

Thanks for helping out! I really appreciate everyone coming out to give me a hand.

When is it?

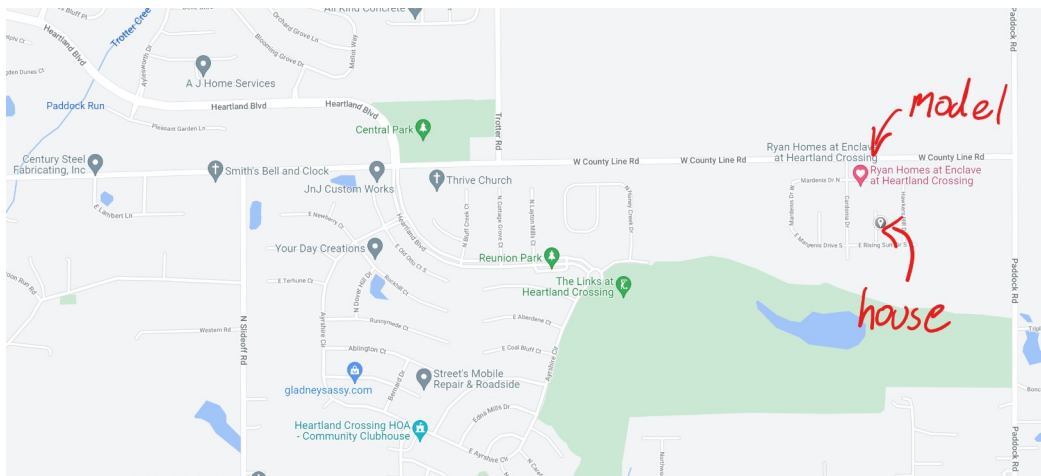

Saturday, 18 September 2021

I'll plan to be out there around 8am and will be there most of the day. You're welcome to come at any time that works for you but please let me know ahead of time so I can plan accordingly.

How do I get there?

The house is located in Camby by W County Line & Paddock. Since the street address isn't yet registered, the best way to get there would be to navigate to the model home and then go around back from there.

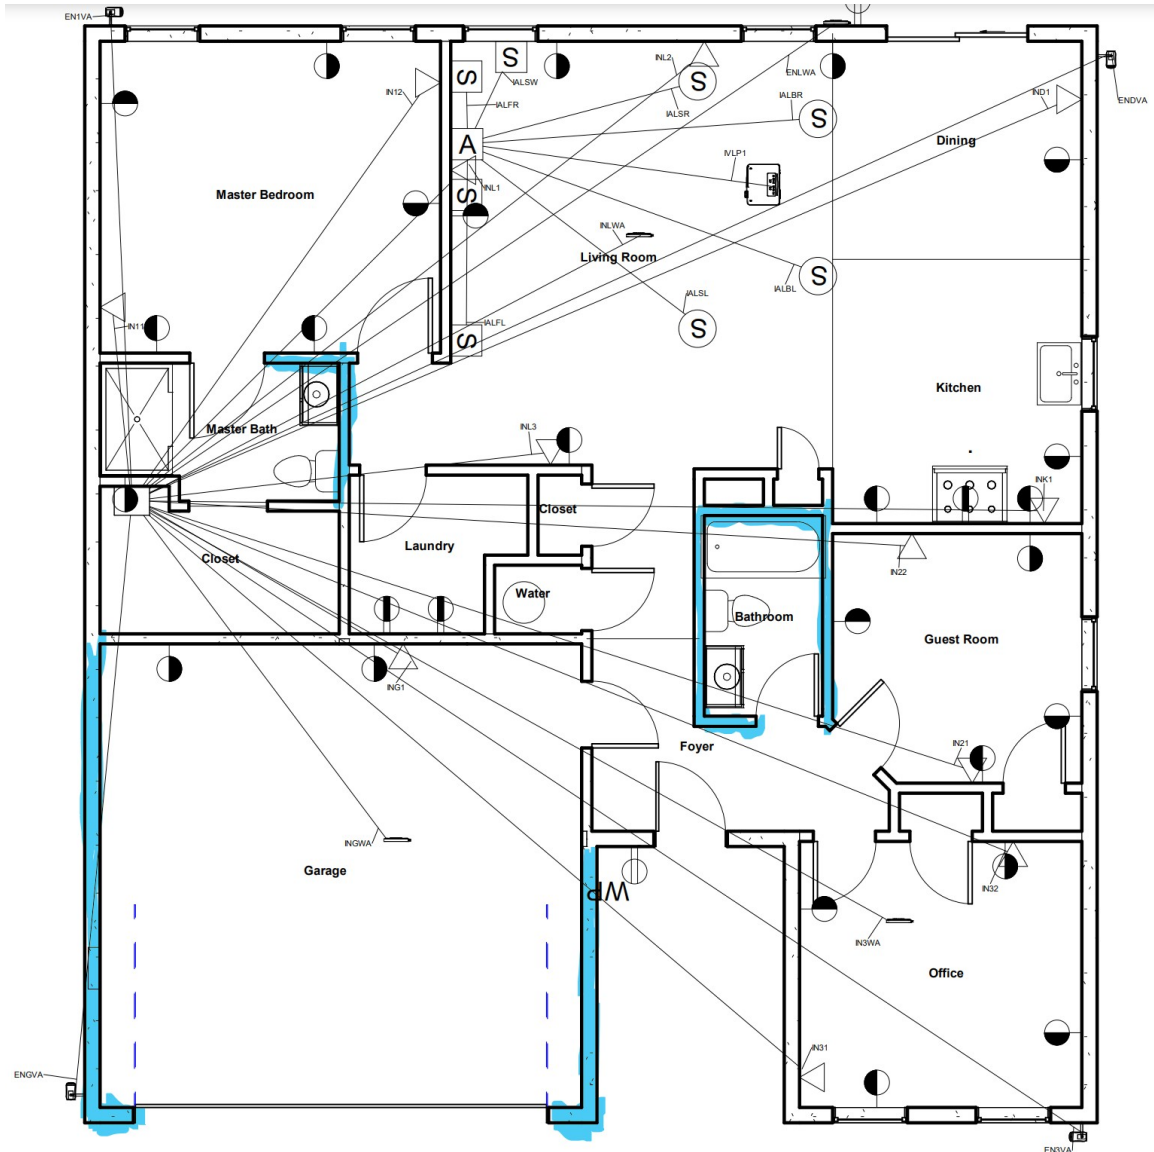

The house is lot #66, you should be able to spot it easily by looking for the only single-story home on the right side of Tiosa Lane that doesn't have siding yet.

What are we doing?

We'll be wiring ethernet and speakers into the house. It's significantly easier to add these communication circuits before the drywall goes into place so I wanted to put quite a bit in to make sure things are future-proofed. We will also be adding insulation in select areas that the builder does not usually provide it.

The below diagram shows all of the wiring with intended insulation shown in blue. I will have larger copies of this diagram available for us onsite.

I will plan to move materials to the site the night before and have all the data outlets positioned ahead of time to help things move more smoothly.

What do I need to bring?

I will have all of the required materials and tools but if you are able to bring extras it may help things go faster.

- Safety gear (work gloves, glasses) – I will have several extra sets of these but more is always better for safety gear
- Staple guns
- Ladders
- Hammers
- Drills w/ spade bits

The house will not be wired for power yet so any power tools will need to be cordless.

I will have a cooler with water at the house and we'll get everyone food when there's a good stopping point. If you have any requests for drinks let me know and I'll make sure to have it there for you.
