
6. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
7. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
8. Remove the (See 09–17–2 HEADLINER REMOVAL/INSTALLATION.)
9. Remove the screws.
10. Disengage the hooks.
    (1) Press the rear end of each hook.
    (2) After sliding the hooks rearward, press them upward.
11. Remove the deflector.
12. Install in the reverse order of removal.



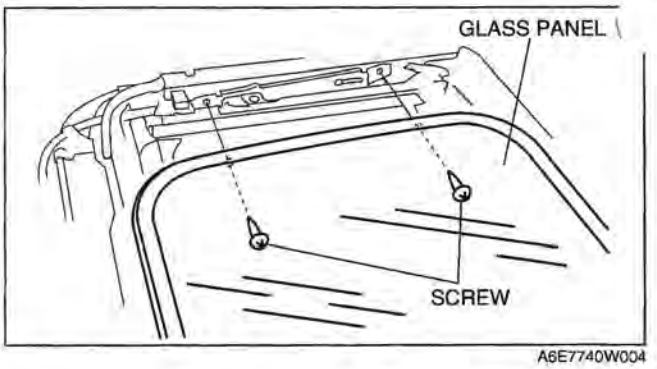
A6E7740W003

09–15

GLASS PANEL REMOVAL/INSTALLATION

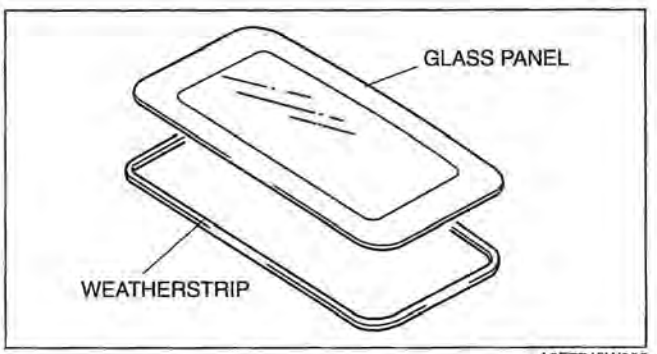
E6U091569850W02

1. Fully close the glass panel.
2. Fully open the sunshade.
3. Remove the screws, and then remove the glass panel.



A6E7740W004

4. Peel the weatherstrip off the glass panel.
5. Install in the reverse order of removal.
6. Adjust the glass panel. (See 09–15–4 GLASS PANEL ADJUSTMENT.)



A6E7740W006

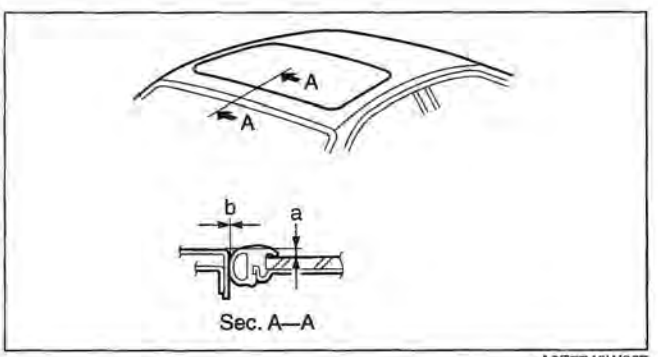
GLASS PANEL ADJUSTMENT

E6U091569850W03

1. Fully close the glass panel.
2. Measure the gap and height between the glass panel and body.
3. If not as specified, loosen the glass panel installation screws and reposition the glass panel.

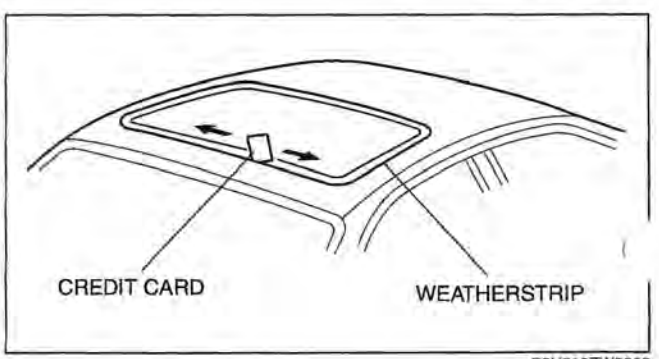
Clearance
a: 2.0—2.2 mm {0.079—0.086 in}
b: 0 mm {0 in}

4. Tighten the installation screws.



A6E7740W007

5. Insert a credit card between the weatherstrip and the body of the vehicle. Verify that the sunroof is shut tightly (there is resistance when the credit card is moved).
   - If the sunroof is not shut tightly, readjust by performing Steps 3 and 4.

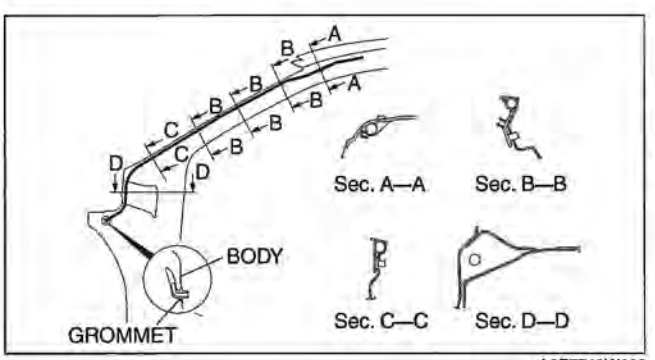


E6U915ZW5002

FRONT DRAIN HOSE REMOVAL

E6U091569920W01

1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
   Remove the following parts:
   (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Disconnect the front drain hose from the sunroof frame.
9. Remove the front drain hose from the clips.
10. Pull the front drain hose into the room side.
11. Remove the front drain hose.



A6E7740W009

09–15

FRONT DRAIN HOSE INSTALLATION

E6U091569920W02

Caution

- **If the front drain hose is pinched or bent anywhere, the water in the hose may not discharge and enter the inside of the vehicle. During and after installation of the trims and the headliner, always make sure there is no interference with the front drain hose. Fix any problem if found.**

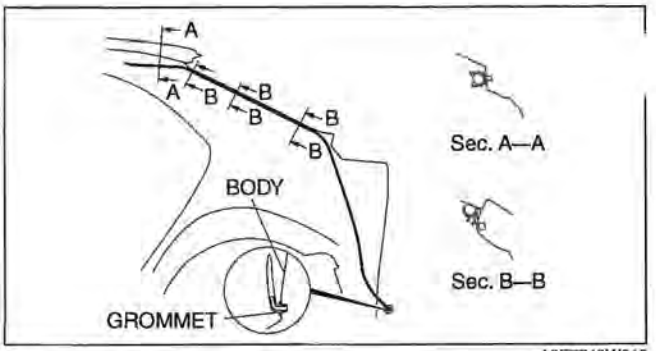
1. Apply soapy water to the front drain hose inserting area.
2. Insert one end (the wider end) of the front drain hose into the sunroof frame.
3. Install the front drain hose to the clips, parallel to the pillar and free of slack.
4. Insert the front drain hose joint into the hinge pillar inner hole.
5. Install the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
6. Install the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Install the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
8. Connect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
9. Install the following parts:
   (1) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (2) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (3) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (4) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (5) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (6) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (7) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (8) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (9) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (10) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (11) Sunroof seaming welt (vehicles with sunroof only)
   (12) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
10. Install the seaming welt.

REAR DRAIN HOSE REMOVAL [SPORT SEDAN, 5-DOOR]

E6U091569920W03

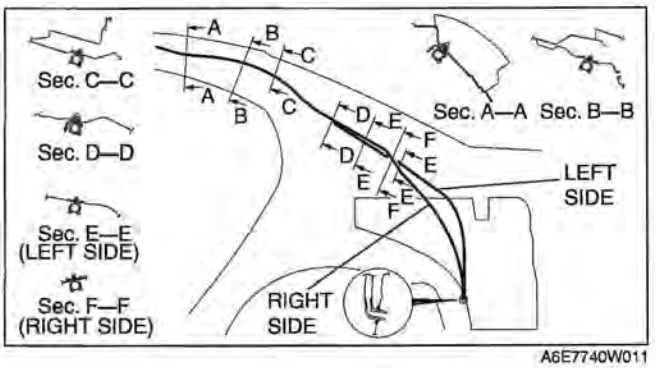
1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
3. Remove the following parts:
   (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Remove the trunk side trim.(See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
9. Remove the trunk side upper trim.(5-DOOR)(See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
10. Disconnect the rear drain hose from the sunroof frame.
11. Remove the rear drain hose from the clips.

SPORT SEDAN



A6E7740W010

5-DOOR



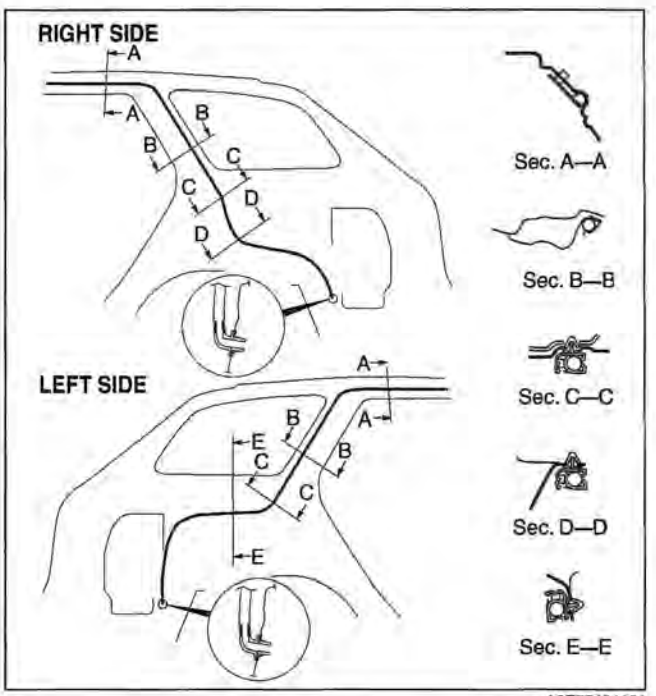
A6E7740W011

12. Pull the rear drain hose into the room side.
13. Remove the rear drain hose.

REAR DRAIN HOSE REMOVAL [SPORT WAGON]

E6U091569920W04

1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
   Remove the following parts:
   (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Remove the trunk side trim.(See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
9. Remove the trunk side upper trim.(See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
10. Disconnect the rear drain hose from the sunroof frame.
11. Remove the rear drain hose from the clips.
12. Pull the rear drain hose into the room side.
13. Remove the rear drain hose.



A6E77401101

REAR DRAIN HOSE INSTALLATION

E6U091569920W05

Caution

- **If the rear drain hose is pinched or bent anywhere, the water in the hose may not discharge and enter the inside of the vehicle. During and after installation of the trims and the headliner, always make sure there is no interference with the rear drain hose. Fix any problem if found.**

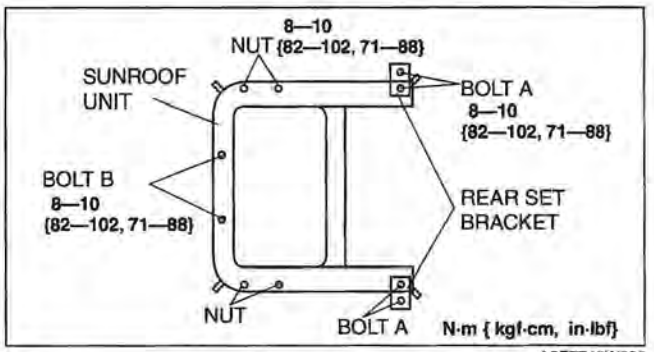
1. Apply soapy water to the rear drain hose inserting area.
2. Insert one end (the wider side) of the rear drain hose into the sunroof frame.
3. Install the rear drain hose to the clips parallel to the pillar and free of slack.
4. Insert the rear drain hose joint into the rear pillar inner hole.
5. Install the trunk side trim.(See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
6. Install the trunk side upper trim (5-DOOR, SPORT WAGON).(See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
7. Install the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Install the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
9. Install the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
10. Connect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
11. Install the following parts:
    (1) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
    (2) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
    (3) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
    (4) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
    (5) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
    (6) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
    (7) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (8) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (9) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
    (10) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
    (11) Sunroof seaming welt (vehicles with sunroof only)
    (12) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
12. Install the seaming welt.

SUNROOF UNIT REMOVAL/INSTALLATION

E6U091569850W04

1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
3. Remove the following parts:
    (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
    (2) Sunroof seaming welt (vehicles with sunroof only)
    (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
    (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
    (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
    (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
    (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
    (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
    (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
    (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Remove the glass panel.(See 09–15–4 GLASS PANEL REMOVAL/INSTALLATION.)
9. Disconnect the front and rear drain hose from the sunroof frame.

10. Remove the bolt A, and then remove the rear set bracket.
11. Remove the bolt B and nuts, and then remove the sunroof unit.
13. Install in the reverse order of removal.
13. Adjust the glass panel. (See 09–15–4 GLASS PANEL ADJUSTMENT.)

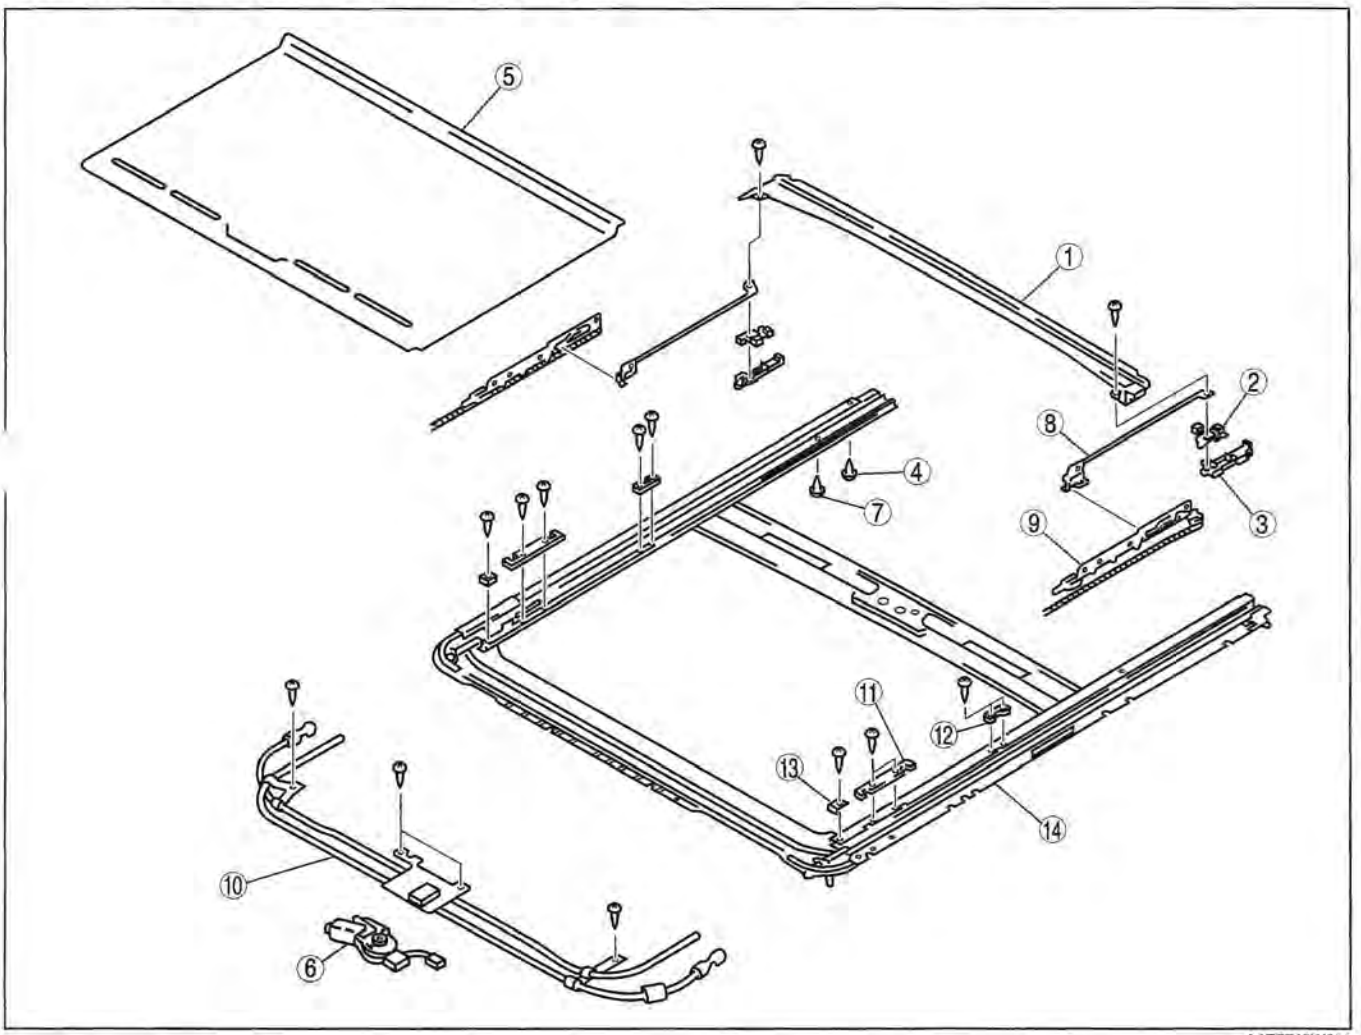


A6E7740W005

SUNROOF UNIT DISASSEMBLY/ASSEMBLY

E6U091569850W05

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.



A6E7740W001

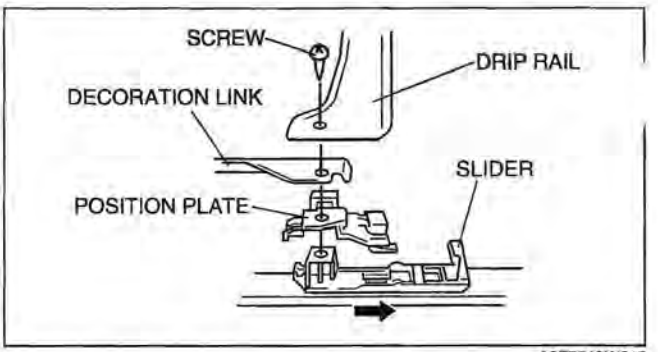
14	Frame

Slider Disassembly Note

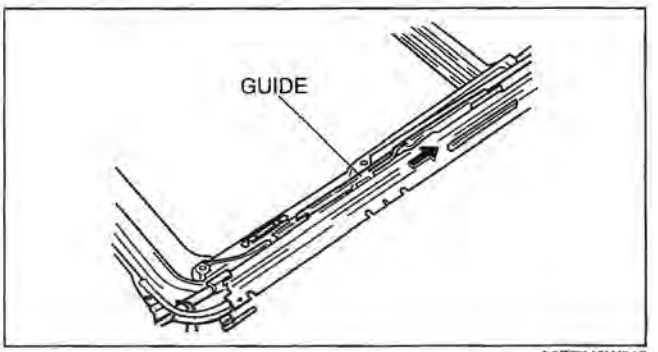
1. Remove the screw.
2. Slide the slider rearward, and remove it from the sunroof frame.



A6E7740W012

Guide Disassembly Note

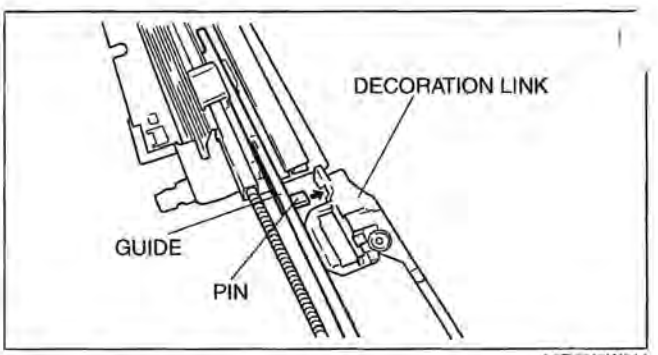
1. Slide the guide rearward, and remove it from the sunroof frame.



A6E7740W013

Decoration Link Assembly Note

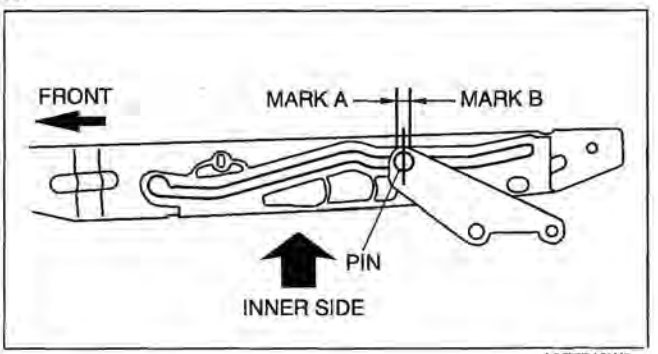
1. Set the pin in the decoration link.



A6E7740W014

Guide Assembly Note

1. Move the guide by hand until it comes to the front stopper.
2. Move the guide by hand until center of pin comes between mark A and B.

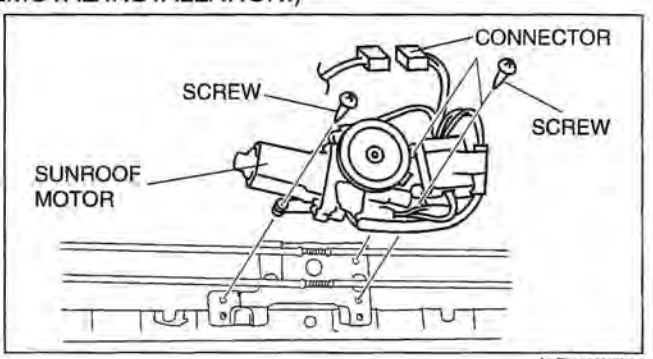


A6E7740W

SUNROOF MOTOR REMOVAL

E6U091569873W01

1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
   Remove the following parts:
   (1) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
8. Disconnect the connector.
9. Remove the screws, and then remove the sunroof motor.



A6E7740W002

SUNROOF MOTOR INSTALLATION

E6U091569873W02

1. Connect the sunroof motor connector.
2. Connect the sunroof switch connector.
3. Connect the negative battery cable.
4. Turn the ignition switch to ON position.
5. Press the CLOSE side of the slide switch until the sunroof motor stops.
6. Disconnect the sunroof switch connector.
7. Install the screws, and then install the sunroof motor.
8. Install the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
9. Install the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
10. Install the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
11. Connect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
12. Install the following parts:
    (1) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
    (2) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
    (3) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
    (4) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
    (5) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
    (6) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
    (7) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
    (8) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
    (9) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
    (10) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
    (11) Sunroof seaming welt (vehicles with sunroof only)
    (12) Microphone (vehicles with car-navigation system)(See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
13. Install the seaming welt.

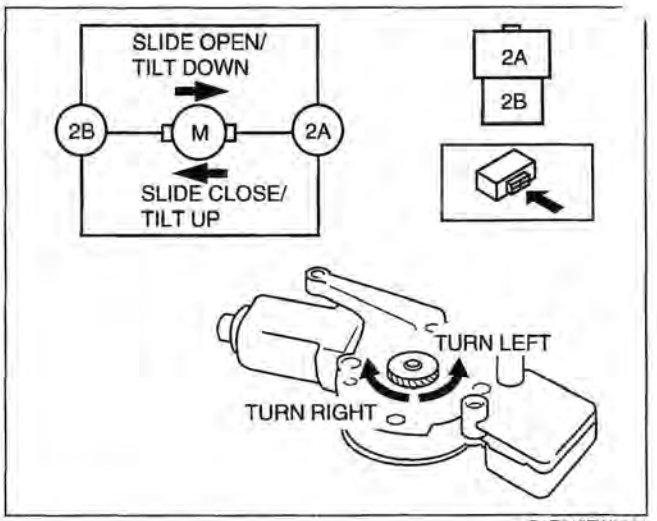
SUNROOF MOTOR INSPECTION

E6U091569873W03

Motor

1. Apply battery positive voltage to the sunroof motor terminals and inspect the operation of the sunroof motor.
   - If not as specified, replace the sunroof motor.

Connection		Motor operation
2A	2B	
B+	GND	Turn left (Slide close/Tilt up)
GND	B+	Turn right (Slide open/Tilt down)



D6E915ZW5001

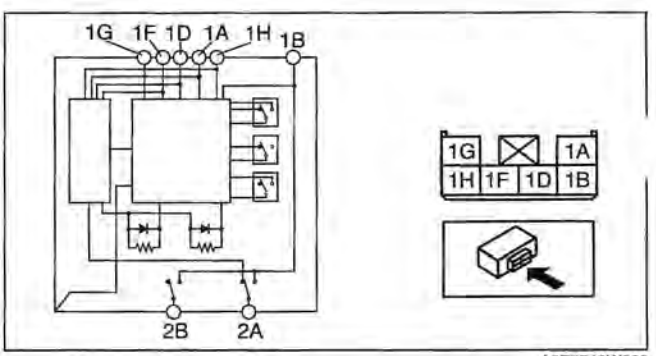
Limit Switch

1. Inspect for continuity between the sunroof motor terminals using an ohmmeter.
   - If not as specified, replace the sunroof motor.

O—O : Continuity

Glass panel position	Terminal						
	1A	1D	1F	1H	GND	2A	2B
Fully open			O		O	O	
Fully closed	O	O		O			O
Fully tilt up				O	O		O

A6E7740W021



A6E7740W020

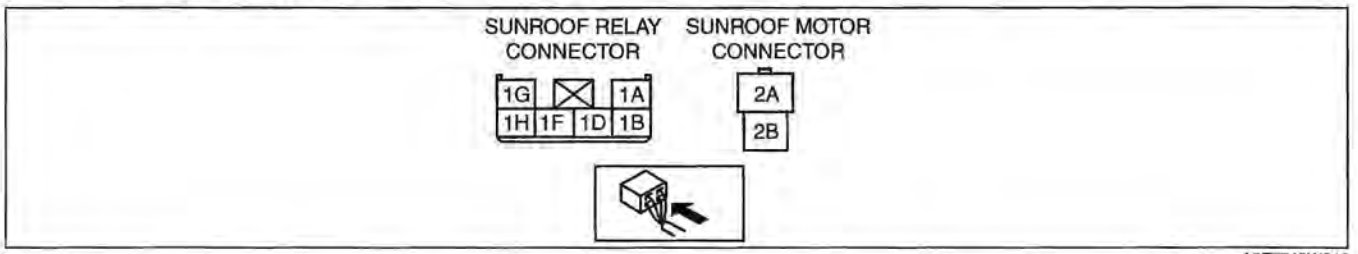
SUNROOF RELAY INSPECTION

E6U091569873W04

Note
- Sunroof relay is built in the sunroof motor.

1. Measure the voltage at the sunroof relay terminals as indicated below.
2. Disconnect the sunroof relay connector before inspecting for continuity at terminal 1G
   - If not as specified, inspect the parts listed under "Action" and the related wiring harnesses.
   - If the parts and wiring harnesses are okay but the system still does not work properly, replace the sunroof relay.

Terminal voltage list (Reference)



A6E7740W019

Terminal	Signal	Connected to	Test condition	Voltage (V)/ Continuity	Action
1A	Tilt down	Sunroof switch	Sunroof is tilting down. (Not including position when fully closed)	0	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect related harness
			Other	B+	
1B	IG2	Sunroof motor	Ignition switch is at ON position.	B+	• Inspect A/C 15 A fuse • Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect related harness
			Other	0	
1C	—	—	—	—	—
1D	Slide close	Sunroof switch	Sunroof is closing. (Including position when fully closed and open)	0	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect related harness
			Other	B+	
1E	—	—	—	—	—
1F	Slide open	Sunroof switch	Sunroof is fully opening.	0	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect related harness
			Other	B+	
1G	Sunroof relay ground	GND	Under any condition: inspect for continuity to ground.	Yes	• Inspect related harness
1H	Tilt up	Sunroof switch	Sunroof is tilting up. (Including position when fully closed)	0	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect related harness
			Other	B+	
2A	Slide close/ tilt up	Sunroof motor	Sunroof is opening/tilting down.	0	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect sunroof motor (See 09–15–12 SUNROOF MOTOR INSPECTION) • Inspect related harness
			Sunroof is closing/tilting up.	B+	
			Other	0	
2B	Slide open/tilt down	Sunroof motor	Sunroof is opening/tilting down.	B+	• Inspect sunroof switch (See 09–15–14 SUNROOF SWITCH INSPECTION) • Inspect sunroof motor (See 09–15–12 SUNROOF MOTOR INSPECTION) • Inspect related harness
			Sunroof is closing/tilting up.	0	
			Other	0	

SUNROOF SWITCH REMOVAL/INSTALLATION

E6U091566560W01

Note
- The sunroof switch is together with the front map light.

1. Disconnect the negative battery cable.
2. Remove the front map light from the headliner.(See 09–18–27 FRONT MAP LIGHT REMOVAL/ INSTALLATION.)
3. Install in the reverse order of removal.

SUNROOF SWITCH INSPECTION

E6U091566560W02

1. Inspect for continuity between the sunroof switch terminals using an ohmmeter.
   - If not as specified, replace the sunroof switch.

O—O : Continuity

Switch position	Terminal						
	1A	1D	1F	1G	1H	1B	2D
Slide open			O—O			O—O	
Slide closed		O——		O		O—O	
Tilt up				O—O		O—O	
Tilt down	O——			O		O—O	
Off						O—O

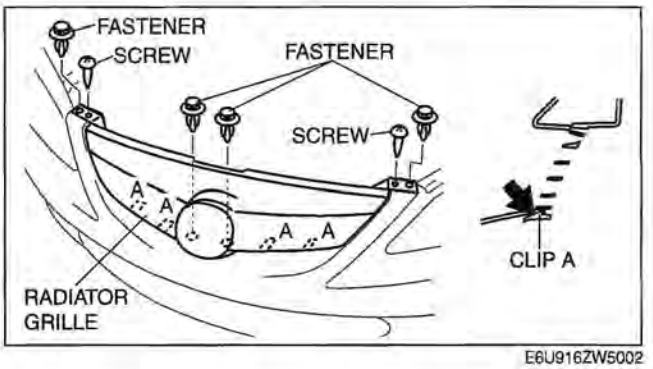
RADIATOR GRILLE REMOVAL/INSTALLATION

E6U091650710W01

Standard Type

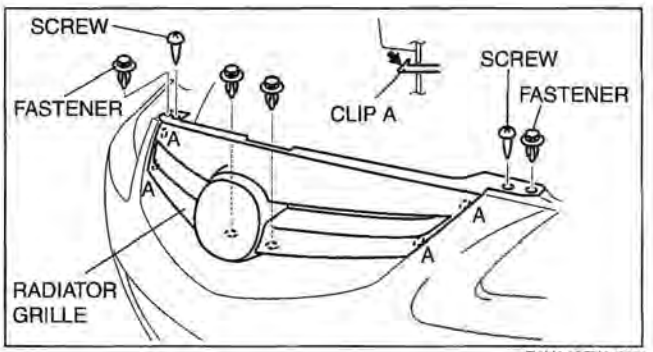
1. Remove the screws.
   Remove the fasteners.
2. Press clips A in the direction of the arrow, pull the radiator grille outward, and remove it from the front bumper.
3. Install in the reverse order of removal.



E6U916ZW5002

Sport Type

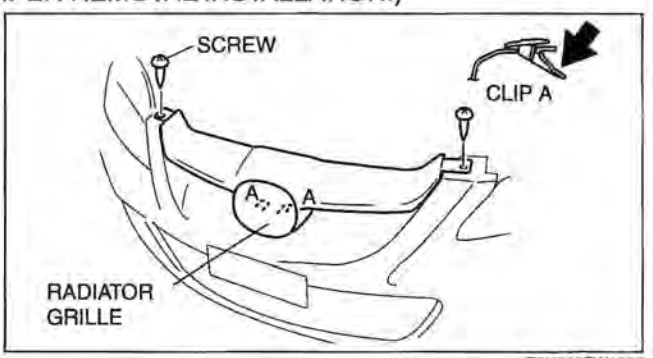
1. Remove the screws.
2. Remove the fasteners.
3. Press clips A in the direction of the arrow, pull the radiator grille outward, and remove it from the front bumper.
4. Install in the reverse order of removal.



E6U916ZW5003

With TC

1. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
2. Remove the screws.
3. Press clips A in the direction of the arrow, pull the radiator grille outward, and remove it from the front bumper.
4. Install in the reverse order of removal.



E6U916ZW1005

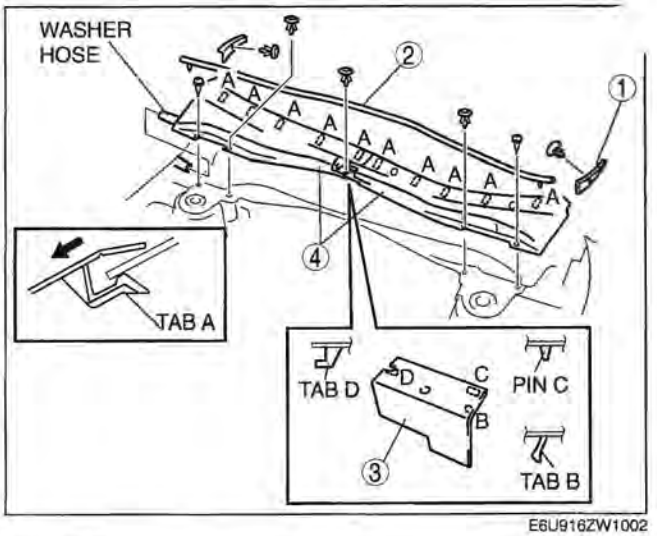
COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC]

E6U091650710W10

1. Remove the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Front fender molding
2	Weatherstrip
3	Cover
4	Cowl grille

3. Remove the washer nozzle. (See 09–19–11 WINDSHIELD WASHER NOZZLE REMOVAL/ INSTALLATION [L3 WITH TC].)
4. Install in the reverse order of removal.



E6U916ZW1002

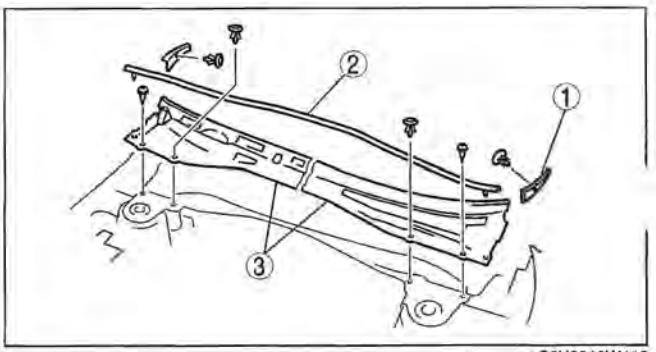
COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC]

E6U091650710W02

1. Remove the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Front fender molding
2	Weatherstrip
3	Cowl grille

3. Install in the reverse order of removal.

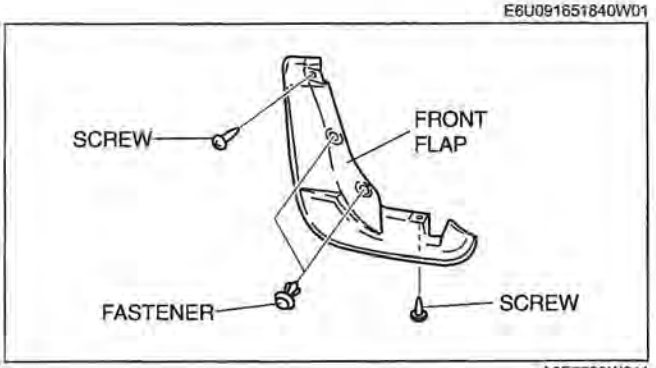


C6U0916W116

FRONT FLAP REMOVAL/INSTALLATION

E6U091651840W01

1. Remove the screws and fasteners.
2. Remove the front flap.
3. Install in the reverse order of removal.

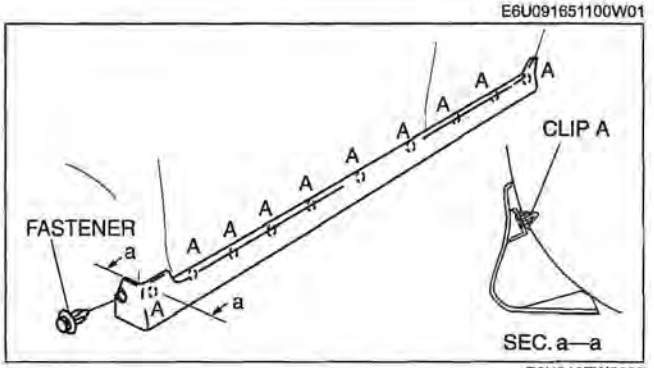


A6E7728W011

SIDE STEP MOLDING REMOVAL/INSTALLATION

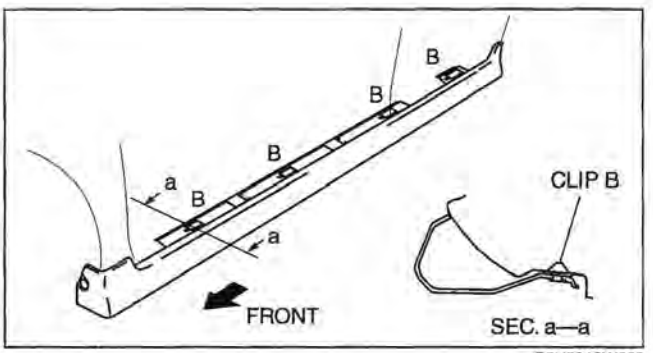
1. Remove the fastener.
2. Pull the side step molding outward, then disengage clips A from the body.

E6U091651100W01



E6U916ZW5005

3. Slide the side step molding towards the front of the vehicle and remove clips B from the molding.
4. Remove the side step molding.
5. Install in the reverse order of removal.



B6U0916W002

SIDE PROTECTOR REMOVAL

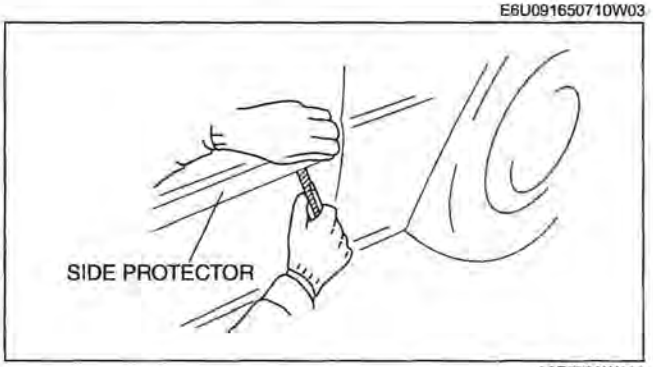
1. Pry the side protector end **20—30 mm {0.8—1.1 in}** using a flathead screwdriver or a razor.

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note
- The side protector is installed with double-sided adhesive tape. If the side protector is difficult to remove, soften the double-sided adhesive tape using a hot air blower.

2. Pull the side protector outward, then remove it.

E6U091650710W03



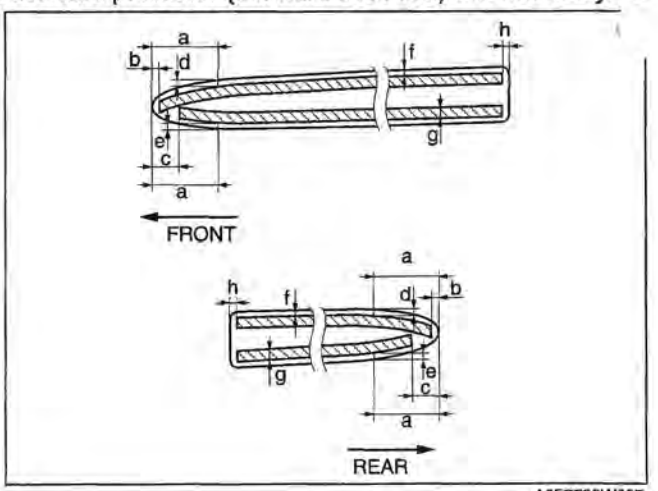
A6E7728W006

SIDE PROTECTOR INSTALLATION

E6U091650710W04

1. Remove the adhesive remaining on the side protector (if it will be reused) and the body using a razor.
2. Remove any grease or dirt from the adhesion surface of the side protector (if it will be reused) and the body.
3. Attach double-sided adhesive tape to the side protector as shown (if it will be reused).

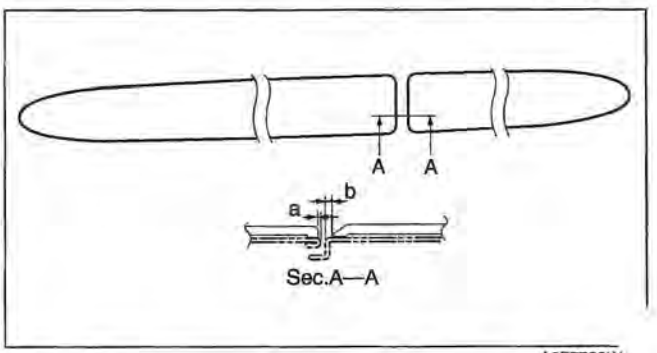
Clearance
- **a: 50.0 mm {1.97 in}**
- **b: 2.0 mm {0.79 in}**
- **c: 12.0 mm {0.47 in}**
- **d: 3.0 mm {0.11 in}**
- **e: 3.0 mm {0.11 in}**
- **f: 1.0—3.0 mm {0.04—0.11 in}**
- **g: 5.0 mm {0.19 in}**
- **h: 1.0 mm {0.04 in}**



A6E7728W007

4. Peel off the backing of the double-sided adhesive tape and attach the side protector onto the body as shown.

Clearance
- **a: 1.2—4.2 mm {0.05—0.16 in}**
- **b: 3.2—6.2 mm {0.13—0.24 in}**



A6E7726W

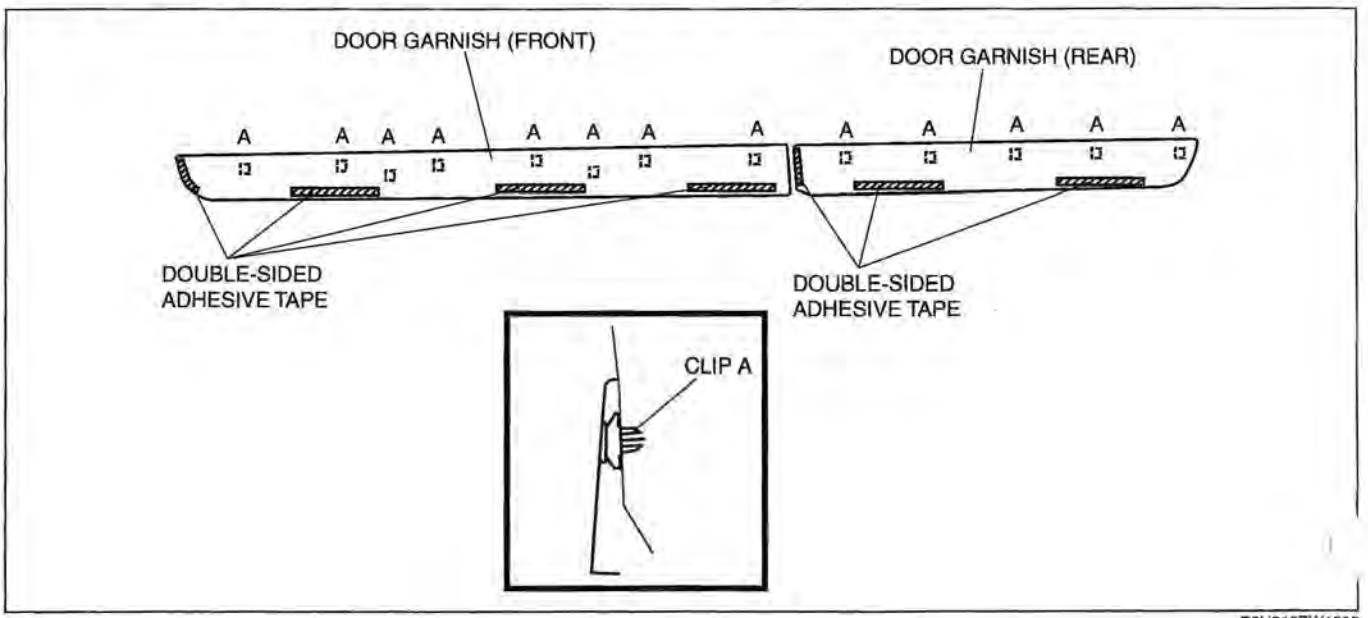
DOOR GARNISH REMOVAL

E6U091650710W08

1. Cut the double-sided adhesive tape using a razor.

Warning
- **Using a razor with bare hands can cause injury. Always wear gloves when using a razor.**

Note
- The side protector is installed with double-sided adhesive tape. If the side protector is difficult to remove, soften the double-sided adhesive tape using a hot air blower.



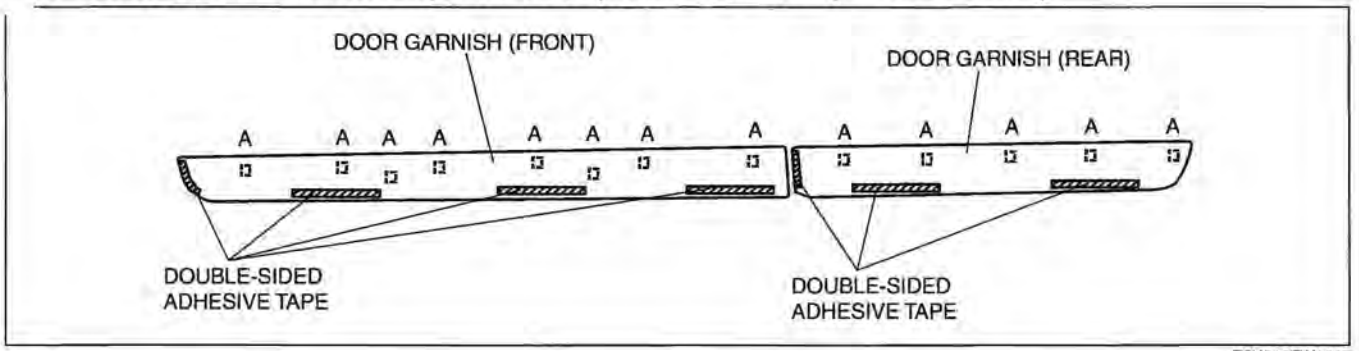
E6U916ZW1006

2. Remove the clip A.
3. Pull the door garnish outward, then remove it.

DOOR GARNISH INSTALLATION

E6U091650710W09

1. Remove the adhesive remaining on the side protector (if it will be reused) and the body using a razor.
2. Remove any grease or dirt from the adhesion surface of the side protector (if it will be reused) and the body. Attach double-sided adhesive tape to the side protector as shown (if it will be reused).



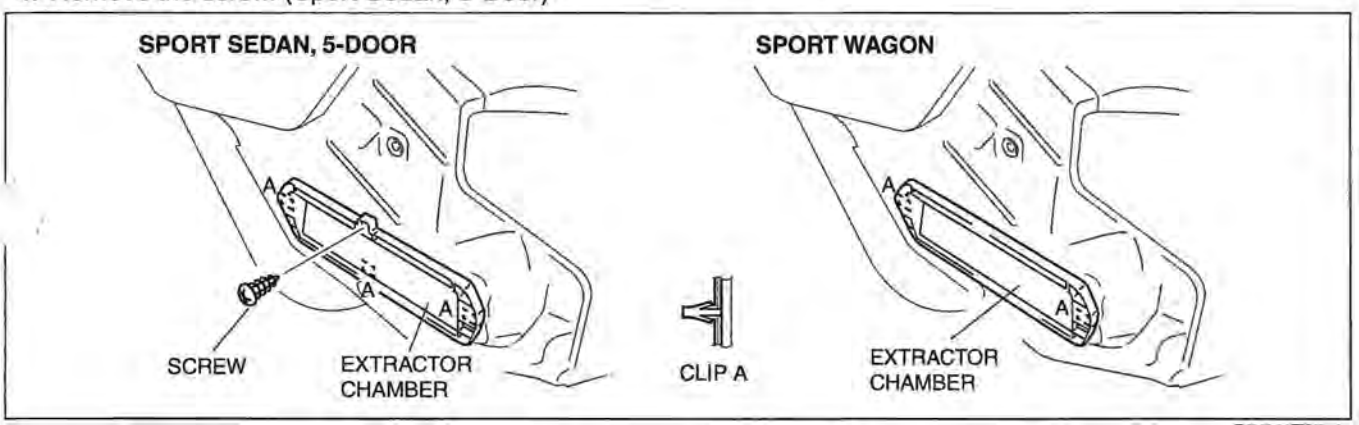
E8U916ZW1007

4. Peel off the backing of the double-sided adhesive tape and attach the door garnish onto the body.

EXTRACTOR CHAMBER REMOVAL/INSTALLATION

E6U091650710W05

1. Remove the trunk side trim. (See09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
2. Remove the rear combination light. (See 09–18–14 REAR COMBINATION LIGHT REMOVAL/INSTALLATION.)
3. Remove the rear bumper. (See 09–10–13 REAR BUMPER REMOVAL/INSTALLATION.)
4. Remove the screw. (Sport Sedan, 5-Door)



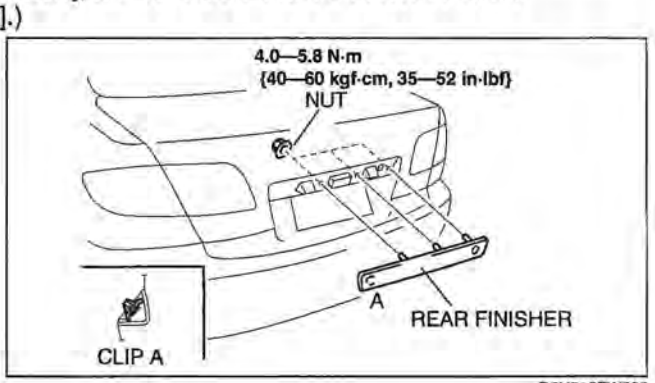
E6U916ZW5000

5. Squeeze the clips A and remove the extractor chamber from the vehicle side.
6. Install in the reverse order of removal.

REAR FINISHER REMOVAL/INSTALLATION

E6U091650030W01

1. Remove the trunk lid trim. (Sport Sedan) (See 09–17–20 TRUNK LID TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
2. Remove the liftgate upper trim, liftgate side trim and liftgate lower trim. (5-Door, Sport Wagon) (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON], 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON], 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the nuts.
4. Pull the rear finisher outward, then disengage clip A from the body.
5. Install in the reverse order of removal.

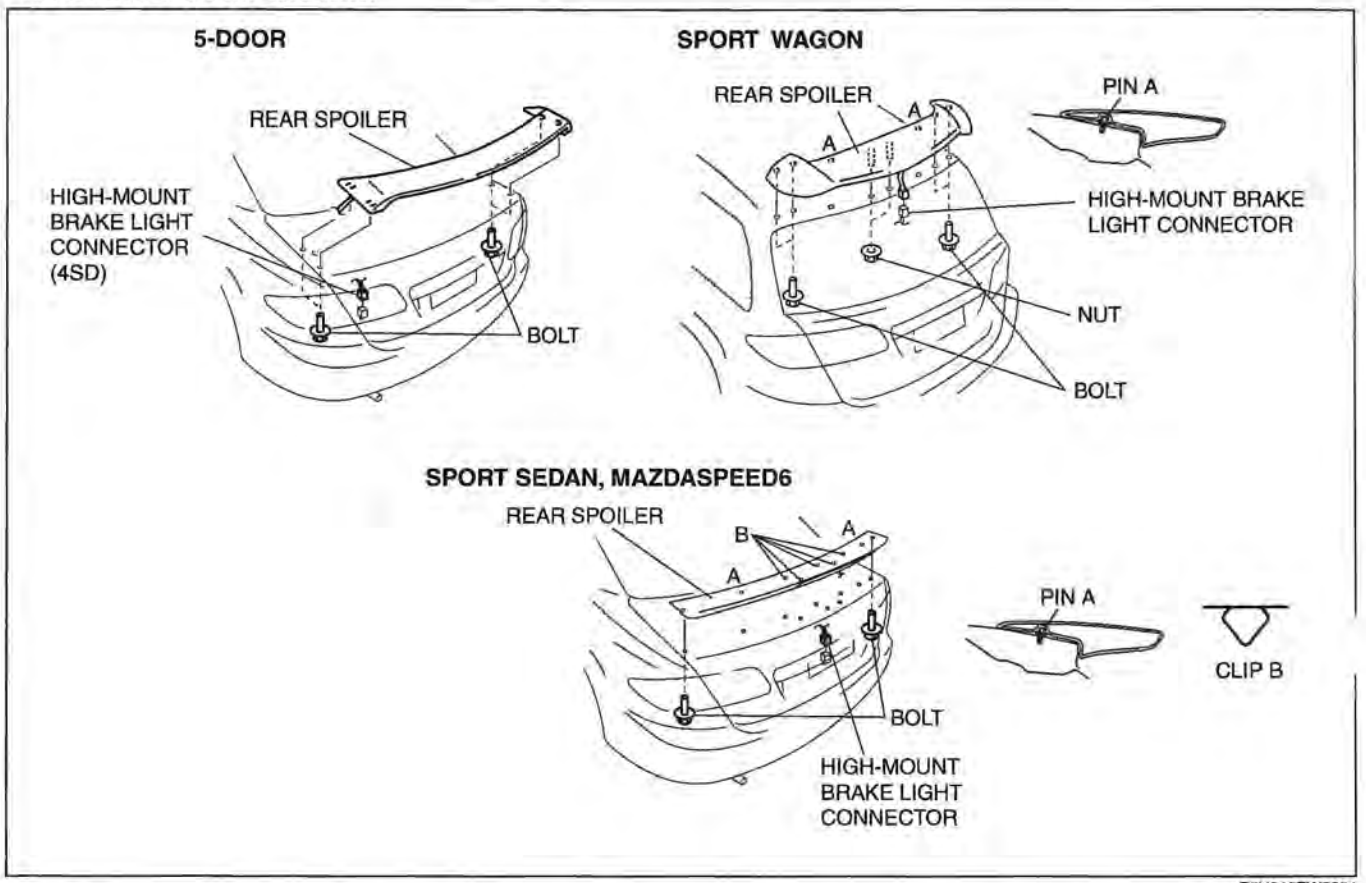


D6U916ZW003

REAR SPOILER REMOVAL/INSTALLATION

E6U091650710W06

1. Remove the trunk lid trim. (Sport Sedan) (See 09–17–20 TRUNK LID TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
2. Remove the liftgate upper trim, liftgate side trim and liftgate lower trim. (5-Door) (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON], 09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON], 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the liftgate upper trim. (Sport Wagon) (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Remove the bolts and nuts.



E6U916ZW5004

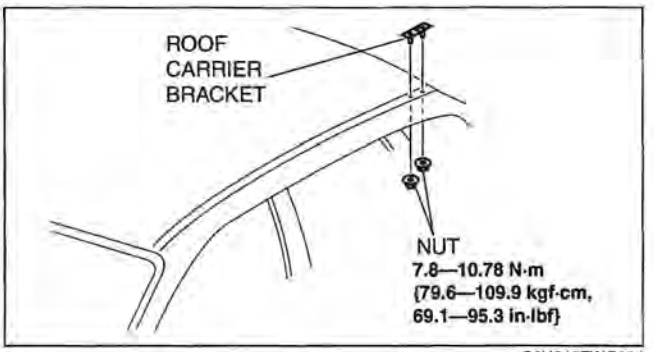
5. Disconnect the high-mount brake light connector. (Sport Sedan, Mazdaspeed6, Sport Wagon)
6. Remove the rear spoiler.
7. Install in the reverse order of removal.

ROOF CARRIER BRACKET REMOVAL/INSTALLATION [SPORT WAGON]

E6U091650710W07

1. Remove the following parts:
   (1) Microphone (vehicles with car-navigation system) (See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
2. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)

3. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
4. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
5. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
   Remove the nuts.
   Remove the roof carrier bracket.
8. Install in the reverse order of removal.



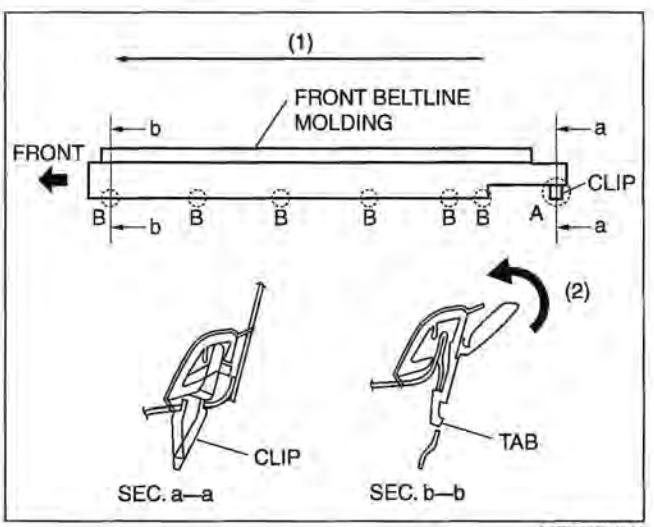
C6U916ZWC004

FRONT BELTLINE MOLDING REMOVAL

E6U091650641W01

Note
- When removing the front beltline molding, the clip may be damaged. If the clip is damaged, replace the front beltline molding with a new one.

1. Pull section A upward and remove the clip.
2. Rotate section B of the front beltline molding in direction (2), along the direction (1) shown in the figure, and remove it from the body.



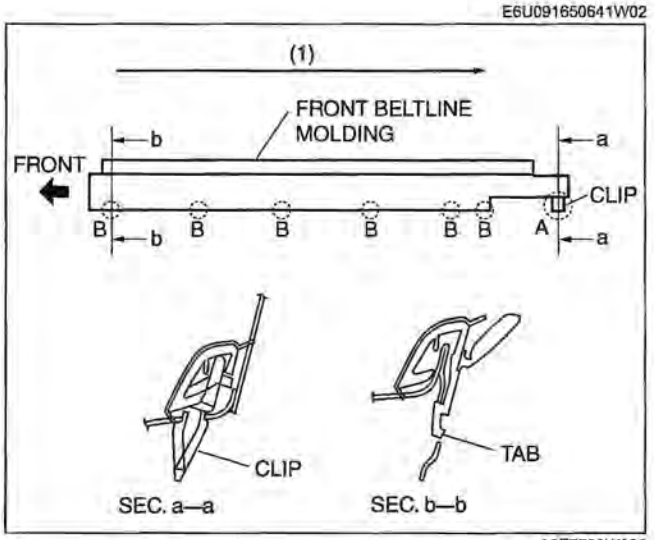
A6E7730W001

FRONT BELTLINE MOLDING INSTALLATION

E6U091650641W02

1. Press the clip into the body.
2. Press in section B of the front beltline molding along the direction (1) shown in the figure to attach it to the body.

Note
- If the front beltline molding is difficult to attach, apply soapy water.



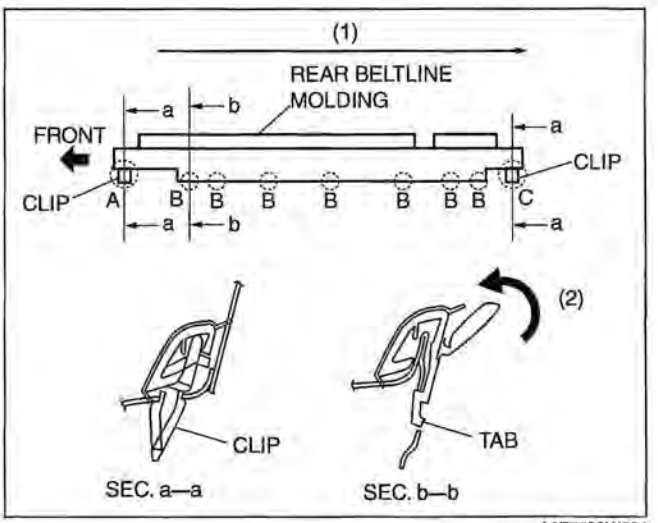
A6E7730W003

REAR BELTLINE MOLDING REMOVAL

E6U091650641W03

Note
- When removing the rear beltline molding, the clip may be damaged. If the clip is damaged, replace the rear beltline molding with a new one.

1. Pull section A upward and remove the clip.
2. Rotate section B of the rear beltline molding in direction (2), along the direction (1) shown in the figure and remove it from the body.
3. Pull section C upward and remove the clip. Then remove the rear beltline molding.



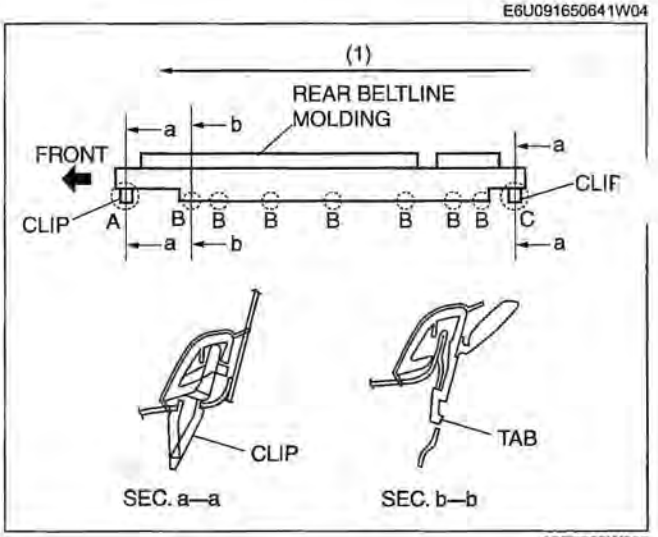
A6E7730W004

REAR BELTLINE MOLDING INSTALLATION

E6U091650641W04

1. Press the clip at section C into the body.
2. Press in section B of the rear beltline molding along the direction (1) to attach it to the body.
3. Press the clip at section A in and attach the rear beltline molding.

Note
- If the rear beltline molding is difficult to attach, apply soapy water.

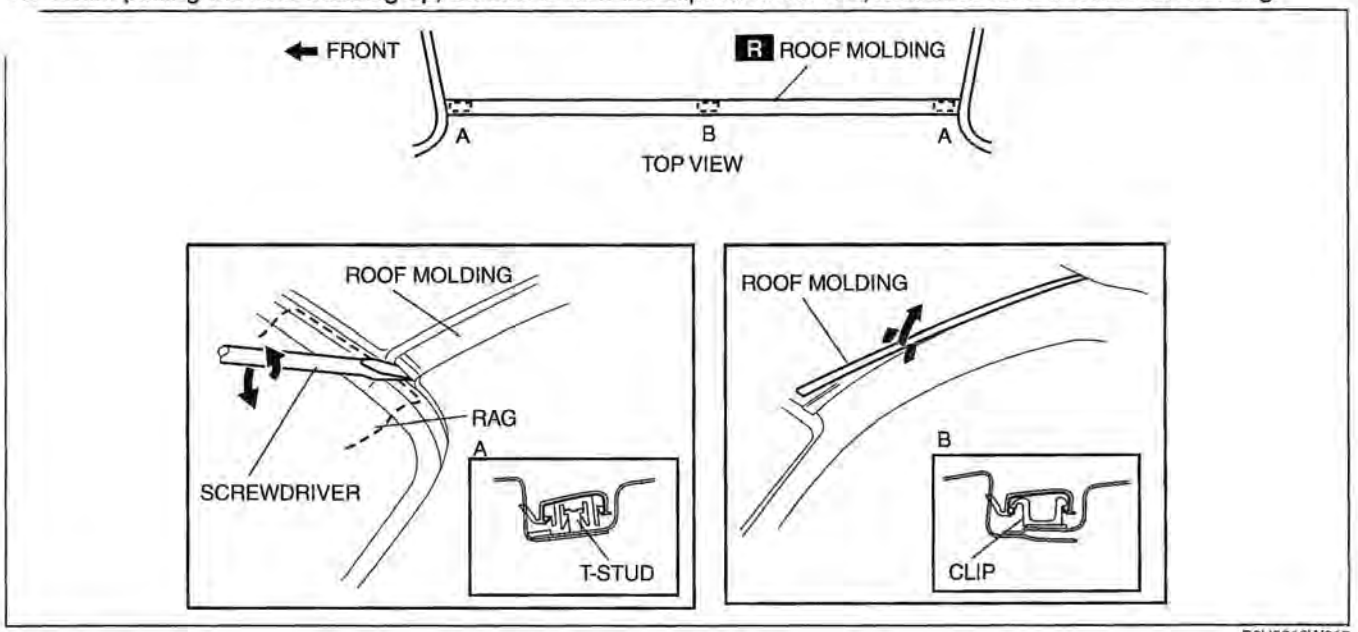


A6E7730W005

ROOF MOLDING REMOVAL

E6U091650641W05

1. Detach the T-stud which secure sections A of roof molding, using a screwdriver or equivalent tool.
2. While pulling the roof molding up, detach it from the clips at section B, and then remove the roof molding.

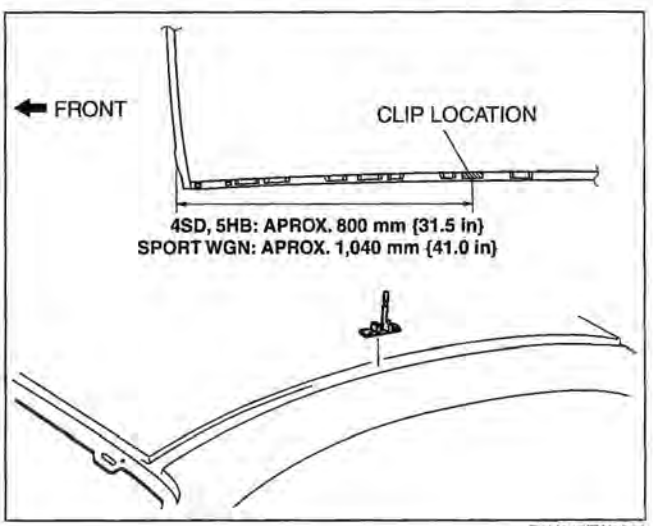


B6U0916W015

ROOF MOLDING INSTALLATION

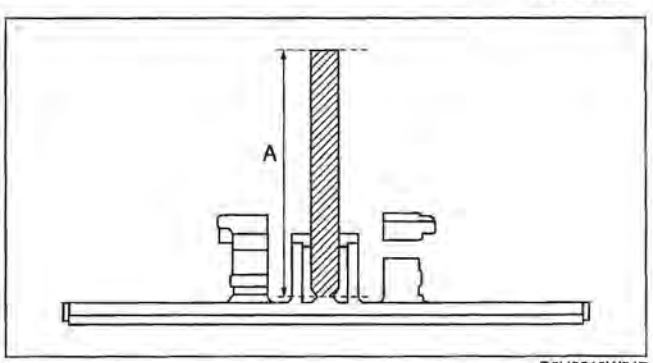
E6U091650641W06

1. Follow the following procedure when installing a new clip.
   (1) Remove the faulty clip.
   (2) Clean and degrease the area of the roof panel where the clip will be affixed.
   (3) If the temperature is **less than 20 °C {68 °F}**, warm the clip installation surface to **20 °C—40 °C {68—104 °F}** using a hot air blower.
   (4) Peel off the backing of the double-sided adhesive tape of the clip.
   (5) Install the clip by pressing it on the vehicle.



E6U916ZW5006

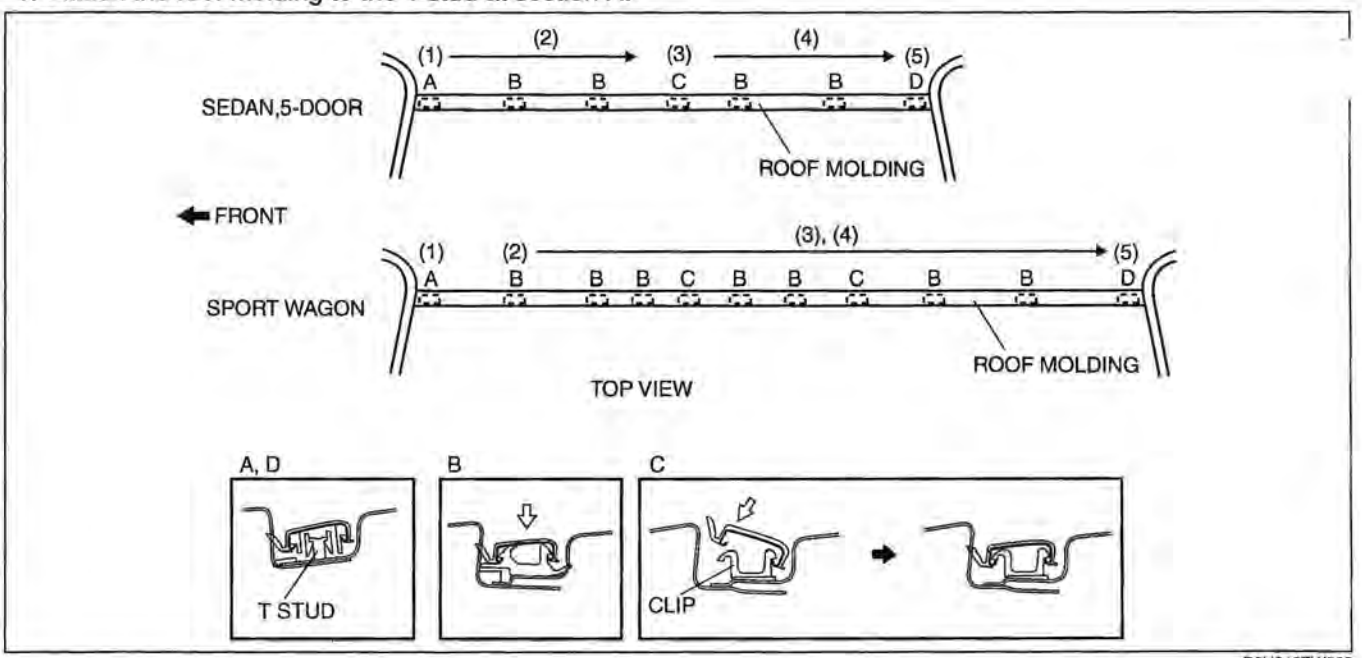
   (6) Remove section A of the clip.



B6U0916W017

Vehicle with T-stud

1. Attach the roof molding to the T-stud at section A.

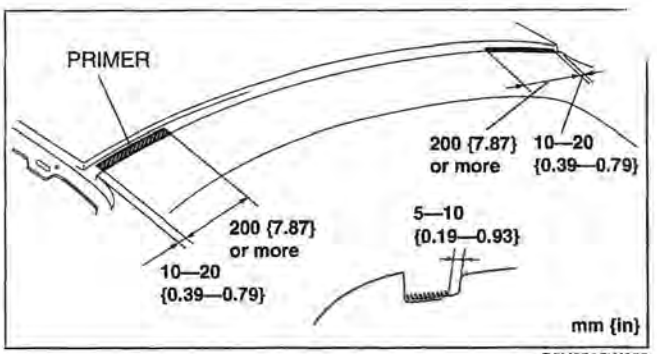


D6U916ZW005

2. Press in the roof molding following the arrows.
3. Hook the roof molding to the clip, and then press it in to attach the roof molding to the clip.
4. Press in the roof molding following the arrows.
5. Attach the roof molding to the T-stud at section D.

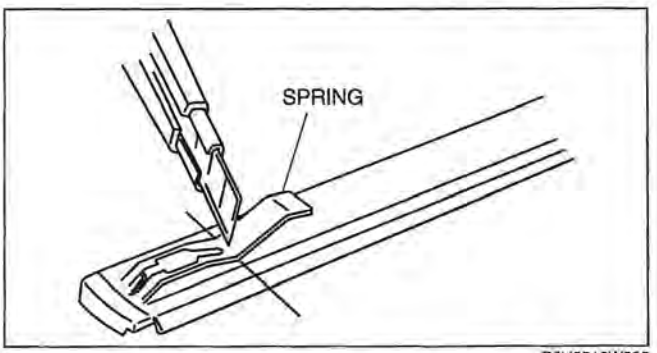
Vehicle without T-stud (When replacing roof panel)

1. Apply primer to the areas of the roof panel indicated in the figure.



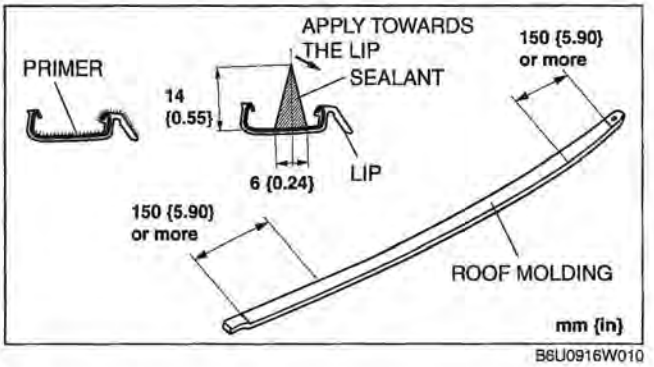
B6U0916W008

2. Cut the spring off of the front and rear ends of the roof molding.
3. Apply primer to the areas of the roof molding indicated in the figure.



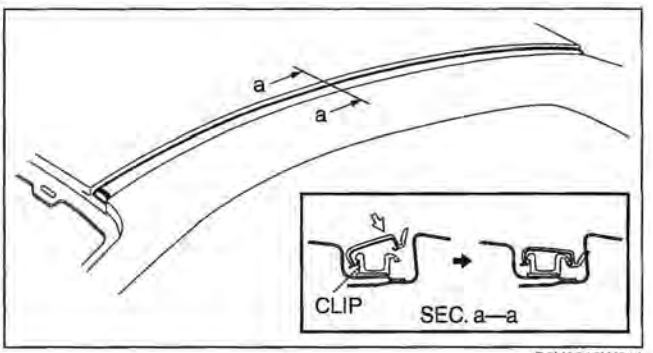
B6U0916W009

4. Apply sealant to the areas of the roof molding indicated in the figure.



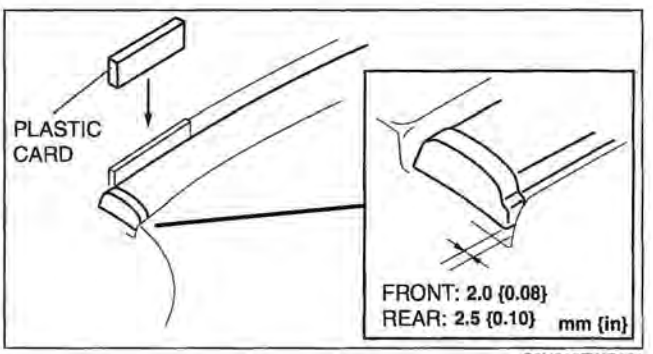
B6U0916W010

5. Install the roof molding to the clips as shown in the figure.



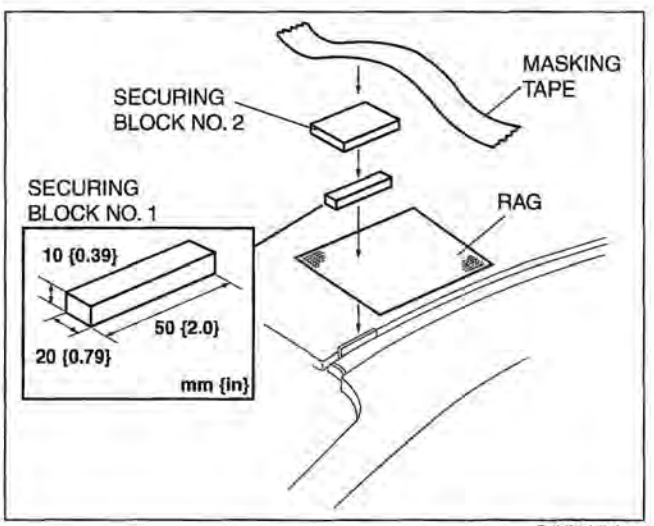
B6U0916W011

6. Use a plastic card (**10 mm {0.39 in}** width, **30 mm {1.18 in}** length) to adjust the front and rear gaps of the roof molding.



C6U916ZWC101

7. Secure the front and rear ends of the roof molding as shown in the figure.
8. After the adhesive material has hardened, remove the securing parts.



B6U0916W013

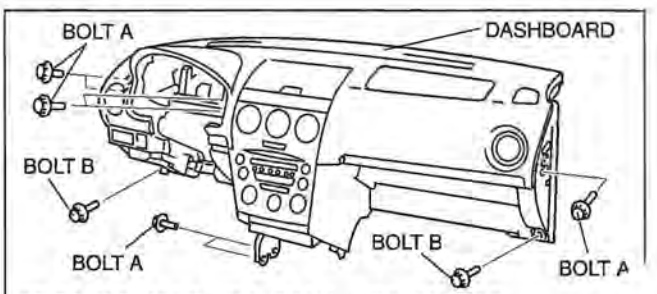
DASHBOARD REMOVAL/INSTALLATION

E6U091755000W02

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Glove compartment (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
   (2) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (3) Meter hood (See 09–17–6 METER HOOD REMOVAL/INSTALLATION.)
   (4) Instrument cluster (See 09–22–3 INSTRUMENT CLUSTER REMOVAL/INSTALLATION.)
   (5) Column cover (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   (6) Driver-side air bag module (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
   (7) Steering wheel (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (8) Combination switch (See 09–18–19 COMBINATION SWITCH REMOVAL/INSTALLATION.)
   (9) Lower panel (See 09–17–7 LOWER PANEL REMOVAL/INSTALLATION.)
   (10) Steering shaft (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
   (11) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (12) Front scuff plates (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (13) Front side trims (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (14) Side panels (See 09–17–6 SIDE PANEL REMOVAL/INSTALLATION.)
3. For vehicles equipped with the wire-type climate control unit, disconnect the wires for the front A/C unit. (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].) (See 07–40–30 CLIMATE CONTROL UNIT INSTALLATION [L3, AJ].) (See 07–40–31 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
4. Disconnect the dashboard harness connectors.
5. Remove the bolts.

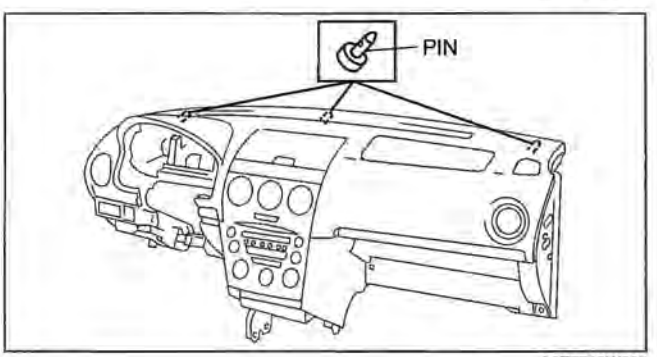


BOLT A: **18.6—25.5 N·m {1.9—2.6 kgf·m, 13.2—18.8 ft·lbf}**
BOLT B: **2.1—2.9 N·m {21—30 kgf·cm, 19—26 in·lbf}**

C6U0917W121

6. Pull out the support pins from the body to remove the dashboard.

   Warning
   - **Removing the dashboard without supporting it can be dangerous. The dashboard may fall and injure you. Always perform these procedures together with at least another person.**



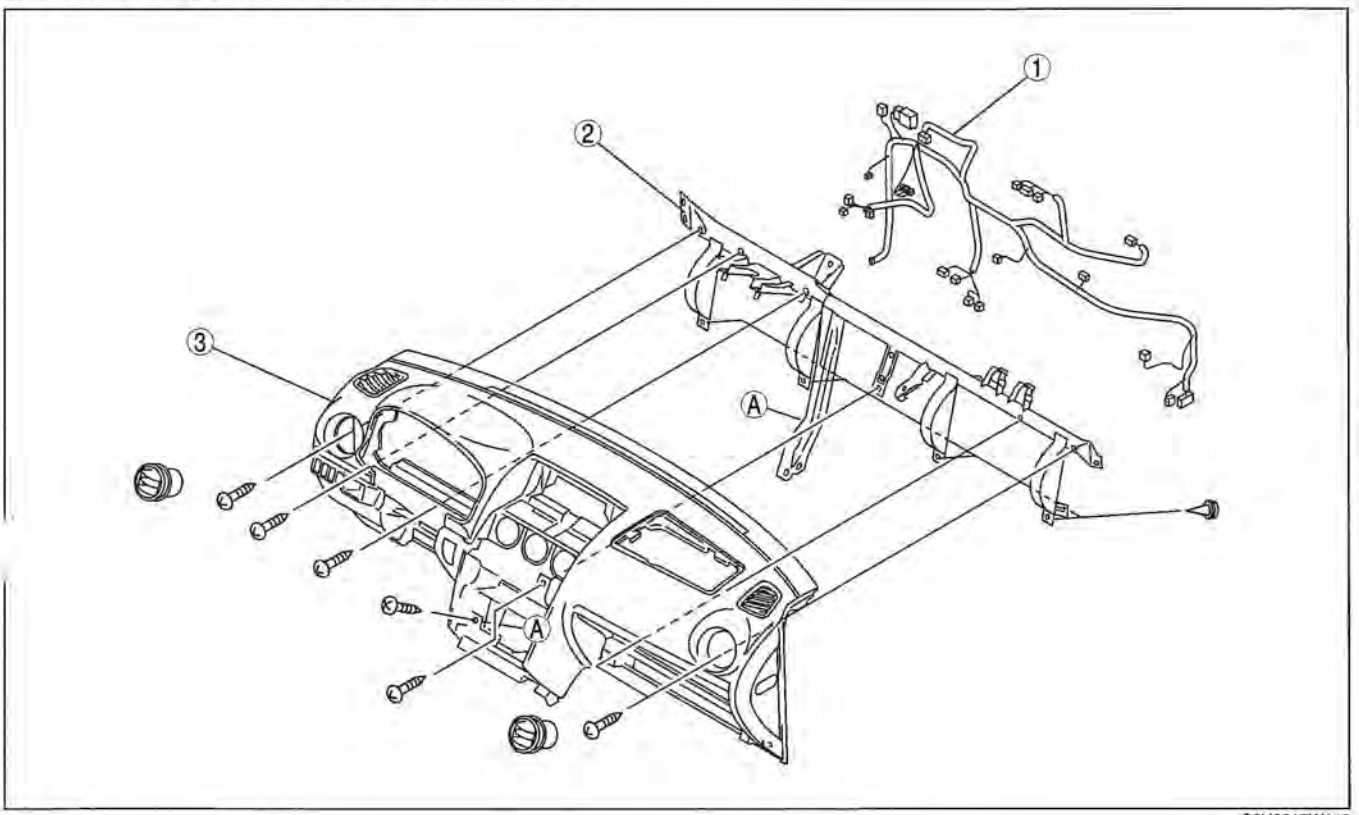
A6E7742W005

7. Take the dashboard off from the driver-side door opening.
8. Install in the reverse order of removal.

DASHBOARD DISASSEMBLY/ASSEMBLY

E6U091755000W03

1. Remove the following parts:
   (1) Passenger-side air bag module (See 08–10–7 PASSENGER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
   (2) Ventilator grilles
   (3) Center panel unit (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
   (4) LCD unit (vehicles with car-navigation system) (See 09–20–6 LCD UNIT REMOVAL/INSTALLATION.)
   (5) Center box (vehicles without car-navigation system) (See 09–17–9 CENTER BOX REMOVAL/INSTALLATION.)
   (6) Climate control unit (See 07–40–30 CLIMATE CONTROL UNIT REMOVAL [L3, AJ].) (See 07–40–31 CLIMATE CONTROL UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
2. Disassemble in the order indicated in the table.
3. Assemble in the reverse order of disassembly.



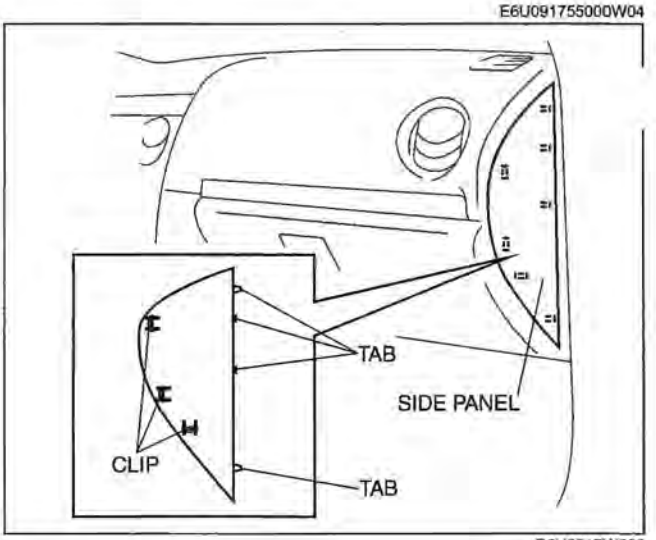
C6U0917W119

1	Dashboard wiring harness
2	Dashboard member
3	Dashboard

SIDE PANEL REMOVAL/INSTALLATION

1. Disengage clips using a tape-wrapped flathead screwdriver.
2. Pull the side panel outward, then disengage tabs from dashboard, and remove the side panel.
3. Install in the reverse order of removal.

E6U091755000W04

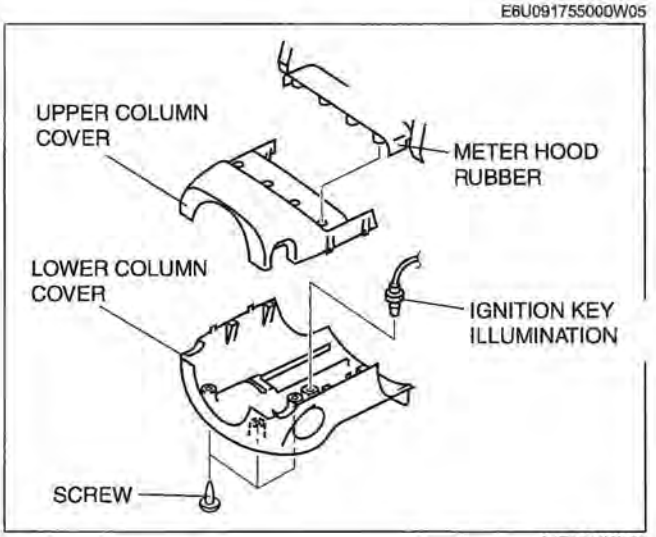


B6U0917W003

COLUMN COVER REMOVAL/INSTALLATION

1. Detach the fitting parts of the upper column cover from the meter hood rubber.
2. Remove the upper column cover.
3. Remove the screws.
4. Remove the lower column cover.
5. Remove the ignition key illumination.
6. Install in the reverse order of removal.

E6U091755000W05

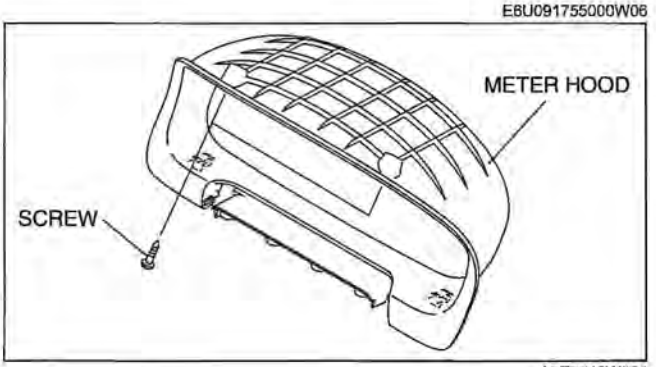


A6E7742W008

METER HOOD REMOVAL/INSTALLATION

1. Remove the screws.
2. Pull the meter hood outward, then detach the column cover.
3. Install in the reverse order of removal.

E6U091755000W06

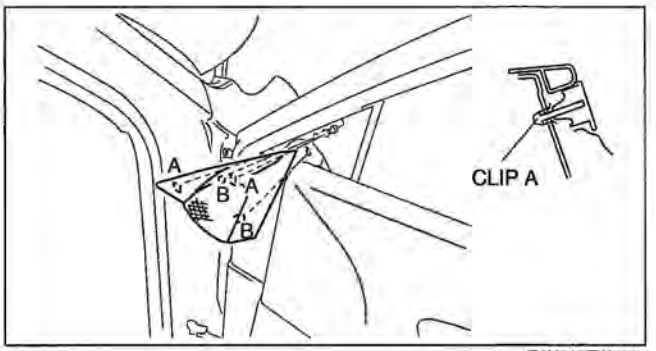


A6E7742W002

INNER GARNISH REMOVAL/INSTALLATION

E6U091755000W10

1. Disconnect the negative battery cable.
2. Pull the inner garnish outward and detach clips A and pins B.
3. Remove the inner garnish.
4. Disconnect the front tweeter connector.
5. Install in the reverse order of removal.

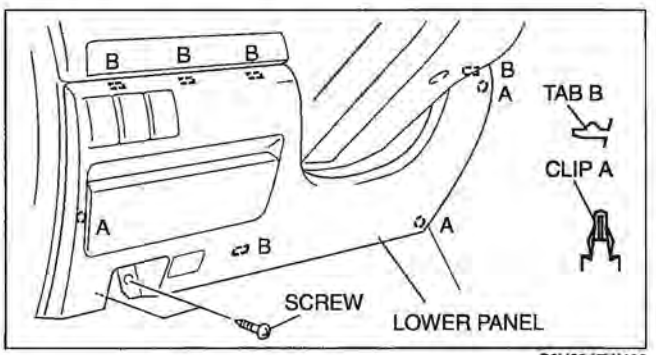


E6U917ZW5007

LOWER PANEL REMOVAL/INSTALLATION

E6U091755000W07

1. Remove the hood release lever. (See 09–10–3 HOOD REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–10–4 HOOD REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the screws.
3. Pull the lower panel outward, disengage clips A and tabs B from the dashboard, and remove the lower panel.
4. Install in the reverse order of removal.

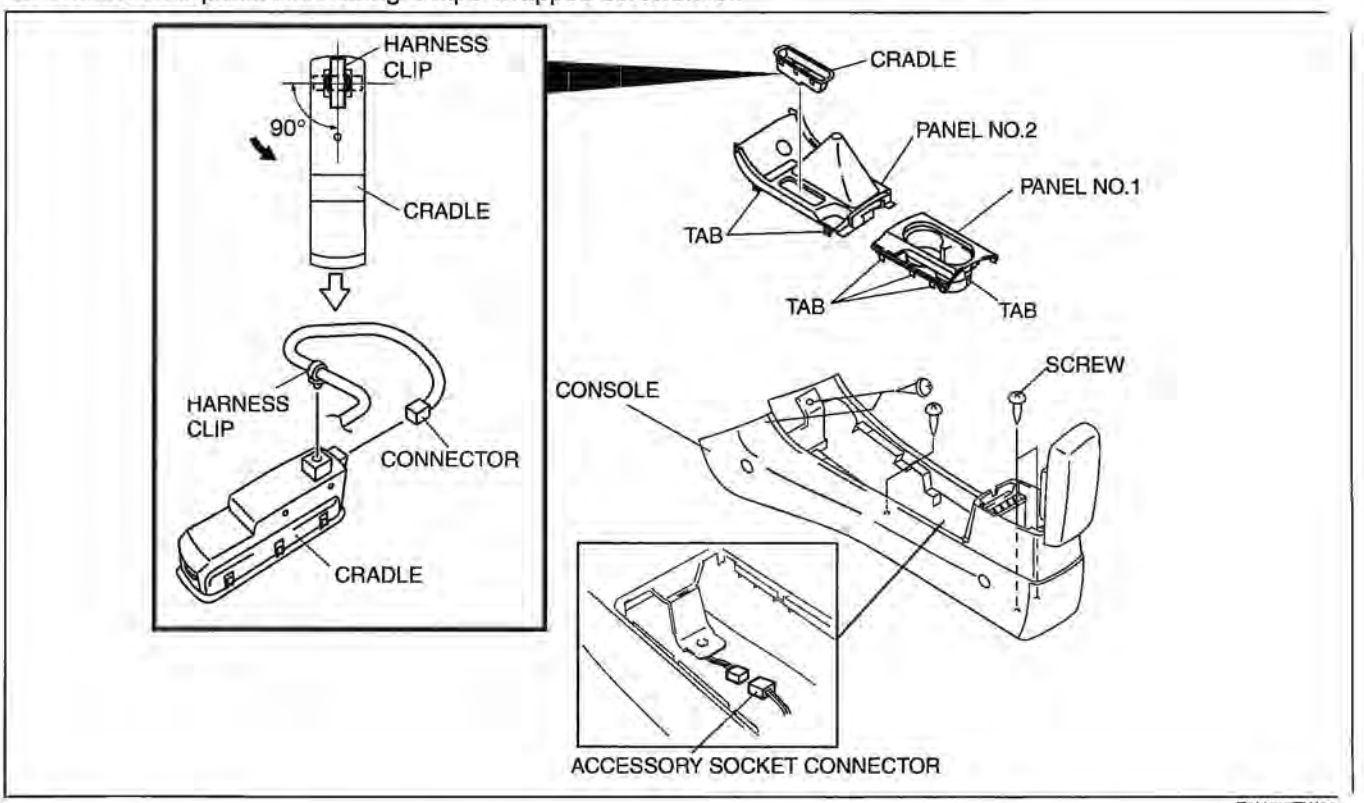


C6U0917W108

CONSOLE REMOVAL/INSTALLATION

E6U091764270W01

1. Disconnect the negative battery cable.
2. For MTX vehicle, remove the shift lever knob.
3. Remove the panel No.1 using a tape-wrapped screwdriver.



E6U917ZW5

4. Remove the panel No.2 using a tape-wrapped screwdriver, disconnect the cigarette lighter connector, and remove the front ashtray illumination.
5. Rotate the wiring harness clip installed on the cradle 90° in the direction indicated by the arrow in the figure and pull it out. (with car-navigation system)
6. Disconnect the cradle connector.
7. Remove the screws.
8. Remove the seat warmer switch. (See 09–13–29 SEAT WARMER SWITCH REMOVAL/INSTALLATION.)
9. Disconnect the accessory socket connector.
10. Remove the console.
11. Install in the reverse order of removal.

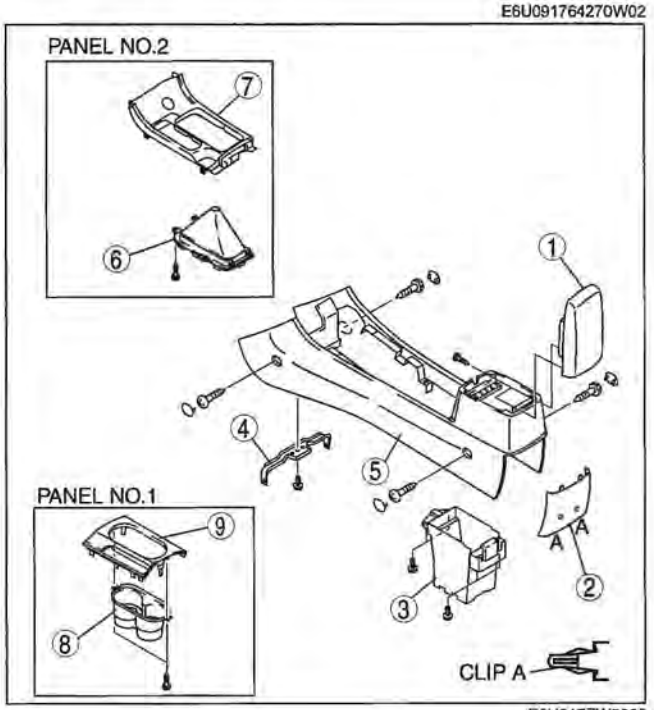
CONSOLE DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Console lid
2	Cover
3	Box
4	Bracket
5	Console
6	Boot (only MTX vehicle)
7	Panel No.2
8	Cup holder
9	Panel No.1

2. Assemble in the reverse order of disassembly.

E6U091764270W02

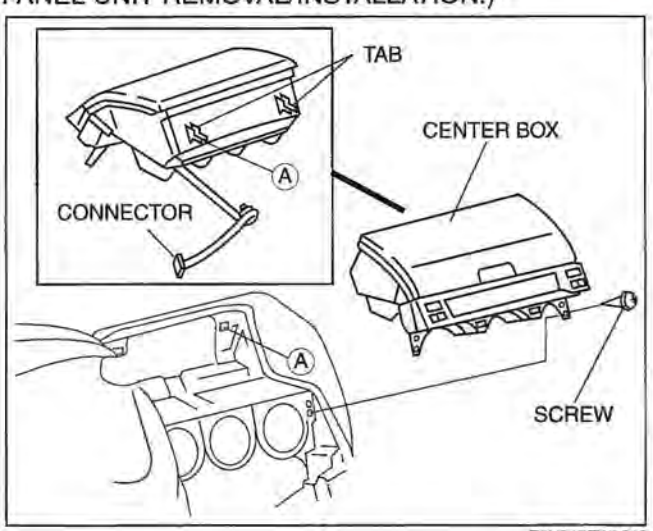


E6U917ZW5000

CENTER BOX REMOVAL/INSTALLATION

E6U091755000W08

1. Disconnect the negative battery cable.
2. Remove the center panel unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
3. Remove the screws.
4. Pull the center box outward, then disengage the tabs.
5. Disconnect the information display connector.
6. Install in the reverse order of removal.

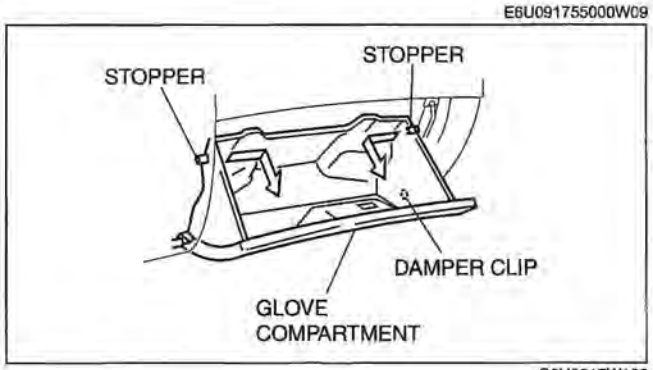


E6U917ZW5010

GLOVE COMPARTMENT REMOVAL/INSTALLATION

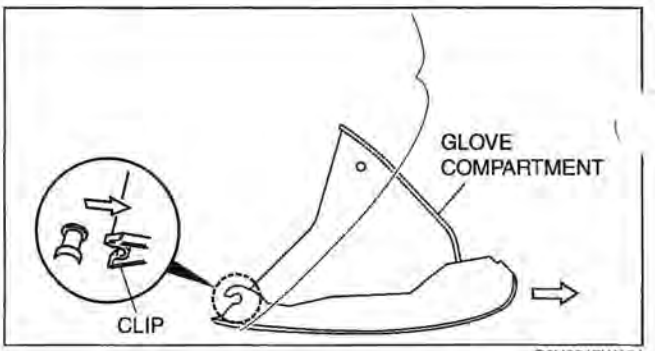
E6U091755000W09

1. Remove the damper clip.
2. Bend the stoppers inward to remove.



C6U0917W103

3. Open the glove compartment lid until it is completely horizontal and remove the clips by pulling them in the direction of the arrow.
4. Remove the glove compartment.
5. Install in the reverse order of removal.

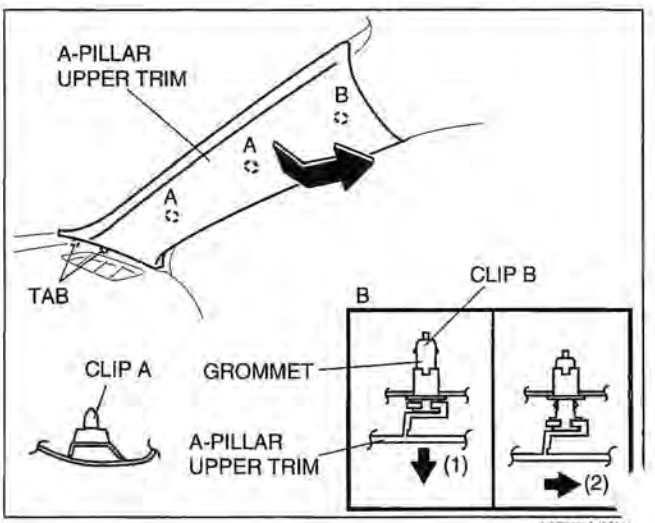


C6U0917W104

A-PILLAR TRIM REMOVAL/INSTALLATION

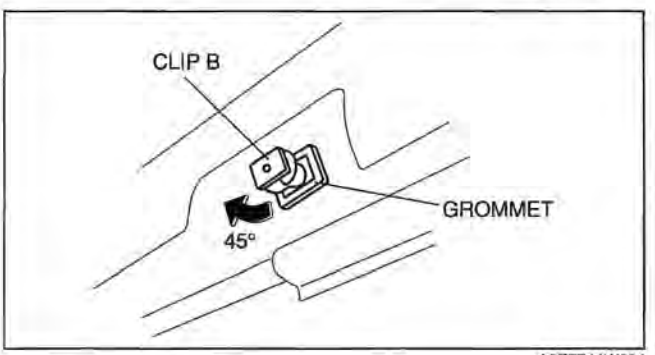
E6U091768150W01

1. Partially peel back the seaming welt.
2. Pull the A-pillar trim, then disengage clips A.
3. Pull the A-pillar trim, then disengage clip B (1).
4. Pull the A-pillar trim upward, then disengage clip B from the A-pillar trim (2).
5. Disengage the tabs from the dashboard, then remove the A-pillar trim.



A6E7744W02

6. Pull clip B out, then rotate 45°.
7. Remove clip B from the grommet by pulling it outward.
8. Install in the reverse order of removal.

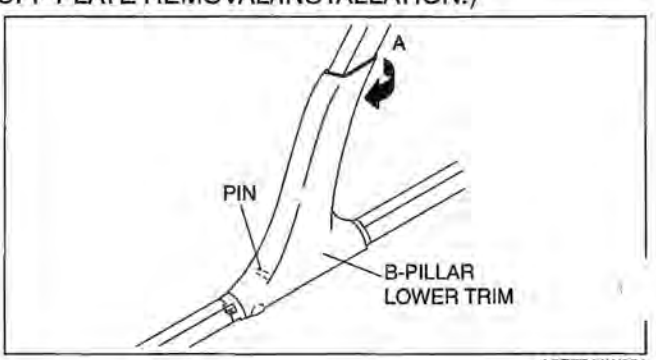


A6E7744W024

B-PILLAR LOWER TRIM REMOVAL/INSTALLATION

E6U091768150W02

1. Remove the front scuff plate. (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Pull the area marked A, then remove one side of the B-pillar lower trim.
4. Pull the B-pillar lower trim, then remove the pin from the body.
5. Remove the B-pillar lower trim.
6. Install in the reverse order of removal.

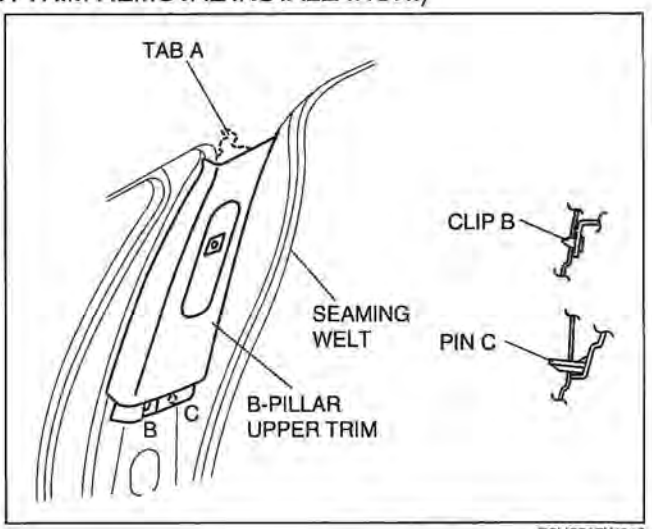


A6E7744W021

B-PILLAR UPPER TRIM REMOVAL/INSTALLATION

E6U091768150W03

1. Remove the following parts:
   (1) Remove the upper anchor of the front seat belt. (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (2) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (3) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (4) B-pillar lower trim (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.
3. Pull the B-pillar upper trim outward, then disengage clip B and pin C from the body.
4. Disengage tab A from the body, then remove B-pillar upper trim.
5. Install in the reverse order of removal.

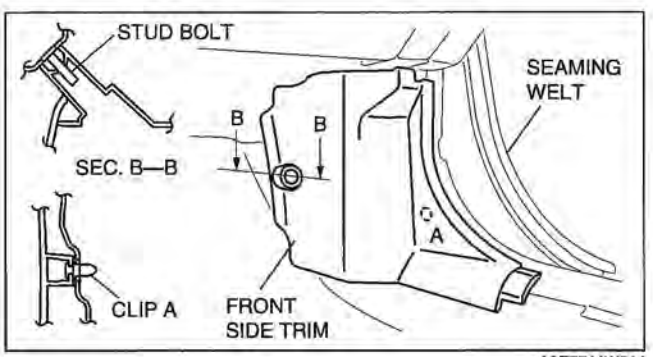


B6U0917W010

FRONT SIDE TRIM REMOVAL/INSTALLATION

E6U091768370W01

1. Remove the front scuff plate. (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
2. Partially peel back the seaming welt.
3. Pull the front side trim outward, disengage clip A and the stud bolt, then remove the front side trim. Install in the reverse order of removal.

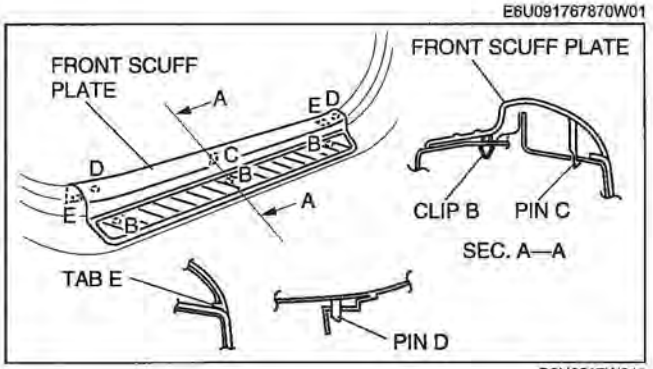


A6E7744W014

FRONT SCUFF PLATE REMOVAL/INSTALLATION

E6U091767870W01

1. Pull the front scuff plate upward, disengage clips B, pins C, D and tabs E from the body, and remove the front scuff plate.
2. Install in the reverse order of removal.

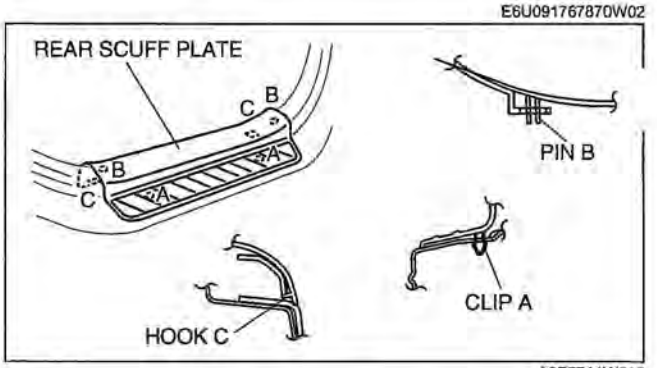


B6U0917W011

REAR SCUFF PLATE REMOVAL/INSTALLATION

1. Pull the rear scuff plate upward, then disengage clips A, pins B, and tabs C from the body, and remove the rear scuff plate.
2. Install in the reverse order of removal.

E6U091767870W02



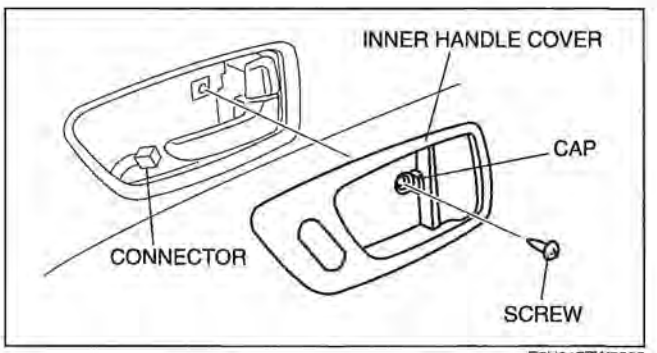
A6E7744W018

FRONT DOOR TRIM REMOVAL/INSTALLATION

Driver's Side

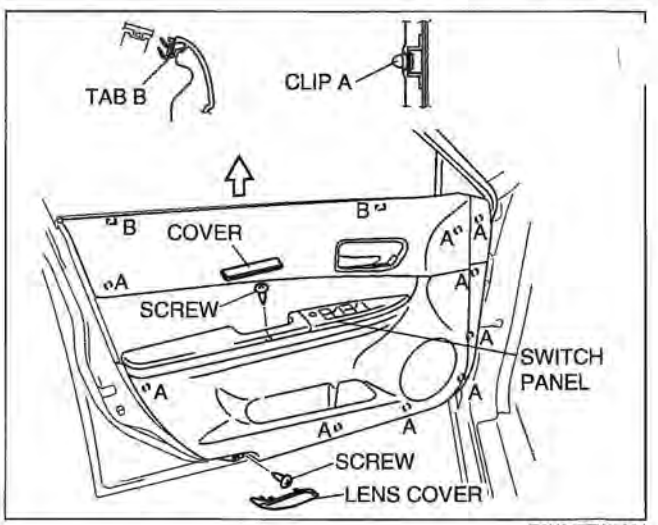
E6U091768400W01

1. Disconnect the negative battery cable.
2. Open the cap using a small screwdriver, then remove the screw.
3. Remove the inner handle cover.
4. Disconnect the door lock switch connector.
5. Remove the inner garnish.



E6U917ZW5003

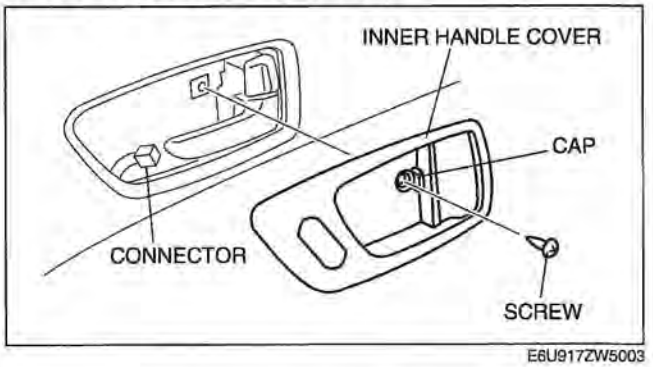
6. Remove the cover, then remove screw A.
7. Remove the lens cover, then remove screw.
8. Disengage clips A from the front door using a fastener remover.
9. Pull the front door trim upward, then disengage tabs B from the front door.
10. Disconnect the power door mirror switch connector and the power window main switch connector.
11. Remove the courtesy light.
12. Remove the front door trim.
13. Remove the switch panel from the front door trim.
14. Install in the reverse order of removal.



E6U917ZW5004

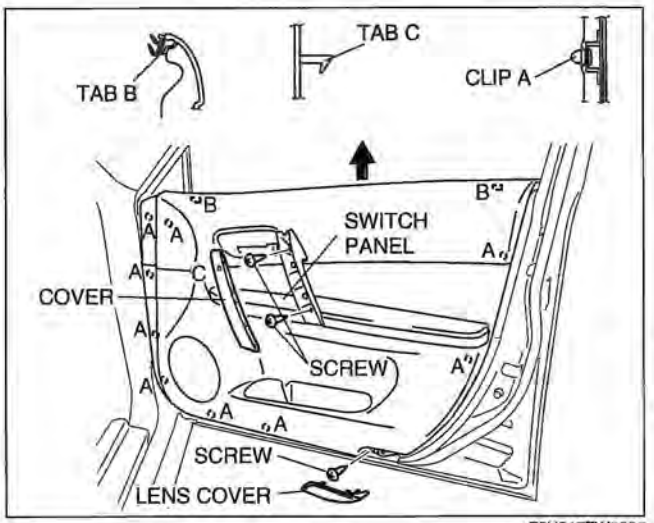
Passenger's Side

1. Disconnect the negative battery cable.
2. Remove the inner garnish. (See 09–17–7 INNER GARNISH REMOVAL/INSTALLATION.)
3. Open the cap using a small screwdriver, then remove the screw.
4. Remove the inner handle cover.
5. Disconnect the door lock switch connector.



E6U917ZW5003

6. Remove the cover, then remove screw A.
7. Remove the lens cover, then remove screw.
8. Disengage clips A from the front door using a fastener remover.
9. Pull the front door trim upward, then disengage tabs B from the front door.
10. Disconnect the power window subswitch connector.
11. Remove the courtesy light.
12. Remove the front door trim.
13. Remove the switch panel from the front door trim.
14. Install in the reverse order of removal.

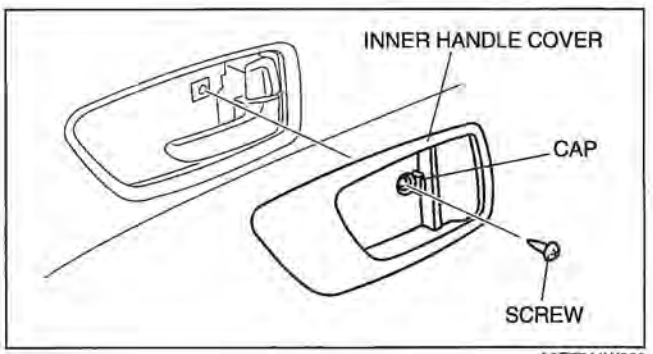


E6U917ZW5005

REAR DOOR TRIM REMOVAL/INSTALLATION

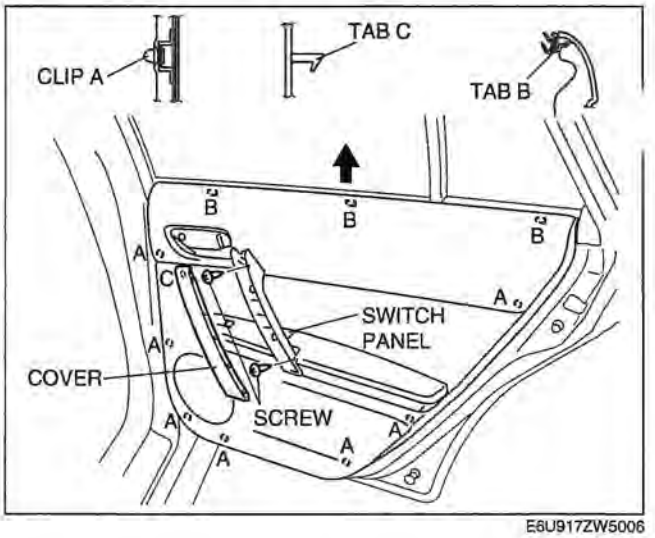
E6U091768400W02

1. Disconnect the negative battery cable.
2. Open the cap using a small screwdriver, then remove the screw.
3. Remove the inner handle cover.



A6E7744W009

4. Remove the cover, then remove screws.
5. Disengage clips A from the rear door using a fastener remover.
6. Pull the rear door trim upward, then disengage tabs B from the rear door.
7. Disconnect the power window subswitch connector.
8. Remove the rear door trim.
9. Remove the switch panel from the rear door trim.
10. Install in the reverse order of removal.



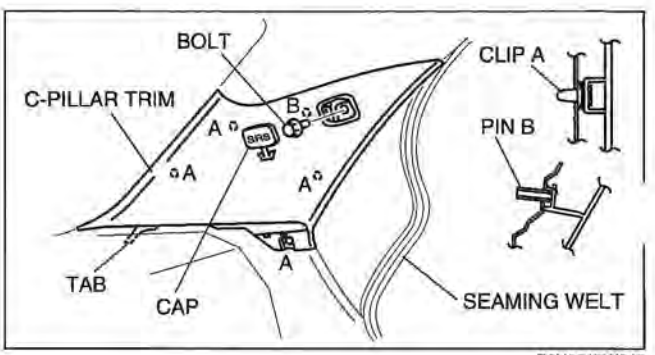
E6U917ZW5006

C-PILLAR TRIM REMOVAL/INSTALLATION

E6U091768150W04

Sport Sedan

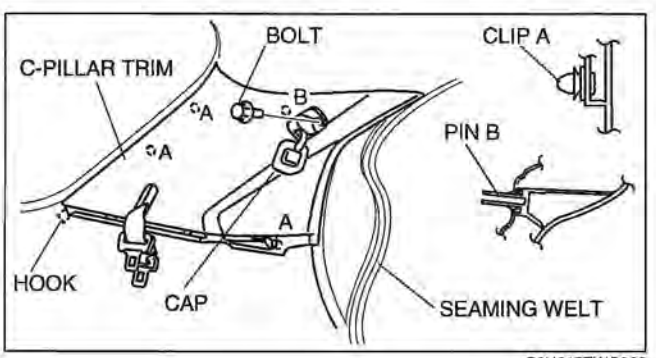
1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear side seat. (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].)
3. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
4. Partially peel back the seaming welt.
5. Remove the cap using a fastener remover, and remove the bolt (with curtain air bag system).
6. Disengage clips A and pin B using a fastener remover.
7. Pull the C-pillar trim outward, then disengage the tab from the body.
8. Install in the reverse order of removal.



B6U0917W015

5-Door

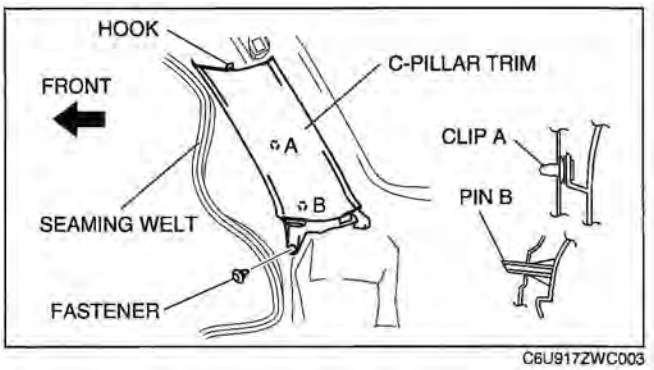
1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
3. Remove the trunk side upper trim. (See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
4. Turn the seaming welt over.
5. Remove the cap using a fastener remover the bolt. (with curtain air bag system)
6. Disengage clips A and pin B using a fastener remover.
7. Pull the C-pillar trim forward, then disengage the hook from the body.
8. Remove the rear center seat belt tongue from the C-pillar trim. (LH only)
9. Remove the C-pillar trim.
10. Install in the reverse order of removal.



C6U917ZWC002

Sport Wagon

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   Remove the trunk side upper trim. (See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Turn the seaming welt over.
5. Remove the fastener.
6. Pull the C-pillar trim forward, then disengage the clip A and pin B from the body.
7. Remove the hook from the body, then remove the C-pillar trim.
8. Install in the reverse order of removal.

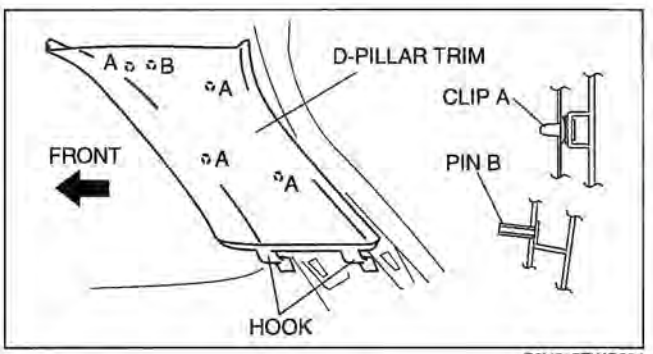


C6U917ZWC003

D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON]

E6U091768150W05

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
3. Remove the trunk side upper trim. (See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Pull the D-pillar trim forward, then disengage the clips A and pin B from the body.
5. Remove the hook from the body, then remove the D-pillar trim.
6. Install in the reverse order of removal.



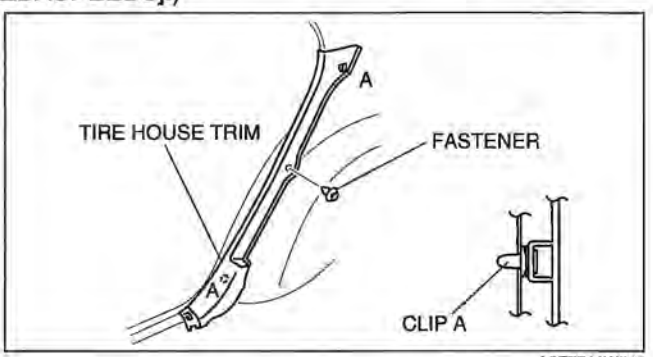
C6U917ZWC004

TIRE HOUSE TRIM REMOVAL/INSTALLATION

E6U091768580W01

Sport Sedan

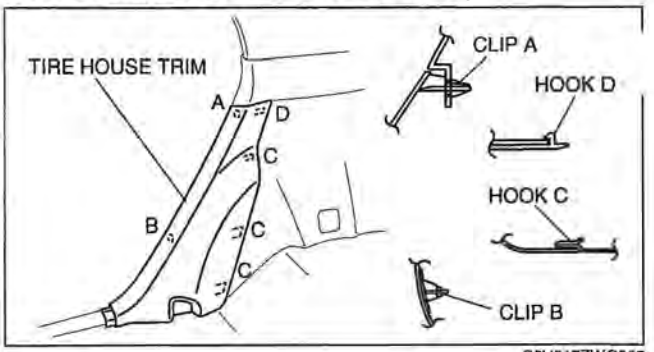
1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the rear side seat. (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–13–14 REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6].)
3. Remove the fastener.
4. Pull the tire house trim outward, disengage clips A from the body, and remove the tire house trim.
5. Install in the reverse order of removal.



A6E7744W015

5-Door, Sport Wagon

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Pull the tire house trim toward you, then disengage clip B from the body and clip A, hooks C, D from the trunk side trim.
3. Remove the tire house trim.
4. Install in the reverse order of removal.

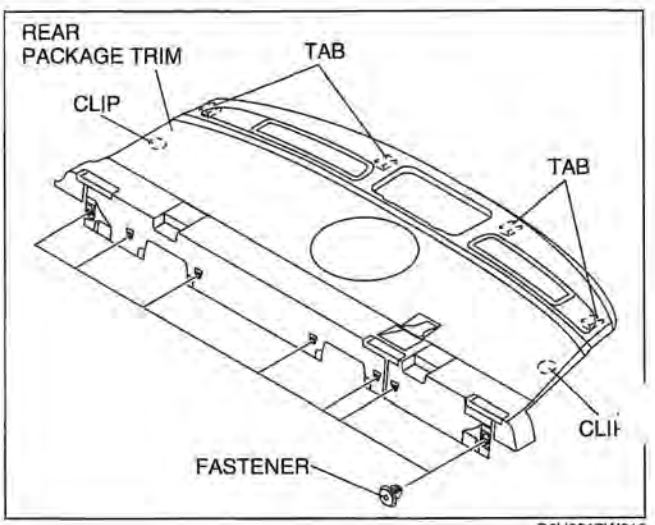


C6U917ZWC005

REAR PACKAGE TRIM REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091768580W02

1. Remove the high-mount brake light.
2. Fold down the rear seat back.
3. Remove the fasteners.
4. Pull the rear package trim upward, then disengage the clips from the body.
5. Disengage the tabs, then remove the rear package trim.
6. Install in the reverse order of removal.



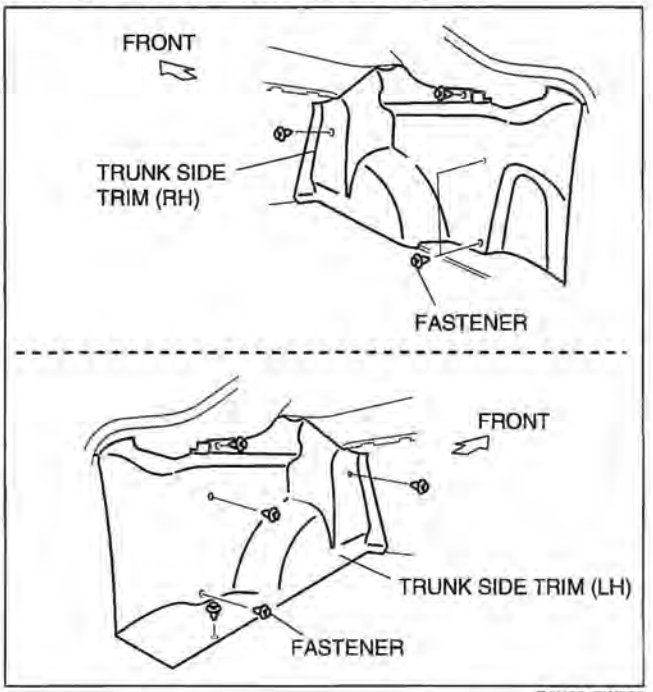
B6U0917W016

TRUNK SIDE TRIM REMOVAL/INSTALLATION

E6U091768810W01

Sport Sedan

1. Remove the trunk end trim. (See 09–17–19 TRUNK END TRIM REMOVAL/INSTALLATION.)
   Remove the fasteners, then remove the trunk side trim.
3. Install in the reverse order of removal.

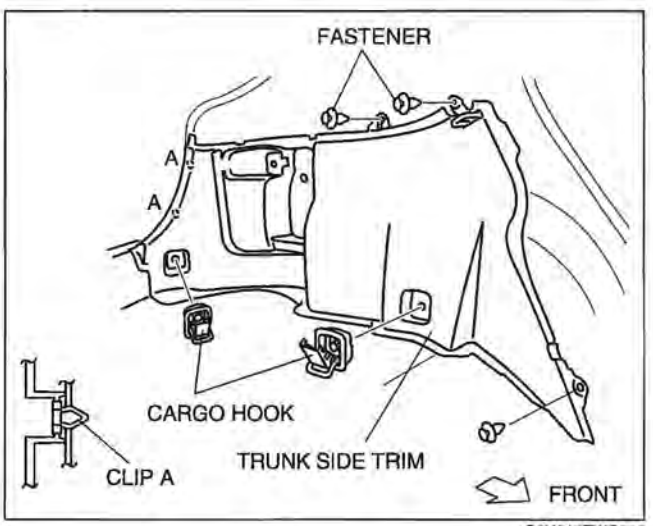


B6U0917W022

09–17

5-Door

1. Remove the following parts:
   (1) Trunk end trim (See 09–17–19 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION
   (3) Tire house trim (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
2. Remove the trunk side trim cover.
3. Remove the cargo hooks.
4. Remove the fasteners.
5. Pull the trunk side trim toward you, then disengage clips A from the body.
6. Install in the reverse order of removal.



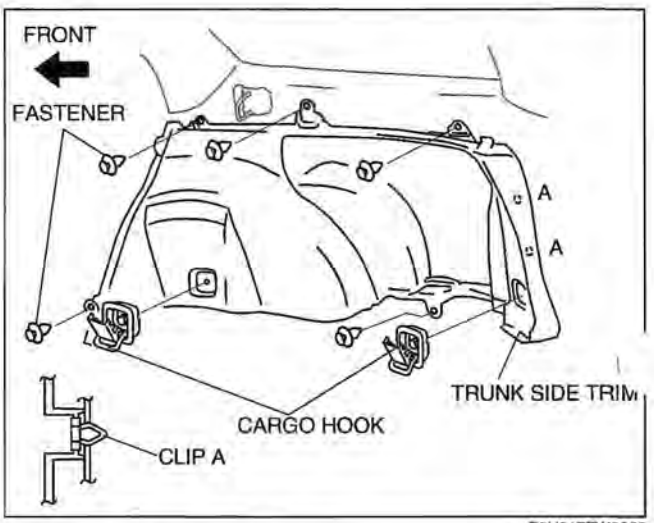
C6U917ZWC006

Spot Wagon

1. Remove the following parts:
   (1) Trunk end trim (See 09–17–19 TRUNK END TRIM REMOVAL/INSTALLATION.)
   (2) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION
   (3) Tire house trim (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   (4) Trunk side upper trim (See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
2. Remove the trunk side trim cover.

C6U917ZWC007

3. Remove the cargo hooks.
4. Remove the fasteners.
5. Pull the trunk side trim toward you, then disengage clips A from the body.
6. Install in the reverse order of removal.



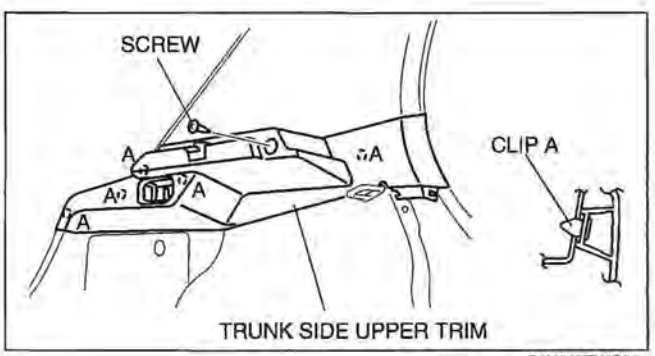
E6U917ZW5009

TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091768810W02

5-Door

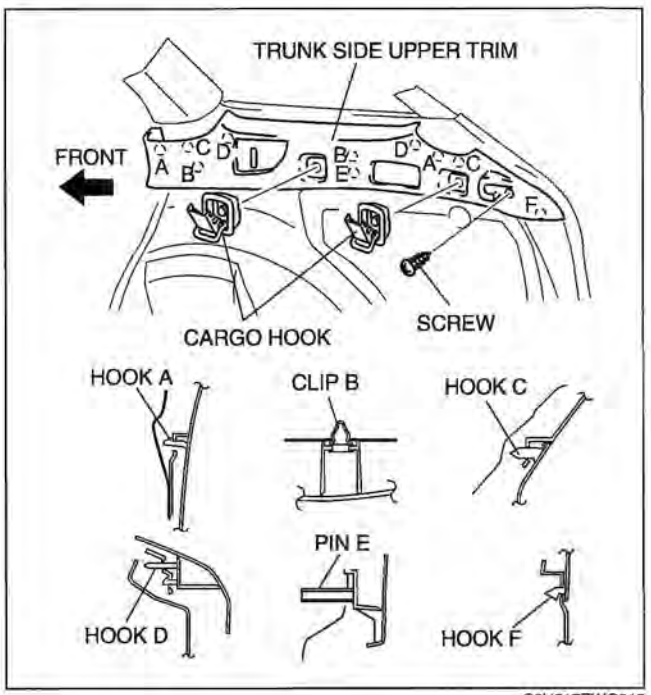
1. Disconnect the negative battery cable. (LH only)
2. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
3. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
4. Remove the cargo compartment light. (LH only) (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
5. Remove the rear seat remote lever.
6. Remove the screw.
7. Pull the trunk side upper trim toward you, then disengage clips A from the body.
8. Install in the reverse order of removal.



C6U917ZWC0

Sport Wagon

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
   Remove the rear seat remote lever.
   Remove the cargo hooks.
5. Remove the screw.
6. Pull the trunk side upper trim toward you, then remove the hooks A, C, D, F and clips B, pin E from the body.
7. Remove the trunk side upper trim.
8. Install in the reverse order of removal.



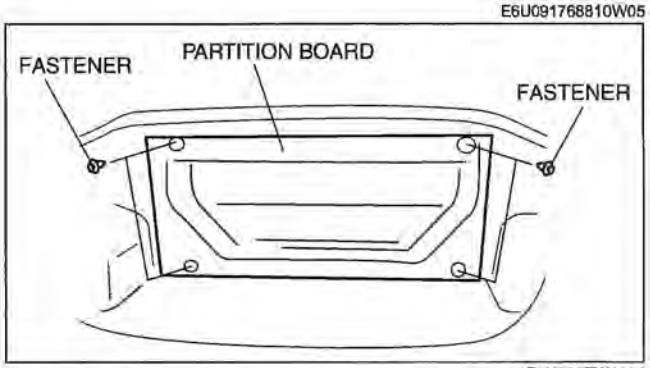
C6U917ZWC010

09–17

PARTITION BOARD REMOVAL/INSTALLATION

E6U091768810W05

1. Remove the fasteners.
2. Remove the partition board.
   Install in the reverse order of removal.



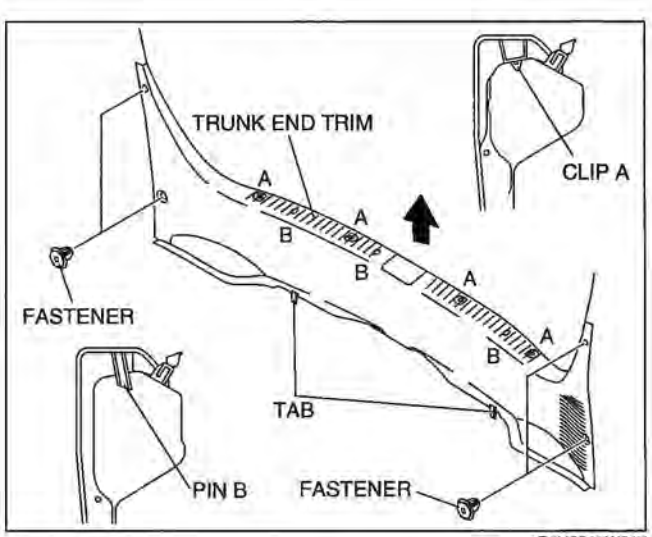
E6U917ZW1004

TRUNK END TRIM REMOVAL/INSTALLATION

E6U091768810W03

Sport Sedan

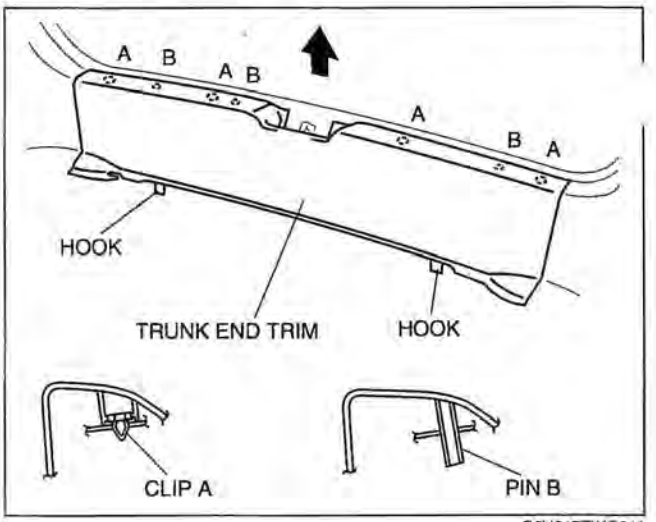
1. Remove the fasteners.
2. Pull the trunk end trim upward, then disengage clips A, pins B, and the tabs.
3. Remove the trunk end trim.
4. Install in the reverse order of removal.



B6U0917W017

5-Door

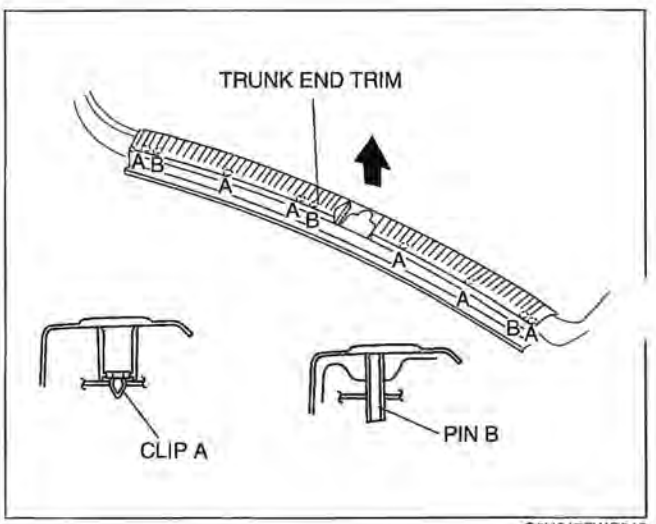
1. Pull the trunk end trim upward, then disengage clips A, pins B, and hooks.
2. Remove the trunk end trim.
3. Install in the reverse order of removal.



C6U917ZWC011

Sport Wagon

1. Pull the trunk end trim upward, then disengage clips A and pins B from the body.
2. Remove the trunk end trim.
3. Install in the reverse order of removal.

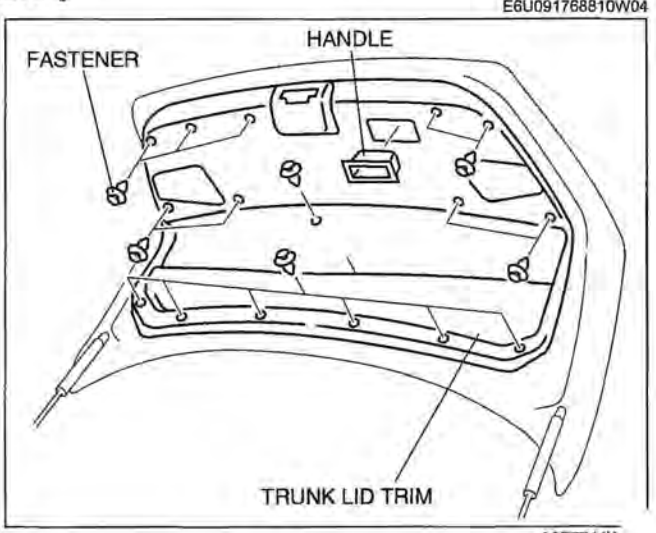


C6U917ZWC012

TRUNK LID TRIM REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091768810W04

1. Pull the handle outward, then remove the handle.
2. Remove the fasteners, then remove the trunk lid trim.
3. Install in the reverse order of removal.



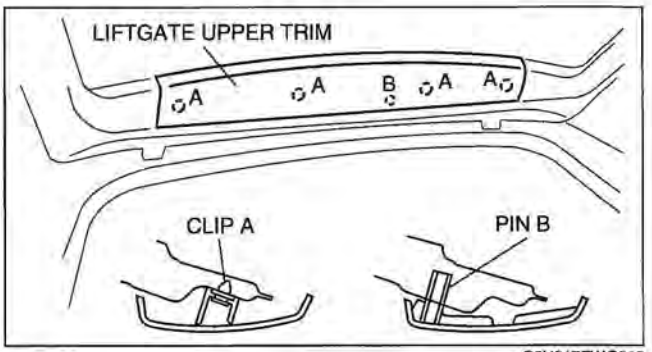
A6E7744W

LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091768940W01

5-Door

1. Pull the liftgate upper trim toward you, then disengage clips A, and pin B from the body.
2. Remove the liftgate upper trim.
3. Install in the reverse order of removal.



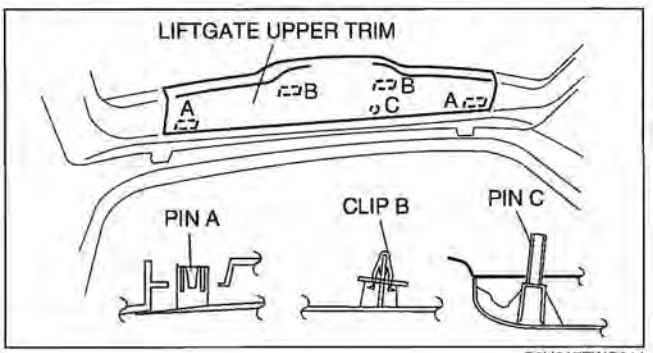
C6U917ZWC013

Sport Wagon
Without rear spoiler

Caution

- **Removing the liftgate upper trim by pulling on the middle section of the trim could damage the high-mount brake light. When removing the trim, be sure to pull on the side edges of the trim only.**

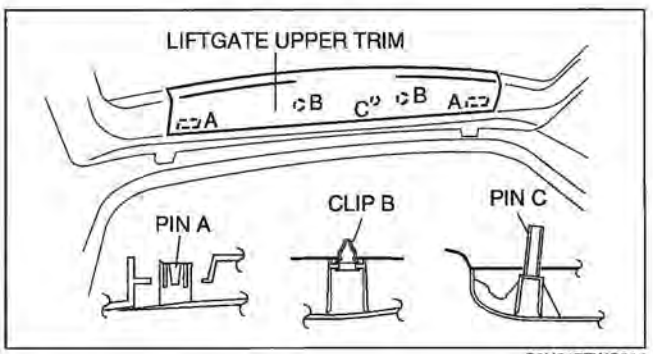
1. Pull the liftgate upper trim on the side edges towards you, then disengage pins A from the body.
2. Pull the middle section of the trim towards you and disengage clips B and pin C from the body.
3. Remove the liftgate upper trim.
4. Install in the reverse order of removal.



C6U917ZWC014

With rear spoiler

1. Pull the liftgate upper trim toward you, then disengage the pin A, C and clip B from the body.
2. Remove the liftgate upper trim.
3. Install in the reverse order of removal.



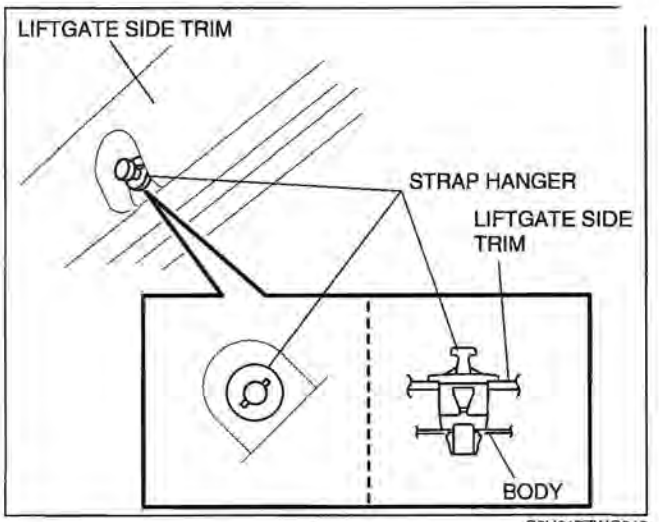
C6U917ZWC015

LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091768940W02

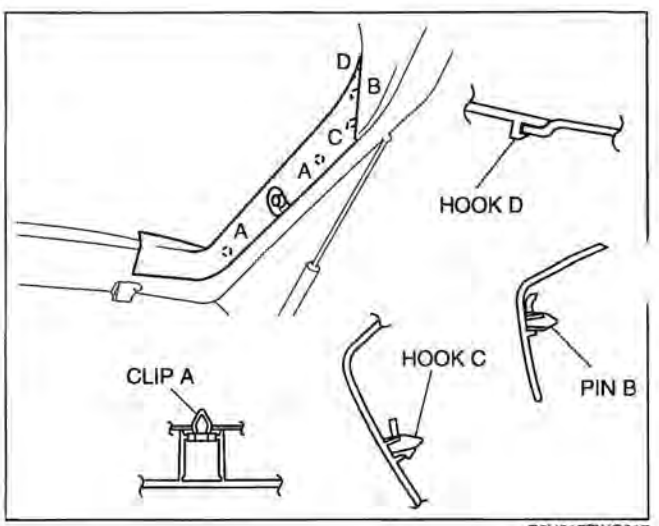
5-Door

1. Remove the liftgate upper trim. (See09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
2. Position the strap hanger as shown in the figure.



C6U917ZWC016

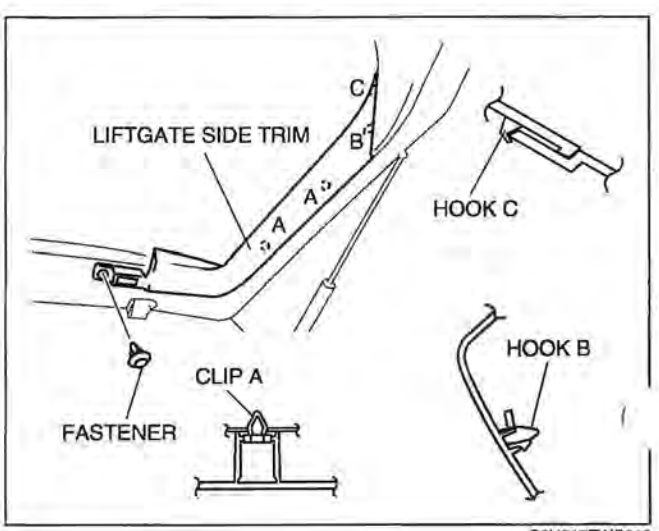
3. Pull the liftgate side trim toward you, then disengage clips A, pin B and the strap hanger from the body and pin B, hook C, D from the liftgate lower trim.
4. Remove the liftgate side trim.
5. Remove the hanger strap from the liftgate side trim.
6. Install in the reverse order of removal.



C6U917ZWC017

Sport Wagon

1. Remove the liftgate upper trim. (See09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
2. Remove the fastener.
3. Pull the liftgate side trim toward you, then disengage the clips A and hook B, C from the body.
4. Remove the liftgate side trim.
5. Install in the reverse order of removal.



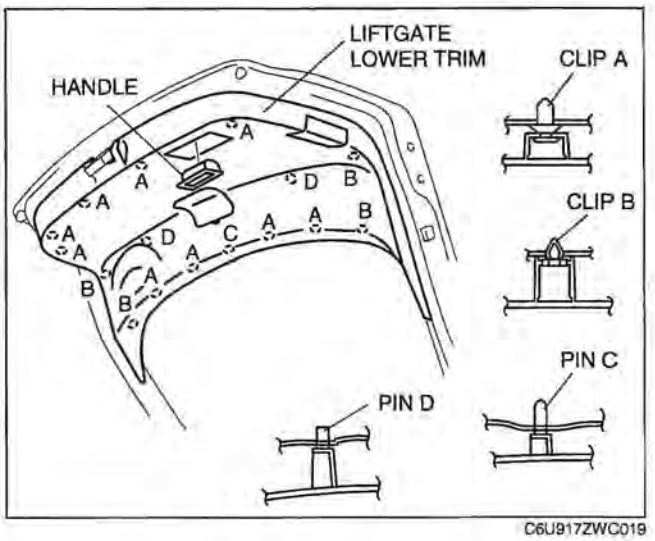
C6U917ZWC018

LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091768940W03

5-Door

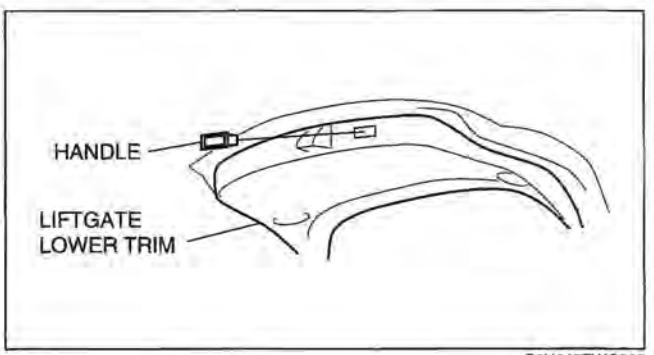
1. Remove the liftgate upper trim. (See09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
2. Remove the liftgate side trim. (See09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
3. Pull the handle toward you, then remove the handle.
4. Pull the liftgate lower trim toward you, then disengage clips A, B and pins C, D from the body.
5. Remove the liftgate lower trim.
6. Install in the reverse order of removal.



C6U917ZWC019

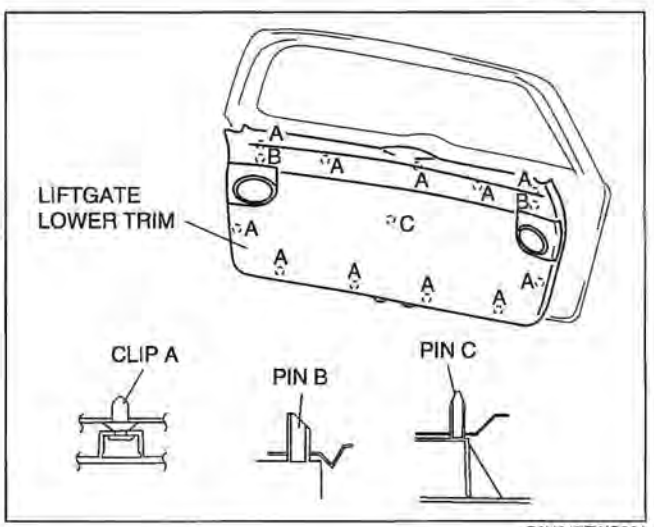
Sport Wagon

1. Remove the liftgate upper trim. (See09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
2. Remove the liftgate side trim. (See09–17–22 LIFTGATE SIDE TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
   Pull the handle toward you, then remove it.



C6U917ZWC020

4. Pull the liftgate lower trim toward you, then disengage the clips A and pins B, C from the body.
5. Remove the liftgate lower trim.
6. Install in the reverse order of removal.



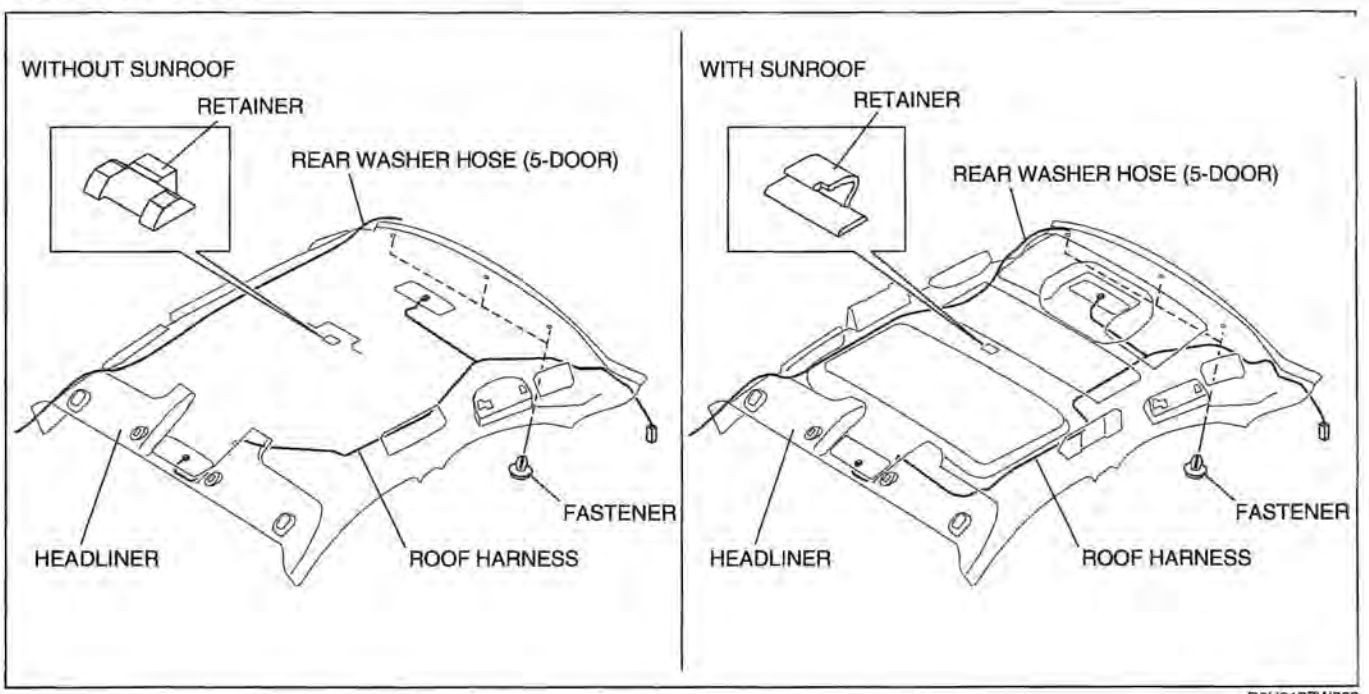
C6U917ZWC021

HEADLINER REMOVAL/INSTALLATION

E6U091768030W01

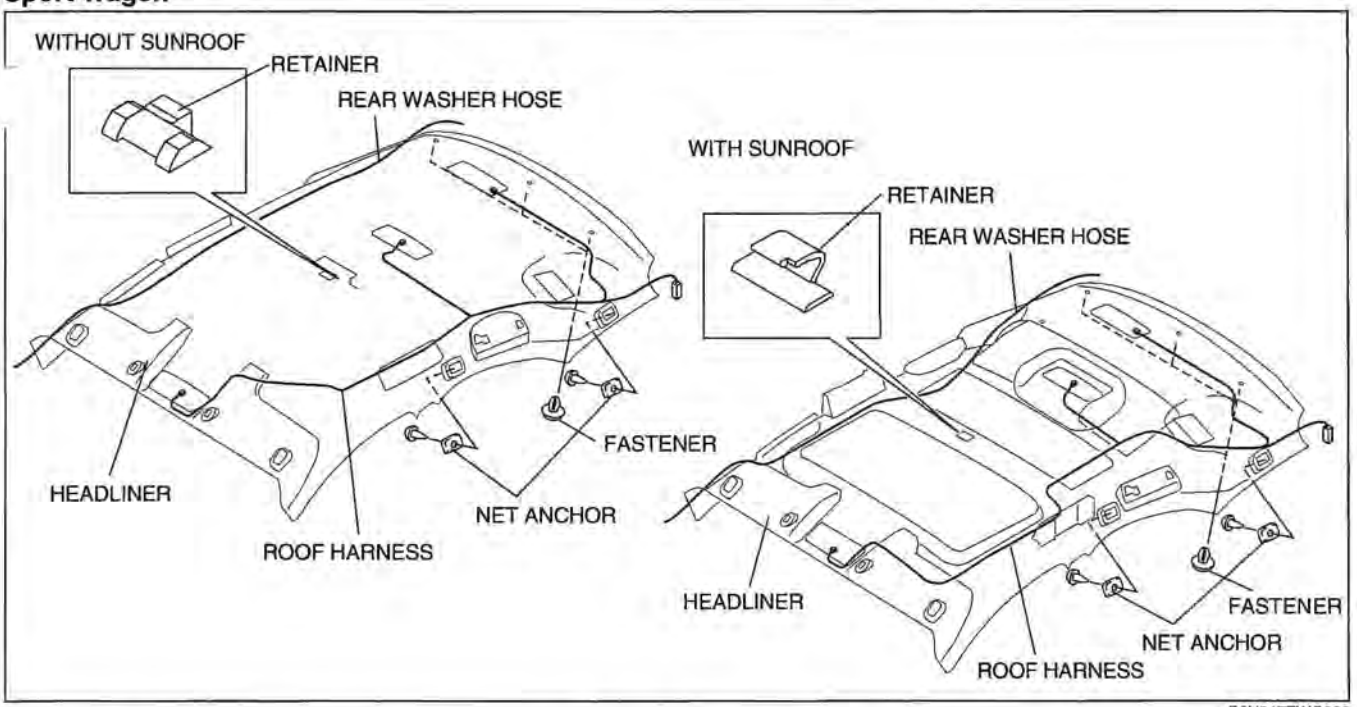
1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
3. Remove the following parts:
   (1) Microphone (vehicles with car-navigation system) (See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the net anchor. (Sport Wagon)
8. Disconnect the roof harness connector, remove the clip, and remove the connector.
9. Disconnect the rear washer hose. (5-Door, Sport Wagon)
10. Place the rear center seat belt bezel out of the way of the headliner. (Sport Wagon)
11. Remove the fasteners.
12. Remove the retainer holding the roof panel and remove the headliner.

Sport Sedan, 5-Door



D6U917ZW002

Sport Wagon



C6U917ZWC023

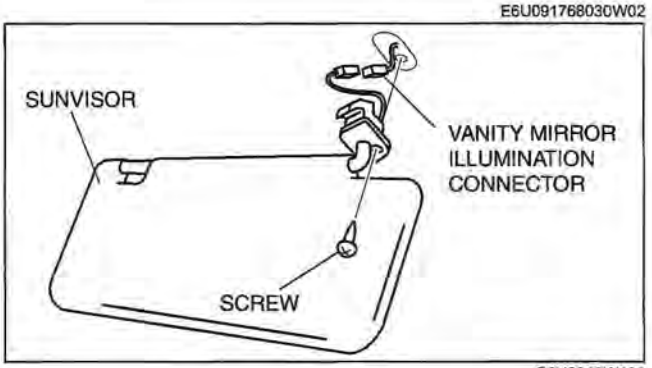
13. Take the headliner off from the passenger-side door opening. (Sport Sedan, 5-Door)
14. Take the headliner off from the liftgate opening. (Sport Wagon)
15. Install in the reverse order of removal.

09–17

SUNVISOR REMOVAL/INSTALLATION

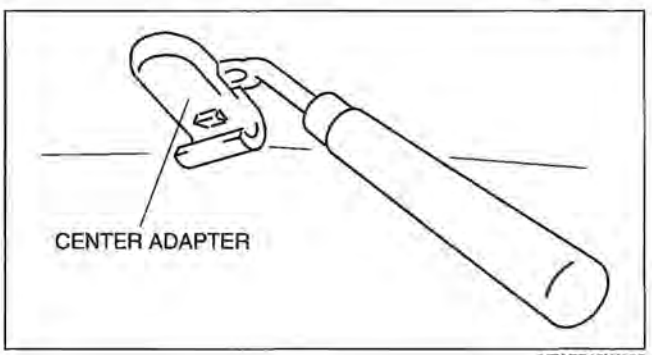
Remove the screw, then the sunvisor.
.. Disconnect the vanity mirror illumination connector.

E6U091768030W02



C6U0917W101

3. Disengage the center adapter (sunvisor stopper) from the body using a fastener remover.
4. Install in the reverse order of removal.

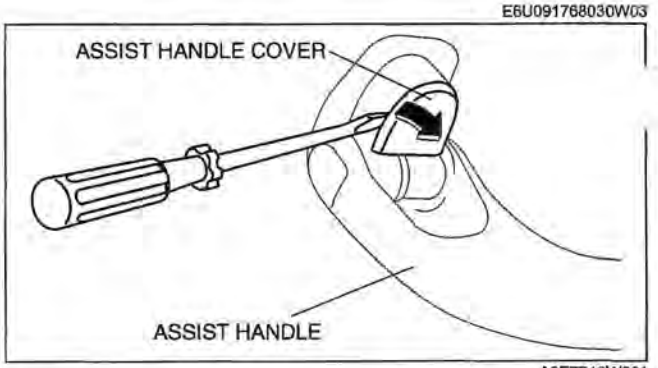


YTA7746W103

ASSIST HANDLE REMOVAL/INSTALLATION

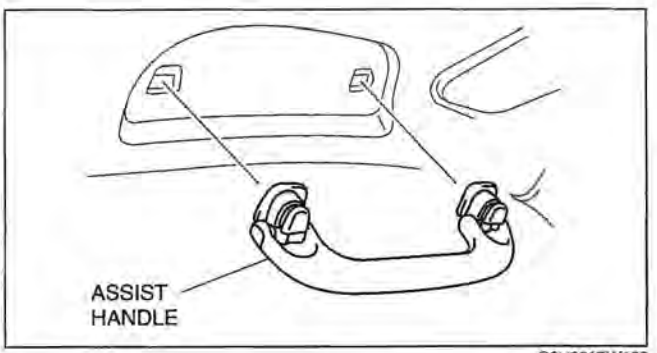
E6U091768030W03

1. Insert a screwdriver into the assist handle notch and remove the assist handle cover.



A6E7746W001

2. Pull the assist handle outward, then remove the assist handle.
3. Install in the reverse order of removal.



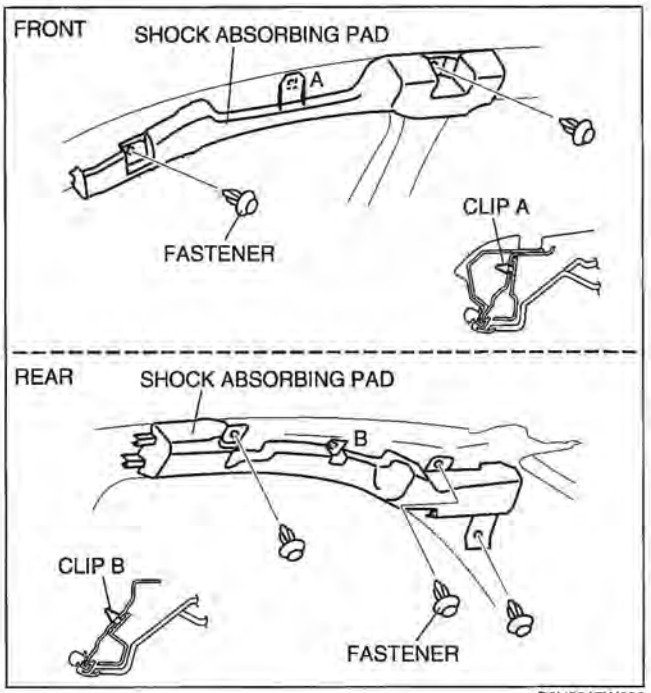
C6U0917W102

SHOCK ABSORBING PAD REMOVAL/INSTALLATION

E6U091700113W01

1. Disconnect the negative battery cable.
2. Partially peel back the seaming welt.
3. Remove the following parts:
   (1) Microphone (vehicles with car-navigation system) (See 09–20–14 MICROPHONE REMOVAL/INSTALLATION.)
   (2) Sunroof seaming welt (vehicles with sunroof only)
   (3) A-pillar trims (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)
   (4) Upper anchor of the front seat belt (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (5) Front scuff plate (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plate (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (8) B-pillar upper trims (See 09–17–11 B-PILLAR UPPER TRIM REMOVAL/INSTALLATION.)
   (9) C-pillar trims (See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
   (10) D-pillar trims (Sport Wagon) (See 09–17–15 D-PILLAR TRIM REMOVAL/INSTALLATION [SPORT WAGON].)
   (11) Front and rear map lights (See 09–18–27 FRONT MAP LIGHT REMOVAL/INSTALLATION.) (See 09–18–28 REAR MAP LIGHT REMOVAL/INSTALLATION.)
   (12) Cargo compartment light (See 09–18–29 CARGO COMPARTMENT LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Disconnect the auto-dimming mirror connector. (vehicles with auto-dimming mirror only)
5. Remove the sunvisors. (See 09–17–25 SUNVISOR REMOVAL/INSTALLATION.)
6. Remove the assist handle. (See 09–17–26 ASSIST HANDLE REMOVAL/INSTALLATION.)
7. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)

8. Remove the fasteners.
9. Pull the shock absorbing pad, then disengage the clip A or B from the body.
   Install in the reverse order of removal.

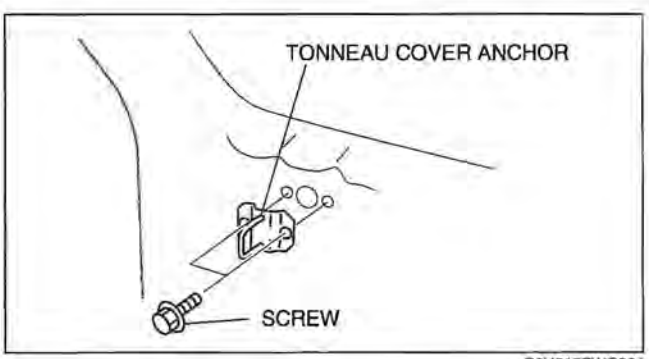


B6U0917W023

TONNEAU COVER ANCHOR REMOVAL/INSTALLATION [SPORT WAGON]

E6U091768580W03

1. Remove the rear scuff plate. (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
2. Remove the tire house trim. (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)
3. Remove the trunk side upper trim. (See 09–17–18 TRUNK SIDE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Remove the screws.
   Remove the tonneau cover anchor.
   Install in the reverse order of removal.



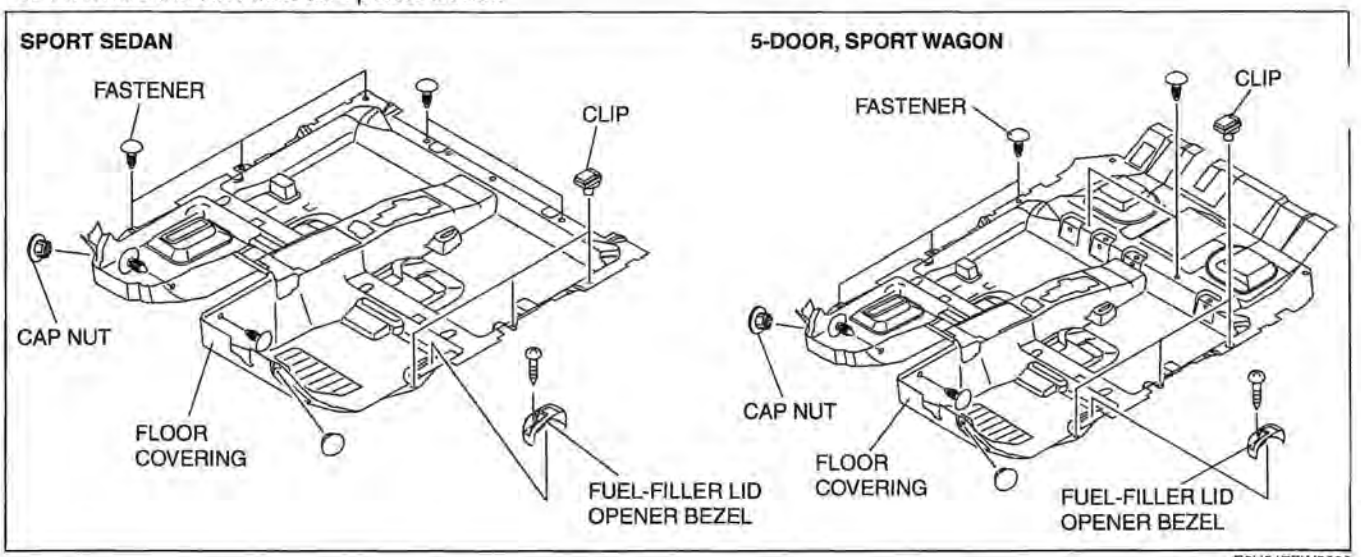
C6U917ZWC024

FLOOR COVERING REMOVAL/INSTALLATION

E6U091768660W01

1. Disconnect the negative battery cable.
2. Remove the following parts:
   (1) Front seats (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].)(See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
   (2) Rear seat (See 09–13–16 REAR SEAT REMOVAL/INSTALLATION [SPORT SEDAN].) (See 09–13–14 REAR SEAT REMOVAL/INSTALLATION [MAZDASPEED6].) (See 09–13–17 REAR SEAT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
   (3) Car-navigation unit (vehicles with car-navigation system) (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/INSTALLATION.)
   (4) Audio amplifier (BOSE) (See 09–20–8 AUDIO AMPLIFIER REMOVAL/INSTALLATION.)
   (5) Front scuff plates (See 09–17–11 FRONT SCUFF PLATE REMOVAL/INSTALLATION.)
   (6) Rear scuff plates (See 09–17–12 REAR SCUFF PLATE REMOVAL/INSTALLATION.)
   (7) Console (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
   (8) Front side trims (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   (9) B-pillar lower trims (See 09–17–10 B-PILLAR LOWER TRIM REMOVAL/INSTALLATION.)
   (10)Lower anchor of the front seat belt installation bolts (See 08–11–3 FRONT SEAT BELT REMOVAL/INSTALLATION.)
   (11)Tire house trims (5-Door, Sport Wagon) (See 09–17–15 TIRE HOUSE TRIM REMOVAL/INSTALLATION.)

3. Remove the fuel-filler lid opener bezel.



4. Remove the fasteners.
5. Remove the cap nuts.
6. Remove the clips.
7. Take the floor covering off from the front passenger-side door opening.
8. Install in the reverse order of removal.

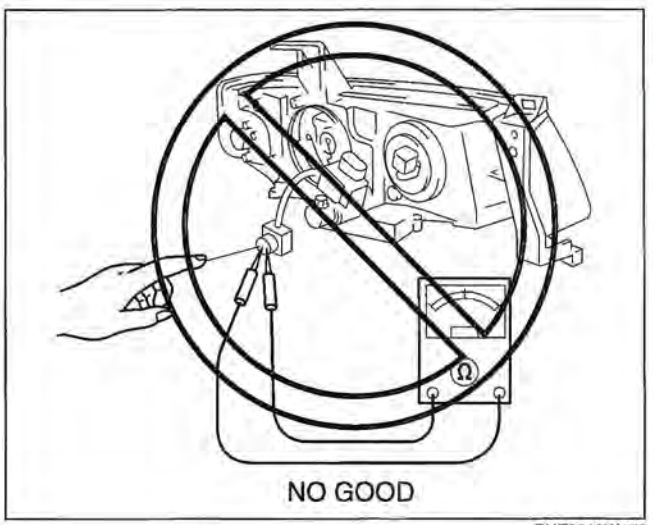
DISCHARGE HEADLIGHT SERVICE WARNINGS

E6U091800000W03

Discharge Headlight Bulb Service Warnings

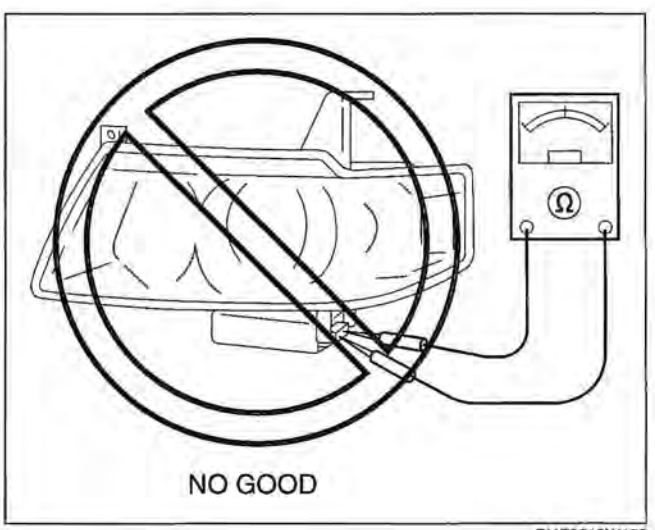
- **To prevent electrical shock when replacing the discharge headlight bulb, dry hands thoroughly, and carry out work in an area out of rain.**
- **When the light switch is on, approx. 25,000 V of high voltage passes through the discharge headlight bulb socket. Because of the danger of electrical shock, do not insert fingers or a tester.**
- **When the headlights are on, high voltage flows around the socket and bulb. When turning on the discharge headlights while working, always leave the headlights in the vehicle-installed condition to prevent electrical shock.**



BHE0918W172

Discharge Headlight Control Module Service Warnings

- **Because of the danger of electrical shock, when inspecting with a tester, do not inspect the discharge headlight control module as a single unit or disassemble it.**



BHE0918W173

Discharge Headlight Control Module Reuse

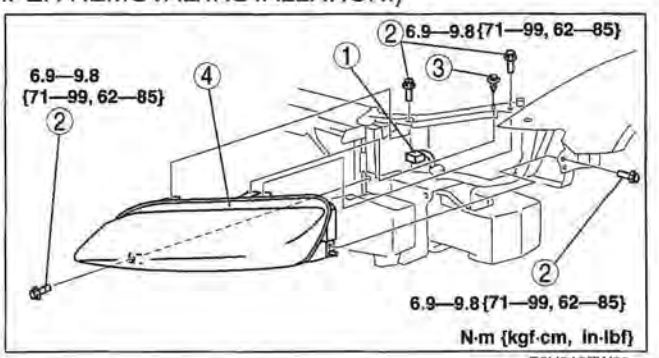
- **If the discharge headlight control module is dented or damaged in any way, replace the module with a new one to prevent electrical shock and improper operation.**
- **Although the control module may temporarily operate normally even though it has received an impac' it is possible that the interior may have been damaged. When reusing the control module, inspect the following items regarding discharge headlight illumination to verify that there are no malfunctions.**
  - **— Verify that the discharge headlights illuminate normally by testing them several times under cold illumination (headlights off for approx. 10 min or more and then turned on) and hot illumination (headlights on for approx. 15 min or more, turned off for approx. 1 min, and then turned on again) conditions.**
  - **— Inspect the headlight illumination in the period from directly after cold illumination until they are uniformly illuminated (approx. 5 min) and verify that there is no flickering or inconsistent brightness.**
  - **— Turn on the headlights for approx. 30 min with normal condition bulbs and verify that there is no brightness difference between the right and left, and that illumination is consistent.**

FRONT COMBINATION LIGHT REMOVAL/INSTALLATION

E6U091851060W01

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Bolt
3	Fastener
4	Front combination light



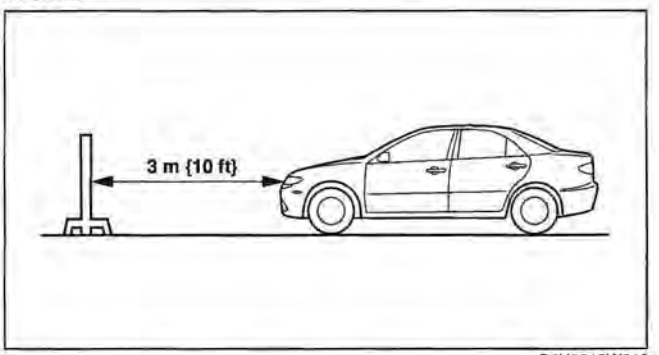
E6U918ZW5

4. Install in the reverse order of removal.
5. Adjust the headlight aiming. (See 09–18–8 HEADLIGHT ADJUSTMENT.)

HEADLIGHT ADJUSTMENT

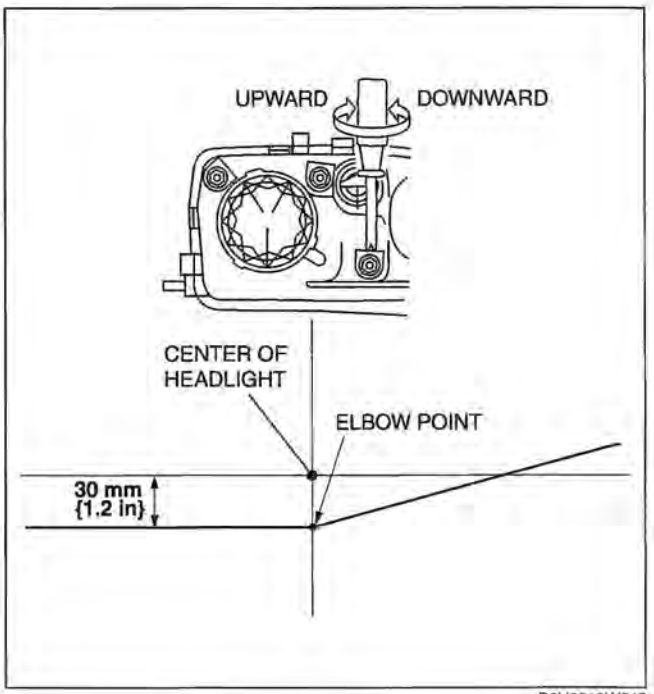
E6U091851030W01

1. Adjust the tire air pressure to the specification.
2. Position the unloaded vehicle on a flat, level surface.
3. Seat one person in the driver's seat.
4. Position the vehicle straight ahead and perpendicular to a wall.
5. Set the headlights **3 m {10 ft}** from the white screen.
6. While adjusting one headlight, mask the other.
7. Start the engine to charge the battery.
8. Turn on the lower-beam headlight.



B6U0918W013

9. Adjust the headlights as shown in the figure.



B6U0918W012

HEADLIGHT BULB REMOVAL/INSTALLATION

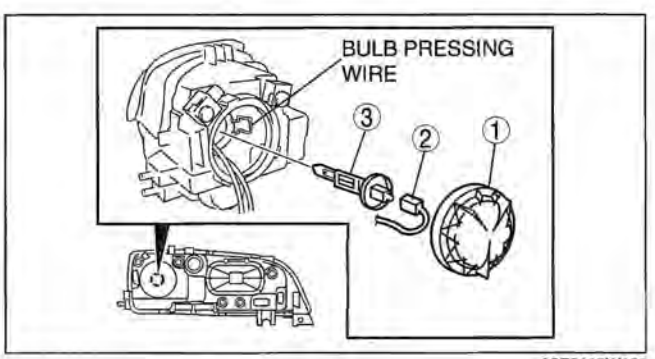
E6U091851030W02

Low-beam

Halogen type

1. Disconnect the negative battery cable.
2. Set the coolant reserve tank out of the way (RH).
3. Remove in the order indicated in the table.

1	Cover
2	Connector
3	Halogen headlight bulb (See 09–18–9 Halogen headlight bulb removal note)



A6E8112W105

Caution

- **A halogen bulb generates extremely high heat when it is used. If the surface of the bulb is soiled, excessive heat will build up and the light's life will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

4. Install in the reverse order of removal.

Halogen headlight bulb removal note

1. Release the bulb pressing wire to remove the Halogen headlight bulb.

Discharge type

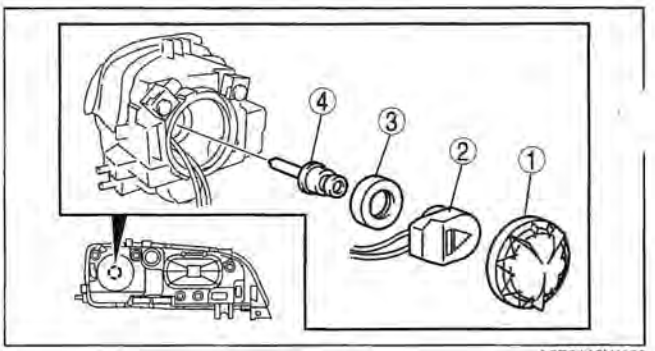
Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09–18–7 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Set the coolant reserve tank out of the way (RH).

3. Remove in the order indicated in the table.

1	Cover
2	Connector
3	Bulb cover
4	Discharge headlight bulb



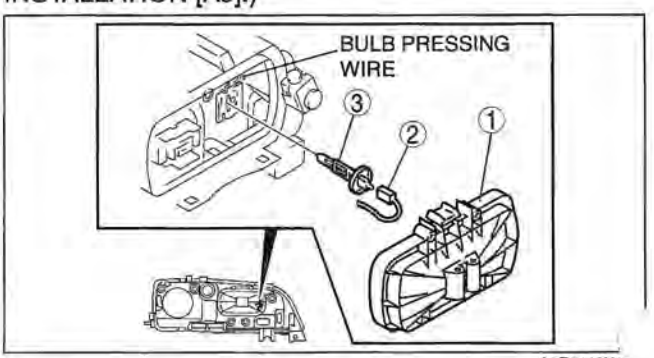
A6E8112W106

Caution
- **The bulb generates extremely high heat when it is illuminated. If the surface of the bulb is soiled, excessive heat will build up and the life of the bulb will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

4. Install in the reverse order of removal.

High-beam
1. Disconnect the negative battery cable.
2. Set the air cleaner case out of the way (LH).(See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)(See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove in the order indicated in the table.

1	Cover
2	Connector
3	Headlight bulb (See 09–18–10 Headlight bulb removal note)



A6E8112W

Caution
- **A halogen bulb generates extremely high heat when it is used. If the surface of the bulb is soiled, excessive heat will build up and the light's life will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

4. Install in the reverse order of removal.

Headlight bulb removal note
1. Release the bulb pressing wire to remove the headlight bulb.

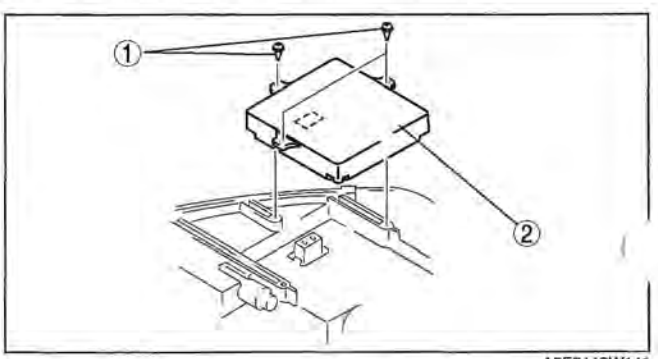
DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION

E6U091851030W04

Caution
- **Incorrect servicing of the discharge headlight control module could result in electrical shock. Before servicing the discharge headlight control module, always refer to the "Discharge headlight service warnings." (See 09–18–7 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the front combination light. (See 09–18–8 FRONT COMBINATION LIGHT REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Bolt
2	Discharge headlight control module



A6E8112W141

5. Install in the reverse order of removal.

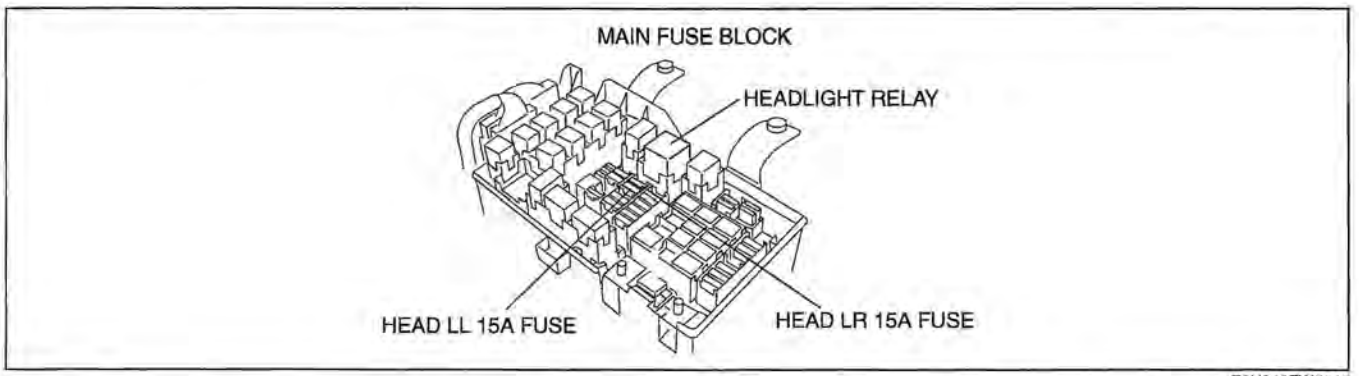
DISCHARGE HEADLIGHT SYSTEM INSPECTION

E6U091851030W05

Discharge Headlight Inoperative

Warning

- **Incorrect servicing of the discharge headlights could result in electrical shock. Before servicing the discharge headlights, always refer to the discharge headlight service warnings. (See 09–18–7 DISCHARGE HEADLIGHT SERVICE WARNINGS.)**



E6U918ZW5017

Inspection procedure

STEP	INSPECTION		ACTION
1	**INSPECT POWER SUPPLY CIRCUIT OF DISCHARGE HEADLIGHT CONTROL MODULE** • Disconnect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Measure the voltage at discharge headlight control module terminal D (wiring harness-side). • Is the voltage **approx. 12 V**?	Yes	Go to Step 6.
		No	Go to the next step.
2	**INSPECT FUSE** • Turn the headlight switch to the OFF position. • Remove the HEAD LR 15 A fuse (RH) or HEAD LL 15 A fuse (LH). • Inspect the fuses. • Are the fuses normal?	Yes	Go to the next step.
		No	Replace the fuse.
3	**INSPECT HEADLIGHT LOW RELAY** • Inspect the headlight relay. (See 09–21–7 RELAY INSPECTION.) • Is the headlight relay normal?	Yes	Go to the next step.
		No	Replace the headlight relay. (See 09–21–7 RELAY INSPECTION.)
4	**INSPECT LIGHT SWITCH** • Inspect the light switch. (See 09–18–21 LIGHT SWITCH INSPECTION.) • Is the light switch normal?	Yes	Go to the next step.
		No	Replace the light switch. (See 09–18–21 LIGHT SWITCH REMOVAL/INSTALLATION.)
5	**INSPECT WIRING HARNESS BETWEEN BATTERY AND DISCHARGE HEADLIGHT CONTROL MODULE** • Disconnect the negative battery cable. • Inspect for continuity between the following terminals: — Battery (positive terminal) and headlight relay terminal E. — HEAD LR 15 A fuse (RH) and discharge headlight control module terminal D — HEAD LL 15 A fuse (LH) discharge headlight control module terminal D • Are the wiring harnesses normal?	Yes	Go to the next step.
		No	Replace the related wiring harness.

STEP	INSPECTION		ACTION
6	**INSPECT WIRING HARNESS BETWEEN DISCHARGE HEADLIGHT CONTROL MODULE AND GROUND** • Inspect the wiring harness between discharge headlight control module terminal E and ground for the following: — Short to power supply — Open circuit • Is the wiring harness normal?	Yes	Go to the next step.
		No	Replace the related wiring harness.
7	**VERIFY WHETHER MALFUNCTION IS IN DISCHARGE HEADLIGHT BULB OR DISCHARGE HEADLIGHT CONTROL MODULE** • Install the discharge headlight low bulb (previously verified as illuminating normally). (See 09–18–9 HEADLIGHT BULB REMOVAL/INSTALLATION.) • Connect the discharge headlight control module connector. • Turn the headlight switch to the HEADLIGHT (LO) position. • Does the headlight (low-beam) illuminate?	Yes	System inspection completed.
		No	Replace the discharge headlight control module. (See 09–18–10 DISCHARGE HEADLIGHT CONTROL MODULE REMOVAL/INSTALLATION.)

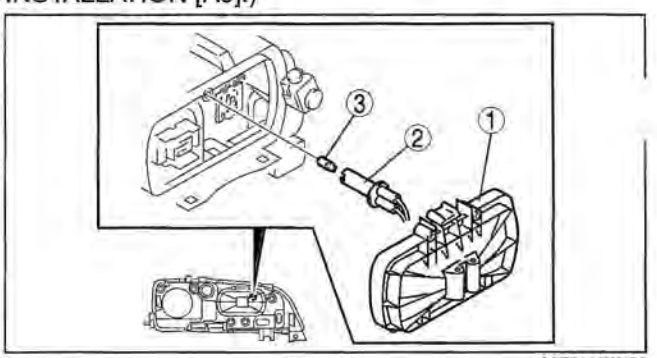
PARKING LIGHT BULB REMOVAL/INSTALLATION

E6U091851040W01

1. Disconnect the negative battery cable.
2. Set the air cleaner case out of the way (LH).(See 01–13A–4 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [L3].)(See 01–13C–2 INTAKE AIR SYSTEM REMOVAL/INSTALLATION [AJ].)
3. Remove in the order indicated in the table.

1	Cover
2	Socket
3	Parking light bulb

4. Install in the reverse order of removal.



A6E8112W109

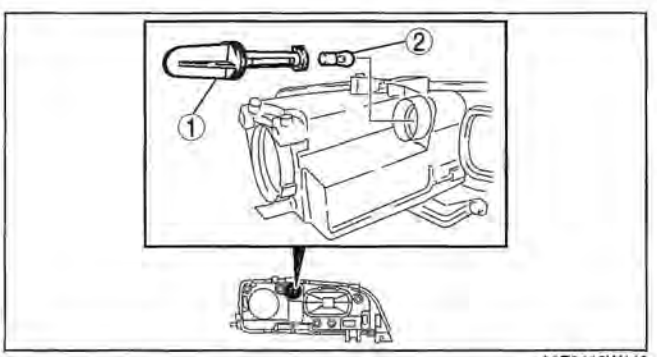
FRONT TURN LIGHT REMOVAL/INSTALLATION

E6U091851050W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Socket
2	Front turn light bulb

3. Install in the reverse order of removal.



A6E8112W110

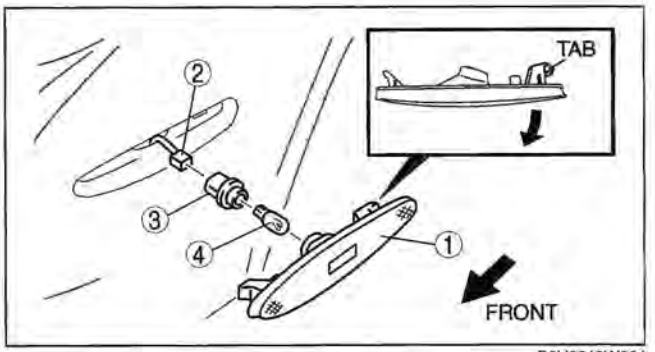
FRONT SIDE MARKER LIGHT REMOVAL/INSTALLATION

E6U091851120W01

1. Disconnect the negative battery cable.
2. Partially peel off the mud guard.
   Remove in the order indicated in the table.

1	Front side marker light (See 09–18–13 Front Side Marker Light Removal Note)
2	Connector
3	Socket
4	Front side marker light bulb

4. Install in the reverse order of removal.



B6U0918W024

Front Side Marker Light Removal Note

1. Insert your hand into where the mud guard is bent back and push the tab to remove the front side marker light.
2. Pull the front side marker light toward you to remove it.

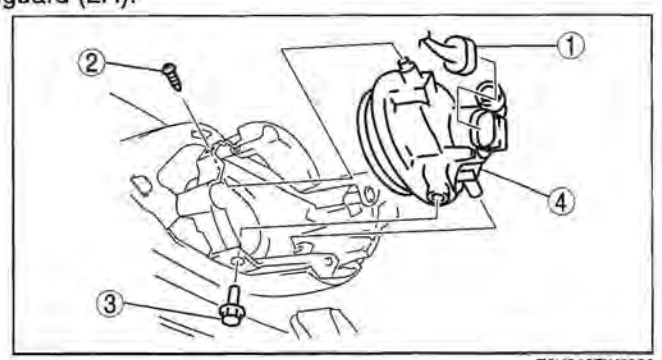
FRONT FOG LIGHT REMOVAL/INSTALLATION

E6U091851680W03

1. Disconnect the negative battery cable.
2. Remove the front bumper (RH).(See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove the fasteners, then slightly bend back the mudguard (LH).
4. Remove in the order indicated in the table.

1	Connector
2	Screw
3	Bolt
4	Front fog light

5. Install in the reverse order of removal.
6. Adjust the front fog light aiming.(See 09–18–13 FRONT FOG LIGHT ADJUSTMENT.)

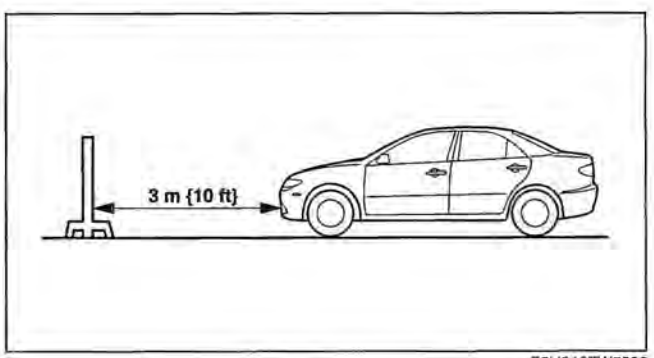


E6U918ZW5023

FRONT FOG LIGHT ADJUSTMENT

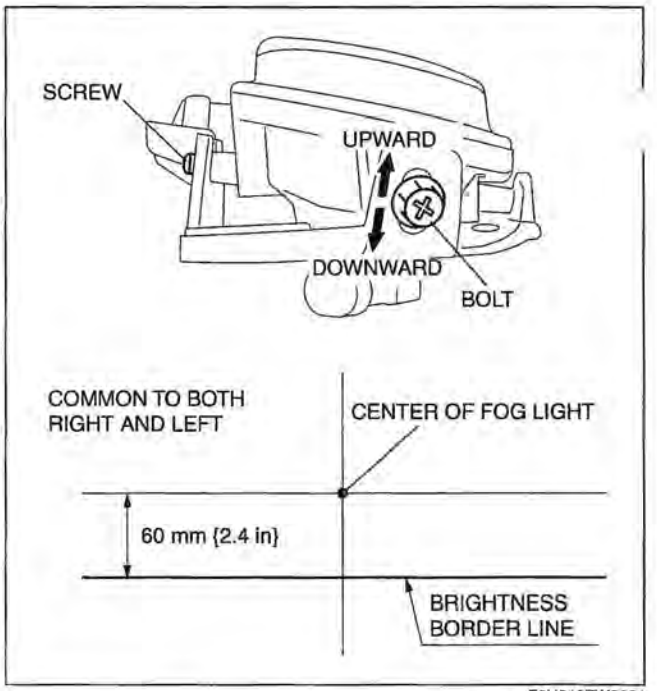
E6U091851680W01

1. Adjust the tire air pressure to the specification.
2. Position the unloaded vehicle on a flat, level surface.
3. Seat one person in the driver's seat.
4. Position the vehicle **3 m {10 ft}** in front of a white screen.
5. While adjusting one fog light, mask the other.
6. Start the engine to charge the battery.
7. Turn the front fog light on.



E6U918ZW5008

8. Loosen the screw and the bolt, move the front fog light in the direction of the arrows,and adjust the front fog light beam to the position shown in the figure.
9. Tighten the bolt, then tighten the screw.



E6U918ZW5021

FRONT FOG LIGHT BULB REMOVAL/INSTALLATION

E6U091851680W02

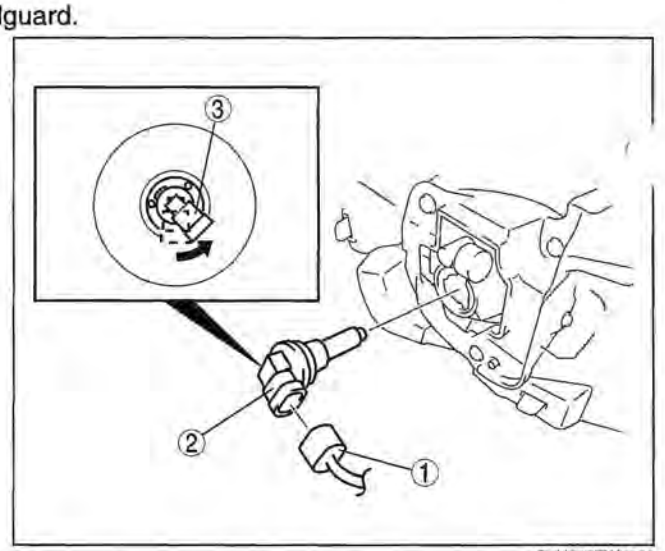
1. Disconnect the negative battery cable.
2. Remove the fasteners, then slightly bend back the mudguard.
3. Remove in the order indicated in the table.

1	Connector
2	Socket
3	Front fog light bulb

Caution

- **A halogen bulb generates extremely high heat when it is used. If the surface of the bulb is soiled, excessive heat will build up and the light's life will be shortened. When replacing the bulb, hold the metal flange, not the glass.**

4. Install in the reverse order of removal.



E6U918ZW5020

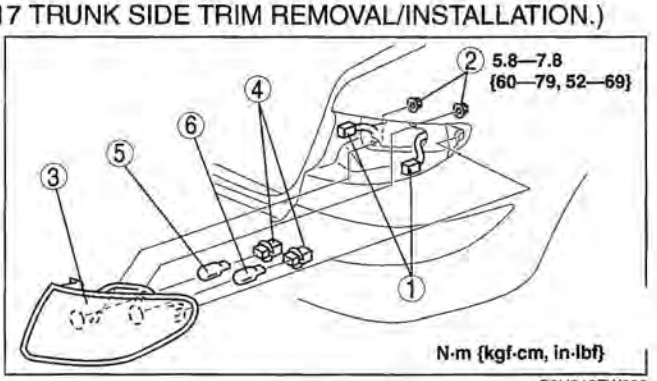
REAR COMBINATION LIGHT REMOVAL/INSTALLATION

E6U091851150W01

1. Disconnect the negative battery cable.
2. Remove the trunk side trim.(Sport Sedan)(See 09–17–17 TRUNK SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Nut
3	Rear combination light
4	Socket
5	Rear turn light bulb
6	Brake light/taillight bulb

4. Install in the reverse order of removal.



C6U918ZW003

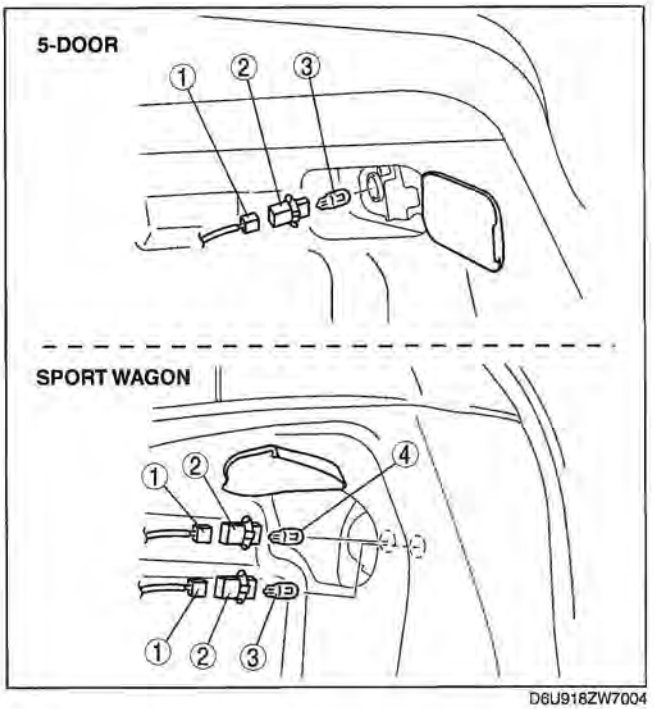
REAR COMBINATION LIGHT BULB REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091851150W02

1. Disconnect the negative battery cable.
2. Turn over the service hole cover.
   Remove in the order indicated in the table.

1	Connector
2	Socket
3	Brake/taillight bulb
4	Rear turn light bulb (Sport Wagon)

4. Install in the reverse order of removal.



D6U918ZW7004

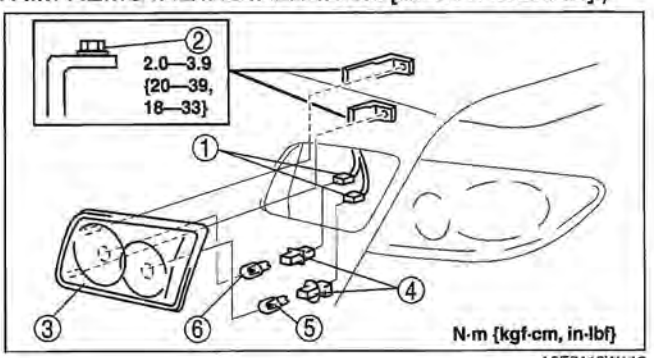
INBOARD COMBINATION LIGHT REMOVAL/INSTALLATION

E6U091851360W01

1. Disconnect the negative battery cable.
2. Remove the trunk lid trim. (See 09–17–20 TRUNK LID TRIM REMOVAL/INSTALLATION [SPORT SEDAN].)
   Remove in the order indicated in the table.

1	Connector
2	Nut
3	Inboard combination light (See 09–18–15 Inboard Combination Light Installation Note)
4	Socket
5	Back-up light bulb
6	Taillight bulb

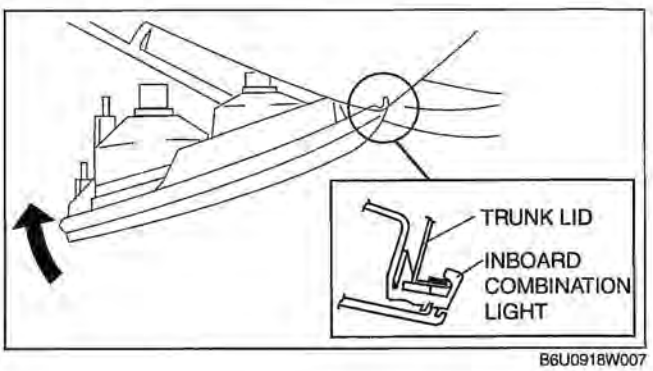
4. Install in the reverse order of removal.



A6E8112W119

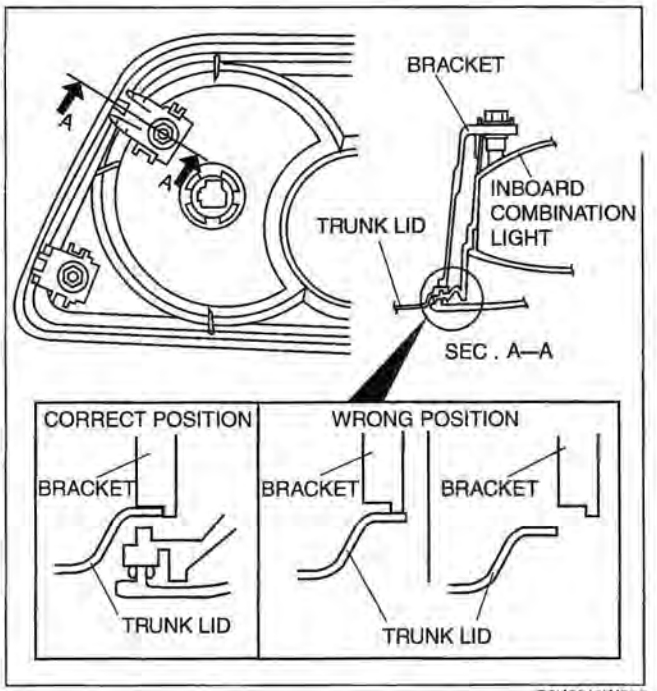
Inboard Combination Light Installation Note

1. Insert the inboard combination light into the trunk lid as shown in the figure, then pivot it inward and fix in place.



B6U0918W007

2. Place the bracket in the proper position as shown in the figure and press it to the trunk lid to attach.



B6U0918W006

HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION [SPORT SEDAN]

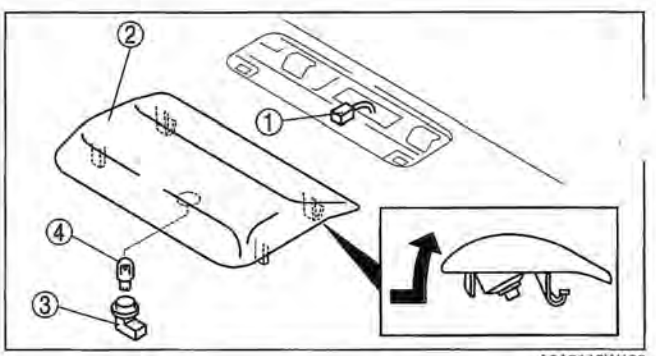
E6U091851580W01

In-Vehicle-Type

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Connector
2	High-mount brake light
3	Socket
4	High-mount brake light bulb

3. Install in the reverse order of removal.



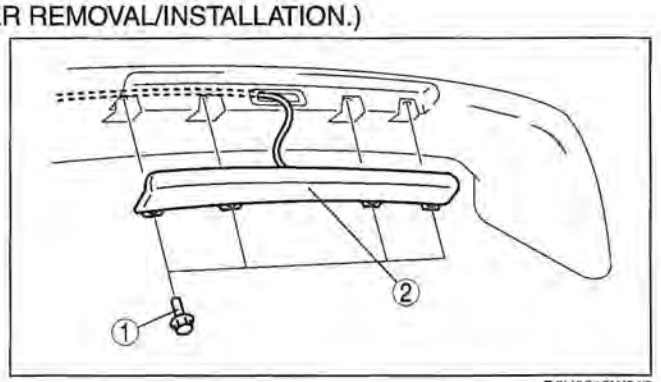
A6A8112W123

Rear Spoiler Type

1. Disconnect the negative battery cable.
2. Remove the rear spoiler. (See 09–16–8 REAR SPOILER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Bolt
2	High-mount brake light (See 09–18–17 High-mount brake light removal note)

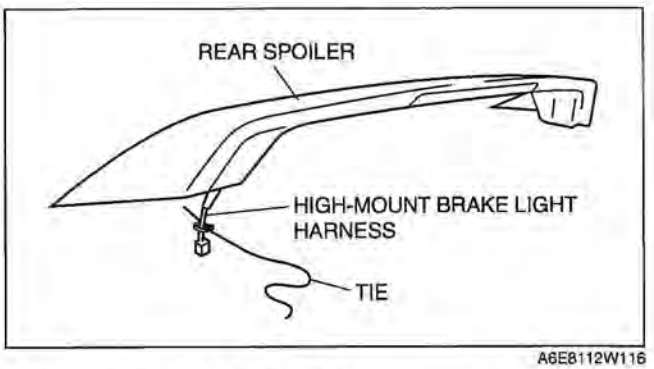
4. Install in the reverse order of removal.



B6U0918W017

High-mount brake light removal note

1. Tie a string to the end of the high-mount brake light connector beforehand so that the connector can be passed easily through the rear spoiler during installation.



A6E8112W116

HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

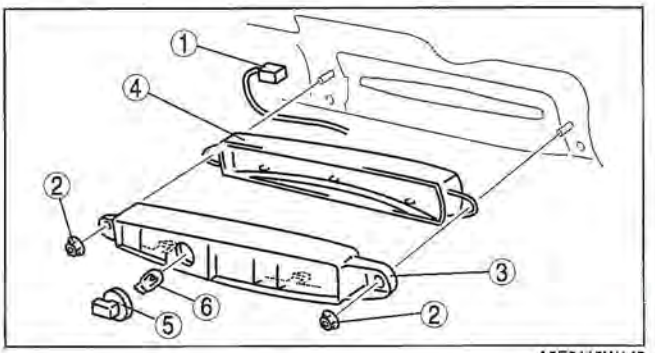
E6U091851580W02

5-Door

1. Disconnect the negative battery cable.
2. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON])
3. Remove in the order indicated in the table.

1	Connector
2	Nut
3	High-mount brake light
4	Lens
5	Socket
6	High-mount brake light bulb

4. Install in the reverse order of removal.



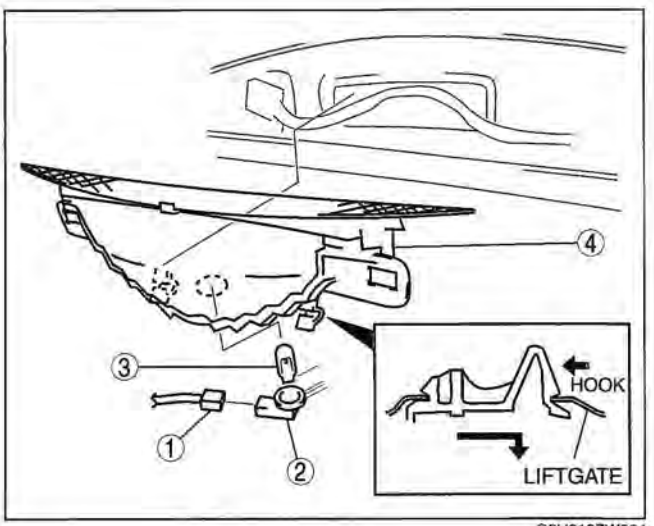
A6E8112W142

Sport Wagon
In-vehicle-type

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim.
3. Remove in the order indicated in the table.

1	Connector
2	Socket
3	High-mount brake light bulb
4	High-mount brake light

4. Install in the reverse order of removal.



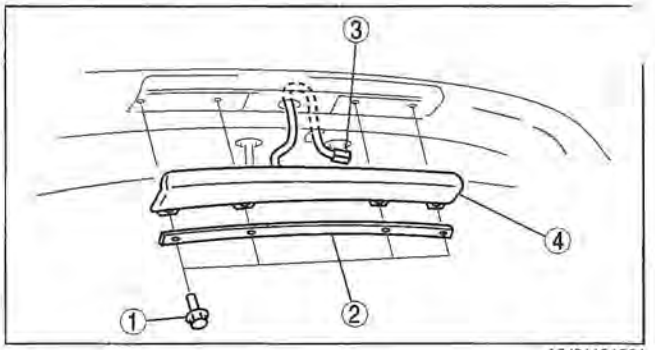
C6U918ZW004

Rear spoiler type

1. Disconnect the negative battery cable.
2. Remove the rear spoiler.
3. Remove in the order indicated in the table.

1	Bolt
2	Cover
3	Connector
4	High-mount brake light

4. Install in the reverse order of removal.



A6J81121004

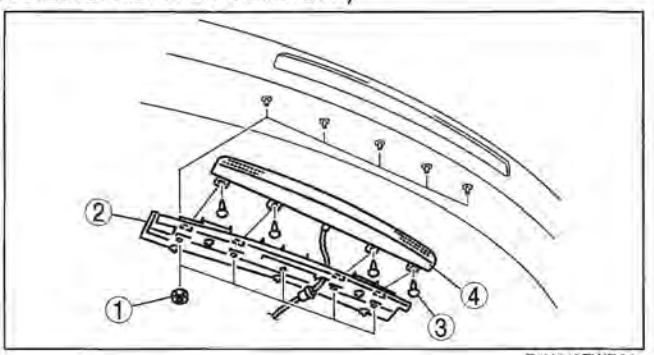
HIGH-MOUNT BRAKE LIGHT REMOVAL/INSTALLATION [L3 WITH TC]

E6U091851580W03

1. Disconnect the negative battery cable.
2. Remove the rear spoiler. (See 09–16–8 REAR SPOILER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Nut
2	Bracket
3	Screw
4	High-mount brake light

4. Install in the reverse order of removal.



E6U918ZWB0

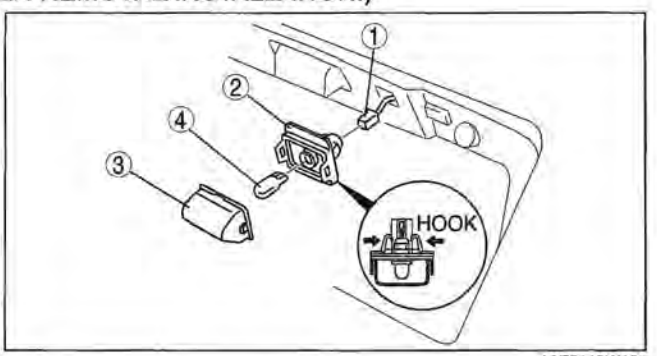
LICENSE PLATE LIGHT REMOVAL/INSTALLATION

E6U091851270W01

1. Disconnect the negative battery cable.
2. Remove the rear finisher. (See 09–16–7 REAR FINISHER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	License plate light
3	Lens
4	License plate light bulb

4. Install in the reverse order of removal.



A8E8112W108

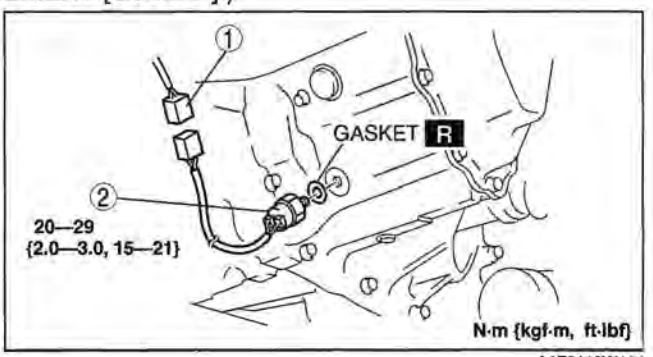
BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [G35M-R]

E6U091817640W01

1. Disconnect the negative battery cable.
2. Drain the oil.(See05–15A–2 TRANSAXLE OIL REPLACEMENT [G35M-R].)
   Remove in the order indicated in the table.

1	Connector
2	Back-up light switch

4. Install in the reverse order of removal.
5. Refill the oil.(See05–15A–2 TRANSAXLE OIL REPLACEMENT [G35M-R].)



A6E8112W104

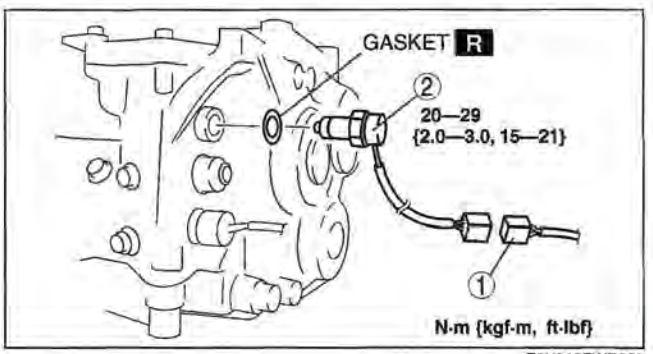
BACK-UP LIGHT SWITCH REMOVAL/INSTALLATION [L3 WITH TC]

E6U091817640W03

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Connector
2	Back-up light switch

3. Install in the reverse order of removal.



E6U918ZWB009

09–18

CK-UP LIGHT SWITCH INSPECTION

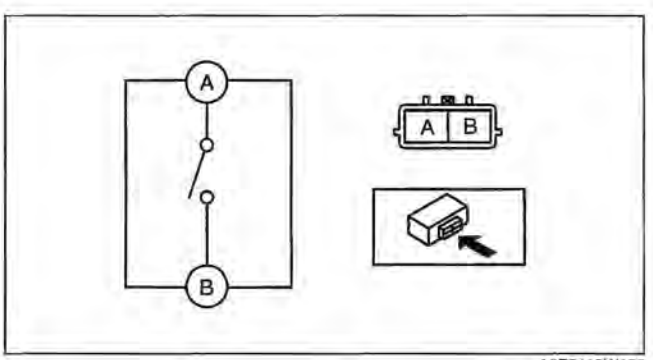
E6U091817640W02

1. Disconnect the back-up light switch connector.
2. Inspect for continuity between the back-up light switch terminals using an ohmmeter.
   - If not as specified, replace the back-up light switch.

O—O : Continuity

Shift lever position	Terminal	
	A	B
Reverse	O	O
Other		

A6E8112W128



A6E8112W153

COMBINATION SWITCH REMOVAL/INSTALLATION

E6U091866120W03

1. Disconnect the negative battery cable.
2. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Remove the steering wheel. (See 06–12–7 STEERING WHEEL AND COLUMN REMOVAL/INSTALLATION.)
4. Remove the column cover. (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)

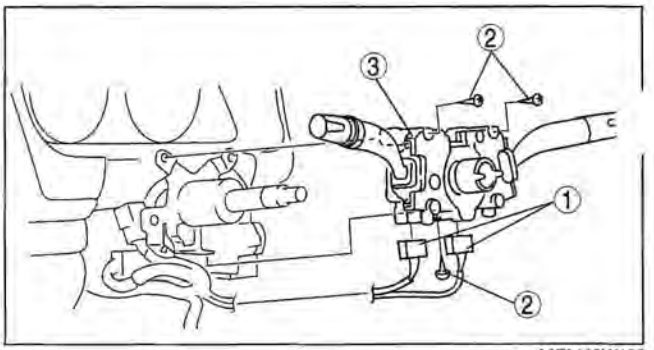
Caution

- **The clock spring is generally not to be removed from the combination switch as may result in a malfunction of the steering angle sensor. However, remove it only when replacing the clock spring as a single unit by referring to CLOCK SPRING REMOVAL/INSTALLATION. (See 08–10–15 CLOCK SPRING REMOVAL/INSTALLATION.)**

5. Remove in the order indicated in the table.

1	Connector
2	Screw
3	Combination switch

6. Install in the reverse order of removal.



A6E8112W102

COMBINATION SWITCH DISASSEMBLY/ASSEMBLY

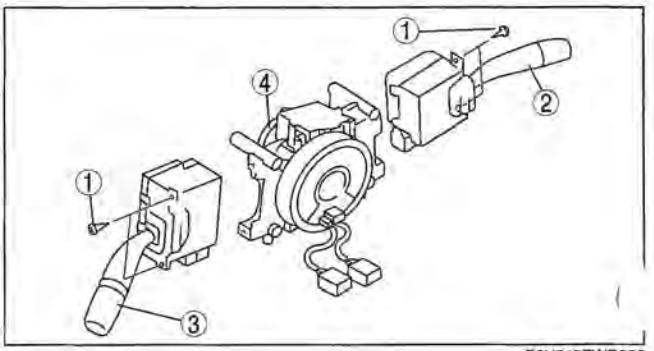
E6U091866120W04

Caution

- **The clock spring is generally not to be removed from the combination switch as may result in a malfunction of the steering angle sensor. However, remove it only when replacing the clock spring as a single unit by referring to CLOCK SPRING REMOVAL/INSTALLATION. (See 08–10–15 CLOCK SPRING REMOVAL/INSTALLATION.)**

1. Disassemble in the order indicated in the table.
2. Assemble in the reverse order of disassembly.

1	Screw
2	Wiper and washer switch
3	Light switch
4	Body

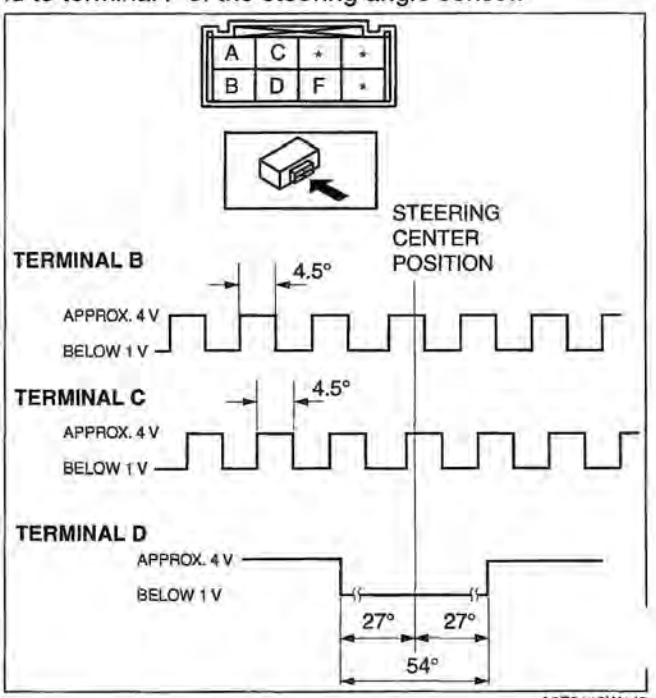


E6U918ZWB020

STEERING ANGLE SENSOR INSPECTION

E6U091866120W05

1. Disconnect the steering angle sensor connector.
2. Connect battery positive voltage to terminal A and ground to terminal F of the steering angle sensor.
3. Turn the steering wheel to the right and left, and verify that the voltage and pulses at the terminals are as shown in the figure.
   - If there is any malfunction, replace the body of the combination switch.



A6E6112W143

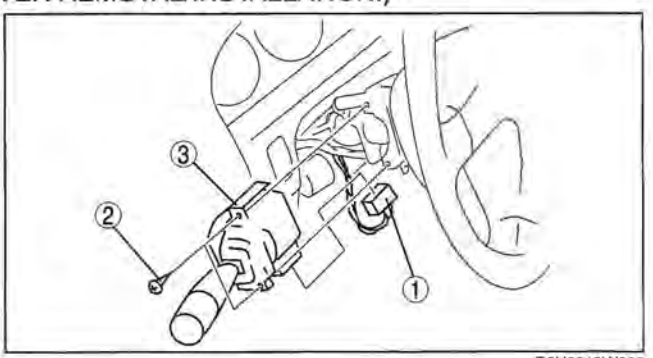
LIGHT SWITCH REMOVAL/INSTALLATION

E6U091866121W01

1. Disconnect the negative battery cable.
2. Remove the column cover.(See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Connector
2	Screw
3	Light switch

4. Install in the reverse order of removal.



B6U0918W009

LIGHT SWITCH INSPECTION

E6U091866121W02

1. Inspect for continuity between the light switch terminals using an ohmmeter.
   - If not as specified, replace the light switch.

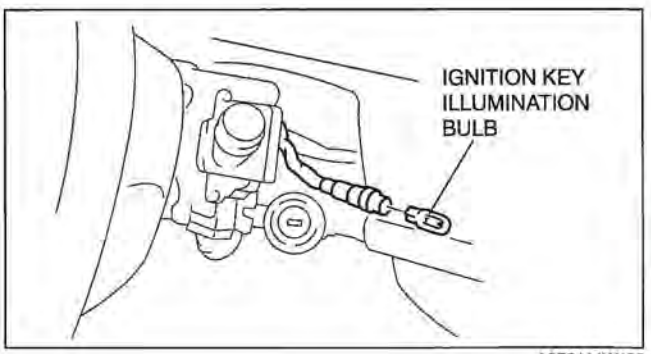
IGNITION KEY ILLUMINATION BULB REMOVAL/INSTALLATION

E6U091860231W01

1. Disconnect the negative battery cable.
2. Remove the column cover.
3. Remove the ignition key illumination bulb.
4. Install in the reverse order of removal.



A6E8114W129

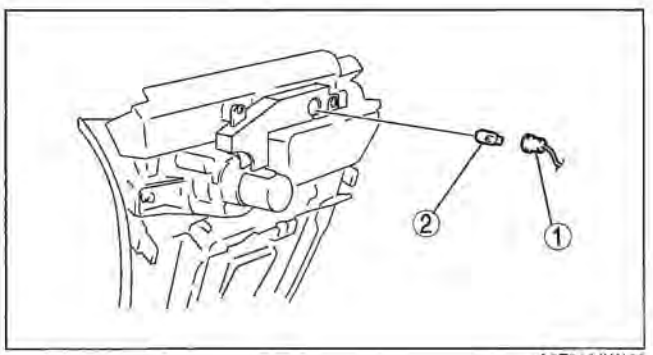
ASHTRAY ILLUMINATION BULB REMOVAL/INSTALLATION

E6U091864610W01

1. Disconnect the negative battery cable.
2. Remove the boot panel.
3. Remove in the order indicated in the table.

1	Socket
2	Ashtray illumination bulb

4. Install in the reverse order of removal.



A6E8114W106

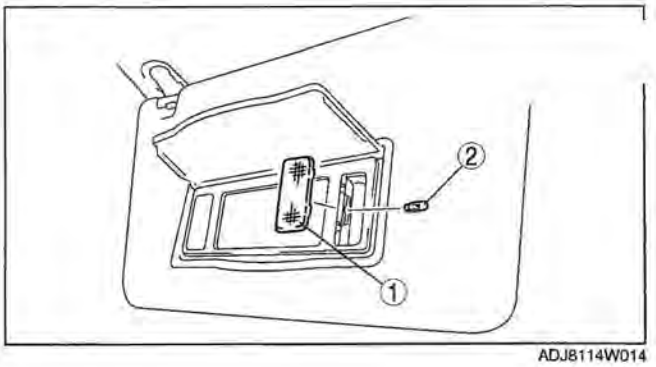
VANITY MIRROR ILLUMINATION BULB REMOVAL/INSTALLATION

E6U091869270W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Lens (See 09–18–32 Lens Removal Note)
2	Vanity mirror illumination bulb

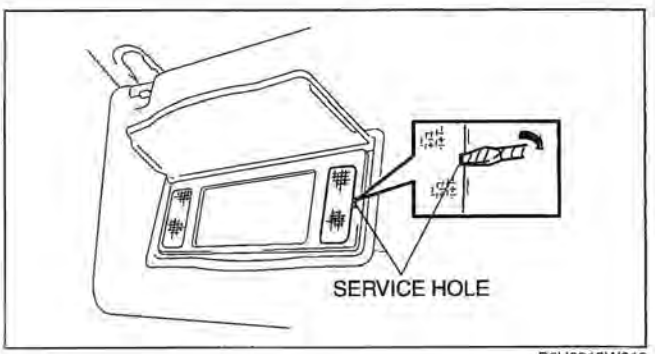
3. Install in the reverse order of removal.



ADJ8114W014

Lens Removal Note

1. Insert a tape-wrapped flathead screwdriver into the service hole, and pry the screwdriver in the direction indicated by the arrow to remove the lens.



B6U0918W019

VANITY MIRROR ILLUMINATION INSPECTION

E6U091869270W

1. Remove the sunvisor.
2. Inspect for continuity between the vanity mirror illumination terminals using an ohmmeter.
   - If not as specified, replace the sunvisor.

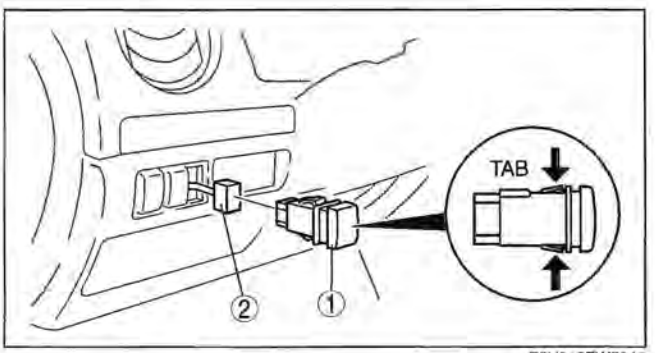
PANEL LIGHT CONTROL SWITCH REMOVAL/INSTALLATION

E6U091866600W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Panel light control switch (See 09–18–34 Panel Light Control Switch Removal Note)
2	Connector

3. Install in the reverse order of removal.



E6U918ZW50

Panel Light Control Switch Removal Note

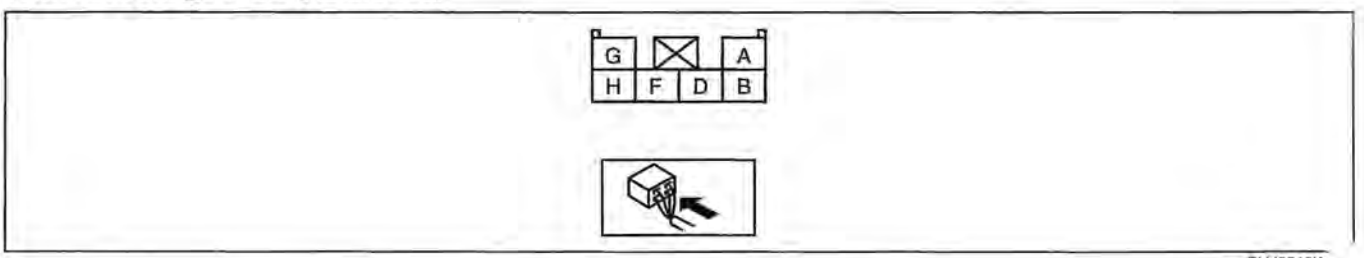
1. Insert your hand from the lower side of the dashboard and squeeze the tabs of the panel light control switch.
2. Pull the panel light control switch toward you to remove it.

PANEL LIGHT CONTROL SWITCH INSPECTION

E6U091866600W02

1. Connect the panel light control switch connector.
2. Connect the negative battery cable.
3. Measure the voltage at each terminal (other than terminal D).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)".
4. Disconnect the panel light control switch connector.
5. Verify that continuity at terminal D is as indicated in the Terminal Voltage Table (Reference).
   - If there is any malfunction, inspect the parts under "Inspection item(s)".
     — If the system does not work properly even though the parts or related wiring harnesses do not have any malfunction, replace the panel light control switch.

Terminal Voltage Table (Reference)



BHJ0918V

Terminal	Signal name	Connected to	Measured condition	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
A	Illumination	Instrument cluster	Inspect using an oscilloscope. (See 09–18–35 Terminals A and F Inspection.)		–	• Instrument cluster • Each illumination • Related wiring harnesses
F		Each illumination				
B	TNS	TNS relay	Turn the light switch to the TNS or ON position.		B+	• TNS relay (See09–21–7 RELAY INSPECTION.) • ILLUMI 10 A fuse • Related wiring harnesses
			Turn the light switch to the OFF position.		1.0 or less	
D	GND	Body ground	Under any condition: Inspect for continuity to ground.		Continuity detected	• GND • Related wiring harnesses
G	IG1	Ignition switch	Turn the ignition switch to the ON position.		B+	• Ignition switch (See09–21–3 IGNITION SWITCH INSPECTION [WITHOUT ADVANCED KEYLESS SYSTEM].) (See09–21–5 IGNITION SWITCH INSPECTION [WITH ADVANCED KEYLESS SYSTEM].) • Related wiring harnesses
			Turn the ignition switch to the ACC or LOCK position.		1.0 or less	
H	Dimmer cancel	Instrument cluster/ center panel module	Turn the light switch to the TNS or ON position.	Dimmer cancel switch is on.	B+	• Instrument cluster • Center panel module • Related wiring harnesses
				Dimmer cancel switch is off.	1.0 or less	

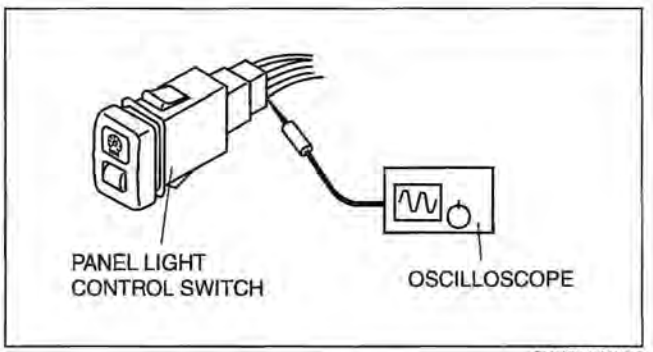
09–18

Terminals A and F Inspection

Measure the wave pattern of panel light control switch terminals A and F using an oscilloscope.

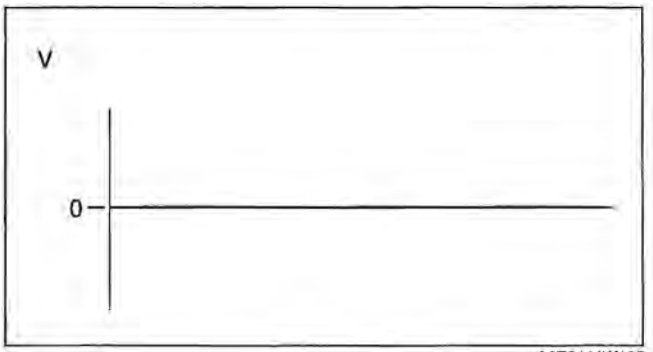
- Oscilloscope setting :
  5 V/DIV (Y) , 5 ms/div (X) , DC range

2. Turn the light switch to the TNS or ON position.
3. Turn the panel light control switch to the brightest setting.



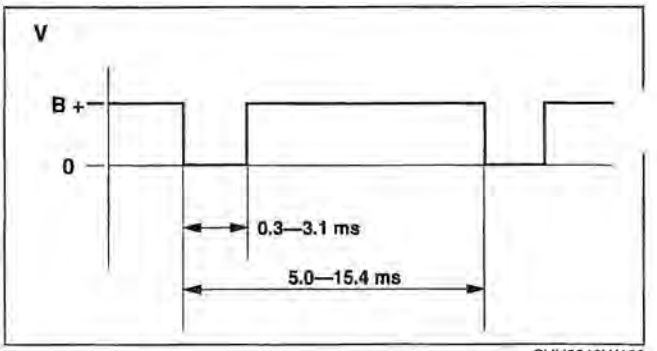
CHU0918W168

4. Verify that the wave pattern is as shown in the figure.



A6E8114W125

5. Turn the panel light control switch to the darkest position and verify that the wave pattern is as shown in the figure.



CHU0918W169

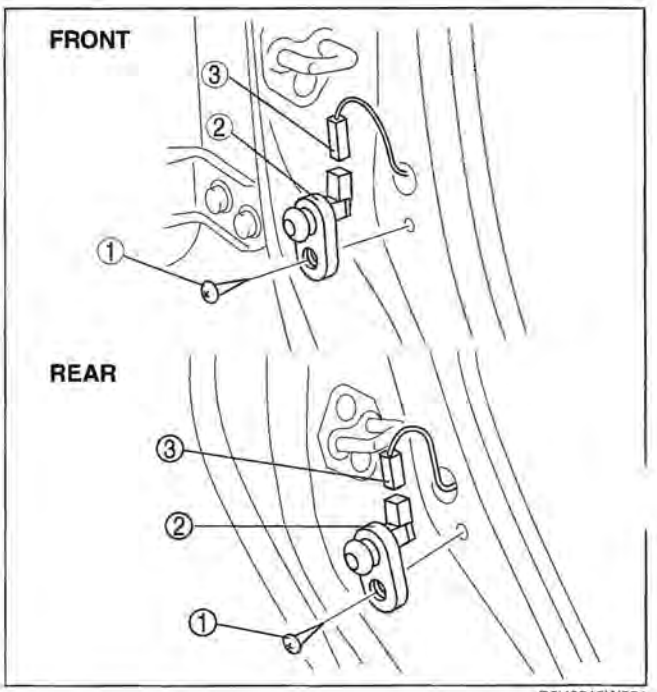
DOOR SWITCH REMOVAL/INSTALLATION

E6U091866540W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Screw
2	Door switch
3	Connector

3. Install in the reverse order of removal.



B6U0918W021

DOOR SWITCH INSPECTION

E6U091866540W02

1. Remove the door switch. (See 09–18–36 DOOR SWITCH REMOVAL/INSTALLATION.)
2. Inspect for continuity between the door switch terminal and a body ground using an ohmmeter.
   - If not as specified, replace the door switch.

O—O : Continuity

Switch position	Terminal	
	A	Body GND
Pressed

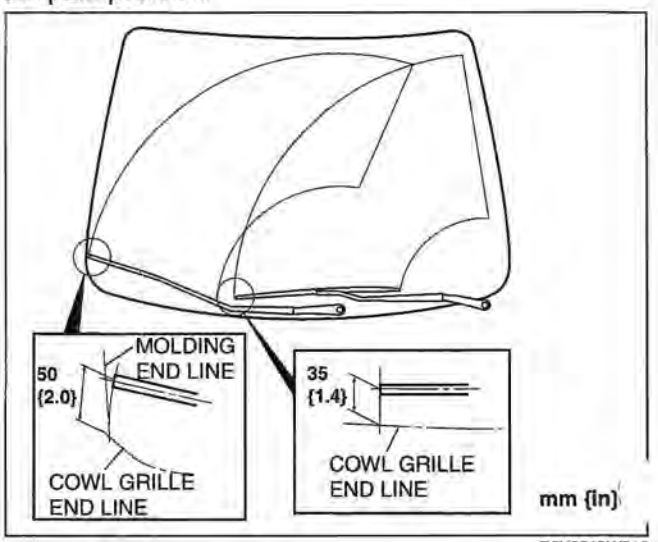
WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT

E6U091967320W01

1. Operate the windshield wiper motor to set the wipers in the park position.
2. Set the windshield wiper arm heights as shown.



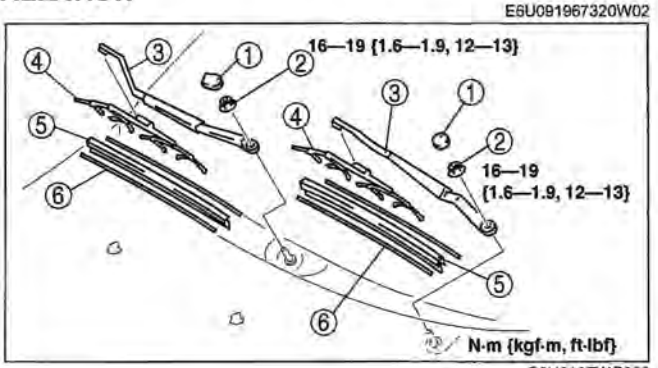
B6U0919W210

WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION

E6U091967320W02

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Windshield wiper arm (See 09–19–4 Windshield Wiper Arm Installation Note)
4	Windshield wiper blade
5	Rubber brush
6	Backing plate

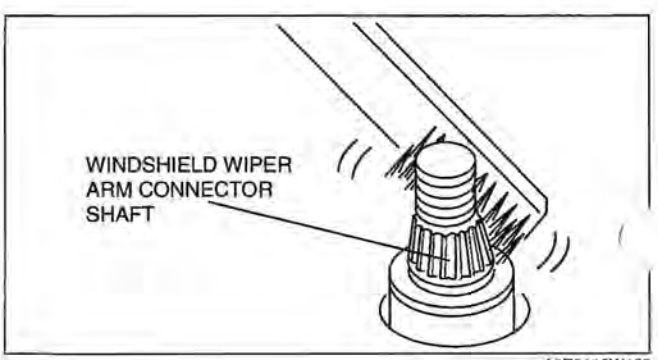


C6U919ZWC003

2. Install in the reverse order of removal.
3. Adjust the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT.)

Windshield Wiper Arm Installation Note

1. Clean the windshield wiper arm connector shafts using a wire brush before installing the windshield wiper arms.



A6E8116W103

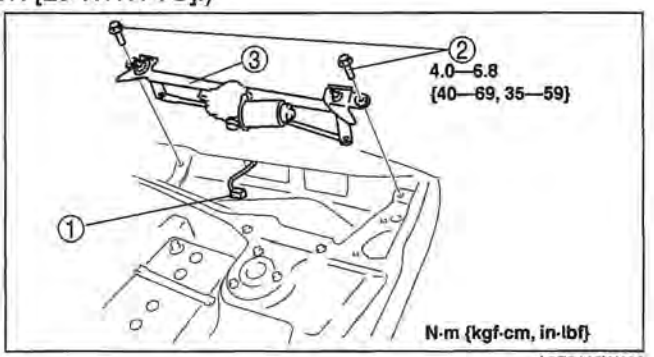
WINDSHIELD WIPER MOTOR REMOVAL/INSTALLATION

E6U091967340W01

1. Disconnect the negative battery cable.
2. Remove the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE REMOVAL/INSTALLATION.)
3. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].) (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
4. Remove in the order indicated in the table.

1	Connector
2	Bolt
3	Windshield wiper motor

5. Install in the reverse order of removal.
6. Adjust the windshield wiper arm and blade. (See 09–19–4 WINDSHIELD WIPER ARM AND BLADE ADJUSTMENT.)



A6E8116W102

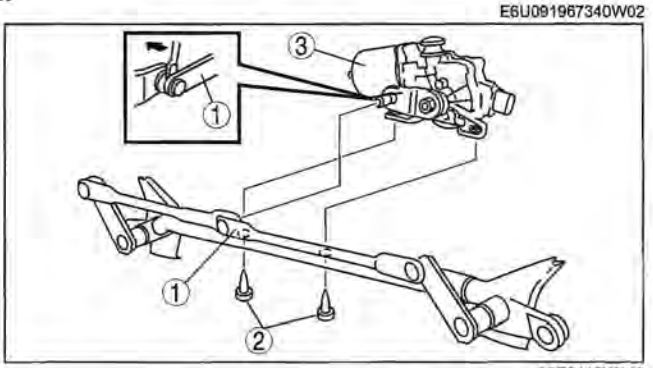
WINDSHIELD WIPER MOTOR DISASSEMBLY/ASSEMBLY

E6U091967340W02

1. Disassemble in the order indicated in the table.

1	Windshield wiper link (See 09–19–5 Windshield Wiper Link Removal Note)
2	Bolt
3	Windshield wiper motor

2. Assemble in the reverse order of disassembly.



A6E8116W140

09–19

Windshield Wiper Link Removal Note

1. Pry off the connection between the windshield wiper motor and windshield wiper link.

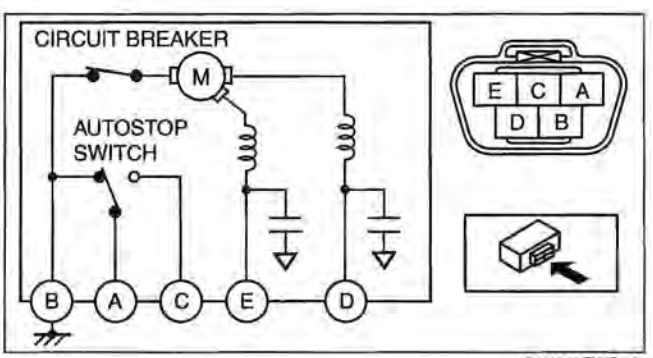
WINDSHIELD WIPER MOTOR INSPECTION

E6U091967340W03

1. Disconnect the windshield wiper motor connector.
2. Connect battery positive voltage to terminal E or D and ground to terminal B, and inspect operation of the windshield wiper motor as indicated below.

Terminal	Operation
E	High
D	Low

3. Disconnect battery positive voltage from terminal E of the motor while the wipers are operating.
4. Verify that the wipers do not stop in the park position.
5. Short between the motor terminals A and D and connect battery positive voltage to the motor terminal C.
6. Verify that the wipers operate at low speed again, then stop in the park position.
   - If not as specified, replace the windshield wiper motor.



C6U919ZWC005

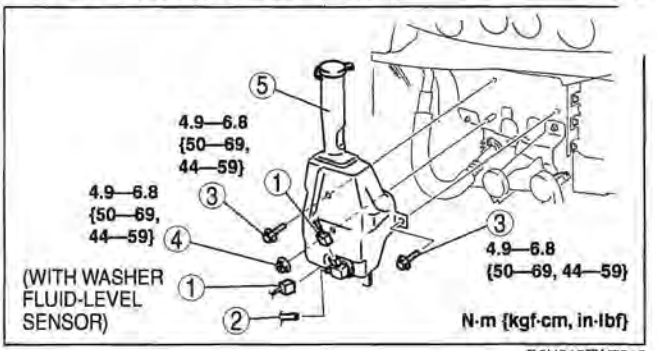
WASHER TANK REMOVAL/INSTALLATION [SPORT SEDAN]

E6U091967480W01

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Windshield washer hose (See 09–19–6 Windshield Washer Hose Installation Note)
3	Bolt
4	Nut
5	Washer tank

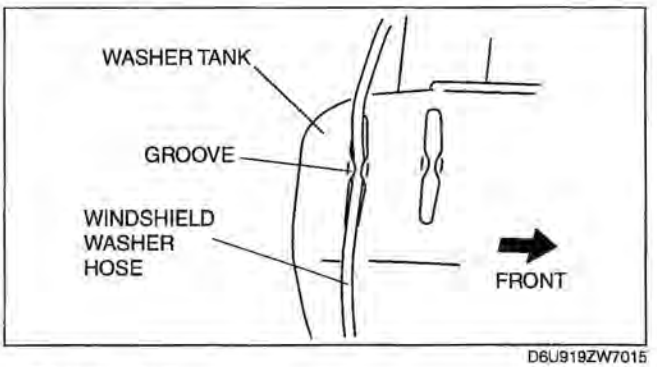
4. Install in the reverse order of removal.



D6U919ZW7012

Windshield Washer Hose Installation Note

1. Install the windshield washer hose by inserting it in the washer tank groove.



D6U919ZW7015

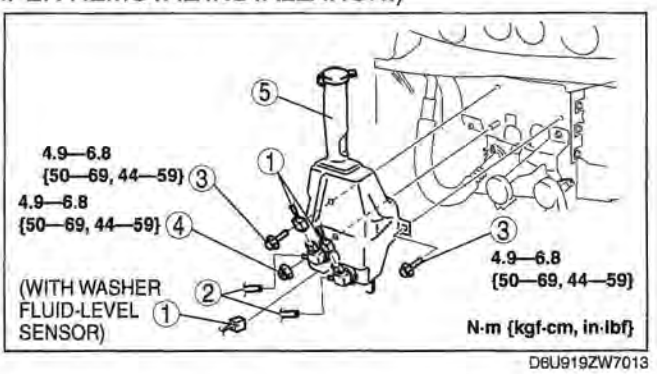
WASHER TANK REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091967480

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Washer hose (See 09–19–6 Washer Hose Installation Note)
3	Bolt
4	Nut
5	Washer tank

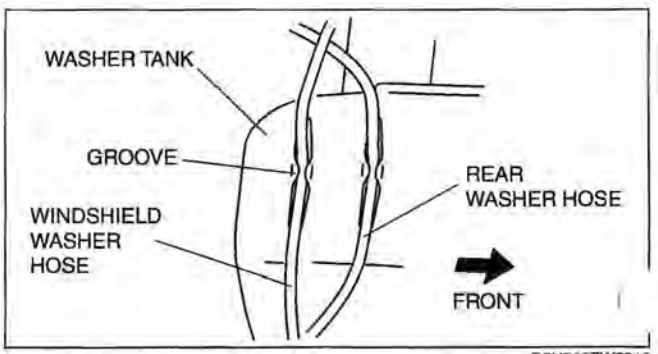
4. Install in the reverse order of removal.



D6U919ZW7013

Washer Hose Installation Note

1. Install the washer hose by inserting it in the washer tank groove.



D6U919ZW7016

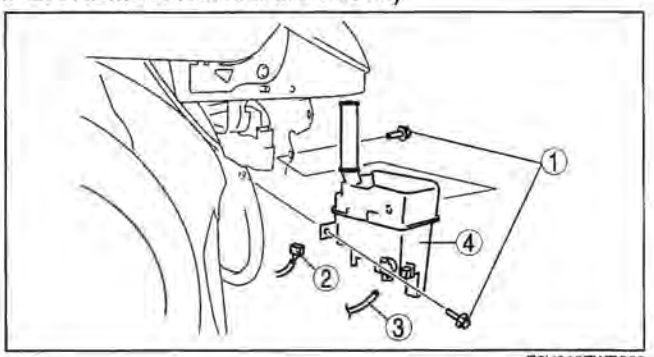
WASHER TANK REMOVAL/INSTALLATION [L3 WITH TC]

E6U091967480W03

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Washer hose
4	Washer tank

4. Install in the reverse order of removal.



E6U919ZWB002

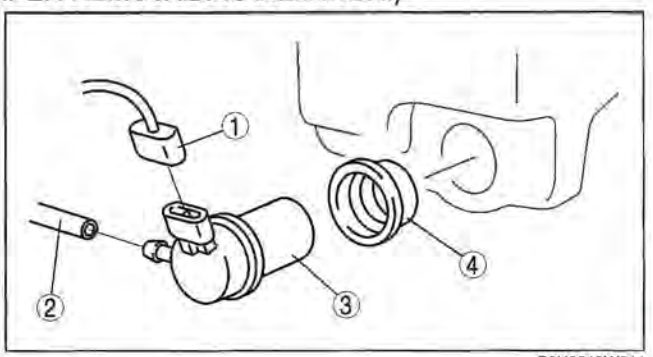
WINDSHIELD WASHER MOTOR REMOVAL/INSTALLATION

E6U091976670W01

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Washer hose
3	Windshield washer motor
4	Grommet

4. Install in the reverse order of removal.



B6U0919W011

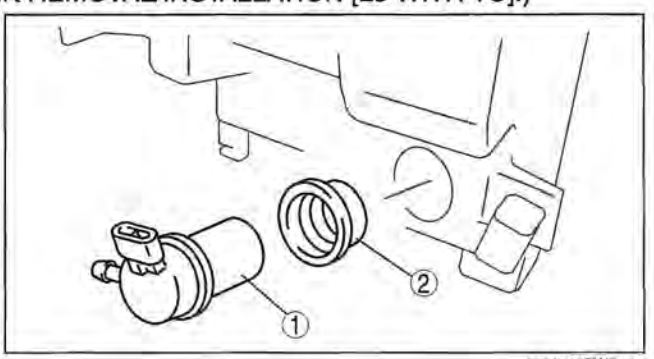
..INDSHIELD WASHER MOTOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U091976670W03

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09–19–7 WASHER TANK REMOVAL/INSTALLATION [L3 WITH TC].)
3. Remove in the order indicated in the table.

1	Windshield washer motor
2	Grommet

4. Install in the reverse order of removal.

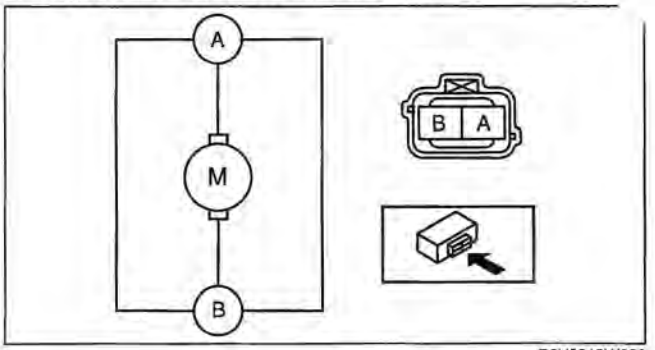


E6U919ZWB003

WINDSHIELD WASHER MOTOR INSPECTION

E6U091976670W02

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Connect battery positive voltage to the motor terminal A and ground to the motor terminal B.
4. Verify that the windshield washer motor operates.
   - If the motor does not operate, replace the windshield washer motor.

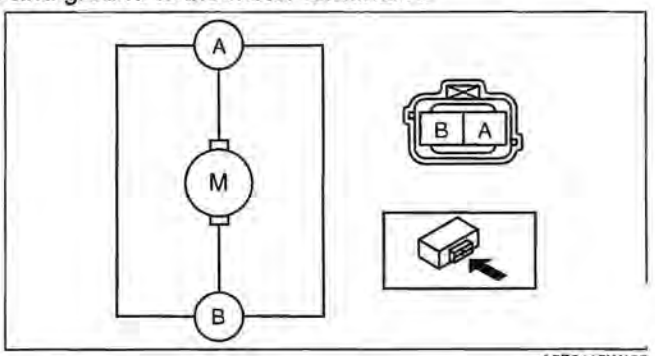


B6U0919W008

WINDSHIELD WASHER MOTOR INSPECTION [L3 WITH TC]

E6U091976670W04

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09–19–7 WASHER TANK REMOVAL/INSTALLATION [L3 WITH TC].)
3. Connect battery positive voltage to the motor terminal B and ground to the motor terminal A.
4. Verify that the windshield washer motor operates.
   - If the motor does not operate, replace the windshield washer motor.



A6E8116W129

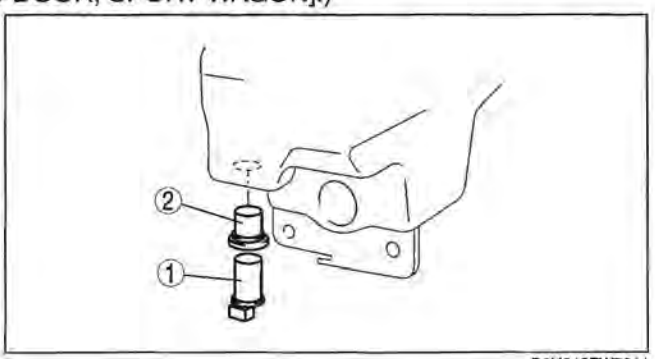
WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION

E6U091967488W01

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09–19–6 WASHER TANK REMOVAL/INSTALLATION [SPORT SEDAN].)(See 09–19–6 WASHER TANK REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove in the order indicated in the table.

1	Washer fluid-level sensor
2	Grommet

4. Install in the reverse order of removal.



D6U919ZW7011

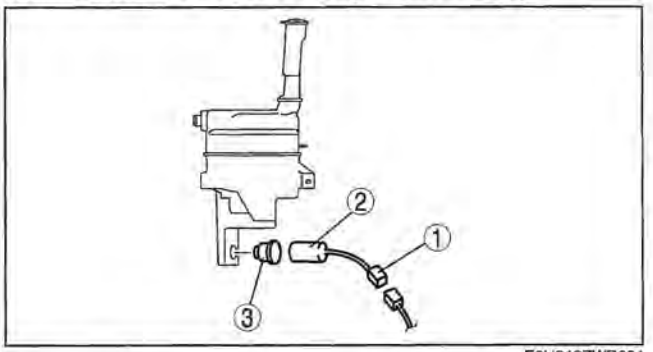
WASHER FLUID-LEVEL SENSOR REMOVAL/INSTALLATION [L3 WITH TC]

E6U091967488W03

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09–19–7 WASHER TANK REMOVAL/INSTALLATION [L3 WITH TC].)
   Remove in the order indicated in the table.

1	Connector
2	Washer fluid-level sensor
3	Grommet

4. Install in the reverse order of removal.



E6U919ZWB004

WASHER FLUID-LEVEL SENSOR INSPECTION

E6U091967488W02

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Inspect for continuity between the washer fluid-level sensor terminals using an ohmmeter.
   - If not as specified, replace the washer fluid-level sensor.

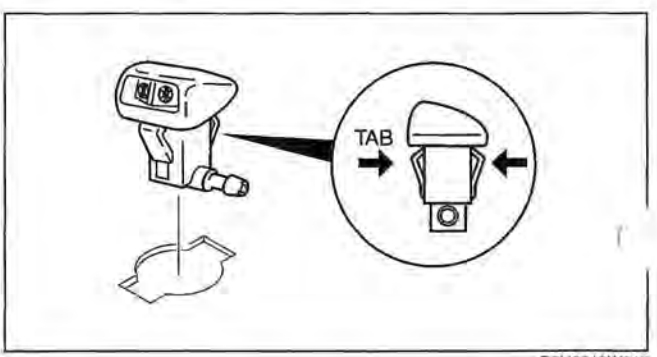
WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION

E6U091967510W01

1. Remove the hood insulator.
2. Remove the windshield washer hose from the windshield washer nozzle.
3. Squeeze the tabs of the windshield washer nozzle.
4. Pull the windshield washer nozzle out to remove it.
5. Install in the reverse order of removal.

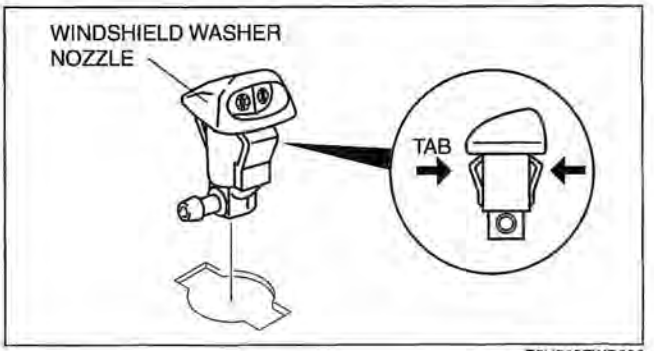


B6U0919W015

WINDSHIELD WASHER NOZZLE REMOVAL/INSTALLATION [L3 WITH TC]

E6U091967510W02

1. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
2. Remove the windshield washer hose from the windshield washer nozzle.
   Compress the tabs of the windshield washer nozzle.
3. Pull the windshield washer nozzle out to remove it.
5. Install in the reverse order of removal.



E6U919ZWB006

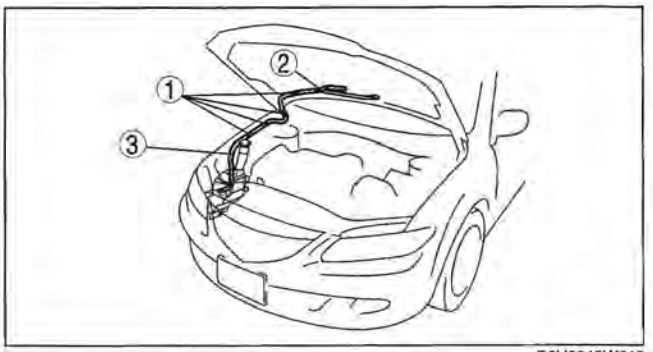
WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION

E6U091950630W01

1. Remove the hood insulator.
2. Partially peel off the right side mud guard.
3. Remove in the order indicated in the table.

1	Clip
2	Joint pipe
3	Windshield washer hose (See 09–19–11 Windshield Washer Hose Installation Note)

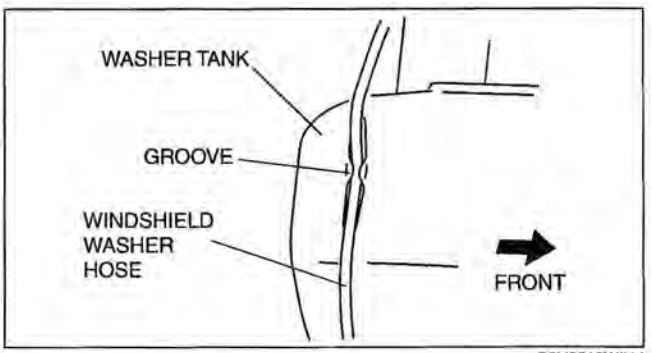
4. Install in the reverse order of removal.



B6U0919W013

Windshield Washer Hose Installation Note

1. Install the windshield washer hose by inserting it in the washer tank groove.



B6U0919W014

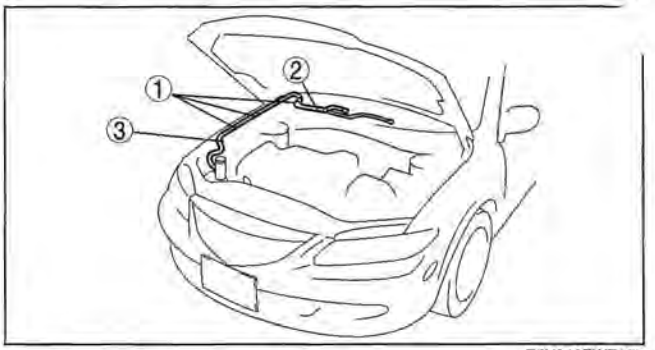
WINDSHIELD WASHER HOSE REMOVAL/INSTALLATION [L3 WITH TC]

E6U091950630W02

1. Remove the cowl grille. (See 09–16–4 COWL GRILLE REMOVAL/INSTALLATION [L3 WITH TC].)
2. Partially peel off the right side mud guard.
3. Remove in the order indicated in the table.

1	Clip
2	Joint pipe
3	Windshield washer hose

4. Install in the reverse order of removal.



E6U919ZWB007

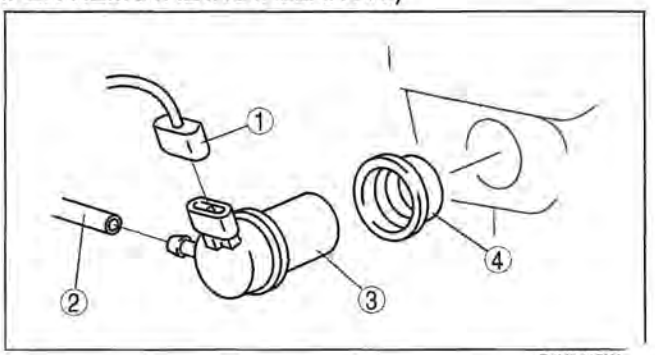
REAR WASHER MOTOR REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091976672W01

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Washer hose
3	Rear washer motor
4	Grommet

4. Install in the reverse order of removal.

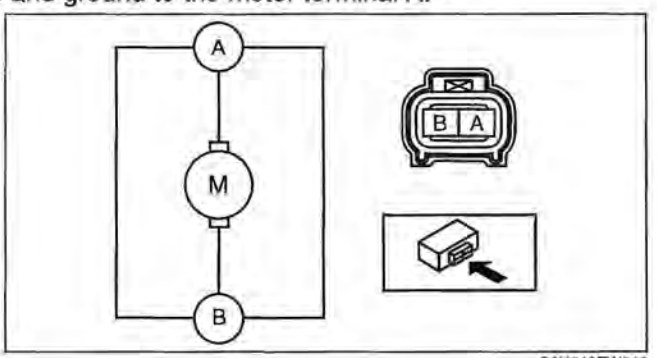


C6U0919W

REAR WASHER MOTOR INSPECTION [5-DOOR, SPORT WAGON]

E6U091976672W02

1. Disconnect the negative battery cable.
2. Remove the front bumper. (See 09–10–10 FRONT BUMPER REMOVAL/INSTALLATION.)
3. Connect battery positive voltage to the motor terminal B and ground to the motor terminal A.
4. Verify that the rear washer motor operates.
   - If the motor does not operate, replace the rear washer motor.



C6U919ZW010

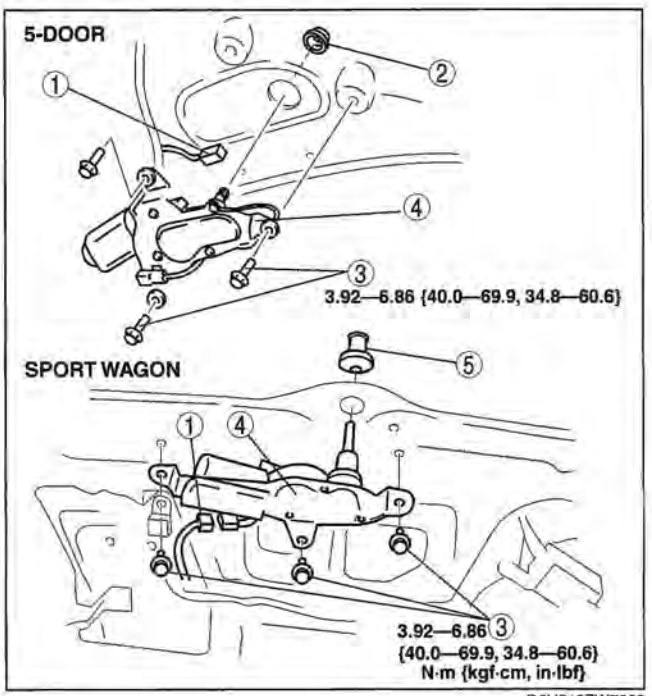
REAR WIPER MOTOR REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091967450W01

1. Disconnect the negative battery cable.
2. Remove the rear wiper arm and blade. (See 09–19–14 REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
4. Remove in the order indicated in the table.

1	Connector
2	Outer bushing (5-Door)
3	Bolt
4	Rear wiper motor
5	Outer bushing (Sport Wagon)

5. Install in the reverse order of removal.
6. Adjust the rear wiper arm and blade. (See 09–19–15 REAR WIPER ARM AND BLADE ADJUSTMENT [5-DOOR, SPORT WAGON].)



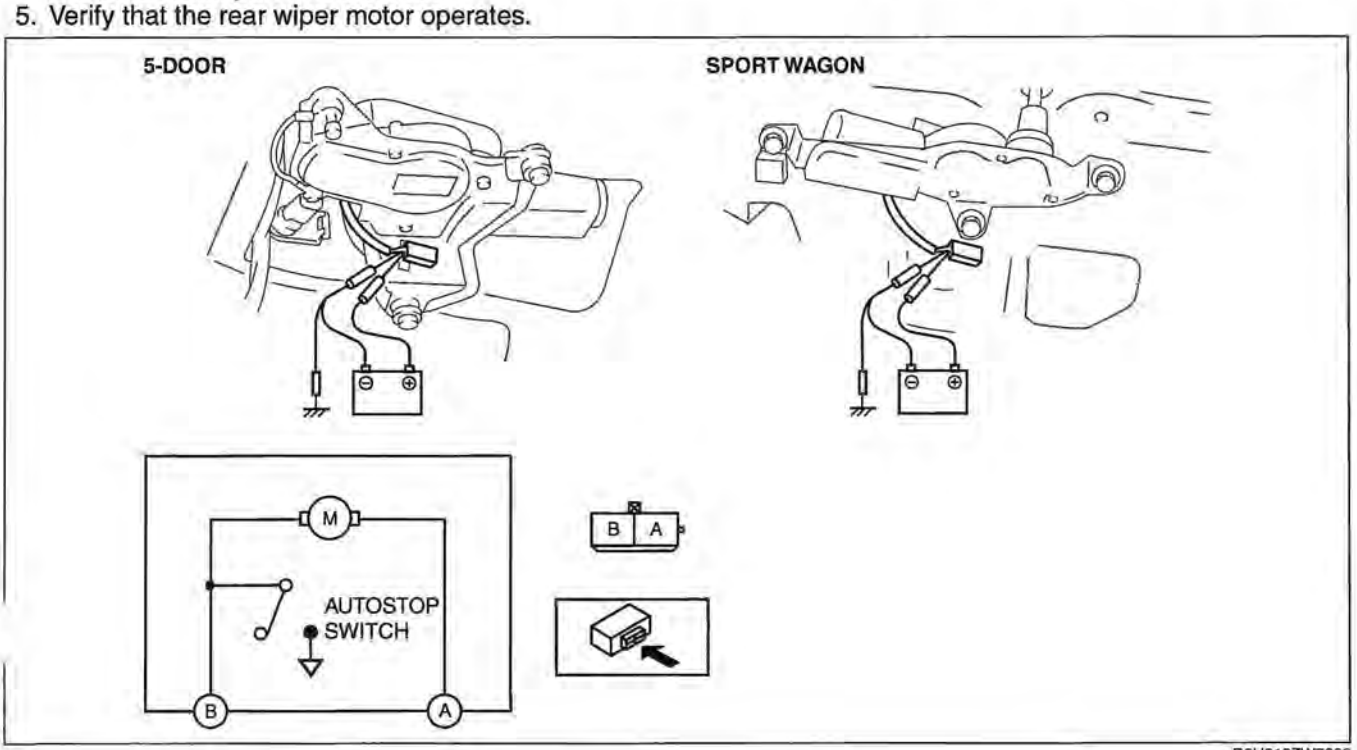
D6U919ZW7002

09–19

REAR WIPER MOTOR INSPECTION [5-DOOR, SPORT WAGON]

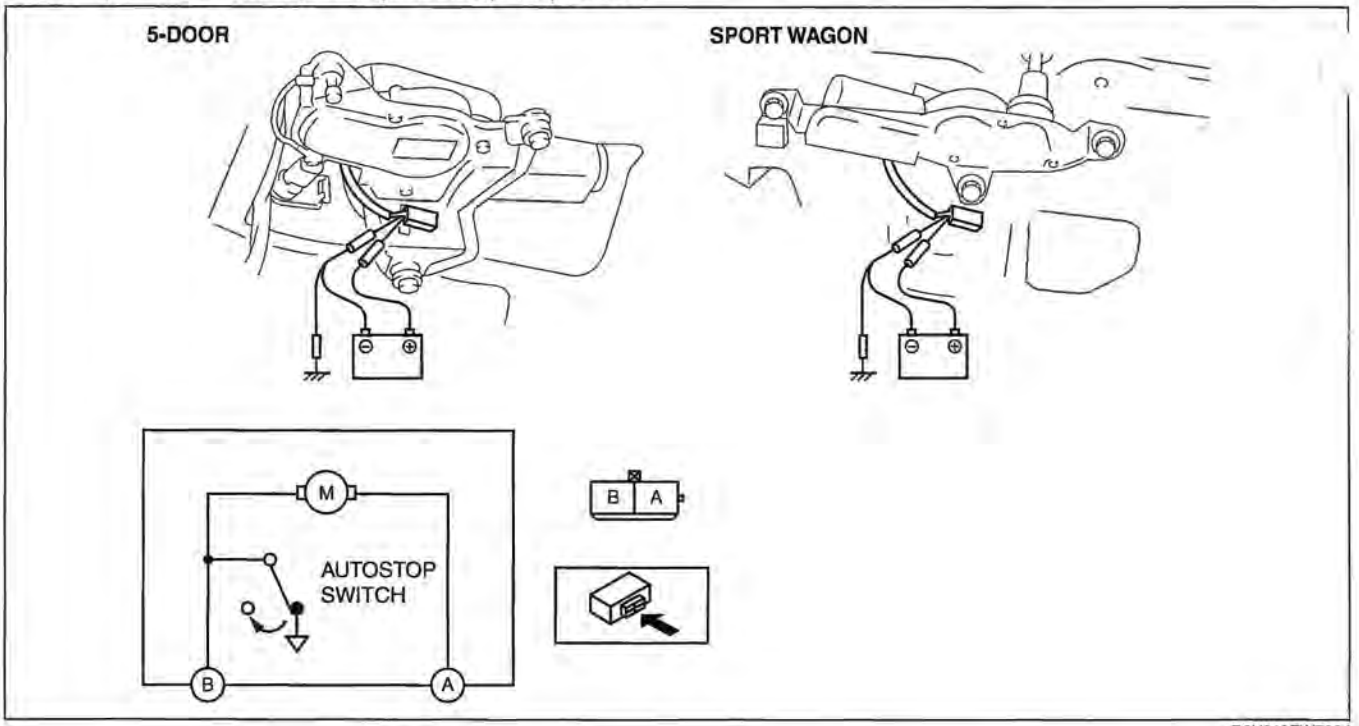
E6U091967450W02

1. Disconnect the negative battery cable.
2. Remove the liftgate lower trim. (See 09–17–23 LIFTGATE LOWER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Disconnect the rear wiper motor connector.
4. Connect battery positive voltage to the rear wiper motor terminal A, and ground the rear wiper motor terminal B to a bare metal part of the vehicle.
5. Verify that the rear wiper motor operates.



D6U919ZW7003

6. Disconnect the ground to the terminal B while the rear wiper is operating.
7. Verify that the rear wiper stops in the park position.



D6U919ZW7004

- If not as specified, replace the rear wiper motor.

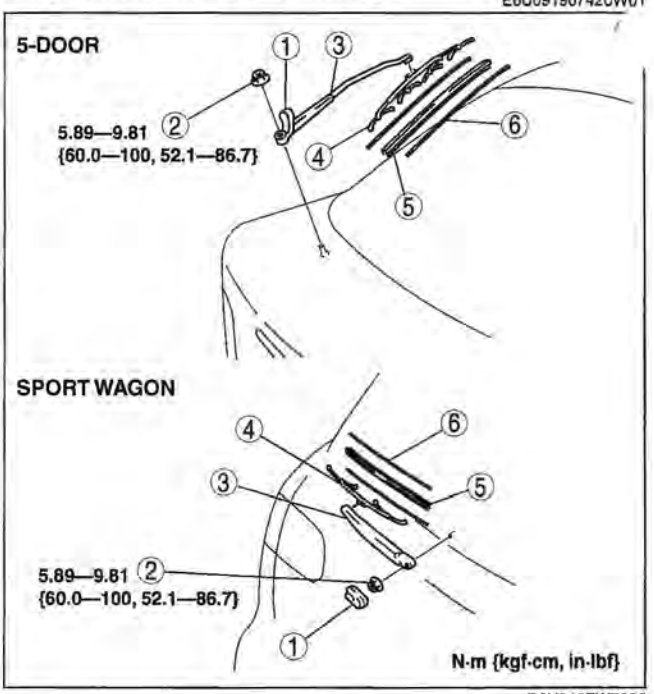
REAR WIPER ARM AND BLADE REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U09196742OW01

1. Remove in the order indicated in the table.

1	Cap
2	Nut
3	Rear wiper arm (See 09–19–15 Rear Wiper Arm Installation Note)
4	Rear wiper blade
5	Rubber brush
6	Backing plate

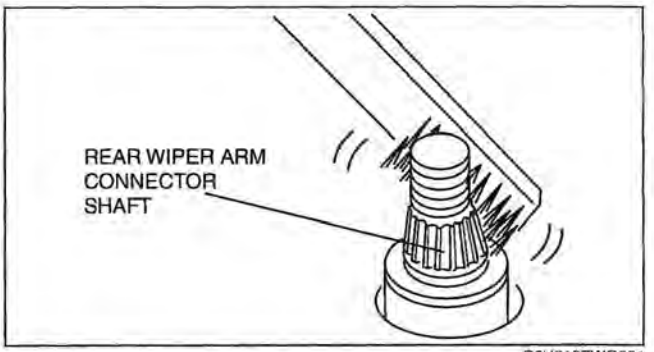
2. Install in the reverse order of removal.
3. Adjust the rear wiper arm and blade. (See 09–19–15 REAR WIPER ARM AND BLADE ADJUSTMENT [5-DOOR, SPORT WAGON].)



D6U919ZW7005

Rear Wiper Arm Installation Note

1. Clean the rear wiper arm connector shaft using a wire brush before installing the rear wiper arm.

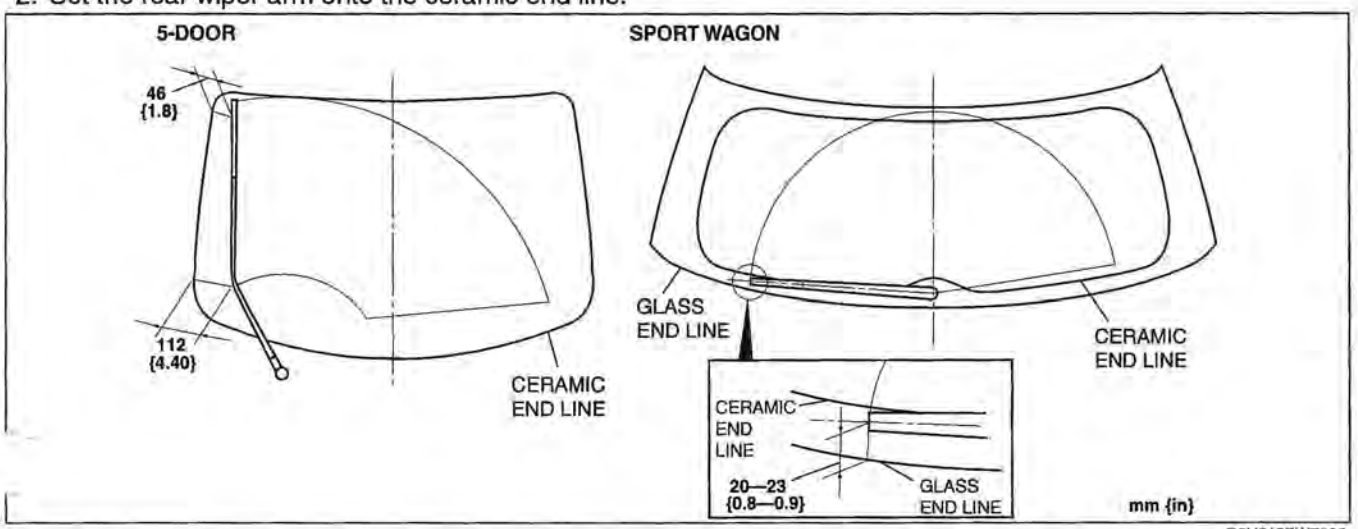


C6U919ZWC001

REAR WIPER ARM AND BLADE ADJUSTMENT [5-DOOR, SPORT WAGON]

E6U091967420W02

1. Operate the rear wiper motor to set the wiper in the park position.
2. Set the rear wiper arm onto the ceramic end line.

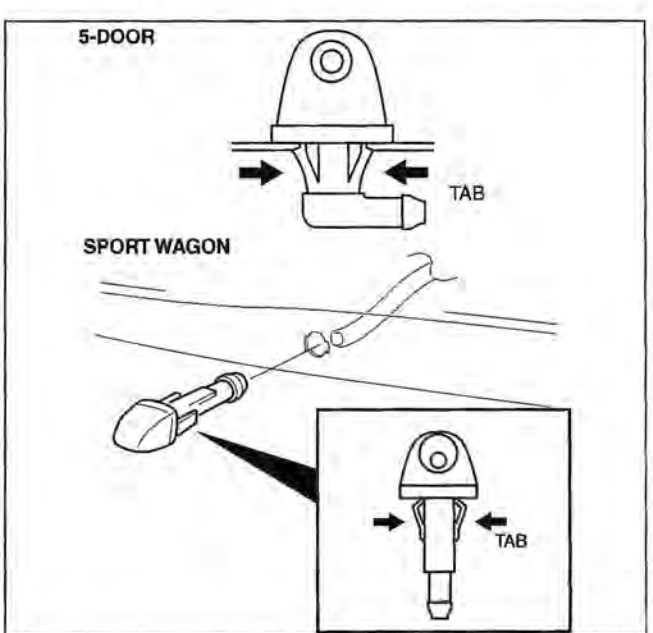


D6U919ZW7006

REAR WASHER NOZZLE REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

E6U091967511W01

1. Disconnect the negative battery cable.
2. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Remove the high-mount brake light (In-vehicle-type). (Sport Wagon)
4. Remove the rear washer hose from the rear washer nozzle.
5. Squeeze the tabs of the rear washer nozzle.
6. Pull the rear washer nozzle out to remove it.
7. Install in the reverse order of removal.
8. Adjust the rear washer nozzle. (See 09–19–16 REAR WASHER NOZZLE ADJUSTMENT [5-DOOR, SPORT WAGON].)

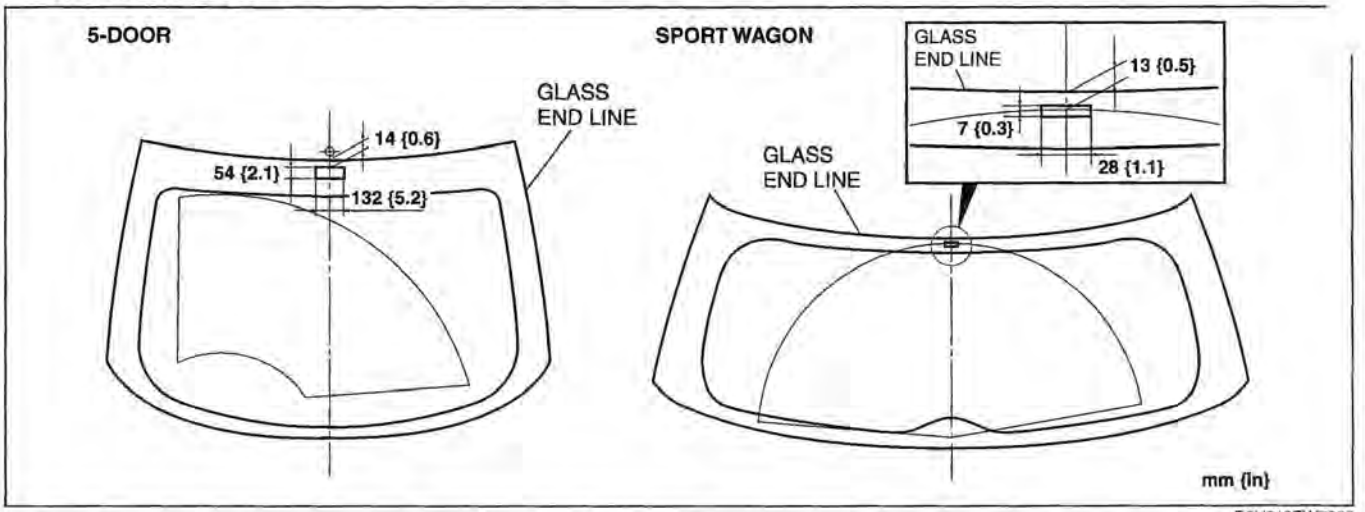


D6U919ZW7007

REAR WASHER NOZZLE ADJUSTMENT [5-DOOR, SPORT WAGON]

E6U091967511W02

1. Insert a needle or an equivalent tool into the spray hole of the rear washer nozzle and adjust the nozzle direction as shown.

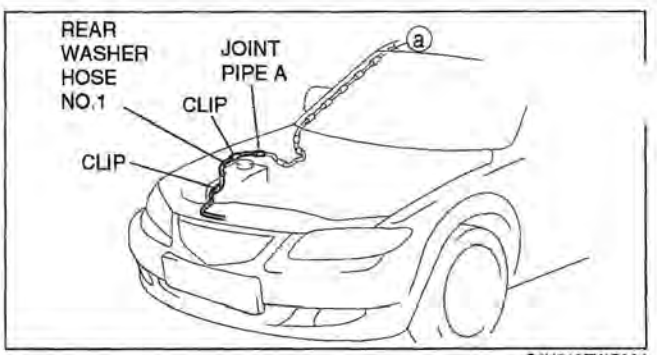


D6U919ZW7008

REAR WASHER HOSE REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON]

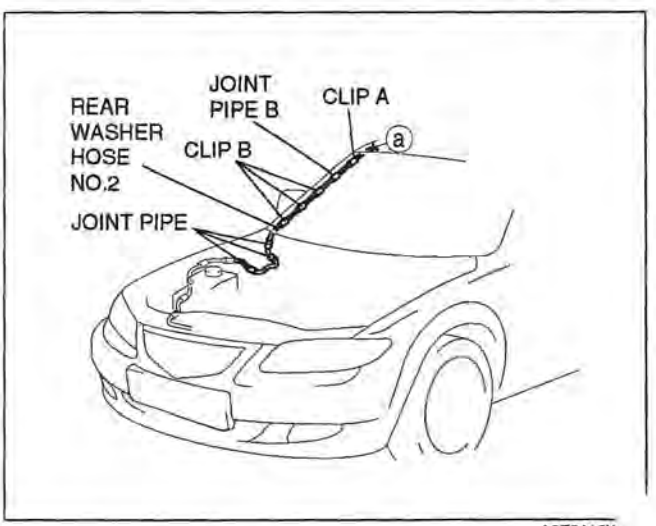
E6U091967471W01

1. Disconnect the negative battery cable.
2. Remove the washer tank. (See 09–19–6 WASHER TANK REMOVAL/INSTALLATION [5-DOOR, SPORT WAGON].)
3. Partially peel off the right side mud guard.
4. Remove rear washer hose No.1 from the clips.
5. Remove rear washer hose No.1 and joint pipe A.
6. Remove the A-pillar trim. (See 09–17–10 A-PILLAR TRIM REMOVAL/INSTALLATION.)



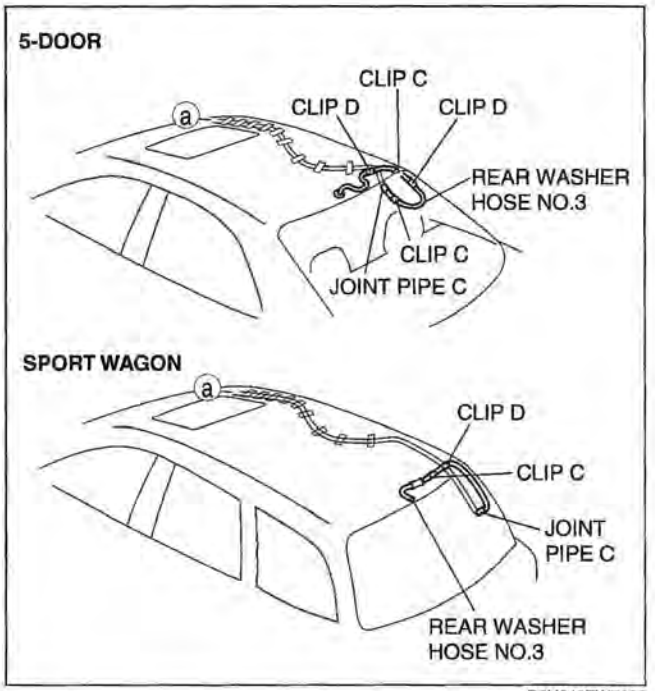
C6U919ZWC004

7. Remove rear washer hose No.2 from clip A.
8. Remove clips B from the body.
9. Remove rear washer hose No.2 and joint pipes B.
10. Remove the C-pillar trim.(5-Door)(See 09–17–14 C-PILLAR TRIM REMOVAL/INSTALLATION.)
11. Remove the D-pillar trim.(Sport Wagon)
12. Remove the liftgate upper trim. (See 09–17–21 LIFTGATE UPPER TRIM REMOVAL/ INSTALLATION [5-DOOR, SPORT WAGON].)



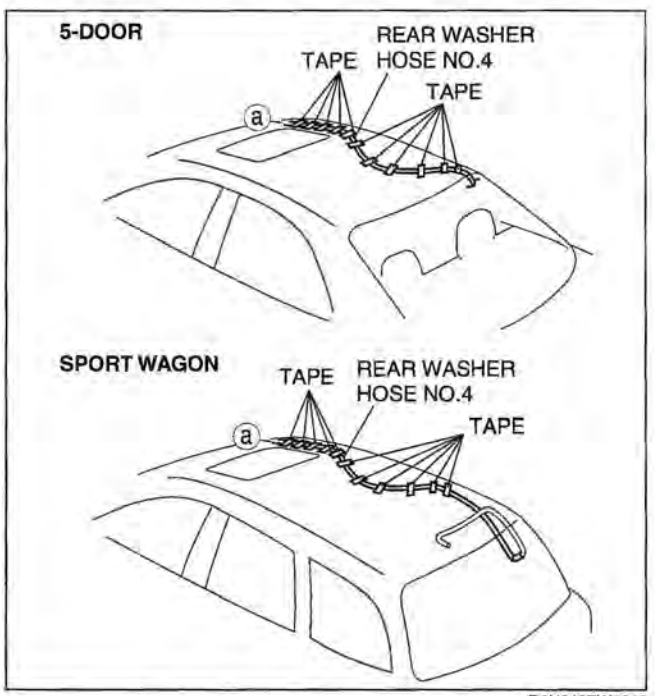
A6E8116W

13. Remove rear washer hose No.3 from clip C.
14. Remove clips D from the body. (5-Door)
15. Remove rear washer hose No.3 and joint pipe C.
    Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)



D6U919ZW7009

17. Remove the tape from rear washer hose No.4.
18. Install in the reverse order of removal.



D6U919ZW7010

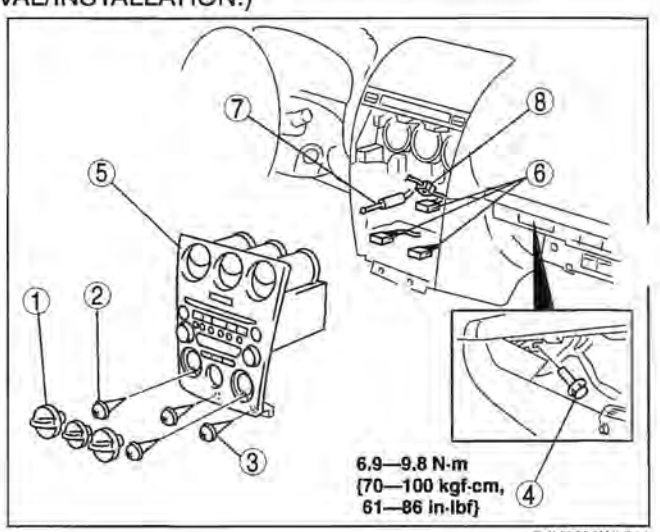
2	GPS antenna (See 09–20–14 GPS ANTENNA REMOVAL/ INSTALLATION.)
3	Tweeter (See 09–20–10 TWEETER REMOVAL/ INSTALLATION.) (See 09–20–11 TWEETER INSPECTION.)
4	Front door speaker (See 09–20–9 FRONT DOOR SPEAKER REMOVAL/INSTALLATION.) (See 09–20–9 FRONT DOOR SPEAKER INSPECTION.)
5	Audio amplifier (See 09–20–8 AUDIO AMPLIFIER REMOVAL/ INSTALLATION.)
6	Audio unit (See 09–20–4 CENTER PANEL UNIT REMOVAL/ INSTALLATION.) (See 09–20–5 CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY.) (See 09–20–6 AUDIO UNIT DISASSEMBLY/ ASSEMBLY.)
7	Car-navigation unit (See 09–20–6 CAR-NAVIGATION UNIT REMOVAL/ INSTALLATION.)

CENTER PANEL UNIT REMOVAL/INSTALLATION

E6U092066900W01

1. Disconnect the negative battery cable.
2. Remove the glove compartment. (See 09–17–9 GLOVE COMPARTMENT REMOVAL/INSTALLATION.)
3. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Dial (manual A/C only)
2	Screw (manual A/C only)
3	Screw
4	Bolt (See 09–20–4 Bolt Removal Note.)
5	Center panel unit (See 09–20–5 Center Panel Unit Removal Note.)
6	Connector
7	Antenna feeder
8	Wiring harness



E6U0920W5111

5. Install in the reverse order of removal.

Caution

- **Make certain that the wiring harness and antenna feeder are not caught between the unit and dashboard. If the harness or the antenna feeder is caught between the unit and dashboard, it may cause trouble or malfunctions.**

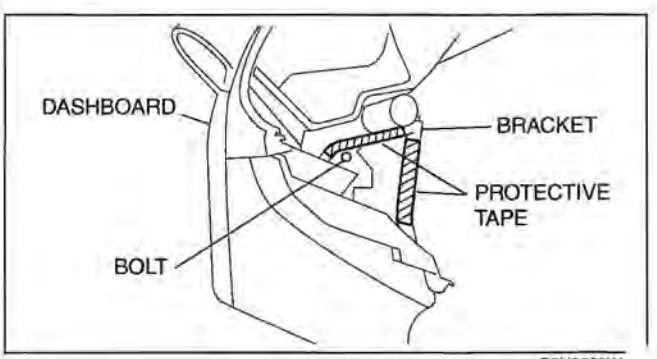
Bolt Removal Note

1. Attach protective tape to the bracket installed to the dashboard.

Caution

- **Removing the bolt without attaching protective tape to the bracket may cause injury to your hand. Always attach protective tape to the bracket when removing the bolt.**

2. Remove the Bolt.



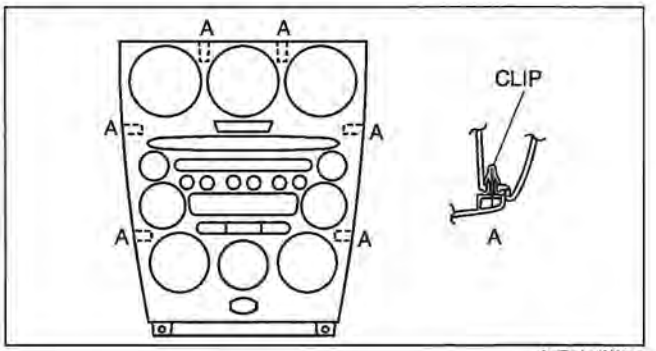
B6U0920W

Center Panel Unit Removal Note

1. Pull the center panel unit toward you, then disengage clips A from the dashboard, and remove the center panel unit.

Caution

- **Verify that bolt has been removed when pulling the center panel unit outward. If the center panel unit is pulled with bolt installed, stress will be applied to the connectors inside the panel which may cause a malfunction.**



A6E8124W029

CENTER PANEL UNIT DISASSEMBLY/ASSEMBLY

E6U092066900W02

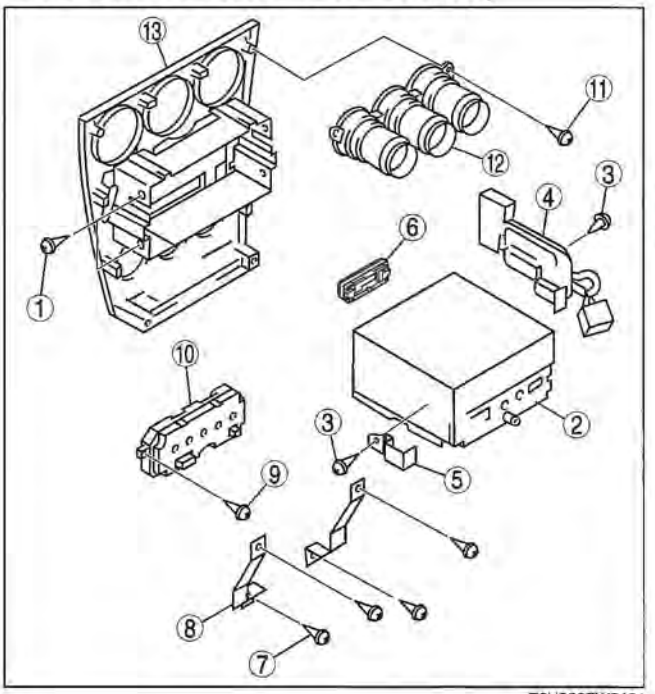
Caution

- **Before disassembling the center panel unit, spread a cloth on the floor to put the disassembled parts on. This protects the surface of the panel from scratches or dirt.**

1. Remove the center panel unit. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
2. Remove in the order indicated in the table.

1	Screw
2	Audio unit
3	Screw
4	Circuit board (manual A/C only)
5	Bracket
6	Cover (lower module)
7	Screw
8	Bracket (full-auto A/C only)
9	Screw (full-auto A/C only)
10	Climate control unit (full-auto A/C only)
11	Screw
12	Ventilator grille
13	Center panel

3. Install in the reverse order of removal.



E6U920ZW5101

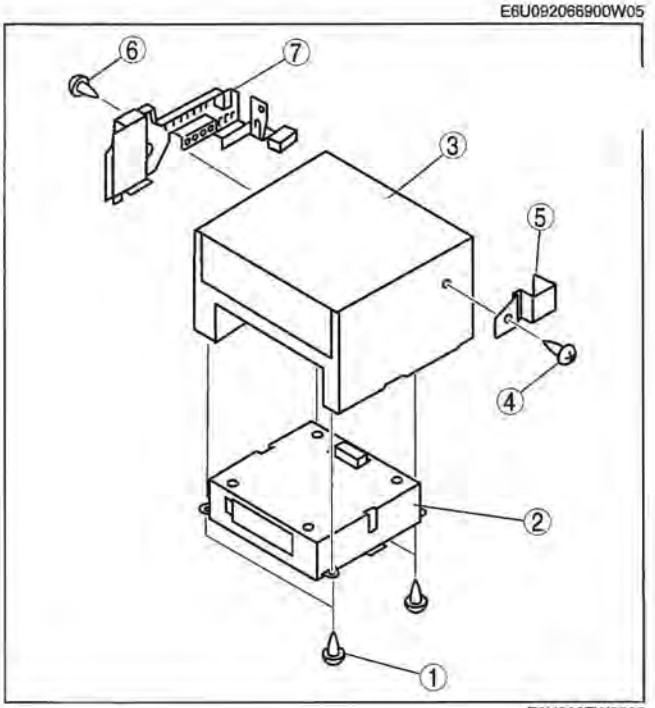
AUDIO UNIT DISASSEMBLY/ASSEMBLY

1. Disassemble in the order indicated in the table.

1	Screw
2	Lower module
3	Base unit
4	Screw
5	Bracket
6	Screw
7	Circuit boad (manual A/C only)

2. Assemble in the reverse order of disassembly.

E6U092066900W05



E6U920ZW5005

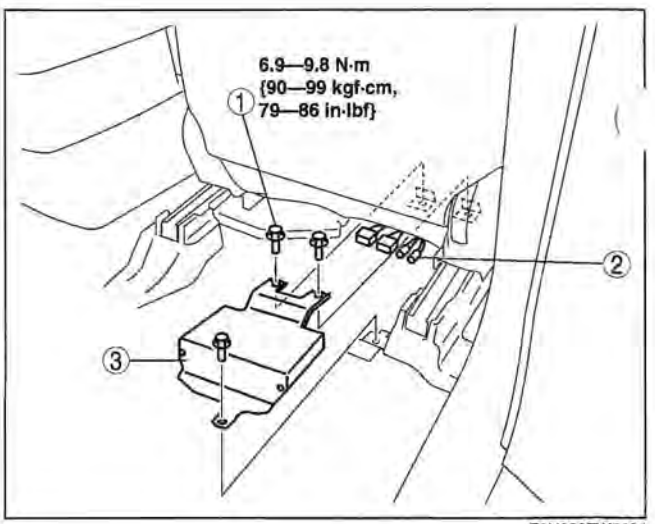
CAR-NAVIGATION UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Car-navigation unit

3. Install in the reverse order of removal.

E6U092066902W01



E6U920ZW5004

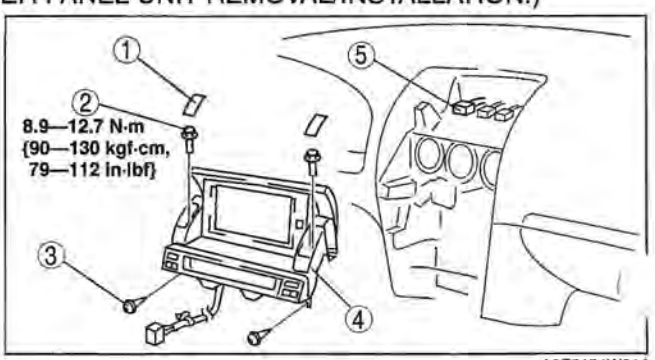
LCD UNIT REMOVAL/INSTALLATION

1. Disconnect the negative battery cable.
2. Remove the center panel module. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Cover
2	Bolt
3	Screw
4	LCD unit (See 09–20–7 LCD Unit Removal Note)
5	Connector

4. Install in the reverse order of removal.

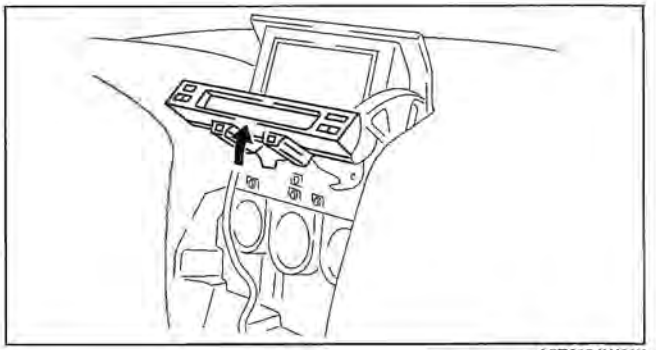
E6U092066902W02



A6E8124W014

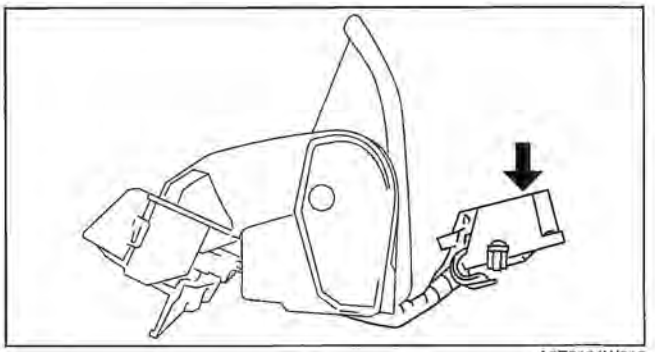
LCD Unit Removal Note

1. Pull up the front part of the LCD unit.



A6E8124W017

2. While pressing down the unit behind the LCD unit, pull the LCD unit out from the dashboard.



A6E8124W018

AUDIO CONTROL SWITCH REMOVAL/INSTALLATION

E6U092000148W01

Note

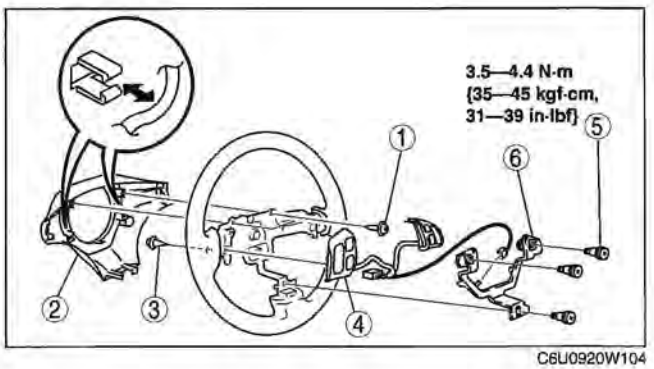
- The audio control switch and the cruise control switch use a common connector.

Disconnect the negative battery cable.

2. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Remove the steering wheel.
4. Remove in the order indicated in the table.

1	Screw
2	Cover
3	Screw
4	Audio control switch/cruise control switch
5	Bolt
6	Bracket

5. Install in the reverse order of removal.

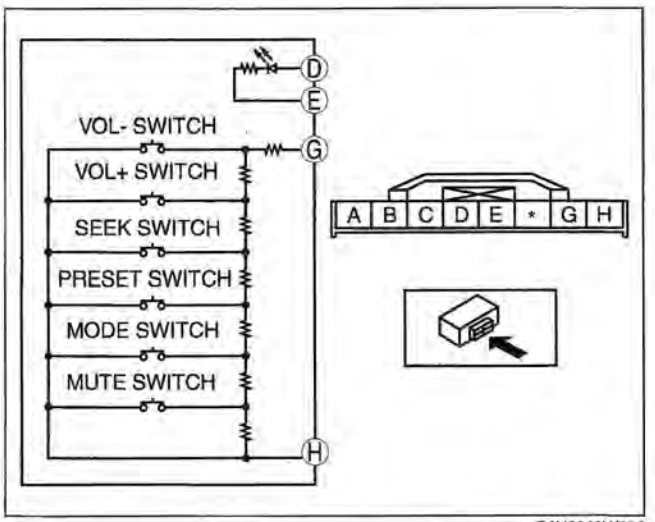


C6U0920W104

AUDIO CONTROL SWITCH INSPECTION

E6U092000148W02

1. Disconnect the negative battery cable.
2. Remove the driver-side air bag module. (See 08–10–6 DRIVER-SIDE AIR BAG MODULE REMOVAL/INSTALLATION.)
3. Disconnect the audio control switch connector.
4. Measure the resistance and inspect for continuity between the cruise control switch terminals using an ohmmeter.
   - If not as specified, replace the cruise control switch.



B6U0920W503

O-W-O: Resistance O-▶|-O: Diode

Switch position	Terminal			
	D	E	G	H
VOL- switch held at on	O-▶|-O		O-W-O	R_1
VOL+ switch held at on	O-▶|-O		O-W-O	R_2
SEEK+ switch held at on	O-▶|-O		O-W-O	R_3

R_3: 287—314 ohms, R_4: 535—588 ohms
R_5: 987—1086 ohms, R_6: 1.94—2.13 kilohms
R_7: 4.08—5.29 kilohms

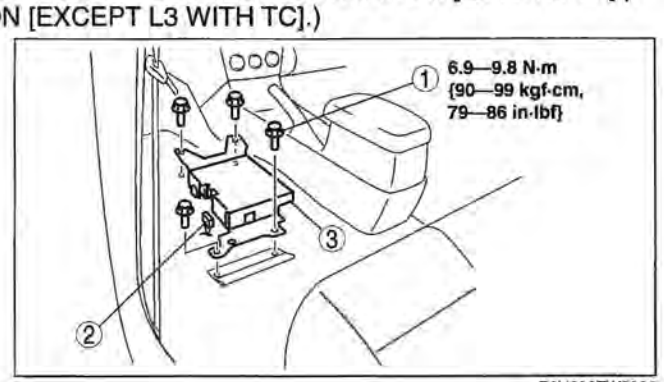
A6E8124W028

AUDIO AMPLIFIER REMOVAL/INSTALLATION

E6U092066910W01

1. Disconnect the negative battery cable.
2. Remove the front seat (driver-side). (See 09–13–4 FRONT SEAT REMOVAL/INSTALLATION [L3 WITH TC].) (See 09–13–5 FRONT SEAT REMOVAL/INSTALLATION [EXCEPT L3 WITH TC].)
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Audio amplifier



E6U920ZW5003

4. Install in the reverse order of removal.

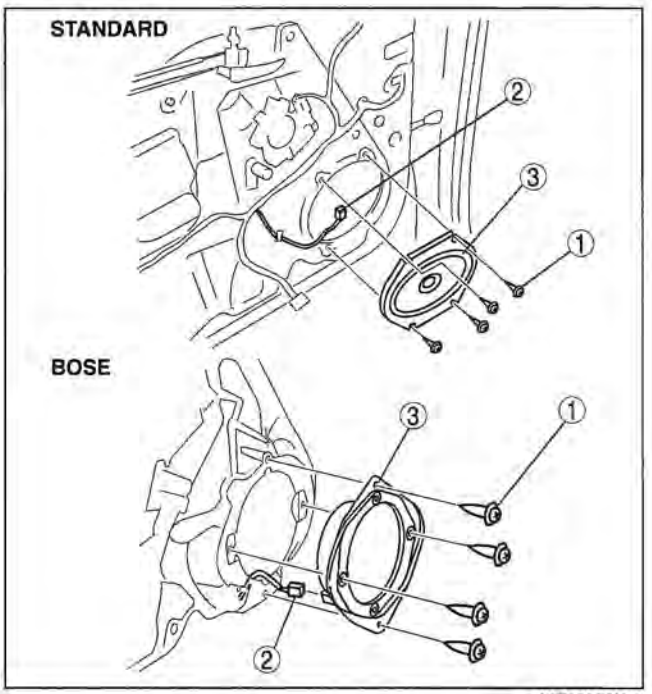
FRONT DOOR SPEAKER REMOVAL/INSTALLATION

E6U092066961W01

1. Disconnect the negative battery cable.
2. Remove the front door trim.
   Remove in the order indicated in the table.

1	Screw
2	Connector
3	Front door speaker (See 09–20–9 Front Door Speaker Installation Note)

4. Install in the reverse order of removal.



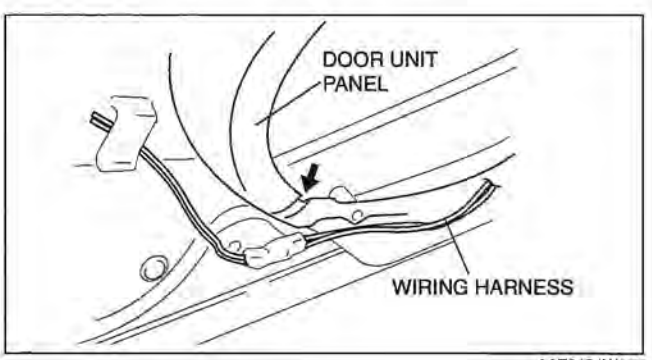
A6E8124W001

Front Door Speaker Installation Note

1. Attach the speaker with the wiring harness placed in the groove of the door unit panel.

Caution

- **If the speaker is attached with the harness placed outside of the groove, the wiring harness might be broken.**



A6E8124W002

FRONT DOOR SPEAKER INSPECTION

E6U092066961W02

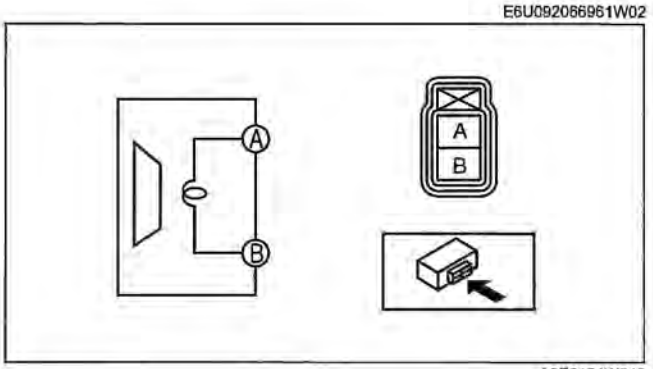
1. Inspect for resistance between the front door speaker terminals using an ohmmeter.
   - If not as specified, replace the front door speaker.

○WW○ : Resistance

Test condition	Terminal	
	A	B
Under any condition	○	○ R

R: 4 ohms (standard)
1.8 ohms (BOSE)

B6U0920W602



A6E8124W040

2. To verify that the front door speaker outputs sound, apply voltage to the front door speaker and release using a 1.5 V battery.
   - If it does not output sound, replace the front door speaker.

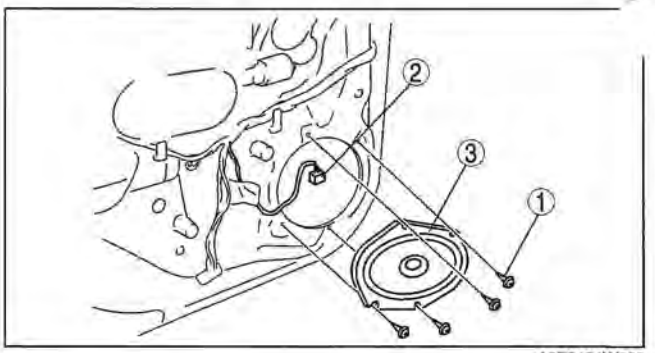
REAR DOOR SPEAKER REMOVAL/INSTALLATION

E6U092066961W03

1. Disconnect the negative battery cable.
2. Remove the rear door trim.
3. Remove in the order indicated in the table.

1	Screw
2	Connector
3	Rear door speaker (See 09–20–10 Rear Door Speaker Installation Note)

4. Install in the reverse order of removal.



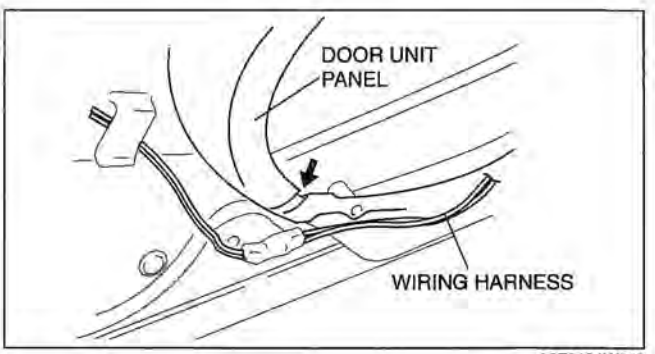
A6E8124W003

Rear Door Speaker Installation Note

1. Attach the speaker with the wiring harness placed in the groove of the door unit panel.

Caution

- **If the speaker is attached with the harness placed outside of the groove, the wiring harness might be broken.**



A6E8124W002

REAR DOOR SPEAKER INSPECTION

E6U092066961

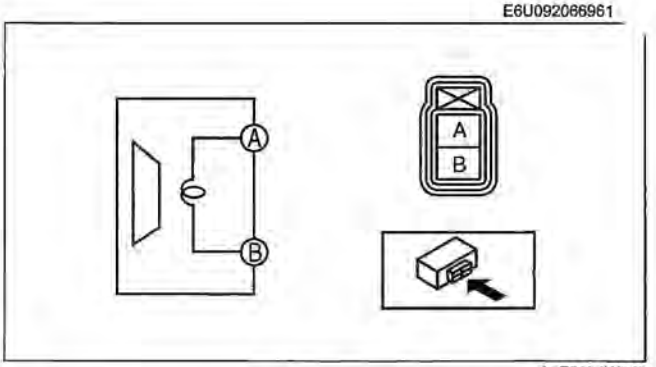
1. Inspect for resistance between the rear door speaker terminals using an ohmmeter.
   - If not as specified, replace the rear door speaker.

: Resistance

Test condition	Terminal	
	A	B
Under any condition		R

R: 4 ohms (standard)
2 ohms (BOSE)

A6E8124W032



A6E8124W040

2. To verify that the rear door speaker outputs sound, apply voltage to the rear door speaker and release using a 1.5 V battery.
   - If it does not output sound, replace the rear door speaker.

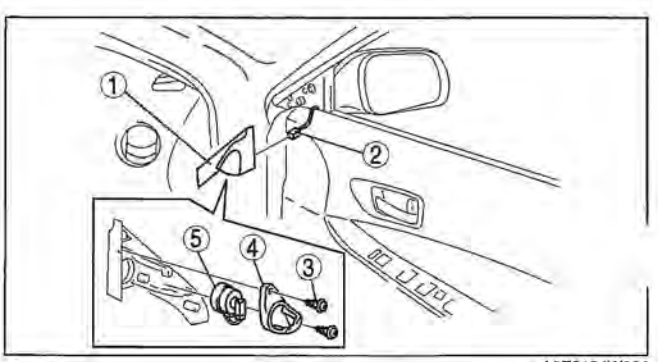
TWEETER REMOVAL/INSTALLATION

E6U092068966W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Inner garnish
2	Connector
3	Screw
4	Cover
5	Tweeter

3. Install in the reverse order of removal.



A6E8124W004

TWEETER INSPECTION

E6U092068966W02

1. To verify the front door speaker outputs sound.
   - If it does output sound, then go to next step.
   - If it does not output sound, inspect the front door speaker and related wiring harnesses. (See 09–20–9 FRONT DOOR SPEAKER INSPECTION.)
2. Remove the center panel module. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
3. Inspect for continuity between the tweeter connector terminals and audio unit connector terminals using an ohmmeter.
   - If there is no continuity, replace the related wiring harnesses.
   - If there is continuity, replace the tweeter.

O—O: Continuity

Test condition	Terminal			
	Audio unit connector		Tweeter connector	
	1F	1D	A	B
Under any condition	O		O	
		O		O

E6U920ZW5102

3. Install in the reverse order of removal.

WOOFER INSPECTION [SPORT SEDAN]

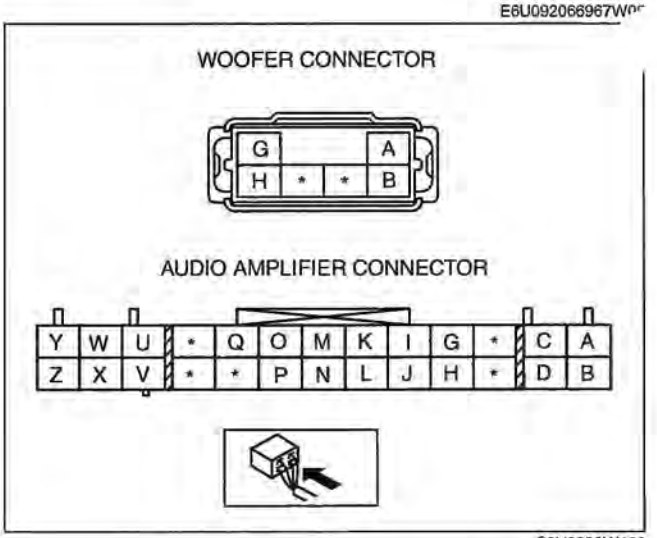
1. Inspect for continuity between the audio amplifier connector terminals and woofer connector terminals using an ohmmeter.
   - If not as specified, replace the related wiring harnesses.

O—O: Continuity

Test condition	Terminal			
	Audio amplifier connector		Woofer connector	
	O	P	G	H
Under any condition	O		O	
		O		O

B6U0920W003

E6U092066967W0[illegible]



C6U0920W106

2. Verify that there is battery positive voltage at the woofer connector terminal A using a voltmeter.
   - If not as specified, replace the related wiring harness.
3. Inspect continuity between the woofer connector terminal B and body ground using an ohmmeter.
   - If not as specified, replace the related wiring harness.
   - If as specified, replace the woofer.

WOOFER INSPECTION [5-DOOR, SPORT WAGON]

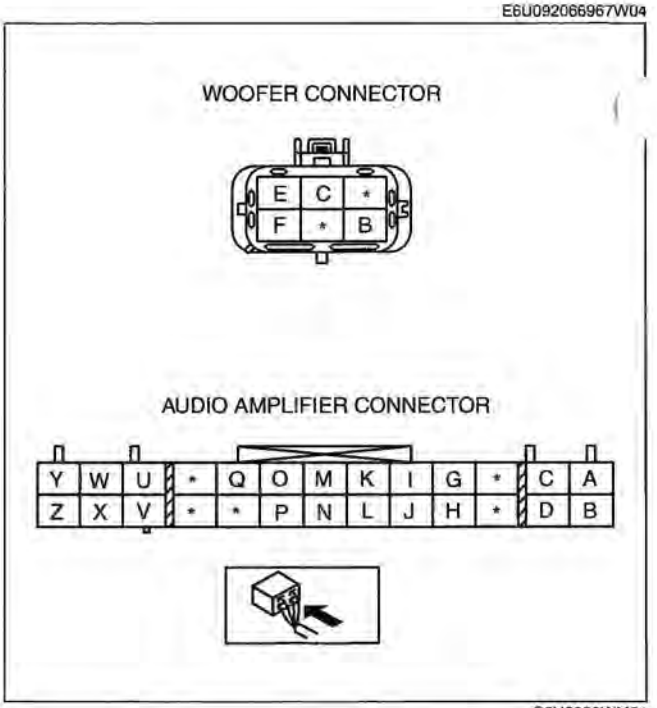
1. Inspect for continuity between the audio amplifier connector terminals and woofer connector terminals using an ohmmeter.
   - If not as specified, replace the related wiring harnesses.

O—O: Continuity

Test condition	Terminal			
	Audio amplifier connector		Woofer connector	
	O	P	E	F
Under any condition	O		O	
		O		O

C6U0920WM02

E6U092066967W04



C6U0920WM01

2. Verify that there is battery positive voltage at the woofer connector terminal C using a voltmeter.
   - If not as specified, replace the related wiring harness.
3. Inspect continuity between the woofer connector terminal B and body ground using an ohmmeter.
   - If not as specified, replace the related wiring harness.
   - If as specified, replace the woofer.

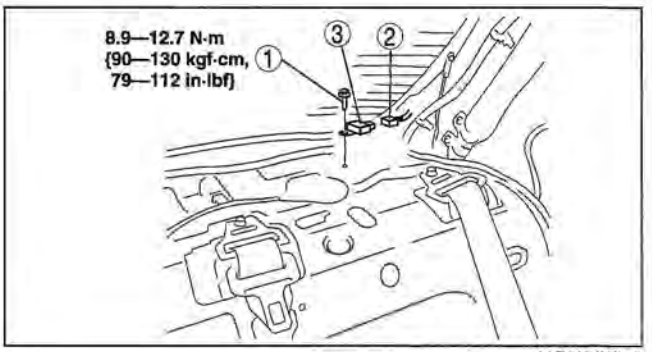
CONDENSER REMOVAL/INSTALLATION [SPORT SEDAN]

E6U092066869W01

1. Disconnect the negative battery cable.
2. Remove the rear package trim.
   Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Condenser

4. Install in the reverse order of removal.



A6E8124W007

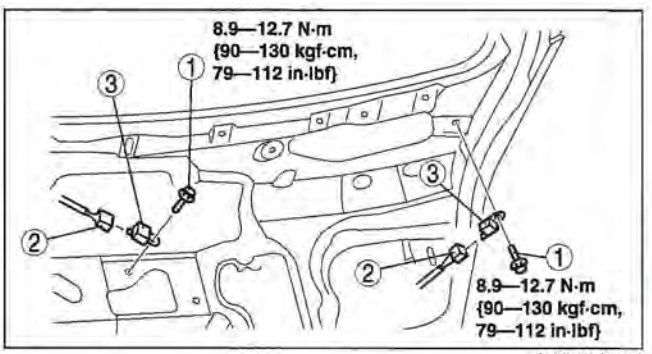
CONDENSER REMOVAL/INSTALLATION [5-DOOR]

E6U092066869W02

1. Disconnect the negative battery cable.
2. Remove the liftgate lower trim.
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Condenser

4. Install in the reverse order of removal.



A6E8124W021

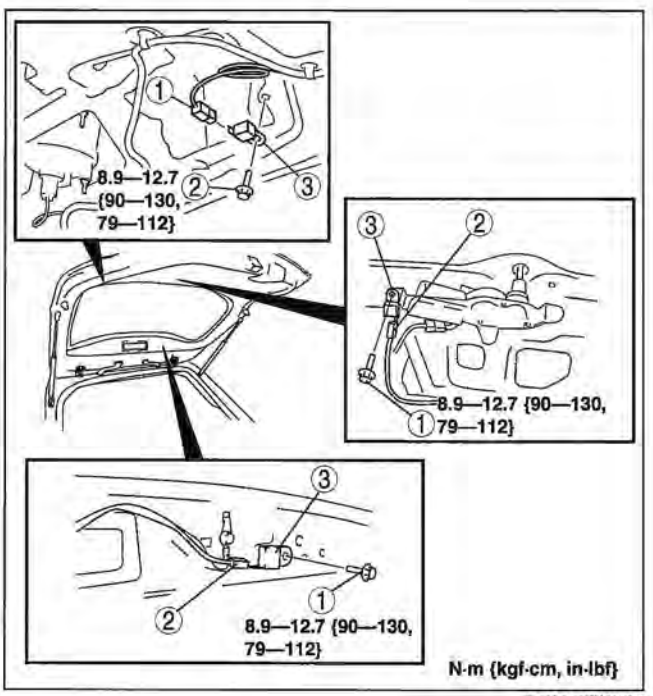
CONDENSER REMOVAL/INSTALLATION [SPORT WAGON]

E6U092066869W03

1. Disconnect the negative battery cable.
2. Remove the liftgate lower trim.
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Condenser

4. Install in the reverse order of removal.



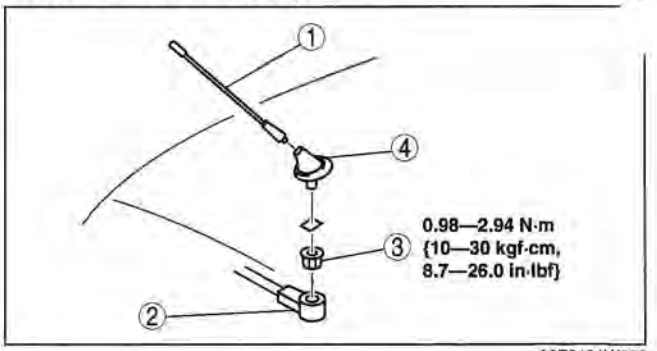
E6U920ZW5002

CENTER ROOF ANTENNA REMOVAL/INSTALLATION

E6U092066939W01

1. Disconnect the negative battery cable.
2. Remove the headliner. (See 09–17–24 HEADLINER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Antenna rod
2	Antenna feeder
3	Nut
4	Center roof antenna



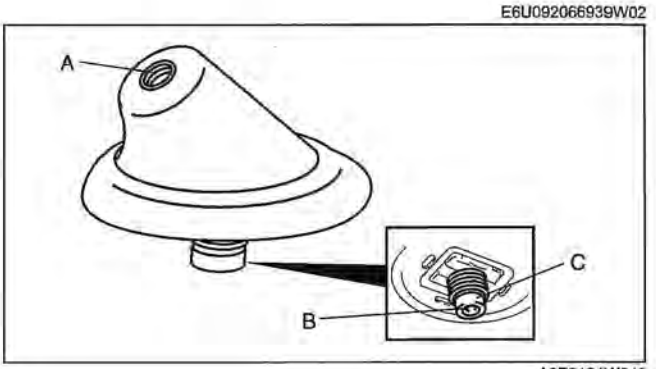
A6E8124W023

4. Install in the reverse order of removal.
5. After installation, verify that the rubber of the center roof antenna is installed to the roof panel with no space between them.

CENTER ROOF ANTENNA INSPECTION

E6U092066939W02

1. Verify that there is no continuity between the center roof antenna terminals A and C using an ohmmeter.
2. Inspect for continuity between the center roof antenna terminals using an ohmmeter.
   - If not as specified, replace the center roof antenna.



A6E8124W048

O—O: Continuity

Test condition	Terminal	
	A	B
Under any condition	O	O

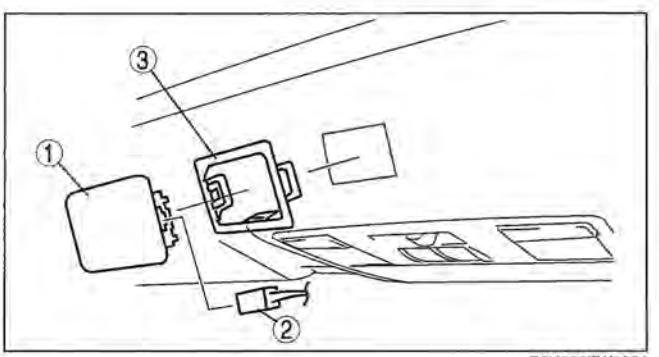
A6E8124W031

MICROPHONE REMOVAL/INSTALLATION

E6U092000175W01

1. Disconnect the negative battery cable.
2. Remove in the order indicated in the table.

1	Microphone
2	Connector
3	Bracket



E6U920ZW5001

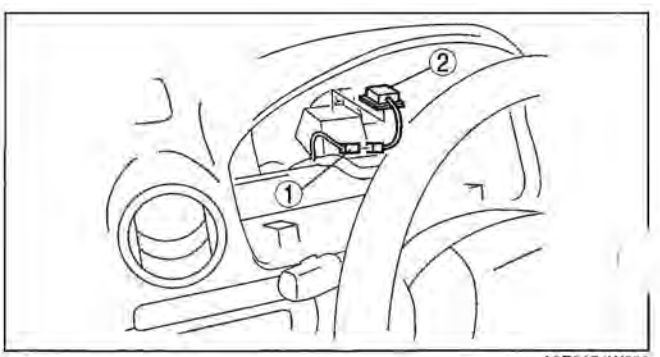
3. Install in the reverse order of removal.

GPS ANTENNA REMOVAL/INSTALLATION

E6U092066936W01

1. Disconnect the negative battery cable.
2. Remove the instrument cluster.
3. Remove in the order indicated in the table.

1	Connector
2	GPS antenna



A6E8124W022

DPE920ZW1015

ACCESSORY SOCKET REMOVAL/INSTALLATION

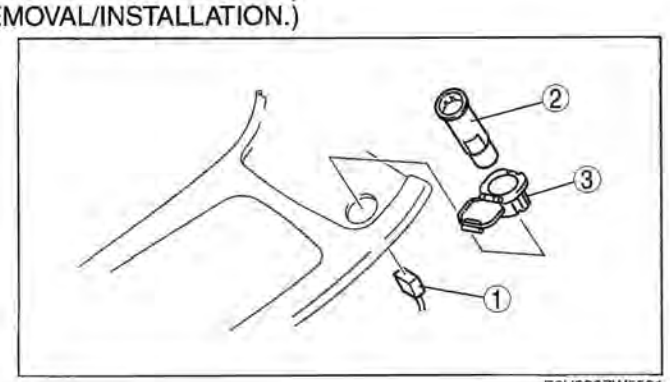
E6U092066290W01

Front

1. Disconnect the negative battery cable.
2. Remove the panel No.1. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
3. Remove the panel No.2. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)
4. Remove in the order indicated in the table.

1	Connector
2	Socket (See 09–20–19 Socket removal note.)
3	Cap (See 09–20–19 Cap removal note.)

5. Install in the reverse order of removal.



E6U920ZW5501

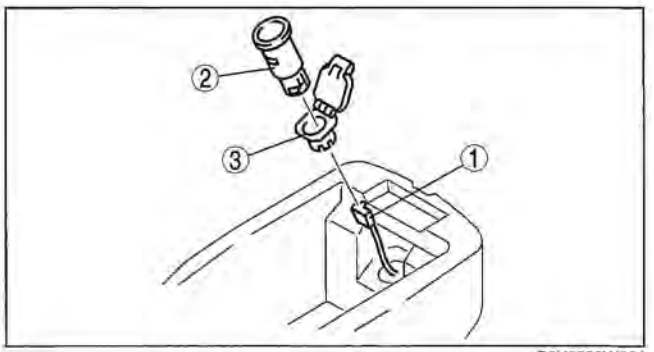
Rear

1. Disconnect the negative battery cable.
2. Remove the console. (See 09–17–8 CONSOLE REMOVAL/INSTALLATION.)

3. Remove in the order indicated in the table.

1	Connector
2	Socket (See 09–20–19 Socket removal note.)
3	Cap (See 09–20–19 Cap removal note.)

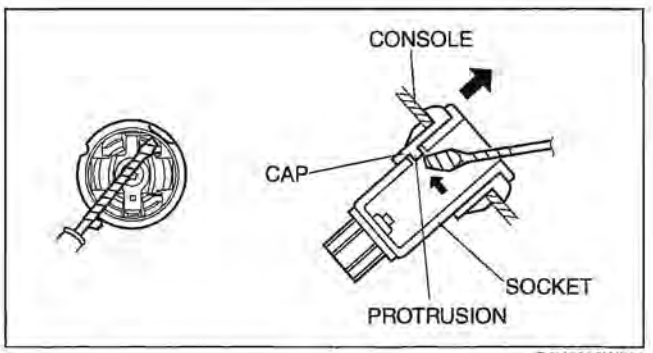
4. Install in the reverse order of removal.



B6U0920W004

Socket removal note

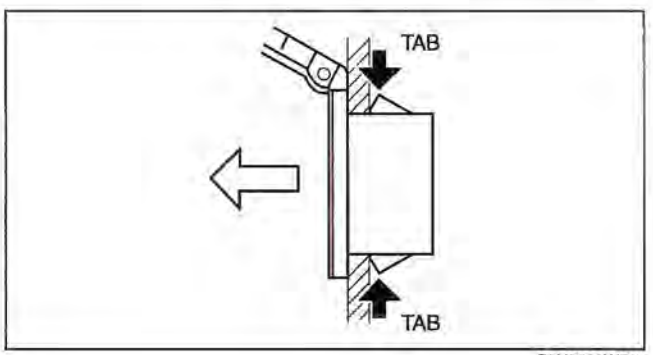
1. Remove the socket by pushing on the protrusion with a tape-wrapped flathead screwdriver inserted through the socket hole, and pulling the socket toward you.



B6U0920W006

Cap removal note

1. Pull the cap forward while squeezing the tabs.



B6U0920W007

ACCESSORY SOCKET INSPECTION

E6U092066290W02

1. Remove the accessory socket. (See 09–20–18 ACCESSORY SOCKET REMOVAL/INSTALLATION.)
2. Inspect for continuity between the accessory socket terminals B and C using an ohmmeter as shown in the figure.
   - If not as specified, replace the accessory socket.

FUSE SERVICE CAUTION

E6U092166000W01

Caution

- **Determine and correct the cause of the burnt fuse before replacing it with the specified type. If th fuse is replaced before doing this, it may burn again.**

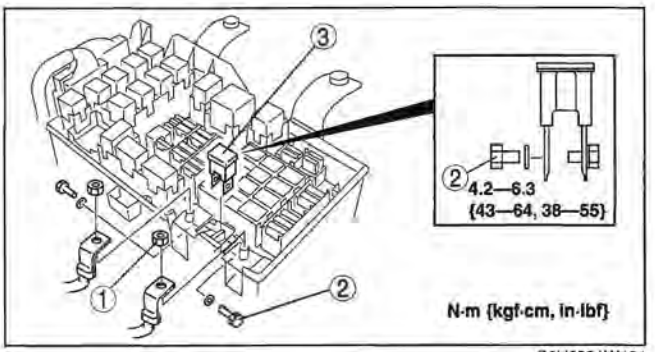
MAIN FUSE REMOVAL/INSTALLATION

E6U092166761W01

1. Disconnect the negative battery cable.
2. Remove the main fuse block cover.
3. Remove in the order indicated in the table.

1	Nut
2	Bolt (See 09–21–2 Bolt Removal Note.)
3	Main fuse

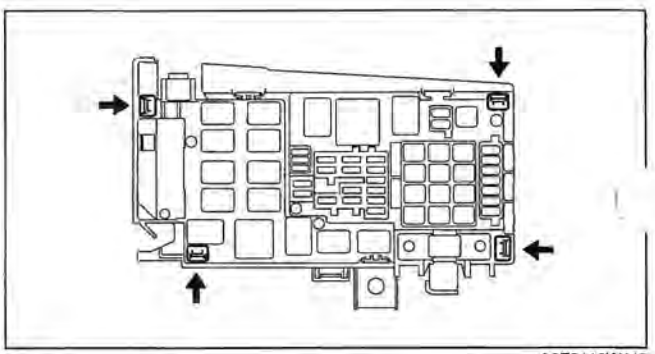
4. Install in the reverse order of removal.



C6U0921W101

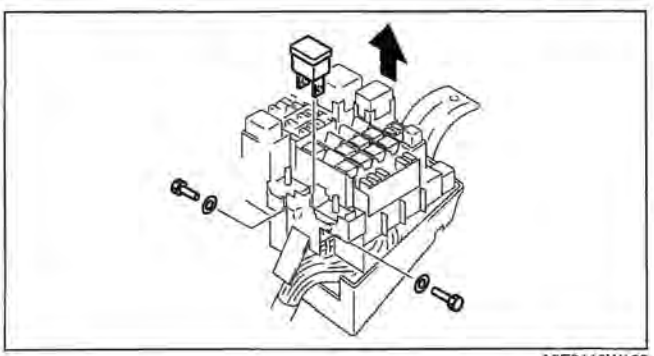
Bolt Removal Note

1. Press and remove the tabs on the main fuse block at the positions indicated by the arrows.



A6E8110W119

2. Lift up the main fuse block and remove the bolts.



A6E8110W120

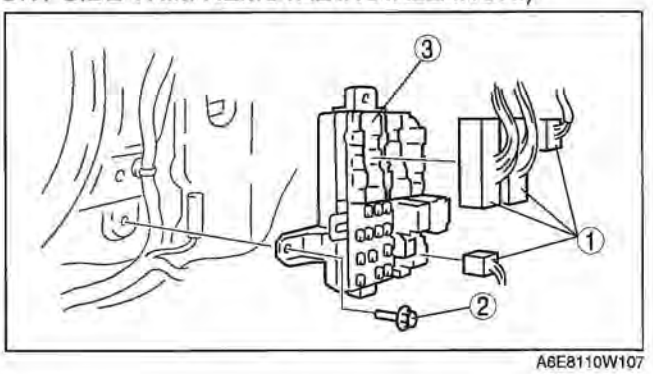
FUSE BLOCK REMOVAL/INSTALLATION

E6U092166730W01

1. Disconnect the negative battery cable.
2. Remove the left-side front side trim. (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
   Remove in the order indicated in the table.

1	Connector
2	Bolt
3	Fuse block

4. Install in the reverse order of removal.



A6E8110W107

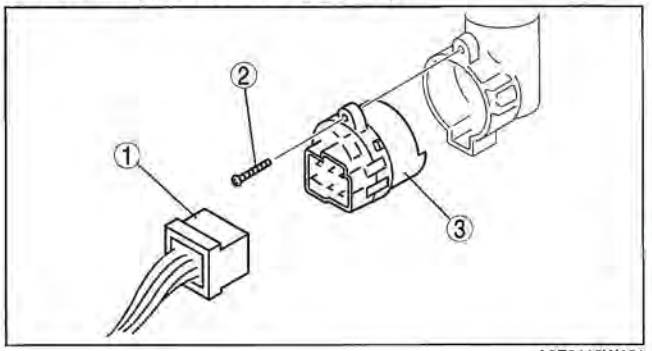
IGNITION SWITCH REMOVAL/INSTALLATION

E6U092166151W01

1. Disconnect the negative battery cable.
2. Remove the column cover. (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
3. Remove in the order indicated in the table.

1	Connector
2	Screw
3	Ignition switch

4. Install in the reverse order of removal.



A6E8110W101

09–21

IGNITION SWITCH INSPECTION

E6U092166151W02

1. Disconnect the negative battery cable.
2. Remove the column cover. (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the ignition switch connectors.
4. Inspect for continuity between the ignition switch terminals.
   - If not as specified, replace the ignition switch.

O—O: Continuity

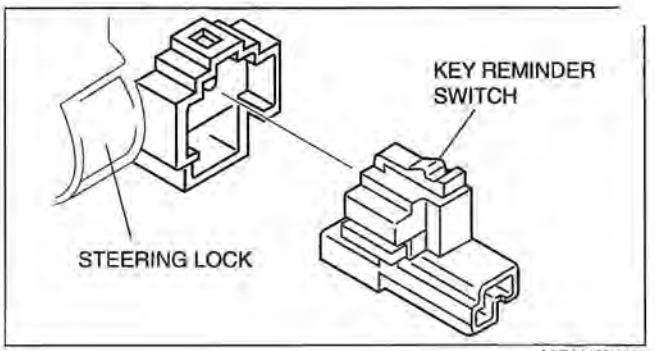
A6E8110W116

KEY REMINDER SWITCH REMOVAL/INSTALLATION

E6U092166152W01

1. Disconnect the negative battery cable.
2. Remove the column cover.
3. Disconnect the key reminder switch connector.
4. Remove the key reminder switch.
5. Install in the reverse order of removal.



A6E8110W102

KEY REMINDER SWITCH INSPECTION

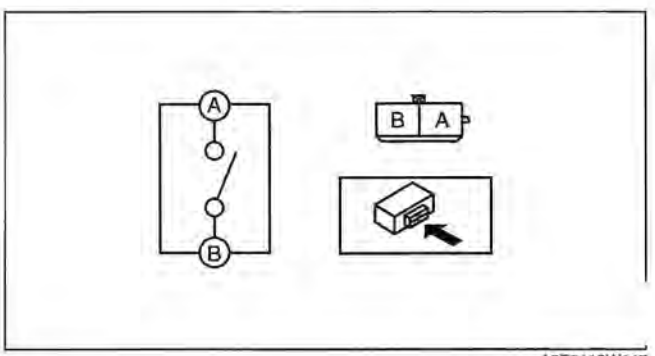
E6U092166152W02

1. Disconnect the negative battery cable.
2. Remove the column cover. (See 09–17–6 COLUMN COVER REMOVAL/INSTALLATION.)
3. Disconnect the key reminder switch connector.
4. Inspect for continuity between the key reminder switch terminals.
   - If not as specified, replace the key reminder switch.

O—O : Continuity

Key position	Terminal	
	A	B
Key inserted	O	O
Key removed		

A6E8110W115



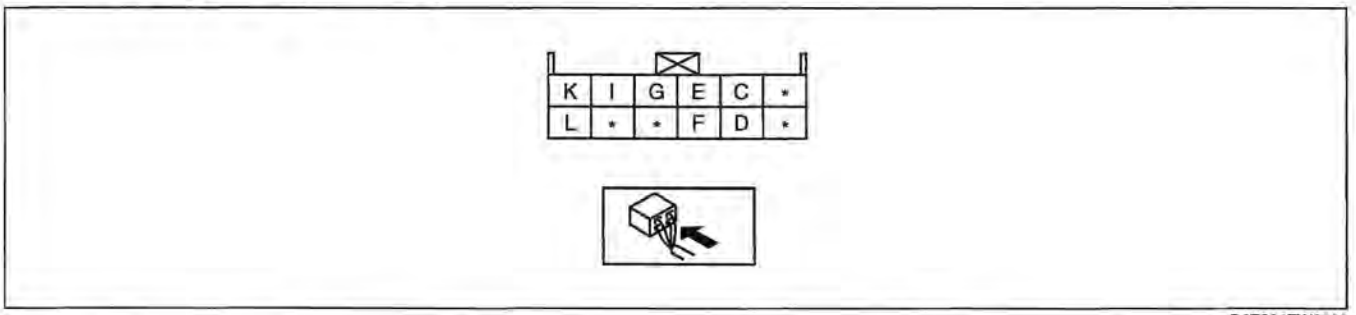
A6E8110W117

STEERING LOCK UNIT INSPECTION

E6U092166152W03

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.
   - If the system does not work properly even though the inspection items or related wiring harnesses do not have any malfunction, replace the steering look unit.

Terminal Voltage Table (Reference)



D6E921ZW2502

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
E	Push switch signal	Keyless control module	Start knob pressed	B+	• Keyless control module • Related wiring harnesses
			Start knob released	1.0 or less	
F	Power supply	Fuse	Under any condition	B+	• Fuse • Related wiring harnesses
G	Key reminder switch signal	Keyless control module	Key inserted	B+	• Keyless control module • Related wiring harnesses
			Key removed	1.0 or less	
I	Power supply	Fuse	Under any condition	B+	• Fuse • Related wiring harnesses
K	Serial communication	Keyless control module	Under any condition: Inspect for continuity to keyless control module.	Continuity detected	Related wiring harnesses
L	GND	Body ground	Under any condition: Inspect for continuity to GND.	Continuity detected	Related wiring harnesses

INSTRUMENT CLUSTER REMOVAL/INSTALLATION

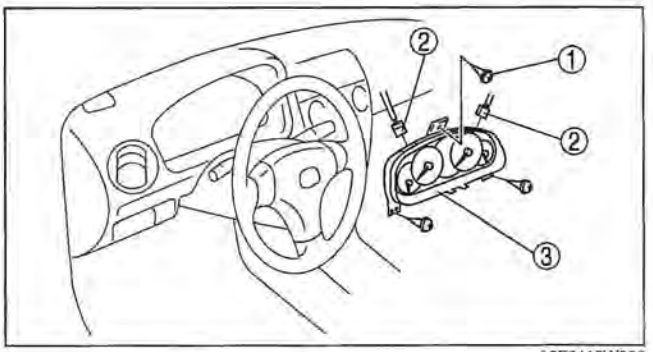
E6U092255430W01

Caution

- **When replacing the instrument cluster, the configuration procedure must be performed before removing the instrument cluster. If the configuration procedure is not performed before removing the instrument cluster, it is possible that the instrument cluster will not operate normally.**

1. Configure the instrument cluster (only when replacing it). (See 09–22–4 INSTRUMENT CLUSTER CONFIGURATION.)
2. Disconnect the negative battery cable.
3. Pull down the adjusting lever of the tilt steering wheel and push the steering wheel down.
4. Pull the steering wheel toward you.
5. Remove the meter hood.
6. Remove in the order indicated in the table.

1	Screw
2	Connector (See 09–22–3 Connector Removal Note)
3	Instrument cluster (See 09–22–4 Instrument Cluster Removal Note)

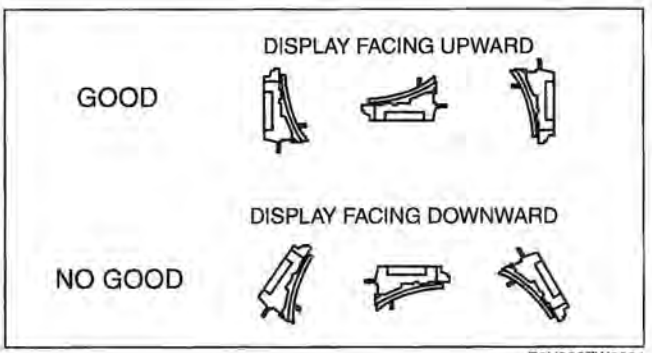


A6E8118W003

7. Install in the reverse order of removal.

Caution

- **The removed instrument cluster should be placed with the display side up to prevent grease from leaking from the meters.**

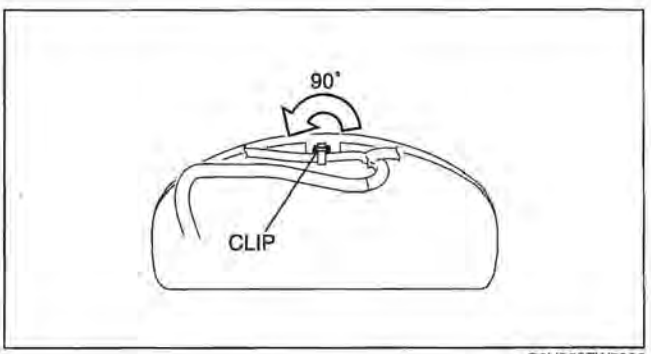


E6U922ZW5001

09–22

Connector Removal Note

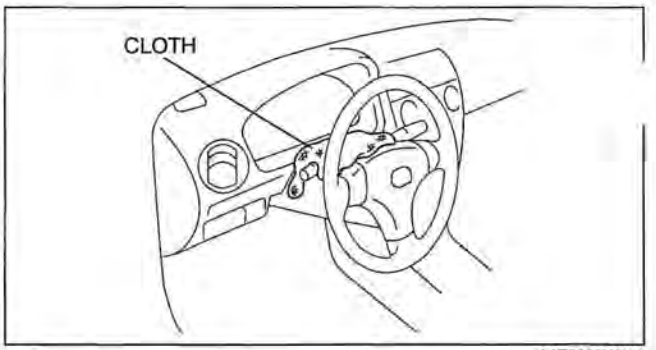
1. Disconnect the connectors.
2. Rotate the clip **90°**, then remove the clip from the instrument cluster.



E6U922ZW5002

Instrument Cluster Removal Note

1. When removing the instrument cluster, in order to prevent damage to the lens, cover the steering shaft with a cloth.



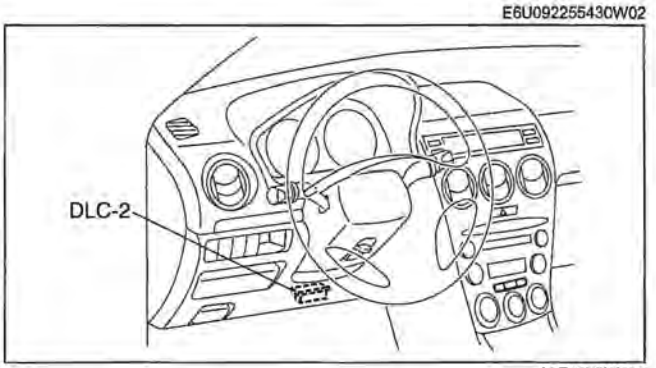
A6E8118W005

INSTRUMENT CLUSTER CONFIGURATION

E6U092255430W02

1. Connect the **SST** (WDS or equivalent) to the DLC-2.
2. Input vehicle information following the directions on the screen.
3. Select "MODULE PROGRAMMING".
4. Select "PROGRAMMABLE MODULE INSTALLATION".
5. Select the following items and perform procedures according to directions on the screen.

   Items
   - **"IC"**



A6E3970W002

6. Retrieve DTCs using the **SST** (WDS or equivalent), then verify that there is no DTC present.
   - If DTC is present, perform applicable DTC inspection.

INSTRUMENT CLUSTER DISASSEMBLY/ASSEMBLY

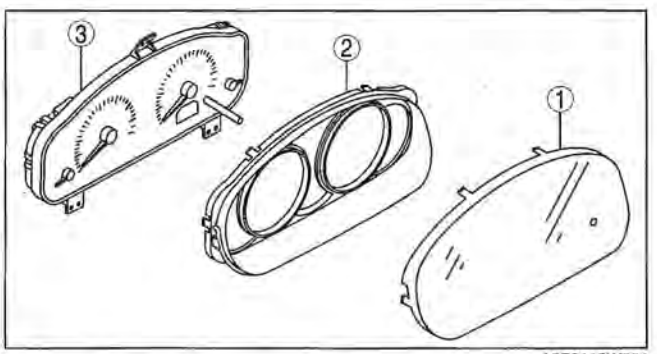
E6U092255430W03

Caution
- **If the instrument cluster is dropped or the print plate is damaged, the system will not work properly and it may be the cause of trouble or malfunctions.**

1. Disassemble in the order indicated in the table.

1	Lens
2	Case
3	Meter unit

2. Assemble in the reverse order of disassembly.



A6E8118W004

INSTRUMENT CLUSTER INSPECTION

E6U092255430W04

Speedometer

Using the input/output check mode

Inspect the speedometer by setting it in the input/output check mode DTC 12.

Using a speedometer tester

1. Adjust the tire air pressure to the specification.
2. Using a speedometer tester, verify that the speedometer indication is within the allowable ranges shown below.

Speedometer tester indication (km/h)	Allowable range (km/h)
20	18—22
40	38—42
60	58—62
80	78—82
100	97—102
120	117—122
140	136—142

Speedometer tester indication (mph)	Allowable range (mph)
10	9—11
20	19—21
30	29—31
40	39—41
50	49—51
60	59—61
70	69—71
80	78—82

3. Verify that fluctuation of the speedometer needle is within the allowable range.
   - If the speedometer needle does not move or the indication is outside of the allowable range, inspect the PCM, TCM, ABS HU/CM (vehicles with ABS), VSS (vehicles without ABS) and related wiring harnesses.
     — If the PCM, TCM, ABS HU/CM (vehicles with ABS), VSS (vehicles without ABS) and related wiring harnesses are normal, replace the instrument cluster.

Needle fluctuation allowable range
Within 3.0 km/h

Tachometer

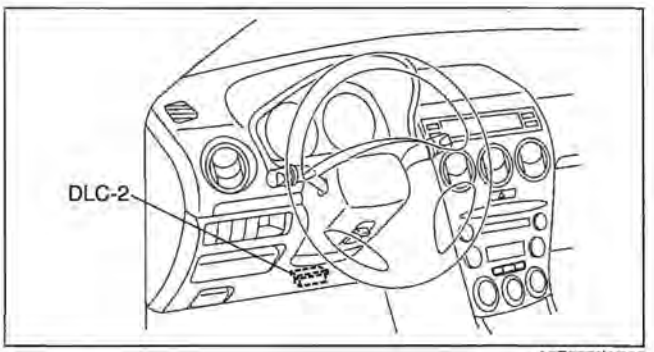
Using the input/output check mode

1. Inspect the tachometer by setting it in the input/output check code 13.

Using the SSTs (WDS or equivalent)

Caution
- **If the engine speed exceeds the allowable range, the engine could be damaged. Therefore, wher inspecting the tachometer, do not allow the engine speed to exceed the allowable range indicatic on the tachometer.**

1. Connect the **SSTs** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
2. Access and monitor PIDs by **SSTs** (WDS or equivalent).



A6E3970W002

Fuel Gauge
1. Inspect the fuel gauge by setting it in the input/output check code 23.

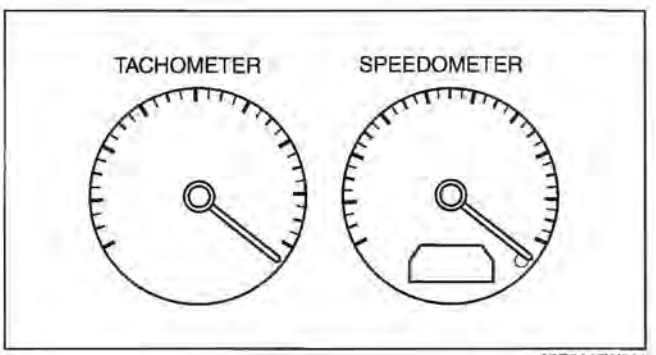
Water Temperature Gauge
1. Inspect the water temperature gauge by setting it in the input/output check code 25.

INSTRUMENT CLUSTER REPAIR

E6U092255430W05

Note
- The needle of speedometer or tachometer may continue to rotate clockwise until it indicates over maximum graduation. If a customer complains of this concern, repair the needle position according to th following steps.

1. Verify the concern.
2. Turn the ignition switch to LOCK position.
3. Disconnect the negative battery cable.
4. Connect the negative battery cable.
5. Turn the ignition switch to ON position.
6. Verify that the needle returns to zero.
   - If the needle does not return to zero, replace the instrument cluster



A6EB118W011

INSTRUMENT CLUSTER INPUT/OUTPUT CHECK MODE

E6U092255430W06

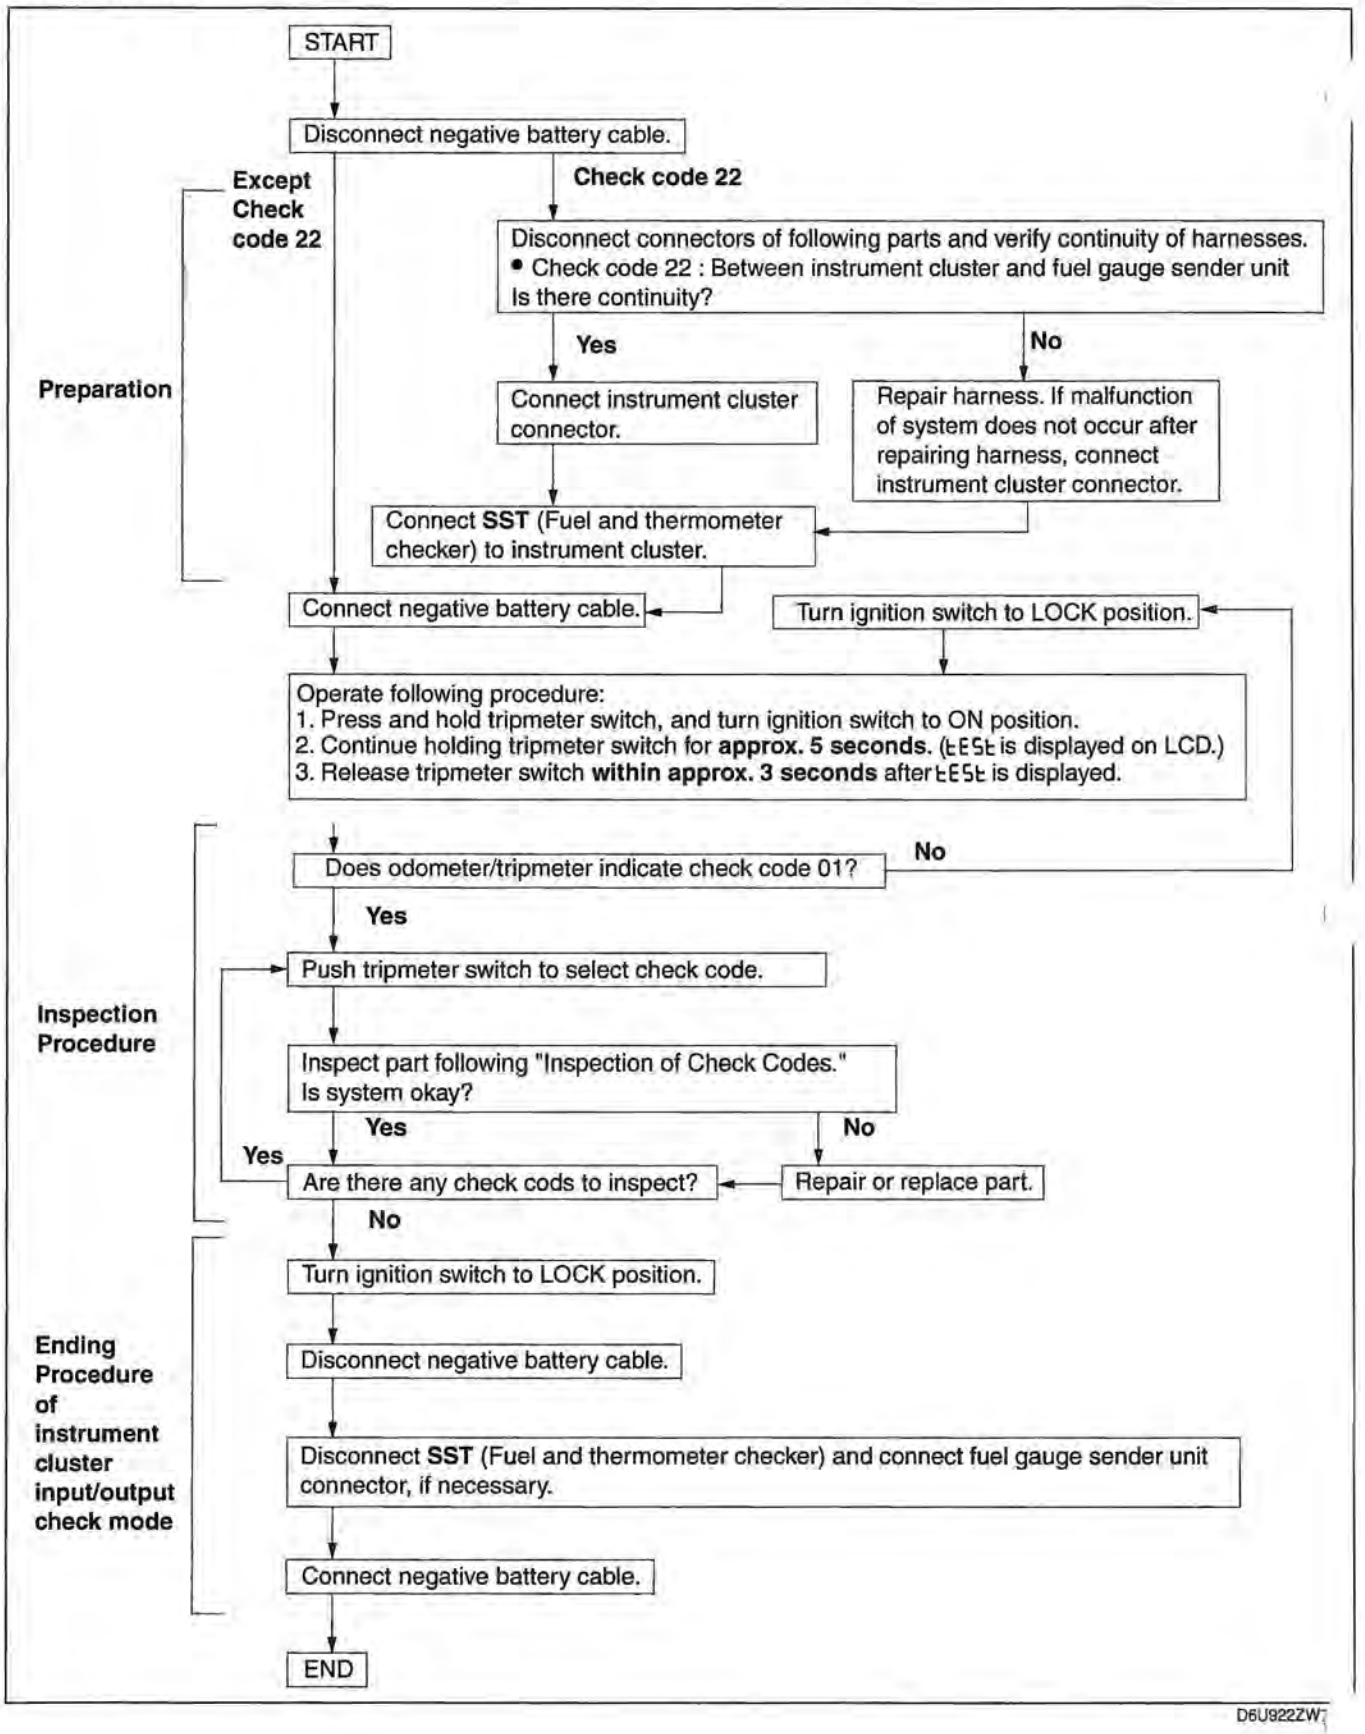
Note
- In this mode, it is possible to check the items in the following chart.

Check Code Table

Check code	Checked item	Related item
01	Buckle switch (driver's side)	Seat belt warning buzzer
04	Door switch	• Ignition key illumination • Key reminder warning buzzer • Lights-on reminder warning buzzer
08	TNS relay	• Lights-on reminder warning buzzer • Each illumination
12	Speedometer	Speedometer
13	Tachometer	Tachometer
14	Buzzer	Buzzer
16	Fuel-level warning light	Fuel-level warning light
22	Fuel gauge sender unit	Fuel gauge
23	Fuel gauge	Fuel gauge
25	Water temperature gauge	Water temperature gauge
26	LCD	LCD
31	Key reminder switch	Key reminder warning buzzer
33	Hazard warning switch	Turn and hazard indicator buzzer
55	Dimmer cancel switch	Instrument cluster illumination
58	Buckle switch (passenger's side)	Seat belt warning buzzer
59	Fuel system signal	Fuel gauge

Note
- Check codes which are not listed may be indicated, but they cannot be inspected.
- The check codes are displayed in numerical order. (While performing the inspection, if you want to inspect a check code of which the number is smaller than the code number you are currently inspecting, terminate the check mode then repeat the inspection from the beginning.)
- If a speed signal is input to the instrument cluster (the front wheels are rotated) the input/output check mode will be cancelled.
- The check codes can be fast-forwarded by pushing and holding the odometer/tripmeter switch for **1 second or more**.

Operating Order



D6U922ZW

Checking Order

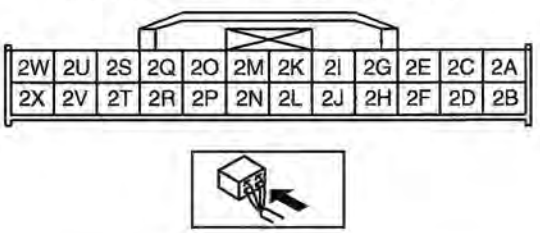
Note
- When inspecting more than two check codes, perform the inspection by following the priority order of inspection indicated in the chart below.

Priority order of inspection	IG switch position	Check code
1	ON	22
2		01, 04, 08, 12, 13, 14, 16, 23, 25, 26, 55, 58
3	LOCK	31, 33

Inspection of Check Codes
Check code 01

Check code 01	Buckle switch (drivewr's side) on/off signal

INSTRUMENT CLUSTER CONNECTOR



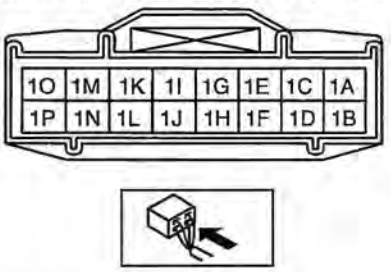
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Unfasten driver's side seat belt. (Buckle switch on.)	on	Go to next step.
		oFF	Measure voltage at instrument cluster terminal 2G. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Buckle switch — Wiring harness (Buckle switch—SAS control module—instrument cluster)
2	Fasten driver's side seat belt. (Buckle switch off.)	on	Measure voltage at instrument cluster terminal 2G. Is voltage **B+**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Buckle switch — Wiring harness (Buckle switch—SAS control module—instrument cluster)
		oFF	Input signal to instrument cluster is okay.

Check code 04

Check code 04	Door switch on/off signal

INSTRUMENT CLUSTER CONNECTOR



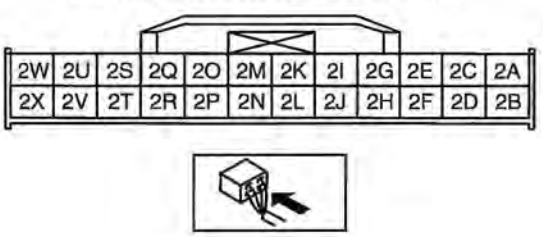
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Open driver-side door. (Door switch on.)	on	Close driver-side door, then go to next step.
		oFF	Measure voltage at instrument cluster terminal 1J. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Door switch — Wiring harness (Instrument cluster—BCM—door switch)
2	Close driver-side door. (Door switch off.)	on	Measure voltage at instrument cluster terminals 1J. Is voltage **B+**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Door switch — Wiring harness (Instrument cluster—BCM—door switch)
		oFF	Input signal to instrument cluster is okay.

Check code 08

Check code 08	TNS relay on/off signal

INSTRUMENT CLUSTER CONNECTOR



Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Turn headlight switch to TNS position. (TNS relay on.)	on	Go to next step.
		oFF	Measure voltage at instrument cluster terminal 2K. Is voltage **B+**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — TNS relay — Wiring harness (Battery—TNS relay—instrument cluster)
2	Turn headlight switch off. (TNS relay off.)	on	Measure voltage at instrument cluster terminal 2K. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — TNS relay — Wiring harness (TNS relay—instrument cluster)
		oFF	Input signal to instrument cluster is okay.

Check code 12

Check code 12	Operation signal to speedometer		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code 12.	00	Speedometer needle moves full scale then returns to **60 km/h or 60 MPH**.	Speedometer is okay.
		Other than stated above.	Replace instrument cluster.
	Err	—	

Check code 13

Check code 13	Operation signal to tachometer		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code 13.	00	Tachometer needle moves full scale then returns to **3,000 rpm**.	Tachometer is okay.
		Other than stated above.	Replace instrument cluster.
	Err	—	

Check code 14

Check code 14	Operation signal to buzzer		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code	on (Fixed)	Buzzer sounds.	Buzzer is okay.
		Buzzer does not sound.	Replace instrument cluster.

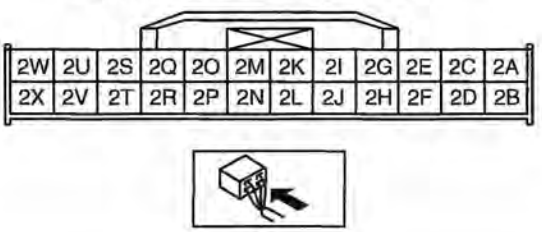
Check code 16

Check code 16	Operation signal to fuel-level warning light		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code 16.	17 (Turns on and off)	Fuel-level warning light turns on and off **three times.**	Fuel-level warning light is okay.
		Other than stated above.	Replace instrument cluster.

Check code 22

Check code 22	Fuel level signal

INSTRUMENT CLUSTER CONNECTOR



Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Select check code 22 with fuel gauge sender unit connector disconnected.	124 | 127	Go to next step.
		Other than stated above.	Go to Step 6.
2	Connect instrument cluster terminals 2D and 2M.	000 | 003	Go to next step.
		Other than stated above.	Go to Step 6.
3	Using **SST** (Fuel and thermometer checker) or resistor, input **20 ohms** between instrument cluster terminals 2D and 2M.	017 | 023	Go to next step.
		Other than stated above.	Go to Step 6.
4	Using **SST** (Fuel and thermometer checker) or resistor, input **60 ohms** between instrument cluster terminals 2D and 2M.	057 | 063	Go to next step.
		Other than stated above.	Go to Step 6.

STEP	INSPECTION	INDICATION	ACTION
5	Using **SST** (Fuel and thermometer checker) or resistor, input **100 ohms** between instrument cluster terminals 2D and 2M.		Inspect fuel gauge sender unit.
		Other than stated above.	Go to next step.
6	Inspect the wiring harness and connector between instrument cluster and fuel gauge sender unit. • If there is any malfunction, repair or replace the wiring harness, BCM or connector. • If there is no malfunction, replace the instrument cluster.		

Check code 23

Check code 23	Operation signal to fuel gauge		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code 23.		Fuel gauge indicates in following order every **2 seconds**. • F → 1/2 → E → F (fixed)	Fuel gauge is okay.
		Other than stated above.	Replace instrument cluster.
		Replace instrument cluster.	

Check code 25

Check code 25	Operation signal to water temperature gauge		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Wait for **2 seconds** after selecting check code 25.		Water temperature gauge indicates in following order for every **2 seconds**. • H → Center → C → H (fixed)	Water temperature gauge is okay.
		Other than stated above.	Replace instrument cluster.
		Replace instrument cluster.	

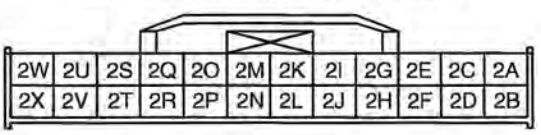
Check code 26

Check code 26	LCD indication		
INSPECTION	**INDICATION**	**SITUATION**	**ACTION**
Select check code 26.		• Display is normal. • Warning and indicator light illuminated. — Glow indicator light — Generator warning light — AT warning light — DSC/TCS indicator light — DSC OFF light — ABS warning light — Brake system warning light — Cruise main indicator light — Cruise set indicator light — TCS OFF indicator light — Selector indicator light — AWD indicator light — MIL — Keyless warning/ indicator light	LCD is okay.
		Other than stated above.	Replace instrument cluster.

Check code 31

Check code 31	Key reminder on/off signal

INSTRUMENT CLUSTER CONNECTOR



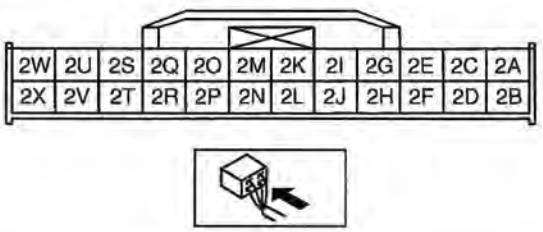
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Remove key from steering lock and then insert key into steering lock after selecting check code 31. (Key reminder switch on.)	on	Go to next step.
		oFF	Measure voltage at instrument cluster terminal 2B. Is voltage **B+**? • If as specified, replace instrument cluster. • If not as specified, replace following parts. — Key reminder switch — Wiring harness (Battery—key reminder switch—instrument cluster)
2	Remove key from steering lock (Key reminder switch off.)	on	Measure voltage at instrument cluster terminal 2B. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Key reminder switch — Wiring harness (Key reminder switch—instrument cluster)
		oFF	Input signal to instrument cluster is okay.

Check code 33

Check code 33	Hazard warning switch on/off signal

INSTRUMENT CLUSTER CONNECTOR



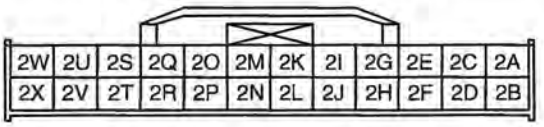
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Turn the hazard warning switch on after selecting check code 33.	on⇔oFF	Go to next step.
		on (Fixed)	Measure voltage at instrument cluster terminal 2N and 2R. Is voltage **B+**? • If not as specified, go to the next step. • If as specified, inspect following parts. — Hazard warning switch — BCM — Wiring harness (Hazard warning switch—BCM—instrument cluster) • If there is no malfunction, replace the instrument cluster.
		oFF (Fixed)	Measure voltage at instrument cluster terminal 2N and 2R. Is voltage **0 V**? • If not as specified, go to the next step. • If as specified, inspect following parts. — Hazard warning switch — BCM — Wiring harness (Hazard warning switch—BCM—instrument cluster) • If there is no malfunction, replace the instrument cluster.
2	Turn the hazard warning switch off.	oFF (Fixed)	Input signal to instrument cluster is okay.
		Other than fixed "OFF"	Inspect following parts. • Hazard warning switch • BCM • Wiring harness (Hazard warning switch—BCM—instrument cluster) — If there is no malfunction, replace the instrument cluster.

Check code 55

Check code 55	**Dimmer cancel switch on/off signal**

INSTRUMENT CLUSTER CONNECTOR



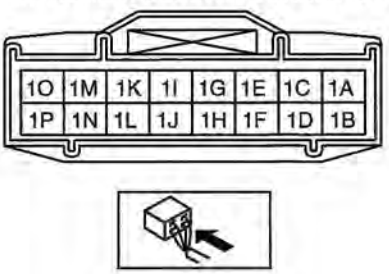
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Turn the panel light control switch to the dimmer cancel position after selecting check code 55.	on	Go to next step.
		oFF	Measure voltage at instrument cluster terminal 2A. Is voltage **4 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Panel light control switch — Wiring harness (Panel light control switch—instrument cluster)
2	Turn the panel light control switch to the other position.	on	Measure voltage at instrument cluster terminal 2A. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Panel light control switch — Wiring harness (Panel light control switch—instrument cluster)
		oFF	Input signal to instrument cluster is okay.

Check code 58

Check code 58	**Buckle (passenger's side) switch on/off signal**

INSTRUMENT CLUSTER CONNECTOR



Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	Seat one person in the passenger's seat, and unfasten passenger-side seat belt. (Seat weight sensor and buckle switch ON)	on	Go to next step.
		oFF	Measure voltage at instrument cluster terminal 1A. Is voltage **0 V**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Buckle switch (passenger's side) — Seat weight sensor control module — Seat weight sensor — SAS control module — Wiring harness (Buckle switch (passenger's side)—SAS control module, seat weight sensor—Seat weight sense control module—SAS control module)

STEP	INSPECTION	INDICATION	ACTION
2	Seat one person in the passenger's seat, and fasten passenger-side seat belt. (Seat weight sensor ON and buckle switch OFF) Seat no person in the passenger's seat, and unfasten passenger-side seat belt. (Seat weight sensor OFF and buckle switch ON) Seat no person in the passenger's seat, and fasten passenger-side seat belt. (Seat weight sensor and buckle switch OFF)		Measure voltage at instrument cluster terminal 1A. Is voltage **B+**? • If as specified, replace instrument cluster. • If not as specified, inspect following parts. — Buckle switch (passenger's side) — Seat weight sensor control module — Seat weight sensor — SAS control module — Wiring harness (Buckle switch (passenger's side)—SAS control module, seat weight sensor—Seat weight sense control module—SAS control module)
			Input signal to instrument cluster is okay.

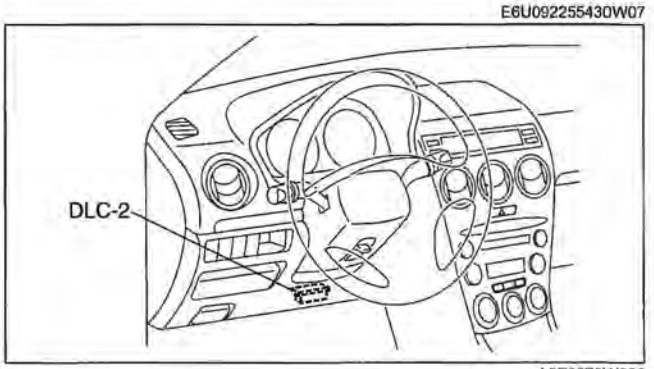
Check code 59
Diagnostic procedure

STEP	INSPECTION	INDICATION	ACTION
1	The three digits number is indicated after selecting check code 59. Confirm the first digit from the right.	First digit from the right 	The CAN system is okay. Go to next step.
		First digit from the right 	The DTC of CAN system is detected. Perform the DTC inspection. (See 09–02B–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3 WITH TC)])(See 09–02A–4 DTC TABLE [MULTIPLEX COMMUNICATION SYSTEM (L3, AJ)]) • If the CAN system is okay, replace the instrument cluster. Go to next step.
2	Confirm the second digit from the right.	Second digit from the right 	The wiring harnesses between the fuel gauge sender unit and instrument cluster are okay. Go to next step.
		Second digit from the right 	Inspect following parts. • Fuel gauge sender unit • Wiring harness (Fuel gauge sender unit—instrument cluster) — If fuel gauge sender unit and wiring harness are okay, replace the instrument cluster. Go to next step.
3	Confirm the third digit from the right.	Third digit from the right 	The fuel pulse signal from the PCM is okay.
		Third digit from the right 	Inspect the PCM. (See 01–02A–18 DTC TABLE [L3].) (See 01–02B–14 DTC TABLE [L3 WITH TC].)) (See 01–02C–13 DTC TABLE [AJ].) (See 01–40A–9 PCM INSPECTION [L3].) (See 01–40B–6 PCM INSPECTION [L3 WITH TC].) (See 01–40C–6 PCM INSPECTION [AJ].) • If the PCM is okay, replace the instrument cluster.

PID/DATA MONITOR AND RECORD PROCEDURE

1. Connect the **SST** (WDS or equivalent) to the vehicle DLC-2 16-pin connector.
   Access and monitor PIDs using the **SST** (WDS or equivalent).

E6U092255430W07



A6E3970W002

Monitor Item Table

- The PID/DATA monitoring items for the instrument cluster is as shown in the table below.

—: Not applicable

PID item	Definition	Unit/Condition		Terminal
CCNT_HE	Continuous codes	Number of continuous codes		—
ECT_GAUGE	Temperature gauge	°C	°F	2W, 2X
ODO COUNT	Total distance	km	mile	
SPDOMETER	Speedometer	km/h	mile/h	
TACH	Tachometer	rpm		

09-22

FUEL GAUGE SENDER UNIT REMOVAL/INSTALLATION [AWD]

E6U092260960W02

Fuel Gauge Sender Unit

1. Remove the fuel gauge sender unit. (See 01–14B–9 FUEL PUMP UNIT REMOVAL/INSTALLATION [L3 WITH TC].)
2. Install in the reverse order of removal.

Fuel Gauge Sender Sub-Unit

Warning

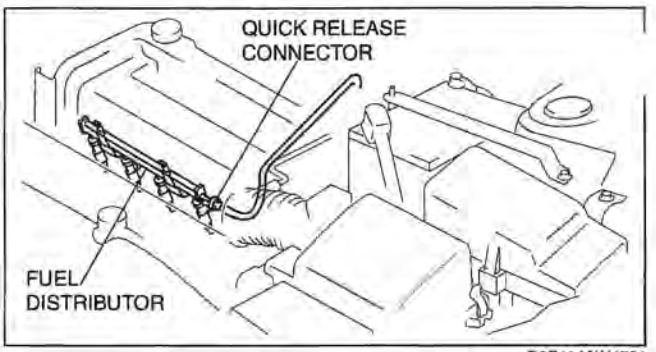
- **Fuel line spills and leakage are dangerous. Fuel can ignite and cause serious injuries or death and damage. Fuel can also irritate skin and eyes. To prevent this, always complete the "Fuel Line Safety Procedure".**
- **A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before draining fuel, make sure to discharge static electricity by touching a vehicle.**

Caution

- **Because the fuel tank is constructed such that the fuel level is higher than the installation surface of the fuel pump, fuel leakage could occur. If the fuel gauge indicates a fuel level of half or more, perform the following Steps 1—14 to drain the fuel.**
- **Disconnecting/connecting the quick release connector without cleaning it may possibly cause damage to the fuel pipe and quick release connector. Always clean the quick release connector joint area before disconnecting/connecting using a cloth or soft brush, and make sure that it is free of foreign material.**

1. Complete the "BEFORE REPAIR PROCEDURE".
2. Remove the plug hole plate.
3. Disconnect the quick release connector connected to the fuel distributor.
4. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.
5. Start the fuel pump using the following procedure.

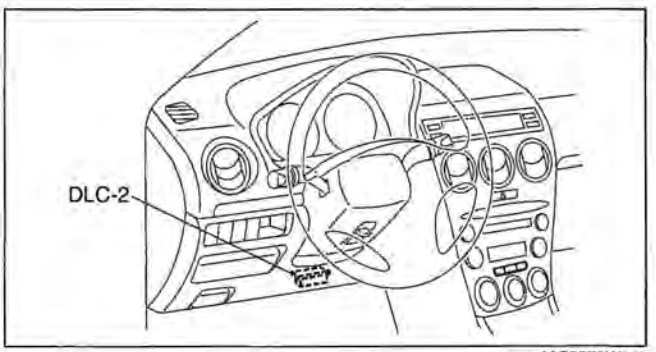
Using WDS or equivalent



D6E114AW4701

1. Connect the WDS or equivalent to the DLC-2.
2. Using the simulation function "FP", start the fuel pump.

Without using WDS or equivalent

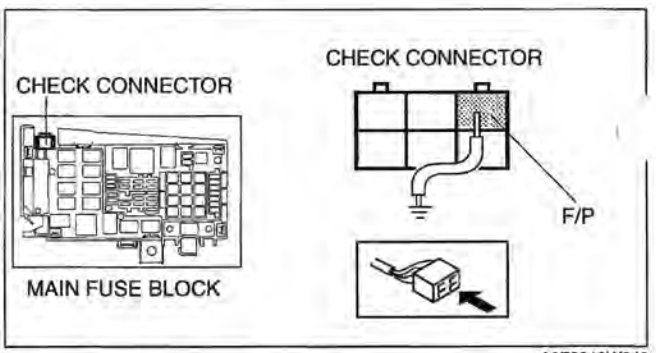


A6E3970W002

1. Short the check connector terminal F/P to body GND using a jumper wire.
2. Turn the ignition switch to ON position to operate the fuel pump.

Caution

- **The fuel pump could be damaged if it is operated (fuel pump idling) while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.**

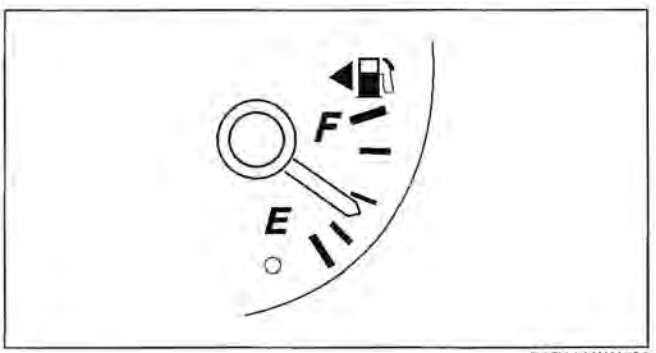


A6E3912W049

Note

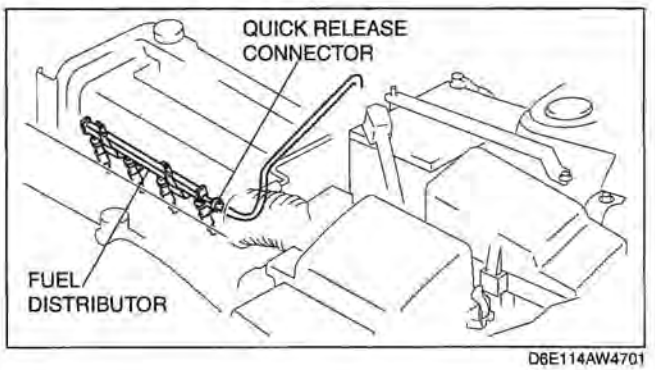
- If the fuel tank is full, drain **approx. 40 L {10.6 US gal, 8.8 Imp gal}** of fuel until the fuel gauge indicates **approx. 3/8** of a tank.

6. Stop operation of the fuel pump when essentially no fuel is being discharged.
7. Reconnect the quick release connector to the fuel distributor.
8. Start the engine and idle it for 15 min (to transfer fuel from the sub-tank to the main tank).
9. Stop the engine.
10. Complete the "BEFORE REPAIR PROCEDURE".
11. Remove the plug hole plate.



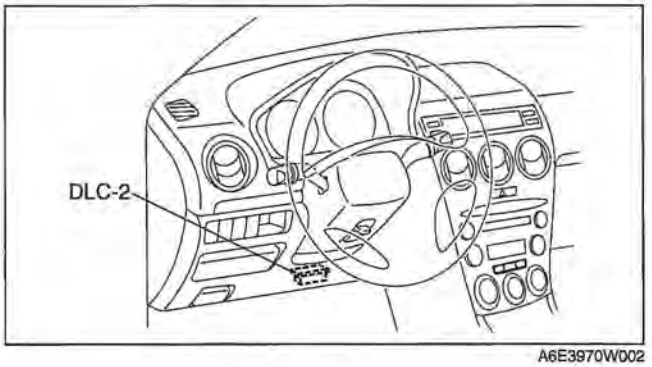
D6E114AW4702

12. Disconnect the quick release connector connected to the fuel distributor.
13. Connect a long hose to the disconnected quick release connector and drain the fuel into a container used for collecting gasoline.
14. Start the fuel pump using the following procedure.



D6E114AW4701

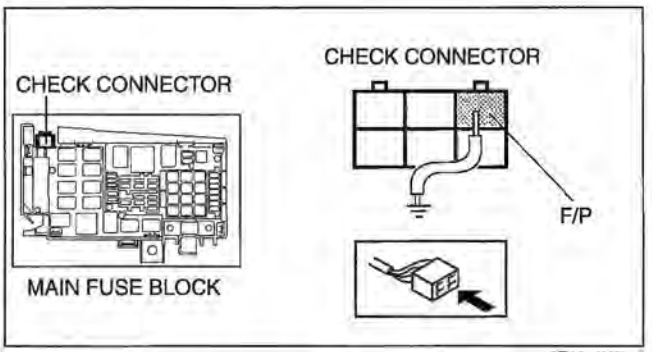
Using WDS or equivalent
Connect the WDS or equivalent to the DLC-2.
Using the simulation function "FP", start the fuel pump.



A6E3970W002

Without using WDS or equivalent
1. Short the check connector terminal F/P to body GND using a jumper wire.
2. Turn the ignition switch to ON position to operate the fuel pump.

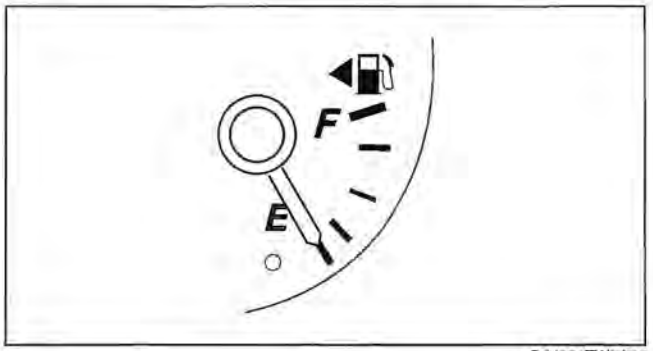
Caution
- **The fuel pump could be damaged if it is operated (fuel pump idling) while there is no fuel in the fuel tank. Verify the amount of fuel being discharged from the hose and stop operation of the fuel pump when essentially no fuel is being discharged.**



A6E3912W049

Note
- If the fuel tank is full, drain **approx. 55 L {15 US gal, 12 Imp gal}** of fuel until the fuel gauge indicates E position.

15. Stop operation of the fuel pump when essentially no fuel is being discharged.
16. Disconnect the negative battery cable.
17. Complete the following in order to the work area.
    (1) Loosen the bolt of the fuel tank strap.
    (2) Lower the fuel tank to a position where the **SST** can be attached from the service hole cover.
18. Remove the rear seat cushion.

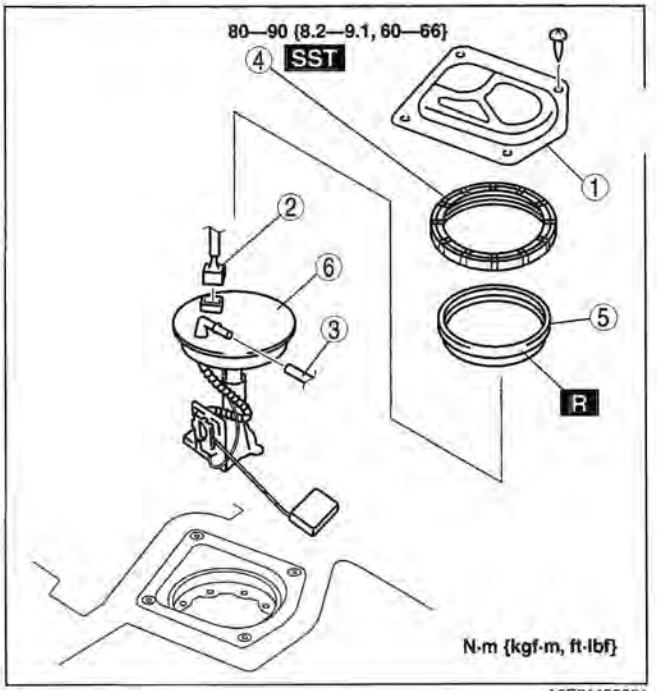


D6J922ZW5A02

19. Remove in the order indicated in the table.

1	Service hole cover
2	Connector
3	Plastic fuel hose (fuel tank side, transfer hose part) (See 01–14B–21 QUICK RELEASE CONNECTOR REMOVAL/INSTALLATION [L3 WITH TC])
4	Fuel gauge sender cap (See 09–22–22 Fuel gauge sender cap removal note) (See 09–22–22 Fuel Gauge Sender Cap Installation Note)
5	Packing
6	Fuel gauge sender sub-unit

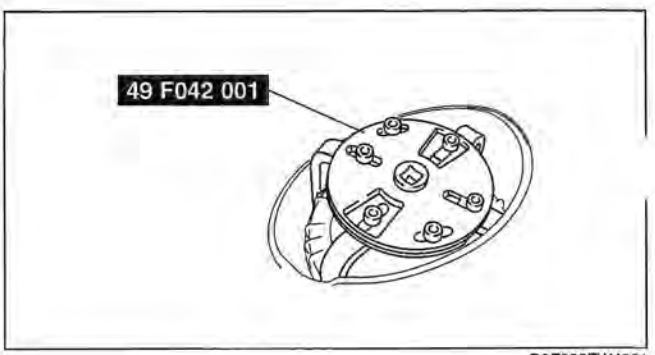
20. Install in the reverse order of removal.
21. Complete the "AFTER REPAIR PROCEDURE".
22. Complete the "Fuel leak inspection after fuel gauge sender sub-unit installation." (See 09–22–23 Fuel leak inspection after fuel gauge sender sub-unit installation.)



A6E81182001

Fuel gauge sender cap removal note

1. Using the **SST**, remove the fuel gauge sender cap.

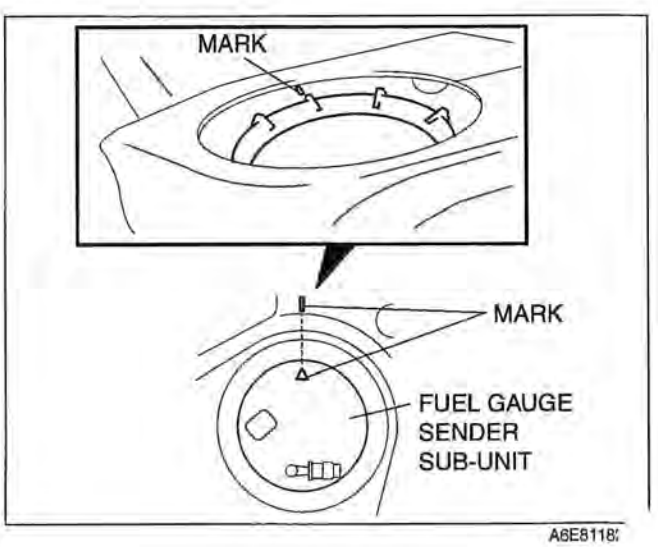


D6E922ZW4901

Fuel Gauge Sender Cap Installation Note

1. Verify that the fuel tank mark is aligned with the fuel gauge sender sub-unit mark as shown.
2. Using the **SST**, tighten the fuel gauge sender cap without shifting the mark.

Tightening torque
80—90 N·m {8.2—9.1 kgf·m, 60—66 ft·lbf}



A6E8118

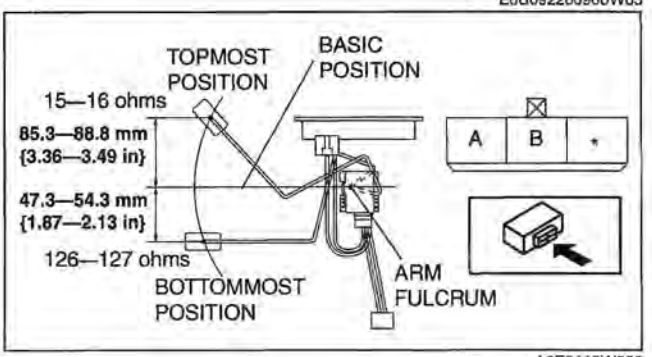
Fuel leak inspection after fuel gauge sender sub-unit installation

1. Drive the vehicle.
2. Perform a quick start and a hard brake **5—6 times**.
   Stop the vehicle.
   Verify that there is no fuel leakage near the fuel pump unit in the vehicle interior.

FUEL GAUGE SENDER UNIT INSPECTION [EXCEPT AWD]

E6U092260960W03

1. Move the float to the topmost and bottommost positions, and verify that the resistance between terminals A and B of the unit and the position of the float are as indicated in the figure.
   - If they are not as indicated, replace the fuel gauge sender unit.

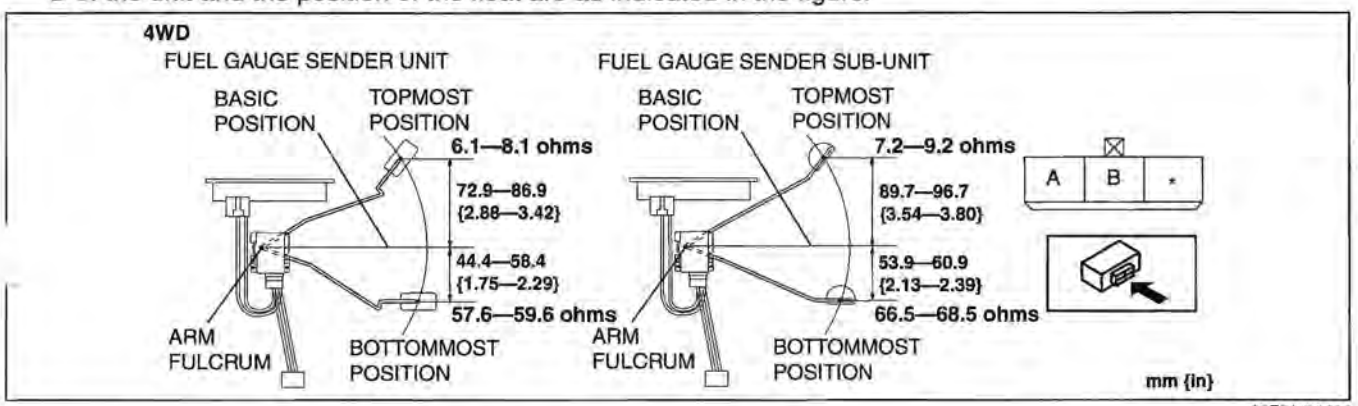


A6E8118W002

FUEL GAUGE SENDER UNIT INSPECTION [AWD]

E6U092260960W04

1. Move the float to the topmost and bottommost positions, and verify that the resistance between terminals A and B of the unit and the position of the float are as indicated in the figure.



A6E81181103

- If they are not as indicated, replace the fuel gauge sender unit.

OIL PRESSURE SWITCH INSPECTION

E6U092218500W01

1. Verify that the oil pressure warning light illuminates when the ignition switch is at the ON position.
2. Verify that the oil pressure warning light goes off when the engine is started.
   - If the oil pressure warning light does not illuminate or remains illuminated, inspect the related wiring harness.
     — If the related wiring harness are normal, inspect the oil pressure. (See 01–11A–5 OIL PRESSURE INSPECTION [L3, AJ].) (See 01–11B–3 OIL PRESSURE INSPECTION [L3 WITH TC].)
       - If the oil pressure is normal, replace the oil pressure switch.

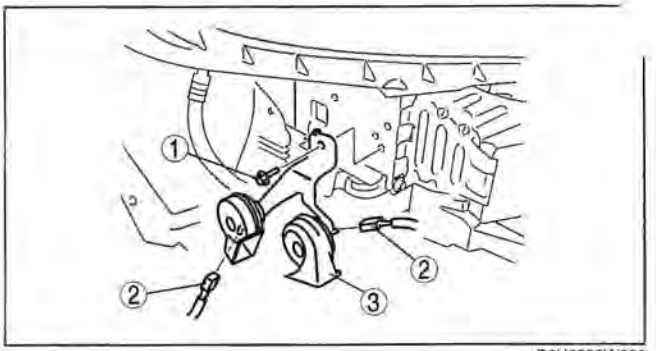
HORN REMOVAL/INSTALLATION

E6U092268790W01

1. Disconnect the negative battery cable.
2. Bend the mud guard.
3. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	Horn

4. Install in the reverse order of removal.



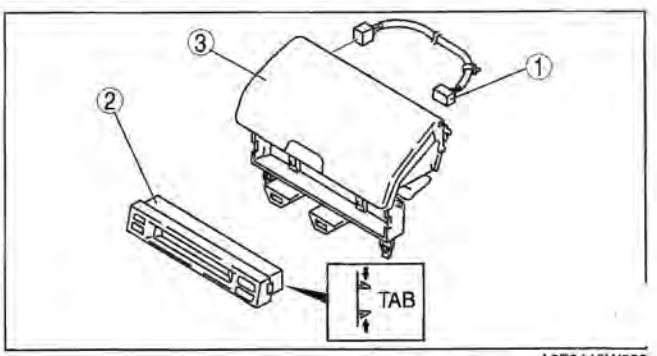
B6U0922W002

INFORMATION DISPLAY REMOVAL/INSTALLATION

E6U092255000W01

1. Disconnect the negative battery cable.
2. Remove the center panel module. (See 09–20–4 CENTER PANEL UNIT REMOVAL/INSTALLATION.)
3. Remove the center box.
4. Remove in the order indicated in the table.
5. Install in the reverse order of removal.

1	Short harness
2	Information display (See 09–22–24 Information Display Removal Note)
3	Center box



A6E8118W008

Information Display Removal Note

1. Squeeze the tabs of information display and pull forward to remove it.

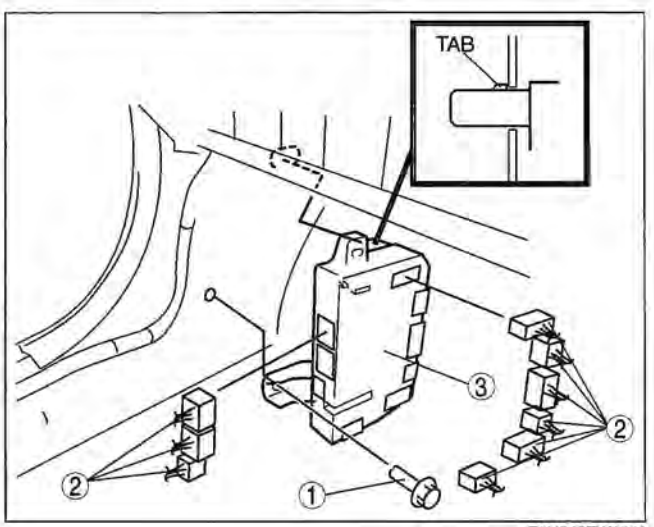
BODY CONTROL MODULE (BCM) REMOVAL/INSTALLATION

E6U094000200W01

1. Disconnect the negative battery cable.
2. Remove the front side trim. (Left side) (See 09–17–11 FRONT SIDE TRIM REMOVAL/INSTALLATION.)
3. Remove the fuse block.
4. Remove in the order indicated in the table.

1	Bolt
2	Connector
3	BCM

5. Install in the reverse order of removal.



E6U940ZW1001

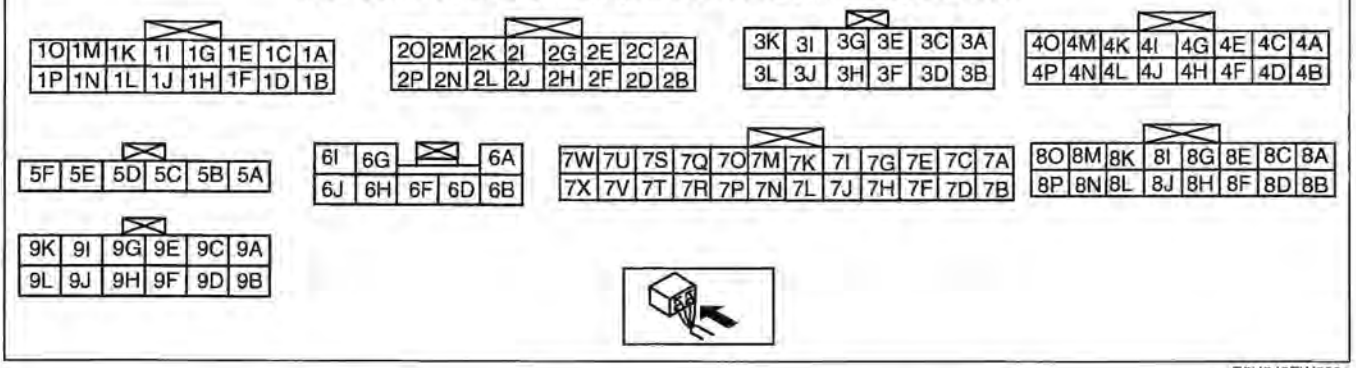
BODY CONTROL MODULE (BCM) INSPECTION

E6U094000200W02

1. Measure the voltage or inspect for continuity according to the Terminal Voltage Table (Reference).
   - If the voltage is not as specified in the Terminal Voltage Table (Reference), inspect the parts under "Inspection item(s)" and related wiring harnesses.

Terminal Voltage Table (Reference)

BODY CONTROL MODULE (BCM) WIRING HARNESS SIDE CONNECTOR



E6U940ZW5001

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
1A	Liftgate lock control	Liftgate lock actuator (5HB, WGN)	Lock actuator locking	1.0 or less → B+ → 1.0 or less	• Liftgate lock actuator (5HB, WGN) • Related wiring harnesses
			Other	1.0 or less	
1C	Liftgate unlock control	Liftgate lock actuator (5HB, WGN)	Lock actuator unlocking	1.0 or less → B+ → 1.0 or less	• Liftgate lock actuator (5HB, WGN) • Related wiring harnesses
			Other	1.0 or less	
1F	Door switch signal (LR)	Door switch (LR)	Door open (LR) (Door switch on)	1.0 or less	• Door switch (LR) • Related wiring harnesses
			Doors closed (LR) (Door switch off)	B+	
1G	Headlight leveling (manual) GND	Headlight leveling actuator	Under any condition: Inspect for continuity to headlight leveling actuator.	Continuity detected	• Related wiring harnesses
1I	Interior light control	• Map light • Interior light	**Within 5 min** after any door is opened.	1.0 or less	• Map light • Interior light • Related wiring harnesses
			5 min or more after any door is opened.	B+	
			All doors closed	B+	
1K	Interior light power supply	• Map light • Interior light	Under any condition.	B+	• Map light • Interior light • Related wiring harnesses
1M	Brake light power supply	Brake light	Stop light switch is ON	B+	• Brake light • Related wiring harnesses
			Stop light switch is OFF	1.0 or less	
1O	Back-up light power supply	Back-up light	Back-up light switch is ON	B+	• Back-up light • Related wiring harnesses
			Back-up light switch is OFF	1.0 or less	
1P	Taillight power supply	Taillight	TNS switch is ON	B+	• Taillight • Related wiring harnesses
			TNS switch is OFF	1.0 or less	
2A	Fuel level signal 2 output	Instrument cluster	Under any condition: Inspect for continuity to instrument cluster.	Continuity detected	• Related wiring harnesses
2B	Fuel level signal 1 output	Instrument cluster	Under any condition: Inspect for continuity to instrument cluster.	Continuity detected	• Related wiring harnesses
2C	Woofer signal 1	Woofer	Under any condition: Inspect for continuity to woofer.	Continuity detected	• Related wiring harnesses

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
2D	Rear wiper motor power supply	Rear wiper motor	Rear wiper switch is ON	B+	• Rear wiper motor • Related wiring harnesses
			Rear wiper switch is OFF	1.0 or less	
2E	Woofer signal 2	Woofer	Under any condition: Inspect for continuity to woofer.	Continuity detected	• Related wiring harnesses
2F	• Trunk compartment light signal (4SD) • cargo compartment light switch signal (5HB, WGN)	• Trunk compartment light switch (4SD) • Cargo compartment light switch (5HB, WGN)	Trunk lid/liftgate is open. (Switch on)	1.0 or less	• Trunk compartment light switch (4SD) • Cargo compartment light switch (5HB, WGN) • Related wiring harnesses
			Trunk lid/liftgate is closed. (Switch off)	B+	
2G	Woofer GND	GND	Under any condition: Inspect for continuity to GND.	Continuity detected	• Related wiring harnesses
2I	Rear turn light (RH) control	Rear turn light (RH)	Turn switch (RH) is ON	Alternates between 1.0 or less and B+	• Rear turn light (RH) • Related wiring harnesses
			Turn switch is OFF	1.0 or less	
2J	Autostop switch signal	Autostop switch	Rear wiper moving	B+	• Autostop switch (rear wiper motor) • Related wiring harnesses
			Rear wiper stopped	1.0 or less	
2K	Rear turn light (LH) control	Rear turn light (LH)	Turn switch (LH) is ON	Alternates between 1.0 or less and B+	• Rear turn light (LH) • Related wiring harnesses
			Turn wiper switch is OFF	1.0 or less	
2L	Unlock input	Trunk lid key cylinder switch	At the moment key cylinder is neutral position	5	• Trunk lid key cylinder switch • Related wiring harnesses
			At the moment key cylinder is unlocked	1.0 or less	
2M	Sunroof power supply	Sunroof switch	Under any condition	B+	• Sunroof switch • Battery
2O	Auto leveling control module signal	Auto leveling control module	Under any condition: Inspect for continuity to auto leveling control module.	Continuity detected	• Related wiring harnesses
3A	Power supply (rear wiper)	R.WIP 10 A fuse	Ignition switch is ON position.	B+	• R.WIP 10 A fuse • Battery
3B	Turn light (RH) signal output	Instrument cluster	Turn switch (RH) is ON	Alternates between 1.0 or less and B+	• Related wiring harnesses
			Turn switch is OFF	1.0 or less	
3C	Rear washer switch signal	Rear washer switch	Rear washer switch is ON	1.0 or less	• Rear washer switch • Rear washer motor • Related wiring harnesses
			Rear washer switch is OFF	B+	
3D	Turn light (LH) signal output	Instrument cluster	Turn switch (LH) is ON	Alternates between 1.0 or less and B+	• Related wiring harnesses
			Turn switch is OFF	1.0 or less	
3E	Ignition key illumination control	Ignition key illumination	Ignition switch off and driver-side door opened.	1.0 or less	• Ignition key illumination • Related wiring harnesses
			15 s or more after driver-side door closed.	B+	
3F	Power supply	A/C fuse	Ignition switch is ON position.	B+	• A/C fuse • Battery

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
3G	Power supply	D/L fuse	Under any condition	B+	• D/L fuse • Battery
3H	Headlight leveling (manual) GND	Headlight leveling switch	Under any condition: Inspect for continuity to headlight leveling switch.	Continuity detected	• Related wiring harnesses
3I	Power supply	METER fuse	Ignition switch is ON position.	B+	• METER fuse • Battery
3J	Power supply	ROOM fuse	Under any condition	B+	• ROOM fuse • Battery
3K	Back-up light switch signal	Car-navigation unit	Back-up light switch is ON	B+	• Related wiring harnesses
			Back-up light switch is OFF	1.0 or less	
3L	Power supply	METER fuse	Ignition switch is ON position.	B+	• METER fuse • Battery
4A	Power supply	SAS fuse	Ignition switch is ON position.	B+	• SAS fuse • Battery
4B	Power supply (headlight leveling switch)	Headlight leveling switch	TNS switch is ON.	B+	• Related wiring harnesses
4C	Turn switch input (LH)	Turn switch	Turn switch at left position	1.0 or less	• Turn switch • Related wiring harnesses
			Other	B+	
4D	Security light signal	Instrument cluster	Under any condition: Inspect for continuity to Instrument cluster.	Continuity detected	• Related wiring harnesses
4E	Turn switch input (RH)	Turn switch	Turn switch at right position	1.0 or less	• Turn switch • Related wiring harnesses
			Other	B+	
4F	Horn switch input	Horn switch	Horn switch is ON	1.0 or less	• Horn switch • Related wiring harnesses
			Other	B+	
4G	Hazard switch input	Hazard switch	Hazard switch at left position	1.0 or less	• Hazard switch • Related wiring harnesse
			Other	B+	
4H	Vehicle speed signal output	• Audio unit • Wiper switch (without auto wiper) • Auto light-off control module • Car-navigation unit	Under any condition: Inspect for continuity to related module.	Continuity detected	• Related wiring harnesses
4I	Rear wiper (INT) switch signal	Rear wiper switch	Rear wiper switch is INT position.	1.0 or less	• Rear wiper switch • Related wiring harnesses
			Rear wiper switch is OFF	B+	
4J	CAN_L	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
4K	Rear wiper switch signal	Rear wiper switch	Rear wiper switch is ON position.	1.0 or less	• Rear wiper switch • Related wiring harnesses
			Rear wiper switch is OFF	B+	
4L	CAN_H	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
4M	Door switch signal (driver-side) output	Instrument cluster	Door open (driver-side) (Door switch on)	1.0 or less	• Door switch (driver-side) • Related wiring harnesses
			Doors closed (driver-side) (Door switch off)	B+	
4N	DLC-2	DLC-2	Under any condition: Inspect for continuity to DLC-2.	Continuity detected	• Related wiring harnesse

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
4O	Door switch signal (except driver-side) output	Instrument cluster	Door open (except driver-side) (Door switch on)	1.0 or less	• Door switch (except driver-side) • Related wiring harnesses
			Doors closed (except driver-side) (Door switch off)	B+	
4P	Key reminder switch signal	• Steering lock unit (with advanced keyless system) • Ignition switch (with keyless entry system)	Key inserted	B+	• Steering lock unit (with advanced keyless system) • Ignition switch (with keyless entry system) • Related wiring harnesses
			Key removed	1.0 or less	
5A	Fuel level signal 2 input	Fuel gauge sender unit	Under any condition: Inspect for continuity to fuel gauge sender unit.	Continuity detected	• Related wiring harnesses
5B	Fuel level signal 1 input	Fuel gauge sender unit	Under any condition: Inspect for continuity to fuel gauge sender unit.	Continuity detected	• Related wiring harnesses
5C	Woofer signal 1	Audio amplifier	Under any condition: Inspect for continuity to audio amplifier.	Continuity detected	• Related wiring harnesses
5D	Woofer signal 2	Audio amplifier	Under any condition: Inspect for continuity to audio amplifier.	Continuity detected	• Related wiring harnesses
5E	Woofer GND	GND	Under any condition: Inspect for continuity to GND.	Continuity detected	• Related wiring harnesses
6A	Door unlock control	Door lock actuator	Door lock actuator unlocking	1.0 or less → B+ → 1.0 or less	• Door lock actuator • Related wiring harnesses
			Other	1.0 or less	
6B	Door lock control	Door lock actuator	Door lock actuator locking	1.0 or less → B+ → 1.0 or less	• Door lock actuator • Related wiring harnesses
			Other	1.0 or less	
6D	GND (headlight leveling switch)	GND	Under any condition: Inspect for continuity to GND.	Continuity detected	• Related wiring harnesses
6F	Courtesy light control	Courtesy light	**Within 5 min** after any door is opened.	1.0 or less	• Courtesy light • Related wiring harnesses
			5 min or more after any door is opened.	B+	
			All doors closed	B+	
6G	Driver-side door unlock control	Driver-side door lock actuator	Driver-side door lock actuator unlocking	1.0 or less → B+ → 1.0 or less	• Driver-side door lock actuator • Related wiring harnesses
			Other	1.0 or less	
6H	Courtesy light control	Courtesy light	**Within 5 min** after any door is opened.	1.0 or less	• Courtesy light • Related wiring harnesses
			5 min or more after any door is opened.	B+	
			All doors closed	B+	
6I	Power supply	• Position memory control module • Rain sensor • Power window main switch • 4WD control module	Ignition switch is ON position.	B+	• Related wiring harnesses
6J	Brake signal	Brake switch	Stop light switch is ON	B+	Brake switch
			Stop light switch is OFF	1.0 or less	

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
7A	Signal GND	GND	Under any condition: Inspect for continuity to GND.	Continuity detected	• Related wiring harnesses
7B	Door switch signal (driver-side)	Door switch (driver-side)	Door open (driver-side) (Door switch on)	1.0 or less	• Door switch (driver-side) • Related wiring harnesses
			Doors closed (driver-side) (Door switch off)	B+	
7C	Lock input (Driver-side door lock-link switch)	Driver-side door lock-link switch	Driver-side door locked	1.0 or less	• Driver-side door lock-link switch • Related wiring harnesses
			Driver-side door unlocked	5	
7D	Door switch signal (RR)	Door switch (RR)	Door open (RR) (Door switch on)	1.0 or less	• Door switch (RR) • Related wiring harnesses
			Doors closed (RR) (Door switch off)	B+	
7E	Unlock input (Driver-side door lock-link switch)	Driver-side door lock-link switch	Driver-side door locked	5	• Driver-side door lock-link switch • Related wiring harnesses
			Driver-side door unlocked	1.0 or less	
7F	Door switch signal (passenger-side)	Door switch (passenger-side)	Door open (passenger-side) (Door switch on)	1.0 or less	• Door switch (passenger-side) • Related wiring harnesses
			Doors closed (passenger-side) (Door switch off)	B+	
7G	Unlock input (except driver-side door lock-link switch)	Driver-side door lock-link switch	Except driver-side door locked	5	• Except driver-side door lock-link switch • Related wiring harnesses
			Except driver-side door unlocked	1.0 or less	
7H	Key reminder switch signal output	Keyless control module (with advanced keyless system)	Key inserted	B+	• Related wiring harnesses
			Key removed	1.0 or less	
7I	Keyless control module communication	Keyless control module	Under any condition: Inspect for continuity to keyless control module.	Continuity detected	• Related wiring harnesses
7J	Lock/unlock input	Driver-side door key cylinder switch	At the moment key cylinder is locked	2.5	• Driver-side door key cylinder switch • Related wiring harnesses
			At the moment key cylinder is unlocked	1.0 or less	
			At the moment key cylinder is neutral position	5	
7M	Lock/unlock input	Door lock switch	Door lock switch is pressed to lock.	2.5	• Door lock switch • Related wiring harnesses
			Door lock switch is pressed to unlock.	1.0 or less	
			Other	5	
7N	SAS control module signal	SAS control module	Under any condition: Inspect for continuity to SAS control module.	Continuity detected	• Related wiring harnesses
7O	Power window main switch communication	Power window main switch	Under any condition: Inspect for continuity to power window main switch.	Continuity detected	• Related wiring harnesses
7P	CAN_H	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
7R	CAN_L	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
7U	Power supply	SAS control module	Ignition switch is ON position.	B+	• Related wiring harnesses

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
8A	Power GND	GND	Under any condition: Inspect for continuity to GND.	Continuity detected	• Related wiring harnesses
8B	Power supply	• Auto leveling control module • TCM • Back-up light switch • Cooling fan relay • HO2S (rear)	Ignition switch is ON position.	B+	• Related wiring harnesses
8C	Brake signal output	PCM	Stop light switch is ON	B+	• Brake switch • Related wiring harnesses
			Stop light switch is OFF	1.0 or less	
8F	Power supply	ABS/TCS HU/CM	Ignition switch is ON position.	B+	• Related wiring harnesses
8H	Front turn light (RH) control	Front turn light (RH)	Turn switch (RH) is ON	Alternates between 1.0 or less and B+	• Front turn light (RH) • Related wiring harnesses
			Turn switch is OFF	1.0 or less	
8J	Front turn light (LH) control	Front turn light (LH)	Turn switch (LH) is ON	Alternates between 1.0 or less and B+	• Front turn light (LH) • Related wiring harnesses
			Turn switch is OFF	1.0 or less	
8K	Power supply	HAZARD fuse	Under any condition	B+	• HAZARD fuse • Battery
8L	Power supply	A/C relay	Ignition switch is ON position.	B+	• Related wiring harnesses
8M	Hood switch signal	Hood switch	Hood open (Hood switch off)	B+	• Hood switch • Related wiring harnesses
			Hood closed (Hood switch on)	1.0 or less	
8N	Rear washer motor control	Rear washer motor	Rear washer switch is ON	1.0 or less	• Rear washer switch • Rear washer motor • Related wiring harnesses
			Rear washer switch is OFF	B+	
8P	Back-up light switch signal	• Back-up light switch (MTX) • TR switch (ATX)	Shift to reverse	B+	• Back-up light switch (MTX) • TR switch (ATX) • Related wiring harnesses
			Other	1.0 or less	
9A	CAN_L	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
9B	Vehicle speed signal input	ABS/TCS HU/CM	Under any condition: Inspect for continuity to ABS/TCS HU/CM.	Continuity detected	• Related wiring harnesses
9C	CAN_L	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
9D	CAN_L	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
9E	CAN_H	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses
9F	CAN_H	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesses

Terminal	Signal name	Connected to	Measured condition	Voltage (V)/ Continuity	Inspection item(s)
9G	CAN_H	—	Because this terminal is for communication, good/no good judgment by terminal voltage is not possible.	—	• Related wiring harnesse
9H	DLC-2	DLC-2	Under any condition: Inspect for continuity to Check connector.	Continuity detected	• Related wiring harnesses
9J	Horn switch input	Horn relay	Horn switch is ON	1.0 or less	• Horn relay • Related wiring harnesses
			Other	B+	
9K	Power supply (headlight leveling switch)	Headlight leveling switch	TNS switch is ON.	B+	• Related wiring harnesses
9L	Security light signal	PCM	Under any condition: Inspect for continuity to PCM.	Continuity detected	• Related wiring harnesses

BODY ELECTRICAL SYSTEM

E6U095000000W01

Item				Specifications
Exterior light bulb capacity (W)	Headlight	Low-beam		55 × 2
		High-beam		55 × 2
	Parking light			5 × 2
	Front fog light			55 × 2
	Front turn light			28 × 2
	Front side marker light			5 × 2
	Brake light/taillight			21/5 × 2
	Rear turn light			21 × 2
	Back-up light			18.4 × 2
	Taillight			5 × 2
	License plate light			5 × 2
	High-mount brake light	Sport Sedan, Sport Wagon	In-vehicle-type	18.4 × 1
			Rear spoiler type	4 (LED)
		5-Door		21 × 1
Interior light bulb capacity (W)	Front map light			5 × 2
	Rear map light			5 × 2
	Trunk compartment light			3 × 1
	Courtesy light			5 × 2
	Vanity mirror illumination			1.2 × 2
	Ignition key illumination			1.4 × 1
	Ashtray illumination			1.4 × 1
	Glove compartment light			1.7 × 1
	Cargo compartment light		5-Door	5 × 1
			Sport Wagon	10 × 1
